FEDERAL ENERGY REGULATORY COMMISSION

North American Electric Reliability Corporation	**)** **)**	**Docket No. ____________**

PETITION OF THE
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION
FOR APPROVAL OF PROPOSED TRANSMISSION OPERATIONS AND INTERCONNECTION RELIABILITY OPERATIONS AND COORDINATION RELIABILITY STANDARDS

Pursuant to Section 215(d)(1) of the Federal Power Act[1] and Section 39.5[2] of the regulations of the Federal Energy Regulatory Commission ("FERC" or "Commission"), the North American Electric Reliability Corporation ("NERC")[3] hereby submits for Commission approval the following nine proposed Reliability Standards (Exhibit A):[4]

- TOP-001-3 (Transmission Operations);
- TOP-002-4 (Operations Planning);
- TOP-003-3 (Operational Reliability Data);
- IRO-001-4 (Reliability Coordination – Responsibilities);
- IRO-002-4 (Reliability Coordination –Monitoring and Analysis);
- IRO-008-2 (Reliability Coordinator Operational Analyses and Real-time Assessments);
- IRO-010-2 (Reliability Coordinator Data Specification and Collection);
- IRO-014-3 (Coordination Among Reliability Coordinators); and
- IRO-017-1 (Outage Coordination).

---

1 16 U.S.C. § 824o (2012).

2 18 C.F.R. § 39.5 (2014).

3 The Commission certified NERC as the electric reliability organization ("ERO") in accordance with Section 215 of the Federal Power Act ("FPA") on July 20, 2006. *N. Am. Elec. Reliability Corp.*, 116 FERC ¶ 61,062 (2006) ("ERO Certification Order").

4 Unless otherwise designated, all capitalized terms shall have the meaning set forth in the *Glossary of Terms Used in NERC Reliability Standards* ("NERC Glossary"), *available at* http://www.nerc.com/files/Glossary_of_Terms.pdf.

NERC requests that the Commission approve the proposed Reliability Standards and find that each is just, reasonable, not unduly discriminatory or preferential, and in the public interest. As discussed further below, the proposed Reliability Standards replace the Reliability Standards currently pending with the Commission in Docket Nos. RM12-12-000, RM13-14-000 and RM13-15-000 (the "Pending TOP/IRO Standards).[5]

NERC also requests approval of: (i) revised definitions for the NERC Glossary terms "Operational Planning Analysis" and "Real-time Assessment" (Exhibit A); (ii) the Implementation Plan for the proposed Reliability Standards and definitions (Exhibit B); and (iii) the associated Violation Risk Factors ("VRFs") and Violation Severity Levels ("VSLs") (Exhibits A and J). Finally, NERC requests retirement of the following Reliability Standards.

- IRO-001-1.1 (Reliability Coordination – Responsibilities and Authorities);
- IRO-002-2 (Reliability Coordination — Facilities)
- IRO-003-2 (Reliability Coordination – Wide-Area View);
- IRO-004-2 (Reliability Coordination – Operations Planning);
- IRO-005-3.1a (Reliability Coordination – Current Day Operations);
- IRO-008-1 (Reliability Coordinator Operational Analyses and Real-time Assessments);
- IRO-010-1a (Reliability Coordinator Data Specification and Collection);
- IRO-014-1 (Coordination Among Reliability Coordinators);
- IRO-015-1 (Notifications and Information Exchange Between Reliability Coordinators);
- IRO-016-1 (Coordination of Real-time Activities Between Reliability Coordinators);
- PER-001-0.2 (Operating Personnel Responsibility and Authority);
- TOP-001-1a (Reliability Responsibilities and Authorities);
- TOP-002-2.1b (Normal Operations Planning);
- TOP-003-1 (Planned Outage Coordination);
- TOP-004-2 (Transmission Operations);
- TOP-005-2a (Operational Reliability Information);

[5] Concurrent with this filing, NERC is submitting a motion to withdraw the Reliability Standards pending Commission approval in those dockets. *Notice of Withdrawal of the North American Electric Reliability Corporation*, Docket Nos. RM13-12-000, RM13-14-000, and RM13-15-000 (Mar. 18, 2015).

- TOP-006-2 (Monitoring System Conditions);
- TOP-007-0 (Reporting System Operating Limit and Interconnection Reliability Operating Limit Violations); and
- TOP-008-1 (Response to Transmission Limit Violations).

As required by Section 39.5(a) of the Commission's regulations,[6] this Petition presents the technical basis and purpose of the proposed Reliability Standards and definitions, a summary of the development history (Exhibit K), and a demonstration that the proposed Reliability Standards meet the criteria identified by the Commission in Order No. 672[7] (Exhibit C).

This Petition is organized as follows: Section I of the Petition presents an executive summary of the proposed Reliability Standards. Section II of the Petition provides the individuals to whom notices and communications related to the filing should be provided. Section III provides background on the regulatory structure governing the Reliability Standards approval process, as well as information on the development of the proposed Reliability Standards. Section IV of the Petition then discusses the proposed Reliability Standards and definitions in detail, including the purpose and improvements of the proposed Reliability Standards and definitions. Section IV also explains how the proposed Reliability Standards address:

- the recommendations in the joint FERC and NERC report on the 2011 Arizona-Southern California outages ("Southwest Outage Report") (*see also* Exhibit F),[8]

---

[6] 18 C.F.R. § 39.5(a) (2014).

[7] The Commission specified in Order No. 672 certain general factors it would consider when assessing whether a particular Reliability Standard is just and reasonable. *See Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, at P 262, 321-37, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

[8] FERC and NERC, *Arizona-Southern California Outage on September 8, 2011, Causes and Recommendations* (Apr. 27, 2012), *available at* http://www.ferc.gov/legal/staff-reports/04-27-2012-ferc-nerc-report.pdf.

- concerns raised by the Commission in the November 21, 2013 *Notice of Proposed Rulemaking*, which proposed to remand the Pending TOP/IRO Standards (the "TOP/IRO NOPR") (*see also* Exhibit G),[9] and

- outstanding FERC directives related to the proposed Reliability Standards (*see also* Exhibit H).

I. EXECUTIVE SUMMARY

The proposed Transmission Operations ("TOP") and Interconnection Reliability Operations and Coordination ("IRO") Reliability Standards address matters that are fundamental to grid reliability as they pertain to the coordinated efforts to plan and operate the Bulk Electric System in a reliable manner under both normal and abnormal conditions. As discussed further below, the proposed Reliability Standards consolidate many of the currently effective TOP and IRO Reliability Standards and replace the Pending TOP/IRO Standards in addressing the roles and responsibilities of Reliability Coordinators, Transmission Operators and Balancing Authorities with respect to planning and operating the Bulk Electric System. The proposed Reliability Standards provide a comprehensive framework for reliable operations, with important improvements to ensure the Bulk Electric System is operated within pre-established limits while enhancing situational awareness and strengthening operations planning.

The proposed Reliability Standards establish or revise requirements for operations planning, system monitoring, real-time actions, coordination between applicable entities, and operational reliability data. Among other things, the proposed Reliability Standards help to ensure that Reliability Coordinators and Transmission Operators work together, and with other functional entities, to operate the Bulk Electric System within System Operating Limits ("SOLs") and Interconnection Reliability Operating Limits ("IROLs"). SOLs and IROLs are

[9] *Monitoring System Conditions- Transmission Operations Reliability Standard Transmission Operations Reliability Standards Interconnection Reliability Operations and Coordination Reliability Standards*, 145 FERC ¶ 61,158 (2013) ("TOP/IRO NOPR").

vital concepts in NERC's Reliability Standards as they establish acceptable performance criteria both pre- and post-contingency to maintain reliable Bulk Electric System operations.

The proposed TOP Reliability Standards generally address real-time operations and planning for next-day operations, and apply primarily to the responsibilities and authorities of Transmission Operators, although certain requirements apply to the roles and responsibilities of the Balancing Authority. The proposed IRO Reliability Standards set forth the responsibility and authority of Reliability Coordinators to provide for reliable operations. Reliability Coordinators have an essential role in ensuring reliable operations, as they are the functional entities with the highest level of authority and have the wide-area view of the Bulk Electric System.

The proposed Reliability Standards improve upon the currently effective TOP and IRO Reliability Standards by eliminating gaps, ambiguities, and redundancies, and by improving the overall quality of the TOP and IRO Reliability Standards. Specifically, the proposed Reliability Standards include improvements over the currently effective TOP and IRO Reliability Standards in key areas such as: (1) operating within SOLs and IROLs; (2) outage coordination; (3) situational awareness; (4) improved clarity and content in foundational definitions; and (5) requirements for operational reliability data.

For the reasons discussed herein, NERC respectfully requests that the Commission approve the proposed Reliability Standards, the proposed revised definitions, and the proposed retirements.

II. NOTICES AND COMMUNICATIONS

III. BACKGROUND

A. Regulatory Framework

By enacting the Energy Policy Act of 2005,[11] Congress entrusted the Commission with the duties of approving and enforcing rules to ensure the reliability of the Nation's Bulk-Power System, and with the duties of certifying an ERO that would be charged with developing and enforcing mandatory Reliability Standards, subject to Commission approval. Section 215(b)(1)[12] of the FPA states that all users, owners, and operators of the Bulk-Power System in the United States will be subject to Commission-approved Reliability Standards. Section 215(d)(5)[13] of the FPA authorizes the Commission to order the ERO to submit a new or modified Reliability Standard. Section 39.5(a)[14] of the Commission's regulations requires the ERO to file with the

---

[10] Persons to be included on the Commission's service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission's regulations, 18 C.F.R. § 385.203 (2014), to allow the inclusion of more than two persons on the service list in this proceeding.

[11] 16 U.S.C. § 824o (2012).

[12] *Id.* § 824(b)(1).

[13] *Id.* § 824o(d)(5).

[14] 18 C.F.R. § 39.5(a).

Commission for its approval each Reliability Standard that the ERO proposes should become mandatory and enforceable in the United States, and each modification to a Reliability Standard that the ERO proposes should be made effective.

The Commission has the regulatory responsibility to approve Reliability Standards that protect the reliability of the Bulk-Power System and to ensure that such Reliability Standards are just, reasonable, not unduly discriminatory or preferential, and in the public interest. Pursuant to Section 215(d)(2) of the FPA[15] and Section 39.5(c)[16] of the Commission's regulations, the Commission will give due weight to the technical expertise of the ERO with respect to the content of a Reliability Standard.

B. NERC Reliability Standards Development Procedure

The proposed Reliability Standards and definitions were developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.[17] NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC Standard Processes Manual.[18] In its order certifying NERC as the Commission's Electric Reliability Organization, the Commission found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability

18 The NERC *Rules of Procedure* are available at http://www.nerc.com/AboutNERC/Pages/Rules-of-Procedure.aspx. The NERC *Standard Processes Manual* is available at http://www.nerc.com/comm/SC/Documents/Appendix_3A_StandardsProcessesManual.pdf.

Standards[19] and thus satisfies certain of the criteria for approving Reliability Standards.[20] The development process is open to any person or entity with a legitimate interest in the reliability of the Bulk-Power System. NERC considers the comments of all stakeholders, and stakeholders must approve, and the NERC Board of Trustees must adopt, a Reliability Standard before NERC submits a proposed Reliability Standard to the Commission for approval.

C. FERC Proceeding History

As noted above, the proposed Reliability Standards are intended to replace the Pending TOP/IRO Standards, which consist of the following:

- *Reliability Standard TOP-006-3 (Monitoring System Conditions)*, which NERC filed on April 5, 2013 in Docket No. RM13-12-000. The proposed revisions to Reliability Standard TOP-006-3 were intended to divide the reporting responsibilities of Balancing Authorities and Transmission Operators into separate requirements.

- *Reliability Standards TOP-001-2 (Transmission Operations), TOP-002-3* (*Operations Planning), TOP-003-2 (Operational Reliability Data) and PRC-001-2 (System Protection Coordination)*, which NERC filed on April 16, 2013, in Docket No. RM13-14-000. These Reliability Standards were intended to replace the eight currently effective TOP Reliability Standards.[21]

- *Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators)*, which NERC filed on April 16, 2013, in Docket No. RM13-15-000. These four Reliability Standards were intended to replace six currently effective IRO Reliability Standards (IRO-001-1.1, IRO-002-2, IRO-005-3a, IRO-014-1, IRO-015-1, and IRO-016-1).

On November 21, 2013, the Commission issued the TOP/IRO NOPR, proposing to approve proposed Reliability Standard TOP-006-3 but remand the other Pending TOP/IRO Standards. A

---

[19] ERO Certification Order at P 250.

[20] Order No. 672 at PP 268, 270.

[21] The changes in proposed Reliability Standard PRC-001-2 were administrative in nature and limited to removal of three requirements in currently effective Reliability Standard PRC-001-1 that were addressed in proposed Reliability Standard TOP-003-2. Concurrent with this filing, NERC is requesting withdrawal of its request for approval of PRC-001-2 but is not proposing herein any changes to that standard. Any changes corresponding changes to PRC-001 are being addressed in Project 2007-06.2 – Phase 2 of System Protection Coordination.

summary of the Commission's concerns raised in the TOP/IRO NOPR are included in Section IV as well as Exhibit G.

In response to the TOP/IRO NOPR, on December 20, 2013, NERC filed a motion requesting that the Commission defer action on the Pending TOP/IRO Standards, until January 31, 2015, to allow NERC time to consider the reliability concerns raised by the Commission and revise the Pending TOP/IRO Standards as necessary.[22] The Commission granted that motion on January 14, 2014.[23] NERC has been providing the Commission quarterly updates on the status of its standards development process to revise the Pending TOP/IRO Standards. In its quarterly report for the fourth quarter of 2014, filed January 2, 2015, NERC informed the Commission that it needed additional time to obtain NERC Board of Trustees ("Board") adoption of proposed Reliability Standard TOP-001-3 at the Board's regularly scheduled meeting on February 12, 2015.

D. Project 2014-03 – Revisions to TOP and IRO Standards

In response to the TOP/IRO NOPR and consistent with NERC's responsibility as the ERO to develop Reliability Standards that provide for an adequate level of reliability of the Bulk-Power System, NERC, with Commission and industry support, initiated Project 2014-03 to develop revisions to the Pending TOP/IRO Reliability Standards and fulfill the goals of the original projects: Project 2006-06 Reliability Coordination[24] and Project 2007-03 Real-time Operations.[25]

---

22 *Motion of the North American Electric Reliability Corporation to Defer Action*, Docket No. RM13-12-000 (December 20, 2013).

23 *Monitoring System Conditions- Transmission Operations Reliability Standard Transmission Operations Reliability Standards Interconnection Reliability Operations and Coordination Reliability Standards*, 146 FERC ¶ 61,023 (2014).

24 The Project 2006-06 development webpage is available at http://www.nerc.com/pa/Stand/Pages/RelaibilityCoordinationProject20066.aspx.

25 The Project 2007-03 development webpage is available at http://www.nerc.com/pa/Stand/Pages/Real-time_Operations_Project_2007-03.aspx.

The objective of Project 2014-03 was to provide clear, unambiguous Reliability Standards to allow Reliability Coordinators, Transmission Operators, and Balancing Authorities operate the interconnected transmission system in a safe and reliable manner. In addition, the Project 2014-03 standard drafting team considered recommendations from the Independent Experts Review Panel ("IERP").[26]

As discussed below, the proposed Reliability Standards reflect an improved, more robust set of Reliability Standards. The NERC Board adopted the proposed Reliability Standards and definitions on November 13, 2014, with the exception of proposed Reliability Standard TOP-001-3, which the Board adopted on February 12, 2015.

IV. JUSTIFICATION FOR APPROVAL

As discussed in Exhibit C, the proposed Reliability Standards and definitions satisfy the Commission's criteria in Order No. 672 and are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The development of the proposed Reliability Standards was informed by recent industry reports and initiatives, including two NERC-sponsored technical conferences in March 2014,[27] the Southwest Outage Report, the IERP Report, the NERC Operating Committee consideration of the IERP report (Exhibit I), and the Commission's TOP/IRO NOPR.

The following section provides: (1) an explanation of the purpose and improvements in the proposed Reliability Standards and modified NERC Glossary definitions; (2) a description of each

---

[26] In 2013, NERC formed the IERP, which consisted of five industry experts, to independently review the NERC Reliability Standards to assess the content and quality of the Reliability Standards, including the identification of Bulk-Power System risks. The IERP's final report (the "IERP Report") is available at : http://www.nerc.com/pa/Stand/Standards%20Development%20Plan%20Library/Standards_Independent_Experts_Review_Project_Report.pdf.

[27] The slides from the conferences are available at: http://www.nerc.com/pa/Stand/Prjct201403RvsnstoTOPandIROStndrds/top_iro_technical_conference_presentation_20140306.pdf.

of the proposed definitions and requirements in the proposed Reliability Standards; and (3) an explanation of the manner in which the proposed Reliability Standards address the recommendations in the Southwest Outage Report, the concerns raised in the TOP/IRO NOPR, and outstanding FERC directives related to the proposed Reliability Standards.

A. Purpose of and Improvements in the Proposed Reliability Standards

1. Purpose

The proposed Reliability Standards address the important reliability goal of setting forth the requirements applicable to Reliability Coordinators, Transmission Operators, and Balancing Authorities with respect to planning and operating the Bulk-Power System, including requirements for operating the interconnected transmission system within predetermined operating limits. The proposed Reliability Standards establish or revise requirements for operations planning, system monitoring, real-time actions, coordination between applicable entities, and operational reliability data. The proposed Reliability Standards consolidate the currently effective TOP and IRO Reliability Standards, providing a more precise set of Reliability Standards addressing operating responsibilities. The mapping document, provided as Exhibit D hereto, shows how the currently effective Reliability Standards map to the proposed Reliability Standards.

The proposed TOP Reliability Standards generally address real-time operations and planning for next-day operations, and apply primarily to the responsibilities and authorities of Transmission Operators. Among other things, the proposed revisions to the TOP Reliability Standards help ensure that Transmission Operators plan to operate within all SOLs.

The proposed IRO Reliability Standards, which complement the proposed TOP Standards, are designed to ensure that the Bulk Electric System is planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions. The proposed IRO Reliability

Standards set forth the responsibility and authority of Reliability Coordinators to provide for reliable operations. Reliability Coordinators have an essential role in ensuring reliable operations, as they are the functional entities with the highest level of authority and have the wide-area view of the Bulk Electric System.[28]

2. Improvements

The proposed Reliability Standards improve upon the currently effective TOP and IRO Reliability Standards by eliminating gaps, ambiguities, and redundancies, and by improving the overall quality of the TOP and IRO Reliability Standards. Specifically, the proposed Reliability Standards include improvements over the currently effective TOP and IRO Reliability Standards in key areas such as: (1) operating within SOLs and IROLs; (2) outage coordination; (3) situational awareness; (4) improved clarity and content in foundational definitions; and (5) requirements for operational reliability data.

a) Operating Within SOLs and IROLs

An SOL is defined in the NERC Glossary as:

> The value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits are based upon certain operating criteria. These include, but are not limited to:
>
> - Facility Ratings (Applicable pre- and post-Contingency equipment or facility ratings)
> - Transient Stability Ratings (Applicable pre- and post- Contingency Stability Limits)
> - Voltage Stability Ratings (Applicable pre- and post- Contingency Voltage Stability)
> - System Voltage Limits (Applicable pre- and post- Contingency Voltage Limits)"

[28] *See* Order No. 693 at P 1582 "the reliability coordinator is the highest authority in matters affecting reliability of the Bulk-Power System."

An IROL is defined as:

> A System Operating Limit that, if violated, could lead to instability, uncontrolled separation, or Cascading outages that adversely impact the reliability of the Bulk Electric System.

As the Commission has noted, during deteriorating system conditions, an SOL can rapidly degrade into an IROL.[29] When any Facility Rating or Stability Limit is exceeded, or expected to be exceeded, these conditions should be mitigated to avoid the possibility of further deteriorating system conditions and the potential for a Cascading event.

The proposed Reliability Standards improve upon existing obligations for Transmission Operators and Reliability Coordinators to help ensure the Bulk Electric System is operated within predetermined operating limits. Specifically, SOLs, which must be monitored by Transmission Operators, include Ratings and limits necessary to ensure reliable operation within acceptable reliability criteria, as determined pursuant to Facilities Design, Connections and Maintenance ("FAC") Reliability Standards. In the proposed IRO Reliability Standards, Reliability Coordinators must continue to monitor SOLs in addition to their obligation in the currently effective Reliability Standards to monitor and analyze IROLs. These obligations require the Reliability Coordinator to have the wide-area view necessary for situational awareness and provide them the ability to respond to system conditions that have the potential to negatively affect reliable operations.[30]

When a Transmission Operator or Reliability Coordinator, based on its analysis and monitoring of SOLs and/or IROLs, identify a violation of operating limits, the proposed TOP and

---

[29] TOP/IRO NOPR at P 52.

[30] *See* i*d*. As the Commission noted, "[d]uring deteriorating system conditions, an SOL can rapidly degrade into an IROL.... Major cascading events including the Northeast Blackout of 2003 and the 2011 Southwest Outage were initiated by a non-IROL SOL exceedance, followed by a series of non-IROL SOL exceedances until the system cascaded." *Id.*

IRO Reliability Standards set forth the requirements for applicable entities to resolve the situation within specified timeframes. Specifically, proposed Reliability Standard TOP-001-3 requires that all violations of IROLs be resolved within the IROL $T_{V,}$[31] which is a technically-based performance expectation that essentially provides that IROL violations cannot exceed 30 minutes, which is consistent with the 30-minute criteria contained in existing TOP Reliability Standards. This proposed revision provides consistency with the Reliability Coordinator requirements contained in currently effective Reliability Standard IRO-009-1. The proposed Reliability Standards also include revisions that will require resolution of SOL violations within specified timeframes that are based on Ratings methodologies developed pursuant to the FAC Reliability Standards and coordinated between the Transmission Operator and Reliability Coordinator.

b) Improved Definitions

The proposed Reliability Standards also use certain foundational NERC Glossary terms, the definitions for which have been improved as part of Project 2014-03. Specifically, NERC is proposing revised definitions for "Operational Planning Analysis" and "Real-time Assessment." As described below, the proposed definitions provide significant additional detail over the currently effective definitions to enhance the consistency and the reliability benefit of Operational Planning Analyses and Real-time Assessments. For example, the proposed definition of Real-time Assessment includes several inputs that were identified as contributing to past outages on the Bulk Electric System, which, in turn, will enhance situational awareness.[32]

---

[31] IROL T_v is defined in the *Glossary of Terms Used in NERC Reliability Standards* as "[t]he maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit's T_v shall be less than or equal to 30 minutes."

[32] The proposed definition of Real-time Assessment is "[a]n evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System

Additionally, the proposed Reliability Standards now use the proposed NERC Glossary term "Operating Instruction"[33] instead of the term "reliability directive." The proposed NERC Glossary term "Operating Instruction" defines the scope of commands that are covered by the proposed TOP and IRO Reliability Standards.

c) Situational Awareness

The proposed Reliability Standards also improve upon existing situational awareness requirements. Collectively, the revised definition of Real-time Assessment and associated requirements for Real-time monitoring and Real-time Assessments in proposed Reliability Standards TOP-001-3 and IRO-008-2 provide for consistency in the operations of the Transmission Operator and Reliability Coordinator, giving clear definition of responsibilities and avoiding potential gaps. For example, the proposed TOP Reliability Standards include a requirement for Transmission Operators to perform Real-time Assessments at least once every 30 minutes. The requirement for Transmission Operators to assess system operating conditions on a frequent basis, which is analogous to an existing requirement in the currently effective IRO Reliability Standards requiring Reliability Coordinators to perform Real-time Assessments, will improve situational awareness and reinforce the responsibilities outlined in the NERC Functional

---

and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)" Several inputs are based on the Southwest Outage Report recommendations as described in Exhibit F.

[33] The defined term "Operating Instruction" was developed along with proposed Reliability Standard COM-002-4 (Operating Personnel Communications Protocol) and is currently pending before the Commission in Docket No. RM14-13-000. *See Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standards COM-001-2 and COM-002-4*, Docket No. RM14-13-000 (May 14, 2014). On September 18, 2014, the Commission issued a Notice of Proposed Rulemaking proposing to adopt the proposed Reliability Standards and new proposed definitions (including Operating Instruction), as well as the implementation plans, VRFs, and VSLs for the proposed Reliability Standards.

Model.[34] As noted above, the definition of Real-time Assessments has been modified to include additional inputs to improve situational awareness.

The proposed TOP Reliability Standards also include clear requirements for monitoring system conditions that support completion of Real-time Assessments and align with similar requirements in the currently effective IRO Reliability Standards. Specifically, proposed Reliability Standard TOP-001-3 requires, among other things, Transmission Operators and Balancing Authorities to monitor Facilities and status indications necessary to operate within SOLs and support Interconnection frequency.

d) Operations Planning and Outage Coordination

The proposed Reliability Standards also improve upon operational planning requirements for Reliability Coordinators and Transmission Operators. Proposed Reliability Standards IRO-008-2 and TOP-002-4 contain requirements for performing day-ahead studies and developing plans to operate within operating limits. Certain operational planning requirements are applicable to the Balancing Authorities as well, as discussed below. Further, the revised definition for Operational Planning Analysis incorporates recommendations from the Southwest Outage Report that are designed to address operations planning shortfalls with the potential to cause repeat occurrences of similar events, as further described in Exhibit F. For example, the revised definition of Operational Planning Analysis includes use of external system data such as transmission or generation outages, interchange prediction, and projected system conditions to improve the scope, accuracy, and quality of the analysis.

[34] NERC Functional Model at page 38. The Transmission Operator and Reliability Coordinator have similar roles with respect to transmission operations, but different scopes.

Operations planning relies on timely and accurate information of transmission and generation outages. Consequently, the standard drafting team developed proposed Reliability Standard IRO-017-1 to address the coordination of outages in advance. Proposed Reliability Standard IRO-017-1 establishes operational planning requirements for each Reliability Coordinator to implement an outage coordination process for its area that will identify and resolve issues with the potential to impact reliable operations. Proposed Reliability Standard IRO-017-1 thus addresses a reliability gap identified in the IERP Report and the Southwest Outage Report.

e) Operational Reliability Data

The proposed Reliability Standards establish clear requirements for the provision of information and data needed by the Transmission Operator and Balancing Authority for reliable operations. Effective operations planning and accurate assessment of system conditions in real-time rely on complete, current, and timely data and information. Specifically, proposed TOP-003-1 establishes requirements for Transmission Operators and Balancing Authorities to specify the data and information needed to perform their reliability functions, and obligates entities to provide the data according to prescribed formats and protocols. In doing so, proposed TOP-003-1 is applying the Commission-approved approach used for Reliability Coordinators in IRO-010-1a to improve the flow of operational reliability data needed by Transmission Operators and Balancing Authorities in a consistent manner.

B. Proposed Reliability Standards and Definitions

1. <u>Proposed Definitions</u>

NERC submits for Commission approval two revised definitions for inclusion in the NERC Glossary: (i) Real-time Assessment, and (ii) Operational Planning Analysis. The additional specificity reflected in the proposed definitions addresses concerns raised in the TOP/IRO NOPR and recommendations in the Southwest Outage Report, as discussed below. The revisions in the proposed definitions are intended to make sure that Operational Planning Analyses and Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness for next-day planning and real-time operations, respectively. The current and proposed definitions of Real-time Assessment and Operational Planning Analysis are provided below.

a) "Real-time Assessment"

The term "Real-time Assessment" is used in the following proposed Reliability Standards: TOP-001-3; TOP-003-3; IRO-002-4; IRO-008-2; IRO-010-2; and IRO-014-3. The term "Real-time Assessment" is currently defined in the NERC Glossary as "[a]n examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data." The proposed definition of "Real-time Assessment" is:

> An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

The proposed definition adds additional detail and clarity on the data or inputs that must be evaluated in a Real-time Assessment. The proposed definition will lead to improved assessments, and, in turn, more reliable operations. The proposed definition incorporates the defined term "Contingency" to add clarity regarding the existing and expected system conditions that are examined in a Real-time Assessment. "Contingency" is defined in the NERC Glossary as "[t]he unexpected failure or outage of a system component, such as a generator, transmission line, circuit breaker, switch or other electrical element." The proposed definition also includes additional specificity regarding the various inputs for the assessment and how that information may be provided such as through third-party services. The use of third-party services may provide smaller entities an efficient method for complying with the requirements. The additional specificity in the proposed definition ensures that assessments contain sufficient details to result in an appropriate level of situational awareness.

b) "Operational Planning Analysis"

The proposed definition of "Operational Planning Analysis" is used in the following proposed Reliability Standards: TOP-002-4; TOP-003-3; IRO-002-4; IRO-008-2; IRO-010-2; and IRO-014-3. The term "Operational Planning Analysis" is defined in the NERC Glossary as follows:

> An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, Interchange, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).

The proposed definition of Operational Planning Analysis is:

> An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

As with the definition of "Real-time Assessment," the proposed definition for Operational Planning Analysis incorporates the defined term "Contingency" to add clarity regarding the existing and expected system conditions examined in an Operational Planning Analysis, which are undefined in the current definition. The proposed definition also includes additional specificity regarding the various inputs for the analysis and how that information may be provided such as through third-party services, which may provide smaller entities an efficient method for complying with the requirements. The proposed definition removes the language specifying that the Operational Planning Analysis may be performed "either a day ahead or as much as 12 months ahead." The standard drafting team concluded that the time-frame was unnecessary for the reliability objective, which is to obtain an evaluation of projected system conditions for next-day operations based on specified inputs.

c) "Operating Instruction"

The NERC Glossary term "Operating Instruction", which is currently pending Commission approval in Docket No. RM14-13-000, is used in proposed Reliability Standards TOP-001-3 and IRO-001-4.[35] The propose definition for the term "Operating Instruction" is as follows:

> A command by operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System to change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. (A discussion of general information and of potential options or alternatives to resolve Bulk Electric System operating concerns is not a command and is not considered an Operating Instruction.)

As used in proposed Reliability Standard TOP-001-3, an Operating Instruction is the means by which a Transmission Operator directs entities to act to address the reliability of its Transmission Operator Area. Similarly, as used in proposed Reliability Standard, IRO-001-4, an Operating Instruction is the means by which a Reliability Coordinator directs entities to act to address the reliability of its Reliability Coordinator Area. It replaces the terms "directive" and "reliability directive" used in currently effective Reliability Standards TOP-001-1a and IRO-001-1.1.

---

[35] The definition for "Operating Instruction" was developed and submitted for Commission approval along with the proposed Reliability Standard COM-002-4 (Operating Personnel Communications Protocols). As noted above, on September 18, 2014, the Commission issued a Notice of Proposed Rulemaking proposing to adopt the proposed Reliability Standards and new proposed definitions (including Operating Instruction), as well as the implementation plans, VRFs, and VSLs for the proposed Reliability Standards.

By focusing on commands that “change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System,” the definition does not attempt to differentiate between commands given in an Emergency condition or a non-Emergency condition. Further, as explained in the COM-001-2 and COM-002-4 petition, a “command,” as used in the proposed definition, purposely does not specify whether the coverage is restricted to oral or written commands. Rather, the proposed Requirements in COM-002-4 specify protocols using the qualifiers “oral” and “written” in the Requirements themselves. As a result, where used in the proposed TOP and IRO Reliability Standards, “Operating Instruction” carries the broader meaning, which captures both. The proposed definition also includes a clarifying note in parentheses that general discussions are not considered Operating Instructions.

2. Proposed Reliability Standards

a) Proposed Reliability Standard TOP-001-3 (Transmission Operations)

Proposed Reliability Standard TOP-001-3 (Transmission Operations) contains twenty requirements relating to transmission operations. As shown in Exhibit D, proposed Reliability Standard TOP-001-3 replaces relevant requirements from TOP-001-1a (Reliability Responsibilities and Authorities) and other currently effective TOP and IRO Reliability Standards proposed for retirement. The purpose of proposed Reliability Standard TOP-001-3 is to prevent instability, uncontrolled separation, or Cascading outages that adversely affect the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences. The proposed standard achieves this reliability goal by providing appropriate entities with the authority to take actions, or direct the actions of others, to maintain reliability during Real-time operations. It includes Real-time monitoring and Real-time assessment requirements to preserve reliability and ensure that applicable entities identify and address SOL exceedances. The proposed Reliability

Standard also requires entities to communicate with each other regarding issues that could affect transmission operations. The proposed Reliability Standard applies to Balancing Authorities, Transmission Operators, Generator Operators, and Distribution Providers. The following is a description of each of the requirements in TOP-001-3.

Requirements R1 and R2 require each Transmission Operator (Requirement R1) and Balancing Authority (Requirement R2) to act to address the reliability of its area through its own actions or by issuing Operating Instructions. These requirements establishes an explicit, affirmative obligation to act. In contrast, as noted by the IERP, the obligation to act in currently effective Reliability Standard TOP-001-1a is only an implied requirement.

Requirement R3 provides that each Balancing Authority, Generator Operator, and Distribution Provider must comply with each Operating Instruction issued by its Transmission Operator(s), unless doing so would violate safety, equipment, regulatory, or statutory requirements or the action cannot be physically implemented.

Requirement R4 provides that each Balancing Authority, Generator Operator, or Distribution Provider must notify the Transmission Operator if it is unable to comply with the Transmission Operator's Operating Instruction.

Requirements R5 requires that each Transmission Operator, Generator Operator, and Distribution Provider comply with each Operating Instruction issued by its Balancing Authority, unless it cannot physically implemented the action or it would violate safety, equipment, regulatory, or statutory requirements.

Requirement R6 requires each Transmission Operator, Generator Operator, and Distribution Provider to inform its Balancing Authority of its inability to comply with an Operating Instruction issued by its Balancing Authority.[36]

Requirement R7 provides that each Transmission Operator must assist other Transmission Operators within its Reliability Coordinator Area, if requested and able, provided that the requesting Transmission Operator has implemented its comparable Emergency procedures, unless doing so would violate safety, equipment, regulatory, or statutory requirements or such assistance cannot be physically implemented. The proposed requirement creates a clear obligation for a Transmission Operator to provide assistance within its capability (i.e. "if requested and able"), and maintains the implicit obligation that the requesting Transmission Operator is also taking similar action (i.e. "has implemented its comparable emergency procedures").

Requirement R8 provides that each Transmission Operator must inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of the Transmission Operator's actual or expected operations that result in, or could result in, an Emergency.

Requirements R9, R16, and R17 address outage coordination of monitoring and control equipment. Proposed Requirement R9 provides that each Balancing Authority and Transmission Operator must notify its Reliability Coordinator and known impacted interconnected entities of all planned outages, and unplanned outages of 30 minutes or more, for telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels

[36] The responsibility of Reliability Coordinators to act or direct others to act is addressed in proposed Reliability Standard IRO-001-4 (Reliability Coordination – Responsibilities).

between the affected entities. Proposed Requirement R9 includes additional terms, as described in Section IV.C below in response to the Southwest Outage Report Recommendation #15. Proposed Requirements R16 and R17 provide that each Transmission Operator (Requirement R16) and each Balancing Authority (Requirement R17) must provide its System Operators with the authority to approve planned outages and maintenance.

Requirement R10 addresses Transmission Operator monitoring obligations to help ensure that Transmission Operators have the necessary situational awareness to maintain reliable operations. The proposed requirement is derived from currently effective Reliability Standard IRO-003-2, Requirement R1, which covers the monitoring obligations of Reliability Coordinators. Requirement R10 provides that each Transmission Operator must take certain steps for determining SOL exceedances within its Transmission Operator Area. Specifically, within its area, each Transmission Operator must monitor Facilities and the status of Special Protection Systems. Outside its area, the Transmission Operator must obtain and use status, voltages, and flow data for Facilities and the status of Special Protection Systems. Requirement R10 addresses the Commission's concerns that the Pending TOP/IRO Standards did not have sufficient requirements for real-time monitoring.[37]

Requirement R11 is the equivalent of Requirement R10 for Balancing Authorities. Under Requirement R11, each Balancing Authority is required to monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain generation-Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.

[37] TOP/IRO NOPR at P 60.

Requirement R12 provides that each Transmission Operator must not operate outside of any identified IROL for a continuous duration exceeding its associated IROL T_v.

Requirement R13 provides that each Transmission Operator must ensure that a Real-time Assessment is performed at least once every 30 minutes. This proposed requirement is derived from Reliability Standard IRO-008-1, Requirement R2, which applies to Reliability Coordinators, and will significantly improve situational awareness.[38]

Requirement R14 provides that each Transmission Operator must initiate its Operating Plan to mitigate a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.[39] As discussed below, proposed Reliability Standard TOP-002-4, Requirement R3 requires Transmission Operators to have evidence that it has an Operating Plan to address potential System Operating Limits (SOLs) exceedances.

Requirement R15 provides that each Transmission Operator must inform its Reliability Coordinator of actions taken to return the system to within limits when a SOL has been exceeded.

Requirement R18 provides that each Transmission Operator must operate to the most limiting parameter in instances where there is a difference in SOLs. As shown in Exhibit D, this Requirement is from currently effective IRO-005-3.1a, Requirement R10. The phrase "derived limits" in IRO-005-3.1a R10 is replaced with "SOLs" for clarity and consistency.

---

[38] As described below, proposed Reliability Standard TOP-002-4, Requirement R2 requires Transmission Operators to have an Operating Plan for next-day operations. It is appropriate for an Operating Plan to contain guidance for performing Real-time Assessments with detailed instructions and timing requirements to adapt to conditions where processes, procedures, and automated software systems are not available (if used). This could include instructions such as an indication that no actions may be required if system conditions have not changed significantly and that previous Contingency analysis or Real-time Assessments may be used in such a situation.

[39] An "Operating Plan" is defined in the NERC Glossary as:

> A document that identifies a group of activities that may be used to achieve some goal. An Operating Plan may contain Operating Procedures and Operating Processes. A company-specific system restoration plan that includes an Operating Procedure for black-starting units, Operating Processes for communicating restoration progress with other entities, etc., is an example of an Operating Plan.

Requirements R19 and R20 provide that each Transmission Operator (Requirement R19) and Balancing Authority (Requirement R20) must have data exchange capabilities with the entities from which it needs data in order to maintain reliability in its area. Proposed Requirements R19 and R20 are consistent with proposed Reliability Standard IRO-002-4, Requirement R1, which provides that each Reliability Coordinator must have data exchange capabilities with its Balancing Authorities, Transmission Operators, and other entities it deems necessary. These data exchange capabilities are required to support the data specifications required in proposed Reliability Standard TOP-003-3, as discussed below.

b) Proposed Reliability Standard TOP-002-4 (Operations Planning)

Proposed Reliability Standard TOP-002-4 (Operations Planning) contains seven requirements relating to operations planning for Transmission Operators and Balancing Authorities, replacing relevant requirements from Reliability Standard TOP-002-1b (Normal Operations Planning) and other TOP and IRO Reliability Standards proposed for retirement, as shown in Exhibit D hereto. The purpose of proposed Reliability Standard TOP-002-4 is to ensure that Transmission Operators and Balancing Authorities have plans for operating within specified limits. Specifically, the proposed standard addresses next-day planning and operations and provide for the necessary notifications and coordination between various functional entities. The revised definition of Operational Planning Analysis is an integral component of proposed TOP-002-4 and specifies the scope and inputs required for next-day analyses. The proposed standard also improves coordination of next-day operations by requiring Transmission Operators and Balancing Authorities to provide Operating Plans to their Reliability Coordinators. Proposed Requirements R1 through R3 and R6 apply to Transmission Operators, and proposed Requirements R4, R5, and R7 apply to Balancing Authorities. The following is a description of each of the requirements in TOP-002-4.

Requirement R1 requires each Transmission Operator to have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its SOLs.

Requirement R2 requires each Transmission Operator to have an Operating Plan (or Plans) for next-day operations to address potential SOL exceedances identified in the Operational Planning Analysis performed pursuant to Requirement R1.

Requirement R4 requires each Balancing Authority to have an Operating Plan (or Plans) for the next day that address four items: (i) expected generation resource commitment and dispatch; (ii) interchange scheduling; (iii) demand patterns; and (iv) capacity and energy reserve requirements, including deliverability capability.

Requirements R3 and R5 require each Transmission Operator (Requirement R3) and Balancing Authority (Requirement R5) to notify the entities identified in their Operating Plan as to their roles in that plan.

Requirements R6 and R7 require each Transmission Operator (Requirement R6) and Balancing Authority (Requirement R7) to provide its plan to its Reliability Coordinator.

c) Proposed Reliability Standard TOP-003-3 (Operational Reliability Data)

Proposed Reliability Standard TOP-003-3 (Operational Reliability Data) establishes requirements for the provision of information and data needed by the Transmission Operator and Balancing Authority for reliable operations, replacing relevant requirements from Reliability Standard TOP-003-1, as shown in Exhibit D. The purpose of proposed Reliability Standard TOP-003-3 is to ensure that Transmission Operators and Balancing Authorities have the data needed to fulfill their operational and planning responsibilities. Proposed TOP-003-3 is derived from the

Commission-approved approach for Reliability Coordinators in Reliability Standard IRO-010-1a to improve the flow of operational reliability data needed by Transmission Operators and Balancing Authorities.[40]

The proposed Reliability Standard consists of five Requirements, including requirements for Balancing Authorities and Transmission Operators to maintain and distribute to relevant entities data specifications needed to perform various analyses and assessments. The proposed Reliability Standard also requires entities receiving data specifications to respond according to mutually agreed upon parameters. The following is a description of each of the Requirements in TOP-003-3.

Requirement R1 requires each Transmission Operator to maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification must include, but is not limited to:

- a list of data and information needed to support these analyses, monitoring, and assessments;
- provisions for the notification of current Protection System and Special Protection System status or degradation that impacts System reliability;
- a periodicity for providing data; and
- the deadline by which the respondent (i.e., recipient) is to provide the indicated data.

Requirement R2 requires each Balancing Authority to maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification must include:

40 Proposed Reliability Standard IRO-010-2 replaces Reliability Standard IRO-010-1a and contains the data specification requirements for Reliability Coordinators.

- a list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring;
- provisions for the notification of current Protection System and Special Protection System status or degradation that impacts System reliability;
- a periodicity for providing data; and
- the deadline by which the respondent (i.e., recipient) is to provide the indicated data.

Requirements R3 and R4 require each Transmission Operator (Requirement R3) and Balancing Authority (Requirement R4) to distribute its data specification to the entities that have the necessary data.

Requirement R5 requires each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification pursuant to Requirement R3 or R4 to satisfy the obligations of the documented data specification using: (i) a mutually agreeable format; (ii) a mutually agreeable process for resolving data conflicts; and (iii) a mutually agreeable security protocol.

Data specification and collection for Reliability Coordinators is addressed in proposed Reliability Standard IRO-010-2 (Reliability Coordinator Data Specification and Collection), discussed below.

d) Proposed Reliability Standard IRO-001-4 (Reliability Coordination – Responsibilities)

Proposed Reliability Standard IRO-001-4 (Reliability Coordination – Responsibilities) contains requirements relating to the Reliability Coordinator's overall responsibility for reliable operation within the Reliability Coordinator Area. The purpose of the proposed Reliability Standard is to establish the responsibility of Reliability Coordinators to act or direct others to act to address the reliability of the Reliability Coordinator Area. The proposed Reliability Standard is applicable to Reliability Coordinators, Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers, which is consistent with the entities that are listed as receiving instructions from the Reliability Coordinator in the NERC functional model. The Transmission Service Provider is not an applicable entity as it does not perform an operating reliability function under the direction of the Reliability Coordinator, as described in the NERC Functional Model.

The proposed Reliability Standard contains the following three requirements:

- *Requirement R1* provides that each Reliability Coordinator must act to address the reliability of its Reliability Coordinator Area through direct actions or by issuing Operating Instructions.

- *Requirement R2* provides that each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider must comply with its Reliability Coordinator's Operating Instructions unless compliance cannot be physically implemented or such actions would violate safety, equipment, regulatory, or statutory requirements.

- *Requirement R3* provides that a Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider informs the Reliability Coordinator that it is unable to perform an Operating Instruction issued by its Reliability Coordinator.

e) Proposed Reliability Standard IRO-002-4 (Reliability Coordination – Monitoring and Analysis)

Proposed Reliability Standard IRO-002-4 (Reliability Coordination – Monitoring and Analysis) contains requirements relating to capabilities for monitoring and analysis of Real-time operating data. The purpose of the proposed Reliability Standard is to provide System Operators with the capabilities necessary to monitor and analyze data needed to perform reliability functions.

The proposed Reliability Standard consists of the following four requirements:

- *Requirement R1* requires each Reliability Coordinator to have data exchange capabilities with its Balancing Authorities, Transmission Operators, and other entities as it deems necessary, for it to perform the Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

- *Requirement R2* provides that each Reliability Coordinator must provide its System Operators with the authority to approve planned outages and maintenance of its telecommunication, monitoring, and analysis capabilities.

- *Requirement R3* provides that each Reliability Coordinator must monitor Facilities, the status of Special Protection Systems, and non-Bulk Electric System facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to identify any SOL or IROL exceedances within its Reliability Coordinator Area.

- *Requirement R4* provides that each Reliability Coordinator must have monitoring systems that provide information used by the Reliability Coordinator's operating personnel, with particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure.

f) Proposed Reliability Standard IRO-008-2 (Reliability Coordinator Operational Analyses and Real-time Assessments)

Proposed Reliability Standard IRO-008-2 (Reliability Coordinator Operational Analyses and Real-time Assessments) contains requirements for Reliability Coordinators to conduct next-day analyses and assessments of operating conditions in Real-time to help prevent instability, uncontrolled separation, or Cascading. The proposed definitions of Operational Planning Analysis and Real-time Assessment are integral components of proposed IRO-008-2 as they specify the scope and inputs for next-day analysis and real-time assessments of operating conditions in Real-time. Furthermore, proposed IRO-008-2 enhances next-day operations planning by specifying requirements for coordination of the Reliability Coordinator's Operating Plan to address potential SOL and IROL exceedances.

The proposed Reliability Standard consists of the following six requirements, designed to ensure that Reliability Coordinators perform analyses to identify potential or actual SOL or IROL exceedances and that such exceedances are addressed in a coordinated fashion:

- *Requirement R1* provides that each Reliability Coordinator must perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed SOLs and IROLs within its Wide Area.

- *Requirement R2* provides that each Reliability Coordinator must have a coordinated Operating Plan for next-day operations to address potential SOL and IROLs exceedances identified as a result of its Operating Planning Analysis performed pursuant to Requirement R1. The coordinated Operating Plan must consider the Operating Plans provided by its

Transmission Operators and Balancing Authorities pursuant to Requirements R6 and R7 of proposed Reliability Standard TOP-002-4.

- *Requirement R3* provides that each Reliability Coordinator must notify impacted entities identified in its Requirement R2 Operating Plan as to their role in the plan.
- *Requirement R4* provides that each Reliability Coordinator must ensure that a Real-time Assessment is performed at least once every 30 minutes.
- *Requirement R5* provides that each Reliability Coordinator must notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a SOL or IROL exceedance within its Wide Area.
- *Requirement R6* provides that each Reliability Coordinator must notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the SOL or IROL exceedance identified in Requirement R5 has been prevented or mitigated.

g) Proposed Reliability Standard IRO-010-2 (Reliability Coordinator Data Specification and Collection)

Proposed Reliability Standard IRO-010-2 (Reliability Coordinator Data Specification and Collection) provides a mechanism for the Reliability Coordinator to obtain the information and data it needs for reliable operations and to help prevent instability, uncontrolled separation, or Cascading outages. Proposed Reliability Standard IRO-010-2 reflects recommendations from Southwest Outage Report, including more clearly identifying necessary data and information to be included in the Reliability Coordinator's data specification.

The proposed Reliability Standard consists of the following three requirements:

- *Requirement R1* provides that the Reliability Coordinator must maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification must include:
    - a list of data and information necessary to support Reliability Coordinator Operational Planning Analyses, Real-time monitoring, and Real-time Assessments, including non-Bulk Electric System data and external network data, as deemed necessary by the Reliability Coordinator;

- provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability;
- a periodicity for providing data; and
- the deadline by which the respondent is to provide the indicated data.

- *Requirement R2* provides that the Reliability Coordinator must distribute its data specification to entities that have the required data.
- *Requirement R3* provides that each Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification must satisfy the obligations of the documented specifications using a mutually-agreeable format, process for resolving data conflicts, and security protocol.

h) Proposed Reliability Standard IRO-014-3 (Coordination Among Reliability Coordinators)

Proposed Reliability Standard IRO-014-3 (Coordination Among Reliability Coordinators) contains requirements for coordination for interconnected operations at the Reliability Coordinator level. The purpose of the proposed Reliability Standard is to ensure that each Reliability Coordinator's operations are coordinated such that they will not adversely affect other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

The proposed Reliability Standard consists of the following seven requirements:

- *Requirement R1* requires each Reliability Coordinator to have and implement Operating Procedures, Processes, or Plans for activities that require notification or coordination of actions that may affect adjacent Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Processes, or Plans must include, at a minimum: (i) criteria and processes for notifications; (ii) energy and capacity shortages; (iii) control of voltage, including the coordination of reactive resources; (iv) exchange of information, including planned and unplanned outage information to support Operational Planning Analyses and Real-time Assessments; and (v) provisions for periodic communications to support reliable operations.
- *Requirement R2* requires each Reliability Coordinator to maintain its Operating Procedures, Processes, or Plans through annual reviews and updates, with no more than 15 months passing between reviews. For each update, the Reliability Coordinator is required to obtain written agreement from the other Reliability Coordinators required to take the indicated action and distribute the Operating Procedures, Process, or Plans within 30 days of an update.

- *Requirement R3* requires each Reliability Coordinator to notify other impacted Reliability Coordinators upon identification of an expected or actual Emergency in its Reliability Coordinator Area.

- *Requirement R4* specifies that, in the event Reliability Coordinators disagree on the existence of an Emergency, each impacted Reliability Coordinator must operate as though an Emergency exists.

- *Requirement R5* provides that each Reliability Coordinator that identifies an Emergency in its Reliability Coordinator Area must develop an action plan to resolve the Emergency.

- *Requirement R6* provides that each impacted Reliability Coordinator must implement the action plan developed by the Reliability Coordinator that identifies the Emergency, unless such actions would violate safety, equipment, regulatory, or statutory requirements.

- Requirement R7 requires each Reliability Coordinator to assist other Reliability Coordinators, if requested and able, provided that the requesting Reliability Coordinator has implemented its Emergency procedures, unless such actions cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. The proposed requirement creates an affirmative obligation for the Reliability Coordinator to provide assistance within its capability (i.e. "if requested and able"), and maintains the implicit obligation that the requesting Reliability Coordinator is also taking similar action (i.e. 'has implemented its emergency procedures").

i) Proposed Reliability Standard IRO-017-1 (Outage Coordination)

Proposed Reliability Standard IRO-017-1 (Outage Coordination) is a new Reliability Standard designed to ensure that outages are properly coordinated in the Operations Planning time horizon and Near-Term Transmission Planning Horizon.[41] Transmission Planning and Operations Planning involve different functional entities per the NERC Functional Model. Furthermore, these two types of planning involve different objectives, information, timeframes, and processes. The requirements in the proposed Reliability Standard, which span both time horizons, provide the necessary requirements for effective coordination of planned outages to support reliable operations.

[41] The Operations Planning time horizon refers to "operating and resource plans from day-ahead up to and including seasonal." *See* Time Horizons, *available at* http://www.nerc.com/files/Time_Horizons.pdf. The term Near-Term Transmission Planning Horizon is defined in the NERC Glossary as "[t]he transmission planning period that covers Year One through five."

Proposed Reliability Standard IRO-017-1 consists of the following four requirements to address planned outage coordination concerns.

- *Requirement R1* provides that each Reliability Coordinator must develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. This process must:
    - identify applicable roles and reporting responsibilities, including development and communication of outage schedules and assignment of coordination responsibilities for outage schedules between Transmission Operators and Balancing Authorities;
    - specify outage submission timing requirements;
    - define the process to evaluate the impact of Transmission and generation outages with the Reliability Coordinator's Wide Area; and
    - define the process to coordinate the resolution of identified outage conflicts with Transmission Operators and Balancing Authorities, as well as other Reliability Coordinators.
- *Requirement R2* provides that each Transmission Operator and Balancing Authority must perform the functions specified in its Reliability Coordinator's outage coordination process.
- Requirement R3 provides that each Planning Coordinator and Transmission Planner must provide its Planning Assessment to impacted Reliability Coordinators.[42] Planning Coordinators and Transmission Planners are required to develop Planning Assessments under the currently effective Reliability Standard TPL-001-4 (Transmission System Planning Performance Requirements).
- Requirement R4 requires each Planning Coordinator and Transmission Planner to jointly develop solutions with its respective Reliability Coordinator(s) for identified issues or conflicts with planned outages in its Planning Assessment for the Near-Term Transmission Planning Horizon.

C. Consideration of the Southwest Outage Report Recommendations

The following section discusses the manner in which the proposed Reliability Standards address the recommendations of the Southwest Outage Report. On the afternoon of September 8, 2011, an 11-minute system disturbance occurred in the Pacific Southwest, leading to cascading

[42] Planning Assessment is defined in the NERC Glossary as a "[d]ocumented evaluation of future Transmission System performance and Corrective Action Plans to remedy identified deficiencies."

outages and leaving approximately 2.7 million customers without power ("2011 Southwest Outage"). The outages affected parts of Arizona, southern California, and Baja California, Mexico. All of the San Diego area lost power, with nearly 1.5 million customers in the region losing power, some for up to 12 hours.[43]

Following the 2011 Southwest Outage, NERC and FERC conducted a joint investigation. The investigation concluded that the cause of the disturbance stemmed primarily from weaknesses in operations planning and real-time situational awareness, which, if conducted properly, would have allowed system operators to proactively operate the system in a secure state during normal system conditions and to restore the system to a secure state as soon as possible.[44]

On April 27, 2012, FERC and NERC issued the Southwest Outage Report, outlining the investigators' findings and making recommendations for reliability improvements. The Southwest Outage Report made twenty-seven (27) findings and associated recommendations applicable mostly to Transmission Operators, Balancing Authorities, and Reliability Coordinators. These findings and recommendations addressed the lack of adequate operations planning and real-time situational awareness of contingency conditions, as well as other factors that contributed to the 2011 Southwest Outage.[45] The Southwest Outage Report findings are divided into eight

43 Southwest Outage Report at 1.

44 *Id*. at 5.

45 The Southwest Outage Report concluded that several other factors contributed to the 2011 Southwest Outage. For example, the Reliability Coordinator and the affected entities did not consistently recognize the adverse impact that sub-100 kV facilities can have on the Bulk-Power System reliability. Furthermore, there were significant issues with Protection System settings. *See* Southwest Outage Report pp. 63-110 and Appendix B: Table of Findings and Recommendations.

categories, [46] and each category lists specific reliability issues identified during the joint investigation.

As part of Project 2014-03, the standard drafting team considered the Southwest Outage Report findings and recommendations applicable to Transmission Operators, Balancing Authorities and Reliability Coordinators, and addressed these recommendations in the language of the proposed Reliability Standards.[47] Several of the findings and recommendations were outside the scope of Project 2014-03 either fully, or partially, as discussed in this section of the petition.[48] Below is a short description of each applicable finding and recommendation identified in the Southwest Outage Report,[49] and an explanation of how the proposed Reliability Standards address the reliability issues identified following the 2011 Southwest Outage. The full listing of the recommendations and mapping to the proposed TOP and IRO Reliability Standards is provided in Exhibit F. A summary of the findings and recommendations is available in Appendix B of the Southwest Outage Report.

---

[46] The eight categories of findings are: next-day planning, seasonal planning, near-and long-term planning, situational awareness, consideration of Bulk Electric System equipment, Interchange System Operating Limits (IROLs) derivations, Protection Systems, and angular separation. *See* Southwest Outage Report, Appendix B.

[47] *See* Exhibit F Mapping of Revised TOP and IRO Reliability Standards to Address 2012 Southwest Outage Report Recommendations ("Southwest Outage Recommendation Mapping Document"). Several of the Southwest Outage Report recommendations were specific to the particular facts and circumstances of the 2011 Southwest Outage, and were not addressed in the Southwest Outage Recommendation Mapping Document. The Southwest Outage Report identified weaknesses in WECC seasonal planning, but the standard drafting team determined that these weaknesses should not become prescriptive requirements for all Reliability Coordinator areas.

[48] *Id.*

[49] *See* Southwest Outage Report, Appendix B for a list of all findings and recommendations included in the Southwest Outage Recommendation Mapping Document and this petition.

1. <u>Operations Planning</u>

Eight findings in the Southwest Outage Report relate to operations planning.[50] The Southwest Outage Report's next-day and seasonal planning recommendations fall within this category and were considered together by the standard drafting team.

As described more fully below, the Southwest Outage Report recommendations related to operations planning are addressed generally by proposed Reliability Standards IRO-017-1, TOP-002-4 and IRO-008-2. Proposed Reliability Standard IRO-017-1 addresses the outage coordination concerns identified in the Southwest Outage Report, as its purpose is to ensure that outages are properly coordinated in the Operations Planning Time Horizon and Near-Term Transmission Planning Horizon. Outage coordination in the Operations Planning Time Horizon supports the needs of the Transmission Operators and the Reliability Coordinators to plan for reliable next-day operations, as required by the proposed TOP-002-4 and IRO-008-2. Specific considerations related to each finding are included below.

Finding #1: Failure to Conduct and Share Next-Day Studies

The Southwest Outage Report concluded that not all of the affected Transmission Operators conduct next-day studies or share their studies with the neighboring Transmission Operator and the Reliability Coordinator. Accordingly, recommendation #1 suggested that all Transmission Operators should conduct next-day studies and share the results with neighboring Transmission Operators and the Reliability Coordinator (before the next day). This measure was proposed to ensure that all contingencies that could affect the Bulk-Power System are studied.

[50] The standard drafting team referenced the definition of "Operations Planning Time Horizon" to group items. This definition includes "operating and resource plans from day-ahead up to and including seasonal."

The proposed language of TOP-002-4, Requirements R1, R3, and R6 directly addresses this recommendation by requiring Transmission Operators to conduct next-day studies (Requirement R1), share the results of the studies with the registered entities identified in the Operating Plan(s) (Requirement R3), and provide the results to the Reliability Coordinator (Requirement R6).

Finding #2: Lack of Updated External Networks in Next-Day Study Models

The Southwest Outage Report determined that when conducting next-day studies, some affected Transmission Operators used models that do not reflect next-day operating conditions external to their systems. Recommendation #2 stated that Transmission Operators and Balancing Authorities update their studies to reflect these conditions. Such external operating conditions include generation and transmission outages and scheduled Interchanges.

Proposed Reliability Standards TOP-002-4, Requirement R1 and TOP-003-3 Requirement R1, Part 1.1, and the proposed definition of Operational Planning Analysis address this particular reliability concern. Specifically, TOP-002-4 Requirement R1 requires the Transmission Operators to have Operational Planning Analysis for the next day, which under the proposed definition includes external operating conditions like Interchange data, transmission and generator outages, and identified equipment limitations. In addition, proposed Reliability Standard TOP-003-3 Requirement R1, Part 1.1 requires Transmission Operators to maintain a documented specification for the data they need to support Operational Planning Analyses, including external network data.

Furthermore, recommendation #2 suggested that Transmission Operators and Balancing Authorities should take the necessary steps to allow free exchange of next-day operational data between operating entities. TOP-003-3 Requirements R1, R2 and R5 address this reliability issue. Requirement R1 directs Transmission Operators to maintain data specification for the data necessary to perform Operational Planning Analysis, and Requirement R2 establishes a similar obligation for Balancing Authorities. Requirement R5 requires Transmission Operators, Balancing Authorities, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Owners, and Distribution Providers to satisfy any requests for information included in the proposed Reliability Standard that are necessary for completion of the required Operational Planning Analysis.

The same recommendation also concluded that the Reliability Coordinators should review the procedures for coordinating next-day studies within their region, ensure adequate data exchange among Balancing Authorities and Transmission Operators, and facilitate the next-day studies conducted by Balancing Authorities and Transmission Operators. This issue is addressed in proposed IRO-008-2 R2, which directs Reliability Coordinators to have coordinated Operating Plans(s) for next-day operations. These coordinated Operating Plans aim to timely and adequately address reliability issues identified in the next-day Operational Planning Analysis.

Finding #3: Sub-100 kV Facilities not Adequately Considered in Next-Day Studies

In the Southwest Outage Report, NERC and FERC staff determined that in conducting next-day studies, some Transmission Operators do not adequately consider lower-voltage facilities below 100 kV. Recommendation #3 stated that Transmission Operators and Reliability Coordinators should ensure their next-day studies include all internal and external facilities (including those below 100 kV) that can affect Bulk-Power System reliability. Proposed TOP-003-3 R1.1 and IRO-010-2 R1.1 address this by specifically requiring Transmission Operators and Reliability Coordinators to incorporate any non-Bulk Electric System data deemed necessary into their Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Finding #4: Flawed Process for Estimating Scheduled Interchanges

During the 2011 Southwest Outage investigation, NERC and FERC staff determined that the Reliability Coordinator process for estimating scheduled Interchanges was not adequate to ensure that such values were accurately reflected in the Reliability Coordinator's next-day studies. Recommendation #4 suggested that the Reliability Coordinator involved in the event should improve its process for predicting Interchanges in the day-ahead timeframe. In the proposed definition of Operational Planning Analysis, Interchange data is an included input of next-day studies, which addresses this recommendation.

Finding #5: Lack of Coordination in Seasonal Planning Process

The Southwest Outage Report concluded that due to a lack of coordination in the seasonal planning process in the Western Electricity Coordinating Council ("WECC") region, Transmission Operators may fail to identify contingencies in one subregion that could affect other Transmission Operators in the same or another subregion. Recommendation #5 addresses this issue by recommending that the individual Transmission Operators should conduct a full contingency seasonal analysis to identify contingencies outside their own systems and share the analysis with the other affected Transmission Operators.[51]

Proposed Reliability Standards TOP-003-3, Requirement R1 and TOP-002-4, Requirement R3 address coordination of operational planning among Transmission Operators by requiring Transmission Operators to gather external data deemed necessary to perform analysis and share the results of the studies with the affected entities. Furthermore, proposed Reliability Standard IRO-017-1 requires Reliability Coordinators to establish an outage coordination process that will

[51] This recommendation also included language related to actions of the WECC Regional Entity. This section of the recommendation was not considered by the standard drafting because it is not applicable to Reliability Coordinators, Transmission Operators and Balancing Authorities and falls outside the scope of Project 2014-03.

identify and resolve transmission and generation planned outage issues in the Operations Planning Time Horizon, which includes next-day and seasonal planning periods that have the potential to impact the Reliability Coordinator's wide-area.

Finding #6: External and Lower-Voltage Facilities not Adequately Considered in Seasonal Planning Process

The Southwest Outage Report concluded in recommendation #6 that the focus of Transmission Operator seasonal planning should be expanded to include external facilities and internal and external sub-100 kV facilities that affect Bulk-Power System reliability. This reliability concern is addressed in TOP-003-3, Requirement R1, which requires Transmission Operators to obtain external network and sub-100 kV data deemed necessary for use in Operational Planning Analyses. Additionally, the outage coordination process established by Reliability Coordinators, as required by proposed IRO-017-1, must specifically address wide-area issues. In this manner, the proposed Reliability Standards collectively ensure that the scope of operations planning from day-ahead up to and including seasonal planning extends beyond the individual Transmission Operator Area and is coordinated across the Reliability Coordinator Area. Furthermore, proposed Reliability Standard IRO-017-1, Requirement R1 specifies that the Reliability Coordinator's outage coordination process must include a process for resolving planned outage conflicts with other Reliability Coordinators.

Finding #7: Failure to Study Multiple Load Levels

The Southwest Outage Report determined that Transmission Operators in WECC do not always conduct their individual planning studies based on multiple base cases, and as a result, some contingencies could be missed and excluded from the studies. FERC and NERC staff suggested in recommendation #7 that Transmission Operators include in their seasonal studies multiple base cases and generation maintenance outages, as well as dispatch scenarios during high-load shoulder periods. The standard drafting team addressed this issue by including a broader definition of Operational Planning Analysis, under which projected system conditions such as load forecasts and generation output levels must be considered by Transmission Operators and Reliability Coordinators. Such projected system conditions would include generator outages and high-load periods. Additionally, the outage coordination process established by Reliability Coordinators as required by proposed IRO-017-1 must specifically define a process to evaluate the impact of transmission and generation planned outages within the wide-area. The Reliability Coordinator's outage coordination process covers the Operations Planning Time Horizon, which spans from day-ahead up to and including seasonal planning.

Finding #8: Not Sharing Overload Relay Trip Setting

Recommendation #8 of the Southwest Outage Report recommended that Transmission Operators include in the information they share during the seasonal planning process the overload relay trip settings on transformers and transmission lines that affect the Bulk-Power System. This reliability concern is addressed in proposed Reliability Standards TOP-003-3, Requirement R1 and TOP-002-4, Requirement R3, and in the associated definition of Operational Planning Analysis. TOP-003-3, Requirement R1 requires Transmission Operators to maintain provisions for notification of current Protection System and Special Protection System status or degradation that affects system reliability. The proposed Reliability Standard TOP-002-4, Requirement R3 requires sharing of the study results among the Transmission Operators. Furthermore, the definition of Operational Planning Analysis explicitly requires that Protection Systems be included in the pre-and-post contingency studies.

Additionally, the Reliability Coordinators must specifically define a process to evaluate the impact of transmission and generation planned outages within the wide-area as required by proposed IRO-017-1. This process would include relevant system inputs necessary to evaluate the impact of transmission and generation planned outages on the reliable operation of the Bulk Power System. The Reliability Coordinator's outage coordination process covers the Operations Planning Time Horizon, which spans from day-ahead up to and including seasonal planning.

2. Near-and-long term planning

Finding #9: Gaps in Planning Process

Recommendation #9 of the Southwest Outage Report recommended that Transmission Operators[52] develop study cases that cover critical system conditions over the planning horizon; consider the benefits and potential adverse effects of all Protection Systems, including remedial action schemes (RASs), Safety Nets (such as the San Onofre Nuclear Generating Station (SONGS) separation scheme), and overload protection schemes; study the interaction of RASs and Safety Nets; and consider the impact of elements operated at less than 100 kV on Bulk-Power System reliability. This reliability concern is addressed in proposed Reliability Standard TOP-003-3, Requirement R1, Part 1.1 and 1.2 and the proposed definition of Operational Planning Analysis, as discussed above.

3. Situational Awareness

Finding #11: Lack of Real-Time External Visibility

NERC and FERC staff concluded in the Southwest Outage Report that Transmission Operators have limited real-time visibility outside their systems and lack adequate situational awareness of external contingencies. Accordingly, recommendation #11 proposed that Transmission Operators engage in more real-time data sharing and obtain sufficient data to monitor significant external facilities in real-time. Proposed Reliability Standard TOP-003-3 addresses

---

[52] This recommendation is also applicable to Planning Coordinators and Transmission Planners, which fall outside the scope of Project 2014-03. Recommendation #9 includes language applicable specifically to WECC Regional Entity, which is also outside the scope of the proposed Reliability Standards. Recommendation #10 is not applicable and was not considered by the standard drafting team.

this issue by requiring Transmission Operators to include external network data in their data specifications for Operational Planning Analyses.

In addition, recommendation #11 advised that Transmission Operators review their real-time monitoring tools, such as state estimator and real-time contingency analysis ("RTCA"), to ensure that such tools reflect the critical facilities needed for the reliable operation of the Bulk Power System. The language in proposed Reliability Standard TOP-001-3, Requirement R13 addresses this reliability concern by requiring Transmission Operators to perform a Real-time Assessment at least once every 30 minutes. Furthermore, the proposed definition of Real-time Assessment includes an assessment of potential post-contingency operating conditions.

Finding #12: Inadequate Real-Time Tools

In recommendation #12, FERC and NERC staff advised that Transmission Operators should take measures to ensure that their real-time tools are adequate, operational, and run frequently enough to provide their operators the situational awareness necessary to identify and plan for contingencies and reliably operate their systems. Proposed Reliability Standard TOP-001-3, Requirement R13, as described in detail above, is designed to resolve this specific issue by requiring Transmission Operators to ensure a Real-time Assessment is performed at least once every 30 minutes.

Finding #13: Reliance on Post-Contingency Mitigation Plans

The Southwest Outage Report determined that post-contingency mitigation plans are not viable under all circumstances and suggested in recommendation #13 that Transmission Operators review existing operating processes and procedures to ensure that post-contingency mitigation plans reflect the time necessary to take mitigating actions to return the system to a secure state. Proposed Reliability Standards TOP-002-4, Requirement R2 and TOP-001-3, Requirement R14 resolve this issue by requiring Transmission Operators to have an Operating Plan to address SOL exceedances, and initiate the Operating Plan to mitigate an exceedance as part of its real-time monitoring or assessment.

In addition, the standard drafting team has developed a white paper on SOL definition and exceedance criteria (the "SOL White Paper"), which clarified the standard drafting team's position on establishing and exceeding SOLs, and on implementing Operating Plans to mitigate exceedances.[53] The SOL White Paper provides important linkages between relevant reliability standards and reliability concepts to establish a common understanding necessary for developing effective Operating Plans to mitigate SOL exceedances.

Finally, recommendation #13 advised that as part of the review of existing operating processes and procedures, Transmission Operators should consider the effect of relays that automatically isolate facilities without providing operators sufficient time to take mitigating measures. This reliability concern is addressed in proposed Reliability Standard TOP-003-3, Requirement R1, and the proposed definitions of Operational Planning Analysis and Real-time Assessment, which collectively require the acquisition of Protection System data, such as relays that automatically isolate facilities, as an item to be included in the TOP studies.

> *Finding #15: Failure to Notify WECC Reliability Coordinator and the Neighboring Transmission Operators Upon Losing Real Time Contingency Analysis (RTCA) Capability*

During the 2011 Southwest Outage, at least one affected Transmission Operator lost the ability to conduct RTCA more than 30 minutes prior to, and throughout the course of the event. As a result, recommendation #15 suggested that Transmission Operators should ensure procedures

---

[53] *System Operating Limit Definition and Exceedance Clarification*, White Paper (May 2014). Available at: http://www.nerc.com/pa/Stand/Prjct201403RvsnstoTOPandIROStndrds/2014_03_first_posting_white_paper_sol_exceedance_20140509.pdf

and training[54] are in place to notify WECC Reliability Coordinator and neighboring Transmission Operators and Balancing Authorities promptly after losing RTCA capabilities. Proposed TOP-001-3, Requirement R9, which requires Transmission Operators to notify affected registered entities of outages to monitoring and assessment capabilities, addresses this recommendation.

4. Consideration of Bulk Electric System Equipment

Designation of Bulk Electric System facilities is outside the scope of Project 2014-03. The proposed Reliability Standards incorporated non-Bulk Electric System data and facilities monitoring where necessary for the reliable operation of the Bulk Electric System, as shown below.

Finding #17: Impact of Sub-100 kV Facilities on Bulk Power System Reliability

The Southwest Outage Report determined that WECC Reliability Coordinator and affected Transmission Operators and Balancing Authorities did not consistently recognize the adverse impact sub-100 kV facilities could have on Bulk-Power System reliability. Recommendation #17 concluded that WECC, as the Reliability Coordinator, should lead other entities, including Transmission Operators and Balancing Authorities, to ensure that all facilities that can adversely impact Bulk-Power System reliability are either designated as part of the Bulk Electric System or otherwise incorporated into planning and operations studies, and actively monitored and alarmed in RTCA systems.

With respect to sub-100 kV facilities, the standard drafting team determined that any sub-100 kV elements that is necessary for reliable operation of the Bulk Electric System would be included as Bulk Electric System facilities through the exception process provided in Appendix

---

54 The training issue falls outside of the scope of Project 2014-03.

5C to the NERC Rules of Procedure.[55] The exception process provides the means for Transmission Operators and Reliability Coordinators to include Elements in the Bulk Electric System that are necessary for the reliable operation of the interconnected transmission system but were not identified in the Bulk Electric System definition.[56] Accordingly, the standard drafting team concluded it is unnecessary to include non-Bulk Electric System monitoring. In addition, proposed Reliability Standard TOP-001-3, Requirement R10 requires Transmission Operators to monitor Facilities within their Transmission Operator Area, and to obtain information deemed necessary by the Transmission Operator about such Facilities located outside of the Transmission Operator Area when determining SOL exceedances.

When non-Bulk Electric Facilities have no impact on the Bulk Electric System, but are needed for completing system models, then the Commission-approved FAC-001-2, Requirement R3 addresses the issue. This Reliability Standard requires the Reliability Coordinator to include in its methodology its entire Reliability Coordinator Area and critical modeling details from other Reliability Coordinator Areas that would affect the Facility under study. In addition, the Reliability Coordinator must include details of system models used to determine SOLs.

---

55 *Revisions to Electric Reliability Organization Definition of Bulk Electric System and Rules of Procedure*, Order No. 773, 141 FERC ¶ 61,236 (2012), *order on reh'g*, Order No. 773-A, 143 FERC ¶ 61,053 (2013), *order on reh'g and clarification*, 144 FERC ¶ 61,174 (2013); *Revisions to Electric Reliability Organization Definition of Bulk Electric System and Rules of Procedure*, 143 FERC ¶ 61,231, at P 13 (2013).

56 In approving the exception process, the Commission stated:

> We believe that entities, having knowledge of their systems and the concomitant planning assessments and system impact studies, will identify an element that is necessary for reliable operation of the integrated transmission network while conducting their day-to-day operations and planning and performing studies. If the element does not fall within the definition, we expect that the entity will submit the element for inclusion through the exception process. Use of this process should ensure that the all sub-100 kV elements, as well as other facilities, necessary for the operation of the interconnected transmission network are included in an 'appropriate and consistent' manner.

Order No. 773 at P 269.

Similarly, proposed Reliability Standard IRO-002-4, Requirement R4 requires each Reliability Coordinator to monitor facilities identified as necessary within its Reliability Coordinator Area and within neighboring Reliability Coordinator Areas, and to identify any SOL exceedances and to determine any IROL exceedances.

Finally, as noted above, the proposed Reliability Standards TOP-003-3, Requirement R1 and IRO-010-2, Requirement R1 incorporate non-Bulk Electric System facilities into the data used by Transmission Operators and Reliability Coordinators to support their analysis.

5. Interconnection Reliability Operating Limit Derivations

Finding #18: Failure to Establish Valid SOLs and Identify IROLs

Recommendation #18.1 of the Southwest Outage Report advised that Reliability Coordinators study IROLs in the day-ahead timeframe and monitor potential IROL exceedances in real-time. Reliability Standard FAC-014-2, Requirement R1 directs the Reliability Coordinator to establish SOLs and IROLs. To address the recommendation, proposed Reliability Standard IRO-008-2, Requirement R1 further specifies that each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed SOLs and IROLs within its wide-area. In addition, IRO-008-2, Requirement R4 requires the Reliability Coordinator to perform a Real-time Assessment of system conditions at least once every 30 minutes.

6. Protection Systems

Findings #19-#26: Related to Coordination of Special Protection Systems and Remedial Action Schemes at the Reliability Coordinator and TOP level

The standard drafting team determined that currently effective Reliability Standard PRC-001 already addresses coordination of Special Protection Systems and Remedial Action Schemes. Thus, any changes to Protection System coordination falls outside the scope of Project 2014-3.

Nevertheless, proposed Reliability Standards TOP-001-3, Requirement R10 and IRO-002-4, Requirement R4 address monitoring of Special Protection Systems and Remedial Action Schemes.[57] TOP-001-3, Requirement R10 Part 10.1 mandates Transmission Operators to monitor Facilities and the status of Special Protection Systems within their Transmission Operator areas, while Part 10.2 mandates the same actions for Facilities outside of a Transmission Operator's area.

7. <u>Angular Separation</u>

Findings #27: Phase Angle Difference Following Loss of Transmission Line

The Southwest Outage Report concluded that one of the Transmission Operators involved in the 2011 Southwest Outage did not have tools in place to determine the phase angle difference between the two terminals of its 500 kV line after the line tripped. Recommendation #27 included several possible actions to address this failure, including a suggestion that the Transmission Operators should have the tools necessary to evaluate phase angle differences following the loss of lines. Although the recommended changes related to phase angle calculation tools fall outside the scope of Project 2014-3 as it is being addressed in Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities, the proposed definition of Operational Planning Analysis and Real-time Assessment include consideration of phase angle and equipment limitations.

D. Consideration of TOP/IRO NOPR Concerns

In its TOP/IRO NOPR, the Commission expressed certain concerns regarding the Pending TOP/IRO Standards and proposed to remand those standards for further consideration in NERC's

---

[57] During the development of the proposed TOP/IRO standards, the terms Remedial Action Scheme and Special Protection System were interchangeable as defined in the NERC Glossary of Terms. On February 3, 2015 NERC filed a petition for approval of revisions to the definition of "*Remedial Action Scheme*" ("RAS"), which proposes to eliminate the defined term Special Protection System. See RM15-13-000. Proposed TOP/IRO standards will be modified as necessary based on the Commission's action in response to NERC's petition in RM15-13-000.

standards development process.[58] The Commission identified "Issues to be addressed" and "Issues Requiring Clarifications." As part of Project 2014-03, the standard drafting team considered the issues raised in the TOP/IRO NOPR and designed the proposed Reliability Standards to address the Commission's concerns. This section discusses the manner in which the proposed Reliability Standards address each of the issues raised in the TOP/IRO NOPR. Additional information is provided in Exhibit G hereto.

1. <u>TOP Reliability Standards – Issues to be Addressed</u>

a. Plan and Operate Within All SOLs

The Commission expressed concern that the Pending TOP/IRO Standards lacked a requirement for Transmission Operators to analyze and operate within all SOLs.[59] Specifically, the Commission stated that while the Pending TOP/IRO Standards require Transmission Operators to plan to operate within all IROLs, they only require Transmission Operators to plan to operate within a limited subset of SOLs identified by the Transmission Operator as necessary to support reliability internal to its area.[60] The Commission maintained that this limitation would reduce system reliability and cause negative consequences external to the Transmission Operator's area.[61] The Commission also expressed the concern that deteriorating system conditions may result in an SOL rapidly degrading into an IROL. The Commission noted further that limiting the analysis to non-IROL SOLs identified internally by the Transmission Operator may "reduce system reliability because operators have less situational awareness of the system and conditions."[62]

---

58 TOP/IRO NOPR at PP 42-99.

59 *Id*. at P 42.

60 *Id*.

61 *Id*. at PP 42, 51.

62 *Id*. at P 52.

The proposed Reliability Standards address the Commission's concerns by requiring Transmission Operators to plan to operate within all SOLs. Proposed Reliability TOP-001-3, Requirement R14 requires "each Transmission Operator to initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment." Further, proposed TOP-001-3, Requirement R15 requires that each Transmission Operator inform its Reliability Coordinator of actions taken to resolve the SOL exceedance. Proposed IRO-008-2, Requirements R1, R2, R5, and R6 now include coverage of SOLs, which resolves the Commission's concern that the previously-proposed Reliability Standards limited "non-IROL SOLs" to only those internally identified by the Transmission Operator.

The Commission also proposed that the Transmission Operator should be required "to have an operational plan to operate within all Bulk-Power System IROLs and SOLs for all cases when facility ratings or stability limits are exceeded during anticipated normal and contingency event conditions."[63] The Commission noted that this operational plan "is needed to ensure that a Transmission Operator operates in, or can return its system to, a reliable operating state" and that a Transmission Operator should have plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state.[64]

To address the Commission's concerns,[65] proposed Reliability Standard TOP-002-4 requires, among other things, that Transmission Operators have: (1) an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its SOLs; and (2) an Operating Plans for next-day operations to address potential SOL exceedances identified as a result of its Operational Planning

63 TOP/IRO NOPR at P 54.

64 *Id*. at P 54.

65 *Id*.

Analysis. Further, as noted above, proposed Reliability TOP-001-3, Requirement R14 requires Transmission Operators to initiate their Operating Plans to mitigate any SOL exceedances identified as part of its Real-time monitoring or Real-time Assessment."

The Commission also raised the concern that the Pending TOP/IRO Standards do not consider the possibility that additional SOLs could develop or occur in the same-day or Real-time operational time horizon, and therefore would pose an operational risk to the interconnected transmission network.[66] The Commission's concern is addressed in proposed Reliability Standard TOP-001-3, where operational responsibilities and actions pertaining to IROLs and SOLs are established for the real-time operational time horizon.

2. TOP Reliability Standards – Issues Requiring Clarification[67]

a. System Models, Monitoring and Tools

The Commission raised a concern about NERC's proposed retirement (on redundancy grounds) of TOP Reliability Standards associated with system computer models, monitoring equipment, metering, and analysis tools. The Commission stated that

> [m]onitoring and analysis capabilities are essential in establishing and maintaining situational awareness. While NERC indicates that these functions are assured through the certification process, we are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. . . . [C]ertification is a one-time process that may not adequately assure continual operational responsibility would occur if these requirements were in a Reliability Standard.[68]

66 TOP/IRO NOPR at P 55.

67 In addition to the Issues Requiring Clarification discussed below, the Commission requested clarification on issues related to Reliability Standard PRC-001. As discussed above, issues related to PRC-001 are being addressed in a separate project.

68 TOP/IRO NOPR at P 60.

The Commission stated that the retirement of certain requirements in the currently effective IRO and TOP Reliability Standards addressing monitoring and analysis capabilities should not occur before the completion of NERC Project 2009-02.[69]

Proposed Reliability Standard TOP-001-3, Requirements R10 and R11 address this concern by adapting currently effective Reliability Standard IRO-003-2, Requirement R1 to Transmission Operators and Balancing Authorities. Specifically, TOP-001-3, Requirement R10 obligates each Transmission Operator to determine SOL exceedances within its Transmission Operator Area by monitoring facilities and the status of Special Protection Systems, and obtaining and using status, voltages and flow data for facilities and the status of Special Protection Systems outside of its Transmission Operator Area. Similarly, Requirement R11 directs each Balancing Authority to monitor its Balancing Authority Area, including the status of Special Protection Systems that affect generation or load, to maintain generation-load-interchange balance within its Balancing Authority Area and support interconnection frequency. Further, proposed Reliability Standard TOP-001-3, Requirement R13 also adapt currently effective Reliability Standard IRO-008-1, Requirement R2 to the Transmission Operator, requiring each Transmission Operator to perform a Real-time Assessment at least once every 30 minutes.

The proposed changes to Reliability Standard TOP-001-3, Requirements R10, R11 and R13 address the Commission's concerns about the retirement of the currently effective IRO and TOP requirements creating gaps on monitoring and analysis capabilities before the completion of Project 2009-02. Therefore, NERC does not propose a schedule as directed by the Commission to complete and implement Project 2009-02 prior to retiring these requirements.[70]

---

69 TOP/IRO NOPR at P 61.

70 *Id*.

b. Compliance with Reliability Directives

The Commission expressed concern with NERC's proposed definition of "Reliability Directive" that could be interpreted as limiting the obligation to comply with Transmission Operator directives in emergencies only.[71] As discussed above, the proposed Reliability Standards used the proposed term "Operating Instruction" to provide additional clarity and specification to the circumstances under which entities must comply with a Transmission Operator's commands.

c. Consideration of External Networks and sub-100 kV Facilities and Contingencies in Operational Planning Analysis

The Commission expressed concerns that the Pending TOP/IRO Standards were unclear on the need for including external networks or sub-100 kV facilities in the Operational Planning Analysis conducted by Transmission Operators.[72] The proposed TOP Reliability Standards address this concern as follows. Proposed Reliability Standard TOP-003-3 requires each applicable entity to develop a data specification that would cover its data needs for monitoring and analysis purposes, including non-Bulk Electric System data and external network data deemed necessary by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments (see Requirement R1, Part 1.1). Further proposed TOP-003-3, Requirement R5 requires Transmission Operators to supply data to Transmission Operator, thus making it clear that a Transmission Operator may request and receive data from outside of its immediate area. Similar requirements are proposed in IRO-010-2, Requirement R1, Part 1.1 for Reliability Coordinators.

[71] TOP/IRO NOPR at P 64.

[72] *Id*. at P 68.

The Commission also noted that Order No. 693 contained a directive to modify the TOP Reliability Standards for planned outage coordination to consider sub-100 kV facilities that the registered entity viewed as having a direct impact on Bulk-Power System reliability.[73] The Southwest Blackout Report recommended similar treatment of sub-100 kV facilities and external networks to ensure that Transmission Operators' next-day studies include all external networks and facilities that could affect the reliability of the Bulk-Power System.[74] Proposed Reliability Standard IRO-017-1 addresses outage coordination among the Reliability Coordinator, Transmission Operator, Balancing Authority, Planning Coordinator, and Transmission Planner. Together with the data specification requirements in proposed Reliability Standards TOP-003-3 and IRO-010-2, proposed Reliability Standard IRO-017-1 would help ensure that the outage coordination process established by Reliability Coordinator will consider sub-100 kV facilities that the relevant entities view as having a direct impact on Bulk-Power System reliability.

d. Operating to Respect the Most Severe Single Contingency in Real-Time Operations and Unknown Operating States

In the NOPR, the Commission expressed concern with the proposed retirements of TOP-004-2, Requirements R2 and R4, which include "three key rules, the requirements to be ready for the single largest contingency, to move quickly from an 'unknown operating state' to within proven limits, and to determine the cause of SOL violations in all time-frames, including real-time."[75] The proposed Reliability Standards maintain the reliability objective of operating to the most severe single contingency by requiring monitoring, notification, and actions to operate within

73 *See* TOP/IRO NOPR at P 68 (citing Order No. 693 at P 1624).

74 *See Id*. at P 68 (citing 2011 Southwest Outage Report, recommendation Nos. 2 and 3).

75 *Id*. at P 73. The Commission stated that "these three rules represent the bedrock core of real-time operating rules and practices, and it is therefore incumbent upon NERC to provide a more thorough and comprehensive explanation of how the proposed replacement standards compare in meeting the same objectives as the current standards."

SOLs and IROLs as discussed in preceding sections. Further, the FAC Reliability Standards currently require that SOLs provide a certain level of Bulk Electric System performance for the pre- and post-Contingency state. Additionally, the proposed definitions of "Real-time Assessment" and "Operational Planning Analysis" are strengthened to include Contingency conditions in the evaluations as follows:

> An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

The proposed Reliability Standards require Transmission Operators to plan to operate within SOLs and to initiate Operating Plans to mitigate SOL exceedances. The Commission noted that a reliability objective should be to move quickly from an 'unknown operating state' to within proven limits.[76] The standard drafting team considers that, operationally, there always will be limits in service, and an operator should be obligated to adhere to the set of limits in service at the time a situation arises. The Commission's concern about an "unknown operating state" is addressed in proposed Reliability Standard TOP-001-3 and the SOL White Paper, attached as Exhibit E hereto, which explains how an SOL exceedance is determined and what entities do upon experiencing such an exceedance. Proposed Reliability Standard TOP-001-3, Requirement R13 specifies that Transmission Operators must perform a Real-time Assessment at least once every 30 minutes, which by definition is an evaluation of system conditions to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The Real-time Assessment

[76] TOP/IRO NOPR at P. 73

provides the Transmission Operator with the necessary knowledge of the system operating state to initiate an Operating Plan, as specified in Requirement R14, when necessary to mitigate an exceedance of SOLs, as described in the SOL White Paper. The SOL White Paper provides technical guidance for including timelines in the required Operating Plans to return the system to within prescribed ratings and limits.

Further, proposed Reliability Standard TOP-001-3, Requirements R12 and R13 address this concern by prohibiting a Transmission Operator from operating outside any IROL for a continuous duration exceeding its associated IROL T_v (Requirement R12), and requiring that a Transmission Operator perform a Real-time Assessment at least once every 30 minutes (Requirement R13).

The Commission noted that importance of determining 'the cause of SOL violations in all time-frames, including real-time." Proposed Reliability Standard TOP-001-3, Requirement R10 addresses this point by ensuring appropriate action is taken to mitigate an exceedance, but does not specifically require that the cause of the violation must be determined in real-time. Instead, real-time efforts should be focused on resolving the exceedance with causes investigated, analyzed, and determined later and off-line. Pursuant to the revised definition of Real-time Assessment and proposed TOP-001-3, Requirement R13, which requires that a Transmission Operator perform a Real-time Assessment at least every 30 minutes, NERC believes that the Real-time Assessment conducted by Transmission Operators is sufficient for identifying "cause" for operators in Real-time.

Questions posed by the Commission with regard to the impact and usefulness of the proposed Real-time Assessment on smaller entities, who often maintain similar reliability based on operator experience,[77] are also addressed by the flexibility that provided in proposed Reliability Standard TOP-001-3, Requirement R13. Requirement R13 requires that a Real-time Assessment be performed every 30 minutes or less, but it does not mandate how it should be done. This requirement would allow smaller entities the flexibility to devise their own methods to comply with the requirement, including contracting with others to provide these services on their behalf.

e. Notification of Emergencies

In the NOPR, the Commission identified potential inconsistencies and ambiguities resulting from terminology used in the Pending TOP standards.[78] Proposed Reliability Standard TOP-001-3 uses the defined term "Emergency" in places where the Commission identified ambiguity, and applies the term to all operating time horizons. Further, the term Adverse Reliability Impact was eliminated from the proposed standard.

f. Primary Decision-Making Authority for Mitigation of IROLs/SOLs

The Commission sought clarification and technical explanation of whether Transmission Operators or Reliability Coordinators have primary responsibility for IROLs.[79] NERC hereby clarifies that the Reliability Coordinator has primary responsibility for IROLs, and the Transmission Operator has primary responsibility for SOLs, although the Reliability Coordinator must provide oversight on SOLs, as well as assistance in mitigating SOLs, as necessary. This split in responsibilities is important for the preservation of reliability within the Bulk Electric System

---

77 TOP/IRO NOPR at P 74.

78 *Id*. at P 80-83.

79 *Id*. at P 87.

and consistent with the NERC functional model. The proposed Reliability Standards were designed to be consistent with these roles.

3. IRO Reliability Standards – Issues to be Addressed

a. Planned Outage Coordination

The Commission identified coordination of outages as "a critical reliability function that should be performed by the Reliability Coordinator" that is not adequately addressed in the Pending TOP/IRO Standards.[80] Proposed Reliability Standard IRO-017-1 addresses the Commission's NOPR concerns. Under the proposed standard, each Reliability Coordinator is required to develop, implement and maintain an outage coordination process for generation and transmission outages in its Reliability Coordinator Area. Each Transmission Operator and Balancing Authority, in turn, would be required to perform the functions specified in its Reliability Coordinator's process. Further, each Planning Coordinator and Transmission Planner will provide its Planning Assessment to relevant Reliability Coordinators and work together to solve any issues or conflicts with planned outages among the applicable entities. Additionally, proposed Reliability Standard IRO-014-3, Requirement R1, Part 1.4 requires Reliability Coordinators to include the exchange of planned and unplanned outage information to support Operational Planning Analyses and Real-time Assessments in the Operating Procedures, Processes, and Plans for activities that require coordination with adjacent Reliability Coordinators.

[80] TOP/IRO NOPR at P 90.

4. <u>IRO Reliability Standards – Issues Requiring Clarification</u>

a. Use of a Secure Data Network

The Commission sought assurance that the Pending TOP/IRO Standards provided for data exchange and notifications among Reliability Coordinators, Transmission Operators and Balancing Authorities "using a secure mode in a secure environment."[81] Proposed Reliability Standard TOP-003-3, Requirement R5, Part 5.3 and proposed IRO-010-2, Requirement R3, Part 3.3 specify that security is to be part of a data specification, and to be mutually agreed upon by the applicable registered entities. This proposed change makes clear that the data exchange and notifications among Reliability Coordinators, Transmission Operators, and Balancing Authorities "will be conducted using a secure mode in a secure environment."

b. Reliability Coordinator Monitoring of SOLs and IROLs

The Commission expressed concerns with proposed changes to the obligation of Reliability Coordinators to monitor SOLs in the currently effective IRO Reliability Standards.[82] The proposed Reliability Standards maintain the obligations for Reliability Coordinators to monitor SOLs. Specifically, proposed Reliability Standard IRO-002-4, Requirement R3 requires each Reliability Coordinator to monitor facilities, Special Protection Systems, and necessary non-Bulk Electric System facilities in order to identify SOL and IROL exceedances within its Reliability Coordinator Area.

E. Consideration of Outstanding Commission Directives

In developing the proposed Reliability Standards, the standard drafting team also addressed outstanding Commission directives relevant to the proposed Reliability Standards. Exhibit H

81 TOP/IRO NOPR at P 94.

82 *Id*. at P 96.

hereto provides a list of these outstanding directives and a description of the manner in which the standard drafting team addressed these directives. The following is a brief discussion of how the proposed Reliability Standards address the notable outstanding directives.

1. Outstanding Directives Related to the IRO Reliability Standards

- The Commission directed NERC to consider clarifying the requirement in IRO-001-1 that entities comply with a Reliability Coordinator's directive "unless such actions would violate safety, equipment or regulatory or statutory requirements."[83] As discussed above, that requirement is carried forward in proposed Reliability Standard IRO-001-4. The standard drafting team clarified during the development of the standard that the term "safety" should be read broadly to encompass the safety of both personnel and equipment and that no additional wording is needed.

- The Commission also directed NERC to consider stakeholder comments regarding the establishment of a chain of command so that, for example, if a Generator Operator receives conflicting instructions from a Balancing Authority and a Transmission Operator, it can determine which instruction governs.[84] The standard drafting team concluded that no additional medications to the proposed Reliability Standards are necessary. If Generator Operator receives conflicting Operating Instructions, the Generator Operator should contact the Reliability Coordinator for clarification. The NERC Functional model refers to the Reliability Coordinator as overall authority.

- The Commission also directed NERC to consider stakeholder comments that Reliability Standard IRO-001-1 fails to address the operational limitations of qualifying facilities ("QFs") because QFs have contractual obligations to provide thermal energy to their industrial hosts and can only be directed to change operations only in the case of a system emergency, pursuant to 18 CFR § 292.307.[85] The standard drafting team concluded that no modifications to the proposed Reliability Standards were necessary because while a Reliability Coordinator can direct a QF to act in accordance with an Operating Instructions, the proposed Reliability Standards do not require a QF to comply if it would violate the QFs regulatory or statutory requirements.

- The Commission directed NERC to modify Reliability Standard IRO-002-1 to require a minimum set of tools that must be made available to the Reliability Coordinator.[86] This directive was beyond the scope of Project 2014-03 and is being addressed in a separate

---

83 Order No. 693 at P 897.

84 *Id*. at P 897.

85 *Id*.

86 *Id*. at P 905.

standards development project (Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities).

- The Commission directed NERC to develop a modification to Reliability Standard IRO-003-1 to create criteria to define the term "critical facilities" in a Reliability Coordinator's area and its adjacent systems.[87] The proposed Reliability Standards no longer use the term "critical facilities." As discussed above, proposed Reliability Standard IRO-010-2 provides a mechanism for Reliability Coordinators to obtain data necessary to perform its reliability tasks, obviating the need for specific criteria for determining critical facilities.

- The Commission directed NERC to modify Reliability Standard IRO-004-1 to require the next-day analysis to identify control actions that can be implemented and effective within 30 minutes after a contingency.[88] As described above, this issue is addressed in proposed Reliability Standards IRO-008-2 and TOP-002-4, as well as through the revised definitions of Operational Planning Analysis and Real-time Assessment. In short, SOLs must be controlled according to the Operating Plan, which is set up on time-based facility ratings. IROLs are controlled to the IROL Tv, which by definition is always less than 30 minutes. Commission-approved Reliability Standard IRO-009-1, also addresses this issue.

- The Commission directed NERC to include a requirement for the Reliability Coordinator to assess and approve actions that have impacts beyond the area views of Transmission Operators or Balancing Authorities, including how to determine whether an action needs to be assessed by the Reliability Coordinator.[89] Proposed Reliability Standard IRO-008-2, Requirements R2 and R5 address this directive by requiring Reliability Coordinators to (1) have coordinated Operating Plans for next-day operations, and (2) notify impacted Transmission Operators, Balancing Authorities and other Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a SOL or IROL exceedance within its Wide Area.

- The Commission directed NERC to provide clarification in proposed standards that Reliability Coordinators and Transmission Operators direct control actions of entities in their respective areas to respect System Operating Limits and Interconnection Reliability Operating Limits. [90] Proposed Reliability Standard IRO-001-4 Requirement R1 addresses this clarification in the case of the Reliability Coordinator as discussed above. (TOP-001-3 Requirement R1 addresses this clarification in the case of the Transmission Operator).

- In Order No. 693, the Commission also directed NERC to include the Reliability Coordinator as an applicable entity in Reliability Standard VAR-001-1 given its role as the highest level of authority overseeing the reliability of the Bulk-Power System.[91]

---

[87] Order No. 693 at P 914.

[88] *Id*. at P 935.

[89] *Id*. at P 525.

[90] *Id*. at P 950.

[91] *Id*. at P 1855.

Although the directive related to the VAR standards, because the IRO standards address the Reliability Coordinator's oversight of Bulk-Power System facilities, the standard drafting team concluded that this directive is addressed in proposed Reliability Standard IRO-002-4, Requirement R3, which requires the Reliability Coordinator to monitor facilities, which would include voltage and reactive power resources.

- Similarly, the Commission directed NERC to develop a modification to INT-006-1 that makes it applicable to Reliability Coordinators and Transmission Operators, requiring them to review energy interchange transactions from the wide-area and local area reliability viewpoints, respectively, and, where their review indicates a potential detrimental reliability impact, communicate to the sink Balancing Authorities necessary transaction modifications before implementation.[92] Proposed Reliability Standard IRO-008-2 addresses this directive by requiring Reliability Coordinators to perform an Operational Planning Analysis, which requires Reliability Coordinators to consider Interchange, and develop a plan to address any problems. Similar requirements exist for the Transmission Operator in proposed Reliability Standard TOP-002-3.

- Directives pertaining to Reliability Standard PRC-001[93] are being addressed in a separate project to revise that standard.

2. Outstanding Directives Related to the TOP Reliability Standards

- The Commission directed to NERC to modify TOP-001-1 to define the term "emergency."[94] Proposed TOP-001-3 uses the defined term "Emergency" to improve clarity. The standard drafting team concluded that criteria for entering operating states belong in EOP standards, as noted by the Commission in Order 693.[95] Currently enforceable Reliability Standard EOP-002-3.1 - Capacity and Energy Emergencies and proposed Reliability Standard EOP-011-1 contain responsibilities.

- The Commission directed to NERC to consider stakeholder comments to require the Transmission Operator to notify the Reliability Coordinator or the Balancing Authority that it is removing facilities from service.[96] This directive is addressed in proposed Reliability Standard TOP-001-3, Requirement R8, which requires Transmission Operators to inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.

---

92 Order No. 693 at P 866.

93 *Id*. at P 1449.

94 *Id*. at P 1585.

95 *Id*. at P 560.

96 *Id*. at P 1588.

- The Commission directed revisions to TOP-002-2 and TOP-005-1 to deletes references to confidentiality agreements in Requirements R3 and R4, but addresses the issue separately to ensure that necessary protections are in place related to confidential information.[97] As discussed above, proposed Reliability Standards IRO-010-2 and TOP-003-3 address security of data.

- The Commission directed revisions to TOP-002-2 to require the next-day analysis for all IROLs to identify and communicate control actions to system operators that can be implemented within 30 minutes following a contingency to return the system to a reliable operating state and prevent cascading outages.[98] As IROLs are the responsibility of the Reliability Coordinator, this issue is addressed in proposed Reliability Standard IRO-008-2 and Commission-approved Reliability Standard IRO-009-1, as discussed above.

- The Commission directed revisions to TOP-002-2 to require next-day analysis of minimum voltages at nuclear power plants auxiliary power busses.[99] This issue is addressed through proposed Reliability Standards IRO-010-2 and TOP-003-3, which provide Reliability Coordinators and Transmission Operators, respectively, a mechanism to acquire all of the data necessary for them to fulfill their reliability functions including non-Bulk Electric System data, as necessary. Next-day analysis is performed using Operational Planning Analysis.

- The Commission directed revisions to TOP-002-2 to also require simulation contingencies to match what will actually happen in the field.[100] The standard drafting team revised the definitions of Operational Planning Analysis and Real-time Assessment accordingly to require Contingencies to match field conditions.

- The Commission directed NERC to revise TOP-003-0 to require the communication of scheduled outages to all affected entities well in advance to ensure reliability and accuracy of available transmission capability calculations.[101] Proposed Reliability Standard IRO-017-1 addresses this directive by requiring Reliability Coordinators to develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.

- The Commission also directed NERC to revise TOP-003-0 to incorporate an appropriate lead-time for planned outages.[102] The standard drafting team determined that such a requirements is not necessary and could potentially conflict with existing rules in

---

97 Order No. 693 at PP 1608, 1651.

98 *Id*. at P 1608.

99 *Id*.

100 *Id*.

101 *Id*. at P 1620.

102 *Id*. at P 1621.

organized markets. Nevertheless, pursuant to proposed Reliability Standard IRO-017-1, a Reliability Coordinator could include lead times in its process.

- The Commission directed NERC to consider whether to include breaker outages within the meaning of facilities that are subject to advance notice for planned outages.[103] Pursuant to IRO-017-1, a Reliability Coordinator could include breakers in its outage coordination process.

- The Commission also directed modifications to TOP-003-0 to require that any facility below the thresholds in Requirement R1 of that standard that, in the opinion of the Transmission Operator, Balancing Authority, or Reliability Coordinator will have a direct impact on the reliability of the Bulk-Power System be subject to planned outage coordination.[104] Under proposed Reliability Standards IRO-010-2 and TOP-003-3, the Reliability Coordinator and Transmission Operator have a mechanism to obtain the data necessary to perform their reliability tasks, including identifying the appropriate facilities for outage coordination.

- The Commission directed modification to TOP-004-1 to require that the system be restored to respect proven limits as soon as possible taking no more than 30 minutes.[105] This directive is addressed through the more stringent definitions proposed for Operational Planning Analysis, Real-time Assessment, and the requirements in proposed Reliability Standard TOP-004-2 for the Transmission Operator to perform an Operational Planning Analysis as well as a Real-time Assessment every 30 minutes and to create an Operating Plan for mitigation of SOL exceedances.

- The Commission also directed revisions to TOP-004-1 to explicitly incorporate the interpretation of "multiple outages" as multiple element outages resulting from high-risk conditions.[106] The standard drafting team concluded that Commission-approved Reliability Standard EOP-001-2.1b, which covers emergency operations planning, already addresses this directive. In addition, Commission-approved Reliability Standard FAC-011-2 and FAC-014-2 includes specific requirements for dealing with multiple contingencies.

- The Commission also directed NERC to consider stakeholder comments that TOP-004-1, Requirement R2 should be revised to include frequency monitoring.[107] This directive is addressed by proposed Reliability Standards IRO-010-2 and TOP-003-3, which provide Reliability Coordinators and Transmission Operators a mechanism to obtain data on frequency, voltages, real and reactive power flows, and any other data that the entity needs.

---

[103] Order No. 693 at P 1622.

[104] *Id*. at P 1624.

[105] *Id*. at P 1636.

[106] *Id*. at P 1638.

[107] *Id*. at P 1639.

- The Commission directed revisions to TOP-005-1 regarding the operational status of special protection systems and power system stabilizers.[108] The standard drafting team addressed this directive in proposed Reliability Standards IRO-010-2 and TOP-003-3 and in revising the definitions of Operational Planning Analysis and Real-time Assessments. Proposed Reliability Standards IRO-010-2 and TOP-003-3 specifically include a requirement to have provisions for notification of current Protection System and Special Protection System status or degradation.

- The Commission directed revisions to TOP-005-1 to add a requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk-Power System.[109] This directive was beyond the scope of Project 2014-03 and will be addressed in a future standards development project (Project 2009-02 Real-time Monitoring and Analysis Capabilities).

- The Commission directed NERC to clarify the meaning of "appropriate technical information" concerning protective relays as used in TOP-006-1.[110] That term is not used in the proposed Reliability Standards. To address concerns about the status of protection systems, the standard drafting team incorporated explicit references in the definitions of Operational Planning Analysis and Real-time Assessment and the data specification standards (i.e., proposed Reliability Standards IRO-010-2 and TOP-003-3).

- The Commission directed NERC to consider the Nuclear Energy Regulatory Commission's comments related to nuclear power plant voltage requirements.[111] Under proposed Reliability Standards TOP-002-3 and TOP-001-3, applicable entities must study minimum voltage limits, including those at nuclear plants.

In addition to the directives addressed by the standards drafting team, discussed above, NERC also notes that it resolved two directives from Order No. 748[112] that relate to the issues addressed by the proposed Reliability Standards. First, the Commission directed the NERC Reliability Coordinator Working Group to consider whether the need exists to refine the delineation of responsibilities between the Reliability Coordinator and Transmission Operator for

108 Order No. 693 at P 1648.

109 *Id*. at PP 1660, 1875.

110 *Id*. at P 1665.

111 *Id*. at P 1673.

112 *Mandatory Reliability Standards for Interconnection Reliability Operating Limits,* Order No. 748, 134 FERC ¶ 61,213 (2011).

analyzing certain "grid-impactive" SOLs that are of interest to the Reliability Coordinator.[113] Second, the Commission directed the NERC Reliability Coordinator Working Group to consider whether there is a need for reliability coordinators to have action plans developed and implemented with respect to certain "grid-impactive" SOLs that are of interest to the Reliability Coordinator.[114]

The working group, which included participation from the NERC Operating Committee and stakeholders, concluded that there was no need to create another category between IROL and SOL called "grid-impactive" SOLs. The working group determined that such a category could not be clearly defined and consequently did not support changes to the currently effective IRO standards. In addition to the working group action, the directives are addressed by proposed IRO-008-2 Requirements R1 and R2, which require the Reliability Coordinator to (1) analyze both SOLs and IROLs, as discussed above, and (2) must have a coordinated operating plan to address potential SOL and IROL exceedances which considers the operating plans provided by the Transmission Operators.

F. Enforceability of Proposed Reliability Standards

The proposed Reliability Standards also include measures that support each requirement by clearly identifying what is required and how the ERO will enforce the requirement. These measures help ensure that the requirements will be enforced in a clear, consistent, and non-preferential manner and without prejudice to any party.[115]

The proposed Reliability Standards also include VRFs and VSLs. The VRFs and VSLs provide guidance on the way that NERC will enforce the requirements of the proposed Reliability Standards. The VRFs and VSLs for the proposed Reliability Standards comport with NERC and

---

113 Order No. 748 at P 44.

114 *Id*. at P 55.

115 Order No. 672 at P 327.

Commission guidelines related to their assignment. Exhibit J provides a detailed review of the VRFs and VSLs, and the analysis of how the VRFs and VSLs were determined using these guidelines.

V. CONCLUSION

For the reasons set forth above, NERC respectfully requests that the Commission approve:

- the proposed Reliability Standards and associated elements included in Exhibit A;
- the proposed revised definitions to be incorporated into the NERC Glossary, included in Exhibit A; and
- the proposed Implementation Plan, including the noted retirements, included in Exhibit B.

Respectfully submitted,

/s/ Shamai Elstein

Exhibit A

Proposed Reliability Standards and Definitions

Reliability Standard IRO-001-4

A. Introduction

1. **Title**: Reliability Coordination – Responsibilities
2. **Number**: IRO-001-4
3. **Purpose:** To establish the responsibility of Reliability Coordinators to act or direct other entities to act.
4. **Applicability**
   - **4.1.** Reliability Coordinator
   - **4.2.** Transmission Operator
   - **4.3.** Balancing Authority
   - **4.4.** Generator Operator
   - **4.5.** Distribution Provider
5. **Effective Date:**

   See Implementation Plan.
6. **Background:**

   See the Project 2014-03 project page.

B. Requirements and Measures

R1. Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions. *[Violation Risk Factor: High][Time Horizon: Same-Day Operations, Real-time Operations]*

M1. Each Reliability Coordinator shall have and provide evidence which may include but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions.

R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-time Operations]*

M2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's Operating Instructions, unless the instruction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's Operating Instructions. If such a situation has not occurred, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider may provide an attestation.

R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator of its inability to perform the Operating Instruction issued by its Reliability Coordinator in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-time Operations]*

M3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed its Reliability Coordinator of its inability to perform an Operating Instruction issued by its Reliability Coordinator in Requirement R1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes:

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1 shall retain voice recordings for the most recent 90-calendar days and documentation for the most recent 12-calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90-calendar days and documentation for the most recent 12-calendar months.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator failed to act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions.
R2	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with the Reliability Coordinator's Operating Instructions, and compliance with the Operating Instructions could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R3	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction issued by its Reliability Coordinator in Requirement R1 .

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

None.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Rationale for Applicability:
Purchasing-Selling Entity and Load-Serving Entity have been deleted from the approved IRO-001-1.1 as they are not listed as entities that the Reliability Coordinator directs in Functional Model v5.

Rationale for Change from Reliability Directive to Operating Instruction:
The change from Reliability Directive to Operating Instruction throughout the standard is in response to NOPR paragraph 64 (…"*We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements). For example, mandatory compliance with directives in non-emergency situations is important when a decision is made to alter or maintain the state of an element on the interconnected transmission network…*") This change is also consistent with the proposed COM-002-4.

Rationale for Requirements R2 and R3:
The Transmission Service Provider has been removed from Requirements R2 and R3 as the Transmission Service Provider is not listed in the Functional Model as a recipient of corrective actions issued by the Reliability Coordinator. This allows for the retirement of IRO-004-2.

Reliability Standard IRO-002-4

A. Introduction

1. **Title:** **Reliability Coordination – Monitoring and Analysis**
2. **Number:** IRO-002-4
3. **Purpose:** Provide System Operators with the capabilities necessary to monitor and analyze data needed to perform their reliability functions.
4. **Applicability**

   4.1. Reliability Coordinator
5. **Effective Date:**

   See Implementation Plan.
6. **Background:**

   See the Project 2014-03 project page.

B. Requirements and Measures

R1. Each Reliability Coordinator shall have data exchange capabilities with its Balancing Authorities and Transmission Operators, and with other entities it deems necessary, for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M1. Each Reliability Coordinator shall have and provide upon request, evidence that could include but is not limited to a document that lists its data exchange capabilities with its Balancing Authorities and Transmission Operators, and with other entities it deems necessary, for it to perform its operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

R2. Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its telecommunication, monitoring and analysis capabilities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M2. Each Reliability Coordinator shall have and provide upon request evidence that could include but is not limited to a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operators with the authority to approve planned outages and maintenance of its telecommunication, monitoring and analysis capabilities.

R3. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any

Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M3. Each Reliability Coordinator shall have, and provide upon request, evidence that could include but is not limited to Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it has monitored Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.

R4. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M4. The Reliability Coordinator shall have, and provide upon request, evidence that could include but is not limited to Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it has monitoring systems consistent with the requirement.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes:

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Reliability Coordinator shall retain its current, in force document and any documents in force for the current year and previous calendar year for Requirements R1, R2, and R3 and Measures M1, M2, and M3.

The Reliability Coordinator shall keep data or evidence for Requirement R4 and Measure M4 for the current calendar year and one previous calendar year.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations, Real-time Operations	High	The Reliability Coordinator did not have data exchange capabilities with one applicable entity, or 5% or less of the applicable entities, whichever is greater.	The Reliability Coordinator did not have data exchange capabilities with two applicable entities, or more than 5% or less than or equal to 10% of the applicable entities, whichever is greater.	The Reliability Coordinator did not have data exchange capabilities with three applicable entities, or more than 10% or less than or equal to 15% of the applicable entities, whichever is greater.	The Reliability Coordinator did not have data exchange capabilities with four or more applicable entities or greater than 15% of the applicable entities, whichever is greater.
R2	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator failed to provide its System Operator with the authority to approve planned outages and maintenance of its telecommunication, monitoring and analysis capabilities.
R3	Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator did not monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						Operating Limit exceedances within its Reliability Coordinator Area.
R4	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator did not have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs) Corrected typographical errors in BOT approved version of VSLs	Revised to add missing measures and compliance elements
2	October 17, 2008	Adopted by NERC Board of Trustees	Deleted R2, M3 and associated compliance elements as conforming changes associated with approval of IRO-010-1. Revised as part of IROL Project
2	March 17, 2011	Order issued by FERC approving IRO-002-2 (approval effective 5/23/11)	FERC approval
2	February 24, 2014	Updated VSLs based on June 24, 2013 approval.	VSLs revised
3	July 25, 2011	Revised under Project 2006-06	Revised
3	August 4, 2011	Approved by Board of Trustees	Retired R1-R8 under Project 2006-06.

4	November 13, 2014	Approved by Board of Trustees	Revisions under Project 2014-03

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Changes made to the proposed definitions were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Rationale for Requirements:
The data exchange elements of Requirements R1 and R2 from approved IRO-002-2 have been added back into proposed IRO-002-4 in order to ensure that there is no reliability gap. The SDT found no proposed requirements in the current project that covered the issue. Voice communication is covered in proposed COM-001-2 but data communications needs to remain in IRO-002-4 as it is not covered in proposed COM-001-2. Staffing of communications and facilities in corresponding requirements from IRO-002-2 is addressed in approved PER-004-2, Requirement R1 and has been deleted from this draft.

Rationale for R2:
Requirement R2 from IRO-002-3 has been deleted because approved EOP-008-1, Requirement R1, part 1.6.2 addresses redundancy and back-up concerns for outages of analysis tools. New Requirement R4 has been added to address NOPR paragraphs 96 and 97: *"…As we explain above, the reliability coordinator's obligation to monitor SOLs is important to reliability because a SOL can evolve into an IROL during deteriorating system conditions, and for potential system conditions such as this, the reliability coordinator's monitoring of SOLs provides a necessary backup function to the transmission operator…."*

Rationale for R4:
Requirement R4 added back from approved IRO-002-2 as the SDT found no proposed requirements that covered the issues.

Reliability Standard IRO-008-2

A. Introduction

1. **Title**: Reliability Coordinator Operational Analyses and Real-time Assessments
2. **Number:** IRO-008-2
3. **Purpose:** Perform analyses and assessments to prevent instability, uncontrolled separation, or Cascading.
4. **Applicability**
   4.1. Reliability Coordinator.
5. **Proposed Effective Date:**
   See Implementation Plan.
6. **Background**
   See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area. [*Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M1. Each Reliability Coordinator shall have evidence of a completed Operational Planning Analysis. Such evidence could include but is not limited to dated power flow study results.

R2. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. [*Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M2. Each Reliability Coordinator shall have evidence that it has a coordinated Operating Plan for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of the Operational Planning Analysis performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. Such evidence could include but is not limited to plans for precluding operating in excess of each SOL and IROL that were identified as a result of the Operational Planning Analysis.

R3. Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in such plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Each Reliability Coordinator shall have evidence that it notified impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in such plan(s). Such evidence could include but is not limited to dated operator logs, or e-mail records.

R4. Each Reliability Coordinator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-time Operations]*

M4. Each Reliability Coordinator shall have, and make available upon request, evidence to show it ensured that a Real-time Assessment is performed at least once every 30 minutes. This evidence could include but is not limited to dated computer logs showing times the assessment was conducted, dated checklists, or other evidence.

R5. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-time Operations]*

M5. Each Reliability Coordinator shall make available upon request, evidence that it informed impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, of its actual or expected operations that result in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

R6. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Same-Day Operations, Real-time Operations]*

M6. Each Reliability Coordinator shall make available upon request, evidence that it informed impacted Transmission Operators and Balancing Authorities within its

Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Reliability Coordinator shall keep data or evidence to show compliance for Requirements R1 through R3, R5, and R6 and Measures M1 through M3, M5, and M6 for a rolling 90-calendar days period for analyses, the most recent 90-calendar days for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Reliability Coordinator shall each keep data or evidence for Requirement R4 and Measure M4 for a rolling 30-calendar day period, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

Table of Compliance Elements

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Medium	N/A	N/A	N/A	The Reliability Coordinator did not perform an Operational Planning Analysis allowing it to assess whether its planned operations for the next-day within its Wide Area will exceed any of its System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs).
R2	Operations Planning	Medium	N/A	N/A	N/A	The Reliability Coordinator did not have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
For the Requirement R3 and R5 VSLs, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size. If a Reliability Coordinator has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation						
R3	Operations Planning	Medium	The Reliability Coordinator did not notify one impacted entity or 5% or less of the impacted entities whichever is greater identified in its Operating Plan(s) as to their role in that plan(s).	The Reliability Coordinator did not notify two impacted entities or more than 5% and less than or equal to 10% of the impacted entities whichever is greater, identified in its Operating Plan(s) as to their role in that plan(s).	The Reliability Coordinator did not notify three impacted entities or more than 10% and less than or equal to 15% of the impacted entities whichever is greater, identified in its Operating Plan(s) as to their role in that plan(s).	The Reliability Coordinator did not notify four or more impacted entities or more than 15% of the impacted entities identified in its Operating Plan(s) as to their role in that plan(s).
R4	Same-day Operations, Real-time Operations	High	For any sample 24-hour period within the 30-day retention period, the Reliability	For any sample 24-hour period within the 30-day retention period, the Reliability Coordinator's	For any sample 24-hour period within the 30-day retention period, the Reliability	For any sample 24-hour period within the 30-day retention period, the Reliability Coordinator's Real-time Assessment was not conducted for three or more 30-minute periods

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
			Coordinator's Real-time Assessment was not conducted for one 30-minute period within that 24-hour period.	Real-time Assessment was not conducted for two 30-minute periods within that 24-hour period. F. Associated Documents

Operating Plan - An Operating Plan includes general Operating Processes and specific Operating Procedures. It may be an overview document which provides a prescription for an Operating Plan for the next-day, or it may be a specific plan to address a specific SOL or IROL exceedance identified in the Operational Planning Analysis (OPA). Consistent with the NERC definition, Operating Plans can be general in nature, or they can be specific plans to address specific reliability issues. The use of the term Operating Plan in the revised TOP/IRO standards allows room for both. An Operating Plan references processes and procedures, including electronic data exchange, which are available to the System Operator on a daily basis to allow the operator to reliably address conditions which may arise throughout the day. It is valid for tomorrow, the day after, and the day after that. Operating Plans should be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an OPA or a Real-time Assessment (RTA). As the definition in the Glossary of Terms states, a restoration plan is an example of an Operating Plan. It contains all the overarching principles that the System Operator needs to work his/her way through the restoration process. It is not a specific document written for a specific blackout scenario but rather a collection of tools consisting of processes, procedures, and automated software systems that are available to the operator to use in restoring the system. An Operating Plan can in turn be looked upon in a similar manner. It does not contain a prescription for the specific set-up for tomorrow but contains a treatment of all the processes, procedures, and automated software systems that are at the operator's disposal. The existence of an Operating Plan, however, does not preclude the need for creating specific action plans for specific SOL or IROL exceedances identified in the OPA. When a Reliability Coordinator performs an OPA, the analysis may reveal instances of possible SOL or IROL exceedances for pre- or post-Contingency conditions. In these instances, Reliability Coordinators are expected to ensure that there are plans in place to prevent or mitigate those SOLs or IROLs, should those operating conditions be encountered the next day. The Operating Plan may contain a description of the process by which specific prevention or mitigation plans for day-to-day SOL or IROL exceedances identified in the OPA are handled and communicated. This approach could alleviate any potential administrative burden associated with perceived requirements for continual day-to-day updating of "the Operating Plan document" for compliance purposes.

Version History

Version	Date	Action	Change Tracking
1	October 17, 2008	Adopted by NERC Board of Trustees	
1	March 17, 2011	Order issued by FERC approving IRO-008-1 (approval effective 5/23/11)	
1	February 28, 2014	Updated VSLs and VRF's based on June 24, 2013 approval.	
2	November 13, 2014	Adopted by NERC Board of Trustees	Revisions under Project 2014-03

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Changes made to the proposed definitions were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Rationale for R1:
Revised in response to NOPR paragraph 96 on the obligation of Reliability Coordinators to monitor SOLs. Measure M1 revised for consistency with TOP-003-3, Measure M1.

Rationale for R2 and R3:
Requirements added in response to IERP and SW Outage Report recommendations concerning the coordination and review of plans.

Rationale for R5 and R6:
In Requirements R5 and R6 the use of the term ‘impacted’ and the tie to the Operating Plan where notification protocols will be set out should minimize the volume of notifications.

Reliability Standard IRO-010-2

A. Introduction

1. **Title:** Reliability Coordinator Data Specification and Collection
2. **Number:** IRO-010-2
3. **Purpose:** To prevent instability, uncontrolled separation, or Cascading outages that adversely impact reliability, by ensuring the Reliability Coordinator has the data it needs to monitor and assess the operation of its Reliability Coordinator Area.
4. **Applicability**
   - **4.1.** Reliability Coordinator.
   - **4.2.** Balancing Authority.
   - **4.3.** Generator Owner.
   - **4.4.** Generator Operator.
   - **4.5.** Load-Serving Entity.
   - **4.6.** Transmission Operator.
   - **4.7.** Transmission Owner.
   - **4.8.** Distribution Provider.
5. **Proposed Effective Date:**

   See Implementation Plan.
6. **Background**

   See Project 2014-03 project page.

B. Requirements

R1. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: *(Violation Risk Factor: Low) (Time Horizon: Operations Planning)*

- **1.1.** A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator.
- **1.2.** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
- **1.3.** A periodicity for providing data.
- **1.4.** The deadline by which the respondent is to provide the indicated data.

M1. The Reliability Coordinator shall make available its dated, current, in force documented specification for data.

R2. The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. *(Violation Risk Factor: Low) (Time Horizon: Operations Planning)*

M2. The Reliability Coordinator shall make available evidence that it has distributed its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. This evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R3. Each Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: *(Violation Risk Factor: Medium) (Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations)*

3.1 A mutually agreeable format

3.2 A mutually agreeable process for resolving data conflicts

3.3 A mutually agreeable security protocol

M3. The Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall make available evidence that it satisfied the obligations of the documented specification using the specified criteria. Such evidence could include but is not limited to electronic or hard copies of data transmittals or attestations of receiving entities.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2 Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider shall each keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Reliability Coordinator shall retain its dated, current, in force documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments for Requirement R1, Measure M1 as well as any documents in force since the last compliance audit.

The Reliability Coordinator shall keep evidence for three calendar years that it has distributed its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments for Requirement R2, Measure M2.

Each Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification shall retain evidence for the most recent 90-calendar days that it has satisfied the obligations of the documented specifications in accordance with Requirement R3 and Measurement M3.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
R1	Operations Planning	Low	The Reliability Coordinator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include any of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. OR, The Reliability Coordinator did not have a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
						monitoring, and Real-time Assessments.
For the Requirement R2 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R2	Operations Planning	Low	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to one entity, or 5% or less of the entities, whichever is greater, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to two entities, or more than 5% and less than or equal to 10% of the reliability entities, whichever is greater, that have data required by the Reliability Coordinator's Operational Planning Analyses, and Real-time monitoring, and Real-time	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to three entities, or more than 10% and less than or equal to 15% of the reliability entities, whichever is greater, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to four or more entities, or more than 15% of the entities, whichever is greater, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
				Assessments.	monitoring, and Real-time Assessments.	Assessments.
R3	Operations Planning, Same-Day Operations, Real-time Operations	Medium	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow one of the criteria shown in Parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow two of the criteria shown in Parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow any of the criteria shown in Parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 did not satisfy the obligations of the documented specifications for data.

Version History

Version	Date	Action	Change Tracking
1	October 17, 2008	Adopted by Board of Trustees	New
1a	August 5, 2009	Added Appendix 1: Interpretation of R1.2 and R3 as approved by Board of Trustees	Addition
1a	March 17, 2011	Order issued by FERC approving IRO-010-1a (approval effective 5/23/11)	
1a	November 19, 2013	Updated VRFs based on June 24, 2013 approval	
2	April 2014	Revisions pursuant to Project 2014-03	
2	November 13, 2014	Adopted by NERC Board of Trustees	Revisions under Project 2014-03

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Rationale for Definitions:
Changes made to the proposed definitions were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Rationale for Applicability Changes:

Changes were made to applicability based on IRO FYRT recommendation to address the need for UVLS and UFLS information in the data specification.

The Interchange Authority was removed because activities in the Coordinate Interchange standards are performed by software systems and not a responsible entity. The software, not a functional entity, performs the task of accepting and disseminating interchange data between entities. The Balancing Authority is the responsible functional entity for these tasks.

The Planning Coordinator and Transmission Planner were removed from Draft 2 as those entities would not be involved in a data specification concept as outlined in this standard.

Rationale:

Proposed Requirement R1, Part 1.1:
Is in response to issues raised in NOPR paragraph 67 on the need for obtaining non-BES and external network data necessary for the Reliability Coordinator to fulfill its responsibilities.

Proposed Requirement R1, Part 1.2:
Is in response to NOPR paragraph 78 on relay data.

Proposed Requirement R3, Part 3.3:

Is in response to NOPR paragraph 92 where concerns were raised about data exchange through secured networks.

Corresponding changes have been made to proposed TOP-003-3.

Reliability Standard IRO-014-3

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators

2. **Number:** IRO-014-3

3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not adversely impact other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

4. **Applicability:**

   4.1. Reliability Coordinator

5. **Effective Date**

   See Implementation Plan.

6. **Background:**

   See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations]*

1.1. Criteria and processes for notifications.

1.2. Energy and capacity shortages.

1.3. Control of voltage, including the coordination of reactive resources.

1.4. Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

1.5. Provisions for periodic communications to support reliable operations.

M1. Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Operating Processes, and Operating Plans that require notifications, or the coordination of actions among impacted Reliability Coordinators for conditions or activities that may impact adjacent Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements, and notes from periodic communications.

R2. Each Reliability Coordinator shall maintain its Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 as follows: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-Day Operations]*

2.1. Review and update annually with no more than 15 months between reviews.

2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

2.3. Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.

M2. Each Reliability Coordinator shall have dated evidence that its Operating Procedures, Operating Processes, and Operating Plans that require one or more other Reliability Coordinators to take action were maintained as specified. This evidence may include but is not limited to dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions.

R3. Each Reliability Coordinator, upon identification of an expected or actual Emergency in its Reliability Coordinator Area, shall notify other impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

M3. Each Reliability Coordinator shall have and provide evidence which may include but is not limited to operator logs, voice recordings, or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an expected or actual Emergency in its Reliability Coordinator Area, notified other impacted Reliability Coordinators.

R4. Each impacted Reliability Coordinator shall operate as though the Emergency exists during each instance where Reliability Coordinators disagree on the existence of an Emergency. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M4. Each Reliability Coordinator shall have and provide evidence which may include but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated as though an Emergency existed during each instance where Reliability Coordinators disagreed on the existence of an Emergency.

R5. Each Reliability Coordinator that Identifies an Emergency in its Reliability Coordinator Area shall develop an action plan to resolve the Emergency during those instances where impacted Reliability Coordinators disagree on the existence of an Emergency. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M5. Each Reliability Coordinator that identifies an Emergency in its Reliability Coordinator Area shall have evidence that it developed an action plan during those instances where impacted Reliability Coordinators disagreed on the existence of an Emergency. This evidence may include but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation.

R6. Each impacted Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identifies the Emergency during those instances where Reliability Coordinators disagree on the existence of an Emergency, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M6. Each impacted Reliability Coordinator shall have and provide evidence which may include but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who identifies the Emergency when Reliability Coordinators disagree on the existence of an Emergency unless such actions would have violated safety, equipment, regulatory, or statutory requirements.

R7. Each Reliability Coordinator shall assist Reliability Coordinators, if requested and able, provided that the requesting Reliability Coordinator has implemented its emergency procedures, unless such actions cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M7. Each Reliability Coordinator shall make available upon request, evidence that requested assistance was provided, if able, to requesting Reliability Coordinators unless such actions could not be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes:

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Assessment Processes” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for Requirements R1 and R2 and Measures M1 and M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R5 and Measure M5.
- Each Reliability Coordinator shall retain 3-calendar years plus current calendar year of evidence for Requirement R6 and Measure M6.
- Each Reliability Coordinator shall retain evidence for 90-calendar days for operator logs and voice recordings and for the period since the last compliance audit for other evidence for Requirements R3, R4, and R7 and Measures M3, M4, and M7.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant, or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4 Additional Compliance Information

None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations	Medium	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification or coordination of actions with impacted adjacent Reliability Coordinators to support Interconnection reliability but failed to address one of the topical areas identified in Parts 1.1 through 1.5.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted adjacent Reliability Coordinators to support Interconnection reliability but failed to address two of the topical areas identified in Parts 1.1 through 1.5.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted adjacent Reliability Coordinators to support Interconnection reliability but failed to address three of the topical areas identified in Parts 1.1 through 1.5.	The Reliability Coordinator failed to have Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted adjacent Reliability Coordinators to support Interconnection reliability. OR, The Reliability Coordinator failed to implement its Operating Procedures, Operating processes, or Operating Plans when activities required notification, or coordination of actions with impacted adjacent Reliability Coordinators to support

F. Associated Documents

Operating Plan - An Operating Plan includes general Operating Processes and specific Operating Procedures. It may be an overview document which provides a prescription for an Operating Plan for the next-day, or it may be a specific plan to address a specific SOL or IROL exceedance identified in the Operational Planning Analysis (OPA). Consistent with the NERC definition, Operating Plans can be general in nature, or they can be specific plans to address specific reliability issues. The use of the term Operating Plan in the revised TOP/IRO standards allows room for both. An Operating Plan references processes and procedures, including electronic data exchange, which are available to the System Operator on a daily basis to allow the operator to reliably address conditions which may arise throughout the day. It is valid for tomorrow, the day after, and the day after that. Operating Plans should be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an OPA or a Real-time Assessment (RTA). As the definition in the Glossary of Terms states, a restoration plan is an example of an Operating Plan. It contains all the overarching principles that the System Operator needs to work his/her way through the restoration process. It is not a specific document written for a specific blackout scenario but rather a collection of tools consisting of processes, procedures, and automated software systems that are available to the operator to use in restoring the system. An Operating Plan can in turn be looked upon in a similar manner. It does not contain a prescription for the specific set-up for tomorrow but contains a treatment of all the processes, procedures, and automated software systems that are at the operator’s disposal. The existence of an Operating Plan, however, does not preclude the need for creating specific action plans for specific SOL or IROL exceedances identified in the OPA. When a Reliability Coordinator performs an OPA, the analysis may reveal instances of possible SOL or IROL exceedances for pre- or post-Contingency conditions. In these instances, Reliability Coordinators are expected to ensure that there are plans in place to prevent or mitigate those SOLs or IROLs, should those operating conditions be encountered the next day. The Operating Plan may contain a description of the process by which specific prevention or mitigation plans for day-to-day SOL or IROL exceedances identified in the OPA are handled and communicated. This approach could alleviate any potential administrative burden associated with perceived requirements for continual day-to-day updating of “the Operating Plan document” for compliance purposes.

Version History

Version	Date	Action	Change Tracking
1	August 10, 2005	1. Changed incorrect use of certain hyphens (-) to "en dash (–)." 2. Hyphenated "30-day" when used as adjective. 3. Changed standard header to be consistent with standard "Title." 4. Initial capped heading "Definitions of Terms Used in Standard." 5. Added "periods" to items where appropriate. 6. Changed "Timeframe" to "Time Frame" in item D, 1.2. 7. Lower cased all words that are not "defined" terms — drafting team, self-certification. 8. Changed apostrophes to "smart" symbols. 9. Added comma in all word strings "Procedures, Processes, or Plans," etc. 10. Added hyphens to "Reliability Coordinator-to-Reliability Coordinator" where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate.	January 20, 2006
1	February 7, 2006	Adopted by Board of Trustees	Revised
1	March 16, 2007	Approved by FERC	
2	August 4, 2011	Revised per Project 2006-6; Revised existing requirements for clarity, retired R3 and R4 and incorporated requirements from IRO-015-1 and IRO-016-1 into this standard. Adopted by Board of Trustees	Revised

3	November 13, 2014	Adopted by Board of Trustees	Revisions under Project 2014-03

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Rationale for Terminology:
Terminology changed from Adverse Reliability Impact to Emergency for consistency amongst standards. Emergency is a more inclusive term.

Rationale for Requirement R7:
Language added for consistency with proposed TOP-001-3, Requirement R7.

Reliability Standard IRO-017-1

A. Introduction

1. **Title: Outage Coordination**

2. **Number: IRO-017-1**

3. **Purpose:** To ensure that outages are properly coordinated in the Operations Planning time horizon and Near-Term Transmission Planning Horizon.

4. **Applicability:**

    4.1. Reliability Coordinator

    4.2. Transmission Operator

    4.3. Balancing Authority

    4.4. Planning Coordinator

    4.5. Transmission Planner

5. **Effective Date:**

    See Implementation Plan.

6. **Background:**

    See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. The outage coordination process shall: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

1.1. Identify applicable roles and reporting responsibilities including:

1.1.1. Development and communication of outage schedules.

1.1.2. Assignment of coordination responsibilities for outage schedules between Transmission Operator(s) and Balancing Authority(s).

1.2. Specify outage submission timing requirements.

1.3. Define the process to evaluate the impact of Transmission and generation outages within its Wide Area.

1.4. Define the process to coordinate the resolution of identified outage conflicts with its Transmission Operators and Balancing Authorities, and other Reliability Coordinators.

M1. Each Reliability Coordinator shall make available its dated, current, in force outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.

R2. Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M2. Each Transmission Operator and Balancing Authority shall provide evidence upon request that it performed the functions specified in its Reliability Coordinator's outage coordination process. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R3. Each Planning Coordinator and Transmission Planner shall provide its Planning Assessment to impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

M3. Each Planning Coordinator and Transmission Planner shall provide evidence upon request showing that it provided its Planning Assessment to impacted Reliability Coordinators. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R4. Each Planning Coordinator and Transmission Planner shall jointly develop solutions with its respective Reliability Coordinator(s) for identified issues or conflicts with planned outages in its Planning Assessment for the Near-Term Transmission Planning Horizon. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

M4. Each Planning Coordinator, and Transmission Planner shall provide evidence upon request showing that it jointly developed solutions with its respective Reliability Coordinator(s) for identified issues or conflicts with planned outages in its Planning Assessment for the Near-term Transmission Planning Horizon. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator shall retain its dated, current, in force, outage coordination process in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.

Each Transmission Operator and Balancing Authority shall retain evidence for three calendar years that it followed its Reliability Coordinator outage coordination process in accordance with Requirement R2 and Measurement M2.

Each Planning Coordinator and Transmission Planner shall retain evidence for three calendar years that it has its Planning Assessment to impacted Reliability Coordinators in accordance with Requirement R3 and Measurement M3.

Each Reliability Coordinator, Planning Coordinator, and Transmission Planner shall retain evidence for three calendar years that it has coordinated solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment in accordance with Requirement R4 and Measurement M4.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Medium	The Reliability Coordinator did develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area but it was missing one of the parts specified in Requirement R1 (Parts 1.1 – 1.4).	The Reliability Coordinator did develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area but it was missing two of the parts specified in Requirement R1 (Parts 1.1 – 1.4).	The Reliability Coordinator did develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area but it was missing three of the parts specified in Requirement R1 (Parts 1.1 – 1.4).	The Reliability Coordinator did develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area but it was missing all four of the parts specified in Requirement R1 (Parts 1.1 – 1.4). OR, The Reliability Coordinator did not develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.
R2	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not perform the functions specified in its Reliability Coordinator's outage coordination process.
R3	Operations Planning	Medium	N/A	N/A	N/A	The Planning Coordinator or Transmission Planner did not provide its Planning Assessment to impacted Reliability Coordinators.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	Operations Planning	Medium	N/A	N/A	N/A	The Planning Coordinator or Transmission Planner did not jointly develop solutions with its respective Reliability Coordinator(s) for identified issues or conflicts with planned outages in its Planning Assessment for the Near-term Transmission Planning Horizon.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

Time Horizon: The official definition of the Operations Planning Time Horizon is: "operating and resource plans from day-ahead up to and including seasonal." The SDT equates 'seasonal' as being up to one year out and that these requirements covers the period from day-ahead to one year out.

Version History

Version	Date	Action	Change Tracking
1	April 2014	New standard developed by Project 2014-03	New
1	November 13, 2014	Adopted by NERC Board of Trustees	Revisions under Project 2014-03

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

This standard is in response to issues raised in NOPR paragraph 90 and recommendations made by the Independent Expert Review Panel and SW Outage Report on the need for an outage coordination standard. It allows for one cohesive standard to address all outage coordination concerns as opposed to having multiple requirements spread throughout the various standards.

Rationale for Time Horizon:
The official definition of the Operations Planning Time Horizon is: "operating and resource plans from day-ahead up to and including seasonal." The SDT equates 'seasonal' as being up to one year out and that these requirements covers the period from day-ahead to one year out.

Rationale for R3:

Planning Assessment is a defined term and a document that Planning Coordinators and Transmission Planners already have to produce for approved TPL-001-4. It is not a compilation of load flow studies but a textual summary of what was found in those studies including rationales and assumptions.

Rationale for R4:
The SDT has re-written Requirement R4 to show that the process starts with the Planning Assessments created by the Planning Coordinator and Transmission Planner and then those Planning Assessments are reviewed and reconciled as needed with the Reliability Coordinator. This is in response to comments in paragraph 90 of the FERC NOPR about directly involving the Reliability Coordinator in the planning process for periods beyond the present one year outreach as well as recommendations in the IERP. The re-write should not be construed as relieving the Reliability Coordinator of responsibilities in this area but simply as a reflection of how the process actually starts.

In the future, the SDT believes that such coordination should take place in the TPL standards and to support that position, the SDT has created an item in a draft SAR for TPL-001-4 that would revise Requirement R8 to make the Reliability Coordinator an explicit party in the review process described there.

In addition, the SDT will submit a request to the Functional Model Working Team to adjust the roles and responsibilities of the Reliability Coordinator to this new paradigm.

Reliability Standard TOP-001-3

A. Introduction

1. **Title: Transmission Operations**

2. **Number: TOP-001-3**

3. **Purpose:** To prevent instability, uncontrolled separation, or Cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability:**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

5. **Effective Date:**

   See Implementation Plan.

6. **Background:**

   See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Transmission Operator shall act to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions. *[Violation Risk Factor: High][Time Horizon: Same-Day Operations, Real-time Operations]*

M1. Each Transmission Operator shall have and provide evidence which may include but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions.

R2. Each Balancing Authority shall act to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions. *[Violation Risk Factor: High][Time Horizon: Same-Day Operations, Real-time Operations]*

M2. Each Balancing Authority shall have and provide evidence which may include but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions.

R3. Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-Time Operations]*

M3. Each Balancing Authority, Generator Operator, and Distribution Provider shall make available upon request, evidence that it complied with each Operating Instruction issued by the Transmission Operator(s) unless such action could not be physically implemented or it would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. In such cases, the Balancing Authority, Generator Operator, and Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Transmission Operator's Operating Instruction. If such a situation has not occurred, the Balancing Authority, Generator Operator, or Distribution Provider may provide an attestation.

R4. Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator of its inability to comply with an Operating Instruction issued by its Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-Time Operations]*

M4. Each Balancing Authority, Generator Operator, and Distribution Provider shall make available upon request, evidence which may include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with its Operating Instruction issued. If such a situation has not occurred, the Balancing Authority, Generator Operator, or Distribution Provider may provide an attestation.

R5. Each Transmission Operator, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-Time Operations]*

M5. Each Transmission Operator, Generator Operator, and Distribution Provider shall make available upon request, evidence that it complied with each Operating Instruction issued by its Balancing Authority unless such action could not be physically implemented or it would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. In such cases, the Transmission Operator, Generator Operator, and Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Balancing Authority's Operating Instruction. If such a situation has not occurred, the Transmission Operator, Generator Operator, or Distribution Provider may provide an attestation.

R6. Each Transmission Operator, Generator Operator, and Distribution Provider shall inform its Balancing Authority of its inability to comply with an Operating Instruction issued by its Balancing Authority. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-Time Operations]*

M6. Each Transmission Operator, Generator Operator, and Distribution Provider shall make available upon request, evidence which may include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Balancing Authority of its inability to comply with its Operating Instruction. If such a situation has not occurred, the Transmission Operator, Generator Operator, or Distribution Provider may provide an attestation.

R7. Each Transmission Operator shall assist other Transmission Operators within its Reliability Coordinator Area, if requested and able, provided that the requesting Transmission Operator has implemented its comparable Emergency procedures, unless such assistance cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M7. Each Transmission Operator shall make available upon request, evidence that comparable requested assistance, if able, was provided to other Transmission Operators within its Reliability Coordinator Area unless such assistance could not be physically implemented or would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no request for assistance was received, the Transmission Operator may provide an attestation.

R8. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M8. Each Transmission Operator shall make available upon request, evidence that it informed its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no such situations have occurred, the Transmission Operator may provide an attestation.

R9. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and known impacted interconnected entities of all planned outages, and unplanned outages of 30 minutes or more, for telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M9. Each Balancing Authority and Transmission Operator shall make available upon request, evidence that it notified its Reliability Coordinator and known impacted interconnected entities of all planned outages, and unplanned outages of 30 minutes or more, for telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Balancing Authority or Transmission Operator may provide an attestation.

R10. Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

10.1. Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and

10.2. Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems.

M10. Each Transmission Operator shall have, and provide upon request, evidence that could include but is not limited to Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it monitored or obtained and utilized status, voltages, and flow data for Facilities and the status of Special Protection Systems as required to determine any System Operating Limit (SOL) exceedances within its Transmission Operator Area.

R11. Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain generation-Load-interchange balance within its Balancing Authority Area and support Interconnection frequency. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M11. Each Balancing Authority shall have, and provide upon request, evidence that could include but is not limited to Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it monitors its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain generation-Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.

R12. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M12. Each Transmission Operator shall make available evidence to show that for any occasion in which it operated outside any identified Interconnection Reliability Operating Limit (IROL), the continuous duration did not exceed its associated IROL T_v. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If such a situation has not occurred, the Transmission Operator may provide an attestation that an event has not occurred.

R13. Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M13. Each Transmission Operator shall have, and make available upon request, evidence to show it ensured that a Real-Time Assessment was performed at least once every 30 minutes. This evidence could include but is not limited to dated computer logs showing times the assessment was conducted, dated checklists, or other evidence.

R14. Each Transmission Operator shall initiate its Operating Plan to mitigate a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M14. Each Transmission Operator shall have evidence that it initiated its Operating Plan for mitigating SOL exceedances identified as part of its Real-time monitoring or Real-time Assessments. This evidence could include but is not limited to dated computer logs showing times the Operating Plan was initiated, dated checklists, or other evidence.

R15. Each Transmission Operator shall inform its Reliability Coordinator of actions taken to return the System to within limits when a SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

M15. Each Transmission Operator shall make available evidence that it informed its Reliability Coordinator of actions taken to return the System to within limits when a SOL was exceeded. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If such a situation has not occurred, the Transmission Operator may provide an attestation.

R16. Each Transmission Operator shall provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M16. Each Transmission Operator shall have, and provide upon request, evidence that could include but is not limited to a documented procedure or equivalent evidence that will be used to confirm that the Transmission Operator has provided its System Operators with the authority to approve planned outages and maintenance of telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.

R17. Each Balancing Authority shall provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M17. Each Balancing Authority shall have, and provide upon request, evidence that could include but is not limited to a documented procedure or equivalent evidence that will be used to confirm that the Balancing Authority has provided its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.

R18. Each Transmission Operator shall operate to the most limiting parameter in instances where there is a difference in SOLs. [*Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M18. Each Transmission Operator shall have, and provide upon request, evidence that could include but is not limited to operator logs, voice recordings, electronic communications, or equivalent evidence that will be used to determine if it operated to the most limiting parameter in instances where there is a difference in SOLs.

R19. Each Transmission Operator shall have data exchange capabilities with the entities that it has identified that it needs data from in order to maintain reliability in its Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M19. Each Transmission Operator shall have, and provide upon request, evidence that could include, but is not limited to, operator logs, system specifications, or other evidence that it has data exchange capabilities with the entities that it has identified that it needs data from in order to maintain reliability in its Transmission Operator Area.

R20. Each Balancing Authority shall have data exchange capabilities with the entities that it has identified that it needs data from in order to maintain reliability in its Balancing Authority Area. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M20. Each Balancing Authority shall have, and provide upon request, evidence that could include, but is not limited to, operator logs, system specifications, or other evidence that it has data exchange capabilities with the entities that it has identified that it needs data from in order to maintain reliability in its Balancing Authority Area.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall each keep data or evidence for each applicable Requirement R1 through R11, and R15 through R20 and Measure M1 through M11, and M15 through M20 for the current calendar year and one previous calendar year, with the exception of operator logs and voice recordings which shall be retained for a minimum of ninety calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v as specified in Requirement R12 and Measure M12 and that it initiated its Operating Plan to mitigate a SOL exceedance as specified in Requirement R14 and Measurement M14.

Each Transmission Operator shall keep data or evidence for Requirement R13 and Measure M13 for a rolling 30-day period, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Balancing Authority, Transmission Operator, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Transmission Operator failed to act to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions.
R2	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Balancing Authority failed to act to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions.
R3	Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with an Operating Instruction issued by the Transmission Operator, and such action could have been physically implemented and would not have violated safety, equipment, regulatory, or statutory requirements.
R4	Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to comply with an Operating Instruction issued by its Transmission Operator.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R5	Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with an Operating Instruction issued by the Balancing Authority, and such action could have been physically implemented and would not have violated safety, equipment, regulatory, or statutory requirements.
R6	Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The responsible entity did not inform its Balancing Authority of its inability to comply with an Operating Instruction issued by its Balancing Authority.
R7	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not provide comparable assistance to other Transmission Operators within its Reliability Coordinator Area, when requested and able, and the requesting entity had implemented its Emergency procedures, and such actions could have been physically implemented and would not have violated safety, equipment, regulatory, or statutory requirements.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
For the Requirements R8 and R9 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R8	Operations Planning, Same-Day Operations, Real-Time Operations	High	The Transmission Operator did not inform one known impacted Transmission Operator or 5% or less of the known impacted Transmission Operators, whichever is greater, of its actual or expected operations that resulted in, or could have resulted in, an Emergency on respective Transmission Operator Areas. OR, The Transmission Operator did not inform one known impacted Balancing Authorities or 5% or less of the known	The Transmission Operator did not inform two known impacted Transmission Operators or more than 5% and less than or equal to 10% of the known impacted Transmission Operators, whichever is greater, of its actual or expected operations that resulted in, or could have resulted in, an Emergency on respective Transmission Operator Areas. OR, The Transmission Operator did not inform two known impacted Balancing Authorities or more	The Transmission Operator did not inform three known impacted Transmission Operators or more than 10% and less than or equal to 15% of the known impacted Transmission Operators, whichever is greater, of its actual or expected operations that resulted in, or could have resulted in, an Emergency on respective Transmission Operator Areas. OR, The Transmission Operator did not inform three known impacted Balancing Authorities or more than 10% and less than or equal to 15% of the known impacted Balancing Authorities, whichever is greater, of	The Transmission Operator did not inform its Reliability Coordinator of its actual or expected operations that resulted in, or could have resulted in, an Emergency on those respective Transmission Operator Areas. OR The Transmission Operator did not inform four or more known impacted Transmission Operators or more than 15% of the known impacted Transmission Operators of its actual or expected operations that resulted in, or could have resulted in, an Emergency on those respective Transmission Operator Areas. OR, The Transmission Operator did not inform four or more known impacted Balancing Authorities or more than 15% of the known impacted

			Lower VSL	Moderate VSL	High VSL	Severe VSL
					balance within its Balancing Authority Area and support Interconnection frequency.	
R12	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
R13	Same-Day Operations, Real-Time Operations	High	For any sample 24-hour period within the 30-day retention period, the Transmission Operator's Real-time Assessment was not conducted for one 30-minute period within that 24-hour period.	For any sample 24-hour period within the 30-day retention period, the Transmission Operator's Real-time Assessment was not conducted for two 30-minute periods within that 24-hour period.	For any sample 24-hour period within the 30-day retention period, the Transmission Operator's Real-time Assessment was not conducted for three 30-minute periods within that 24-hour period.	For any sample 24-hour period within the 30-day retention period, the Transmission Operator's Real-time Assessment was not conducted for four or more 30-minute periods within that 24-hour period.
R14.	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not initiate its Operating Plan for mitigating a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R15.	Real-Time Operations	Medium	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions taken to return the System to within limits when a SOL had been exceeded.
R16.	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.
R17.	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The Balancing Authority did not provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R18	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Transmission Operator failed to operate to the most limiting parameter in instances where there was a difference in SOLs.
R19	Operations Planning, Same-Day Operations, Real-time Operations	High	The Transmission Operator did not have data exchange capabilities with one identified entity, or 5% or less of the applicable entities, whichever is greater.	The Transmission Operator did not have data exchange capabilities with two identified entities, or more than 5% or less than or equal to 10% of the applicable entities, whichever is greater.	The Transmission Operator did not have data exchange capabilities with three identified entities, or more than 10% or less than or equal to 15% of the applicable entities, whichever is greater.	The Transmission Operator did not have data exchange capabilities with four or more identified entities or greater than 15% of the applicable entities, whichever is greater.
R20	Operations Planning, Same-Day Operations, Real-time Operations	High	The Balancing Authority did not have data exchange capabilities with one identified entity, or 5% or less of the applicable entities, whichever is greater.	The Balancing Authority did not have data exchange capabilities with two identified entities, or more than 5% or less than or equal to 10% of the applicable entities, whichever is greater.	The Balancing Authority did not have data exchange capabilities with three identified entities, or more than 10% or less than or equal to 15% of the applicable entities, whichever is greater.	The Balancing Authority did not have data exchange capabilities with four or more identified entities or greater than 15% of the applicable entities, whichever is greater.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

The SDT has created the SOL Exceedance White Paper as guidance on SOL issues and the URL for that document is: http://www.nerc.com/pa/stand/Pages/TOP0013RI.aspx.

Operating Plan - An Operating Plan includes general Operating Processes and specific Operating Procedures. It may be an overview document which provides a prescription for an Operating Plan for the next-day, or it may be a specific plan to address a specific SOL or IROL exceedance identified in the Operational Planning Analysis (OPA). Consistent with the NERC definition, Operating Plans can be general in nature, or they can be specific plans to address specific reliability issues. The use of the term Operating Plan in the revised TOP/IRO standards allows room for both. An Operating Plan references processes and procedures, including electronic data exchange, which are available to the System Operator on a daily basis to allow the operator to reliably address conditions which may arise throughout the day. It is valid for tomorrow, the day after, and the day after that. Operating Plans should be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an OPA or a Real-time Assessment (RTA). As the definition in the Glossary of Terms states, a restoration plan is an example of an Operating Plan. It contains all the overarching principles that the System Operator needs to work his/her way through the restoration process. It is not a specific document written for a specific blackout scenario but rather a collection of tools consisting of processes, procedures, and automated software systems that are available to the operator to use in restoring the system. An Operating Plan can in turn be looked upon in a similar manner. It does not contain a prescription for the specific set-up for tomorrow but contains a treatment of all the processes, procedures, and automated software systems that are at the operator’s disposal. The existence of an Operating Plan, however, does not preclude the need for creating specific action plans for specific SOL or IROL exceedances identified in the OPA. When a Reliability Coordinator performs an OPA, the analysis may reveal instances of possible SOL or IROL exceedances for pre- or post-Contingency conditions. In these instances, Reliability Coordinators are expected to ensure that there are plans in place to prevent or mitigate those SOLs or IROLs, should those operating conditions be encountered the next day. The Operating Plan may contain a description of the process by which specific prevention or mitigation plans for day-to-day SOL or IROL exceedances identified in the OPA are handled and communicated. This approach could alleviate any potential administrative burden associated with perceived requirements for continual day-to-day updating of “the Operating Plan document” for compliance purposes.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1a	May 12, 2010	Added Appendix 1 – Interpretation of R8 approved by Board of Trustees on May 12, 2010	Interpretation
1a	September 15, 2011	FERC Order issued approved the Interpretation of R8 (FERC Order became effective November 21, 2011)	Interpretation
2	May 6, 2012	Revised under Project 2007-03	Revised
2	May 9, 2012	Adopted by Board of Trustees	Revised
3	February 12, 2015	Adopted by Board of Trustees	Revisions under Project 2014-03

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Rationale for Requirement R3:

The phrase 'cannot be physically implemented' means that a Transmission Operator may request something to be done that is not physically possible due to its lack of knowledge of the system involved.

Rationale for Requirement R10:

New proposed Requirement R10 is derived from approved IRO-003-2, Requirement R1, adapted to the Transmission Operator Area. This new requirement is in response to NOPR paragraph 60 concerning monitoring capabilities for the Transmission Operator. New Requirement R11 covers the Balancing Authorities. Monitoring of external systems can be accomplished via data links.

Rationale for Requirement R13:

The new Requirement R13 is in response to NOPR paragraphs 55 and 60 concerning Real-time analysis responsibilities for Transmission Operators and is copied from approved IRO-008-1, Requirement R2. The Transmission Operator's Operating Plan will describe how to perform the Real-time Assessment. The Operating Plan should contain instructions as to how to perform Operational Planning Analysis and Real-time Assessment with detailed instructions and timing requirements as to how to adapt to conditions where processes, procedures, and automated software systems are not available (if used). This could include instructions such as an indication that no actions may be required if system conditions have not changed significantly and that previous Contingency analysis or Real-time Assessments may be used in such a situation.

Rationale for Requirement R14:

The original Requirement R8 was deleted and original Requirements R9 and R11 were revised in order to respond to NOPR paragraph 42 which raised the issue of handling all SOLs and not just a sub-set of SOLs. The SDT has developed a white paper on SOL exceedances that explains its intent on what needs to be contained in such an Operating Plan. These Operating Plans are developed and documented in advance of Real-time and may be developed from Operational Planning Assessments required per proposed TOP-002-4 or other assessments. Operating Plans could be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an Operational Planning Assessment or a Real-time Assessment. The intent is to have a plan and philosophy that can be followed by an operator.

Rationale for Requirements R16 and R17:

In response to IERP Report recommendation 3 on authority.

Rationale for Requirement R18:

Moved from approved IRO-005-3.1a, Requirement R10. Transmission Service Provider, Distribution Provider, Load-Serving Entity, Generator Operator, and Purchasing-Selling Entity are deleted as those entities will receive instructions on limits from the responsible entities cited in the requirement. Note – Derived limits replaced by SOLs for clarity and specificity. SOLs include voltage, Stability, and thermal limits and are thus the most limiting factor.

Rationale for Requirements R19 and R20:

Added for consistency with proposed IRO-002-4, Requirement R1. Data exchange capabilities are required to support the data specification concept in proposed TOP-003-3.

Reliability Standard TOP-002-4

A. Introduction

1. **Title: Operations Planning**
2. **Number: TOP-002-4**
3. **Purpose:** To ensure that Transmission Operators and Balancing Authorities have plans for operating within specified limits.
4. **Applicability:**
   4.1. Transmission Operator
   4.2. Balancing Authority
5. **Effective Date:**
   See Implementation Plan.
6. **Background:**
   See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis. Such evidence could include but is not limited to dated power flow study results.

R2. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M2. Each Transmission Operator shall have evidence that it has an Operating Plan to address potential System Operating Limits (SOLs) exceedances identified as a result of the Operational Planning Analysis performed in Requirement R1. Such evidence could include but it is not limited to plans for precluding operating in excess of each SOL that was identified as a result of the Operational Planning Analysis.

R3. Each Transmission Operator shall notify entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Each Transmission Operator shall have evidence that it notified entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in the plan(s). Such evidence could include but is not limited to dated operator logs, or e-mail records.

R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

4.1 Expected generation resource commitment and dispatch

4.2 Interchange scheduling

4.3 Demand patterns

4.4 Capacity and energy reserve requirements, including deliverability capability

M4. Each Balancing Authority shall have evidence that it has developed a plan to operate within the criteria identified. Such evidence could include but is not limited to dated operator logs or e-mail records.

R5. Each Balancing Authority shall notify entities identified in the Operating Plan(s) cited in Requirement R4 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M5. Each Balancing Authority shall have evidence that it notified entities identified in the plan(s) cited in Requirement R4 as to their role in the plan(s). Such evidence could include but is not limited to dated operator logs or e-mail records.

R6. Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M6. Each Transmission Operator shall have evidence that it provided its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator. Such evidence could include but is not limited to dated operator logs or e-mail records.

R7. Each Balancing Authority shall provide its Operating Plan(s) for next-day operations identified in Requirement R4 to its Reliability Coordinator. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M7. Each Balancing Authority shall have evidence that it provided its Operating Plan(s) for next-day operations identified in Requirement R4 to its Reliability Coordinator. Such evidence could include but is not limited to dated operator logs or e-mail records.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Assessment Processes” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator and Balancing Authority shall keep data or evidence to show compliance for each applicable Requirement for a rolling 90-calendar days period for analyses, the most recent 90-calendar days for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator or Balancing Authority is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis allowing it to assess whether its planned operations for the next day within its Transmission Operator Area exceeded any of its System Operating Limits (SOLs).
R2	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not have an Operating Plan to address potential System Operating Limit (SOL) exceedances identified as a result of the Operational Planning Analysis performed in Requirement R1.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
For the Requirement R3 and R5 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R3	Operations Planning	Medium	The Transmission Operator did not notify one impacted entity or 5% or less of the entities, whichever is greater identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify two entities or more than 5% and less than or equal to 10% of the impacted entities, whichever is greater, identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three impacted entities or more than 10% and less than or equal to 15% of the entities, whichever is greater, identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more entities or more than 15% of the impacted NERC identified in the Operating Plan(s) as to their role in the plan(s).
R4	Operations Planning	Medium	The Balancing Authority has an Operating Plan but it does not address one of the criteria in Requirement R4.	The Balancing Authority has an Operating Plan but it does not address two of the criteria in Requirement R4.	The Balancing Authority has an Operating Plan but it does not address three of the criteria in Requirement R4.	The Balancing Authority did not have an Operating Plan.
R5	Operations Planning	Medium	The Balancing Authority did not notify one impacted entity or 5% or less	The Balancing Authority did not notify two entities or more than 5% and	The Balancing Authority did not notify three impacted entities or	The Balancing Authority did not notify four or more entities or more than

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
			of the entities, whichever is greater, identified in the Operating Plan(s) as to their role in the plan(s).	less than or equal to 10% of the impacted entities, whichever is greater, identified in the Operating Plan(s) as to their role in the plan(s).	more than 10% and less than or equal to 15% of the entities, whichever is greater, identified in the Operating Plan(s) as to their role in the plan(s).	15% of the impacted entities identified in the Operating Plan(s) as to their role in the plan(s).
R6	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not provide its Operating Plan(s) for next-day operations as identified in Requirement R2 to its Reliability Coordinator.
R7	Operations Planning	Medium	N/A	N/A	N/A	The Balancing Authority did not provide its Operating Plan(s) for next-day operations as identified in Requirement R4 to its Reliability Coordinator.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

Operating Plan - An Operating Plan includes general Operating Processes and specific Operating Procedures. It may be an overview document which provides a prescription for an Operating Plan for the next-day, or it may be a specific plan to address a specific SOL or IROL exceedance identified in the Operational Planning Analysis (OPA). Consistent with the NERC definition, Operating Plans can be general in nature, or they can be specific plans to address specific reliability issues. The use of the term Operating Plan in the revised TOP/IRO standards allows room for both. An Operating Plan references processes and procedures which are available to the System Operator on a daily basis to allow the operator to reliably address conditions which may arise throughout the day. It is valid for tomorrow, the day after, and the day after that. Operating Plans should be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an OPA or a Real-time Assessment (RTA). As the definition in the Glossary of Terms states, a restoration plan is an example of an Operating Plan. It contains all the overarching principles that the System Operator needs to work his/her way through the restoration process. It is not a specific document written for a specific blackout scenario but rather a collection of tools consisting of processes, procedures, and automated software systems that are available to the operator to use in restoring the system. An Operating Plan can in turn be looked upon in a similar manner. It does not contain a prescription for the specific set-up for tomorrow but contains a treatment of all the processes, procedures, and automated software systems that are at the operator's disposal. The existence of an Operating Plan, however, does not preclude the need for creating specific action plans for specific SOL or IROL exceedances identified in the OPA. When a Reliability Coordinator performs an OPA, the analysis may reveal instances of possible SOL or IROL exceedances for pre- or post-Contingency conditions. In these instances, Reliability Coordinators are expected to ensure that there are plans in place to prevent or mitigate those SOLs or IROLs, should those operating conditions be encountered the next day. The Operating Plan may contain a description of the process by which specific prevention or mitigation plans for day-to-day SOL or IROL exceedances identified in the OPA are handled and communicated. This approach could alleviate any potential administrative burden associated with perceived requirements for continual day-to-day updating of "the Operating Plan document" for compliance purposes.

Version History

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Rationale for Definitions:

Changes made to the proposed definitions were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Rationale for R1:

Terms deleted in Requirement R1 as they are now contained in the revised definition of Operational Planning Analysis

Rationale for R2:

The change to Requirement R2 is in response to NOPR paragraph 42 and in concert with proposed changes made to proposed TOP-001-4

Rationale for R3:

Changes in response to IERP recommendation

Rationale for R4 and R5:

These Requirements were added to address IERP recommendations

Rationale for R6 and R7:

Added in response to SW Outage Report recommendation 1

Reliability Standard TOP-003-3

A. Introduction

1. **Title: Operational Reliability Data**

2. **Number: TOP-003-3**

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have data needed to fulfill their operational and planning responsibilities.

4. **Applicability:**

   4.1. Transmission Operator

   4.2. Balancing Authority

   4.3. Generator Owner

   4.4. Generator Operator

   4.5. Load-Serving Entity

   4.6. Transmission Owner

   4.7. Distribution Provider

5. **Effective Date:**

   See Implementation Plan.

6. **Background:**

   See Project 2014-03 project page.

B. Requirements and Measures

R1. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.

1.2. Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

M1. Each Transmission Operator shall make available its dated, current, in force documented specification for data.

R2. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

M2. Each Balancing Authority shall make available its dated, current, in force documented specification for data.

R3. Each Transmission Operator shall distribute its data specification to entities that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessment. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R4. Each Balancing Authority shall distribute its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications using: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

5.1. A mutually agreeable format

5.2. A mutually agreeable process for resolving data conflicts

5.3. A mutually agreeable security protocol

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Assessment Processes

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Assessment Processes" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated reliability standard.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Transmission Operator shall retain its dated, current, in force, documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.

Each Balancing Authority shall retain its dated, current, in force, documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring in accordance with Requirement R2 and Measurement M2 as well as any documents in force since the last compliance audit.

Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the

Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments in accordance with Requirement R3 and Measurement M3.

Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring in accordance with Requirement R4 and Measurement M4.

Each Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90-calendar days that it has satisfied the obligations of the documented specifications in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Low	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. OR, The Transmission Operator did not have a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R2	Operations Planning	Low	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. OR, The Balancing Authority did not have a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 and R4 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Guidelines and Technical Basis

Rationale:

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.

Rationale for Definitions:

Changes made to the proposed definitions were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Rationale for R1:

Changes to proposed Requirement R1, Part 1.1 are in response to issues raised in NOPR paragraph 67 on the need for obtaining non-BES and external network data necessary for the Transmission Operator to fulfill its responsibilities.

Proposed Requirement R1, Part 1.2 is in response to NOPR paragraph 78 on relay data. The language has been moved from approved PRC-001-1.

Corresponding changes have been made to Requirement R2 for the Balancing Authority and to proposed IRO-010-2, Requirement R1 for the Reliability Coordinator.

Rationale for R5:

Proposed Requirement R5, Part 5.3 is in response to NOPR paragraph 92 where concerns were raised about data exchange through secured networks.

TOP/IRO Reliability Standards Definitions

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Definitions

Project 2014-03 Revisions to TOP/IRO Reliability Standards

As part of the work in Project 2014-03 Revisions to TOP/IRO Reliability Standards, the SDT is proposing changes to two existing definitions: Operational Planning Analysis and Real-time Assessment.

The currently-effective definition of Operational Planning Analysis is: "*An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).*"

The proposed version of the definition of Operational Planning Analysis is: "*An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)*"

The currently-effective definition of Real-time Assessment is: "*An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.*"

The proposed version of the definition of Real-time Assessment is: "*An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)*"

The definitions were revised in response to issues raised in NOPR paragraphs 55, 73, and 74 on analysis and monitoring of SOLs in all time horizons, NOPR paragraph 70 (updating study results in Real-time), and NOPR paragraph 78 (Protection System coordination). The phase angle item was added in response to SW Outage Report recommendation 27.

The two definitions are also employed in the following proposed project standards: TOP-001-3, TOP-002-4, TOP-003-3, IRO-002-4, IRO-008-2, and IRO-010-2. These definitions are not used in any other standards, either currently-effective or in development in any other project.

Exhibit B

Implementation Plan for Proposed Reliability Standards and Definitions

Implementation Plan

Project 2014-03 Revisions to TOP/IRO Reliability Standards

Requested Approvals

- TOP-001-3 Transmission Operations
- TOP-002-4 Operations Planning
- TOP-003-3 Operational Reliability Data
- IRO-001-4 Reliability Coordination - Responsibilities and Authorities
- IRO-002-4 Reliability Coordination — Analysis Tools
- IRO-008-2 Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-2 Reliability Coordinator Data Specification and Collection
- IRO-014-3 Coordination Among Reliability Coordinators
- IRO-017-1 Outage Coordination

Requested Retirements (two groups of standards)

1. **Existing Approved Standards**
   - TOP-001-1a Reliability Responsibilities and Authorities
   - TOP-002—2.1b Normal Operations Planning
   - TOP-003-1 Planned Outage Coordination
   - TOP-004-2 Transmission Operations
   - TOP-005-2a Operational Reliability Information
   - TOP-006-2 Monitoring System Conditions
   - TOP-007-0 Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations
   - TOP-008-1 Response to Transmission Limit Violations
   - IRO-001-1.1 Reliability Coordination — Responsibilities and Authorities
   - IRO-002-2 Reliability Coordination — Facilities
   - IRO-003-2 Reliability Coordination – Wide Area View
   - IRO-004-2 Reliability Coordination – Operations Planning
   - IRO-005-3.1a Reliability Coordination — Current Day Operations
   - IRO-008-1 Reliability Coordinator Operational Analyses and Real-time Assessments
   - IRO-010-1a Reliability Coordinator Data Specification and Collection
   - IRO-014-1 Coordination Among Reliability Coordinators
   - IRO-015-1 Notifications and Information Exchange Between Reliability Coordinators
   - IRO-016-1 Coordination of Real-time Activities Between Reliability Coordinators
   - PER-001-0.2 Operating Personnel Responsibility and Authority

2. **Filed with FERC but not approved** – these standards were filed with FERC but never approved and will be retired as part of this project. Upon Board approval of replacement standards, NERC will request the Board to rescind its approval of these standards and petition FERC to withdraw its petition for approval of these standards:
   - TOP-001-2 Transmission Operations
   - TOP-002-3 Operations Planning
   - TOP-003-2 Operational Reliability Data
   - IRO-001-3 Reliability Coordination - Responsibilities and Authorities
   - IRO-002-3 Reliability Coordination — Analysis Tools
   - IRO-005-4 Reliability Coordination — Current Day Operations
   - IRO-014-2 Coordination Among Reliability Coordinators
   - PRC-001-2 System Protection Coordination

Prerequisite Approvals[1]

Definition of Operating Instruction (filed with proposed COM-002-4).
COM-001-2 – Communications (filed with proposed COM-002-4)

Revisions to Defined Terms in the NERC Glossary

The Standards Drafting Team proposes retiring the following Board-approved definitions:	
Reliability Directive	Original definition – approved by the Board but never adopted by FERC; will be withdrawn as part of this project, consistent with the approach for the standards that were filed with FERC and not approved. Definition: *A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.*
The Standards Drafting Team proposes revising the following Board-approved definitions:	
Operational Planning Analysis	**Original definition**: *An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).* **Revised definition**: *An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels;*

[1] In the event approval of COM-001-2 and the definition of Operating Instruction do not occur prior to the approval of the standards and definitions revised or developed in Project 2014-03, the currently enforceable standards and definitions would remain effective until those approvals have occurred, and the new or revised standards in Project 2014-03 shall become effective concurrent with the effective date of COM-001-2 and the definition of Operating Instruction.

	Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
Real-time Assessment	**Original definition**: *An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.* **Revised definition**: *An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)*

The definitions were revised in response to issues raised in NOPR paragraphs 55, 73, and 74 on analysis and monitoring of SOLs in all time horizons, NOPR paragraph 70 (updating study results in Real-time), and NOPR paragraph 78 (Protection System coordination). The phase angle item was added in response to SW Outage Report recommendation 27.

Background

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the "TOP Standards") to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the "IRO Standards") to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR proposed to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO standards through the NERC standards development process to address the concerns set forth in the NOPR. That motion to defer action was granted by the Commission on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report and this implementation plan is developed from the changes made to the standards revised by that project.

General Considerations

The twelve month implementation period for all of the standards except TOP-003-3 and IRO-010-2 is intended to allow time for entities to update processes and train operators on the revised requirements. All of the Requirements in proposed TOP-003-3 and IRO-010-2 except TOP-003-3, Requirements R5 and IRO-010-2, Requirement R3 become effective three months earlier, in order to provide recipients of data requests from their Reliability Coordinators, Transmission Operators, and/or Balancing Authorities time to respond to the request for data.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Transmission Operator
- Distribution Provider
- Generator Owner
- Generator Operator
- Load-Serving Entity
- Planning Coordinator
- Transmission Planner

Effective Date for Standards

1. **If the Prerequisite Approvals occur on or before Approval of the standards in Project 2014-03:**

- **For all standards except proposed TOP-003-3 and proposed IRO-010-2:**
  The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

- **For proposed TOP-003-3:**
  All requirements except Requirement R5 shall become effective on the first day of the first calendar quarter that is nine (9) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is nine (9) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

  Requirement R5 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

  The reason for the difference in effective dates for proposed TOP-003-3 is to allow applicable entities to have time to properly respond to the data specification requests.

- **For proposed IRO-010-2:**
  Requirement R1 and R2 shall become effective on the first day of the first calendar quarter that is nine (9) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirements R1 and R2 shall become

effective on the first day of the first calendar quarter that is nine (9) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.
Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

The reason for the difference in effective dates for proposed IRO-010-2 is to allow applicable entities to have time to properly respond to the data specification requests.

2. If the approval of the standards in Project 2014-03 occurs concurrent with or before the Prerequisite Approvals:

- **For all standards except proposed TOP-003-3 and proposed IRO-010-2:**
  The standard shall become effective concurrently with COM-001-2 and the definition of Operating Instruction.

- **For proposed TOP-003-3:**
  All requirements except Requirement R5 shall become effective on the first day of the first calendar quarter that is nine (9) months after the date that the definition of Operating Instruction is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is nine (9) months after the date COM-001-2 is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

  Requirement R5 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the definition of Operating Instruction is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the definition of Operating Instruction is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

The reason for the difference in effective dates for proposed TOP-003-3 is to allow applicable entities to have time to properly respond to the data specification requests.

- **For proposed IRO-010-2:**
  Requirement R1 and R2 shall become effective on the first day of the first calendar quarter that is nine (9) months after the date that the definition of Operating Instruction is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirements R1 and R2 shall become effective on the first day of the first calendar quarter that is nine (9) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.
  Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the definition of Operating Instruction is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

- **Standards for Retirement:**
  Midnight of the day before the first day of the first calendar quarter that is twelve (12) months after the date that the standards in Project 2014-03 are approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standards shall be retired at midnight of the day before the first day of the first calendar quarter that is twelve (12) months after the date the standards in Project 2014-03 are adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

- **Definition of Reliability Directive:**
  Midnight of the day before the first day of the first calendar quarter that is twelve (12) months after the date that the standards in Project 2014-03 are approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the definition shall be retired at midnight of the day before the first day of the first calendar quarter that is twelve (12) months after the date the standards in Project 2014-03 are adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

Implementation Plan for Definitions

The definitions of Operational Planning Analysis and Real-time Assessment shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the definitions are approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a definitions to go into effect. Where approval by an applicable governmental authority is not required, the definitions shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the definitions are adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

The definitions are used in proposed IRO-010-2, Requirements R1 and R2 and in proposed TOP-003-3, Requirements R1 and R3 so it is necessary that the definitions become effective concurrent with those requirements.

The two definitions are also employed in the following proposed project standards: TOP-001-3, TOP-002-4, and IRO-008-2. These definitions are not used in any other standards, either approved or in development in any other project.

Exhibit C

Order No. 672 Criteria

EXHIBIT C

Order No. 672 Criteria

In Order No. 672,[1] the Commission identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The discussion below identifies these factors and explains how the proposed Reliability Standards meet or exceed the criteria.

1. **Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve that goal.[2]**

The proposed Reliability Standards achieve the specific reliability goal of addressing the roles and responsibilities of Reliability Coordinators, Transmission Operators, and Balancing Authorities with respect to planning and operating the Bulk Electric System. The proposed Reliability Standards provide a comprehensive framework for reliable operations, with important improvements to ensure the Bulk Electric System is operated within limits while enhancing situational awareness and strengthening operations planning.

The proposed Reliability Standards establish or revise requirements for operations planning, system monitoring, real-time actions, coordination between applicable entities, and operational reliability data. Among other things, the proposed Reliability Standards help to ensure that Reliability Coordinators and Transmission Operators work together, and with other functional entities, to operate the Bulk Electric System within System Operating Limits ("SOLs") and Interconnection Reliability Operating Limits ("IROLs"). SOLs and IROLs are vital concepts in

---

[1] *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

[2] Order No. 672 at PP 321, 324.

NERC's Reliability Standards as they establish acceptable performance criteria both pre- and post-contingency to maintain reliable Bulk Electric System operations.

2. Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.[3]

The proposed Reliability Standards are clear and unambiguous as to what is required and who is required to comply, in accordance with Order No. 672. The proposed Reliability Standards clearly articulate the actions that applicable entities must take to comply with the standards.

3. A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.[4]

The Violation Risk Factors ("VRFs") and Violation Severity Levels ("VSLs") for the proposed Reliability Standards comport with NERC and Commission guidelines related to their assignment, as discussed further in Exhibit J. The assignment of the severity level for each VSL is consistent with the corresponding requirement. The VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations. For these reasons, the proposed Reliability Standards include clear and understandable consequences in accordance with Order No. 672.

---

[3] Order No. 672 at PP 322, 325.

[4] Order No. 672 at P 326.

4. **A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner.** [5]

The proposed Reliability Standards contain measures that support each requirement by clearly identifying what is required to demonstrate compliance. These measures help provide clarity regarding the manner in which the requirements will be enforced, and help ensure that the requirements will be enforced in a clear, consistent, and non-preferential manner and without prejudice to any party.

5. **Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect "best practices" without regard to implementation cost or historical regional infrastructure design.**[6]

The proposed Reliability Standards achieve the reliability goals effectively and efficiently in accordance with Order No. 672. The proposed Reliability Standards clearly articulate the reliability objectives that applicable entities must meet.

6. **Proposed Reliability Standards cannot be "lowest common denominator," *i.e.*, cannot reflect a compromise that does not adequately protect Bulk-Power System reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.**[7]

The proposed Reliability Standards do not reflect a "lowest common denominator" approach. To the contrary, the proposed Reliability Standards contains significant benefits for the Bulk-Power System. The requirements of the proposed Reliability Standards help ensure that entities coordinate efforts to plan and operate the Bulk Electric System in a reliable manner under normal and abnormal conditions...

---

[5] Order No. 672 at P 327.

[6] Order No. 672 at P 328.

[7] Order No. 672 at P 329-30.

7. **Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one geographic area or regional model. It should take into account regional variations in the organization and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.[8]**

The proposed Reliability Standards apply throughout North America and do not favor one geographic area or regional model.

8. **Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid beyond any restriction necessary for reliability.[9]**

The proposed Reliability Standards have no undue negative impact on competition. The proposed Reliability Standards require the same performance by each applicable entity. The standards do not unreasonably restrict the available transmission capability or limit use of the Bulk-Power System in a preferential manner.

9. **The implementation time for the proposed Reliability Standard is reasonable.[10]**

The proposed effective dates for the proposed Reliability Standards are just and reasonable and appropriately balance the urgency in the need to implement the standard against the reasonableness of the time allowed for those who must comply to develop and implement the necessary procedures and policies. The proposed implementation periods will allow applicable entities adequate time to meaningfully implement the requirements. The proposed effective dates are explained in the proposed Implementation Plan, attached as Exhibit B.

---

[8] Order No. 672 at P 331.

[9] Order No. 672 at P 332.

[10] Order No. 672 at P 333.

10. The Reliability Standard was developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.[11]

The proposed Reliability Standards were developed in accordance with NERC's Commission-approved, ANSI- accredited processes for developing and approving Reliability Standards. Exhibit K includes a summary of the development proceedings, and details the processes followed to develop the proposed Reliability Standards. These processes included, among other things, comment and balloting periods. Additionally, all meetings of the drafting team were properly noticed and open to the public. The initial and additional ballots achieved a quorum and exceeded the required ballot pool approval levels.

11. NERC must explain any balancing of vital public interests in the development of proposed Reliability Standards.[12]

NERC has identified no competing public interests regarding the request for approval of the proposed Reliability Standards. No comments were received that indicated the proposed Reliability Standards conflict with other vital public interests.

12. Proposed Reliability Standards must consider any other appropriate factors.[13]

No other negative factors relevant to whether the proposed Reliability Standards are just and reasonable were identified.

[13] Order No. 672 at P 323.

Exhibit D

Mapping Document

Project 2014-03 – Revisions to TOP and IRO Reliability Standards

Mapping Document | Updated December 2014

This mapping document showing the translation of Requirements in the following currently-enforceable standards to revised or new standards developed in Project 2014-03:

- IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination - Facilities
- IRO-003-2 — Reliability Coordination – Wide-Area View
- IRO-004-2 — Reliability Coordination — Operations Planning
- IRO-005-3.1a — Reliability Coordination - Current Day Operations
- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-1a — Reliability Coordinator Data Specification and Collection
- IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities Between Reliability Coordinators
- PER-001-0.2 — Operating Personnel Responsibility and Authority
- TOP-001-1a — Reliability Responsibilities and Authorities
- TOP-002-2.1b — Normal Operations Planning
- TOP-003-1 — Planned Outage Coordination
- TOP-004-2 — Transmission Operations
- TOP-005-2a — Operational Reliability Information
- TOP-006-3 — Monitoring System Conditions[1]
- TOP-007-0 — Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations
- TOP-008-1 — Response to Transmission Limit Violations

---

[1] TOP-006-2 is the currently enforceable version of this standard; TOP-006-3 was developed in response to a request for interpretation seeking clarification of Requirement R1 and does not substantively change the Requirements of TOP-006-2. In its NOPR proposing to remand the TOP and IRO standard, FERC proposed to approve TOP-006-3. The drafting team has mapped the Requirements in the new standards to TOP-006-3 because the Parts of Requirement R1 in TOP-006-3 more clearly delineate which entity has responsibility.

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.	The SDT proposes retiring the requirement as it is addressed in the NERC Rules of Procedure, January 30, 2014: **Section 503.2 (2.1)** "Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4)." **Section 501 (1.4)** "**1.4** For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall: **1.4.1** Ensure that all areas are under the oversight of one and only one Reliability Coordinator. **1.4.2** Ensure that all Balancing Authorities and Transmission operator entities are under the responsibility of one and only one Reliability Coordinator. **1.4.3** Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator. **1.4.4** Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority."
R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.	**The SDT is proposing to retire this requirement.** The SDT proposes retiring Requirement R2 as the regional reliability plan is a high level overview "how" document that shows how a Reliability Coordinator will comply with other NERC Standards. As a result, this requirement is administrative and redundant to other measureable and enforceable requirements within the standards. Since the requirement is generally administrative, it does not materially impact the reliability of the BES. The Reliability Plan concept is a holdover from the transition period from the Operating Policies to the Version 0 standards and was used extensively in the readiness evaluation process by the Operating Committee. The template used for the Reliability Plan is actually an outline of Operating Policy 9. The material included in the plan was a description of how an entity satisfied the specific functional areas under Policy 9. With the transition of Policy 9 to the IRO and other standards, the items addressed in

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	the reliability plans are inherently addressed in the body of other more measurable Reliability Standards.
R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.	**This requirement is replaced by proposed IRO-001-4, Requirements R1 and R2.** The SDT does not believe that there is a need for a decision-making authority requirement as the decision-making authority is inherent when the requirement states that the Reliability Coordinator must act, or by issuing Operating Instructions. **Proposed IRO-001-4, Requirements R1 and R2:** **R1**. Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions. **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.
R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.	**The SDT is proposing to retire this requirement.** The SDT contends that approved IRO-001-1.1, Requirement R4 is redundant with NERC Rules of Procedure, Section 500 (January 30, 2014) and should be retired from the standard. **(Section 501)** "The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved Reliability Standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable Reliability Standards." **(Section 508)** Provisions Relating to Coordinated Functional Registration (CFR) Entities In addition to registering as an entity responsible for all functions that it performs itself, multiple entities may each register using a CFR for one or more Reliability Standard(s) and/or for one or more Requirements/sub-Requirements within particular Reliability Standard(s) applicable to a specific function. The CFR submission must include a written agreement that governs itself and clearly specifies the entities' respective compliance responsibilities. The Registration of the CFR is the complete

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. Neither NERC nor the Regional Entity shall be parties to any such agreement, nor shall NERC or the Regional Entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the CFR.
R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.	The SDT is proposing to retire this requirement consistent with Paragraph 81 criteria as it is strictly administrative in nature.
R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.	The SDT is proposing to retire this requirement. The Reliability Coordinator may delegate tasks but cannot delegate the responsibility for these tasks. Therefore, it is not necessary to mandate that delegated tasks must be carried out by certified personnel as it is the responsibility of the Reliability Coordinator to ensure that the task is carried out.
R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.	This requirement is replaced by proposed IRO-014-3, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection reliability.
R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability	This requirement is replaced by proposed IRO-001-4, Requirements R2 and R3. **Proposed IRO-001-4, Requirements R2 and R3:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2.

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinator may implement alternate remedial actions.	
R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.	The SDT is proposing to retire this requirement as it is redundant with the definition of Reliability Coordinator in Functional Model v5. The NERC Functional Model Version 5 defines the Reliability Coordinator function as follows: "The functional entity that maintains the Real-time operating reliability of the Bulk Electric System within a Reliability Coordinator Area." An entity performing Reliability Coordinator services must meet this definition.

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.	The first sentence of this requirement is replaced by proposed COM-001-2 Requirement R1 for voice links and proposed IRO-002-4 Requirement R1 for data links. The second sentence of this requirement is covered by approved PER-004-2 Requirement R1 so to eliminate redundancy, that part of the requirement is not proposed to be replaced. **Proposed COM-001-2, Requirement R1:** **R1.** Each Reliability Coordinator shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): 1.1 All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area. 1.2 Each adjacent Reliability Coordinator within the same Interconnection. **Proposed IRO-002-4, Requirement R1:** **R1.** Each Reliability Coordinator shall have data exchange capabilities with its Balancing Authorities and Transmission Operators, and with other entities it deems necessary, for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Approved PER-004-2, Requirement R1:** **R1.** Each Reliability Coordinator shall be staffed with adequately trained and NERC-certified Reliability Coordinator operators, 24 hours per day, seven days per week.
R2. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.	This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3, Part 3.3. **Proposed IRO-010-2, Requirements R1 and R3, Part 3.3:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **R3.** Part 3.3. A mutually agreeable security protocol
R3. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability	This requirement is replaced by proposed COM-001-2 Requirement R1 and proposed IRO-002-4 Requirement R2. **Proposed COM-001-2, Requirement R1:**

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.	**R1.** Each Reliability Coordinator shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): 1.1 All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area. 1.2 Each adjacent Reliability Coordinator within the same Interconnection. **Proposed IRO-002-4, Requirement R2:** **R2**. Each Reliability Coordinator shall have data exchange capabilities with Balancing Authorities and Transmission Operators, and with other entities it deems necessary, for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
R4. Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.	This requirement is replaced by proposed IRO-002-4, Requirements R3 and R4. **Proposed IRO-002-4, Requirements R3 and R4:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **R4.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure.
R5. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to	This requirement is replaced by proposed IRO-002-4, Requirement R3. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.	
R6. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays.	This requirement is replaced by proposed IRO-008-5, Requirement R5 and the proposed definition of Real-time Assessment. **Proposed IRO-008, Requirement R4:** **R4**. Each Reliability Coordinator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)
R7. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.	This requirement is replaced by proposed IRO-002-4, Requirement R3 and approved EOP-008-1, Requirement R1, Part 1.6.2. **Proposed IRO-002-4, Requirement R3:** **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Approved EOP-008-1, Requirement R1, Part 1.6.2:** **R1. Part 1.6.2**. Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.
R8. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have	This requirement is replaced by proposed IRO-002, Requirement R2 and approved EOP-008-1, Requirement R1, Part 1.6.2. **Proposed IRO-002-4, Requirement R2:**

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
procedures in place to mitigate the effects of analysis tool outages.	**R2.** Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its telecommunications, monitoring and analysis capabilities. **Approved EOP-008-1, Requirement R1, Part 1.6.2:** **R1. Part 1.6.2.** Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor all Bulk Electric System facilities, which may include sub-transmission information, within its Reliability Coordinator Area and adjacent Reliability Coordinator Areas, as necessary to ensure that, at any time, regardless of prior planned or unplanned events, the Reliability Coordinator is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit violations within its Reliability Coordinator Area.	Replaced with proposed IRO-002-4, Requirement R3. **Proposed IRO-002-4, Requirement R3:** **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.
R2. Each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL or IROL violation. Reliability Coordinators shall also know the status of any facilities that may be required to assist area restoration objectives.	Replaced with proposed IRO-002-4, Requirement R3 and revised definitions of Operational Planning Analysis and Real-time Assessment. **Proposed IRO-002-4, Requirement R3:** **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Standard IRO-004-2 — Reliability Coordination - Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.	This requirement is replaced by proposed IRO-001-4, Requirement R1 since Operating Instructions, regardless of what timeframe they are issued for, are issued in a Real-time environment. In addition, roles for entities identified in the Operating Plans built from Operational Planning Analyses are communicated in proposed IRO-008-2, Requirement R3. **Proposed IRO-001-4, Requirement R1:** R1. Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions. **Proposed IRO-008-2, Requirement R3:** R3. Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s).

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: **R1.1** Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading. **R1.2.** Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.3.** Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.4.** System real and reactive reserves (actual versus required). **R1.5**. Capacity and energy adequacy conditions. **R1.6.** Current ACE for all its Balancing Authorities. **R1.7**. Current local or Transmission Loading Relief procedures in effect. **R1.8.** Planned generation dispatches. **R1.9.** Planned transmission or generation outages. **R1.10.** Contingency events.	Replaced by proposed IRO-002-4, Requirements R3 and R4. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure.
R2. Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and	The first sentence is replaced by proposed IRO-002-4, Requirement R3. The second sentence is covered by approved EOP-002-3.1a, Requirement R8 and can be retired. **Proposed IRO-002-4 Requirement, R3**:

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.	**R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Approved EOP-002-3.1a, Requirement R8:** **R8.** A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 “Energy Emergency Alerts.” The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R3. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.	The SDT proposes retiring this requirement as it has been superseded by approved EOP-010-1, Requirements R1 through R3. **Approved EOP-010-1, Requirements R1 to R3:** **R1** Each Reliability Coordinator shall develop, maintain, and implement a GMD Operating Plan that coordinates GMD Operating Procedures or Operating Processes within its Reliability Coordinator Area. At a minimum, the GMD Operating Plan shall include: **1.1** A description of activities designed to mitigate the effects of GMD events on the reliable operation of the interconnected transmission system within the Reliability Coordinator Area. **1.2** A process for the Reliability Coordinator to review the GMD Operating Procedures or Operating Processes of Transmission Operators within its Reliability Coordinator Area. **R2.** Each Reliability Coordinator shall disseminate forecasted and current space weather information to functional entities identified as recipients in the Reliability Coordinator's GMD Operating Plan. **R3.** Each Transmission Operator shall develop, maintain, and implement a GMD Operating Procedure or Operating Process to mitigate the effects of GMD events on the reliable

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	operation of its respective system. At a minimum, the Operating Procedure or Operating Process shall include: **3.1.** Steps or tasks to receive space weather information. **3.2**. System Operator actions to be initiated based on predetermined conditions. **3.3**. The conditions for terminating the Operating Procedure or Operating Process.
R4. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.	This requirement has been replaced by proposed IRO-008-2, Requirements R3, R5 and R6. **Proposed IRO-008-2, Requirement R3:** **R3.** Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s). **Proposed IRO-008-2, Requirement R5:** **R5.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area. **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated.
R5. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.	This requirement is replaced by proposed IRO-001-4, Requirement R1 and proposed IRO-002-34 Requirements R3 and R4. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-002-4, Requirement R3: **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure.
R6. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.	The first sentence is replaced with proposed IRO-008-2, Requirement R2. The issue of CPS and DCS is covered in approved EOP-002-3.1, Requirements R6, R7, and R8. The second sentence is replaced by the proposed IRO-017-1, Requirement R1 as well as through the proposed definitions of Operational Planning Analysis and Real-time Assessments. Generator Operators are not included in proposed IRO-017-1 as the SDT believes that Generator Operator outage information will be sent to the respective Transmission Operators and Balancing Authorities and then sent on to the Reliability Coordinators through those entities. **Proposed IRO-008-2, Requirement R2:** **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed IRO-017-1, Requirement R1:** **R1.** Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. **Approved EOP-002-3.1, Requirements R6, R7, and R8:** **R6.** If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to: R6.1. Loading all available generating capacity. **R6.2**. Deploying all available operating reserve. **R6.3.** Interrupting interruptible load and exports. **R6.4.** Requesting emergency assistance from other Balancing Authorities. **R6.5**. Declaring an Energy Emergency through its Reliability Coordinator; and **R6.6.** Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall: R7.1. Manually shed firm load without delay to return its ACE to zero; and **R7.2**. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002 "Energy Emergency Alerts." **R8.** A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 "Energy Emergency Alerts." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R8. The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.	The first sentence is replaced by proposed IRO-002-4, Requirements R3 and R4. The second sentence is replaced by proposed IRO-001-4, Requirement R1. **Proposed IRO-002-4, Requirement R3:** **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions.
R9. Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator	The first sentence is replaced by proposed IRO-002-4, Requirements R3 and R4. The second sentence is replaced by proposed IRO-010-2, Requirements R1, Part 1.2, and R3.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.	**Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant infrastructure. **Proposed IRO-010-4, Requirement R1, Part 1.2:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability. **Proposed IRO-010-4, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.
R10. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.	For Reliability Coordinators, this requirement is replaced by approved IRO-009-1, Requirement R5. For Transmission Operators, Balancing Authorities, and Generator Operators, this requirement is replaced by proposed TOP-001-3, Requirement R18. The Transmission Service Provider and Purchasing-Selling Entity will receive instructions on limits from the previously cited entities and can thus be deleted from the requirement. **Approved IRO-009-1, Requirement R5:**

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator shall operate to the most limiting parameter in instances where there is a difference in SOLs.
R11. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.	This requirement is replaced by proposed MOD-001-2, Requirement R2. **Proposed MOD-001-2, Requirement R2:** **R2**. Each Transmission Service Provider that determines Available Flowgate Capability (AFC) or Available Transfer Capability (ATC) shall develop an Available Transfer Capability Implementation Document (ATCID) that describes the methodology (or methodologies) for determining AFC or ATC values. The methodology (or methodologies) shall reflect the Transmission Service Provider's current practices for determining AFC or ATC values. **2.1.** Each methodology shall describe the method used to account for the following elements, provided such elements impact the determination of AFC or ATC: **2.1.1.** The simulation of transfers performed through the adjustment of generation, Load, or both; **2.1.2.** Transmission topology, including, but not limited to, additions and retirements; **2.1.3.** Expected transmission uses; **2.1.4.** Planned outages**;** **2.1.5.** Parallel path (loop flow) adjustments; **2.1.6.** Load forecast; and **2.1.7.** Generator dispatch, including, but not limited to, additions and retirements. **2.2.** Each Transmission Service Provider that uses the Flowgate Methodology shall, for reliability-related constraints identified in part 1.3, use the AFC determined by the Transmission Service Provider for that constraint.
R12. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall	The requirement is replaced by proposed IRO-008-2, Requirements R3, R5, and R6. **Proposed IRO-008-2, Requirement R3:**

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.	**R3.** Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s). **Proposed IRO-008-2, Requirement R5:** **R5**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area. **Proposed IRO-008-2, Requirement R6:** **R6**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated.

IRO-008-1 Reliability Coordination Operational Analyses and Real-time Assessments	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions.	This requirement is replaced by proposed IRO-008-2, Requirement R1. **Proposed IRO-008-2, Requirement R1:** **R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area.
R2. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.	This requirement is replaced by proposed IRO-008-2, Requirement R4. **Proposed IRO-008-2, Requirement R4:** **R4.** Each Reliability Coordinator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.
R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.	This requirement is replaced by proposed IRO-008-2, Requirements R3 and R5. **Proposed IRO-008-2, Requirements R3 and R5:** **R3.** Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s). **Proposed IRO-008-2, R5:** **R5**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area.

Standard IRO-010-1a Reliability Coordinator Data Specification and Collection	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following: **R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. **R1.2.** Mutually agreeable format. **R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses). **R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.	This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.1** A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator. **1.2** Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability. **1.3** A periodicity for providing data. **1.4** The deadline by which the respondent is to provide the indicated data. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: **3.1** A mutually agreeable format **3.2** A mutually agreeable process for resolving data conflicts **3.3** A mutually agreeable security protocol
R2. The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.	This requirement is replaced by proposed IRO-010-2, Requirement R2. **Proposed IRO-010-2, Requirement R2:** **R2.** The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard IRO-010-1a Reliability Coordinator Data Specification and Collection	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.	This requirement is replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: **3.1** A mutually agreeable format **3.2** A mutually agreeable process for resolving data conflicts **3.3** A mutually agreeable security protocol

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators **R1.1** These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: **R1.1.1** Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and	This requirement is replaced by proposed IRO-014-3, Requirement R1. Data is covered in proposed IRO-010-2, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Communications and notifications, and the process to follow in making those notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
information to be exchanged with other Reliability Coordinators. **R1.1.2** Energy and capacity shortages. **R1.1.3** Planned or unplanned outage information. **R1.1.4** Voltage control, including the coordination of reactive resources for voltage control. **R1.1.5** Coordination of information exchange to support reliability assessments. **R1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.	**1.5** Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas. **1.6** Provisions for weekly conference calls. **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: **R2.1.** Agreed to by all the Reliability Coordinators required to take the indicated action(s). **R2.2**. Distributed to all Reliability Coordinators that are required to take the indicated action(s).	This requirement is replaced by proposed IRO-014-3, Requirement R2. **Proposed IRO-014-3, Requirement R2:** **R2.** Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: **2.1** Review and update annually with no more than 15 months between reviews. **2.2** Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update. **2.3** Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.
R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include: **R3.1.** A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.	R3.1 is a strictly administrative requirement with no reliability benefit and is proposed to be retired under the P81 criteria. R3.2 is replaced by proposed IRO-014-3, Requirement R1, Part 1.5. **Proposed IRO-014-3, Requirement R1**: **R1.** Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R3.2. The agreed-upon actions from the associated Reliability Coordinator-to- Reliability Coordinator Operating Procedure, Process, or Plan.	reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Criteria and processes for notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments. **1.5** Provisions for periodic communications to support reliable operations.
R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall: **R4.1.** Include version control number or date. **R4.2.** Include a distribution list. **R4.3**. Be reviewed, at least once every three years, and updated if needed	This requirement is proposed to be retired as it is strictly an administrative requirement with no reliability benefit.

Standard IRO-015-1 - Notifications and Information Exchange Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. **R1.1** The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.	This requirement is replaced by proposed IRO-014-3, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following:
R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. **R2.1** The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.	This requirement is replaced by proposed IRO-014-3, Requirement R1, Part 1.5. **Proposed IRO-014-3, Requirement R1, Part 1.5:** **R1, Part 1.5:** Provisions for periodic communications to support reliable operations.
R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators.	This requirement is replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications …

Standard IRO-016-1 - Coordination of Real-time Activities Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. **R1.1** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. **R1.2** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). **R1.2.1** If time permits, this re-evaluation shall be done before taking corrective actions. **R1.2.2** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved **R1.3** If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented.	Proposed IRO-014-3, Requirements R3 through R6 are revised versions of approved IRO-016-1, Requirement R1 and its sub-requirements. **Proposed IRO-014-3, Requirement R3:** **R3.** Each Reliability Coordinator, upon identification of an expected or actual Emergency in its Reliability Coordinator Area, shall notify other impacted Reliability Coordinators. **Proposed IRO-014-3, Requirement R4:** **R4.** Each impacted Reliability Coordinator shall operate as though the Emergency exists during each instance where Reliability Coordinators disagree on the existence of an Emergency. **Proposed IRO-014-3, Requirement R5:** **R5**. Each Reliability Coordinator that Identifies an Emergency in its Reliability Coordinator Area shall develop an action plan to resolve the Emergency during those instances where impacted Reliability Coordinators disagree on the existence of an Emergency. **Proposed IRO-014-3, Requirement R6:** **R6.** Each impacted Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identifies the Emergency during those instances where Reliability Coordinators disagree on the existence of an Emergency, unless such actions would violate safety, equipment, regulatory, or statutory requirements.
R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.	This retirement of this Requirement was approved by FERC effective January 21, 2014 as part of the Paragraph 81 Project.

Standard PER-001-0.2 – Operating Personnel Responsibility and Authority	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System	The SDT is proposing to retire this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted. FERC Order 693a, paragraph 112: In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the Bulk Power System have been more clearly laid out in revised standards. (See FERC Order 693a, paragraph 112.) The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the Bulk Power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, makes this requirement superfluous, and, thus, it can be deleted. FERC Order 693a, paragraph 112: "In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism. The SDT does not believe that there is a need for a decision-making authority requirement as the decision-making authority is inherent in proposed TOP-001-4, Requirement R1 which states that the Transmission Operator must act or issue Operating Instructions.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R1: **R1.** Each Transmission Operator shall act to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	This requirement replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed IRO-001-4, Requirements R2 and R3 and proposed TOP-001-3, Requirements R3 and R4. Proposed IRO-001-4, R2: **Proposed IRO-001-4, Requirement R2:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-001-4, Requirement R3:** **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R4: **R4.** Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator in Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed TOP-001-3, Requirements R3 and R4. **Proposed TOP-001-3, Requirements R3 and R4:** **R3.** Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. Proposed TOP-001-3, R4: **R4.** Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator in Requirement R3.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.	This requirement replaced by proposed TOP-001-3, Requirements R8, R12, and R14. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency	The Generator Operator was deleted from this requirement since it will only respond to such requests if they were in the form of an Operating Instruction from its Transmission Operator

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	or Balancing Authority which is covered in proposed TOP-001-3, Requirements R3, R4, R5 and R6. Assistance at the Transmission Operator level is provided through proposed TOP-001-3, Requirement R7. 'Emergency' deleted as the assistance is assistance in response to the other entities' emergency. Balancing Authorities provide assistance under approved EOP-001-2.1b, Requirement R1. **Approved EOP-001.2.1b, Requirement R1:** **R1.** Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities**.** **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R4:** R4. Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator in Requirement R3. **Proposed TOP-001-3, Requirement R5:** **R5.** Each Transmission Operator, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R6:** **R6.** Each Transmission Operator, Generator Operator, and Distribution Provider shall inform its Balancing Authority of its inability to perform an Operating Instruction issued by that Balancing Authority. **Proposed TOP-001-3, Requirement R7:**

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R7. Each Transmission Operator shall assist other Transmission Operators within its Reliability Coordinator Area, if requested and able, provided that the requesting entity has implemented its comparable Emergency procedures, unless such assistance cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: **R7.1** For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.2** For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.3** When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.	The Generator Operator can't know if their actions will burden neighboring systems since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring systems and will receive this data through proposed TOP-003-3, Requirements R1 and R5 and is required to act on this information as per proposed TOP-001-3, Requirement R8. Proposed IRO-010-2, Requirements R1 and R3 handle the notifications from the Transmission Operator to the Reliability Coordinator. **Proposed TOP-001-3, Requirement R8**: **R8.** Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-003-3, Requirement R1:** **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-010-2, Requirement R3: **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications …
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	First sentence – real power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance real power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – reactive power: Replaced by approved VAR-001-4, Requirement R3 for the Transmission Operator which covers reactive power requirements and the meaning of balancing reactive power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power per the NERC Functional Model V5 and therefore the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power and thus the Balancing Authority is not necessary. Replaced by approved VAR-001-4, Requirements R1 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-2, Requirement R1 for the Transmission Operator and Balancing Authority. **Approved EOP-002-3.1, Requirement R6:** **R6**. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. **Approved VAR-001-4, Requirement R1:** **R1.** Each Transmission Operator shall specify a system voltage schedule (which is either a range or a target value with an associated tolerance band) as part of its plan to operate within System Operating Limits and Interconnection Reliability Operating Limits.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Approved VAR-001-4, Requirement R3: **R3**. Each Transmission Operator shall operate or direct the Real-time operation of devices to regulate transmission voltage and reactive flow as necessary. **Approved IRO-009-1, Requirement R1:** **R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. **Approved IRO-009-1, Requirement R2:** **R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	First sentence, retained for Balancing Authority and Transmission Operator and moved to proposed TOP-002-4, Requirements R2 and R4. Second sentence – Replaced by proposed TOP-001-3, Requirements R1 and R2 for Balancing Authority and Transmission Operator, which requires action to resolve issues. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day … **Proposed TOP-001-3, Requirement R1:** **R1.** Each Transmission Operator shall act to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions.
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	The SDT is proposing to retire this requirement. While it may be good utility practice to do this, it is of marginal benefit to reliability and is more of a 'how' to conduct business as opposed to a definitive 'what' to do.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	The Transmission Operator and Balancing Authority will receive the necessary data in proposed TOP-003-3, Requirement R5. The Transmission Service Provider provisions are covered in approved MOD-001-1a, Requirement R1; approved MOD-030-2, Requirement R3; and approved MOD-001-1a, Requirement R2. The coordination of plans is in proposed IRO-017-1, Requirement R2. **Proposed TOP-003-3, Requirement R5:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Approved MOD-001-1a, Requirement R1:** **R1.** Each Transmission Operator shall select one of the methodologies1 listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. **Approved MOD-030-2, Requirement R3:** **R3.** The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that … **Approved MOD-001-1a, Requirement R2:** **R2**. Each Transmission Service Provider shall calculate ATC or AFC values as listed below using the methodology or methodologies selected by its Transmission Operator(s). **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process.
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.	Coordination of plans is covered in proposed IRO-017-1, Requirement R2 and proposed IRO-008-2, Requirement R2. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process. **Proposed IRO-008-2, Requirement R2:** **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	This requirement has been moved to proposed TOP-002-4, Requirements R2 and R4. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	The part of the requirement dealing with the Balancing Authority and Transmission Operator is replaced by proposed TOP-002-4, Requirements R2 and R4. The n-1 Contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to the approved FAC standards which include Contingency planning. In addition, the definition of Operational Planning Analysis has been revised to better show the intent of the Contingency aspects of the analysis. The SDT does not believe that there is a need to replace the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: 4.1 Expected generation resource commitment and dispatch. 4.2 Interchange scheduling 4.3 Demand patterns 4.4 Capacity and energy reserve requirements, including deliverability capability **Proposed definition: Operational Planning Analysis** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	This requirement is replaced by proposed TOP-002-4, Requirement R4. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Voltage and reactive power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-4, Requirement R1. Deliverability by the Balancing Authority is covered by proposed TOP-002-4, Requirement R4. **Approved VAR-001-4, Requirement R1:** **R1.** Each Transmission Operator shall specify a system voltage schedule (which is either a range or a

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	target value with an associated tolerance band) as part of its plan to operate within System Operating Limits and Interconnection Reliability Operating Limits. **Proposed TOP-002-4, Requirement R4:** R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	This requirement is replaced by approved INT-006-4, Requirement R5, and proposed TOP-002-4, Requirement R4. **Approved INT-006-4, Requirement R5:** **R5**. For each Arranged Interchange that is transitioned to Confirmed Interchange, the Sink Balancing Authority shall notify the following entities of the on-time Confirmed Interchange such that the notification is delivered in time to be incorporated into scheduling systems prior to ramp start as specified in Attachment 1, Column D: **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Balancing Authority - The Balancing Authority is only responsible to respond to Operating Instructions as per the definition of Balancing Authority in the NERC Glossary and, thus, consistent with the Commission-approved interpretation of Requirement R10, Balancing

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Authorities have been removed from the applicability of this requirement. SOLs and IROLs are limits which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations. As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between loads and resources in real time within its Balancing Authority Area by keeping its actual interchange equal to its scheduled interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the Bulk Power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions (as shown in proposed TOP-001-3, Requirement R3) from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. The Balancing Authority must coordinate outage information and exchange data required to allow the Transmission Operator to deal with SOLs. Those items are in proposed IRO-017-1, Requirement R2 and proposed TOP-003-3, Requirement R5. That information is considered by the Transmission Operator when formulating its Operating Plans and since IROLs are a sub-set of SOLs, this is covered in proposed TOP-002-4, requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	First sentence replaced by proposed TOP-002-4, Requirement R1, proposed TOP-001-3, Requirement R13. Specific requirements for seasonal studies are not necessary as proposed IRO-017-1 allows for the Reliability Coordinator to determine the timeframe of the studies that it needs. Second sentence – SOLs are set by the Transmission Operator in approved FAC-014-2, Requirement R2 according to the methodology distributed by the Reliability Coordinator in approved FAC-011-2, Requirement R4, Part 4.3. This should assure that SOLs are consistent for common facilities. Third sentence – Replaced by proposed TOP-001-3, Requirement R13 and proposed TOP-001-3, Requirement R8. **Proposed TOP-002-4, Requirement R1:** **R1**. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13**. Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. **Approved FAC-014-2, Requirement R2:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. **Approved FAC-011-2, Requirement R4:** **R4.** The Reliability Coordinator shall issue its SOL Methodology and any changes to that methodology, prior to the effectiveness of the Methodology or of a change to the Methodology, to all of the following: 4.3 Each Transmission Operator that operates in the Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.	Replaced by approved MOD-028-2, Requirement R6.1; approved MOD-029-1a, Requirement R3; and approved MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. **Approved MOD-028-2, Requirement R6.1:** **6.1** Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing load within the source Balancing Authority area and decreasing generation and/or increasing load within the sink Balancing Authority area until either: • A System Operating Limit is reached on the Transmission Service Provider's system, or • A SOL is reached on any other adjacent system in the Transmission model that is not on the study path and the distribution factor is 5% or greater. **Approved MOD-029-1a, Requirement R3:** **R3.** Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. **Approved MOD-030-2, Requirement R2.4:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	2.4 Establish the TFC of each of the defined Flowgates as equal to: - For thermal limits, the System Operating Limit (SOL) of the Flowgate. - For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	This requirement is replaced by proposed TOP-001-3, Requirement R2 where a Balancing Authority can issue Operating instructions to the Generator Operator which could include verification. The SDT believes that this requirement does not apply to the Transmission Operator since it is dealing exclusively with generation. The data coming back from the verification effort would be included in the Balancing Authority data specification as shown in proposed TOP-003-3, Requirements R2 and R5. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to: **14.1** Changes in real and reactive output capabilities. (Retired August 1, 2007)	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications …

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
14.2 Changes in real output capabilities(Effective August 1, 2007) **14.3** Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:** **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: **16.1** - Changes in transmission facility status. **16.2** - Changes in transmission facility rating	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using:
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	This requirement is proposed for retirement as it adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a system reliability issue. This is an administrative item as seen in the measure which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Accuracy is a relative term that would be difficult to objectively measure and assess compliance with. Proposed TOP-003-3, Requirement R1 stipulates that entities must supply the data needed for reliability. The expectation is that the Transmission Operator would specify the data it requires to perform its functions which would include all of the data it needs to create the model for its analyses and studies. The requirement language allows the entity to specify accuracy of the data provided as part of its data specification. This will, in turn, lead to the creation of an accurate model based on accurate data received. In addition, proposed TOP-003-3, Requirement R5, Part 5.2 allows for the resolution of any data causing conflicts that could affect the models. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R5, Part 5.2:** **5.2** A mutually agreeable process for resolving data conflicts

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Generator Operators and Transmission Operators shall provide planned outage information. **1.1** Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. **1.2** Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. **1.3** Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Parts 1.1, 1.2, and 1.3 are addressed as follows: **1.1** Generator Operators will provide planned outage information to Transmission Operators through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. **1.2** Transmission Operators will provide planned outage information to Reliability Coordinators through proposed IRO-010-2, Requirement R3. Reporting requirements are set in proposed IRO-010-2, Requirement R1. **1.3** Reporting requirements are set in proposed TOP-003-3, Requirement R1 and proposed IRO-010-2, Requirement R1. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.	Generator Operators will provide planned outage information to Transmission Operators and Balancing Authorities through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. Transmission Operators and Balancing Authorities coordinate outages through proposed IRO-017-1, Requirement R2. **Proposed TOP-003-3, Requirement R5:** **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	This requirement is replaced by proposed TOP-001-3, Requirement R9. The data specification concept in proposed TOP-003-3 requires entities to provide data as requested. If there are outages of the equipment needed for providing that data, the entity experiencing the outage must notify the entity it is sending data to so that proper arrangements can be made for replacing the data or coming up with a plan to live without it. It is expected that the data specifications would incorporate such concepts. **Proposed TOP-001-3, Requirement R9:** **R9**. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and known impacted interconnected entities of all planned outages, and unplanned outages of 30 minutes or more, for telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	This requirement is replaced by proposed IRO-008-2, Requirement R2 and proposed IRO-017-1, Requirement R1, Part 1.4. **Proposed IRO-017-1, Requirement R1, Part 1.4**: **1.4** Define the process to coordinate the resolution of identified outage conflicts with its Transmission Operators and Balancing Authorities, and other Reliability Coordinators **Proposed IRO-008-2, Requirement R2:** **R2.** Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	This requirement has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14**. Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	The SDT has revised the definitions of Operational Planning Analysis and Real-time Assessment to address all Contingencies, not just the single most severe Contingency and operations follow suit as shown in proposed TOP-001-3, Requirement R14 and proposed TOP-002-4, Requirement R2.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed definition: **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed TOP-002-4, Requirement R2:** **R2**. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	This requirement is replaced by proposed TOP-001-3, Requirements R12 and R14. These requirements are not limited by single or multiple Contingencies. Approved FAC-011-2 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. Approved FAC-014-2, Requirement R6 requires the Planning Coordinator to identify the subset of multiple Contingencies and to provide this list to the Reliability

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Coordinators. Approved FAC-011-2, Requirement R3.3 requires the Reliability Coordinator to include in its SOL methodology a process for determining which of the Stability limits associated with multiple Contingencies are used to establish SOLs. Approved FAC-014-2, Requirement R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. Approved FAC-014-2, Requirement R1 also requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area while approved FAC-014-2, Requirement R2 also requires the Transmission Operator to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Approved FAC-011-2, Requirement R1:** **R1**. The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: **R1.1**. Be applicable for developing SOLs used in the planning horizon **R1.2.** State that SOLs shall not exceed associated Facility Ratings. **R1.3.** Include a description of how to identify the subset of SOLs that qualify as IROLs. **Approved FAC-011-2, Requirement R3:** **R3.** The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: **R3.3**. A process for determining which of the stability limits associated with the list of multiple contingencies (provided by the Planning Authority in accordance with

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	FAC-014 Requirement 6) are applicable for use in the operating horizon given the actual or expected system conditions. **R3.3.1**. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple contingencies. **Approved FAC-014-2, Requirement R1:** **R1.**The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology. **Approved FAC-014-2, Requirement R2:** **R2.** The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. **Approved FAC-014-2, Requirement R6:** **R6.** The Planning Authority shall identify the subset of multiple contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. **R6.1.** The Planning Authority shall provide this list of multiple contingencies and the associated stability limits to the Reliability Coordinators that monitor the facilities associated with these contingencies and limits. **R6.2.** If the Planning Authority does not identify any stability related multiple contingencies, the Planning Authority shall so notify the Reliability Coordinator.
R4. If a Transmission Operator enters an unknown operating state (i.e., any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	The SDT believes that given the revised definitions for Operational Planning Analysis and Real-time Assessment, as well as the new requirement for TOPs to update their OPA results through the performance of a Real-time Assessment every 30 minutes, that entities will always be operating to valid operating limits. Therefore, this requirement is replaced by proposed TOP-001-3, Requirements R12, R13, and R14 along with the revised definitions of Operational Planning Analysis and Real-time Assessment. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the Bulk Power System.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R12: **R12**. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R13:** **R13**. Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)
R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is proposed for retirement by the SDT. In the Functional Model v5, the

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Operator may take such actions, as it deems necessary, to protect its area.	Transmission Operator responsibilities and duties are clearly spelled out. Item 14 states that a Transmission Operator sheds load under the auspices of the Reliability Coordinator. Functional model v5: 14. Coordinates load shedding with, or as directed by, the Reliability Coordinator
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: **6.1** Monitoring and controlling voltage levels and real and reactive power flows. **6.2** Switching transmission elements. **6.3** Planned outages of transmission elements. **6.4** Responding to IROL and SOL violations.	The first sentence has been superseded by the NERC Reliability Standards taken as a whole and is proposed to be retired. The second sentence was replaced as follows: **R6.1** is duplicative of approved VAR-001-4, Requirement R1 for reactive power. Real power flows are covered in proposed TOP-001-3, Requirements R10, R12 and R14. **R6.2** has been replaced by proposed TOP-001-3, Requirement R8. **R6.3** has been replaced by proposed IRO-017-1, Requirement R2. **R6.4** has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Approved VAR-001-4, Requirement R1:** **R1.** Each Transmission Operator shall specify a system voltage schedule (which is either a range or a target value with an associated tolerance band) as part of its plan to operate within System Operating Limits and Interconnection Reliability Operating Limits. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process.

Standard TOP-005-2a — Operational Reliability Information	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Recognizing security concerns, the SDT has added security protocols to proposed IRO-010-2, Requirement R3, Part 3.3 and to proposed TOP-003-3, Requirement R5, Part 5.3 to address overall security concerns. **Proposed IRO-010-2, Requirement R3, Part 3.3:** **3.3** A mutually agreeable security protocol **Proposed TOP-003-3, Requirement R5, Part 5.3:** **5.3** A mutually agreeable security protocol.
R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-2a "Electric System Reliability Data,**"** unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	This requirement replaced by proposed TOP-003-3, Requirement R1, R2, and R5. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted as redundant to NAESB standards – All operating data that a Purchasing-Selling Entity has that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. **1.1** - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. **1.2** - Each Transmission Operator shall inform the Reliability Coordinator and other affected Transmission Operators of all transmission resources available for use. **1.3 -** Each Balancing Authority shall inform its Reliability Coordinator of all generation resources available for use.	The main body of the requirement is replaced by proposed TOP-001-3, Requirements R10 and R11. **1.1** This Part is replaced by proposed TOP-003-3, Requirement R5. **1.2** This Part is replaced by proposed IRO-101-2, Requirement R3. **1.3** This Part is replaced by proposed IRO-010-2, Requirement R3. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain Load-interchange balance within its Balancing Authority Area and support Interconnection frequency. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	This requirement is replaced by proposed IRO-002-4, Requirement R3, proposed TOP-001-3, Requirement R10, and proposed TOP-001-3, R11. The requirements mandate that any Facility needed for an entity to perform its reliability-based functions must be monitored. This would include load-tap changers, rotating and static reactive resources, etc. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: **10.**1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and **10.2** Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide its operating personnel with appropriate technical information concerning protective relays within the Reliability Coordinator Area, the Transmission Operator Area, and the Balancing Authority Area, respectively.	This requirement replaced by proposed IRO-010-2, Requirement R1, Part 1.2; proposed TOP-003-3, Requirement R1, Part 1.2; and proposed TOP-003-3, Requirement R2, Part 2.2.; and the proposed changes to the definitions of Operational Planning Analysis and Real-time Assessment.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed definition: Operational Planning Analysis - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed definition: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed IRO-010-2, Requirement R1, Part 1.2:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed TOP-003-3, Requirement R1, Part 1.2:** **R 1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-003-3, Requirement R2, Part 2.2: **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: **2.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	This requirement replaced by proposed TOP-003-3, Requirement R1 and R2 with regard to load patterns. Weather forecasts are a necessary element for load forecasts which are required for Operational Planning Analysis. Therefore, this requirement can be retired. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.	This requirement replaced by proposed TOP-001-3, Requirements R10 and R11, and proposed IRO-002-4, Requirement R3. **Proposed TOP-001-3, Requirement R10:**

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R10. Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain Load-interchange balance within its Balancing Authority Area and support Interconnection frequency. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	The requirement is replaced by proposed TOP-003-3, Requirements R1 and R2 which state that data specifications can include, but are not limited to the 4 criteria listed. This allows for an entity to create specifications that would include items such as range of metering, accuracy, etc. **Proposed TOP-003-3, Requirement R1:** **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R2:**

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R2. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to:
R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	This requirement is replaced by proposed IRO-002-4, Requirement R3, and proposed TOP-001-3, Requirements R10 and R11. **Proposed IRO-002-4, Requirement R3**: **R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.	This requirement is replaced by proposed TOP-001-3, Requirement R15. The Reliability Coordinator has the primary responsibility for IROLs and will be in communication with Transmission Operators to mitigate the situation. This is shown in proposed IRO-008-2, Requirements R5 and R6. **Proposed TOP-001-3, Requirement R15:** **R15.** Each Transmission Operator shall inform its Reliability Coordinator of actions taken to return the System to within limits when a SOL has been exceeded. **Proposed IRO-008-2, Requirement R5:** **R5.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area. **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated.
R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	This requirement is replaced by proposed TOP-001-3, Requirement R12 and approved IRO-009-1, Requirement R4. **Approved IRO-009-1, Requirement R4:** **R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's Tv. **Proposed TOP-001-3, Requirement R12:**

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R12. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
R3. A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	This requirement replaced by approved EOP-003-2, Requirement R1 and approved IRO-009-1, Requirement R4. **Approved IRO-009-1, Requirement R4:** **R4**. When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's Tv. **Approved EOP-003-2, Requirement R1:** **R1**. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	This requirement replaced by proposed IRO-008-2, Requirement R6. **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated.

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	This requirement replaced by approved EOP-003-1, Requirement R1 and proposed TOP-001-3, Requirements R12 and R14. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	First sentence – Replaced by proposed TOP-001-3, Requirements R12 and R14. Second sentence – Replaced by proposed TOP-001-3, Requirement R18. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator shall operate to the most limiting parameter in instances where there is a difference in SOLs.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall	First sentence - Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other Reliability Standards where disconnection is dependent on System conditions and coordination with

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	other functional entities. Such actions, taken unilaterally, could make conditions worse. Therefore, the SDT is proposing to retire this requirement. Second sentence – In general, notification is replaced by proposed TOP-001-3, Requirement R8. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	The part of the requirement dealing with data is replaced by proposed TOP-003-3, Requirement R1. The part of the requirement dealing with analysis is replaced by proposed TOP-002-4, Requirement R1 and proposed TOP-001-3, Requirement R13. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-002-4, Requirement R1:** **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13**. Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

White Paper on System Operating Limit Definition and Exceedance Clarification

System Operating Limit Definition and Exceedance Clarification

The NERC-defined term System Operating Limit (SOL) is used extensively in the NERC Reliability Standards; however, there is much confusion with – and many widely varied interpretations and applications of – the SOL term. This whitepaper describes the Standard Drafting Team's (SDT) intent with regard to the SOL concept and brings clarity and consistency to the notion of establishing SOLs, exceeding SOLs, and implementing Operating Plans to mitigate SOL exceedances.

System Operating Limit Definition Clarification:
As stated in the NERC Glossary of Terms Used in Reliability Standards, a SOL is defined as the value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. SOLs are based upon certain operating criteria. These include, but are not limited to:

- Facility Ratings (Applicable pre- and post- Contingency equipment or Facility ratings)
- Transient Stability Ratings (Applicable pre- and/or post-Contingency Stability Limits)
- Voltage Stability Ratings (Applicable pre- and/or post- Contingency Voltage Stability)
- System Voltage Limits (Applicable pre- and post-Contingency Voltage Limits)

The concept of SOL determination is not complete without looking at the approved NERC FAC standards FAC-008-3, FAC-011-2, and FAC-014-2:

1. The purpose of approved FAC-008-3, which is applicable to both Generation and Transmission Owners, is to ensure that Facility Ratings used in the reliable planning and operation of the BES are determined based on technically sound principles. A Facility Rating is essential for the determination of SOLs. The standard requires both Generation Owners and Transmission Owners to have a documented Facility Rating that respects the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility. The scope of the Ratings addressed shall include, as a minimum, both Normal and Emergency (short-term) Ratings (approved FAC-008-3, Requirement R3, part 3.4.2). A 24-hour continuous rating is an example of a Normal rating; however, rating practices vary from entity to entity and may include ratings that vary with ambient temperature. Typical Emergency (short-term) Ratings have a finite duration of less than 24 hours (e.g., 4 hours, 2 hours, 1 hour, 30 minutes, or 15 minutes).

2. The purpose of approved FAC-011-2, which is applicable to Reliability Coordinators, is to ensure that SOLs used in the reliable operation of the BES are determined based on an established methodology or methodologies. Approved FAC-011-2, Requirement R2 requires that the Reliability Coordinator's SOL Methodology include a requirement that SOLs provide a certain level of BES performance for the pre- and post-Contingency state. Specifically:

   Pre-Contingency: Acceptable system performance for the pre-Contingency state is characterized by the following:

   a. The BES shall demonstrate transient, dynamic, and voltage Stability.
   b. All Facilities shall be within their applicable Facility Ratings and thermal limits.
   c. All Facilities shall be within their pre-Contingency voltage limits.
   d. All Facilities shall be within their Stability limits.

   Post-Contingency: Acceptable system performance for the post-Contingency state for single Contingencies is characterized by the following (approved Reliability Standard FAC-011-2, Requirement R2, part 2.2):

   a. The BES shall demonstrate transient, dynamic, and voltage Stability.
   b. All Facilities shall be within their applicable Facility Ratings and thermal limits.
   c. All Facilities shall be within their post-Contingency voltage limits.
   d. All Facilities shall be within their Stability limits.
   e. Cascading or uncontrolled separation shall not occur.

3. Approved FAC-011-2 Requirement R3, Part 3.1 also ensures that the Reliability Coordinator's methodology for determining SOLs includes a description of the study model, which at a minimum must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study as well as the level of detail of system models used to determine SOLs which is shown in approved FAC-011-2, Requirement R3, Part 3.4. The requirements within approved FAC-011-2, when combined with the BES Exception Process which is designed to bring impactful facilities into the BES, ensure that all facilities that can adversely impact BES reliability are either designated as part of the BES or otherwise incorporated into planning and operations studies.

4. Approved FAC-014-2, Requirement R2 requires that Transmission Operators establish SOLs for their portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology.

Some have interpreted the language in approved FAC-011-2, Requirement R2 to imply that the objective is to perform prior studies to determine a specific MW flow value (SOL) that ensures operation within the criteria specified in approved FAC-011-2, Requirement R2 sub-requirements, the assumption being that if the system is operated within this pre-determined SOL value, then all of the pre- and post-Contingency requirements described in approved FAC-011-2, Requirement R2 will be met. The SDT believes this approach may not capture the complete intent of the SOL concept within approved FAC-011-2, which is both:

1. Know the Facility Ratings, voltage limits, transient Stability limits, and voltage Stability limits, and
2. Ensure that they are all observed in both the pre- and post-Contingency state by performing a Real-time Assessment.

SOLs are based on Normal and Emergency (short-term) Facility Ratings, voltage limits, transient Stability limits, and voltage Stability limits – any of which can be the most restrictive limit at any point in time pre- or post-Contingency. For example, if an area of the BES is at no risk of encroaching upon Stability or voltage limitations in the pre- or post-Contingency state, and the most restrictive limitations in that area are pre- or post-Contingency exceedance of Facility Ratings, then the thermal Facility Ratings in that area are the most limiting SOLs. Conversely, if an area is not at risk of instability and no Facilities are approaching their thermal Facility Ratings, but the area is prone to pre- or post-Contingency low voltage conditions, then the voltage limits in that area are the most limiting SOLs.

It is important to distinguish operating practices and strategies from the SOL itself. As stated earlier, the SOL is based on the actual set of Facility Ratings, voltage limits, or Stability limits that are to be monitored for the pre- and post-Contingency state. How an entity remains within these SOLs can vary depending on the planning strategies, operating practices, and mechanisms employed by that entity. For example, one Transmission Operator may utilize line outage distribution factors or other similar calculations as a mechanism to ensure SOLs are not exceeded, while another may utilize advanced network applications to achieve the same reliability objective.

In order to ensure an SOL is not exceeded, the following SOL performance must be maintained:

1. **Facility Ratings:**
   In the pre- and post-Contingency state, operate within Facility capability by utilizing Normal and Emergency (short-term) Ratings, as applicable, within their associated time parameters.
2. **Voltage Limits:**
   In the pre-Contingency state, operate within normal voltage limits. In the post-Contingency state, operate within applicable emergency voltage limits.
3. **Transient Stability Limits:**
   Transmission Operators establish SOLs to prevent intra-area instability, inter-area instability, or tripping of Facilities due to out-of-step conditions. Transient Stability limits are typically defined as the maximum power transfer or load level that ensures critical transient reliability criteria are met. Calculated flows must be maintained within appropriate pre- and/or post-Contingency limits.
4. **Voltage Stability Limits:**
   Transmission Operators typically stress Transmission Paths/Interfaces or load areas to the reasonably expected maximum transfer conditions or area load levels to determine whether steady state voltage Stability limits exist. Voltage Stability limits are typically defined as the maximum power transfer or load level that ensures voltage Stability criteria are met. Calculated flows must be maintained within appropriate pre- and/or post-Contingency limits.

System Operating Limit Exceedance Clarification:

The combination of requirements contained within the approved FAC and proposed TOP standards, as well as the use of defined terms contained within those standards such as Operational Planning Analysis, Real-time Assessment, and Operating Plans when executed properly result in maintaining reliable BES performance. Specifically,

1. Approved FAC standards require clear determination of Facility Ratings and describe acceptable system performance criteria for the pre- and post-Contingency state.
2. Proposed TOP-001-3, Requirement R13 requires that a Transmission Operator perform a Real-time Assessment at least once every 30 minutes.
3. Proposed TOP-002-4, Requirement R2 requires that each Transmission Operator have an Operating Plan to address potential SOL exceedances identified as a result of its Operational Planning Analysis.
4. Proposed TOP-001-3, Requirement R14 requires the Transmission Operator to initiate Operating Plan(s) to mitigate SOL exceedances.

<u>Facility Rating Exceedance</u>

Facility Rating exceedance is a function of the available limit set and the magnitude of pre- or post-Contingency flows in relation to those limits as observed in Real-time monitoring or Real-time Assessments. Figure 1 illustrates an SOL Performance Summary for Facility Ratings.

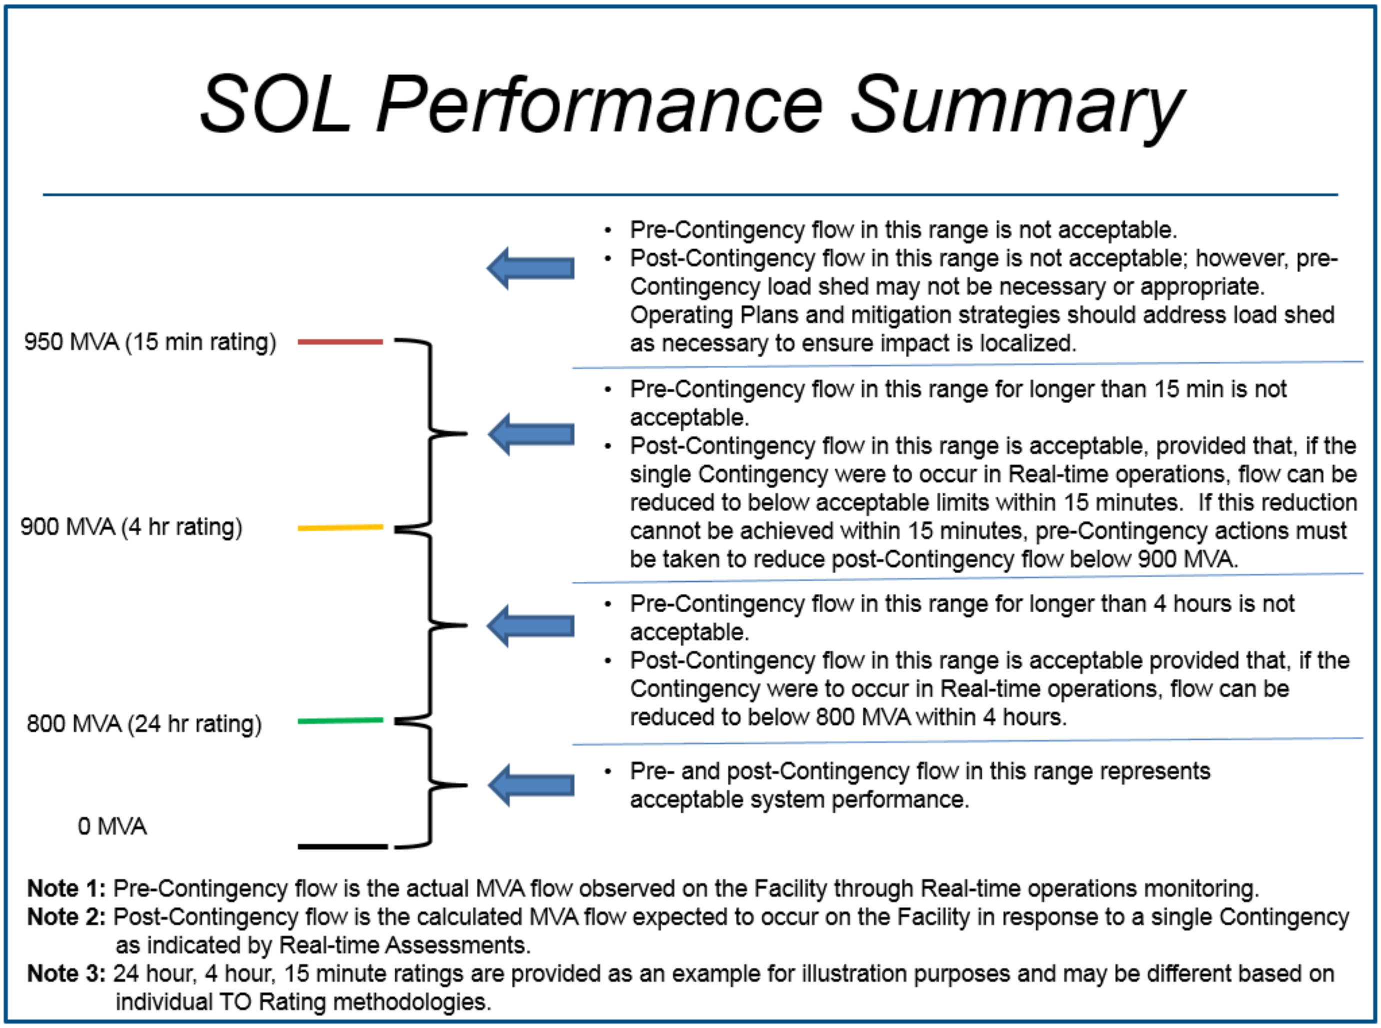

Figure 1. Facility Rating System Operating Limit Performance Summary

In cases where post-Contingency flow exceeds the highest available Facility Rating as shown in Figure 1, Transmission Operators are expected to take pre-Contingency action to relieve the condition (including redispatch, reconfiguration, and making adjustments to the uses of the transmission system); however, the operating condition may not warrant shedding load pre-Contingency to relieve the condition. Pre-Contingency Load shed is generally utilized as a last resort in conditions where the next Contingency could result in Cascading or widespread instability. An entity's Operating Plan is expected to define when it is appropriate to shed Load pre-Contingency versus post-Contingency while ensuring the BES remains N-1 secure.

Steady State Voltage Limit Exceedance

SOL performance for steady state voltage limits is determined through Real-time Assessments. Normal and emergency voltage limits are expected to respect any voltage limitations specified in the Transmission

Owner's or the Generation Owner's Facility Ratings Methodology per approved FAC-008-3. Normal voltage limits are typically applicable for the pre-Contingency state while emergency voltage limits are applicable for the post-Contingency state. SOL exceedance with respect to these voltage limits occurs when either actual bus voltage is outside acceptable pre-Contingency (normal) bus voltage limits, or when Real-time Assessments indicate that bus voltages are expected to fall outside acceptable emergency limits in response to a Contingency event. Real-time Assessments should recognize the impact of auto-reactive devices and whether or not those devices are sufficient for maintaining voltages within acceptable limits pre- or post-Contingency.

Stability Limit Exceedance

Transient and voltage Stability limits can be determined through prior studies, or they can be determined in Real-time.

Transient Stability limits are often expressed as flow limits on a defined interface or cut plane that, if operated within, ensures that the system will remain transiently stable should the identified Contingency(s) occur. Transient instability could take several forms, including undamped oscillations, or angular instability resulting in portions of the system losing synchronism.

Though voltage Stability limits can be determined, expressed, and monitored in several ways, the general principle is universal – voltage Stability limits are intended to ensure that the system does not experience voltage collapse in the pre- or post-Contingency state.

SOL exceedance for Stability limits occurs when the system enters into an operating state where the next Contingency could result in transient or voltage instability. Figure 2 depicts a wide-area voltage Stability based SOL that qualifies as an IROL. In this example, SOL (IROL) exceedance occurs when power transfers over the monitored Facility(s) exceeds the P_{IROL} value. Note - A localized voltage collapse may not qualify as an IROL.

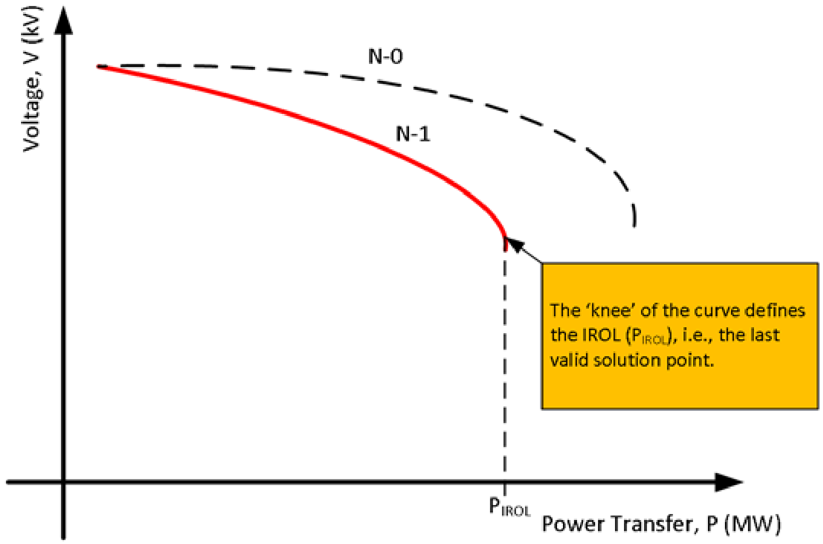

Figure 2. Voltage Stability System Operating Limit Performance Summary

SOL exceedance occurs when acceptable system performance as described in approved FAC-011-2 is not occurring in Real-time operations as determined by Real-time Assessments. In other words, unacceptable system performance as indicated by Real-time Assessments equates to SOL exceedance. An SOL is exceeded when any of the following occur or are observed as part of a Real-time Assessment:

- Actual flow on a Facility is above the Facility Rating for an unacceptable time duration
- Calculated Post-Contingency flow on a Facility is above the highest available Facility Rating
- Actual bus voltage is outside acceptable pre-Contingency (normal) bus voltage limits
- Post-Contingency bus voltage is outside acceptable post-Contingency (emergency) bus voltage limits
- Defined transient or voltage Stability limits are exceeded (techniques for determining and observing Stability limits can vary)

SOL Exceedance and Operating Plans:

When an SOL is being exceeded in Real-time operations, the Transmission Operator is required to implement mitigating strategies consistent with its Operating Plan(s). Operating Plans can include specific Operating Procedures or more general Operating Processes. Operating Plans include both pre- and post-Contingency mitigation plans/strategies. Pre-Contingency mitigation plans/strategies are actions that are implemented before the Contingency occurs to prevent the potential negative impacts on reliability of the

Contingency. Post-Contingency mitigation plans/strategies are actions that are implemented after the Contingency occurs to bring the system back within limits. Operating Plans contain details to include appropriate timelines to escalate the level of mitigating plans/strategies to ensure BES performance is maintained as per approved FAC-011-2, Requirement R2, preventing SOL exceedances from becoming an IROL. Operating Plan(s) must include the appropriate time element to return the system to within acceptable Normal and Emergency (short-term) Ratings and/or operating limits identified above. For example, in Figure 1, operating above the 950 MVA 15 minute limit would be an SOL exceedance for actual flows and may also be an exceedance for projected post-Contingency flows if a communicated post-Contingency load shed plan cannot be implemented in a timely fashion in order to prevent post-Contingency equipment damage and/or non-localized Cascading outages. However, operating between 900 MVA and 950 MVA is not an SOL exceedance unless the associated Operating Plan time parameter is exceeded as explained in Figure 1.

An example Operating Plan is shown in Table 1.

Thermal SOL Limit Exceeded	Pre-Contingency (actual) Loading	Post-Contingency (calculated) Loading
Normal (24 hr)	**Reconfiguration actions, Redispatch actions, emergency procedures except Load shed consistent with timelines identified in Operating Plan.**	**Trend – continue to monitor. Take reconfiguration actions to prevent Contingency from exceeding emergency limit consistent with timelines identified in Operating Plan.**
Emergency (4 hr)	**All of the above plus Load shed only if necessary and appropriate to control loading below 4 hr Emergency Rating consistent with timelines identified in Operating Plan.**	**Use available effective actions and emergency procedures except Load shed consistent with timelines identified in Operating Plan.**
Emergency (15 min)	**All of the above plus Load shed to control loading below 15 min Emergency Rating consistent with timelines identified in Operating Plan.**	**All of the above however, Load shed only if necessary and appropriate to avoid post-Contingency Cascading consistent with timelines identified in Operating Plan.**

Table 1. Operating Plan Example

APPLICABLE DEFINITIONS

Real-time Assessment – An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Operational Planning Analysis – An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

Changes made to the definitions of Real-time Assessment and Operational Planning Analysis were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments and Operational Planning Analysis contain sufficient details to result in an appropriate level of situational awareness. Some examples include: 1) analyzing phase angles which may result in the implementation of an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service, or 2) evaluating the impact of a modified Contingency resulting from the status change of a Special Protection Scheme from enabled/in-service to disabled/out-of-service.

Operating Plan – A document that identifies a group of activities that may be used to achieve some goal. An Operating Plan may contain Operating Procedures and Operating Processes. A company-specific system restoration plan that includes an Operating Procedure for black-starting units, Operating Processes for communicating restoration progress with other entities, etc., is an example of an Operating Plan.

Operating Process – A document that identifies general steps for achieving a generic operating goal. An Operating Process includes steps with options that may be selected depending upon Real-time conditions. A guideline for controlling high voltage is an example of an Operating Process.

Operating Procedure – A document that identifies specific steps or tasks that should be taken by one or more specific operating positions to achieve specific operating goal(s). The steps in an Operating Procedure should be followed in the order in which they are presented, and should be performed by the position(s) identified. A document that lists the specific steps for a System Operator to take in removing a specific transmission line from service is an example of an Operating Procedure.

Time Horizons
When establishing a time horizon for each requirement, the following criteria should be used:

- **Long-term Planning –** a planning horizon of one year or longer.
- **Operations Planning** – operating and resource plans from day-ahead up to and including seasonal.
- **Same-Day Operations** – routine actions required within the timeframe of a day, but not Real-time.
- **Real-time Operations** – actions required within one hour or less to preserve the reliability of the Bulk Electric System.

Facility Rating – The maximum or minimum voltage, current, frequency, or real or reactive power flow through a facility that does not violate the applicable equipment rating of any equipment comprising the facility.

Normal Rating – The rating as defined by the equipment owner that specifies the level of electrical loading, usually expressed in megawatts (MW) or other appropriate units that a system, facility, or element can support or withstand through the daily demand cycles without loss of equipment life.

Emergency Rating – The rating as defined by the equipment owner that specifics the level of electrical loading or output, usually expressed in megawatts (MW) or Mvar, or other appropriate units, that a system, facility, or element can support, procedure, or withstand for a finite period. The rating assumes acceptable loss of equipment life or other physical or safety limitations for the equipment involved.

Exhibit F

Mapping Document of Proposed Reliability Standards to Southwest Outage Report Recommendations

Mapping of Revised TOP and IRO Reliability Standards to Address 2011 Southwest Outage Report Recommendations

The following table provides a mapping of the recommendations applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority contained in the 2011 Southwest Outage Report. Several of the recommendations are specific to the particular facts and circumstances of the 2011 Southwest Outage and are therefore not addressed here.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
1	All TOPs should conduct next-day studies and share the results with neighboring TOPs and the RC (before the next day) to ensure that all contingencies that could impact the BPS are studied.	Next-day studies are required by proposed TOP-002-4, Requirement R1. Sharing the results of those studies is required in proposed TOP-002-4, Requirement R3. Providing results to the Reliability Coordinator is required in proposed TOP-002-4, Requirement R6. **Proposed TOP-002-4, Requirement R1**: Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-002-4, Requirement R3:** Each Transmission Operator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). **Proposed TOP-002-4, Requirement R6**: Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator.
2	TOPs and BAs should ensure that their next-day studies are updated to reflect next-day operating conditions external to their systems, such as generation and	This is addressed in proposed TOP-002-4, through the revised definition of Operational Planning Analysis, and by the data specification standard

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	transmission outages and scheduled interchanges, which can significantly impact the operation of their systems.	which dictates that external system data must be part of the data specification. **Proposed TOP-002-4, Requirement R1**: Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed TOP-003-3, Requirement R1, part 1.1:** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **1.1** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	TOPs and BAs should take the necessary steps, such as executing nondisclosure agreements, to allow the free exchange of next-day operations data between operating entities.	This item is addressed through proposed TOP-003-3. **Proposed TOP-003-3, Requirement R1:** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R2:** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R5**: Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications using:
	Also, RCs should review the procedures in the region for coordinating next-day studies, ensure adequate data exchange among BAs and TOPs, and facilitate the next-day studies of BAs and TOPs.	Proposed IRO-008-2, Requirement R2 requires the Reliability Coordinator to have a coordinated Operating Plan(s) which will have required the Reliability Coordinator to have reviewed the plans submitted by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R2:** Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1 considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
3	TOPs and RCs should ensure that their next-day studies include all internal and external facilities (including those below 100 kV) that can impact BPS reliability.	This is addressed in the data specification standards. **Proposed TOP-003-3, Requirement R1, part 1.1:** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator. **Proposed IRO-010-2, Requirement R1, Part 1.1:** A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator.
4	WECC RC should improve its process for predicting interchanges in the day-ahead timeframe.	Interchange is now part of the list of things that a Reliability Coordinator must consider in the revised definition of Operational Planning Analysis. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
5	WECC RE should ensure better integration and coordination of the various subregions' seasonal studies for the entire WECC system. To ensure a thorough seasonal planning process, at a minimum, WECC RE should require a full contingency analysis of	This recommendation is not applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority and is therefore not addressed here.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	the entire WECC system, using one integrated seasonal study, and should identify and eliminate gaps between subregional studies. Individual TOPs should also conduct a full contingency analysis to identify contingencies outside their own systems that can impact the reliability of the BPS within their system and should share their seasonal studies with TOPs shown to affect or be affected by their contingencies.	 The proposed TOP-003-3 states that Transmission Operators must gather external network data and proposed TOP-002-4 mandates sharing the results of studies. **Proposed TOP-003-3, Requirements R1, Part 1.1**: A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator. **Proposed TOP-002-4, Requirement R3**: Each Transmission Operator shall notify impacted entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). While there is no explicit requirement for seasonal studies, the Reliability Coordinator has the authority to request such a study if it believes it is needed for reliability.
6	TOPs should expand the focus of their seasonal planning to include external facilities and internal and external sub-100 kV facilities that impact BPS reliability.	The proposed TOP-003-3 explicitly states that Transmission Operators must obtain external network and sub-100 kV data. **Proposed TOP-003-3, Requirements R1, Part 1.1** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		While there is no explicit requirement for seasonal studies, the Reliability Coordinator has the authority to request such a study if it believes it is needed for reliability.
7	TOPs should expand the cases on which they run their individual planning studies to include multiple base cases, as well as generation maintenance outages and dispatch scenarios during high load shoulder periods.	The revised definition of Operational Planning Analysis states that "projected system conditions" must be considered which would include generator outages and high load periods. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
8	TOPs should include in the information they share during the seasonal planning process the overload relay trip settings on transformers and transmission lines that impact the BPS, and separately identify those that have overload trip settings below 150% of their normal rating, or below 115% of the highest emergency rating, whichever of these two values is greater.	The proposed TOP-003-3 states that Protection System data must be obtained. And the revised definition of Operational Planning Analysis states explicitly that Protection Systems must be included in studies. Sharing of results is addressed in proposed TOP-002-4. **Proposed TOP-003-3, Requirements R1, Part 1.2**: Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed TOP-002-4, Requirement R3**: Each Transmission Operator shall notify impacted entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). While there is no explicit requirement for seasonal studies, the Reliability Coordinator has the authority to request such a study if it believes it is needed for reliability.
9	WECC RE should take actions to mitigate these and any other identified gaps in the procedures for conducting near- and long-term planning studies. The September 8th event and other major events should be used to identify shortcomings when developing valid cases over the planning horizon and to identify flaws in the existing planning structure. WECC RE should then propose changes to improve the performance of planning studies on a subregional- and Interconnection-wide basis and ensure a coordinated review of TPs’ and PCs’ studies. TOPs, TPs, and PCs should develop study cases that cover critical system conditions over the planning horizon; consider the benefits and potential adverse effects of all protection systems, including RASs, Safety Nets (such as the SONGS separation scheme), and overload protection schemes; study the interaction of RASs and Safety Nets; and consider the impact of	This recommendation is not applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority and is therefore not addressed here. The proposed TOP-003-3 addresses these items. **Proposed TOP-003-3, Requirements R1, Parts1.1 and 1.2:** 1.1 A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	elements operated at less than 100 kV on BPS reliability.	1.2 Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. Planning Coordinators and Transmission Planners are outside the scope of this project.
10	WECC dynamic models should be benchmarked by TPs against actual data from the September 8th event to improve their conformity to actual system performance. In particular, improvements to model performance from validation would be helpful in analysis of under and/or over frequency events in the Western Interconnection and the stability of islanding scenarios in the SDG&E and CFE areas.	This recommendation is not applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority and is therefore not addressed here.
11	TOPs should engage in more real-time data sharing to increase their visibility and situational awareness of external contingencies that could impact the reliability of their systems. They should obtain sufficient data to monitor significant external facilities in real time, especially those that are known to have a direct bearing on the reliability of their system, and properly assess the impact of internal contingencies on the SOLs of other TOPs. In addition, TOPs should review their real-time monitoring tools, such as State Estimator and RTCA, to ensure that such tools represent critical facilities needed for the reliable operation of the BPS.	Proposed TOP-003-3, Requirement R1, Part 1.1 states that Transmission Operators must include external network data in their respective data specifications. **Proposed TOP-003-3, Requirement R1, Part 1.1**: A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator. **Proposed TOP-001-3, Requirement R13:** Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. The revised definition of Real-time Assessment includes potential post-Contingency operating conditions.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		Proposed Definition: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)
12	TOPs should take measures to ensure that their real-time tools are adequate, operational, and run frequently enough to provide their operators the situational awareness necessary to identify and plan for contingencies and reliably operate their systems.	The Project 2014-03 SDT has developed a requirement for the performance of a Real-time Assessment for Transmission Operators. **Proposed TOP-001-3, Requirement R13:** Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.
13	TOPs should review existing operating processes and procedures to ensure that post-contingency mitigation plans reflect the time necessary to take mitigating actions, including control actions, to return the system to a secure N-1 state as soon as possible but no longer than 30 minutes following a single contingency.	Proposed TOP-002-4, Requirement R2 states that Transmission Operators must have an Operating Plan to address SOL exceedances. Proposed TOP-001-3, Requirement R14 then states that the Transmission Operator must initiate its Operating Plan for mitigating and SOL exceedance. In addition, the SDT has developed a white paper on SOL Exceedance that clarifies the SDT position on SOL performance and SOL exceedance. **Proposed TOP-002-4, Requirement R2**: Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-001-3, Requirement R14**:

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	As part of this review, TOPs should consider the effect of relays that automatically isolate facilities without providing operators sufficient time to take mitigating measures**.**	Each Transmission Operator shall initiate its Operating Plan to mitigate a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. The proposed TOP-003-3 explicitly requires the acquisition of Protection System data and the revised definitions of Operational Planning Analysis and Real-time Assessment call out Protection Systems as an item to be studied. **Proposed TOP-003-3, Requirement R1, Part 1.2:** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		(Real-time Assessment may be provided through internal systems or through third-party services.)
14	WECC RC should evaluate the effectiveness of its staffing level, training and tools. Based on the results of this evaluation, it should determine what actions are necessary to perform its functions appropriately as the RC and address any identified deficiencies.	This recommendation is specific to the WECC Reliability Coordinator and is therefore not addressed here.
15	TOPs should ensure procedures and training are in place to notify WECC RC and neighboring TOPs and BAs promptly after losing RTCA capabilities.	Proposed TOP-001-3, Requirement R9 states that Transmission Operators must notify impacted NERC registered entities of outages to monitoring and assessment capabilities. Training is outside the scope of this project. **Proposed TOP-001-3, Requirement R9**: Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and known impacted interconnected entities of all planned outages, and unplanned outages of 30 minutes or more, for telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities.
16	WECC should ensure consistencies in model parameters between its planning model and its RTCA model and should review all model parameters on a consistent basis to make sure discrepancies do not occur.	Model parameters are outside the scope of this project.
17	WECC, as the RE, should lead other entities, including TOPs and BAs, to ensure that all facilities that can adversely impact BPS reliability are either designated as part of the BES or otherwise incorporated into planning and operations studies and actively monitored and alarmed in RTCA systems.	Designation of BES facilities is outside the scope of this project. However, the revised standards do incorporate the need for non-BES data and monitoring as deemed necessary by the reliability entities. If a non-BES facility impacts the BES, such as by contributing to an SOL or IROL, then the SDT expects that facility to be incorporated into the BES through the official BES Exception Process and it would be covered in

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		proposed TOP-001-3, Requirement R10, Parts 10.1 and 10.2 by use of the defined term 'Facilities'. If non-BES facilities do not impact the BES but are needed for completing models, then the SDT believes the situation is already covered in approved FAC-011-2, Requirement R3, Parts 3.1 and 3.4 which mandate that the Reliability Coordinator include external areas and the level of detail needed in models for determining SOLs within its established SOL methodology. **Proposed TOP-003-3, Requirement R1, Part 1.1**: A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator. **Proposed IRO-010-2, Requirement R1, Part 1.1**: A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator. **Proposed TOP-001-3, Requirement R10**: Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed IRO-002-4, Requirement R4**:

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and sub-100 kV facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Approved FAC-001-2, Requirement R3:** The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: 3.1 Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.) 3.4 Level of detail of system models used to determine SOLs.
19, 20, 22, 23, 25, 26	About coordination of SPS/RAS at the RC and TOP level.	Coordination of Special Protection Systems and Remedial Action Schemes is addressed in approved PRC-001-1.1a. Any changes to Protection System coordination issues is outside the scope of this project. Monitoring is addressed in proposed TOP-001-3, Requirement R10 and proposed IRO-002-4, Requirement R4. **Proposed TOP-001-3, Requirement R10**: Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		Proposed IRO-002-4, Requirement R4: Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and sub-100 kV facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.
21	GOs and GOPs should evaluate the sensitivity of the acceleration control functions in turbine control systems to verify that transient perturbations or fault conditions in the transmission system resulting in unit acceleration will not result in unit trip without allowing time for protective devices to clear the fault on the transmission system.	Outside the scope of this project.
24	TOs should reevaluate their facility ratings methodologies and implementation of the methodologies to ensure that their ratings are equal to the most limiting piece of equipment, including relay settings. No relay settings should be set below a facility’s emergency rating. When the relay setting is determined to be the most limiting piece of equipment, consideration should be given to reviewing the setting to ensure that it does not unnecessarily restrict the transmission loadability.	Outside the scope of this project.
27	TOPs should have: (1) the tools necessary to determine phase angle differences following the loss of lines; and	(1) Phase angle calculation tools are outside the scope of this project.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	(2) mitigation and operating plans for reclosing lines with large phase angle differences. TOPs should also train operators to effectively respond to phase angle differences. These plans should be developed based on the seasonal and next-day	(2) Consideration of phase angle limitations has been added to the proposed definitions of Real-time Assessment (RTA) and Operational Planning Analysis (OPA). **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed Definition: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) While there is no explicit requirement for seasonal studies, the Reliability Coordinator has the authority to request such a study if it believes it is needed for reliability. Training is outside the scope of this project.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	contingency analyses that address the angular differences across opened system elements.	

Exhibit G

Summary of NOPR Issues

<u>TOP/IRO Standards - Items for SDT Discussion from FERC NOPR (*Updated August 2014*)</u>

Monitoring System Conditions - Transmission Operations Reliability Standard
Transmission Operations Reliability Standards
Interconnection Reliability Operations and Coordination Reliability Standards
145 FERC ¶ 61,158 (2014)

<u>Plan and Operate within all System Operating Limits</u>

Para 42: Without a requirement to analyze and operate within all SOLs in the proposed standards and by limiting non-IROL SOLs to only those identified by the transmission operator internal to its area, system reliability is reduced and negative consequences can occur outside of the transmission operator's internal area.

Para 43: … affects at least proposed Reliability Standard TOP-002-3, Requirements R1 and R2 as well as proposed Reliability Standard TOP-001-2, Requirements R8 through R11

<u>SDT Consideration:</u>

The Project 2014-03 SDT has changed the proposed requirements to include all SOLs. This resolves the first issue (analyze and operate within all SOLs) identified in paragraph 42. See proposed TOP-001-3, Requirements R14 and R15.

> Proposed TOP-001-3, Requirement R14: Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
>
> Proposed TOP-001-3, Requirement R15: Each Transmission Operator shall inform its Reliability Coordinator of actions taken to return the System to within limits when a SOL has been exceeded.

Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, Part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. Approved FAC-011-2, Requirement R4, Part 4.3 requires the Reliability Coordinator to issue its SOL methodology to Transmission Operators. Approved FAC-014-2, Requirement R2 requires each Transmission Operator to establish SOLs for its Transmission system that are consistent with the established Reliability Coordinator SOL methodology. In addition, proposed IRO-008-2, Requirements R1, R2, R5, and R6 have been revised to include System Operating Limits. This resolves the second issue (only those identified… internal to its area) in paragraph 42.

> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.

> Approved FAC-011-2, Requirement R3, Part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.) Approved FAC-011-2, Requirement R4, Part 4.3: Each Transmission Operator that operates in the Reliability Coordinator Area.
>
> Approved FAC-014-2, Requirement R2: The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology.
>
> Proposed IRO-008-2, Requirement R1: Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area.
>
> Proposed IRO-008-2, Requirement R2: Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.
>
> Proposed IRO-008-2, Requirement R5: Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area.
>
> Proposed IRO-008-2, Requirement R6: Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R5 has been prevented or mitigated.

A remaining issue would be where SOLs overlap Transmission Operator Areas as pointed out in the Technical Conferences. If the SOL overlaps Transmission Operator Areas, then the Transmission Operator would coordinate with its Reliability Coordinator with its wide-area view to cover that SOL. This topic is already covered by the SOL methodology defined in approved FAC-011-2, Requirement R1, and the requirement to coordinate operations between Reliability Coordinators as shown in proposed IRO-014-3, Requirement R1. See also proposed IRO-002-4, Requirement R3.

> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.

Proposed IRO-014-3, Requirement R1: Each Reliability Coordinator shall have and implement Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact adjacent Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following:

Proposed IRO-002-4, Requirement R3: Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.

Para 52: During deteriorating system conditions, an SOL can rapidly degrade into an IROL. … NERC has not explained adequately why the only "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue." Major cascading events including the Northeast Blackout of 2003 and the 2011 Southwest Outage were initiated by a non-IROL SOL exceedance, followed by a series of non-IROL SOL exceedances until the system cascaded.

SDT consideration:

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

Para 53: We recognize that, if IROLs and non-IROL SOLs are determined accurately, the reliability consequences of an exceedance should usually be greater for the former than the latter. If NERC or commenters believe this probability warrants general exclusion of the latter from the TOP Reliability Standards (subject to an entity's specific inclusions), they should explain this view in more detail and present any information that may help us weigh its merit.

SDT consideration:

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

Para 54: We believe that the transmission operator should have operational or mitigation plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state.

SDT consideration:

The original project teams (Projects 2006-06 and 2007-03) established the concept of operating within IROL T_v. T_v is always less than or equal to 30 minutes so the issue for IROLs is covered.

The Project 2014-03 SDT has agreed to the addition of all SOLs as explained above (see paragraph 43 response). Requirements for handling SOLs within a specified timeframe are covered under approved FAC-008-3, Requirement R6 where each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings. These Facility Ratings are part of the data required in the data specifications mandated in proposed TOP-003-3, Requirement R1. The Project 2014-03 SDT agrees the Transmission Operator shall have operational or mitigation plans for all SOLs that consider time-based rating methodology. See proposed TOP-001-3, Requirement R14. The SDT agrees that the Transmission Operator shall develop and coordinate these mitigation plans with its Reliability Coordinator – see proposed TOP-002-4, Requirement R6. Such plans shall also include steps that ensure BES performance consistent with approved FAC-011-2 Requirement R2, including provisions for pre-Contingency load shed to avoid voltage instability, uncontrolled Cascading, or separation.

> Approved FAC-008-3, Requirement R6: Each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings.
>
> Proposed TOP-003-3, Requirement R1: Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
>
> Proposed TOP-001-3, Requirement R14: Each Transmission Operator shall initiate its Operating Plan to mitigate a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
>
> Proposed TOP-002-4, Requirement R6: Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator.
>
> Approved FAC-011-2, Requirement R2: The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance.

Para 55: Because proposed Reliability Standard TOP-001-2, Requirement R8 requires a transmission operator's notification of only those SOLs identified in a next-day Operational Planning Analysis, the Commission believes it is possible for additional SOLs to develop or occur in the same-day or real-time operational time horizon. This could impose an operational risk to the interconnected transmission network. For example, if real-time system load levels are unexpectedly higher than forecasted load conditions used in the Operational Planning Analysis, this condition could result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now exceeded under high load levels whereas under the forecasted load levels (lower load levels), facility ratings and stability limits were not expected to be exceeded. … we believe that the Requirement R8 operational responsibilities and actions should pertain to all IROLs and all SOLs for all operating time horizons.

SDT consideration:

The Project 2014-03 SDT views the time horizon item as an issue that involves analysis tools in a Real-time environment. The intent of the original SDTs was that any aspect of analysis tools would be covered in Project 2009-02. For various reasons, that project has been delayed. Therefore the Project 2014-03 SDT has adapted approved IRO-008-1, Requirement R2 to the SOL and Transmission Operator Area – see proposed TOP-001-3, Requirement R13. In addition, the SDT has added proposed TOP-001-3, Requirement R16 concerning operator control of monitoring and analysis capability outages.

> Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.
>
> Proposed TOP-001-3, Requirement R16: Each Transmission Operator shall provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities

As part of this process, the definition of Real-time Assessment has been revised to provide greater clarity as to the intent of the defined term.

> **Proposed: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

The Project 2014-03 SDT believes that approved EOP-008-1, Requirement R1, Part 1.6.2 assures that any solution to the analysis issue in the preceding paragraphs is adequately covered as to redundancy and back-up concerns.

> Approved EOP-008-1, Requirement R1, Part 1.6.2: Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

In addition, due to concerns raised in the Technical Conferences, the Project 2014-03 SDT has provided guidance as to when an entity has exceeded a limit. This guidance is provided in a white paper that will be shown in the Associated Documents (Section F) of proposed TOP-001-3.

Para 56: Specifically, we propose to direct that NERC develop modifications to Reliability Standard TOP-002-3, Requirements R1 and R2 that address our concerns discussed above to ensure that transmission operators develop mitigation plans for all IROLs and SOLs expected to be exceeded. Similarly, for proposed Reliability Standard TOP-001-2, Requirement R8, we propose to direct that NERC develop modifications to require that transmission operator actions apply to all SOLs identified in all operational time horizons (operations planning, same-day operations and real-time operations). Further, for proposed Reliability Standard TOP-001-2, Requirements R9 through R11, we propose to direct that NERC develop modifications to require that transmission operator specified actions apply to all SOLs related responsibilities in the real-time operations time horizon.

SDT consideration:

See responses above to previous cited paragraphs on SOLs.

System Models, Monitoring and Tools

Para 60: Monitoring and analysis capabilities are essential in establishing and maintaining situational awareness. While NERC indicates that these functions are assured through the certification process, we are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. … certification is a one-time process that may not adequately assure continual operational responsibility would occur if these requirements were in a Reliability Standard.

SDT consideration:

With respect to monitoring, the Project 2014-03 SDT has adapted approved IRO-003-2, Requirement R1 for the Transmission Operator and Balancing Authority Areas. See proposed TOP-001-3, Requirements R10 & R11.

Proposed TOP-001-3, Requirement R10: Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area:

10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems and

10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems.

Proposed TOP-001-3, Requirement R11: Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain generation-Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.

With respect to analysis, the Project 2014-03 SDT has adapted approved IRO-008-1, Requirement R2 for the Transmission Operator. See proposed TOP-001-3, Requirement R13.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

Para 61: The retirement of the current IRO and TOP requirements that address monitoring and analysis capabilities should not occur until the completion and implementation of Project 2009-02. Thus, in its NOPR comments NERC should propose a schedule that it will follow to ensure it completes and implements Project 2009-02 prior to any retirement of the standard such that there would be no gap.

<u>SDT consideration:</u>

See previous response.

<u>Compliance with Reliability Directives</u>

Para 64: The currently-effective TOP Reliability Standards use "reliability directive," which, as an undefined term, does not appear to be limited to a specific set of circumstances. … In contrast, application of the proposed definition of "Reliability Directive" appears to require compliance with transmission operator directives only in emergencies, not normal or pre-emergency times. … We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements).

<u>SDT consideration:</u>

The Project 2014-03 SDT is replacing the term 'reliability directive' with the defined term 'Operating Instruction' throughout the proposed standards. The proposal to use a new defined term 'Reliability Directive' is no longer being considered.

Para 65: NERC's TOP and IRO petitions do not explain the proposed, defined term "Reliability Directive," or why compliance with a transmission operator's directives should be required only during emergencies (if this is the intent). Accordingly, we seek from NERC and other interested entities clarification and technical explanation regarding the scope and intent of the defined term, as well as the anticipated reliability benefits and/or drawbacks of the proposed term.

<u>SDT consideration:</u>

See previous response for paragraph 64.

Para 66: … NERC has not explained or justified its request for approval of the revised definition.

<u>SDT consideration:</u>

See previous response for paragraph 64.

Consideration of External Networks and sub-100 kV Facilities and Contingencies in Operational Planning Analysis

Para 67: In proposed Reliability Standard TOP-002-3, Requirement R1, NERC proposes to require transmission operators to prepare an Operational Planning Analysis, i.e., next day study, which represents "projected System conditions" to determine if their planned operations will exceed facility ratings and stability limits for normal and contingency conditions. NERC does not indicate whether this includes external networks or sub-100 kV facilities.

SDT consideration:

The Project 2014-03 SDT believes that standards must be viewed in aggregate to provide the complete picture of what is covered. Proposed TOP-003-3 requires applicable entities to develop a data specification that covers its needs for monitoring and analysis purposes. There is no restriction on what voltage level or area that data can be pulled from. Proposed TOP-003-3, Requirement R5 shows a Transmission Operator being required to supply requested data to another Transmission Operator which clearly shows that a Transmission Operator can request and receive data from outside of its immediate area. The original SDTs have been clear in response to questions on this matter that they did not intend to place any restrictions on the type and location of data involved as long as the request was reliability based. However, to clear up any possible misconceptions, the Project 2014-03 SDT has amended proposed TOP-003-3, Requirement R1, Part 1.1 to explicitly specify that non-BES data and external data should be part of the data specification for Transmission Operators. Similar requirements exist in proposed IRO-010-2 for the Reliability Coordinator.

> Proposed TOP-003-3, Requirement R1, Part 1.1 A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.
>
> Proposed IRO-010-2, Requirement R1, Part 1.1: A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator.

Concerns were raised during the Technical Conferences that proposed TOP-003-2 did not require that an entity actually use the data acquired in its monitoring and analysis functions. The Project 2014-03 SDT believes that the qualifiers placed in proposed TOP-003-3, Requirement R1, Part 1.1 (shown above) citing that the data specified is to support Operational Planning Analysis, Real-time Monitoring, and Real-time

Assessments indicate that the data is to be used and that no further action is required on that particular issue.

However, the question arises as to what non-BES data and external network data is required. Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, Part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. Approved FAC-011-2, Requirement R3, Part 3.4 states that the level of detail required in system models for determination of SOLs must be part of the Reliability Coordinator's methodology which will determine what, if any, non-BES data is needed. Approved FAC-011-2, Requirement R4, Part 4.3 then requires the Reliability Coordinator to issue its SOL methodology to Transmission Operators who will follow the methodology in its work in determining SOLs.   This combination of requirements will dictate what non-BES and external network data a Transmission Operator needs to acquire (if any).

> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.
>
> Approved FAC-011-2, Requirement R3, Part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)
>
> Approved FAC-011-2, Requirement R3, Part 3.4: Level of detail of system models used to determine SOLs.
>
> Approved FAC-011-2, Requirement R4, Part 4.3: Each Transmission Operator that operates in the Reliability Coordinator Area.

Para 68: In Order No. 693, the Commission directed a modification to planned outage coordination to require consideration of facilities below 100 kV that, in the opinion of the registered entity (such as a transmission operator) "will have a direct impact on the reliability of the Bulk-Power System…. The 2011 Southwest Outage Blackout Report includes similar recommendations that transmission operators should ensure their next-day studies include updated external networks and internal and external facilities (including those below 100 kV) that can impact Bulk-Power System reliability.

<u>SDT consideration:</u>

See previous response for data (paragraph 67).

In addition, the Project 2014-03 SDT has developed a new standard, IRO-017-1 Outage Coordination, to address all aspects of outage coordination between the Reliability Coordinator, Transmission Operator, Balancing Authority, Planning Coordinator, and Transmission Planner.

Para 69: The Commission seeks clarification and technical explanation from NERC whether the term "projected System conditions" in proposed Reliability Standard TOP-002-3 Requirement R1 includes updated external networks to reflect operating conditions external to their systems and sub-100 kV facilities (internal and external) in their operational planning analyses. If not, the Commission seeks comment on the associated reliability risks and, whether it is appropriate to include updated external networks to reflect operating conditions and external and sub-100 kV facilities (internal and external) in the operational planning analyses.

SDT consideration:

See previous responses under this heading.

Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating States

Para 70: NERC proposes to delete Reliability Standard TOP-004-2, Requirement R2, which provides that each transmission operator "shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency." NERC's Petition does not provide an explanation for the deletion. However, the NERC "mapping document," which is included as an exhibit to the TOP Petition indicates that NERC intends that Requirement R2 be replaced by proposed Reliability Standards TOP-001-2, Requirements R7 and R9.

SDT consideration:

The Project 2014-03 SDT believes that the concept of stating an explicit requirement to operate to the most severe single Contingency is not necessary as the FAC standards require an entity to analyze and operate for all Contingencies and not just the most severe single Contingency. The definitions of Operational Planning Analysis and Real-time Assessment have been strengthened to clarify this point.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Proposed: Operational Planning Analysis - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

Para 73: NERC has proposed to retire three key rules here, i.e., the requirements to be ready for the single largest contingency …

SDT consideration:

See previous response.

… to move quickly from an "unknown operating state" to within proven limits …

SDT consideration:

The Project 2014-03 SDT believes that there is always a set of limits in service and asserts that an operator, given a condition that has not been previously studied, is obligated to adhere to the set of limits in service at the time of the event. The SDT has produced an SOL Exceedance White Paper that explains how an SOL Exceedance is to be determined and what to do upon experiencing an SOL exceedance. The SDT believes that the situation has been covered in the proposed standards and requirements and that no further action is required. Specifically, the SDT points to proposed TOP-001-3, Requirements R12 and R13 as well as the guidance provided on Operating Plans in proposed TOP-001-3, Section F.

> Proposed TOP-001-3, Requirement R12: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
>
> Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.
>
> Proposed TOP-001-3, Section F: Operating Plan - An Operating Plan includes general Operating Processes and specific Operating Procedures. It may be an overview document which provides a prescription for an Operating Plan for the next-day, or it may be a specific plan to address a specific SOL or IROL exceedance identified in the Operational Planning Analysis (OPA). Consistent with the NERC definition, Operating Plans can be general in nature, or they can be specific plans to address specific reliability issues. The use of the term Operating Plan in the revised TOP/IRO standards allows room for both. An

Operating Plan references processes and procedures, including electronic data exchange, which are available to the System Operator on a daily basis to allow the operator to reliably address conditions which may arise throughout the day. It is valid for tomorrow, the day after, and the day after that. Operating Plans should be augmented by temporary operating guides which outline prevention/mitigation plans for specific situations which are identified day-to-day in an OPA or a Real-time Assessment (RTA). As the definition in the Glossary of Terms states, a restoration plan is an example of an Operating Plan. It contains all the overarching principles that the System Operator needs to work his/her way through the restoration process. It is not a specific document written for a specific blackout scenario but rather a collection of tools consisting of processes, procedures, and automated software systems that are available to the operator to use in restoring the system. An Operating Plan can in turn be looked upon in a similar manner. It does not contain a prescription for the specific set-up for tomorrow but contains a treatment of all the processes, procedures, and automated software systems that are at the operator's disposal. The existence of an Operating Plan, however, does not preclude the need for creating specific action plans for specific SOL or IROL exceedances identified in the OPA. When a Reliability Coordinator performs an OPA, the analysis may reveal instances of possible SOL or IROL exceedances for pre- or post-Contingency conditions. In these instances, Reliability Coordinators are expected to ensure that there are plans in place to prevent or mitigate those SOLs or IROLs, should those operating conditions be encountered the next day. The Operating Plan may contain a description of the process by which specific prevention or mitigation plans for day-to-day SOL or IROL exceedances identified in the OPA are handled and communicated. This approach could alleviate any potential administrative burden associated with perceived requirements for continual day-to-day updating of "the Operating Plan document" for compliance purposes.

… and to determine the cause of SOL violations in all time-frames, including real-time. We believe these three rules represent the bedrock core of real-time operating rules and practices, and it is therefore incumbent upon NERC to provide a more thorough and comprehensive explanation of how the proposed replacement standards compare in meeting the same objectives as the current standards.

<u>SDT consideration:</u>

The Project 2014-03 SDT agrees that a Transmission Operator needs to take appropriate action to mitigate the exceedance but does not agree to the inclusion of determining the 'cause' of the violation in Real-time. Real-time is not when to investigate or to do detailed analysis – but instead is the time to 'fix' the problem. Causes can be determined later and off-line. The Project 2014-03 SDT, as previously stated, has agreed to include the concept of Real-time Assessment for Transmission Operators. This assessment is believed to be sufficient in identifying ‘cause’ for operators in Real-time. See proposed TOP-001-3, Requirement R13 and the revised definition of Real-time Assessment.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Para 74: In particular, NERC should address whether its proposal would allow a different approach to real-time operational assessments and operation to the most severe single contingencies and, if so, NERC should explain and technically support the nature and associated reliability effects of any different approaches.

SDT consideration:

The Project 2014-03 SDT does not feel that it is advocating a different approach as shown in the previous responses above.

How are the proposed requirements to not exceed IROLs or certain SOLs for more than the specified times are the functional or implicit equivalent of the current rules?

SDT consideration:

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

For example, do the proposed rules allow reliance on post-contingency mitigation at times when the current rules would require pre-contingency mitigation?

SDT consideration:

The Project 2014-03 SDT sees this item as having been addressed due to the commitments made above such as adding all SOLs to the standards and performing Real-time Assessments.

In addition, approved FAC-011-2, Requirement R2 compels the Reliability Coordinator to develop an SOL methodology that considers voltage, thermal, and Stability limits (including voltage) while demonstrating that the BES remains stable (transient, dynamic, and voltage) during pre-contingent (Requirement R2, Part 2.1) and post-contingent (Requirement R2, Part 2.2) conditions. Approved FAC-014-2, Requirement R2 requires each Transmission Operator to establish SOLs for its Transmission system that are consistent with the established Reliability Coordinator SOL methodology. Approved FAC-014-2, Requirement R5, Part 2 compels the Transmission Operator to communicate its SOLs to its Reliability Coordinator and Transmission Service Provider and approved FAC-014-2, Requirement R5, Part 1 compels the Reliability Coordinator to communicate the SOLs to neighboring Reliability Coordinators and other Transmission Operators among a list of other entities.

> Approved FAC-011-2, Requirement R2, and Parts 2.1 and 2.2: The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:
> 2.1 In the pre-contingency state, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES condition used shall reflect current or expected system conditions and shall reflect changes to system topology such as Facility outages.
> 2.2 Following the single Contingencies identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.
>
> Approved FAC-014-2, Requirement R2: The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology.
>
> Approved FAC-014-2, Requirement R5, Part 1: The Reliability Coordinator shall provide its SOLs (including the subset of SOLs

that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area.

If so, is the difference significant for reliability purposes?

SDT consideration:

See previous response.

Do both the current and proposed rules prohibit an entity from operating for more than 30 minutes in a state where loss of a particular line would cause the loss of enough resources or load to risk cascading outages or instability?

SDT consideration:

Yes, industry operates to T_v for all IROLs which is 30 minutes or less. By definition, only IROLs can cause Cascading or instability.

Or, if the entity is not yet operating beyond the pre-determined ratings of the particular line, would the proposed rules allow doing so while the current rules do not?

SDT consideration:

The Project 2014-03 SDT does not see that any changes are being suggested that would change the way these situations are handled today.

Should all transmission operators be required to run a real-time contingency analysis (RTCA) frequently, since the lack of such analysis can impair situational awareness substantially?

SDT consideration:

The SDT proposes to use approved IRO-008-1, Requirement R2 as the model for development for such capabilities for Transmission Operators as described above. See proposed TOP-001-3, Requirement R13 and the revised definition of Real-time Assessment.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Or is the value of such information outweighed for smaller entities with such limited facilities and operations that they generally can maintain similar reliability based on operator experience and judgment without any extra staffing and procedures needed to ensure that the RTCA's informational inputs and modeling are valid and useful?

<u>SDT consideration:</u>

Proposed TOP-001-3, Requirement R13 states that a Transmission Operator must perform a Real-time Assessment every 30 minutes. This is 'what' must be accomplished but doesn't explain 'how' it can be done. That is left to the applicable entity. Smaller entities are free to devise equal and effective methods to accomplish this task. The ERO Rules of Procedure also allow them to contract out services for performing such assessments as long as they retain the responsibility for the final result. To clarify this concept, the Project 2014-03 SDT has added language to the definition of Real-time Assessment on the topic of contracted services.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Para 75: With regard to mitigation of unknown operating states, while NERC asserts that "unknown states" cannot exist, a transmission provider could have valid operating limits for all facilities but lack situational awareness when valid limits are exceeded. … the Commission seeks comment and technical explanation from NERC and other interested entities on the proposed retirement.

<u>SDT consideration:</u>

<u>See response to paragraph 73 above.</u>

The Project 2014-03 SDT believes that standards must be viewed in aggregate to provide the complete picture of what is covered. Approved EOP-008-1, Requirement R1, Part 1.6.2 covers the situation where backup or redundant capabilities are required.

> Approved EOP-008-1, Requirement R1, Part 1.6.2: Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

<u>System Protection Coordination</u>

Para 78: The Commission seeks comment and technical explanation from NERC and other interested entities on how current Reliability Standard PRC-001-1 Requirement R2's requirement for corrective action (i.e., return a system to a stable state) is addressed in its proposal. Further, the Commission proposes that NERC issue guidance on data needed for protection system coordination that addresses the applicable Order No. 693 directives and the proposed retirement of the Reliability Standard PRC-001-1 requirements.

<u>SDT consideration:</u>

Project 2014-03 SDT is no longer revising PRC-001-1. Project 2007-06 is responsible for PRC-001-1 revisions.

<u>Notification of Emergencies</u>

Para 80: NERC's proposed revisions warrant clarification. Read one way, proposed Requirement R3 is less comprehensive than the currently-effective requirements pertaining to notification of emergencies. Yet, it also contains provisions that, read another way, could require TOPs to notify others of all emergencies, not just day-ahead.

Para 81: Similarly, it is not clear whether proposed Reliability Standard TOP-001-2, Requirement R5 would address same-day and real-time operating emergencies not covered by TOP-001-2, Requirement R3. An Adverse Reliability Impact is an event that results in instability, or cascade conditions, while an Emergency includes conditions that could be a precursor to an Adverse Reliability Impact. Thus, the notification provisions of Requirement R5 do not cure the possible ambiguity in proposed Requirement R3.

Para 82: While NERC states that the obligation to notify for real-time emergency conditions was replaced by proposed Requirement R3, NERC does not indicate in its petition that the real-time or same-day obligation was purposely deleted or offer an explanation for the deletion. … We believe that, consistent with the currently-effective TOP Reliability Standards, the notification requirement of proposed Reliability Standard TOP-001-2 should apply to all emergencies, including real-time and same day emergencies. The Commission seeks comment from NERC and other interested entities regarding (1) the proper understanding of the scope of the notification provisions in the proposed requirements and (2) if the notification does not include all operational time horizons, technical justification for why transmission operators should not be required to notify reliability coordinators and other affected transmission operators of all emergencies in all operating time horizons.

SDT consideration:

The Project 2014-03 SDT has combined the previously proposed TOP-001-2, Requirements R3 & R5 into one requirement in proposed TOP-001-3, Requirement R8 that uses only actual and projected Emergency covering all time horizons.

> Proposed TOP-001-3, Requirement R8: Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known other impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.

Para 83: … NERC uses two different definitions of Adverse Reliability Impact in the TOP and IRO Petitions. … In addition, if the definition NERC is proposing no longer includes the phrase "uncontrolled separation" NERC should explain the removal of the statutory phrase "uncontrolled separation."

SDT consideration:

See previous response.

Primary Decision-Making Authority for Mitigation of IROLs/SOLs

Para 84: NERC's proposal contains a potential overlap in authority between the transmission operator and reliability coordinator with regard to the provisions pertaining to mitigation of IROLs and SOLs as set forth in the proposed TOP and IRO Standards.

Para 87: NERC's proposal with respect to mitigating IROLs appears to give both the transmission operator and reliability coordinator authority to act. Therefore, we seek clarification and technical explanation whether the reliability coordinator or the transmission operator has primary responsibility for IROLs.

SDT consideration:

The Reliability Coordinator has the responsibility for IROLs and the Transmission Operator has the responsibility for SOLs. This split in responsibilities is an important concept for the preservation of reliability within the BES and needs to be clear in the various standards and requirements. However, as discussed above, the Reliability Coordinator shall provide oversight on SOLs and assistance in mitigating SOLs as necessary.

See previous response to paragraph 43 on SOL overlap issues.

Planned Outage Coordination

Paragraph 90: The Commission is concerned with NERC's proposal because Reliability Standards IRO-008-1, Requirement R3 and IRO-010-1a do not require coordination of outages. Outage coordination is a critical reliability function that should be performed by the reliability coordinator. Outage coordination is an integral part of the operational planning process with generation outages being scheduled from three to five years in advance and transmission maintenance and construction outages being scheduled one to three years in advance. Outages that have been planned well in advance still must go through a month-ahead, week-ahead, and sometimes even a day-ahead approval process depending on system topography and system conditions that may change as the scheduled maintenance outage approaches. For instance, forced outages often disrupt planned outage schedules. Therefore, the Commission believes it is essential that, as the functional entity with the wide-area view, the reliability coordinator coordinates this critical area of operational planning.

SDT consideration:

The SDT has developed a new standard, IRO-017-1 Outage Coordination, to address the overall topic of outage coordination. In addition, the SDT has revised proposed IRO-014-3, Requirement R1, Part 1.4 to show that outage information must be made available and analyzed. Also, the Planning Coordinator and Transmission Planner have been added to proposed IRO-010-2 as applicable entities to ensure the sharing of planning information with the Reliability Coordinator.

> Proposed IRO-014-3, Requirement R1, Part 1.4: Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.
>
> Proposed IRO-017-1, Requirement R1: Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for

generation and Transmission outages within its Reliability Coordinator Area. The outage coordination process shall:
1.1 Identify applicable roles and reporting responsibilities.
1.1.1 Development and communication of outage schedules.
1.1.2 Assignment of coordination responsibilities for outage schedules between Transmission Operator(s) and Balancing Authority(s).
1.2 Specify outage submission timing requirements.
1.3 Define the process to evaluate the impact of Transmission and generation outages within its Wide Area.
1.4 Define the process to coordinate the resolution of identified outage conflicts with its Transmission Operators and Balancing Authorities, and other Reliability Coordinators.

Proposed IRO-017-1, Requirement R2: Each Transmission Operator and Balancing Authority shall perform the functions specified in its Reliability Coordinator's outage coordination process.

Proposed IRO-017-1, Requirement R3: Each Planning Coordinator and Transmission Planner shall provide its Planning Assessment to impacted Reliability Coordinators.

Proposed IRO-017-1, Requirement R4: Each Planning Coordinator and Transmission Planner shall jointly develop solutions with its respective Reliability Coordinator(s) for identified issues or conflicts with planned outages in its Planning Assessment for the Near-term Transmission Planning Horizon.

Secure Network

Paragraphs 92 & 93: Currently-effective Reliability Standard IRO-002-2, Requirement R2, requires that the data exchange between the reliability coordinator, transmission operator, and balancing authority be accomplished "via a secure network." According to NERC, the requirement to provide information via a "secure network" is now addressed in NERC Rules of Procedure, Section 1002 (Reliability Support Services). NERC also indicates that Requirement R2 is now addressed in proposed Reliability Standard IRO-014-2, Requirements R1, R2, and R3. Although NERC cites Section 1002 of the Rules of Procedure and proposed Reliability Standard IRO-014-2 as providing for the use of a secured data network, NERC does not explain how secured networks are covered in those sections. While Section 1002 of the NERC Rules and Reliability Standard IRO-014-2, Requirements R1, R2, and R3 address notification and exchange of information and data and coordination of actions, no language in these provisions appears to require the data exchange or notifications to be conducted in a secure mode.

SDT consideration:

The Project 2014-03 SDT understands the sensitivity around the concept of secure networks for transfer of data and has made appropriate changes to proposed TOP-003-3, Requirement R5, Part 5.3 and proposed IRO-010-2, Requirement R3, Part 3.3, to allow for the concept of security to be part of the mutually agreed upon data specification.

Proposed TOP-003-3, Requirement R5, Part 5.3: A mutually agreeable security protocol.

Proposed IRO-010-2, Requirement R3, Part 3.3: A mutually agreeable security protocol.

Reliability Coordinator Monitoring of SOLs

Paragraph 96: Although NERC's petition focuses on the appropriate entity to identify SOLs, it does not adequately explain the proposed retirement of the currently-effective Reliability Standard IRO-002-2 that establishes the obligation for reliability coordinators to monitor SOLs. With regard to NERC's explanation that Reliability Standard IRO-002-2 Requirement R4 is redundant with the requirements contained in IRO-010-1a and EOP-008-1, neither of these Reliability Standards requires the reliability coordinator to monitor SOLs.

SDT consideration:

The Project 2014-03 SDT believes that monitoring SOLs is intrinsic to the duties of a Reliability Coordinator as spelled out in Functional Model v5. However, to provide clarity, the Project 2014-03 SDT has provided explicit requirement language to address the need for monitoring SOLs at the Reliability Coordinator level. See proposed IRO-002-4, Requirement R4. As pointed out starting in paragraph 84 of the NOPR, only one entity can be responsible for SOLs and that is the Transmission Operator.

Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, Part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. These requirements will dictate what external data a Reliability Coordinator needs to acquire to effectively monitor SOLs.

Proposed IRO-010-2, Requirement R1, Parts 1.1 – 1.2 show additions to the data specification concept to clarify that external data, non-BES data, and applicable relay data are included.

Proposed IRO-002-4, Requirement R3: Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.

Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.

Approved FAC-011-2, Requirement R3, Part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)

Proposed IRO-010-2, Requirement R1, Part 1.1: A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator.

Proposed IRO-010-2, Requirement R1, Part 1.2: Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

Exhibit H

Consideration of Issues and Directives

Project 2014-03 - Revision of TOP / IRO Reliability Standards

Resolution of Issues and Directives

The following table contains a list of all FERC directives, industry issues, and Independent Expert Review Panel (IERP) recommendations associated with the standards being revised in Project 2014-03, with proposed resolutions.

Standard	Source	Language	Resolution
IRO-001-3	FERC Order 693	892. Consider commenters' suggestions as part of the standards development process. APPA supports the approval of the Reliability Standard but expresses concern that the Version 1 standard does not include Measures that correspond to Requirements R2 and R9. APPA emphasizes the need for Measures corresponding to Requirement R9, which requires the reliability coordinator to act in the interests of reliability for the overall reliability coordinator area and the Interconnection before the interests of any other entity. APPA supports Requirement R8 with the extended applicability, provided that applicability is determined by reference to the NERC compliance registry. APPA agrees that the regional reliability organization should be eliminated as an applicable entity and suggests it be replaced with Regional Entities.	The SDT has added measures for all requirements. The Regional Reliability Organization has been removed from the standards.
IRO-001-3	FERC Order 693	893. Consider commenters' suggestions as part of the standards development process. FirstEnergy	The SDT has considered the commenter's suggestions and believes that safety refers to any

Standard	Source	Language	Resolution
		suggests that NERC clarify whether Requirement R8, which requires entities to comply with a reliability coordinator directive "unless such actions would violate safety, equipment or regulatory or statutory requirements," refers to personnel safety, equipment safety or both. In addition, it suggests the establishment of a chain of command so that, for example, if a generator receives conflicting instructions from a balancing authority and a transmission operator, it can determine which instruction governs.	type of safety including personal or equipment and that no additional wording is necessary. If a generator receives conflicting Operating Instructions, the generator should contact the Reliability Coordinator for clarification. The NERC Functional model refers to the Reliability Coordinator as overall authority.
IRO-001-3	FERC Order 693	895. California Cogeneration comments that the Reliability Standard fails to address the operational limitations of QFs because they have contractual obligations to provide thermal energy to their industrial hosts. It contends that a QF can be directed to change operations only in the case of a system emergency, pursuant to 18 CFR § 292.307.	The SDT has considered the comments and believes that a Reliability Coordinator can direct a Qualifying Facility (registered as a GO or GOP) to act through the issuance of Operating Instructions. Therefore, no additional requirements are necessary.
IRO-001-3	FERC Order 693	896. Eliminate the references to the regional reliability organization as an applicable entity. Paragraph 896. In the NOPR, the Commission proposed to approve the Reliability Standard as mandatory and enforceable. In addition, as a separate action under section 215(d)(5), the NOPR proposed to direct the ERO to develop modifications to Requirement R1 to substitute "Regional Entity" for "regional reliability organization" and reflect	The SDT has removed all references to the Regional Reliability Organization from the standards.

Standard	Source	Language	Resolution
		NERC's Rules of Procedure for registering, certifying and verifying entities, including reliability coordinators. Commenters do not raise any concerns regarding the proposed action. Accordingly, for the reasons stated in the NOPR, the Commission approves IRO-001-1 as mandatory and enforceable. In addition, for the reasons discussed in the NOPR, the Commission directs the ERO to develop modifications to the Reliability Standard through the Reliability Standards development process that reflect the process set forth in the NERC Rules of Procedures and eliminate the regional reliability organization as an applicable entity.	
IRO-001-3	FERC Order 693	897. Consider adding measures and levels of non-compliance. Further, the Commission directs the ERO to consider adding Measures and Levels of Non-Compliance in the Reliability Standard as requested by APPA.	The SDT has added measures and Violation Severity levels (VSLs) (which replaced levels of non-compliance) for each requirement.
IRO-001-3	FERC's December 20, 2007 and April 4, 2008 Orders	On March 4, 2008, NERC submitted a compliance filing in response to a December 20, 2007 Order, in which the Commission reversed a NERC decision to register three retail power marketers to comply with Reliability Standards applicable to load serving entities (LSEs) and directed NERC to submit a plan describing how it would address a possible "reliability gap" that NERC asserted would result if the LSEs were not registered. NERC's compliance	The SDT has established requirements that apply to the Load-Serving Entity. **Proposed TOP-001-3, Requirement R3**: **R3.** Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be

Standard	Source	Language	Resolution
		filing included the following proposal for a short-term plan and a long-term plan to address the potential gap: Short-term: Using a posting and open comment process, NERC will revise the registration criteria to define "Non-Asset Owning LSEs" as a subset of Load Serving Entities and will specify the reliability standards applicable to that subset. · Longer-term: NERC will determine the changes necessary to terms and requirements in reliability standards to address the issues surrounding accountability for loads served by retail marketers/suppliers and process them through execution of the three-year Reliability Standards Development Plan. In this revised Reliability Standards Development Plan, NERC is commencing the implementation of its stated long-term plan to address the issues surrounding accountability for loads served by retail marketers/suppliers. The NERC Reliability Standards Development Procedure will be used to identify the changes necessary to terms and requirements in reliability standards to address the issues surrounding accountability for loads served by retail marketers/suppliers. Specifically, the following description has been	physically implemented or it would violate safety, equipment, regulatory, or statutory requirements.

Standard	Source	Language	Resolution
		incorporated into the scope for affected projects in this revised Reliability Standards Development Plan that includes a standard applicable to Load Serving Entities: Source: FERC's December 20, 2007 Order in Docket Nos. RC07-004-000, RC07-6-000, and RC07-7-000 Issue: In FERC's December 20, 2007 Order, the Commission reversed NERC's Compliance Registry decisions with respect to three load serving entities in the Reliability First (RFC) footprint. The distinguishing feature of these three LSEs is that none own physical assets. Both NERC and RFC assert that there will be a "reliability gap" if retail marketers are not registered as LSEs. To avoid a possible gap, a consistent, uniform approach to ensure that appropriate Reliability Standards and associated requirements are applied to retail marketers must be followed. Each drafting team responsible for reliability standards that are applicable to LSEs is to review and change as necessary, requirements in the reliability standards to address the issues surrounding accountability for loads served by retail marketers/suppliers. For additional information see: · FERC's December 20, 2007 Order (http://www.nerc.com/files/LSE_decision_order.pdf)	

Standard	Source	Language	Resolution
		· NERC's March 4, 2008 (http://www.nerc.com/files/FinalFiledLSE3408.pdf), · FERC's April 4, 2008 Order (http://www.nerc.com/files/AcceptLSECompFiling-040408.pdf), and · NERC's July 31, 2008 (http://www.nerc.com/files/FinalFiled-CompFiling-LSE-07312008.pdf) compliance filings to FERC on this subject.	
IRO-001-3	Fill in the Blank Team	Remove ", sub-region, or interregional coordinating group" from R1	Terms have been removed from the standard.
IRO-001-3	Version 0 Team	Inability to perform needs to be communicated	Clarity has been provided to address this issue throughout the various standards.
IRO-001	Version 0 Team	What is meant by 'interest of other entity'?	The SDT proposes to retire Requirement R9. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the Reliability Coordinator Area and the Interconnection.
IRO-001-3	Fill in the Blank Team	Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market	The purpose statement has been revised accordingly.

Standard	Source	Language	Resolution
		participant over another." from the Purpose section of the standard.	Purpose: To establish the responsibility of Reliability Coordinators to act or direct other entities to act to prevent an Emergency.
IRO-001-3	NERC Audit Observation Team	All applicable registered functions shall comply with RC directives unless such actions would violate safety, equipment or regulatory or statutory requirements. Inform the RC immediately of the inability to perform such directives. For audit purposes, what is acceptable evidence?	Measure M2 contains the provisions for suitable evidence. **Proposed IRO-001-4, Measure M2**: **M2**. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's Operating Instruction, unless the instruction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator’s Operating Instruction. If no event has occurred, the Transmission Operator, Balancing Authority, Generator Operator, or

Standard	Source	Language	Resolution
			Distribution Provider may provide an attestation that an event has not occurred.
IRO-001-3	VRFs Team	R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.	The SDT is proposing to retire this requirement. The Reliability Coordinator may delegate tasks but cannot delegate the responsibility for these tasks. Therefore, it is not necessary to mandate that delegated tasks must be carried out by certified personnel as it is the responsibility of the Reliability Coordinator to ensure that the task is carried out.
IRO-001-3	IERP	Requirement R1 content is incomplete. IERP recommended addressing 3 concepts as follows: RC has the authority to direct others to act. RC has the obligation to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.	The NERC Functional Model v5 spells out the authority of the Reliability Coordinator on page 30 under the description of the Reliability Coordinator functional entity. Proposed IRO-001-4, Requirement addresses the obligation of the Reliability Coordinator to direct others to act. **Proposed IRO-001-4, Requirement R1**: **R1**. Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions. The term 'Reliability Directive' has been replaced with the defined term 'Operating Instruction.' Proposed COM-002-4 determines the protocol for issuing Operating Instructions.

Standard	Source	Language	Resolution
		When directing others to act in accordance with this requirement, a RC must identify its directive as a "Reliability Directive". Consider consolidating with other authority-related standards and COM-003 in a single Authority standard as follows: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have the requirement and authority to take actions, including issuing a Reliability Directive, to prevent, mitigate and respond to an Emergency or Adverse Reliability Impact.	The SDT believes that a separate authority standard is not necessary. Existing standards and requirements in conjunction with the Functional Model v5 are sufficient to address the authority issue raised here.
IRO-001-3	IERP	IERP viewed Requirement R2 language as unclear and unable to be practically implemented. Questioned whether equipment requirements were a valid reason for not complying with RC direction. IERP proposed covering this requirement under a single Authority standard as follows: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with directions from a Reliability Coordinator, Transmission Operator or Balancing Authority under R1 unless it communicates to the RC, TOP or BA that it cannot because the direction cannot be physically implemented or unless such actions would violate	The SDT does not agree with the IERP statement/suggestion. The SDT feels this is more of a compliance issue and should not be addressed in Real-time.

Standard	Source	Language	Resolution
		safety, equipment, regulatory, or statutory requirements.	
IRO-001-3	IERP	IERP viewed content of Requirement R3 as incomplete by not requiring a reason for not complying with the RC's direction IERP recommended consolidating into a single Authority standard (see requirement above, which would replace both IRO-001 requirements R2 and R3)	The SDT does not agree with the IERP statement/suggestion. The SDT feels this is more of a compliance issue and should not be addressed in Real-time.
IRO-002-1	FERC Order 693	905 - Require a minimum set of tools that must be made available to the reliability coordinator. Further, consistent with the NOPR, the Commission directs the ERO to modify IRO-002-1 to require a minimum set of tools that must be made available to the reliability coordinator. We believe that this requirement will ensure that a reliability coordinator has the tools it needs to perform its functions.	This directive is beyond the scope of this project and will be resolved in a future project.
IRO-002	Version 0 Team	R5 – define synchronized information system	The term is not used in the revised standards.
IRO-002	Version 0 Team	R7 – define 'adequate' tools and 'wide-area'	The terms are not used in the revised standards
IRO-002-1	Version 0 Team	Words such as 'easily understood' and 'particular emphasis' need to be tightened	The terms are not used in the revised standards
IRO-002-3	IERP	IERP viewed Requirement R1 as incomplete. RC also needs to approve any other work being done on the tools, hardware/software/telecom systems within the RC that could affect the quality and the content of the data coming into the control center.	Proposed IRO-002-4, Requirement R2 addresses this issue. **Proposed IRO-002-4, Requirement R2**: **R2**. Each Reliability Coordinator shall provide its System Operators with the authority to approve

Standard	Source	Language	Resolution
		Also consider consolidating with Project 2009-02 Requirement R1 was proposed for consolidation under a new Authority standard: Authority R2 Each RC, TOP and BA shall have the requirement and authority to approve, deny or cancel planned outages of its EMS, telecom and other hardware, and associated analysis tools.	planned outages and maintenance of its telecommunication, monitoring and analysis capabilities. The Project 2014-03 SDT is addressing directives assigned to Project 2009-02 as well as issues identified in the NOPR on the TOP/IRO standards. The SDT believes that a separate authority standard is not necessary. Existing standards and requirements in conjunction with the Functional Model v5 are sufficient to address the authority issue raised here.
IRO-002-3	IERP	IERP viewed Requirement R2 as incomplete. Procedures need to address not only tools outages, but also tools maintenance or other inhibitors to quality performance of analysis tools. Also consider consolidating with Project 2009-02	The SDT added 'maintenance' approval to proposed IRO-002-3, Requirement R3. This includes all work being done on monitoring and analysis capabilities and not just those that will cause an outage. **Proposed IRO-002-4, Requirement R2**: **R2.** Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its telecommunication, monitoring and analysis capabilities.

Standard	Source	Language	Resolution
			The Project 2014-03 SDT is addressing directives assigned to Project 2009-02 as well as issues identified in the NOPR on the TOP/IRO standards.
IRO-003	Order 693	914. … we adopt in the Final Rule the proposal to direct that the ERO develop a modification to the Reliability Standard through the Reliability Standards development process to create criteria to define the term "critical facilities" in a reliability coordinator's area …	The term is not used in the revised standards. The proposed data specification concept allows for the Reliability Coordinator to ask for any reliability related data that it needs in order to fulfill its reliability tasks thus obviating the need for a specific criteria for determining critical facilities. And specific requirements for monitoring have been added for the Reliability Coordinator. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed IRO-002-4, Requirement R3:** **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.
IRO-004-1	Order 693	934. In response to APPAs concern that NERC did not provide a Measure for each Requirement, we reiterate that it is in the EROs discretion whether each	Measures have been added to all requirements.

Standard	Source	Language	Resolution
		Requirement requires a corresponding Measure. The ERO should consider this issue through the Reliability Standards development process.	
IRO-004-1	Order 693	935. …direct the ERO to modify IRO-004-1 through the Reliability Standards development process to require the next-day analysis to identify control actions that can be implemented and effective within 30 minutes after a contingency	The SDT has addressed this issue in proposed IRO-008-2 and TOP-002-4 as well as through the revised definitions of Operational Planning Analysis and Real-time Assessment. SOLs must be controlled according to the Operating Plan which is set up on time-based facility ratings (see SOL Exceedance White Paper for further details). IROLs are controlled to the IROL T_v which by definition is always less than 30 minutes. Approved IRO-009-1, Requirement R1 also addresses this item. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

Standard	Source	Language	Resolution
			Proposed Definition: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed IRO-008-2, Requirement R1**: **R1**. Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area. **Proposed IRO-008-2, Requirement R2**: **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Standard	Source	Language	Resolution
			Proposed TOP-002-4, Requirement R1: **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-002-4, Requirement R2**: **R2**. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed IRO-009-1, Requirement R1**: **R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.
IRO-005	FERC Order 693	520. Further, we clarify that we did not propose to require an entity to inform its reliability coordinator of every action it takes. Instead, the proposed directive included a Requirement for the reliability coordinator to assess and approve only those actions that have	The SDT addresses the need for Reliability Coordinator assessment and approval on a requirement by requirement basis. For example, see proposed IRO-008-2, Requirements R3 and R6.

Standard	Source	Language	Resolution
		impacts beyond the area views of transmission operators and balancing authorities. We remain convinced that it is the reliability coordinator's responsibility to ensure Reliable Operation of its reliability coordinator area. The reliability coordinator must also ensure that actions taken by operating entities under its authority will not have wide-area impacts that would adversely impact Reliable Operation of the Bulk-Power System. Therefore, we adopt the proposed directive as stated in the NOPR. 525. Accordingly, we direct the ERO to include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities, including how to determine whether an action needs to be assessed by the reliability coordinator. This Requirement is best developed under the Reliability Standards development process including the consideration whether this Requirement should be included in this communications Reliability Standard or an operating Reliability Standard.	**Proposed IRO-008-2, Requirement R2**: **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R5**: **R5**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Wide Area.
IRO-005-1	FERC Order 693	946. "Conduct a survey on IROL practices and actual operating experiences by requiring reliability coordinators to report any violations of IROLS, their causes, the date and time, the durations and magnitudes in which actual operations exceeds IROLs to NERC.	Completed and filed in Oct 2008
IRO-005-1	FERC Order 693	950- Provide further clarification that reliability coordinators and transmission operators direct control	The SDT has proposed IRO-001-4, Requirement R1 to address the Commission's suggestion for

Standard	Source	Language	Resolution
		actions, not LSEs as part of the standard development process. We do not share TAPS' concern regarding LSEs initiating load shedding as their own control action to respect IROLs or SOLs. The appropriate control actions to respect IROLs and SOLs are the responsibilities of a reliability coordinator and transmission operator. If load shedding is required, it is the responsibility of a reliability coordinator or a transmission operator to direct the appropriate entities including LSEs to carry it out. However, we urge the ERO to provide further clarification in this regard and include TAPS' concern in developing the modification of this Reliability Standard.	clarification. Proposed TOP-001-4, Requirement R1 also addresses this issue. **Proposed IRO-001-4, Requirement R1**: **R1**. Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions. **Proposed TOP-001-4, Requirement R1:** **R1.** Each Transmission Operator shall act to address the reliability of its Transmission Operator Area via direct actions or by issuing Operating Instructions.
IRO-005-1	FERC Order 693	951-"Measures and levels of non-compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency, and causes of the violations and whether these occur during normal or contingency conditions. Accordingly, the Commission approves Reliability Standard IRO-005-1 as mandatory and enforceable. Further, because IRO-005-1 has no Measures or Levels of Non-Compliance, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to IRO-005-1through the Reliability Standards development process that includes Measures and Levels of Non-Compliance. The Commission further directs that the Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration,	The SDT has added measures and VSLs (which replaced levels of non-compliance) for each requirement.

Standard	Source	Language	Resolution
		frequency and causes of the violations and whether these occur during normal or contingency conditions.	
IRO-005-1	Fill in the Blank Team	R14 has regional reference	The term is not used in the revised standards.
IRO-005-1	Version 0 Team	R10, 11 & 12 – RA not empowered to do this	RA is no longer an applicable entity in the revised standards.
IRO-005-4	IERP	Requirement R1 is incomplete--needs to include Emergency. Requirement R1 reads: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Also - there are gaps between the old std IRO-005-3 R2 to IRO-005-4: missing is: There is a possible gap for RC in IRO-005-4 regarding RC handling emergencies as this has been dropped from IRO-005-3.1 Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard	The SDT replaced Adverse Reliability Impact with Emergency in all requirements. Emergency is a broader term. Proposed IRO-002-4, Requirement R3 addresses the issue of monitoring. **Proposed IRO-002-4, Requirement R3**:

Standard	Source	Language	Resolution
		and Disturbance Control Standard requirements. (Minus strikethrough) FROM IRO-005-3 R9: Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows.	**R3.** Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. The SDT believes all appropriate items, including Special Protection System evaluation and awareness is addressed through the revised definitions of Real-time Assessment and Operations Planning Analysis. The data specification has been revised to explicitly address Special Protection Systems. **Proposed: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Standard	Source	Language	Resolution
			Proposed: Operational Planning Analysis - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed IRO-010-2, Requirement R1, Part 1.2:** **R1. Part 1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
		From IRO-005-3 R10: In instances where there is a difference in derived limits, the Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.	The SDT has addressed the issue of resolving differences in limits in proposed TOP-001-3, Requirement R18. **Proposed TOP-001-3, Requirement R18**: **R18.** Each Transmission Operator shall operate to the most limiting parameter in instances where there is a difference in SOLs.

Standard	Source	Language	Resolution
		Recommend consolidating with IRO-008 R3.	The SDT has consolidated requirements and standards as it believes appropriate.
IRO-005-4	IERP	The proposed standard creates a gap in outage coordination by proposing to retire IRO-005-3 R6. This could be resolved through an Authority standard as proposed by the IERP From IRO-005-3 R6: The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.	The SDT has proposed a new standard, IRO-017-1 Outage Coordination, to address this issue.
IRO-005-4	IERP	Requirement R2 should also include Emergency Requirement R2 reads: Each Reliability Coordinator that identifies an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. Note: there is a possible gap for RC in IRO-005-4 regarding RC handling emergencies as this has been dropped from IRO-005-3.1	The SDT replaced Adverse Reliability Impact with Emergency in all requirements for consistency. The definition of Adverse Reliability Impact is encompassed in Emergency.

Standard	Source	Language	Resolution
		Recommend moving to IRO-008 and create an R4	
IRO-014-2	IERP	Gap in Requirement R1 - Need to identify RC's authority to direct another RC to take action - suggestion: create another Requirement, i.e., R6 (in proposed authority standard). Each RC shall comply with directions from another RC under R1 unless it communicates to the other RC that it cannot because compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.	The SDT does not agree with this recommendation. A Reliability Coordinator does not direct another Reliability Coordinator. Proposed IRO-014-3 describes how to coordinate between Reliability Coordinators.
IRO-014-2	IERP	R2 is administrative and should be deleted	The SDT believes that this is not strictly an administrative requirement and serves a reliability purpose.
IRO-014-2	IERP	R3 implements plan from R1; it should be combined with R1	The SDT believes that combining the requirements would create a complex requirement with multiple objectives that would be difficult to measure for compliance.
IRO-014-2	IERP	Requirement R4 is administrative and should be deleted.	The SDT believes that this is not strictly an administrative requirement and serves a reliability purpose.
IRO-014-2	IERP	R5 should require notification of “all IMPACTED RCs"; not "ALL"	The SDT has added ‘impacted’ to appropriate locations in the standards.
IRO-014-2	IERP	R6 should be consolidated with other standards that incorporate the concept of operating to the most conservative for reliability - IRO-009-1 R5	Approved IRO-009-1 only addresses IROLs. Proposed IRO-014-3 addresses all limits.

Standard	Source	Language	Resolution
		R6 reads: During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists.	
IRO-014-2	IERP	Requirement R7 should be retired. The reliability objective is covered under R6, and also supported by IRO-009-1 R5	The SDT believes that the two requirements are sufficiently distinct to warrant separateness. Requirement R6 speaks to actual operations. Requirement R7 speaks to having an established plan. The SDT believes that reliability is best served by having a plan to follow.
IRO-014-2	IERP	Requirement R8 should be retired. The reliability objective is covered under R6.	The SDT does not agree with this recommendation. Requirement R8 is a separate requirement.
IRO-016	VRF's Team	R1.2.1 & R2 – ambiguous	Requirement R2 was approved for retirement by FERC effective January 2014. Requirement R1, part 1.2.1 was incorporated in the set of requirements in proposed IRO-014-3, and ambiguous language has been deleted.
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The SDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there, the SDT has entered an official item in

Standard	Source	Language	Resolution
			the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	This concern is addressed in proposed TOP-001-3, Requirement R8. **Proposed TOP-001-3, Requirement R8**: **R8.** Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	The term is not used in the revised standards
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been revised to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The SDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there, the SDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is

Standard	Source	Language	Resolution
			listed in the Reliability Standards Development Plan under Project 2009-03.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.
TOP-001-2	IERP	Requirement R1 phrase "unless it violates requirements" is too permissive or there may be a better way to phrase it Consider consolidating TOP-001-2 Requirements R1 and R2 and all other standards requirements related Authority to into a single Authority standard as follows: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with directions from a Reliability Coordinator, Transmission Operator or Balancing Authority under [Authority standard R1] unless it communicates to the RC, TOP or BA that it cannot because the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.	The SDT believes that this is well understood language. The SDT believes that a separate authority standard is not necessary. Existing standards and requirements in conjunction with the Functional Model v5 are sufficient to address the authority issue raised here.
TOP-001-2	IERP	The language “emergency assistance” in Requirement R4 is unclear. When and how must assistance be rendered, and what type? BA’s should be included as functional entity. Consider moving R4 to EOP standards (this is an "emergency" operating requirement)	The SDT revised the language for clarity and included the Balancing Authority. **Proposed TOP-001-3, Requirement R7:** **R7**. Each Transmission Operator shall assist other Transmission Operators within its Reliability Coordinator Area, if requested and able, provided that the requesting Transmission Operator has implemented its comparable Emergency procedures,

Standard	Source	Language	Resolution
			unless such assistance cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements.
TOP-001-2	IERP	Requirement R5 should also include notification of Emergencies (in addition to ARI), and should include Bas. R5 states: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load.	The SDT added impacted Balancing Authorities. The SDT replaced Adverse Reliability Impact with Emergency in all requirements for consistency. The definition of Adverse Reliability Impact is encompassed in Emergency. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, known impacted Balancing Authorities, and known impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency.
TOP-001-2	IERP	R6 needs to include real time outages of telecom as well as planned outages.	The SDT added telecommunications to the requirement. **Proposed TOP-001-2, Requirement R9:** **R9**. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and known impacted interconnected entities of outages of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels between it and the affected entities. COM standards are not in scope for this project.

Standard	Source	Language	Resolution
		Requirement should be covered under COM-001	
TOP-001-2	IERP	Requirement R8 does not cover all information needed for reliability. It should cover 1) SOLs within a TOP's/RC's footprint, 2) SOLs that are within one TOP's/RC's footprint that could affect another entity and 3) an SOL that spans into 2 TOP's/RC's footprints The requirement should also obligate the TOP to also inform impacted TOPs (The entity that could be impacted must tell the TOP that could impact them that it needs the info)	The SDT has addressed issue 1 in proposed TOP-001-3, Requirement R15. SOLs that cross boundaries are taken care of at the Reliability Coordinator level. **Proposed TOP-001-3, Requirement R15:** **R15**. Each Transmission Operator shall inform its Reliability Coordinator of actions taken to return the System to within limits when a SOL has been exceeded.
TOP-002-3	Order 693	1597. Consider ISO-NE recommendation that the reference to "transmission service provider" in TOP-002-2 R12 be replaced by TOP and/or TO. Requirement R12 states: The Transmission Service Provider shall include known SOLs and IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs, and or regional Total Transfer Capability and Available Transfer Capability calculation processes.	This requirement is now addressed by approved MOD-028-2, Requirement R6.1; approved MOD-029-1a, Requirement R3; and approved MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. **Approved MOD-028-2, Requirement R6.1:** **R6.1** Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing load within the source Balancing Authority area and decreasing generation and/or increasing load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's system, or

Standard	Source	Language	Resolution
			A SOL is reached on any other adjacent system in the Transmission model that is not on the study path and the distribution factor is 5% or greater. **Approved MOD-029-1a, Requirement R3**: **R3.** Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. Approved MOD-030-2, Requirement R2.4: Establish the TFC of each of the defined Flowgates as equal to: For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
TOP-002-3	Order 693	1598. Requires next-day analysis of minimum voltages at nuclear power plants auxiliary power buses.	The data specification standard require that a Reliability Coordinator and Transmission Operator acquire all of the data necessary for them to fulfill their reliability functions including non-BES data as necessary. Next-day analysis is performed using Operational Planning Analysis. Approved NUC-001-2.1 also applies here. **Proposed IRO-010-2, Requirement R1 and Part 1.1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-

Standard	Source	Language	Resolution
			time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: 1.1 A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator. **Proposed TOP-003-3, Requirement R1 and Part 1.1**: **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: 1.1 A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator. **Proposed Definition: Operational Planning Analysis** - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs

Standard	Source	Language	Resolution
			including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)
TOP-002-3	Order 693	1600. Address critical energy infrastructure confidentiality as part of the routine standard development process	The data specification standards now contain provisions for addressing security of data. **Proposed IRO-010-2, Requirement R3, Part 3.3**: **R3. Part 3.3** A mutually agreeable security protocol. **Proposed TOP-003-3, Requirement R5, Part 5.3:** **R5. Part 5.3** A mutually agreeable security protocol.
TOP-002-3	Order 693	1601. …direct the ERO to modify Reliability Standard TOP-002-2 to require the next-day analysis for all IROLs to identify and communicate control actions to system operators that can be implemented within 30 minutes following a contingency to return the system to a reliable operating state and prevent cascading outages	SOLs are the responsibility of the Transmission Operator and IROLs are the responsibility of the Reliability Coordinator. This issue is addressed in proposed changes to the IRO standards. Approved IRO-009-1, Requirement R1 also applies. **Proposed IRO-008-2, Requirement R1**: **R1**. Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area.

Standard	Source	Language	Resolution
			Proposed IRO-008-2, Requirement R2: **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R3**: **R3**. Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s). **Approved IRO-009-1, Requirement R1:** **R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.
TOP-002-3	Order 693	1606. Commenters did not take issue with the proposed interpretation of the term deliverability as the ability to deliver the output from generation resources to firm	The SDT agrees and has addressed the issue in proposed TOP-002-3, Requirement R4, part 4.4:

Standard	Source	Language	Resolution
		load without any reliability criteria violations for plausible generation dispatches. The Commission adopts this proposed interpretation. In order to ensure the necessary clarity, the term as used in Requirement R7 of TOP-002-2 should be understood in this manner.	Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: 4.4 Capacity and energy reserve requirements, including deliverability capability.
TOP-002-3	Order 693	1608. Require simulation contingencies to match what will actually happen in the field	The SDT has revised the definitions of Operational Planning Analysis and Real-time Assessment accordingly. The definitions require Contingencies to match field conditions as they require evaluations against projected system conditions for Operational Planning Analysis and system conditions for Real-time Assessment. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed Definition: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The

Standard	Source	Language	Resolution
			assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)
TOP-002-3	IERP	Requirement R1. TOP-008-1 R4 needs to be incorporated into TOP-002-3 requirement R1. Also - the definition of "Operational Planning Analysis" provides too much latitude in time. Recommend removing the parenthesis in the definition; the entity will make the determination and document (documentation is evidence) the applicability of what it uses for their next day study	The SDT revised the definition of Operating Planning Analysis and Requirement R1. **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed TOP-002-3, Requirement R1**: **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next

Standard	Source	Language	Resolution
			day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs).
TOP-003-0	FERC Order 693	1620. …direct the ERO to develop a modification to TOP-003-0 that requires the communication of scheduled outages to all affected entities well in advance to ensure reliability and accuracy of ATC calculations.	The SDT has developed proposed IRO-017-1 Outage Coordination to address these type of issues, specifically proposed IRO-017-1, Requirement R1. This new standard takes into account the recommendations from the Independent Expert Review Panel and SW Outage Report and brings all of the various outage coordination issues into one cohesive standard. **Proposed IRO-017-1, Requirement R1:** **R1**. Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.
TOP-003-0	FERC Order 693	1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability Standard to incorporate an appropriate lead time for planned outages.	The SDT posed a question on this issue as a fact finding exercise in the second posting of Project 2007-03 in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – "The ERO should utilize the information filed by commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional

Standard	Source	Language	Resolution
			standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. In response to concerns raised by the IERP and the SW Outage Report, the SDT has developed proposed IRO-017-1 Outage Coordination. This standard requires the development of a coordinated outage process between the Reliability Coordinator, Transmission Operator, Balancing Authority, Planning Coordinator, and Transmission Planner. If so desired, a Reliability Coordinator could include lead times in its process. (See proposed IRO-017-1, Requirement R1, Part 1.2.) In addition, proposed IRO-010-2 and TOP-003-2 dealing with data specifications could also cover this issue. The data specification must include any and all data required by the Reliability Coordinator, Transmission Operator and Balancing Authority. Planned outage data and timings could be included in such a data specification.

Standard	Source	Language	Resolution
			Therefore, the SDT has not included a standard lead time in the revised requirements. **Proposed IRO-017-1, Requirement R1, Part 1.2:** **1.2** Specify outage submission timing requirements.
TOP-003-0	Order 693	1622. Consider TVAs suggestion for including breaker outages within the meaning of facilities that are subject to advance notice for planned outages.	The SDT has developed proposed IRO-017-1 Outage Coordination to address these types of issues. **Proposed IRO-017-1, Requirement R1:** **R1.** Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.
TOP-003-0	Order 693	1624. Direct the ERO to modify the Reliability Standard to require that any facility below the thresholds that, in the opinion of the transmission operator, balancing authority, or reliability coordinator will have a direct impact on the reliability of the Bulk-Power System be subject to Requirement R1 for planned outage coordination.	The data specification standard require that a Reliability Coordinator and Transmission Operator acquire all of the data necessary for them to fulfill their reliability functions including sub-100 kV data as necessary. **Proposed IRO-010-2, Requirement R1 and Part 1.1**: **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: 1.1 A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time

Standard	Source	Language	Resolution
			monitoring, and Real-time Assessments including non-BES data and external network data, as deemed necessary by the Reliability Coordinator. **Proposed TOP-003-3, Requirement R1 and Part 1.1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: 1.1 A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including non-BES data and external network data as deemed necessary by the Transmission Operator.
TOP-003-2	IERP	Requirements R1 and R2 do not address level of accuracy required; see if this is provided elsewhere (i.e. project 2009-02) Consolidate R1 and R2 at minimum; at max consolidate with RC (IRO-010-1a R1)	Level of accuracy is one of the issues identified in the Real-Time Tools Best Practices Task Force Report. NERC is currently instituting a review of all of the recommendations in various reports, including the Real-time Tools Best Practices Task Force report, to see what actions should be taken, if any are still required, to address recommendations in the reports. The SDT does not want to consolidate the two responsibilities. The industry has clearly indicated a desire for separate standards for the Reliability

Standard	Source	Language	Resolution
			Coordinator and Transmission Operator where possible.
TOP-003-2	IERP	Consolidate R3 and R4 at minimum; at max consolidate with RC (IRO-010-1a R2)	The SDT does not want to consolidate the two requirements or the two standards. The SDT feels Requirements R3 and R4 are for different tasks. The industry has clearly indicated a desire for separate standards for the Reliability Coordinator and Transmission Operator where possible.
TOP-003-2	IERP	Requirement R5 should be consolidated with IRO-010-1a R3	The industry has clearly indicated a desire for separate standards for the Reliability Coordinator and Transmission Operator where possible.
TOP-004-1	FERC Order 693	1636 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	The SDT believes that this issue has been addressed through the more stringent definitions proposed for Operational Planning Analysis, Real-time Assessment, and the requirement for the Transmission Operator to perform an Operational Planning Analysis as well as a Real-time Assessment every 30 minutes and to create an Operating Plan for mitigation of SOL exceedances. The SDT has developed a white paper on the topic of SOL exceedance to explain the technical rationale behind this resolution. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known

Standard	Source	Language	Resolution
			Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed Definition: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed TOP-002-4, Requirement R1**: **R1**. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-002-4, Requirement R2**: **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances

Standard	Source	Language	Resolution
			identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-001-3, Requirement R13**: **R13.** Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. **Proposed TOP-001-3, Requirement R14**: **R14**. Each Transmission Operator shall initiate its Operating Plan to mitigate a SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
TOP-004-1	Order 693	1637. …direct the ERO to conduct a survey on the operating practices and actual experiences surrounding drifting in and out of IROL violations.	Completed and filed in Oct 2008.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (… the Commission proposed to interpret “multiple outages” in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element outage. This is not an	The SDT feels that approved EOP-001-2.1b dealing with emergency operations planning covers the intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, approved FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

Standard	Source	Language	Resolution
		exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process should develop a procedure to identify applicable high risk conditions. Under … high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	Order 693	1639. Consider Santa Clara's comment in the SDT process. Santa Clara states that Requirement R2 of the Reliability Standard should be revised to include frequency monitoring in addition to the monitoring of voltage, real and reactive power flows	The data specification standards require that entities obtain all of the data that they need to perform their reliability functions. This would include frequency, voltages, real and reactive power flows, and any other data that the entity needs. Proposed TOP-001-3, Requirements R10 and R11 also address this item. **Proposed IRO-010-2, Requirement R1**: **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R1**: **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-001-3, Requirement R10**:

Standard	Source	Language	Resolution
			R10. Each Transmission Operator shall perform the following as necessary for determining System Operating Limit (SOL) exceedances within its Transmission Operator Area: 10.1 Within its Transmission Operator Area, monitor Facilities and the status of Special Protection Systems, and 10.2 Outside its Transmission Operator Area, obtain and utilize status, voltages, and flow data for Facilities and the status of Special Protection Systems. **Proposed TOP-001-3, Requirement R11:** **R11**. Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, in order to maintain Load-interchange balance within its Balancing Authority Area and support Interconnection frequency.
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	The SDT has clarified the issue. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL $T_{v.}$
TOP-005	Order 693	1648. ...direct the ERO to develop a modification to TOP-005-1 through the Reliability Standards development process regarding the operational status	The SDT has added specific parts to the data specification standards as well as revising the

Standard	Source	Language	Resolution
		of special protection systems and power system stabilizers in Attachment 1.	definitions of Operational Planning Analysis and Real-time Assessment to address this issue. **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed IRO-010-2, Requirement R1, Part 1.2**:

Standard	Source	Language	Resolution
			1.2 Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed TOP-003-3, Requirement R1, Part 1.2**: 1.2 Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
TOP-005	Order 693	1650. Consider FirstEnergy's modifications to Attachment 1 and ISO-NEs recommended revision to requirement R4 in the standards development process. FirstEnergy states that TOP-005-1 should also apply to transmission providers because some of the information listed in Attachment 1 to the Reliability Standard is in their possession. Attachment 1 should be modified so that it allows each entity to know what data it is expected to provide. ISO-NE recommends that the reference to “purchasing-selling entity” should be replaced with LSE.	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-3. Requirement R4 has been superseded by proposed TOP-003-3 which does include the indicated entities and has deleted PSE. **Proposed TOP-003-3, Requirement R5**: **R5.**Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications using:
TOP-005	Order 693	1651. … deletes references to confidentiality agreements, but addresses the issue separately to ensure that necessary protections are in place related to confidential information.	The SDT believes that confidentiality is a market issue and not a reliability issue and as such it does not belong in the Reliability Standards. However, security of information is a reliability concern and the SDT has addressed that issue through the addition of requirements for establishing security protocols in data exchanges.

Standard	Source	Language	Resolution
			Proposed TOP-003-3, Requirement R5, Part 5.3: 5.3 A mutually agreeable security protocol. **Proposed IRO-010-2, Requirement R3, Part 3.3**: 3.3 A mutually agreeable security protocol.
TOP-005	Order 693	1660. Add requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the bulk power system	This directive is beyond the scope of this project and will be resolved in a future project.
TOP-006	Order 693	1665. Clarify the meaning of appropriate technical information concerning protective relays	That term is no longer used in the standards. To address concerns about the status of protection systems, the SDT has incorporated explicit references in the definitions of Operational Planning Analysis and Real-time Assessment and the data specification standards. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.)

Standard	Source	Language	Resolution
			Proposed Definition: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed IRO-010-2, Requirement R1, Part 1.2**: 1.2 Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed TOP-003-3, Requirement R1, Part 1.2**: 1.2 Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
TOP-006	Order 693	1664/1681. The ERO should consider APPA's comment regarding the missing Measures in the ERO's Reliability Standards development process.	All requirements now have measures.
TOP-006	Order 693	1673. Direct the ERO to consider NRC's comments in the Reliability Standards development process when addressing TOP-007-0 as part of its Work Plan.	Analysis is required in proposed TOP-002-3, Requirement R1 and in proposed TOP-001-3, Requirement R13. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1 and proposed

Standard	Source	Language	Resolution
		NRC states that some nuclear power plant voltage requirements would result in SOL, i.e., the nuclear power plant voltage limits would be an SOL as a result of the minimum and maximum voltages required at the nuclear power plant switchyard, which typically has a tighter operating band (a higher minimum and a lower maximum) than other nodes in the system. It therefore recommends adding a new requirement that states as follows: "Following discovery of a potential contingency that could result in an SOL being exceeded at a nuclear power plant (e.g., at post-trip voltage), the transmission owner shall notify the nuclear power plant operator as soon as possible but not longer than 30 minutes if the contingency has not been corrected." NRC also suggests modifying the Measures and Compliance sections and Table 1 to account for the new requirement, and provides specific language to be included in those places.	TOP-001-3, Requirement R13 as shown in the revised definition of Operational Planning Analysis and Real-time Assessment. Additionally, approved NUC-001-2.1, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-3. Approved NUC-001-2, Requirements R3 & R8 cover the information flowing back to the nuclear plant operator. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed Definition: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential

Standard	Source	Language	Resolution
			(post-Contingency) operating conditions. The assessment may reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.) **Proposed TOP-002-3, Requirement R1**: **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13**: **R13.** Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes. **Approved NUC-001-2.1, Requirement R3**: **R3**. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall incorporate the NPIRs into their planning analyses of the electric system and shall communicate the results of these analyses to the Nuclear Plant Generator Operator. **Approved NUC-001-2.1, Requirement R4.1**:

Standard	Source	Language	Resolution
			4.1 Incorporate the NPIRs into their operating analyses of the electric system. **Approved NUC-001-2.1, Requirement R8:** **R8.** Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall inform the Nuclear Plant Generator Operator of actual or proposed changes to electric system design, configuration, operations, limits, Protection Systems, or capabilities that may impact the ability of the electric system to meet the NPIRs.
VAR-001-1	Order 693 Transferred from Project 2013-04 Voltage and Reactive Control	1855. Since a reliability coordinator is the highest level of authority overseeing the reliability of the Bulk-Power System, the Commission believes that it is important to include the reliability coordinator as an applicable entity to assure that adequate voltage and reactive resources are being maintained. As MISO points out, other Reliability Standards address responsibilities of reliability coordinators, but we agree with EEI that it is important to include reliability coordinators in VAR-001-1 as well. Reliability coordinators have responsibilities in the IRO and TOP Reliability Standards, but not the specific responsibilities for voltage levels and reactive resources addressed by VAR-001-1, which have a great impact on system reliability. For example, voltage levels and reactive resources are important factors to ensure that IROLs are valid and operating voltages are within limits, and that reliability coordinators should have responsibilities in	The SDT has clarified the issue of having the Reliability Coordinator provide oversight. The proposed requirement uses the term 'Facilities' which is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)." Therefore, the requirement covers voltage and reactive resources. **Proposed IRO-002-4, Requirement R3**: **R3**. Each Reliability Coordinator shall monitor Facilities, the status of Special Protection Systems, and non-BES facilities identified as necessary by the Reliability Coordinator, within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to identify any System Operating Limit exceedances and to determine any

Standard	Source	Language	Resolution
		VAR-001-1 to monitor that sufficient reactive resources are available for reliable system operations. Accordingly, the ERO should modify VAR-001-1 to include reliability coordinators as applicable entities and include a new requirement(s) that identifies the reliability coordinator's monitoring responsibilities.	Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.
INT-006-1	Order 693 Transferred from Project 2008-12 Coordinate Interchange Standards	866. The Commission directs the ERO to develop a modification to INT-006-1 through the Reliability Standards development process that makes it applicable to reliability coordinators and transmission operators. The Commission directs the ERO to develop a modification to INT-006-1 through the Reliability Standards development process that requires reliability coordinators and transmission operators to review energy interchange transactions from the wide-area and local area reliability viewpoints respectively and, where their review indicates a potential detrimental reliability impact, communicate to the sink balancing authorities necessary transaction modifications before implementation.	An equally efficient and effective method of addressing the directive was approved by the Board and filed with FERC by Project 2008-12 SDT by including the term 'Interchange' in the definition of Operational Planning Analysis. This change has been retained by Project 2014-03. Proposed IRO-008-2, Requirement R1 specifies that the Reliability Coordinator must perform an Operational Planning Analysis. By explicitly including "Interchange" in the definition of Operational Planning Analysis, the Reliability Coordinator must consider Interchange when performing the study. Then, in proposed IRO-008-2, Requirement R2, the Reliability Coordinator must develop a plan for addressing the problem. Similar requirements exist for the Transmission Operator in proposed TOP-002-3. **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation may reflect applicable inputs including,

Standard	Source	Language	Resolution
			but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through third-party services.) **Proposed IRO-008-2, Requirement R1:** **R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed System Operating Limits (SOLs) and Interconnection Operating Reliability Limits (IROLs) within its Wide Area. **Proposed IRO-008-2, Requirement R2**: **R2**. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as performed in Requirement R1 while considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R3:**

Standard	Source	Language	Resolution
			R3. Each Reliability Coordinator shall notify impacted entities identified in its Operating Plan(s) cited in Requirement R2 as to their role in that plan(s). **Proposed TOP-002-4, Requirement R1:** **R1**. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-002-4, Requirement R2:** **R2**. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R3:** **R3**. Each Transmission Operator shall notify impacted entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s).

Exhibit I

Consideration of NERC Operating Committee Response to NERC Standards Committee RISC Triage of IERP Gaps

NERC Operating Committee Response to NERC Standards Committee / RISC Triage of IERP Gaps

April 2, 2014

The NERC Operating Committee reviewed three perceived gaps, Outage Coordination, Governor Frequency Response, and Situational Awareness, as identified by the Independent Experts in their June 2013 report. As an important step in this review, the OC's Executive Committee met via WebEx with the Independent Experts to more thoroughly discuss and understand the thinking which led to these elements being cited as possible gaps. During the WebEx, the OCEC and the Independent Experts also reviewed all of the proposed requirements in the Independent Experts draft Authority matrix. The results of the OC's discussions, and the Project 2014-03 SDT's consideration within the revised TOP and IRO standards for two of the three perceived gaps (Outage Coordination and Situational Awareness) are presented below. The third gap identified by the Independent Experts, Governor Frequency Response, is outside the scope of Project 2014-03.

Outage Coordination

Draft requirements 3, 7, 8 and 9 of the Independent Experts draft Authority Standard focus on Outage Coordination. One concern recognized the fact that the Reliability Coordinators have a wide area view and broader situational awareness, allowing for early identification and resolution of conflicts. Therefore the RCs should have the most influence on outage coordination. Further concerns identify standards that are currently in flux, particularly those remanded standards in which requirements are being removed.

> Operating Committee opinion
>
> The Operating Committee concurs that Outage Coordination is an important grid reliability function. Outage coordination should originate from the TOPs and GOPs; with conflicts resolved by their respective RC. It makes sense for this process to begin with a set of previously approved scheduled long term outages with a sufficient time margin for results to be incorporated into seasonal operating studies. Further, the RC should retain the authority for final approval up to the time the asset is removed from service, as well as recall authority (if technically feasible and appropriate to recall) as needed to prevent or mitigate emergencies.
>
> Longer term outage coordination is necessary for those assets that require long maintenance planning pursuant to the type of work required, such as turbine rebuilds, nuclear refueling, etc. This likely belongs in the scope of the Planning Coordinator (PC) for outages planned more than 12-months into the future. A Reliability Standard could be written that requires PCs to coordinate long term outages and which requires responsible entities (e.g., GOs, TOs) to request a time slot in which to perform whatever maintenance is required.

In either case, during the longer term planning horizon, or the Operations planning and real time operations time frame, each PC or RC should have an understanding of the impacts on neighboring PCs or RCs when those assets are planned to be out or are forced out, with notification/coordination requirements with these PCs or RCs.

SDT response:

To enhance reliability, the Project 2014-03 SDT has provided explicit requirement language to address the need for planned outage coordination at the Reliability Coordinator level. See proposed IRO-014-3, Requirement R1, part 1.4. The Project 2014-03 SDT has developed a new standard, IRO-017-1 Outage Coordination, to address overall outage coordination issues.

Proposed IRO-014-3, Requirement R1, part 1.4: Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

Situational Awareness (EMS RTCA models)

In this gap the Independent Experts recommend the development of a standard that defines the requirements for EMS RTCA models or performance expectations of the models (Project 2009-02 – Real Time Monitoring and Analyses Capabilities).

Operating Committee opinion

The Operating Committee has a concern that this gap could be interpreted as recommending a "HOW" standard where specific tools would be required even for the smallest TOPs, as opposed to a "WHAT" standard that would allow for other ways to accomplish the objective. In conversations with the Independent Experts it became clear that proper situational awareness was the primary concern. The OC concurs that real time contingency analysis process (real time updated topology and telemetry) should be performed on each BES facility. This functionality could be performed by use of an RTCA application at the TO or RC level, or coverage by alternate means would be appropriate.

SDT response:

The Project 2014-03 SDT has adapted approved IRO-008-1, Requirement R2 for the Transmission Operator. See proposed TOP-001-3, Requirement R13. In addition, the Project 2014-03 SDT has revised the definition of Real-time Assessment to allow for contracting needed services to accommodate concerns for smaller entities.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect applicable inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase

angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through third-party services.)

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

Remainder of the draft Authority Standard Requirements

Authority R1

Each RC, TOP and BA shall have the requirement and authority to take actions, including issuing a Reliability Directive, to prevent, mitigate and respond to an Emergency or Adverse Reliability Impact.

Operating Committee opinion

The current IRO-001-1.1 and TOP-001-1a are expected to be retired and replaced by IRO-001-3. In either case, these standards contain the authority to act, but the requirement to act appears to be implicit. The OC agrees that the RC, TOP and BA should explicitly be required to act.

SDT response:

The Project 2014-03 SDT agrees and has adjusted the wording in the standards to address this issue.

Proposed IRO-001-4, Requirement R1: Each Reliability Coordinator shall act to address the reliability of its Reliability Coordinator Area via direct actions or by issuing Operating Instructions.

Proposed TOP-001-3, Requirement R1: Each Transmission Operator shall act to maintain the reliability of its Transmission Operator Area via its own actions or by issuing Operating Instructions.

Proposed TOP-001-3, Requirement R2: Each Balancing Authority shall act to maintain the reliability of its Balancing Authority Area via its own actions or by issuing Operating Instructions.

Authority R2

Each RC, TOP and BA shall have the requirement and authority to approve, deny or cancel planned outages of its EMS, telecom and other hardware, and associated analysis tools.

Operating Committee opinion

The current IRO-002-2 provides for the RC to have control of its tools but does not include the TOP or BA. IRO-002-2 is expected to be retired and replaced by IRO-002-3, which clarifies that the system operators have the authority to approve outages of analysis tools (The OC suggests adding “under the direct control of their company”), but does not include TOPs or BAs. The OC concurs

with the clarification in IRO-002-3, and the OC further agrees that TOPs and BAs should be included.

SDT response:

The Project 2014-03 has added proposed TOP-001-3, Requirements R16 and R17 to provide Transmission Operators and Balancing Authorities with capabilities similar to those of the Reliability Coordinator.

> Proposed TOP-001-3, Requirement R16: Each Transmission Operator shall provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.

> Proposed TOP-001-3, Requirement R17: Each Balancing Authority shall provide its System Operators with the authority to approve planned outages and maintenance of its telemetering and control equipment, monitoring and assessment capabilities, and associated communication channels between affected entities.

Authority R4

RC, TOP and BA shall provide its System Operators with the responsibility and authority to implement the actions under R1, R2 and R3.

Operating Committee opinion

During the OCEC/Independent Expert webex, the Independent Experts explained that the objective of this requirement is to mandate the posting of a letter in the control rooms granting authority to the system operators to carry out their required tasks. While the Operating Committee believes this is a good practice, it does not believe that it rises to the level of a Standards Requirement.

SDT response:

The Project 2014-03 SDT agrees with the position of the Operating Committee Executive Committee. A letter of authority located in the Control Room is an example of good utility practice. A change to the requirements is not warranted.

Authority R5

Each TOP, BA, GOP, and DP shall comply with directions from a RC, TOP or BA under R1 unless it communicates to the RC, TOP or BA that it cannot because the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.

Operating Committee opinion

In relation to R1 above this understanding seems implicit. However, in the interest of clarity the OC would support this requirement.

SDT response:

The Project 2014-03 SDT agrees.

Proposed TOP-001-3, Requirement R3: Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements.

Proposed TOP-001-3, Requirement R5: Each Transmission Operator, Generator Operator, and Distribution Provider shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements.

Proposed IRO-001-4, Requirement R2: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.

Authority R6

Each RC shall comply with directions from another RC under R1 unless it communicates to the other RC that it cannot because compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.

Operating Committee opinion

IRO-014-5, IRO-015-1 and IRO-016-1 describe inter RC procedures, Plans, notifications and coordination. These standards are expected to be retired and replaced by IRO-014-2 incorporating the pertinent requirements from the retiring standards. However, none of these standards explicitly include a requirement for one RC to comply with a directive from another RC.

The OC recognizes that coordination between RCs is vitally important. It is also recognized that an RC is the entity with the best understanding and situational awareness of its unique footprint. Therefore it is not believed to be beneficial for operational reliability for one RC to direct the actions of another RC. Rather, it is more appropriate to have this type of coordination documented within the requisite Joint Operating Agreements in which the appropriate assistance would be documented and understood in advance of such actions.

SDT response:

The Project 2014-03 SDT believes that proposed IRO-014-2 Requirements R3 – R6 already require Reliability Coordinators to coordinate and implement action plans even if the RC cannot agree that a problem exists or what the exact action plan is

> Proposed IRO-014-2, Requirement R3: Each Reliability Coordinator, upon identification of an expected or actual Emergency in its Reliability Coordinator Area, shall notify other impacted Reliability Coordinators.
>
> Proposed IRO-014-2, Requirement R4: Each impacted Reliability Coordinator shall operate as though the Emergency exists during each instance where Reliability Coordinators disagree on the existence of an Emergency.
>
> Proposed IRO-014-2, Requirement R5: Each Reliability Coordinator that identified an Emergency in its Reliability Coordinator Area shall develop an action plan to resolve the Emergency during those instances where impacted Reliability Coordinators disagree on the existence of an Emergency.
>
> Proposed IRO-014-2, Requirement R6: Each impacted Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Emergency during those instances where Reliability Coordinators disagree on the existence of an Emergency, unless such actions would violate safety, equipment, regulatory, or statutory requirements.

Analysis of Violation Risk Factors and Violation Severity Levels

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Violation Risk Factor and Violation Severity Level Assignments

Project 2014-03 Revisions to TOP/IRO Reliability Standards

Violation Risk Factor and Violation Severity Level Assignments

This document provides the Standard Drafting Team's (SDT) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in Project 2014-03.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors

The SDT applied the following NERC criteria when proposing VRFs for the requirements in Project 2014-03.

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to

lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline (2) — Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

---

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on rehearing and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").
[2] Id. at footnote 15.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are twenty requirements in proposed TOP-001-3. None of the twenty requirements were assigned a "Lower" VRF. Requirements R9 and R15 were assigned a "Medium" VRF while all of the other requirements were given a "High" VRF.

VRF for Proposed TOP-001-3, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to taking action to ensure reliability. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to take action, or to direct others to take action, could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to taking action to ensure reliability: approved TOP-001-1a for a Transmission Operator and proposed TOP-001-3 for a Balancing Authority. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to take action, or to direct others to take action, could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1a that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with issued Operating Instructions could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1a that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with issued Operating Instructions could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, there is a similar requirement (Requirement R4) in approved TOP-001-1a that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with issued Operating Instructions could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, there is a similar requirement (Requirement R4) in approved TOP-001-1a that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with issued Operating Instructions could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R6 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for Proposed TOP-001-3, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (requirement R6) in approved TOP-001-1a which is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide requested assistance could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R7 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R7) in approved TOP-001-1a that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to inform other known impacted reliability entities of actions that may result in Emergencies could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R8 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-003-1 which is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Bulk power system instability, separation, or Cascading failures are not likely to occur due to a failure to adhere to this requirement. Thus, this requirement meets the criteria for a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R9 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, there is a similar requirement (Requirement R4) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF. The requirements are considered similar as approved IRO-002-2, Requirement R4 is for Reliability Coordinators while proposed TOP-001-3, Requirement R10 is for Transmission Operators.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to monitor Facilities and the status of Special Protection Systems within the Transmission Operator's Area and to obtain data outside of the Transmission Operator's Area for Facilities and status of Special Protection Systems identified as necessary by the Transmission Operator, could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R10 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, there is a similar requirement (Requirement R4) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF. The requirements are considered similar as approved IRO-002-2, Requirement R4 is for Reliability Coordinators while proposed TOP-001-3, Requirement R11 is for the Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to monitor the status of Special Protection Systems that impact generation or Load could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R11 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R12:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 which has a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to operate within IROL T_v could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R12 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R13:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, there is a similar requirement (Requirement R2) in approved IRO-008-1 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF. The requirements are considered similar as approved IRO-008-1, Requirement R2 is for Reliability Coordinators while proposed TOP-001-3, Requirement R13 is for the Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to ensure Real-time Assessments are performed at least every 30 minutes could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R13 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R14:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 which has a High VRF. Hence, this requirement is also assigned a High VRF.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to initiate the Operating Plan could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R14 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R15:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-007-0 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to inform the Reliability Coordinator of actions taken to return the system to within limits could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R15 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R16:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF. The requirements are considered similar as approved IRO-002-2, Requirement R8 is for Reliability Coordinators while proposed TOP-001-3, Requirement R16 is for the Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide operators with authority to approve outages and maintenance of monitoring, telecommunication, and analysis capabilities could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R16 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R17:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF. The requirements are considered similar as approved IRO-002-2, Requirement R8 is for Reliability Coordinators while proposed TOP-001-3, Requirement R17 is for the Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide operators with authority to approve outages and maintenance of monitoring, telecommunications, and analysis capabilities could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R17 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R18:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved IRO-009-1 that is assigned a High VRF. The requirements are considered similar since approved IRO-009-1 is about the Reliability Coordinator and proposed TOP-001-3, Requirement R18 is about the Transmission Operator. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to operate to the most limiting parameter when there is a difference in SOLs could lead to bulk power system instability, separation, or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R18 addresses a single objective and has a single VRF.

VRF for Proposed TOP-001-3, Requirement R19:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have data exchange capability could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R19, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-001-3, Requirement R20:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have data exchange capability could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-001-3, Requirement R20, contains only one objective; therefore, only one VRF was assigned.

There are seven requirements in proposed TOP-002-4. All of the requirements were assigned a Medium VRF.

VRF for Proposed TOP-002-4, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements, so only one VRF was assigned; therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-002-2.1b that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. This is an advanced planning requirement. So while not having an Operational Planning Analysis could hinder the Transmission Operator, in and of itself it does not directly affect the electrical state or the capability of the bulk

power system and would not directly lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-002-2.1b that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. This is an operational planning requirement. So in and of itself, it does not directly affect the electrical state or the capability of the bulk power system and would not directly lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R4) in approved TOP-002-2.1b that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other impacted reliability entities of their roles does not, in and of itself, lead to bulk power system instability, separation or Cascading failures. This is an advance planning requirement, not Real-time. The Transmission Operator still retains the operating requirements to preclude operating in exceedances of established limits. Thus, this requirement meets the criteria for a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-002-2.1b that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. This is an operational planning requirement. So in and of itself, it does not directly affect the electrical state or the capability of the bulk power system and would not directly lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R4) in approved TOP-002-2.1b that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other impacted reliability entities of their roles does not, in and of itself, lead to bulk power system instability, separation or Cascading failures. This is an advance planning requirement, not Real-time. Thus, this requirement meets the criteria for a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R5, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement with no similar requirement to compare against. However, it is a coordination issue in the operational planning timeframe and so is being treated in a similar fashion to the other requirements in this standard. Hence, this requirement is assigned a Medium VRF.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to submit the Operating Plan for next-day operations cannot, in and of itself, lead to bulk power system instability, separation or Cascading failures. This is an advance planning requirement, not Real-time. Thus, this requirement meets the criteria for a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R6, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-002-4, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement with no similar requirement to compare against. However, it is a coordination issue in the operational planning timeframe and so is being treated in a similar fashion to the other requirements in this standard. Hence, this requirement is assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to submit the Operating Plan for next-day operations cannot, in and of itself, lead to bulk power system instability, separation or Cascading failures. This is an advance planning requirement, not Real-time. Thus, this requirement meets the criteria for a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-002-4, Requirement R7, contains only one objective; therefore, only one VRF was assigned.

There are five requirements in proposed TOP-003-3. Four of the five requirements were assigned a "Low" VRF: Requirements R1, R2, R3, and R4. Requirement R5 was assigned a "Medium" VRF.

VRF for Proposed TOP-003-3, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements, so only one VRF was assigned; therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among reliability standards. There is a similar requirement (Requirement R1) in approved IRO-010-1a that is also assigned a Low VRF. The requirements are viewed as similar since they both refer to data specifications: approved IRO-010-1a for a Reliability Coordinator, and proposed TOP-003-3 for a Transmission Operator.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to compile a data specification does not relieve a Transmission Operator from its responsibility to reliably operate the bulk power system, so this requirement, in and of itself, is administrative in nature and does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-003-3, Requirement R1, contains only one objective; therefore only one VRF was assigned.

VRF for Proposed TOP-003-3, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-010-1a that is assigned a Low VRF. The requirements are viewed as similar since they both refer to data specifications: approved IRO-010-1a for a Reliability Coordinator, and proposed TOP-003-3 for a Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not relieve a Balancing Authority from its responsibility to reliably operate the bulk power system, so this requirement, in and of itself, is administrative in nature and does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-003-3, Requirement R2, contains only one objective, therefore only one VRF was assigned.

VRF for Proposed TOP-003-3, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in approved IRO-010-1a that is assigned a Low VRF. The requirements are viewed as similar since they both refer to the distribution of the data specification: approved IRO-010-1a for a Reliability Coordinator and proposed TOP-003-3, Requirement R3 for a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not relieve a Transmission Operator from its responsibility to reliably operate the

bulk power system, so this requirement, in and of itself, is administrative in nature and does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Lower VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-003-3, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-003-3, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in approved IRO-010-1a that is assigned a Low VRF. The requirements are viewed as similar since they both refer to the distribution of the data specification: approved IRO-010-1a for a Reliability Coordinator, and proposed TOP-003-3 for a Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not relieve a Balancing Authority from its responsibility to reliably operate the bulk power system, so this requirement, in and of itself, is administrative in nature and does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-003-3, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed TOP-003-3, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved IRO-010-1a that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to the provision of data: approved IRO-010-1 for a Reliability Coordinator, and proposed TOP-003-3 for a Transmission Operator and Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide the data requested does not, in and of itself, directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures. However, it greatly increases the likelihood of such problems and, therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed TOP-003-3, Requirement R5, has only one objective; therefore, only one VRF was assigned.

There are three requirements in proposed IRO-001-4. All of the requirements were assigned a "High" VRF.

VRF for Proposed IRO-001-4, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved IRO-001-1.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to taking actions to preserve reliability.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to act, or direct others to act, could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-001-4, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-001-4, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. Therefore, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with Operating Instructions could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-001-4, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-001-4, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. Therefore this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to inform the Reliability Coordinator of the inability to follow an Operating Instruction could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-001-4, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

There are four requirements in proposed IRO-002-4. All of the requirements were assigned a "High" VRF.

VRF for Proposed IRO-002-4, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have data exchange capabilities could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-002-4, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-002-4, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.

- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to give operators the authority to approve planned outages and maintenance of telecommunication, monitoring and analysis capabilities could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-002-4, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-002-4, Requirement R3:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-003-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to monitor Facilities, the status of Special Protection Systems, and sub-100 kV facilities identified as necessary by the Reliability Coordinator, could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-002-4, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-002-4, Requirement R4:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R4) in approved IRO-002-2 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to have adequate monitoring systems with emphasis on cited criteria could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-002-4, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

There are six requirements in proposed IRO-008-2. Four of the six requirements were assigned a “Medium” VRF: Requirements R1, R2, R3, and R6. The other requirements were assigned a “High” VRF.

VRF for Proposed IRO-008-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-008-1 that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to perform an Operational Planning Analysis in the operational planning timeframe, in and of itself, does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-008-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement and there are no comparable requirements to compare against. It is a coordination requirement in the operational planning timeframe so this requirement is assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate an Operating Plan in the operational planning timeframe, in and of itself, does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-008-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved IRO-008-1 that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify entities of roles in Operating Plans in the operational planning timeframe, in and of itself, does not directly affect

the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-008-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in approved IRO-008-1 that is assigned a High VRF. Hence, this requirement is also assigned a High VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to ensure that a Real-time Assessment is performed at least once every 30 minutes could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-008-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved IRO-008-1 that is assigned a Medium VRF. However, that requirement combines operations planning and Real-time. This requirement only applies to Real-time which in the belief of the SDT raises the VRF to High.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify impacted entities of roles in plans in the Real-time environment could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R5, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-008-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, it is similar to proposed TOP-001-3, Requirement R15 which is assigned a Medium VRF. The requirements are similar in that proposed IRO-008-2, Requirement R8 is for Reliability Coordinators while proposed TOP-001-3 is for Transmission Operators. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify impacted entities of when exceedances have been mitigated will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-008-2, Requirement R6, contains only one objective; therefore, only one VRF was assigned.

There are three requirements in proposed IRO-010-2. Two of the requirements, Requirements R1 and R2, are assigned "Low" VRFs. Requirement R3 is assigned a "Medium" VRF.

VRF for Proposed IRO-010-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-010-1a that is assigned a Low VRF. Hence, this requirement is also assigned a Low VRF. This is also consistent with proposed TOP-003-3, Requirement R1.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not, in and of itself, lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-010-2, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-010-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in approved IRO-010-1a that is assigned a Low VRF. Hence, this requirement is also assigned a Low VRF. This is also consistent with proposed TOP-003-3, Requirement R2.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not, in and of itself, lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-010-3, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-010-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved IRO-010-1a that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to supply the data requested does not, in and of itself, lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-010-2, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

There are seven requirements in proposed IRO-014-3. Four of the requirements, Requirements R4, R5, R6, and R7, were assigned a "High" VRF. Requirements R1 and R3 were assigned a "Medium" VRF. Requirement R2 was assigned a "Low" VRF.

VRF for Proposed IRO-014-3, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-014-1 that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have and implement the plans and procedures, in and of itself, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement with no comparable requirement that is assigned a Low VRF. The requirement is for maintenance of plans, processes, and procedures. Hence, the designation of a Low VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to maintain the plans, processes, and procedures is administrative in nature and does not directly affect the electrical state or the capability of the bulk power system, and will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-016-1 that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other Reliability Coordinators, in and of itself, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1.2) in approved IRO-016-1 that is assigned a Medium VRF. Upon reviewing the requirement, the SDT believes that it needs to be elevated to a High VRF since it is dealing with actions taken to operate during a possible Emergency situation in Real-time.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to operate as if the Emergency exists while the situation needs to be resolved could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved IRO-016-1 that is assigned a Medium VRF. Upon reviewing the requirement, the SDT believes that it needs to be elevated to a High VRF since it is dealing with actions taken to operate during a possible Emergency situation in Real-time.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to operate as if the Emergency exists while the situation needs to be resolved could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R5, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1.1) in approved IRO-016-1 that is assigned a Medium VRF. Upon reviewing the requirement, the SDT believes that it needs to be elevated to a High VRF since it is dealing with actions taken to operate during a possible Emergency situation in Real-time.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to operate as if the Emergency exists while the situation needs to be resolved could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R6, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-014-3, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement. However, it is similar to proposed TOP-001-3, Requirement R7 which has a High VRF assignment.

The requirements are similar in that proposed TOP-001-3, Requirement R7 is for Transmission Operators and Balancing Authorities while proposed IRO-014-3, Requirement R9 is for Reliability Coordinators. Hence, this requirement is also assigned a High VRF.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide requested assistance could lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-014-3, Requirement R7, contains only one objective; therefore, only one VRF was assigned.

There are four requirements in proposed IRO-017-1. All four of the requirements have been assigned a "Medium" VRF.

VRF for Proposed IRO-017-1, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R6) in proposed IRO-005-3.1a that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have a coordination process, in and of itself in the planning timeframe, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-017-1, Requirement R1, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-017-1, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a new requirement with no comparable requirement that is assigned a Medium VRF. The requirement is for following the process described in proposed IRO-017-1, Requirement R1 which is assigned a Medium VRF. Hence, the designation of a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to follow the process, in and of itself in the planning timeframe, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-017-1, Requirement R2, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-017-1, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved TPL-001-4 that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the assessments, in and of itself in the planning timeframe, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-017-1, Requirement R3, contains only one objective; therefore, only one VRF was assigned.

VRF for Proposed IRO-017-1, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned, so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R6) in proposed IRO-005-3.1a that is assigned a Medium VRF. Hence, this requirement is also assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate solutions, in and of itself in the planning timeframe, will not lead to bulk power system instability, separation, or Cascading failures; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. Proposed IRO-017-1, Requirement R4, contains only one objective; therefore, only one VRF was assigned.

Justification for Assignment of Violation Severity Levels:
In developing the VSLs for the TOP/IRO standards, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance. The performance or product measured has significant value, as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance, or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement, or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance
Compare the VSLs to any prior levels of noncompliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of noncompliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties
A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement
VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of noncompliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation, per day basis is the “default” for penalty calculations.

VSLs for Proposed TOP-001-3, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R1. While similar, that requirement is not exactly the same as it had two clearly different objects. One of the objects has more to do with actions than the other and that part of the VSL is binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R1. While similar, that requirement is not exactly the same as it had two clearly different objects. One of the objects has more to do with actions than the other and that part of the VSL is Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R3. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R3. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R4. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R4. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved TOP-001-1a, Requirement R6. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R7. Those VSLs are binary Severe. However, when assigning the VSLs for this requirement, the SDT believed that it was possible to provide a gradual increasing scale for the VSLs and assigned the VSLs appropriately.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R9.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are those for proposed TOP-003-1, Requirement R3. Those VSLs are binary Severe. However, when assigning the VSL for the new requirement, the SDT believed that it was possible to provide a gradual increasing scale for the VSL and assigned the VSLs appropriately.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R10.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R4. Those VSLs are incremental. Therefore, the SDT assigned incremental VSLs to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R11.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R4. Those VSLs are incremental. Therefore, the SDT assigned incremental VSLs to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R12:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R12.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved TOP-004-2, Requirement R1. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R13:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R13.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved IRO-008-1, Requirement R2. Those VSLs are gradated based on missing the timing requirement. Therefore, the SDT assigned gradated VSLs to this requirement on the same basis.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R14:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R14.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved TOP-004-2, Requirement R1. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R15:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R15.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved TOP-007-0, Requirement R1. Those VSLs are gradated based on delivering an incomplete message. The SDT believed that the message needed to be complete to preserve reliability. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R16:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R16.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R8. Those VSLs are gradated based on splitting up the different approval rights. The SDT did not believe that there was any value to reliability by splitting up the approval rights. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R17:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R17.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R8. Those VSLs are gradated based on splitting up the different approval rights. The SDT did not believe that there was any value to reliability by splitting up the approval rights. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R18:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R18.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved IRO-009-1, Requirement R5. Those VSLs are binary Severe. Therefore, the SDT assigned a binary Severe VSL to this requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R19:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R19.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R1. Those VSLs are gradated based on a degree of incompleteness of the needed data exchange capabilities and the SDT has adopted that philosophy here as well.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-001-3, Requirement R20:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R20.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The most comparable VSLs for a similar requirement are for the approved IRO-002-2, Requirement R1. Those VSLs are gradated based on a degree of incompleteness of the needed data exchange capabilities and the SDT has adopted that philosophy here as well.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	There is a similar requirement in approved TOP-002-2.1b, Requirement R1. Those VSLs are graded based on differing parts of the requirement. This requirement has only one objective – performing the analysis. That objective matches to the Severe VSL in approved TOP-002-2.1b and the SDT has proposed a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	There is a similar requirement in approved TOP-002-2.1b, Requirement R1. Those VSLs are graded based on differing parts of the requirement. This requirement has only one objective – performing the analysis. That objective matches to the Severe VSL in approved TOP-002-2.1b and the SDT has proposed a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	There is a similar requirement in approved TOP-002-2.1b, Requirement R4. Those VSLs are gradated and the SDT is proposing similar treatment here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	There is a similar requirement in approved TOP-002-2.1b, Requirement R1. Those VSLs are gradated and the SDT is proposing similar treatment here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	There is a similar requirement in approved TOP-002-2.1b, Requirement R4. Those VSLs are gradated and the SDT is proposing similar treatment here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	This is a new requirement with no comparable requirements to compare against. There is only one action to take here, to submit the Operating Plan. There is no partial compliance so the SDT assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-002-4, Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	This is a new requirement with no comparable requirements to compare against. There is only one action to take here, to submit the Operating Plan. There is no partial compliance so the SDT assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-003-3, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R1. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-003-3, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R1. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-003-3, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R2. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-003-3, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R2. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed TOP-003-3, Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-010-1a, Requirement R3. Those VSLs tried to gradate the provision of data. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity supplies the data or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-001-4, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-001-1.1, Requirement R3. Those VSLs are binary Severe. Therefore, the SDT has assigned these VSLs to be binary Severe.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-001-4, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-001-1.1, Requirement R8. Those VSLs tried to gradate the situation by separating out following an Operating Instruction and informing of the inability to follow. Those actions are now separate requirements and this requirement is only about complying with the Operating Instruction which has a binary Severe VSL in approved IRO-001-1.1. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-001-4, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-001-1.1, Requirement R8. Those VSLs tried to gradate the situation by separating out following an Operating Instruction and informing of the inability to follow. Those actions are now separate requirements and this requirement is only about informing the Reliability Coordinator which has a single Moderate VSL in approved IRO-001-1.1. The SDT believes that such a failure should be classified as binary Severe under current guidelines.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-002-4, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-002-2, Requirement R1. Those VSLs are gradated and the SDT has followed that pattern here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-002-4, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-002-2, Requirement R8. Those VSLs tried to gradate the situation. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity has supplied the authority or it hasn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-002-4, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-003-2, Requirement R1. Those VSLs tried to gradate the degree of monitoring. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity is doing the monitoring or it isn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-002-4, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-002-2, Requirement R4. Those VSLs tried to gradate the situation. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity is providing adequate monitoring facilities with the particular emphasis or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-008-1, Requirement R1. Those VSLs tried to gradate the performance of the Operational Planning Analysis by the number of days in a month that it wasn't available. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity performs the analysis or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	This is a new requirement with no comparable requirement to compare against. The SDT believes that this is a binary situation where an entity performs the coordination activity or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-008-1, Requirement R3. Those VSLs gradated the notification efforts. The SDT has followed a similar path and assigned incremental VSLs here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-008-1, Requirement R2. Those VSLs gradated the performance of Real-time Assessments based on time increments. The SDT made a similar assignment here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-008-1, Requirement R3. Those VSLs partially gradated the notification elements. The SDT has followed a similar path but assigned a complete set of incremental VSLs here consistent with current accepted practice.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-008-2, Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed TOP-001-3, Requirement R15. Those VSLs are set up as a binary Severe situation but that requirement only involves notifying one entity, the Reliability Coordinator. There are potentially many more entities involved with this requirement so the SDT has set up a gradated set of VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-010-2, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R1. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-010-2, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R2. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-010-2, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-010-1a, Requirement R2. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved IRO-014-1, Requirement R1. Those VSLs present an incremental approach and the SDT has continued that approach.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	This is a new requirement with no comparable requirement to follow. There are a number of criteria cited for the requirement and this lends itself to an incremental approach for the VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-016-1, Requirement R1. Those VSLs are presented in an incremental approach. Therefore, the SDT has assigned incremental VSLs here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-016-1, Requirement R1.2. Those VSLs are presented as binary Severe. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-016-1, Requirement R1. Those VSLs tried to gradate things but the only differential is whether evidence was provided or not – actions themselves are covered in Severe. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity develops a plan or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved IRO-016-1, Requirement R1.1. Those VSLs tried to gradate the situation. The SDT did not believe that such an exercise benefited reliability and that this was a binary situation where an entity implements the plan or it doesn't. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-014-3, Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to proposed TOP-001-3, Requirement R7. Those VSLs are presented as binary Severe. Therefore, the SDT has assigned a binary Severe VSL here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-017-1, Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	This requirement is similar to proposed IRO-005-3.1a, Requirement R6 which has gradated VSLs and the SFT has adopted that approach here.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-017-1, Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	This is a new requirement with no similar requirement in the Reliability Standards. The responsible entity either follows the process or it doesn't. Attempting to increment the effort doesn't make sense. Therefore, this VSL is binary Severe.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-017-1, Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	This requirement is similar to approved TPL-001-4, Requirement R8. In that case, the VSLs are incremental. However, the responsible entities there are dealing with many other entities. In this case, the responsible entity is dealing only with Reliability Coordinators which makes an incremental approach unnecessary due to the much smaller number of involved entities. Therefore, the VSL is binary Severe.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for Proposed IRO-017-1, Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	This requirement is similar in nature to proposed IRO-017-1, Requirement R1. The VSL has been assigned in a similar manner – binary Severe.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Exhibit K

Summary of Development History and Complete Record of Development

Summary of Development History

Exhibit K: Summary of Development History

The development record for the following proposed Reliability Standards and proposed definitions is summarized below: TOP-001-3, TOP-002-4, TOP-003-3, IRO-001-4, IRO-002-4, IRO-008-2, IRO-010-2, IRO-014-3, IRO-017-1, and the definitions of "Operational Planning Analysis" and "Real-Time Assessment."

I. Overview of the Standard Drafting Team

When evaluating a proposed Reliability Standard, the Commission is expected to give "due weight" to the technical expertise of the ERO.[1] The technical expertise of the ERO is derived from the standard drafting team. For this project, the standard drafting team consisted of industry experts, all with a diverse set of experiences. A roster of the standard drafting team members is included in Exhibit L.

II. Standard Development History

A. Standard Authorization Request Development

The Standard Authorization Request ("SAR") for Project 2014-03 Revisions to TOP/IRO Reliability Standards was submitted on February 12, 2014. The SAR was posted from February 21, 2014 to March 24, 2014.

B. The First Posting – Formal Comment Period, Initial Ballots and Non-Binding Polls

The first drafts of the proposed TOP-001-3, TOP-002-4, TOP-003-3, IRO-001-4, IRO-002-4, IRO-008-2, IRO-010-2, IRO-014-3, and IRO-017-1 Reliability Standards, as well as the corresponding implementation plan and two new definitions, were posted for a 45-day public comment period from May 19, 2014 to July 2, 2014 with an initial ballot conducted from June

[1] Section 215(d)(2) of the Federal Power Act; 16 U.S.C. §824(d)(2) (2012).

23, 2014 to July 2, 2014. The ballot for these proposed Reliability Standards produced the following results:

- TOP-001-3 received a quorum of 82.59% and an approval of 30.99%,
- TOP-002-4 received a quorum of 82.85% and an approval of 62.18%,
- TOP-003-3 received a quorum of 82.85% and an approval of 63.07%,
- IRO-001-4 received a quorum of 82.32% and an approval of 68.57%,
- IRO-002-4 received a quorum of 82.59% and an approval of 36.94%,
- IRO-008-2 received a quorum of 82.59% and an approval of 47.87%,
- IRO-010-2 received a quorum of 82.85% and an approval of 60.26%,
- IRO-014-3 received a quorum of 82.85% and an approval of 61.67%,
- IRO-017-1 received a quorum of 82.06% and an approval of 57.94%,
- The Definitions received a quorum of 81% and an approval of 62.64%.
- The Implementation Plan received a quorum of 80.74% and an approval of 64.70%.

The non-binding polls were conducted from June 23, 2014 to July 2, 2014 and produced the following results:

- For TOP-001-3, 81.82% of those who registered to participate provided an opinion or an abstention, and 33.49% of those who provided an opinion indicated support for the VRFs and VSLs;
- For TOP-002-4, 82.11% of those who registered to participate provided an opinion or an abstention, and 55.78% of those who provided an opinion indicated support for the VRFs and VSLs;
- For TOP-003-3, 82.40% of those who registered to participate provided an opinion or an abstention, and 54.42% of those who provided an opinion indicated support for the VRFs and VSLs;
- For IRO-001-4, 82.11% of those who registered to participate provided an opinion or an abstention, and 55.56% of those who provided an opinion indicated support for the VRFs and VSLs;

- For IRO-002-4, 82.52% of those who registered to participate provided an opinion or an abstention, and 39.46% of those who provided an opinion indicated support for the VRFs and VSLs;

- For IRO-008-2, 82.11% of those who registered to participate provided an opinion or an abstention, and 47.09% of those who provided an opinion indicated support for the VRFs and VSLs;

- For IRO-010-2, 82.11% of those who registered to participate provided an opinion or an abstention, and 55.14% of those who provided an opinion indicated support for the VRFs and VSLs;

- For IRO-014-3, 82.11% of those who registered to participate provided an opinion or an abstention, and 52.41% of those who provided an opinion indicated support for the VRFs and VSLs; and,

- For IRO-017-1, 81.52% of those who registered to participate provided an opinion or an abstention, and 56.99% of those who provided an opinion indicated support for the VRFs and VSLs.

There were 71 sets of comments from approximately 186 individuals from approximately 136 companies representing all 10 industry segments. The standard drafting team considered stakeholder comments and made the following observations and non-substantive modifications based on those comments. A summary of the responses to comments and changes made is included in the Consideration of Comments for the posting.

C. The Second Posting – Formal Comment Period, Additional Ballots and Non-Binding Polls

The second drafts of the proposed TOP-001-3, TOP-002-4, TOP-003-3, IRO-001-4, IRO-002-4, IRO-008-2, IRO-010-2, IRO-014-3, and IRO-017-1 Reliability Standards were posted for a 45-day public comment period from August 6, 2014 to September 19, 2014 with additional ballots conducted from September 10, 2014 to September 19, 2014. The ballots for the second draft of these proposed Reliability Standards produced the following results:

- TOP-001-3 received a quorum of 85.49% and an approval of 48.73%,

- TOP-002-4 received a quorum of 85.22% and an approval of 78.87%,
- TOP-003-3 received a quorum of 86.28% and an approval of 87.03%,
- IRO-001-4 received a quorum of 85.75% and an approval of 76.12%,
- IRO-002-4 received a quorum of 84.96% and an approval of 74.23%,
- IRO-008-2 received a quorum of 84.96% and an approval of 75.67%,
- IRO-010-2 received a quorum of 85.22% and an approval of 85.49%,
- IRO-014-3 received a quorum of 84.96% and an approval of 75.69%,
- IRO-017-1 received a quorum of 85.22% and an approval of 78.67%.
- The Definitions received a quorum of 83.11% and an approval of 93.34%.
- The Implementation Plan received a quorum of 83.91% and an approval of 90.13%.

The non-binding polls were conducted from September 10, 2014 to September 19, 2014 and produced the following results:

- For TOP-001-3, 86.51% of those who registered to participate provided an opinion or an abstention, and 53.45% of those who provided an opinion indicated support for the VRFs and VSLs,
- For TOP-002-4, 86.51% of those who registered to participate provided an opinion or an abstention, and 73.30% of those who provided an opinion indicated support for the VRFs and VSLs,
- For TOP-003-3, 86.51% of those who registered to participate provided an opinion or an abstention; 79.30% of those who provided an opinion indicated support for the VRFs and VSLs,
- For IRO-001-4, 85.34% of those who registered to participate provided an opinion or an abstention, and 74.01% of those who provided an opinion indicated support for the VRFs and VSLs,
- For IRO-002-4, 85.04% of those who registered to participate provided an opinion or an abstention, and 69.69% of those who provided an opinion indicated support for the VRFs and VSLs,

- For IRO-008-2, 85.34% of those who registered to participate provided an opinion or an abstention, and 69.39% of those who provided an opinion indicated support for the VRFs and VSLs,

- For IRO-010-2, 85.63% of those who registered to participate provided an opinion or an abstention; 83.78% of those who provided an opinion indicated support for the VRFs and VSLs,

- For IRO-014-3, 85.63% of those who registered to participate provided an opinion or an abstention, and 78.61% of those who provided an opinion indicated support for the VRFs and VSLs,

- For IRO-017-1, 86.22% of those who registered to participate provided an opinion or an abstention; 74.19% of those who provided an opinion indicated support for the VRFs and VSLs.

There were 59 sets of comments from 166 individuals from approximately 95 companies representing 8 of the 10 industry segments. The standard drafting team considered stakeholder comments and made the following observations and non-substantive modifications based on those comments. A summary of the responses to comments and changes made is included in the Consideration of Comments for the posting.

D. Final Ballots

Proposed Reliability Standards IRO-001-4, IRO-002-4 and IRO-010-2 were posted for a 10-day final ballot period from October 10, 2014 through October 20, 2014, as well as an additional final ballot posted from October 10, 2014 through October 22, 2014 for proposed Reliability Standards TOP-002-4, TOP-003-3, IRO-008-2, IRO-014-3 and IRO-017-1. The non-binding Polls for TOP-002-4, TOP-003-3, IRO-008-2, IRO-014-3 and IRO-017-1 were extended an additional day to reach quorum. The final ballots for all of these proposed Reliability Standards produced the following results:

- TOP-002-4 received a quorum of 89.71% and an approval of 84.76%,

- TOP-003-3 received a quorum of 90.50% and an approval of 86.55%,

- IRO-001-4 received a quorum of 90.77% and an approval of 82.64%,
- IRO-002-4 received a quorum of 89.97% and an approval of 85.96%,
- IRO-008-2 received a quorum of 89.71% and an approval of 83.73%,
- IRO-010-2 received a quorum of 89.97% and an approval of 86.22%,
- IRO-014-3 received a quorum of 89.71% and an approval of 89.88%,
- IRO-017-1 received a quorum of 89.97% and an approval of 82.58%,
- The Definitions received a quorum of 88.39% and an approval of 94.07%.
- The Implementation Plan received a quorum of 88.39% and an approval of 91.84%.

The non-binding polls produced the following results:

- For TOP-002-4, 78.89% of those who registered to participate provided an opinion or an abstention, and 86.77% of those who provided an opinion indicated support for the VRFs and VSLs,
- For TOP-003-3, 78.30% of those who registered to participate provided an opinion or an abstention; 89.29% of those who provided an opinion indicated support for the VRFs and VSLs,
- For IRO-008-2, 78.59% of those who registered to participate provided an opinion or an abstention, and 85.88% of those who provided an opinion indicated support for the VRFs and VSLs,
- For IRO-014-3, 78.59% of those who registered to participate provided an opinion or an abstention, and 91.33% of those who provided an opinion indicated support for the VRFs and VSLs,
- For IRO-017-1, 78.89% of those who registered to participate provided an opinion or an abstention; 92.18% of those who provided an opinion indicated support for the VRFs and VSLs.

E. Authorization of Waiver from the NERC Standard Processes Manual

On October 9, 2014, the NERC Standards Committee approved waivers to the Standard Processes Manual to shorten an additional comment and ballot period for TOP-001-3 from 45 days to 30 days, and to shorten the final ballot for TOP-001-3 from ten days to seven days. The purpose of the waiver was to assist NERC in meeting a delivery date to the Commission for all of the proposed Reliability Standards.

F. The Third Posting – Formal Comment Period, Additional Ballot and Non-Binding Poll

The third draft of the proposed TOP-001-3 was posted for a 30-day formal comment period and additional ballot from October 10, 2014 to November 10, 2014 with an additional ballot conducted from November 4, 2014 to November 10, 2014. The ballot for the third draft of this standard received a 78.36% quorum and an approval of 60.21%. The non-binding poll for TOP-001-3 was conducted from November 4, 2014 to November 10, 2014 and 79.18% of those who registered to participate provided an opinion or an abstention; 63.33% of those who provided an opinion indicated support for the VRFs and VSLs.

There were 47 sets of comments from approximately 133 individuals from approximately 100 companies representing all 10 industry segments. The standard drafting team considered stakeholder comments and made the following observations and non-substantive modifications based on those comments. A summary of the responses to comments and changes made is included in the Consideration of Comments for the posting.

G. The Fourth Posting-Formal Comment Period, Ballot and Non-Binding Polls

The fourth draft of the proposed TOP-001-3 was posted for a 35-day public comment period and additional ballot from December 29, 2014 to January 7, 2015 with a ballot conducted from December 3, 2014 to January 7, 2015. The ballot for the third draft of this standard received a quorum of 80.47% and an approval of 72.43%. The non-binding poll for TOP-001-3 was conducted from December 29, 2014 to January 7, 2015 and 79.47% of those who registered to participate provided an opinion or an abstention; 73.58% of those who provided an opinion indicated support for the VRFs and VSLs.

There were 40 sets of comments from approximately 112 individuals from approximately 78 companies representing 9 of the 10 industry segments. The standard drafting team considered stakeholder comments and made the following observations and non-substantive modifications based on those comments. A summary of the responses to comments and changes made is included in the Consideration of Comments for the posting.

H. Final Ballot

Proposed Reliability Standard TOP-001-3 was posted for a 7-day final ballot, in accordance with the approved waiver, from January 15, 2015 through January 21, 2015. TOP-001-3 received a quorum of 84.70% and an approval of 72.69%.

I. Board of Trustees Adoption

The NERC Board of Trustees adopted the proposed Reliability Standards and definitions on November 13, 2014, with the exception of TOP-001-3, which was adopted on February 12, 2015.

Status:
A Final ballot for **TOP-001-3 - Transmission Operations** concluded at **8 p.m. Eastern on Wednesday, January 21, 2015**. Voting results can be accessed via the links below. The standard will be submitted to the NERC Board of Trustees for adoption and then filed with the appropriate regulatory authorities.

Board Adopted: November 13, 2014 - TOP-001-3, TOP-002-4, TOP-003-3, IRO-001-4, IRO-002-4, IRO-008-2, IRO-010-2, IRO-014-3, IRO-017-1, definitions of Real-time Assessment and Operating Planning Analysis, and the Implementation Plan.

Filed with FERC:

Order Effective:

Enforcement Date:

Purpose/Industry Need:
The primary goal of Project 2014-03 Revisions to TOP/IRO Reliability Standards is to address the concerns identified in the NOPR proposing to remand IRO standards developed in Project 2006-06 Reliability Coordination and TOP standards developed in Project 2007-03 Real-time Operations.

Background:
On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the “TOP Standards”) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the “IRO Standards”) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC “has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards.” For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits (“SOLs”), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

Standards Authorization Request Form

When completed, email this form to:
Laura.Hussey@nerc.net

For questions about this form or for assistance in completing the form, call Laura Hussey at 404-446-2579.

NERC welcomes suggestions for improving the reliability of the Bulk-Power System through improved Reliability Standards. Please use this form to submit your proposal for a new NERC Reliability Standard or a revision to an existing standard.

Request to propose a new or a revision to a Reliability Standard			
Proposed Standard:	Project 2014-03 Revisions to the TOP/IRO Reliability Standards		
Date Submitted:	February 12, 2014		
SAR Requester Information			
Name:	David Souder		
Organization:	PJM		
Telephone:	610-666-4795	E-mail:	souder@pjm.com
SAR Type (Check as many as applicable)			
☐ New Standard		☐ Withdrawal of existing Standard	
☒ Revision to existing Standard		☐ Urgent Action	

SAR Information
Industry Need (What is the industry problem this request is trying to solve?):
On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the "TOP Standards") to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the "IRO Standards") to replace six currently-effective IRO standards. On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR proposed to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards. On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO standards through the NERC standards development process to address the concerns set forth in the NOPR. That motion to defer action was granted by the Commission on January 14, 2014.

SAR Information
Purpose or Goal (How does this request propose to address the problem described above?):
The primary goal of this SAR is to allow the Standard Drafting Team (SDT) for Project 2014-03 Revisions to TOP/IRO Reliability Standards to address the concerns expressed in the NOPR while fulfilling the goals of the original projects: Project 2006-06 Reliability Coordination and Project 2007-03 Real-time Operations. In addition, the SDT should review the goals of Project 2009-02 Real-time Monitoring and Analysis Capabilities and consider whether to incorporate revisions to the TOP and/or IRO standards to address those goals in Project 2014-03.

SAR Information
Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):
Provide clear, unambiguous requirements and standards to allow Reliability Coordinators, Transmission Operators, and Balancing Authorities to operate the interconnected transmission system in a safe and reliable manner.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The SDT shall modify the TOP and IRO Reliability Standards to address the issues raised in the NOPR, while ensuring that the revisions continue to address directives previously assigned to the TOP and IRO standards under Projects 2007-03 and 2006-06. If it is decided to handle the goals of Project 2009-02 within Project 2014-03, then the directives assigned to Project 2009-02 will be addressed as well. In addition, the suggestions from the Independent Expert Review Project will be reviewed, a directive dealing with monitoring responsibilities for the Reliability Coordinator will be resolved, and other IRO standards will be examined for consistency purposes.
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The SDT shall: 1. Revise the TOP/IRO Reliability Standards filed under Projects 2007-03 and 2006-06 to address concerns expressed in the NOPR a. Use the inputs from technical conferences to advise actions 2. Consider the comments and suggestions in the Independent Expert Review Report 3. Review the IRO Reliability Standards not included in the original Project 2006-06 for coordination with any changes made for this project (see list of related standards) 4. Decide whether to handle the goals of Project 2009-02 within Project 2014-03; and if it does so decide, then also address the directives assigned to Project 2009-02. 5. Address the following directive from Order 693, paragraph 1855 so that all monitoring responsibilities for the Reliability Coordinator are included in the IRO family of standards: *"Since a reliability coordinator is the highest level of authority overseeing the reliability of the*

SAR Information
Bulk-Power System, the Commission believes that it is important to include the reliability coordinator as an applicable entity to assure that adequate voltage and reactive resources are being maintained. As MISO points out, other Reliability Standards address responsibilities of reliability coordinators, but we agree with EEI that it is important to include reliability coordinators in VAR-001-1 as well. Reliability coordinators have responsibilities in the IRO and TOP Reliability Standards, but not the specific responsibilities for voltage levels and reactive resources addressed by VAR-001-1, which have a great impact on system reliability. For example, voltage levels and reactive resources are important factors to ensure that IROLs are valid and operating voltages are within limits, and that reliability coordinators should have responsibilities in VAR-001-1 to monitor that sufficient reactive resources are available for reliable system operations. Accordingly, the ERO should modify VAR-001-1 to include reliability coordinators as applicable entities and include a new requirement(s) that identifies the reliability coordinator's monitoring responsibilities."
6. Modify the measures, Violation Risk Factors (VRF), and Violation Severity Levels (VSL) as necessary to address modified requirements

Reliability Functions		
The Standard will Apply to the Following Functions (Check each one that applies.)		
☐	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of Responsible Entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.
☒	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.

Reliability Functions		
☐	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☐	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☐	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
☐	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☐	Transmission Owner	Owns and maintains transmission facilities.
☒	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
☒	Distribution Provider	Delivers electrical energy to the End-use customer.
☒	Generator Owner	Owns and maintains generation facilities.
☒	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.
☒	Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles	
Applicable Reliability Principles (Check all that apply).	
☒	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner

Reliability and Market Interface Principles	
	to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
☒	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
☒	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
☐	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.
☐	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
☐	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Does the proposed Standard comply with all of the following Market Interface Principles?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

Unofficial Comment Form

Project 2014-03 Revisions to TOP/IRO Reliability Standards

Please **DO NOT** use this form for submitting comments. Please use the electronic form to submit comments on the definition. The electronic comment form must be completed by **March 24, 2014**.

All documents and information about this project are available on the project page. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at 609-947-3673.

Background Information - Project 2014-03 Revisions to TOP/IRO Reliability Standards

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addressed three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR announced the Commission's intent to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability.

As explained in the motion, NERC will hold two technical conferences (one in the East and one in the West) to identify and assess concerns regarding the TOP and IRO Standards identified n the NOPR, such as the monitoring of SOLs, unknown operating states, and outage coordination. Concurrently, NERC will work with the Standards Committee to re-formulate a standard drafting team to begin development work on revisions to the proposed standards, which would be informed by the technical conferences.

Additionally, in response to the concerns noted by the Commission in the NOPR on the development of a minimum set of analytical tools (analysis and monitoring capabilities) to ensure that Reliability Coordinators and Transmission Operators have the tools it needs to perform its functions, NERC will continue development of Reliability Standards that address Real-Time Tools as they relate to the proposed TOP and IRO standards, which could either continue to be included as part of Project 2009-02, Real-time Monitoring and Analysis Capabilities, or in revisions to the proposed TOP and IRO standards.

Questions

1. Do you agree with the scope and contents of the SAR? If not, please provide specific comments and suggestions for SDT consideration.

   ☐ Yes
   ☐ No
   Comments:

2. Are you aware of any regional variances associated with approved NERC Reliability Standards that will be needed as a result of this project? If yes, please identify the Regional Variance.

   ☐ Yes
   ☐ No
   Comments:

3. Are you aware of any Canadian provincial or other regulatory requirements that may need to be considered during this project in order to develop a continent-wide approach to the standard(s)? If yes, please identify the jurisdiction and specific regulatory requirements.

   ☐ Yes
   ☐ No
   Comments:

4. Are there any other concerns with this SAR?

   ☐ Yes
   ☐ No
   Comments:

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

   4.5. Load-Serving Entity

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Operations Planning,]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

> Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence that it complied with each Reliability Directive issued and identified as such by the Transmission Operator(s) unless such action would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M2. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with identified, Reliability Directive(s) issued in accordance with Requirement R2. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M3. Each Transmission Operator shall make available, upon request, evidence that it has informed its Reliability Coordinator and Transmission Operators that it knew or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M4. Each Transmission Operator shall make available, upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4, unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M5. Each Transmission Operator shall make available, upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas in accordance with Requirement R5, unless conditions did not permit such communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M6. Each Balancing Authority and Transmission Operator shall make available, upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment, and associated communication channels in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Balancing Authority or Transmission Operator may provide an attestation that an event has not occurred.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M8. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include, but is not limited to, an electronic or hard copy of information from the Operational Planning Analysis used in its assessment, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration that would cause a violation of the Facility

Rating or Stability criteria upon which it is based, as specified in Requirement R8 and in Requirement R9. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R10. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8, in accordance with Requirement R11. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R6, R8, and R10 through R11 and Measure M1 through M6, M8, and M10 through M11 for the current calendar year and one previous calendar year, with the exception of voice recordings which shall be retained for a minimum of 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with an identified Reliability Directive issued by the Transmission Operator, and such action would not have violated safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.
For the Requirement R3, R5, R6, and R8 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting

	Lower	Moderate	High	Severe
				entity had implemented its comparable emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications.
R6	The responsible entity did not notify one negatively-impacted interconnected NERC-registered entity, or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively-impacted interconnected NERC-registered entities, or more than 5% and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively-impacted interconnected NERC-registered entities, or more than 10% and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering equipment, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively-impacted interconnected NERC-registered entities, or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and

	Lower	Moderate	High	Severe
				control equipment and associated communication channels between the affected entities.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs, or more than 5% and less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs, or more than 10% and less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs, or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL), as identified in Requirement R8, for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, had been exceeded.
R11	N/A	N/A	N/A	The Transmission Operator did not act, or direct others to act, to mitigate both the magnitude and duration of

	Lower	Moderate	High	Severe
				exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.

Enforcement Dates: Standard TOP-001-2 — Transmission Operations

United States

Standard	Requirement	Enforcement Date	Inactive Date
TOP-001-2	All		

This standard has not yet been approved by the applicable regulatory authority.

A. Introduction

1. **Title:** **Operations Planning**
2. **Number:** TOP-002-3
3. **Purpose:** To ensure that Transmission Operators have plans for operating within specified limits.
4. **Applicability**

   4.1. Transmission Operator.
5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include, but is not limited to, dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement for a rolling six-month period for analyses, the most recent 90 calendar days for voice recordings, and 12 months for operating logs and e-mail records, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis that represented projected System conditions allowing it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Enforcement Dates: Standard TOP-002-3 — Operations Planning

United States

Standard	Requirement	Enforcement Date	Inactive Date
TOP-002-3	All		

This standard has not yet been approved by the applicable regulatory authority.

A. Introduction

1. Title: **Operational Reliability Data**

2. Number: TOP-003-2

3. Purpose: To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their operational planning and Real-time monitoring responsibilities.

4. Applicability

4.1. Transmission Operator.

4.2. Balancing Authority.

4.3. Generator Owner.

4.4. Generator Operator.

4.5. Interchange Authority.

4.6. Load-Serving Entity.

4.7. Transmission Owner.

4.8. Distribution Provider.

5. Effective Date: All requirements, except Requirement R5, will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements, except Requirement R5, become effective the first day of the first calendar quarter ten months following Board of Trustees' adoption. Requirement R5 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirement R5 becomes effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.

1.2. A mutually-agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. A mutually-agreeable format.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall make available its dated, current, in-force documented specification for data in accordance with Requirement R1.

M2. Each Balancing Authority shall make available its dated, current, in-force documented specification for data in accordance with Requirement R2.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification, as developed in Requirement R1, to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance, as identified below, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their Operational Planning Analyses and Real-time monitoring, in accordance with Requirement R1 and Measurement M1, as well as any documents in force since the last compliance audit.
- Each Balancing Authority shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their analysis functions and Real-time monitoring, in accordance with Requirement R2 and Measurement M2, as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R1 to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4 and Measurement M4.

- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90 calendar days that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.
R2	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring. OR, The Balancing Authority did not include a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Enforcement Dates: Standard TOP-003-2 — Operational Reliability Data

United States

Standard	Requirement	Enforcement Date	Inactive Date
TOP-003-2	All		

This standard has not yet been approved by the applicable regulatory authority.

A. Introduction

1. **Title: Reliability Coordination – Responsibilities and Authorities**
2. **Number:** IRO-001-3
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
   - **4.1.** Reliability Coordinator
   - **4.2.** Transmission Operator
   - **4.3.** Balancing Authority
   - **4.4.** Generator Operator
   - **4.5.** Distribution Provider
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

M1. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it had the authority to take action or direct action, which could have included issuing Reliability Directives, to prevent identified events or mitigate the magnitude or duration of actual events that resulted in an Emergency or Adverse Reliability Impact within its Reliability Coordinator Area. (R1.)

M2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction, unless the direction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2.)

M3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. (R3.)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact. OR The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.
R2	N/A	N/A	N/A	The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider did not comply with the Reliability Coordinator's direction, and compliance with the direction could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R3	N/A	N/A	N/A	The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.

E. Regional Variances

None identified.

1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
1	May 19, 2011	Replaced Levels of Noncompliance with FERC-approved VSLs	VSL Order
2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1.	Project 2006-06
3	TBD	Revised in accordance with SAR for Project 2006-06, Reliability Coordination (RC SDT). Revised the standard and retired six requirements (R1, R2, R4, R5, R6, and R9). Requirement R3 becomes the new R1 and R8 becomes the new R2 and R3.	Project 2006-06
3	August 16, 2012	Adopted by Board of Trustees	

*** FOR INFORMATIONAL PURPOSES ONLY ***

Enforcement Dates: Standard IRO-001-3 — Reliability Coordination - Responsibilities and Authorities

United States

Standard	Requirement	Enforcement Date	Inactive Date
IRO-001-3	All		

This standard has not yet been approved by the applicable regulatory authority.

A. Introduction

1. **Title:** **Reliability Coordination – Analysis Tools**

2. **Number:** IRO-002-3

3. **Purpose:** To ensure that Reliability Coordinators provide their System Operators with authority with respect to analysis tool outages and to have procedures to mitigate effects of analysis tool outages.

4. **Applicability**

   4.1. Reliability Coordinator

5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

R1. Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

R2. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

M1. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. (R1)

M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that that the Reliability Coordinator has procedures in place to mitigate the effects of analysis tool outages. (R2)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator shall retain its current, in force document and any documents in force for the current year and previous calendar year for Requirements R1 and R2 and Measures M1 and M2.

o If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

o The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

Violation Severity Levels				
R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to provide its System Operator with the authority to approve, deny or cancel planned outages of its own analysis tools.
R2	N/A	N/A	N/A	The Reliability Coordinator failed to have a procedure to mitigate the effects of analysis tool outages.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	
1	April 4, 2007	Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs) Corrected typographical errors in BOT approved version of VSLs	Revised to add missing measures and compliance elements
2	October 17, 2008	Deleted R2, M3 and associated compliance elements as conforming changes associated with approval of IRO-010-1	Revised as part of IROL Project
2	October 17, 2008	Adopted by NERC Board of Trustees	IROL Project
2	March 23, 2011	Order issued by FERC approving IRO-002-2 (approval effective 5/23/11)

Enforcement Dates: Standard IRO-002-3 — Reliability Coordination - Analysis Tools

United States

Standard	Requirement	Enforcement Date	Inactive Date
IRO-002-3	All		

This standard has not yet been approved by the applicable regulatory authority.

Introduction

1. **Title:** **Reliability Coordination — Current Day Operations**
2. **Number:** IRO-005-4
3. **Purpose:** To ensure that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified.
4. **Applicability:**
   4.1. Reliability Coordinators.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

A. Requirements

R1. When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

R2. Each Reliability Coordinator that identifies an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

B. Measures

M1. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified an anticipated or actual condition with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R1)

M2. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R2)

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator shall retain its evidence for the most recent 90 days for voice recordings or 12 months for other documentation for Requirements R1 and R2 and Measures M1 and M2.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records or for the time period specified above, whichever is longer.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to three, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. OR The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area (in cases where there are less than three impacted entities).
R2	The Reliability Coordinator failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify three, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify more than three impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated. OR The Reliability Coordinator failed to notify more all impacted

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
				Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated (in cases where there are less than three impacted entities).

Enforcement Dates: Standard IRO-005-4 — Reliability Coordination - Current Day Operations

United States

Standard	Requirement	Enforcement Date	Inactive Date
IRO-005-4	All		

This standard has not yet been approved by the applicable regulatory authority.

A. Introduction

1. **Title:** **Coordination Among Reliability Coordinators**

2. **Number:** IRO-014-2

3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

4. **Applicability:**

   4.1. Reliability Coordinator

5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval**.**

B. Requirements

R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]*

1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.

1.2. Energy and capacity shortages.

1.3. Planned or unplanned outage information.

1.4. Control of voltage, including the coordination of reactive resources.

1.5. Coordination of information exchange to support reliability assessments.

1.6. Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.

1.7. Weekly conference calls

R2. Each Reliability Coordinator shall maintain its Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 as follows: *[Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning]*

2.1. Review and update annually with no more that 15 months between reviews.

2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

2.3. Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.

R3. Each Reliability Coordinator shall make notifications and exchange reliability–related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*

R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R6. During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R7. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. **Measures**

M1. Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Processes, and Operating Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements. (R1)

M2. Each Reliability Coordinator shall have dated evidence that the Operating Procedures, Processes, and Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:

2.1 Reviewed and updated annually with no more than 15 months between reviews.

2.2 Agreed to, in writing, by all the Reliability Coordinators required to take the indicated action(s).

2.3 Distributed within 30 days of an update to all Reliability Coordinators that are required to take the indicated action(s).

This evidence may include, but is not limited to dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions. (R2)

M3. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it made notifications and exchanged reliability–related information with impacted Reliability Coordinators in accordance with the Operating Procedures, Processes, or Plans identified in Requirement R1. (R3)

M4. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls with other Reliability Coordinators within the same Interconnection. (R4)

M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified other Reliability Coordinators. (R5)

M6. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated under the assumption that the Adverse Reliability Impact existed during each instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. (R6)

M7. Each Reliability Coordinator that identified an Adverse Reliability Impact shall have evidence and provide evidence that it developed an action plan during those instances where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation. (R7)

M8. Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who has the identified the Adverse Reliability Impact when a Reliability Coordinator has identified an Adverse Reliability Impact and the impacted Reliability

Coordinators disagree on an action unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.4. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for Requirements R1, R2, and Measures M1, M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R3, R4, R5 and Measure M3, M4, M5.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R6 through R8 and Measures M6 through M8.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant, or for the time period specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address two of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator failed to have Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability to address three or more of the topical areas identified in Parts 1.1 through 1.7.
R2	N/A	The Reliability Coordinator Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to distribute these to all Reliability Coordinators that are required to take action.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to obtain agreement from all Reliability Coordinators that are required to take action. OR Failed to review and update the Operating Procedures, Operating Processes, and Operating Plans identified in R1 annually.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to review and update annually and obtain written agreement from all Reliability Coordinators that are required to take action and failed to distribute these to all Reliability Coordinators that are required to take action.
R3	N/A	N/A	The Reliability Coordinator failed to make notifications OR exchange reliability–related information with impacted Reliability Coordinators.	The Reliability Coordinator failed to make notifications AND exchange reliability–related information with impacted Reliability Coordinators.

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	N/A	N/A	N/A	The Reliability Coordinator failed to participate in an agreed upon (at least weekly) conference call with impacted Reliability Coordinators within the same Interconnection.
R5	N/A	The Reliability Coordinator failed to notify one, but not all, of the impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.	N/A	The Reliability Coordinator failed to notify more than one impacted Reliability Coordinators upon identification of an Adverse Reliability Impact. OR The Reliability Coordinator failed to notify the impacted Reliability Coordinator (when there is only one impacted Reliability Coordinator) upon identification of an Adverse Reliability Impact.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to operate under the assumption that the Adverse Reliability Impact existed during an instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact.
R7	N/A	N/A	N/A	The Reliability Coordinator that identified the Adverse Reliability Impact failed to develop an action plan to resolve the Adverse Reliability Impact during an instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
				Impact.
R8	N/A	N/A	N/A	The Reliability Coordinator failed to implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact during an instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact.

E. Regional Differences

None identified.

F. Associated Documents

Version History

Version	Date	Action	Change Tracking
1	August 10, 2005	1. Changed incorrect use of certain hyphens (-) to “en dash (–).” 2. Hyphenated “30-day” when used as adjective. 3. Changed standard header to be consistent with standard “Title.” 4. Initial capped heading “Definitions of Terms Used in Standard.” 5. Added “periods” to items where appropriate. 6. Changed “Timeframe” to “Time Frame” in item D, 1.2. 7. Lower cased all words that are not “defined” terms — drafting team, self-certification. 8. Changed apostrophes to “smart” symbols. 9. Added comma in all word strings “Procedures, Processes, or Plans,” etc. 10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate.	January 20, 2006

[Docket Nos. RM13-12-000, RM13-14-000 and RM13-15-000]

Monitoring System Conditions - Transmission Operations Reliability Standard
Transmission Operations Reliability Standards
Interconnection Reliability Operations and Coordination Reliability Standards

(Issued November 21, 2013)

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: Pursuant to section 215 of the Federal Power Act (FPA), the Commission proposes to remand revisions to the Transmission Operations and Interconnection Reliability Operations and Coordination Reliability Standards, developed by the North American Electric Reliability Corporation (NERC), which the Commission has certified as the Electric Reliability Organization responsible for developing and enforcing mandatory Reliability Standards. In addition, the Commission proposes to approve NERC's proposed revisions to Reliability Standard TOP-006-3.

DATES: Comments are due **[Insert Date 60 days after publication in the FEDERAL REGISTER].**

ADDRESSES: Comments, identified by docket number, may be filed in the following ways:

- Electronic Filing through http://www.ferc.gov. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format.
- Mail/Hand Delivery: Those unable to file electronically may mail or hand-deliver comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street, NE, Washington, DC 20426.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Comment Procedures Section of this document.

FEDERAL ENERGY REGULATORY COMMISSION

Monitoring System Conditions - Transmission Operations Reliability Standard	Docket No. RM13-12-000
Transmission Operations Reliability Standards	Docket No. RM13-14-000
Interconnection Reliability Operations and Coordination Reliability Standards	Docket No. RM13-15-000

NOTICE OF PROPOSED RULEMAKING

(Issued November 21, 2013)

1. Pursuant to section 215(d) of the Federal Power Act (FPA),[1] the Commission proposes to remand revisions to the Transmission Operations (TOP) and Interconnection Reliability Operations and Coordination (IRO) Reliability Standards, developed by the North American Electric Reliability Corporation (NERC), which the Commission has certified as the Electric Reliability Organization (ERO) responsible for developing and enforcing mandatory Reliability Standards. In addition, the Commission proposes to approve NERC's proposed revision to Reliability Standard TOP-006-3 concerning the monitoring role and notification obligation of reliability coordinators, balancing authorities and transmission operators. The Commission seeks comments on its proposals.

[1] 16 U.S.C. 824o(d) (2012).

2. NERC filed changes to the TOP Reliability Standards (Docket No. RM13-14-000) concurrently with its proposal to modify the IRO Reliability Standards (Docket No. RM13-15-000). NERC requests that the Commission process the two proposals together. In addition, NERC separately filed revisions to Reliability Standard TOP-006-3 (Docket No. RM13-12-000) that NERC proposes to become effective prior to the effective date of the revisions to the TOP Reliability Standards in Docket No. RM13-14-000. Because the proposed TOP and IRO Reliability Standards are interrelated, and because the proposed revisions to Reliability Standard TOP-006-3 involve similar issues raised in the TOP and IRO proposals concerning monitoring of the interconnected transmission network and notification of and by registered entities, the Commission addresses the three proposals together in this Notice of Proposed Rulemaking (NOPR).

3. NERC explains that the set of TOP Reliability Standards "address the important reliability goal of ensuring that the transmission system is operating within operating limits."[2] The TOP Standards generally address real-time operations and planning for next-day operations, and apply primarily to the responsibilities of transmission operators. The set of IRO Standards apply to the responsibility and authority of reliability coordinators, the entities with the highest level of authority that are responsible for reliable operation of the bulk electric system, and have the wide-area view of the bulk

[2] NERC TOP Petition at 3.

electric system. The IRO Standards, which complement the TOP Standards, have the goal of ensuring that the bulk electric system is planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.[3] Thus, together, the TOP and IRO Reliability Standards address matters that are fundamental to grid reliability as they pertain to the coordinated efforts to operate the bulk electric system in a reliable manner during real-time operations.

4. Based on our review of the NERC petitions, it appears that the proposed TOP and IRO Reliability Standards contain some improvements over the current standards. Specifically, the revised standards include organizational and administrative improvements that reduce redundancy and clarify the delineation between applicable entities with regard to certain tasks. The Commission appreciates efforts to clarify standards and reduce redundancies.[4] However, we are concerned that the changes in the proposed standards create reliability gaps in the standards that are critical to reliable operation of the Bulk-Power System. While NERC indicates that the revised TOP Reliability Standards eliminate gaps and ambiguities in the currently-effective TOP requirements, we are concerned that NERC has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these

[4] *Electric Reliability Organization Proposal to Retire Requirements in Reliability Standards*, Order No. 788, 145 FERC ¶ 61,147 (2013).

aspects in the proposed standards. One area of concern is that, unlike the currently-effective TOP Reliability Standards, there is no requirement in the proposed standards for transmission operators to plan and operate within all System Operating Limits (SOLs).[5] The provisions in the proposed TOP Reliability Standards that require transmission operators to operate only within a subset of SOLs offset the potential improvements. The Commission believes that NERC's proposal for the treatment of SOLs adversely impacts multiple requirements in the proposed TOP Reliability Standards. Moreover, as discussed herein, the Commission identifies other concerns that may need to be addressed in order not to create further reliability gaps. Section 215(d)(4) requires that the Commission remand to the ERO for further consideration a Reliability Standard "that the Commission disapproves in whole *or in part*."[6] Thus, notwithstanding the improvements mentioned above, the concern regarding the treatment of SOLs, and potentially other concerns discussed below, leads us to propose to remand the proposed TOP standards. In addition, given the interrelationship between the TOP and IRO Reliability Standards

---

[5] NERC defines a SOL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits [pre- and post-Contingency] are based upon certain operating criteria. … "

[6] 16 U.S.C. 824o(d)(4) (2012) (emphasis added).

and that NERC requests that both sets of standards be addressed together,[7] we believe a remand of the proposed IRO standards in addition to those of the TOP will enable NERC to more comprehensively consider modifications to the standards that would address the reliability concerns identified in this NOPR. This approach, in turn, should allow NERC more flexibility in developing appropriate modifications that address our concerns since changes to the TOP standards might require, in some instances, commensurate changes to the IRO standards.

5. In addition to the concerns regarding the treatment of SOLs, the Commission has identified a reliability gap in the IRO Reliability Standards and accordingly proposes to direct that NERC develop modifications in these standards to ensure that reliability coordinators continue to develop and implement comprehensive generation and transmission outage coordination processes.

6. Further, we discuss below additional issues regarding the proposed TOP and IRO Reliability Standards that require clarification or further explanation and technical justification. Depending on the explanations provided by NERC and other interested entities in their comments to this NOPR, additional Commission action may be appropriate, including directives that NERC must address in response to a final rule in this proceeding.

[7] NERC TOP Petition at 2 (stating that "simultaneous approval of both petitions by the Commission will help ensure a smooth transition and implementation of the proposed Reliability Standards for both the industry and the ERO.").

I. Background

7. Section 215 of the FPA requires a Commission-certified ERO to develop mandatory and enforceable Reliability Standards, which are subject to Commission review and approval. Once approved, the Reliability Standards are enforced by the ERO, subject to Commission oversight, or by the Commission independently. On March 16, 2007, the Commission issued Order No. 693, approving 83 of the 107 initial Reliability Standards filed by NERC, including the existing TOP and IRO Reliability Standards.[8] In addition, in Order No. 748, the Commission approved revisions to the IRO Reliability Standards; however, none of the standards approved in Order No. 748 are at issue in this NOPR.[9]

A. NERC's TOP Petition (Docket No. RM13-14-000)

8. On April 16, 2013, in Docket No. RM13-14-000, NERC submitted for Commission approval three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards.

[8] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[9] *Mandatory Reliability Standards for Interconnection Reliability Operating Limits*, Order No. 748, 134 FERC ¶ 61,213 (2011).

NERC also seeks approval of the implementation plan for the proposed TOP Reliability Standards and approval of the retirement of eight TOP and one PER Reliability Standards,[10] and to retire Requirements R2, R5, and R6 of Reliability Standard PRC-001-1.

9. NERC states that the proposed TOP Reliability Standards represent significant revision and improvement to the current set of enforceable Reliability Standards by upgrading the overall quality of the standards, eliminating gaps in the requirements, ambiguity, redundancies, and addressing Order No. 693 directives. NERC adds that the proposed TOP Reliability Standards are also more efficient than the currently-effective standards because they incorporate the necessary requirements from today's standards into three cohesive, comprehensive Reliability Standards "that are focused on achieving a specific result."[11] NERC states that the proposed TOP Reliability Standards, along with the proposed IRO Reliability Standards, will help to ensure better coordination for

[10] TOP-001-1a – (Reliability Responsibilities and Authorities); TOP-002-2.1b (Normal Operations Planning); TOP-003-1 (Planned Outage Coordination); TOP-004-2 (Transmission Operations); TOP-005-2a (Operational Reliability Information); TOP-006-2 (Monitoring System Conditions); TOP-007-0 (Reporting System Operating Limit and Interconnection Reliability Operating Limit Violations); TOP-008-1(Response to Transmission Limit Violations); and on Personnel Performance, Training, and Qualifications (PER) Reliability Standard, PER-001-0.2 (Operating Personnel Responsibility and Authority).

[11] NERC TOP Petition at 4, 11, 42. NERC explains that the corresponding changes in proposed Reliability Standard PRC-001-2 are administrative in nature and are limited to removal of three requirements in currently-effective Reliability Standard PRC-001-1 that are now addressed in proposed Reliability Standard TOP-003-2.

transmission operators and reliability coordinators to "plan and operate the interconnected Bulk Electric System in a synchronized manner to perform reliably under normal and abnormal conditions."[12]

10. NERC states that the proposed TOP Reliability Standards are a significant improvement from the currently-effective TOP Reliability Standards in three ways. First, NERC explains that the proposed TOP Reliability Standards "rais[e] the bar on system performance by mandating that all IROLs be resolved within the IROL T_v, which is a significant increase in performance over the existing Reliability Standards."[13] NERC indicates that the proposed TOP Reliability Standards adopt an approach "for operating within a subset of SOLs that more closely aligns with the original NERC Operating Guidelines."[14] Second, NERC states that it improved the proposed Reliability Standards by designating requirements to apply solely to transmission operators and removing several of the requirements applicable to reliability coordinators. NERC explains that it

[12] NERC TOP Petition at 9.

[13] NERC TOP Petition at 11. The Interconnection Reliability Operating Limit (IROL) T_v is defined in the NERC Glossary of Terms as: "The maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit's T_v shall be less than or equal to 30 minutes."

[14] NERC TOP Petition at 11. NERC states that "[p]rior to becoming the ERO, NERC guidelines for power system operation and accreditation were referred to as the NERC Operating Guidelines, for which compliance was strongly encouraged yet ultimately voluntary." *Id.* at n.23.

added requirements applicable to reliability coordinators to the proposed IRO Reliability Standards. Third, NERC states it consolidated "the necessary requirements from the eight existing TOP Reliability Standards into three cohesive, comprehensive Reliability Standards."[15] The specific revisions to the TOP Reliability Standards are as follows:

TOP-001-2 (Transmission Operations)[16]

11. In the TOP petition, NERC explains that the requirements of proposed Reliability Standard TOP-001-2 address the following matters: (1) transmission operator "Reliability Directives" (proposed Requirements R1 and R2); (2) emergencies and emergency assistance (proposed Requirements R3-R6); and (3) IROLs and SOLs (proposed Requirements R7-R11). Proposed Requirements R1 and R2 state:

> **R1.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.
>
> **R2.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.

NERC states that proposed Requirement R1 recognizes the reliability need to give transmission operators the ability to issue Reliability Directives to various entities,

---

[15] NERC TOP Petition at 11.

[16] The proposed TOP and IRO Reliability Standards are not attached to the NOPR. The complete text of the Reliability Standards is available on the Commission's eLibrary document retrieval system in Docket Nos. RM13-14 and RM13-15 and is posted on the ERO's web site, *available at*: http://www.nerc.com.

subject to limited exceptions in cases where such actions would violate safety, equipment, regulatory, or statutory requirements. NERC explains that Requirement R2 requires entities receiving the directive from the transmission operator to inform the transmission operator in situations where an identified Reliability Directive cannot be performed. NERC explains that these requirements give transmission operators the authority to issue Reliability Directives when needed, but also provide them the flexibility to take different action in those situations where an entity notifies its transmission operator of its inability to comply with a Reliability Directive.[17]

12. With regard to emergencies and emergency assistance, NERC proposes Requirements R3 through R6:

> **R3.** Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis.
>
> **R4.** Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements.
>
> **R5.** Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load.

[17] NERC TOP Petition at 12-13.

> **R6.** Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.

NERC states that proposed Requirements R3, R5, and R6 apply to the coordination aspects of interconnected operation. NERC explains that proposed Requirement R3 requires a transmission operator to inform its reliability coordinators and other transmission operators of actual and anticipated emergencies based on its assessment of its "Operational Planning Analysis."[18] NERC states that, in situations "where emergency assistance is needed, proposed Requirement R4 requires that Transmission Operators render emergency assistance to other Transmission Operators when it is requested and available" and that proposed Requirement R5 "requires Transmission Operators to inform entities (Reliability Coordinators and other Transmission Operators) of operations that may adversely impact them."[19] According to NERC, this proposed requirement addresses the Order No. 693 directive to consider the need for the transmission operator to notify the reliability coordinator or the balancing authority when facilities are removed

[18] NERC defines an Operational Planning Analysis as "[a]n analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.)." NERC Glossary of Terms at 47.

[19] NERC TOP Petition at 14.

from service.[20] NERC states that proposed Requirement R6 requires balancing authorities and transmission operators to notify the reliability coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment.

13. With respect to treatment of SOLs and IROLs, NERC explains that the standard drafting team examined the requirements for SOLs and IROLs in the currently-effective TOP Reliability Standards to ensure whether they adequately addressed the handling of these limits. In particular, the standard drafting team was concerned that the transition from the NERC Operating Guidelines to the Version 0 standards had resulted in an incorrect emphasis on non-IROL SOLs as opposed to IROLs. The standard drafting team noted a discrepancy among the three currently-effective SOL/IROL-related requirements.[21] According to NERC, in Reliability Standards TOP-002-2a, Requirement R10 and TOP-004-2, Requirement R1, applicable entities are expected to plan and operate to meet all SOLs and IROLs, while in TOP-007-0, R1, entities are only instructed

---

[20] NERC TOP Petition at 14 (citing Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1588).

[21] TOP-002-2a, Requirement R10: Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs). TOP-004-2, Requirement R1: Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs). TOP-007-0, Requirement R2: Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.

to take action for IROLs. According to NERC, the standard drafting team concluded that the Version 0 standards did not accurately reflect what the operating policies stated. Nevertheless, the standard drafting team determined that non-IROL SOLs are still important. NERC explains that reliability risk to the system exists when the system is operating in conditions such that an IROL limit is exceeded for a time exceeding T_v. Consequently, NERC revised the requirements related to operating within limits by tying IROL actions to T_v. NERC proposes Requirements R7 through R11 to address the transmission operator's responsibilities over IROLs[22] or SOLs[23] that the transmission operator identifies as necessary to support reliability internal to its transmission operator area:

> **R7.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
>
> **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**

---

[22] NERC defines an IROL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) derived from, or a subset of the System Operating Limits, which if exceeded, could expose a widespread area of the Bulk Electric System to instability, uncontrolled separation(s) or cascading outages."

[23] NERC defines a SOL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits [pre- and post-Contingency] are based upon certain operating criteria. … "

> **R9.** Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
>
> **R10.** Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.
>
> **R11.** Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.

NERC explains that the responsibility for monitoring and handling IROLs is primarily given to the reliability coordinator, but the transmission operator has the primary responsibility to designate any SOLs that require special attention. NERC indicates that the delineation in the proposed TOP Reliability Standards with respect to operating within an identified IROL and in designating important SOLs is an important distinction in the proposed TOP Reliability Standards that is necessary for reliability.

14. NERC adds that the proposed TOP Reliability Standards include a requirement that provides for "the identification of a sub-set of non-IROL SOLs that are identified as important for local areas."[24] NERC indicates that the proposed requirements mandate exceedances of these non-IROL SOLs to be monitored and reported to the reliability coordinator, giving transmission operators "the ability to ensure that any non-IROL SOLs

[24] NERC TOP Petition at 19.

that are of concern to the transmission operator will be monitored to ensure local consequences are managed."[25]

15. NERC states that the "difference between non-IROL SOLs and IROLs is expressed in the difference between the consequences to the System (or impact to reliability) should unplanned perturbations of the System occur when the limit is being exceeded. For an IROL, the consequences are described as Cascading, uncontrolled separation, or instability."[26] NERC explains that the consequences of non-IROL SOLs are typically thought of in terms of equipment damage or total loss of an element and are restricted to a limited or local area. NERC states that the revised TOP requirements move the standards to where the NERC Operating Guidelines intended them to be and ensure that the reliability of the interconnected system will be maintained and even enhanced because system operators "will not be distracted from true reliability issues by local system issues."[27] NERC states that the impact of exceeding a non-IROL SOL will not result in an Adverse Reliability Impact.[28]

16. According to NERC, transmission operators may also identify and communicate to their reliability coordinator any of the non-IROL SOLs that are believed or anticipated

[25] *Id.* at 19-20.

[26] *Id.* at 19.

[27] NERC TOP Petition at 18.

[28] NERC TOP Petition at 18-19.

to have potential to develop into IROLs and, thus, to ensure that they too are monitored and managed. NERC also explains that, while non-IROL SOLs are similar to IROLs in that non-IROL SOLs must respect the ratings of equipment associated with the facilities to which the non-IROL SOL applies, there is no specific requirement established for a time exceedance similar to the T_v of an IROL. According to NERC, because T_v may be less than 30 minutes, T_v "mandates a tighter time frame for action than the 30-minute time that is mandated in the currently-effective standards, thereby improving reliability of the bulk power system."[29]

Proposed TOP-002-3 (Operations Planning)

17. NERC states that proposed Reliability Standard TOP-002-3 Requirements R1 through R3 require transmission operators to perform Operational Planning Analyses to ensure operations within IROLs and SOLs. The requirements for proposed Reliability Standard TOP-002-3 are as follows:

> **R1.** Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
>
> **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

[29] NERC TOP Petition at 18.

> **R3.** Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).

NERC explains that Requirement R1 requires transmission operators to have an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed any of its facility ratings or stability limits during anticipated normal and contingency event conditions. NERC also explains that Requirement R2 requires transmission operators to develop a plan that will help ensure they do not operate in excess of limits identified in the Operational Planning Analysis. NERC indicates that Requirement R3 requires that entities be notified if they are identified in the transmission operator's plans and that the notification should inform entities of their role in the plans.

18. According to NERC, requiring transmission operators to perform Operational Planning Analyses that incorporate normal and contingency situations for next-day operations while assuring appropriate limits are not violated assures that the transmission operators "will have a plan to follow during Real-time operations that accurately reflects the anticipated conditions of the day's operations, including the ability to deliver generation to Load."[30] NERC adds that Requirement R3 is similar to the coordination requirements established in proposed Reliability Standard TOP-001-2 by ensuring that all entities know their role in next-day operations.

---

[30] NERC TOP Petition at 22.

Proposed TOP-003-2 (Operational Reliability Data)

19. NERC states that proposed Reliability Standard TOP-003-2, Requirements R1 through R5 were adapted for transmission operators and balancing authorities based on similar, Commission-approved requirements for reliability coordinators.[31] The proposed requirements include:

> **R1.** Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include:
>
> **1.1.** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.
> **1.2.** A mutually-agreeable format.
> **1.3.** A periodicity for providing data.
> **1.4.** The deadline by which the respondent is to provide the indicated data.
>
> **R2.** Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring…
>
> **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification…shall satisfy the obligations of the documented specifications for data.

NERC states that the proposed requirements emphasize the need for transmission operators and balancing authorities to obtain all of the data they need for reliability purposes and mandate that entities that have this data timely provide it to the transmission operator and balancing authority. According to NERC, lack of adequate data for real-time operations and modeling have contributed to system incidents in the past, and the

[31] NERC TOP Petition at 23 (citing Reliability Standard IRO-010-1a.)

data specification concept will eliminate this problem by allowing transmission operators and balancing authorities to require entities to send them any required data.

NERC's Response to Order No. 693 Directives and Analysis of Southwest Outage Report

20. NERC indicates that its staff analyzed the recommendations from the report on the Arizona-Southern California Outages on September 8, 2011, Causes and Recommendations ("2011 Southwest Outage Blackout Report") that apply to transmission operators and compared the recommendations to both the currently-effective TOP Reliability Standards and the proposed Reliability Standards.[32] The TOP Petition provides that, "[b]ased on this analysis, NERC staff believes that if entities complied with the proposed TOP Reliability Standards, the likelihood of such an event occurring would be significantly diminished."[33] NERC includes as Exhibit H a detailed report on this analysis, including the relevant 2011 Southwest Outage Blackout Report recommendations with an explanation of how the relevant recommendations would be addressed in the proposed TOP Reliability Standards.

21. The NERC TOP Petition includes a summary of nine Order No. 693 directives related to the proposed TOP Reliability Standards and NERC's responses to those directives in Exhibit I. NERC also explains that, rather than addressing two directives from Order No. 693 relating to minimum analysis and monitoring capabilities in the

[32] NERC TOP Petition at 6 and Exh. H.

[33] NERC TOP Petition at 6.

proposed TOP Reliability Standards and proposed IRO Reliability Standards, the standard drafting team chose to have them addressed by the Project 2009-02 Standard Drafting Team.[34] According to NERC, it "is developing a set of Reliability Standards in Project 2009-02, which is expected to be completed in 2014," that will establish requirements for the functionality, performance, and maintenance of real-time monitoring and analysis capabilities for reliability coordinators, transmission operators, generator operators, and balancing authorities for use by their system operators in support of reliable system operations.[35]

<u>TOP Implementation Plan</u>

22. NERC states that some of the proposed revisions to the TOP Reliability Standards are dependent on corresponding changes to proposed IRO Reliability Standards (IRO-001-3 and IRO-005-4) and to one Verification and Data Reporting of Generator Real and Reactive Power Capability Reliability Standard - MOD-025-2. NERC states that the proposed TOP Reliability Standards cannot be implemented until all three of the above standards have been implemented.

23. In its implementation plan, NERC also states that there "are no new definitions in the proposed set of standards" but the standard drafting teams for the TOP and IRO

---

[34] One directive is applicable to Reliability Standard IRO-002 and is described in PP 905 and 906 of Order No. 693, and the second directive is applicable to Reliability Standard TOP-006 and is described in P 1660.

[35] NERC IRO Petition at 27.

projects have coordinated on a common definition of "Reliability Directive" and agreed that the IRO standard drafting team "would write the definition and post it for vetting by the industry." The definition is as follows:

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

Further, the IRO-014-2 implementation plan indicates that a revised definition for "Adverse Reliability Impact" was approved by the NERC Board of Trustees on August 4, 2011; however, the petition does not discuss the merits of this change.[36] In addition, NERC does not discuss the impact of this revised definition on the overall body of Reliability Standards.

24. NERC requests that all requirements except proposed Reliability Standard TOP-003-2, Requirements R1 and R2 become effective the first day of the first calendar quarter twelve months following applicable regulatory approval.[37] NERC also requests that Requirements R1 and R2 of proposed Reliability Standard TOP-003-2 become effective the first day of the first calendar quarter ten months following applicable

---

[36] Adverse Reliability Impact (ARI) - Previous Definition - The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection. ARI – Revised Definition – The impact of an event that results in the Bulk Electric System instability or Cascading.

[37] NERC also requests that the existing TOP Reliability Standards be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following applicable regulatory approval.

regulatory approval. NERC explains that the twelve month period is to allow for entities to update processes and train operators on the revised requirements, and the two month differential for proposed Reliability Standard TOP-003-2, Requirements R1 and R2 is to provide time for recipients of a data specification to respond to the request for data.[38]

B. NERC's IRO Petition (Docket No. RM13-15-000)

25. Also on April 16, 2013, NERC submitted for Commission approval four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators).[39] NERC also requests approval of the implementation plan for the proposed IRO Reliability Standards, and approval of the retirement of six currently-effective Reliability Standards, effective at midnight immediately prior to the first day of the first calendar quarter that is twelve months following the effective date of a final rule in this proceeding.[40] NERC indicates that its petition also addresses two

---

[38] NERC TOP Petition, Exh. C at 2.

[39] NERC states that the NERC Board of Trustees approved a proposed Reliability Standard IRO-001-2 Reliability Standard on August 4, 2011, that was subsequently revised before it was filed at the Commission. The revision is designated as Reliability Standard IRO-001-3, was approved by the Board on August 16, 2012, and is included in this petition for approval. NERC IRO Petition at 4 n.5.

[40] NERC proposes to retire Reliability Standards IRO-001-1.1 (Responsibilities and Authorities); IRO-002-2 (Facilities); IRO-005-3a (Current Day Operations); IRO-014-1 (Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators); IRO-015-1 (Notifications and Information Exchange Between Reliability Coordinators); IRO-016-1 (Coordination of Real-time Activities Between Reliability Coordinators).

Order No. 693 directives associated with Reliability Standard IRO-005-1, but that it does not address a directive associated with Reliability Standard IRO-002-1 because this directive falls under the scope of Real-Time Tools Best Practices Task Force.

26. NERC identifies two "overall reliability benefits" of the proposed IRO Reliability Standards: (1) delineating a "clean division of responsibilities" between the reliability coordinator and transmission operator, giving the reliability coordinator authority to direct transmission operators to take actions to prevent or mitigate Interconnection Reliability Operating Limits (IROLs); and (2) "raising the bar" on IROL/SOL monitoring to focus on only those important to reliability. NERC also identifies four "improvements" reflected in the proposed IRO Reliability Standards, as follows:

- Interconnected bulk electric systems will be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.
- Personnel responsible for planning and operating interconnected bulk electric systems will be trained, qualified, and have the responsibility and authority to implement actions.
- The security of the interconnected bulk electric systems will be assessed, monitored and maintained on a wide-area basis.
- Plans for emergency operation and system restoration … will be developed, coordinated, maintained and implemented.[41]

[41] NERC IRO Petition at 11.

<u>IRO-001-3 (Responsibilities and Authorities)</u>

27. NERC proposes to replace the nine currently-effective requirements of Reliability Standard IRO-001-1 with the following three requirements in proposed IRO-001-3:

> **R1.** Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.
>
> **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.
>
> **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2.

NERC states that these requirements ensure that reliability coordinators "have the responsibility and authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact."[42] According to NERC, these proposed requirements "ensure that the responsibility and authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact is assigned to the Reliability Coordinator."[43]

[42] NERC IRO Petition at 12.

[43] NERC IRO Petition at 12-13.

28. NERC states that the changes to the proposed Reliability Standard IRO-001-3 are a result of the proposed retirement of the currently-effective Reliability Standard IRO-001-1.1, Requirement R7, which is now covered in proposed Reliability Standard IRO-014-2.[44] According to NERC, Reliability Standard IRO-014-2 will continue to ensure that both coordination agreements are in place to require that IROLs and SOLs are managed, and that system conditions that could cause Adverse Reliability Impacts are mitigated.

IRO-002-3 (Analysis Tools)

29. NERC proposes two new requirements pertaining to analytical tools and to retire Requirements R1 through R7 of currently-effective Reliability Standard IRO-002-2. The two proposed requirements provide:

> **R1.** Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools.
>
> **R2.** Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.

30. NERC states that the currently-effective requirements contain redundancies, which the proposed revision are intended to eliminate. NERC states that it revised Requirement R8 and incorporated it into proposed Requirements R1 and R2 of Reliability Standard

[44] Currently-effective Requirement R7 states: The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.

IRO-002-3. NERC also indicates that it is developing a set of Reliability Standards in Project 2009-02, that will establish requirements for the functionality, performance, and maintenance of real-time monitoring and analysis capabilities which affects Reliability Standard IRO-002.

<u>IRO-005-4 (Current Day Operations)</u>

31. NERC proposes the following two new requirements for proposed Reliability Standard IRO-005-4:

> **R1.** When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
>
> **R2.** Each Reliability Coordinator that identifies an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated.

32. NERC states that proposed Reliability Standard IRO-005-4 is a result of eliminating redundancies between existing and proposed standards. NERC also states that the requirements are to "ensure that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified."[45]

<u>IRO-014-2 (Coordination Among Reliability Coordinators)</u>

33. NERC proposes the eight requirements of Reliability Standard IRO-014-2 to replace the currently-effective Reliability Standards IRO-014-1, IRO-015-1 and

[45] NERC IRO Petition at 28.

IRO-016-1. NERC states that proposed Reliability Standard IRO-014-2 ensures that each reliability coordinator's operations are coordinated to avoid an Adverse Reliability Impact on other reliability coordinator areas and to preserve the reliability benefits of interconnected operations. Proposed Reliability Standard IRO-014-2 provides in part:

> **IRO-014-2 R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:
>
> > **1.1.** Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
> > **1.2.** Energy and capacity shortages.
> > **1.3.** Planned or unplanned outage information.
> > **1.4.** Control of voltage, including the coordination of reactive resources.
> > **1.5.** Coordination of information exchange to support reliability assessments.
> > **1.6.** Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.
> > **1.7.** Weekly conference calls.
>
> **R5.** Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators.
>
> **R6.** During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists.
>
> **R7.** During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact.

34. NERC states that Requirement R1 is the same as the currently-effective requirement except for the addition of Part 1.7, which requires reliability coordinators to

have weekly conference calls. Additionally, while Requirement R1 of Reliability Standard IRO-014-1 addresses "Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability," NERC states that proposed Requirement R1 defines specific information that is to be included in the procedures, processes, and plans.

IRO Implementation Plan

35. NERC proposes as the effective date for Reliability Standard IRO-001-3, the first day of the second calendar quarter beyond the date that the standard is approved by the Commission. NERC states that this time will allow applicable entities adequate time to develop the documentation and other evidence necessary to exhibit compliance with the requirements. NERC proposes as the effective date for Reliability Standards IRO-002-3 and IRO-005-4 the first day of the first calendar quarter following the effective date of a final rule because the revisions are "to an existing mandatory and enforceable standard, applicable entities are already complying with the existing standard."[46]

36. For proposed Reliability Standard IRO-014-2, NERC proposes the first day of the first calendar quarter that is twelve months following the effective date of a final rule as the effective date. NERC states that, while the revisions to this Reliability Standard are to an existing mandatory and enforceable standard, "applicable entities should only have

[46] NERC IRO Petition, Exh. A at 8.

to make minor revisions to their Operating Plans, Operating Processes or Operating Procedures to show compliance."[47]

37. NERC also proposes retirement of the six IRO Reliability Standards, effective at midnight immediately prior to the first day of the first calendar quarter that is twelve months following the effective date of a final rule.

C. Proposed Revisions to Reliability Standard TOP-006-3 (Docket No. RM13-12)

38. On April 4, 2013, NERC proposed revisions to Reliability Standard TOP-006-3 to divide the reporting responsibilities of balancing authorities and transmission operators into separate requirements. According to NERC, the proposed revisions clarify that transmission operators are responsible for monitoring and reporting available transmission resources, while balancing authorities are responsible for monitoring and reporting available generation resources. NERC states that this division is consistent with the roles and responsibilities of registered entities as set forth in NERC Reliability Functional Model.

39. NERC states that, as currently written, Requirement R1.2 could be interpreted as duplicating efforts to monitor and report the availability of generation and transmission resources. NERC explains that it specifically requires both transmission operators and balancing authorities to inform reliability coordinators and other affected transmission operators and balancing authorities of all transmission and generation resources available

[47] NERC IRO Petition, Exh. A at 8-9.

for use. To address these concerns, NERC revised Requirement R1.2 to limit a transmission operator's monitoring and notification obligations to transmission resources available for use. NERC created Requirement R1.3 to limit a balancing authority's monitoring and notification obligations to generation resources available for use. NERC explains that proposed Requirement R1.3 only requires balancing authorities to inform reliability coordinators of all generation resources available for use, and they are not required to report the availability of generation resources to transmission operators because transmission operators already receive this information from generator operators pursuant to currently effective Requirement R1.1. According to NERC, by defining the reporting channels from transmission operators and balancing authorities to reliability coordinators, reliability coordinators will receive necessary information in advance, as part of their operating tools, processes and procedures, to prevent and mitigate emergency operating situations in real and next day operations.

40. In addition, NERC proposes to modify currently-effective Requirement R3. According to NERC, while the currently-effective Requirement R3 requires reliability coordinators, transmission operators and balancing authorities to provide appropriate technical information concerning protective relays to their operating personnel, NERC states that it does not impose explicit geographical boundaries on the scope of this obligation. NERC indicates that revised Requirement R3 specifies that the relevant protective relays are those within these entities' respective reliability coordinator area, transmission operator area or balancing authority area.

41. NERC has proposed medium Violation Risk Factors (VRFs) for proposed TOP-006-3, Requirements R1.2, R1.3 and R3 because these three Requirements all ensure that critical reliability parameters are monitored in real-time. NERC also states that the proposed Violation Security Levels (VSLs) for Requirement R1.3 meet NERC's VSL guidelines. NERC requests that the revisions become effective on the first day of the first calendar quarter after applicable regulatory approval.

II. <u>Discussion</u>

42. Pursuant to section 215(d) of the FPA, we propose to remand NERC's proposed revisions to the TOP and IRO Reliability Standards (Docket Nos. RM13-14-000 and RM13-15-000). While we believe that NERC's approach of condensing the requirements and removing redundancies generally has merit, we are concerned that, unlike the currently-effective TOP Reliability Standards, there is no requirement in the proposed standards for transmission operators to plan and operate within all SOLs. Without a requirement to analyze and operate within all SOLs in the proposed standards and by limiting non-IROL SOLs to only those identified by the transmission operator internal to its area, system reliability is reduced and negative consequences can occur outside of the transmission operator's internal area. As described below, this was a problem during the Southwest Outage when the loss of a 500 kV line in Arizona Public Service's area overloaded equipment, which ultimately resulted in a cascade outage

leaving approximately 2.7 million customers without power.[48] The provisions in the proposed TOP Reliability Standards that require transmission operators to operate only within a subset of SOLs offsets the potential benefits the proposed Reliability Standards may otherwise provide.

43. The Commission believes that NERC's proposal for the treatment of SOLs affects at least proposed Reliability Standard TOP-002-3, Requirements R1 and R2 as well as proposed Reliability Standard TOP-001-2, Requirements R8 through R11. Section 215(d)(4) requires that the Commission remand to the ERO for further consideration a Reliability Standard "that the Commission disapproves in whole or in part."[49] Thus, notwithstanding the organizational and administrative improvements contained in other provisions of proposed TOP Reliability Standards, our concern regarding the treatment of SOLs provides us no option other than to propose to remand the entire Reliability Standards TOP-001-2 and TOP-002-3.

44. In addition to addressing the SOL issue in the TOP Reliability Standards, we also propose to direct that NERC, on remand, develop modifications to the IRO Reliability Standards to ensure that reliability coordinators continue to develop and implement comprehensive generation and transmission outage coordination processes.

---

[48] 2011 Southwest Outage Blackout Report at 1.

[49] 16 U.S.C. 824o(d)(4) (2012) (emphasis added).

45. Given that the SOL and outage coordination process issues pertain to numerous requirements across the proposed standards, the interrelationship among the TOP standards and between the TOP and IRO Reliability Standards, and that NERC requests that both sets of standards be addressed together, we propose to remand the entire set of TOP and IRO Reliability Standards.[50] This approach will give industry and NERC flexibility to develop modifications to the standards that address the concerns identified in this NOPR.

46. Further, the Commission discusses below certain provisions of NERC's proposal that require clarification or further technical explanation. Depending on the explanations provided by NERC and other interested entities in comments to this NOPR, additional Commission action may be appropriate, including the identification of additional issues that NERC must address on remand.

47. Finally, pursuant to section 215(d) of the FPA, we also propose to approve NERC's proposed revisions to Reliability Standard TOP-006-3. We find that proposed TOP-006-3 is sufficiently separate from the standards we propose to remand above. Below, we discuss: (A) the proposed TOP Standards; (B) the proposed IRO Standards; and (C) the proposed revisions to Reliability Standard TOP-006-3.

---

[50] NERC TOP Petition at 1-2.

A. TOP Reliability Standards

1. Issue to be Addressed

a. Plan and Operate Within All SOLs

NERC Petition

48. Currently-effective Reliability Standard TOP-002-2a, Requirement R10 requires the transmission operator to plan to meet all SOLs and IROLs. Similarly, currently-effective Reliability Standard TOP-004-2, Requirement R1 requires transmission operators to operate within all IROLs and SOLs.

49. Proposed Reliability Standard TOP-002-3, Requirement R2 provides that each transmission operator still plan to operate within all IROLs but within only a sub-set of SOLs. It states that each transmission operator "shall develop a plan to operate within each [IROL] and each [SOL] which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator area" as a result of its Operational Planning Analysis performed in Reliability Standard TOP-002-3, Requirement R1.

50. NERC states that it is appropriate to limit Requirement R2 to a sub-set of "non-IROL SOLs" that are important to local areas and that the identified subset of non-IROL SOLs will be subject to the requirements of the proposed Reliability Standards. NERC states that non-IROL SOLs are typically thought of in terms of "equipment damage or

[element] loss of life" and are restricted to a limited or local area.[51] According to NERC, the standard drafting team concluded that it is not necessary to monitor all non-IROL SOLs because the "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue."[52] NERC explains that the "difference between non-IROL SOLs and IROLs is expressed in the difference between the consequences to the System (or impact to reliability) should unplanned perturbations of the system occur when the limit is being exceeded."[53] According to NERC, the consequences of exceeding an IROL are described as cascading, uncontrolled separation, or instability.[54] NERC states that the impact of exceeding a non-IROL SOL will not result in an Adverse Reliability Impact.[55]

<u>Commission Proposal</u>

51. The Commission is concerned with NERC's proposal because, unlike the currently-effective TOP Reliability Standards, the proposed standards do not require the

---

[51] NERC states that the revised TOP requirements move the standards to where the NERC Operating Guidelines intended them to be and ensure that the reliability of the interconnected system will be maintained and even enhanced because system operators will not be distracted from true reliability issues by local system issues. NERC TOP Petition at 18.

[52] NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on Second Draft of Standards for Real-Time Operations) at 23.

[53] NERC TOP Petition at 19.

[54] *Id.*

[55] NERC TOP Petition at 19.

transmission operator to plan and operate within SOLs, only non-IROL SOLs that are identified by the transmission operator as supporting reliability internal to its area and identified as a result of an Operational Planning Analysis.[56] For example, non-IROL SOLs that appear to be excluded from the proposed standard are non-IROL SOLs that are in a transmission operator's area that impact another transmission operator's area or more than one transmission operator's area.

52. During deteriorating system conditions, an SOL can rapidly degrade into an IROL. Limiting the requirement for transmission operators to analyze and operate within SOLs only to non-IROL SOLs identified by the transmission operator for its internal area can reduce system reliability because operators have less situational awareness of the system and conditions. Even if we accept the argument that our rules for operating bulk electric facilities should not be concerned with "equipment damage or [element] loss of life," NERC has not explained adequately why the only "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue." Major cascading events including the Northeast Blackout of 2003 and the 2011 Southwest Outage were initiated by a non-IROL SOL exceedance, followed by a series of non-IROL

[56] NERC's Functional Model states one of the tasks of transmission operations is to "[d]evelop system limitations such as System Operating Limits…and operate within those limits." NERC's "Reliability Functional Model Function Definitions and Functional Entities Version 5" at 37 *available* at www.nerc.com.

SOLs exceedances until the system cascaded.[57] Thus, while non-IROL SOLs are essentially defined as not posing a risk of cascading outages, instability or uncontrolled separation if they are exceeded, experience indicates that operators do not always foresee the consequences of exceeding such SOLs and thus cannot be sure of preventing harm to reliability. The Commission believes that when any facility ratings or stability limits are exceeded or expected to be exceeded (i.e. causing a SOL or an expected SOL on jurisdictional facilities), these conditions should be mitigated to avoid the possibility of further deteriorating system conditions and a cascade event.

53. We recognize that, if IROLs and non-IROL SOLs are determined accurately, the reliability consequences of an exceedance should usually be greater for the former than the latter. If NERC or commenters believe this probability warrants general exclusion of the latter from the TOP Reliability Standards (subject to an entity's specific inclusions), they should explain this view in more detail and present any information that may help us weigh its merit.

54. Moreover, we believe that proposed Reliability Standard TOP-002-3, Requirement R1 is flawed because the transmission operator should have an operational plan to operate within all Bulk-Power System IROLs and SOLs for all cases when facility ratings or stability limits are exceeded during anticipated normal and contingency event conditions. The operational plan is needed to ensure the transmission operator operates

---

[57] *See* 2003 Northeast Blackout Report at 74 and the 2011 Southwest Outage Blackout Report at 1.

in, or can return its system to, a reliable operating state. For example, the 2011 Southwest Outage Blackout Report raised a similar concern, stating that transmission operators should "ensure that post-contingency mitigation plans reflect the time necessary to take mitigating actions, including control actions, to return the system to secure N-1 state as soon as possible but no longer than 30 minutes following a single contingency."[58] We believe that the transmission operator should have operational or mitigation plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state. Absent such plans, system conditions can linger in an unsecure or emergency state exposing the system to cascading outages upon the next contingency. Thus, we are concerned that Requirement R1 is insufficient for the fundamental operation of the interconnected transmission network as proposed by NERC.

55. Similarly, proposed Reliability Standard TOP-001-2, Requirements R8 through R11 address transmission operator notification, operation and action with respect to IROLs and some SOLs based on the transmission operator's next-day Operational Planning Analysis. Because proposed Reliability Standard TOP-001-2, Requirement R8 requires a transmission operator's notification of only those SOLs identified in a next-day Operational Planning Analysis, the Commission believes it is possible for additional

---

[58] Southwest Outage Blackout Report (Recommendation 13 at 90). In addition, in Order No. 693 the Commission stated that operational plans for all IROLs should include the "[i]dentification and communication of control actions [to system operators] that can be implemented within 30 minutes" following a contingency to return the system to a reliable operating state...." Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1601.

SOLs to develop or occur in the same-day or real-time operational time horizon. This could impose an operational risk to the interconnected transmission network. For example, if real-time system load levels are unexpectedly higher than forecasted load conditions used in the Operational Planning Analysis, this condition could result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now exceeded under high load levels whereas under the forecasted load levels (lower load levels), facility ratings and stability limits were not expected to be exceeded. Another example is if an unplanned outage of a transmission element or generator unit occurred after the completion of the next-day Operational Planning Analysis, this condition may result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now possibly exceeded due to the change in the system topology (i.e. transmission element outage) or generation dispatch (i.e. generator unit outage) that redirected the power flow on some portions of the interconnected transmission network.[59] Thus, there are various reasons why a SOL could occur in real-time operations due to the dynamic nature of the real-time interconnected transmission network and not be identified in the next-day Operational Planning Analysis. To assure that transmission operators are equipped to react to such

[59] This condition was identified in the 2011 Southwest Outage Blackout Report, which found that Imperial Irrigation District did not perform a separate, updated next-day study and contingency analysis for September 8, 2011 and instead, referenced a previous study which was not valid because it did not match the load and generation dispatch for the day. 2011 Southwest Outage Blackout Report, Recommendation No. 1 at 66.

situations, we believe that the Requirement R8 operational responsibilities and actions should pertain to all IROLs and all SOLs for all operating time horizons.

56. Accordingly, pursuant to section 215(d)(4) of the FPA, we propose to remand proposed Reliability Standards TOP-001-2 and TOP-002-3. Specifically, we propose to direct that NERC develop modifications to Reliability Standard TOP-002-3, Requirements R1 and R2 that address our concerns discussed above to ensure that transmission operators develop mitigation plans for all IROLs and SOLs expected to be exceeded. Similarly, for proposed Reliability Standard TOP-001-2, Requirement R8, we propose to direct that NERC develop modifications to require that transmission operator actions apply to all SOLs identified in all operational time horizons (operations planning, same-day operations and real-time operations). Further, for proposed Reliability Standard TOP-001-2, Requirements R9 through R11, we propose to direct that NERC develop modifications to require that transmission operator specified actions apply to all SOLs related responsibilities in the real-time operations time horizon. Our concerns discussed above apply to specific provisions of proposed TOP-001-2 and TOP-002-3. However, as explained above, we propose to remand proposed Reliability Standards TOP-001-2 and TOP-002-3. Moreover, as explained above, because the TOP standards are so interrelated, we also propose to remand Reliability Standard TOP-003-2 to give NERC and industry flexibility to address our concerns.

2. TOP Reliability Standards – Issues Requiring Clarification

a. System Models, Monitoring and Tools

NERC Petition

57. NERC proposes to retire TOP and IRO Reliability Standards that require reliability coordinators and transmission operators to maintain and use certain models and analysis capabilities and monitoring. NERC proposes to delete requirements for transmission operators to (1) "maintain accurate computer models utilized for analyzing and planning system operations"; (2) "use monitoring equipment to bring to the attention of operating personnel important deviations"; (3) "use sufficient metering … to ensure accurate and timely monitoring"; and (4) "have sufficient information and analysis tools to determine the cause(s) of SOL violations…."[60] NERC explains that these transmission operator requirements are unnecessary because transmission operators meet these requirements as part of NERC's certification process or are in other currently-effective or proposed standards.[61]

58. Similarly, NERC proposes to retire Reliability Standard IRO-002-2 Requirements R4, R5, R6, and R7, which address real-time monitoring and analysis capabilities and functions required to enable the reliability coordinator to perform its responsibilities. According to NERC, these requirements are unnecessary because they are inherent in the

---

[60] *See* Reliability Standards TOP-002-2.1b, Requirement R19, TOP-006-2, Requirement R5, TOP-006-2, Requirement R6, and TOP-008-1, R4, respectively.

[61] NERC TOP Petition, Exhibit J at 22, 34, 35, and 38.

reliability coordinator's duty to maintain area control error or operate within IROLs/SOLs and can be verified in the certification process.[62] NERC also states that the Commission directives in Order No. 693 applicable to a minimum set of analytical tools and applicable to reliability coordinators and transmission operators will be addressed in Project 2009-02 - Real-time Monitoring and Analysis Capabilities – that has a projected completion date of 2014. Further, NERC proposes to retire other requirements of currently-effective Reliability Standard TOP-006-2 which address real-time monitoring responsibilities of the transmission operator.

Commission Proposal

59. In Order No. 693, the Commission directed NERC to develop requirements for a minimum set of analytical tools (analysis and monitoring capabilities) to ensure that a reliability coordinator has the tools it needs to perform its functions.[63] In its TOP Petition, NERC discusses the importance of analytical tools and real-time monitoring noting that, "[a]ccording to the August 2003 Blackout Report, a principal cause of the August 14, 2003 blackout was a lack of situational awareness, which was in turn the

---

[62] Section 500 of NERC's Rules of Procedure provide for an organization certification program that is intended to ensure that the an applicant to be a reliability coordinator, balancing authority or transmission operator "has the tools, processes, training, and procedures to demonstrate their ability to meet the Requirements/sub-Requirements of all of the Reliability Standards applicable to the function(s) for which it is applying thereby demonstrating the ability to become certified and then operational." NERC Rules of Procedure at 44.

[63] Order No. 693, FERC Stats. & Regs. ¶ 31,242, at PP 905, 906, 1660.

result of inadequate reliability tools."[64] We agree with NERC's statement and believe this is an area of reliability that requires vigilance. Moreover, our view is reinforced by the 2011 Southwest Outage Blackout Report, which found that "[a]ffected TOP's real-time tools are not adequate or, in one case, operational to provide the situational awareness necessary to identify contingencies and reliably operate their systems" and consequently recommended that "TOPs should take measures to ensure that their real-time tools are adequate, operational, and run frequently enough to provide their operators the situational awareness necessary to identify and plan for contingencies and reliably operate their systems."[65]

60. Monitoring and analysis capabilities are essential in establishing and maintaining situational awareness. While NERC indicates that these functions are assured through the certification process,[66] we are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. Monitoring and assessment capabilities must adapt to assess changing topography and system conditions so that

[64] NERC TOP Petition at 10. NERC also states that "the failure of control computers and alarm systems, incomplete tool sets, and the failure to supply network analysis tools with correct System data on August 14, contributed directly to this lack of situational awareness. Also, the need for improved visualization capabilities over a wide geographic area has been a recurrent theme in blackout investigations."

[65] 2011 Southwest Outage Blackout Report at 88 and Finding 12. In addition, the 2011 Southwest Outage Blackout Report , Finding 27 (at 111) states that "[a] TOP did not have tools in place to determine the phase angle difference between two terminals of its 500 kV line after it tripped."

[66] NERC TOP Petition, Exh. J at 33.

operators can continually maintain an adequate level of situational awareness. In contrast, certification is a one-time process that may not adequately assure continual operational responsibility would occur if these requirements were in a Reliability Standard.

61. In addition, as discussed above, NERC indicates that Standards Project 2009-02, Real-time Monitoring and Analysis Capabilities, will address the Commission directives in Order No. 693 that address a minimum set of analytical tools. According to NERC, this project has a projected completion date of 2014. NERC's retiring of current IRO and TOP requirements that address monitoring and analysis capabilities warrants expedition in the completion of Project 2009-02. The retirement of the current IRO and TOP requirements that address monitoring and analysis capabilities should not occur until the completion and implementation of Project 2009-02.[67] Thus, in its NOPR comments NERC should propose a schedule that it will follow to ensure it completes and implements Project 2009-02 prior to any retirement of the standard such that there would be no gap.

[67] NERC's "Standards Independent Experts Review Project" (Industry Experts Report) identifies one aspect of Project 2009-02 as a "high priority" gap. Industry Experts Report at Appendix F. The Industry Experts Report (App. F) identifies a high priority gap for Project 2009-02 to define the requirements for EMS RTCA models or performance expectations of the models; the Report also says proposed TOP-002 should incorporate current requirement for tools to determine cause of SOL violations.

b. <u>Compliance with Reliability Directives</u>

<u>NERC Petition</u>

62. Currently-effective Reliability Standard TOP-001-1, Requirements R3 and R4 require applicable entities to comply with transmission operators' and reliability coordinators' "reliability directives," which currently is an undefined term. NERC proposes Reliability Standard TOP-001-2, Requirement R1 which requires applicable entities to comply with transmission operators' "Reliability Directives," which NERC proposes to define as "[a] communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts."[68]

63. In its implementation plan, NERC states that it is not proposing any new definitions but that the TOP standard drafting team coordinated with the IRO drafting team to develop a definition of "Reliability Directive." This definition is included in the IRO implementation plan.

<u>Commission Proposal</u>

64. The currently-effective TOP Reliability Standards use "reliability directive," which, as an undefined term, does not appear to be limited to a specific set of circumstances. Also IRO Reliability Standards use the term "reliability directive" in the

---

[68] NERC's proposed definition of Reliability Directive does not appear in the TOP Petition. Rather, NERC proposes the definition in the IRO Petition, Exhibit C at 1 (IRO Implementation Plan).

same manner as an undefined term.[69] In contrast, application of the proposed definition of "Reliability Directive" appears to require compliance with transmission operator directives only in emergencies, not normal or pre-emergency times. We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements). For example, mandatory compliance with directives in non-emergency situations is important when a decision is made to alter or maintain the state of an element on the interconnected transmission network. NERC staff has noted in the context of how to communicate such directives that operating practices for such directives should be consistent, no matter what type of operating condition (normal, alert, emergency) exists.[70] Moreover, the transition from normal to emergency operation can be sudden and indistinguishable until recognized, often after the damage is done.[71]

65. NERC's TOP and IRO petitions do not explain the proposed, defined term "Reliability Directive," or why compliance with a transmission operator's directives should be required only during emergencies (if this is the intent). Accordingly, we seek from NERC and other interested entities clarification and technical explanation regarding

---

[69] *See* Reliability Standard IRO-002-2, Requirement R8.

[70] *See* COM-003-1, Operations Communications Protocols White Paper, May 2012 at 12, *available* at nerc.com.

[71] *See* NERC staff's letter to "Project 2009-22 Interpretation of COM-002-2 R2 for IRC Drafting Team" dated November 18, 2011, at 1, *available* at nerc.com.

the scope and intent of the defined term, as well as the anticipated reliability benefits and/or drawbacks of the proposed term.

66. In addition, while NERC has included the proposed definition in its implementation plan, NERC has not explained or justified its request for approval of the revised definition. The Commission has held that definitions are standards.[72] Therefore, we cannot approve the definition without a technical justification.

c. <u>Consideration of External Networks and sub-100 kV Facilities and Contingencies in Operational Planning Analysis</u>

<u>NERC Petition</u>

67. In proposed Reliability Standard TOP-002-3, Requirement R1, NERC proposes to require transmission operators to prepare an Operational Planning Analysis, i.e., next day study, which represents "projected System conditions" to determine if their planned operations will exceed facility ratings and stability limits for normal and contingency conditions. NERC does not indicate whether this includes external networks or sub-100 kV facilities.

---

[72] As with Reliability Standards, the Commission reviews and approves revisions to the NERC glossary pursuant to FPA section 215(d)(2). Further, the Commission may direct a modification to address a specific matter identified by the Commission pursuant to section 215(d)(5). *See also* Order No. 693, FERC Stats. & Regs. ¶ 31,242 at PP 1893-98.

Commission Proposal

68. It is unclear whether NERC's proposal would require transmission operators to include updated external networks to reflect operating conditions external to their systems and (internal and external) sub-100 kV facilities in their operational planning analyses. In Order No. 693, the Commission directed a modification to planned outage coordination to require consideration of facilities below 100 kV that, in the opinion of the registered entity (such as a transmission operator) "will have a direct impact on the reliability of the Bulk-Power System…."[73] The 2011 Southwest Outage Blackout Report includes similar recommendations that transmission operators should ensure their next-day studies include updated external networks and internal and external facilities (including those below 100 kV) that can impact Bulk-Power System reliability.[74] Although proposed Reliability Standard TOP-002-3, Requirement R1 requires the transmission operator to consider "projected System conditions," it is unclear whether "projected System conditions" include the relevant updated external networks and (internal and external) sub-100 kV facilities.

69. The Commission seeks clarification and technical explanation from NERC whether the term "projected System conditions" in proposed Reliability Standard TOP-002-3 Requirement R1 includes updated external networks to reflect operating

[73] Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1624.

[74] 2011 Southwest Outage Blackout Report, Recommendations Nos. 2 and 3.

conditions external to their systems and sub-100 kV facilities (internal and external) in their operational planning analyses. If not, the Commission seeks comment on the associated reliability risks and, whether it is appropriate to include updated external networks to reflect operating conditions and external and sub-100 kV facilities (internal and external) in the operational planning analyses.

d. Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating States

NERC Petition

70. NERC proposes to delete Reliability Standard TOP-004-2, Requirement R2, which provides that each transmission operator "shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency." NERC's Petition does not provide an explanation for the deletion. However, the NERC "mapping document," which is included as an exhibit to the TOP Petition indicates that NERC intends that Requirement R2 be replaced by proposed Reliability Standards TOP-001-2, Requirements R7 and R9.[75] Proposed Requirement R7 requires each transmission operator to not operate outside any identified IROL "for a continuous duration exceeding its associated IROL T_v." Proposed Requirement R9 states each transmission operator shall not operate outside any SOL identified in Requirement R8 "for a continuous duration that could cause a violation of the Facility Rating or Stability criteria upon which it is based." Further, NERC proposes to replace Reliability

[75] NERC TOP Petition, Exhibit J at 25.

Standard TOP-008-1, Requirement R4 with multiple proposed requirements from proposed Reliability Standards TOP-001-2, TOP-002-3, and TOP-003-2. Reliability Standard TOP-008-1, Requirement R4 requires that the transmission operator have information and analysis tools to determine the causes of SOL violations, such as a most severe single contingency event, and conduct this analysis in all operating timeframes.

71. With regard to unknown operating states, currently-effective Reliability Standard TOP-004-2, Requirement R4 states that, if a transmission operator "enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes."[76] Order No. 693 directed NERC to modify Requirement R4 to restore the system "to respect proven reliable power system limits as soon as possible and in no longer than 30 minutes."[77]

72. In the TOP Petition, NERC proposes to replace Requirement R4 with proposed Reliability Standard TOP-001-2, Requirements R7 through R11. Requirements R7 through 11 address the transmission operator's responsibilities over IROLs or SOLs that have been identified by the transmission operator as necessary to support reliability internal to its transmission operator area. NERC explains that the proposed requirements "do not include an explicit reference to 'unknown state' since system limits can and

---

[76] Reliability Standard TOP-004-2, Requirement R4.

[77] Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1636.

should be determined and conditions can be monitored to know when they have been exceeded."[78] NERC also states that unknown operating states "cannot exist because valid operating limits have been determined for all facilities in a TOP's footprint."[79] In addition, NERC states that the proposed requirements "prohibit operations outside of IROLs, or SOLs identified in TOP-001-2…."[80] Further, NERC explains that proposed Reliability Standard EOP-001-2, which applies to emergency operations planning, covers the general intent of being prepared to react to "Emergencies."[81]

Commission Proposal

73. NERC has proposed to retire three key rules here, i.e., the requirements to be ready for the single largest contingency, to move quickly from an "unknown operating state" to within proven limits, and to determine the cause of SOL violations in all time-frames, including real-time. We believe these three rules represent the bedrock core of real-time operating rules and practices, and it is therefore incumbent upon NERC to provide a more thorough and comprehensive explanation of how the proposed

[78] NERC TOP Petition, Exhibit H at 5.

[79] NERC TOP Petition, Exhibit I at 4.

[80] NERC TOP Petition, Exhibit H at 5.

[81] NERC TOP Petition, Exhibit I (Resolution of Order No. 693 directives) at 4.

replacement standards compare in meeting the same objectives as the current standards. We request comment on these concerns, as elaborated below.[82]

74. In particular, NERC should address whether its proposal would allow a different approach to real-time operational assessments and operation to the most severe single contingencies and, if so, NERC should explain and technically support the nature and associated reliability effects of any different approaches.[83] How are the proposed requirements to not exceed IROLs or certain SOLs for more than the specified times are the functional or implicit equivalent of the current rules? For example, do the proposed rules allow reliance on post-contingency mitigation at times when the current rules would require pre-contingency mitigation? If so, is the difference significant for reliability purposes? Do both the current and proposed rules prohibit an entity from operating for more than 30 minutes in a state where loss of a particular line would cause the loss of enough resources or load to risk cascading outages or instability? Or, if the entity is not yet operating beyond the pre-determined ratings of the particular line, would the

[82] The 2011 Southwest Outage Blackout Report indicated that the September 8, 2011 cascade event "showed that the system was not being operated in a secure N-1 state" and that "[NERC's] mandatory Reliability Standards…require that the BES be operated so that it generally remains in a reliable condition, without instability, uncontrolled separation or cascading, even with the occurrence of any single contingency." 2011 Southwest Outage Blackout Report at 5.

[83] Currently-effective Reliability Standard IRO-008-1, Requirement R2 requires that "[e]ach Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs."

proposed rules allow doing so while the current rules do not? Should all transmission operators be required to run a real-time contingency analysis (RTCA) frequently, since the lack of such analysis can impair situational awareness substantially? Or is the value of such information outweighed for smaller entities with such limited facilities and operations that they generally can maintain similar reliability based on operator experience and judgment without any extra staffing and procedures needed to ensure that the RTCA's informational inputs and modeling are valid and useful?

75. With regard to mitigation of unknown operating states, while NERC asserts that "unknown states" cannot exist, a transmission provider could have valid operating limits for all facilities but lack situational awareness when valid limits are exceeded. In addition, a transmission operator could operate in an unanalyzed or unstudied state (as a result of loss of EMS facilities that meter and report voltage, MW flow and other key system indicators). For example, the 2011 Southwest Outage Blackout Report found that Western Area Power Administration-Lower Colorado was operating in an "unknown state" when it lost its real-time contingency analysis capabilities and, at the same time, did not notify its reliability coordinator to assist with situational awareness.[84] In light of

---

[84] 2011 Southwest Outage Blackout Report, Recommendation 15, at 95 states that "[a]n entity should never be operating in an unknown state, as WALC [Western Area Power Administration-Lower Colorado] was when it lacked functional RTCA [real-time contingency analysis] and State Estimator, and did not ask any other entity to assist it with situational awareness." *Cf*. NERC Compliance Filing, Docket No. RM06-16-000 (Oct. 31, 2008) at 7 ("the Reliability Coordinators in the West operate only to study conditions and note that they do not operate in IROL conditions, only SOLs, unless there are one or more unanticipated outages. In these cases, when an IROL condition is

(continued…)

this concern, the Commission seeks comment and technical explanation from NERC and other interested entities on the proposed retirement. As above, our main question is whether the proposed rules are comparable to the current rules for reliability purposes and, if not, whether the difference is reasonable.

e. <u>System Protection Coordination</u>

<u>NERC Petition</u>

76. NERC proposes to replace currently-effective Requirements R2, R5 and R6 in Reliability Standard PRC-001-1, with proposed Reliability Standard TOP-003-2, Requirement R5.[85] Currently-effective Reliability Standard PRC-001-1, Requirement R2 requires generator operators and transmission operators to notify affected entities of relay or equipment failures and if the failure reduces system reliability, take corrective action as soon as possible. Requirement R5 requires generator operators and transmission operators to coordinate changes in generation, transmission, load or operating conditions with appropriate advance notice that could require changes in the protection systems of others. Requirement R6 obligates transmission operators and balancing authorities to

---

experienced, the Reliability Coordinators must restore the system to a known operating state within 20 minutes for stability concerns and 30 minutes for thermal concerns.").

[85] NERC TOP Petition, Exhibit J at 40 and 41. According to NERC (petition at 4), the "corresponding changes in proposed PRC-001-2 are administrative in nature and are limited to removal of three requirements in currently-effective PRC-001-1 that are now addressed in proposed TOP-003-2, included herein for approval."

monitor the status of each special protection system in their area and to notify affected transmission operators and balancing authorities of a change in status.

77. Proposed Reliability Standard TOP-003-2, Requirement R5 states that entities "receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data." In the standard development process, the standard drafting team explained that a "data specification" is required to contain all of the information that a transmission operator and balancing authority needs to fulfill its obligations.[86] In addition, the standard drafting team stated that the transmission operator and balancing authority "are the best ones to determine the contents of the data specification and that any attempt to provide a minimal list or other guidance would be short-sighted and possibly misleading."[87] The standard drafting team indicated that "an auditor can only question what is contained in the requirements and in this case that

---

[86] *E.g.,* NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on the 7th Draft) at 72. Southwest Power Pool Regional Entity stated that it "does not believe TOP-003-2 addresses the requirements in PRC-001." Exh. D at 73. Texas Reliability Entity states that "Requirements R2, R5 and R6 of PRC-001-1, which are proposed to be deleted, are not actually replaced by any new or revised requirements in other standards, resulting in reliability gaps." Exh. D at 89.

[87] NERC TOP Petition, Consideration of Comments (Consideration of Comments on the 7th Draft) at 79. Southwest Power Pool Standards Review Group states that "[t]o be sure that all the bases are covered, we would suggest that the SDT provide a guideline which incorporates the types of data and information they envisioned when drafting these requirements." *Id.*

would include only the existence of the data specification and not its contents. Any omissions of data will be caught up in failures to adhere to other standards."[88]

Commission Proposal

78. The Commission seeks comment and technical explanation from NERC and other interested entities on how current Reliability Standard PRC-001-1 Requirement R2's requirement for corrective action (i.e., return a system to a stable state) is addressed in its proposal.[89] Further, the Commission proposes that NERC issue guidance on data needed for protection system coordination that addresses the applicable Order No. 693 directives and the proposed retirement of the Reliability Standard PRC-001-1 requirements.[90]

---

[88] NERC TOP Petition, Consideration of Comments (Consideration of Comments on the 7th Draft) at 88. Southwest Power Pool Standards Review Group states that "incorporating protective relay information in the data specifications of R1 and R2 raises the potential for auditors to question the contents of an entity's specification." *Id.* at 79.

[89] In Order No. 693, the Commission required changes to Requirement R2 of Reliability Standard PRC-001-1 to clarify "corrective action" (i.e., return a system to a stable state), specify time limit for notification, and require corrective action as soon as possible but no longer than 30 minutes. Order No. 693, FERC Stats. & Regs. ¶ 31,242 at PP 1441, 1445 and 1449.

[90] In Order No. 693, the Commission directed NERC to develop a modification to Reliability Standard TOP-006-1 to clarify "the meaning of 'appropriate technical information' concerning protective relays" so that "operators can make better informed decisions. An example of such information would be the allowable reclosing angle set in the existing relays and the maximum angle at specific points in the Bulk-Power System that would be acceptable to allow closing of lines during system restoration." Order No. 693, FERC Stats. & Regs. ¶ 31,242, at P 1663 and P 1665.

f. <u>Notification of Emergencies</u>

<u>NERC Petition</u>

79. Currently-effective TOP Reliability Standard TOP-001-1a requires each transmission operator to inform its reliability coordinator and other potentially affected transmission operators "of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency."[91] In its petition, NERC proposes to retire Reliability Standard TOP-001-1a and proposes as replacements Requirements R3-R6 of Reliability Standard TOP-001-2. In particular, Requirement R3 provides "[e]ach Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis."[92] In addition, Requirement R3 has a time horizon of "Operations Planning," which NERC describes as the "operating and resource plans from day-ahead up to and including seasonal" and does not include same-day operations or real-time operations.[93]

---

[91] Reliability Standard TOP-001-1a, Requirement R5.

[92] The NERC Glossary defines Operational Planning Analysis as "[a]n analysis of the expected system conditions for the next day's operation... (That analysis may be performed either a day ahead or as much as 12 months ahead.). Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints."

[93] *See* NERC Time Horizons at 1, *available* at http://www.nerc.com/pa/Stand/Resources/Documents/TimeHorizons.pdf at 1.

Commission Proposal

80. NERC's proposed revisions warrant clarification. Read one way, proposed Requirement R3 is less comprehensive than the currently-effective requirements pertaining to notification of emergencies. Yet, it also contains provisions that, read another way, could require TOPs to notify others of all emergencies, not just day-ahead.[94] Indeed, during the standard development process, similar concerns were expressed.[95]

81. Similarly, it is not clear whether proposed Reliability Standard TOP-001-2, Requirement R5 would address same-day and real-time operating emergencies not covered by TOP-001-2, Requirement R3. Proposed TOP-001-2, Requirement R5, states that "[e]ach [TOP] shall inform its [RC] and other [TOPs] of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas…." The definition of Adverse Reliability Impact in NERC's TOP filing is "[t]he impact of an event that results in frequency related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that

[94] An "anticipated" emergency should apply to all operational time horizons: operations planning, same-day, and real-time. Further, an "actual" emergency could only occur during the real-time operational time horizon.

[95] NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on the 7th Draft) at 21: "R3 seems to be missing some words…it is not clear if this requirement is supposed to be about planning ("expected to be affected by anticipated Emergencies") or real-time operations ("known to be affected by actual Emergencies") or both. If the latter is intended, the Time Horizon should include Real-Time Operations and Same Day Operations…." The standard drafting team responded that "it is clear as to what needs to be communicated." *Id.* at 23.

affects a widespread area of the Interconnection."[96] In contrast, NERC defines Emergency as "[a]ny abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System." An Adverse Reliability Impact is an event that results in instability, or cascade conditions, while an Emergency includes conditions that could be a precursor to an Adverse Reliability Impact. Thus, the notification provisions of Requirement R5 do not cure the possible ambiguity in proposed Requirement R3.

82. While NERC states that the obligation to notify for real-time emergency conditions was replaced by proposed Requirement R3, NERC does not indicate in its petition that the real-time or same-day obligation was purposely deleted or offer an explanation for the deletion.[97] We believe that, consistent with the currently-effective TOP Reliability Standards, the notification requirement of proposed Reliability Standard TOP-001-2 should apply to all emergencies, including real-time and same day emergencies. The Commission seeks comment from NERC and other interested entities regarding (1) the proper understanding of the scope of the notification provisions in the proposed requirements and (2) if the notification does not include all operational time

[96] NERC TOP Petition at 19. In the IRO Petition, NERC cites a different definition of Adverse Reliability Impact: "[t]he impact of an event that results in Bulk Electric System instability or cascading." NERC IRO Petition at 13, n20.

[97] NERC TOP Petition, Exhibit C at 3.

horizons, technical justification for why transmission operators should not be required to notify reliability coordinators and other affected transmission operators of all emergencies in all operating time horizons.

83. In addition, as noted above, NERC uses two different definitions of Adverse Reliability Impact in the TOP and IRO Petitions. NERC has not explained the intent or effect of the two definitions, and the term is used in several provisions of the proposed TOP and IRO Reliability Standards. The Commission seeks clarification and a technical explanation from NERC and other interested entities regarding the two definitions, including if it is proposing a revised definition, which definition it is proposing. In addition, if the definition NERC is proposing no longer includes the phrase "uncontrolled separation" NERC should explain the removal of the statutory phrase "uncontrolled separation."

g. Primary Decision-Making Authority for Mitigation of IROLs/SOLs

84. NERC's proposal contains a potential overlap in authority between the transmission operator and reliability coordinator with regard to the provisions pertaining to mitigation of IROLs and SOLs as set forth in the proposed TOP and IRO Standards.

85. NERC states in its TOP Petition that "[t]he responsibility for monitoring and handling IROLs is primarily given to the Reliability Coordinator, but the Transmission Operator has the primary responsibility to designate any SOLs that require special

attention."[98] Likewise, NERC also states that an improvement resulting from the changes to the IRO Reliability Standards is that they delineate a clean division of responsibilities between the reliability coordinator and transmission operators to "help to ensure that the Reliability Coordinator is responsible for identifying and controlling operations associated with IROLs and the Transmission Operator is responsible for identifying and controlling operations associated with SOLs."[99] Proposed Reliability Standard IRO-001-3, Requirement R1, provides that each reliability coordinator "shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact." Further, currently-effective Reliability Standard IRO-009-1, Requirement R4 states that "[w]hen actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's T_v."[100]

86. However, proposed Reliability Standard TOP-001-2, Requirement R11 provides similar authority for the transmission operator with respect to IROLs. NERC proposes

[98] NERC TOP Petition at 15.

[99] NERC IRO Petition at 5-7.

[100] Reliability Standard IRO-009-1, Requirement R4.

that each transmission operator "shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8."[101]

87. NERC's proposal with respect to mitigating IROLs appears to give both the transmission operator and reliability coordinator authority to act.[102] Therefore, we seek clarification and technical explanation whether the reliability coordinator or the transmission operator has primary responsibility for IROLs.

B. IRO Reliability Standards

88. As discussed above, because of the interrelationship of the TOP and IRO Reliability Standards, the Commission proposes to remand proposed IRO Reliability Standards: IRO-001-3, IRO-002-3; IRO-005-4; and IRO-014-2. In addition, as discussed below, as part of the remand, the Commission proposes to direct that NERC develop modifications with regard to planned outage coordination. We also seek comment from NERC and other interested entities regarding several proposed provisions

[101] NERC's TOP Petition (at 15) states that "the delineation in the proposed TOP Reliability Standards with respect to operating within an identified IROL…is an important distinction in the proposed TOP Reliability Standards that is necessary for reliability."

[102] NERC in its 2009 filing to revise and add new IRO standards (RM10-15-000 petition at 8) states that under its "Functional Model, the reliability coordinator is the functional entity with the highest level of responsibility and authority for the real-time reliability of the bulk power system."

of the IRO Reliability Standards. Depending on the responses in the NOPR comments, the Commissions may issue further directives in the final rule in this proceeding.

1. Issues to be Addressed

a. Planned Outage Coordination

NERC Petition

89. In its IRO petition, NERC proposes to retire Reliability Standard IRO-005-3.1a, Requirement R6, which requires reliability coordinators to "coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities and Generator Operators as needed in both the real-time and next-day reliability analysis timeframes."[103] NERC states that the "coordination aspects of this part of Requirement R6 are addressed in the requirements of currently-effective IRO-008-1,[104] Requirement R3, and IRO-010-1a, Requirement R3," which provide:

> **IRO-008-1, R3.** When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
>
> **IRO-010-1a, R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and

---

[103] NERC IRO Petition at 33-34.

[104] NERC IRO Petition at 34.

information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

Commission Proposal

90. The Commission is concerned with NERC's proposal because Reliability Standards IRO-008-1, Requirement R3 and IRO-010-1a do not require coordination of outages. Outage coordination is a critical reliability function that should be performed by the reliability coordinator. Outage coordination is an integral part of the operational planning process with generation outages being scheduled from three to five years in advance and transmission maintenance and construction outages being scheduled one to three years in advance. Outages that have been planned well in advance still must go through a month-ahead, week-ahead, and sometimes even a day-ahead approval process depending on system topography and system conditions that may change as the scheduled maintenance outage approaches. For instance, forced outages often disrupt planned outage schedules. Therefore, the Commission believes it is essential that, as the functional entity with the wide-area view, the reliability coordinator coordinates this critical area of operational planning.[105]

---

[105] The Independent Experts Report identifies outage coordination as one of the key areas where risk to the Bulk-Power System is not adequately mitigated. Industry Experts Report at 15. The Independent Experts Report proposes (Appendix H) to fill this gap "by giving the Reliability Coordinator the authority and responsibility to develop and implement a generation and transmission outage coordination process across Transmission Operators and Balancing Authorities in their footprint" and "between its adjacent Reliability Coordinators." Industry Experts Report at 31. This outage coordination process "shall cover the time period from the current operating hour out through at least 36 months." In addition, The 2011 Southwest Outage Blackout Report

(continued…)

91. Because outage coordination is critical to operations planning and the reliability coordinator has the needed wide-area view for operations planning, on remand, the Commission proposes to direct NERC to develop modifications to the IRO Reliability Standards that would require the reliability coordinator to have the authority and responsibility to develop and implement a generation and transmission outage coordination and planning process across transmission operators and balancing authorities in its footprint and between its adjacent reliability coordinators for the operations planning timeframe.[106]

2. IRO Reliability Standards – Issues Requiring Clarification

a. Use of a Secure Data Network

NERC Petition

92. Currently-effective Reliability Standard IRO-002-2, Requirement R2, requires that the data exchange between the reliability coordinator, transmission operator, and balancing authority be accomplished "via a secure network." According to NERC, the requirement to provide information via a "secure network" is now addressed in NERC

(at 67) found a problem with Imperial Irrigation District's lack of awareness of another entity's planned generation outage.

[106] This proposed directive is consistent with the Order No. 693 directive for NERC to modify Reliability Standard TOP-003-1, Planned Outage Coordination, to require communication of scheduled outages to affected entities well in advance. Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1620 through P 1624. In addition, the Commission has a similar concern with proposed Reliability Standard TOP-003-2 because it is not clear whether it addresses planned outage coordination.

Rules of Procedure, Section 1002 (Reliability Support Services).[107] NERC also indicates that Requirement R2 is now addressed in proposed Reliability Standard IRO-014-2, Requirements R1, R2, and R3.

Commission Proposal

93. Although NERC cites Section 1002 of the Rules of Procedure and proposed Reliability Standard IRO-014-2 as providing for the use of a secured data network, NERC does not explain how secured networks are covered in those sections. While Section 1002 of the NERC Rules and Reliability Standard IRO-014-2, Requirements R1, R2, and R3 address notification and exchange of information and data and coordination of actions, no language in these provisions appears to require the data exchange or notifications to be conducted in a secure mode.

94. A secure network is essential to prevent unauthorized access to or modification of information that is critical for interconnected transmission network reliability functions performed by reliability coordinators. Therefore, we seek comment and technical explanation from NERC and other interested parties regarding how the identified section in the Rules of Procedure and Reliability Standard IRO-014-2, Requirements R1, R2, and

[107] NERC IRO Petition at 16, quoting section 1002 of the NERC Rules of Procedure which states in part that "NERC may assist in the development of tools and other support services for the benefit of Reliability Coordinators and other system operators to enhance reliability, operations and planning. NERC states that it will work with the industry to identify new tools, collaboratively develop requirements, support development, provide an incubation period, and at the end of that period, transition the tool or service to another group or owner for long term operation of the tool or provision of the service."

R3 ensure that the data exchange and notifications will be conducted using a secure mode in a secure environment.

b. Reliability Coordinator Monitoring of SOLs and IROLs

NERC Petition

95. NERC proposes to retire Reliability Standard IRO-002-2, Requirements R4 through R7, which require reliability coordinators to monitor IROLs and SOLs. Requirement R5 requires reliability coordinators to monitor bulk electric system elements that could result in SOL or IROL violations. NERC argues that it is appropriate to retire these requirements because: (1) an SOL is unlikely to have an impact on the wide-area reliability of the Bulk-Power System as it will generally not have an impact outside the affected transmission operator's area and (2) Requirement R4 is redundant with the requirements contained in existing Reliability Standards IRO-010-1a, and EOP-008-1.[108] NERC also asserts that these requirements are redundant with proposed Reliability Standard TOP-001-2, Requirements R8 through R11.

Commission Proposal

96. Although NERC's petition focuses on the appropriate entity to identify SOLs, it does not adequately explain the proposed retirement of the currently-effective Reliability Standard IRO-002-2 that establishes the obligation for reliability coordinators to monitor SOLs. With regard to NERC's explanation that Reliability Standard IRO-002-2

[108] NERC IRO Petition at 19-24.

Requirement R4 is redundant with the requirements contained in IRO-010-1a and EOP-008-1, neither of these Reliability Standards requires the reliability coordinator to monitor SOLs.

97. The reliability coordinator's monitoring function is important to ensure that the reliability coordinator can identify, assess and take appropriate action so that elements of the system do not operate outside established limits causing cascading outages or blackouts. Thus, monitoring is not simply a support function but a major reliability activity necessary to maintain situational awareness and ensure reliable operation of the interconnected transmission network. As we explain above, the reliability coordinator's obligation to monitor SOLs is important to reliability because an SOL can evolve into an IROL during deteriorating system conditions, and for potential system conditions such as this, the reliability coordinator's monitoring of SOLs provides a necessary backup function to the transmission operator.

98. Notwithstanding these concerns, currently-effective Reliability Standard IRO-003-2, Requirements R1 and R2 address the concern over monitoring of SOLs and IROLs, which provide:

> **R1**. Each Reliability Coordinator shall monitor all Bulk Electric System facilities, which may include sub-transmission information, within its Reliability Coordinator Area and adjacent Reliability Coordinator Areas, as necessary to ensure that, at any time, regardless of prior planned or unplanned events, the Reliability Coordinator is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit violations within its Reliability Coordinator Area.
>
> **R2**. Each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL or

> IROL violation. Reliability Coordinators shall also know the status of any facilities that may be required to assist area restoration objectives.

Thus, the Commission seeks comment on whether the currently-effective Reliability Standard IRO-003-2 Requirements R1 and R2 require reliability coordinators to monitor all SOLs and IROLs.

C. Proposed Revisions to Reliability Standard TOP-006-3

99. Pursuant to section 215(d)(5) of the FPA, we propose to approve NERC's proposed revisions to Reliability Standard TOP-006-3 as just, reasonable, not unduly discriminatory or preferential, and in the public interest. We believe that the proposed revisions reasonably clarify that transmission operators are responsible for monitoring and reporting available transmission resources and that balancing authorities are responsible for monitoring and reporting available generation resources is reasonable. Further, NERC's proposed revision to TOP-006-3 is consistent with the Commission's approval of NERC's approach to ensure that reliability entities have clear decision-making authority and capabilities to take appropriate actions with a clear division of responsibility with respect to balancing authority and transmission operator responsibilities during a system emergency.[109]

---

[109] *Electric Reliability Organization Interpretation of Transmission Operations Reliability Standard*, 136 FERC ¶ 61,176 (2011).

III. Information Collection Statement

100. The Commission's information collection requirements are typically subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995.[110] However, by remanding the TOP and IRO Reliability Standards, any information collection requirements are unchanged. With regard to proposed Reliability Standard TOP-006-3, the Commission estimates that the information collection burden will not change as compared to the currently-effective standard. The reporting requirements for transmission operators and balancing authorities remain unchanged because the new requirements clarify the existing standard that the transmission operators report transmission information, while the balancing authorities report generation information.

IV. Environmental Analysis

101. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[111] The Commission has categorically excluded certain actions from this requirement as not having a significant effect on the human environment. Included in the exclusion are rules that are clarifying, corrective, or

---

[110] 44 U.S.C. 3507(d) (2012).

[111] Order No. 486, Regulations Implementing the National Environmental Policy Act, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. Preambles 1986-1990 ¶ 30,783 (1987).

procedural or that do not substantially change the effect of the regulations being amended.[112] The actions proposed herein fall within this categorical exclusion in the Commission's regulations.

V. Regulatory Flexibility Act Certification

102. The Regulatory Flexibility Act of 1980 (RFA)[113] generally requires a description and analysis of final rules that will have significant economic impact on a substantial number of small entities. The RFA mandates consideration of regulatory alternatives that accomplish the stated objectives of a proposed rule and that minimize any significant economic impact on a substantial number of small entities. The Small Business Administration's (SBA) Office of Size Standards develops the numerical definition of a small business.[114] The SBA has established a size standard for electric utilities, stating that a firm is small if, including its affiliates, it is primarily engaged in the transmission, generation and/or distribution of electric energy for sale and its total electric output for the preceding twelve months did not exceed four million megawatt hours.[115] The RFA is not implicated by this NOPR because the Commission is proposing to remand the TOP and IRO Reliability Standards and not proposing any modifications to the existing burden or reporting requirements. With no changes to the TOP and IRO Reliability Standards as

---

[112] 18 CFR 380.4(a)(2)(ii).

[113] 5 U.S.C. 601-612.

[114] 13 CFR 121.201.

[115] *Id.* n.22.

approved, the Commission certifies that this NOPR will not have a significant economic impact on a substantial number of small entities.

103. In addition, for proposed Reliability Standard TOP-006-3, the Commission estimates that there will be no material change in burden for all small entities because the effect of the changes merely clarify that transmission operators are responsible for reporting transmission information while balancing authorities are responsible for reporting generation information.

VI. Comment Procedures

104. The Commission invites interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due [**INSERT DATE 60 days after publication in the FEDERAL REGISTER]**]. Comments must refer to Docket No. RM13-15-000, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments.

105. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's web site at http://www.ferc.gov. The Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

106. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC, 20426.

107. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

VII. Document Availability

108. In addition to publishing the full text of this document in the Federal Register, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the Internet through the Commission's Home Page (http://www.ferc.gov) and in the Commission's Public Reference Room during normal business hours (8:30 a.m. to 5:00 p.m. Eastern time) at 888 First Street, NE, Room 2A, Washington DC 20426.

109. From the Commission's Home Page on the Internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

110. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at (202) 502-6652 (toll free at 1-866-208-3676) or email at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. E-mail the Public Reference Room at public.referenceroom@ferc.gov.

By direction of the Commission.

Deputy Secretary.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Monitoring System Conditions - Transmission Operations Reliability Standard	Docket No. RM13-12-000
Transmission Operations Reliability Standards	Docket No. RM13-14-000
Interconnection Reliability Operations and Coordination Reliability Standards	Docket No. RM13-15-000

MOTION OF THE NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION TO DEFER ACTION

Pursuant to Rule 212 of the Federal Energy Regulatory Commission's ("FERC" or "the Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212, the North American Electric Reliability Corporation ("NERC")[1] hereby submits this Motion to Defer Action on NERC's request to approve revisions to the Transmission Operations ("TOP") and Interconnection Reliability Operations and Coordination ("IRO") Reliability Standards until **January 31, 2015**.

I. BACKGROUND

On April 5, 2013, in Docket No. RM13-12-000, NERC proposed revisions to Reliability Standard TOP-006-3 to clarify that Transmission Operators are responsible for monitoring and reporting available transmission resources and that Balancing Authorities are responsible for monitoring and reporting available generation resources.

On April 16, 2013, in Docket No. RM13-14-000, NERC submitted for Commission approval three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection

[1] The Commission certified NERC as the electric reliability organization ("ERO") in accordance with Section 215 of the FPA on July 20, 2006. *N. Am. Elec. Reliability Corp.*, 116 FERC ¶ 61,062 (2006).

Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the "TOP Standards") to replace the eight currently-effective TOP standards. Additionally, on April 16, 2013, in Docket No. RM13-15-000, NERC submitted for Commission approval four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the "IRO Standards") to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR addressing the three petitions noted above (the TOP-006-3 petition, the TOP Standards petition, and the IRO Standards petition), which proposes to approve the proposed TOP-006-3 standard but remand the proposed TOP and IRO Standards.[2] In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards."[3] For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.[4]

III. MOTION

Consistent with NERC's responsibility as the Electric Reliability Organization ("ERO") to develop Reliability Standards that provide for an adequate level of reliability of the Bulk-Power System, NERC respectfully requests that the Commission defer action in this proceeding to allow NERC time to consider the reliability concerns raised by the Commission in the NOPR. With respect to the proposed TOP and IRO Standards, NERC recently commissioned an independent review of its Reliability Standards, which also noted concerns with the TOP and IRO Reliability Standards submitted in this proceeding.[6] Specifically, the independent review identified the proposed TOP-001-2 (Transmission Operations), PRC-001-2 (System Protection

---

[5] Persons to be included on the Commission's service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission's regulations, 18 C.F.R. § 385.203 (2013), to allow the inclusion of more than two persons on the service list in this proceeding.

[6] *Available at*: http://www.nerc.com/pa/Stand/Standards%20Development%20Plan%20Library/Standards_Independent_Experts_Review_Project_Report.pdf.

Coordination), IRO-001-3 (Responsibilities and Authorities), and IRO-005-4 (Current Day Operations) as high risk standards requiring improvement.[7] Given these concerns, and the issues identified by the Commission in the NOPR, revisions to the proposed Reliability Standards may be required. Accordingly, NERC requests that the Commission defer action in this proceeding until **January 31, 2015**.[8]

NERC recognizes that proceeding through the administrative process of responding to the NOPR, especially given the concerns articulated by the Commission, will require a significant effort by NERC and industry. While this exercise is not without merit, a more efficient use of industry, NERC, and FERC's resources is to first examine the technical issues in the standards through NERC-led technical conferences with active industry and FERC participation. As described in **Attachment A**, NERC will hold two technical conferences to identify and assess concerns regarding the TOP and IRO Standards, such as the monitoring of SOLs, unknown operating states, and outage coordination. Concurrently, NERC will work with the NERC Standards Committee to re-formulate a standard drafting team to begin development work on revisions to the proposed standards, which would be informed by the technical conferences. Additionally, in response to the concerns noted by the Commission in the NOPR on the development of a minimum set of analytical tools (analysis and monitoring capabilities) to ensure that a Reliability Coordinator has the tools it needs to perform its functions ("Real-Time Tools"), NERC will continue development of standards that address Real-Time Tools as they relate to the proposed TOP and IRO standards, which could continue to be included as part of

---

[7] The complete *Standards Independent Experts Review Project* report is available at: http://www.nerc.com/pa/Stand/Standard%20Development%20Plan/Standards_Independent_Experts_Review_Project_Report-SOTC_and_Board.pdf.

[8] With respect to the proposed TOP-006-3 Reliability Standard, while the Commission raised no significant concerns in the NOPR related to this standard, NERC requests that this Motion to Defer Action also apply to that pending standard given that it was addressed by the Commission in the same NOPR as the proposed TOP and IRO standards. NERC will re-file the proposed TOP-006-3 standard for approval separate from this proceeding.

Project 2009-02, Real-time Monitoring and Analysis Capabilities, or in revisions to the proposed TOP and IRO standards. Conforming changes to standards outside of the scope of this proceeding may be required depending on the extent of the changes made to the proposed TOP and IRO Standards.[9]

Deferring action on the NOPR until January 31, 2015 will provide NERC time to hold the technical conferences and develop any necessary revisions to the TOP and IRO standards for Commission approval. While a deferral until January 31, 2015 may seem extended at first glance, the proposed schedule is compressed given the complexity of these highly technical issues and the necessity to reach consensus through the standard development process. Given the scope of the work and the need for a deferral of Commission action on these standards, NERC commits to providing the Commission with quarterly reports regarding the status of revisions.

Accordingly, given the concerns articulated by the Commission in the NOPR, NERC respectfully requests an opportunity to work with industry and FERC to analyze the concerns and propose a new path forward. This Motion to Defer Action, if granted, would provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR, would afford time to review the proposed TOP and IRO Standards through the NERC standards development process, and would help the industry, NERC, and FERC work toward a common set of solutions to develop a set of standards that are technically justifiable and important for reliability.

---

9 For example, in order to address the Commission's concerns with respect to the requirement in the proposed standards that a Transmission Operator must only provide notification of SOLs identified in a next-day Operational Planning Analysis rather than in the same-day or real-time operational time horizon, changes may need to be made to other IRO standards outside the scope of this proceeding.

IV. CONCLUSION

For the reasons set forth above, NERC respectfully requests that the Commission defer action in this proceeding until **January 31, 2015**.

Respectfully submitted,

/s/ Holly A. Hawkins

ATTACHMENT A

Monitoring System Conditions – Transmission Operations Reliability Standards and Interconnection Reliability Operations and Coordination Reliability Standards

DRAFT Technical Conference Agenda

I. The Need for Revisions to the TOP and IRO Reliability Standards

- Notice of Proposed Rulemaking, 145 FERC ¶ 61,158 (2013)
    - Proposed directives

II. Technical Issues

- System Operating Limits
    - Plan and Operate within all System Operating Limits
        - 30 Minute Timeframe or T_m concept

- System Models, Operating and Tools
    - Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating Status
    - Analysis capabilities in Real-time operations
    - Are requirements for monitoring necessary in standards or is certification a sufficient backstop for this capability?

- Primary Decision-Making Authority for Mitigation of Interconnection Reliability Operating Limits/System Operating Limits
    - Does the Reliability Coordinator have sole responsibility for IROLs?

- Planned Outage Coordination

- Use of the term 'Reliability Directive'

Standards Announcement Updated

Project 2014-03 Revisions to TOP and IRO Standards Standard Authorization Request

Formal Comment Period Now Open through March 24, 2014

Now Available

A 30-day formal comment period for the **Project 2014-03 – Revisions to TOP and IRO Standards** Standard Authorization Request (SAR) is open through **8 p.m. Eastern on Monday, March 24, 2014.**

Instructions for Commenting

The comment period is open through **8 p.m. Eastern on Monday, March 24, 2014.** Please use the electronic form to submit comments on the SAR. If you experience any difficulties in using the electronic form, please contact Wendy Muller. An off-line, unofficial copy of the comment form is posted on the project page.

For information on the **Standards Development Process**, please refer to the Standard Processes Manual.

Consideration of Comments

Project 2014-03 Revisions to TOP and IRO Standards

The Project 2014-03 Drafting Team thanks all commenters who submitted comments on SAR. These standards were posted for a 30-day public comment period from February 21, 2014 through March 24, 2014. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 24 sets of comments, including comments from approximately 103 different people from approximately 73 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

All comments submitted may be reviewed in their original format on the standard's project page.

The SDT has made the following changes to the SAR as a result of industry comments:

- Modified the language to show that the intent of the SAR is simply to evaluate how best to respond to the directive in Order 693, paragraph 1855.
- Added the SW Outage Report as another source of input to the SDT deliberations.
- Added the Transmission Service Provider, Transmission Owner, and Interchange Authority to the list of applicable entities.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Mark Lauby, at 404-446-2560 or at mark.lauby@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Standard Processes Manual: http://www.nerc.com/comm/SC/Documents/Appendix_3A_StandardsProcessesManual.pdf

Index to Questions, Comments, and Responses

The Industry Segments are:

1 — Transmission Owners

2 — RTOs, ISOs

3 — Load-serving Entities

4 — Transmission-dependent Utilities

5 — Electric Generators

6 — Electricity Brokers, Aggregators, and Marketers

7 — Large Electricity End Users

8 — Small Electricity End Users

9 — Federal, State, Provincial Regulatory or other Government Entities

Organization	Agree	Supporting Comments of "Entity Name"
N/A	N/A	N/A

1. Do you agree with the scope and contents of the SAR? If not, please provide specific comments and suggestions for SDT consideration.

Summary Consideration: The SAR is proposing to evaluate how to respond to the directive in Order 693, paragraph 1855. It is not a commitment to add requirements anywhere but simply to address the directive within this project. It is not a commitment to add requirements anywhere but simply to address the directive within this project. The directive links back to the TOP and IRO standards as it points to the fact that this issue isn't covered within those standards. If a change to standards is required, now that the IRO standards are opened up through this SAR and project, it may make sense to resolve the issue within the IRO standards as opposed to the VAR standards. If the issue can't be handled within this project, the directive will be returned to the VAR team. To clarify this, the language in the SAR has been modified.

Address the following directive from Order 693, paragraph 1855:

Organization	Yes or No	Question 1 Comment
Southern Company: Southern Company Service, Inc.; Alabama Power Company; Georgia Power Company; Gulf Power Company; Mississippi Power Company; Southern Company Generation; Southern Company Generation and Energy Marketing	No	Southern Company proposes removing Item #5 from the SAR. First, Southern Company does not believe the scope of the SAR should include monitoring responsibilities for the Reliability Coordinator in the IRO family of standards. Southern Company agrees with NERC regarding the monitoring functions being an intrinsic part to the Reliability Coordinator's role. NERC proposed the retirement of Reliability Standard IRO-002-2 Requirements R4, R5, R6, and R7, which address real-time monitoring and analysis capabilities and functions required to enable the reliability coordinator to perform its responsibilities. NERC also believes these requirements are unnecessary because they are inherent in the reliability coordinator's duty to maintain area control error or operate within IROLs/SOLs and can be verified in the certification process. Likewise, Southern Company agrees with NERC and believes that there are requirements that require operation within SOLs and IROLs, which are more

Organization	Yes or No	Question 1 Comment
		“results based.” It is not practical to have a requirement to measure real-time monitoring nor is this necessary. The real reliability objective is to operate within identified parameters as required in IRO-005-3.1a, IRO-006_EAST-1, IRO-008-1, IROL-009-1, PER-005-1, TOP-001-2, TOP-002-2.1b, TOP-004-2, TOP-007-0, TOP-008-1, VAR-001-3, not to monitor. Secondly, as it relates to modifying the TOP and/or IRO standards to specifically assure that voltage and reactive resources are being maintained, there are multiple existing standards that require the Reliability Coordinator to establish and operate within SOL/IROLS, which include operating within system voltage limits. Modifying the TOP and/or IRO standards as shown in #5 of the SAR creates redundancy with existing standards, which goes against the Paragraph 81 principles. See the following standards that require the Reliability Coordinator to operate within SOLs and IROLs: o FAC-011-2: The purpose of FAC-011-2 states, “To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.” Since this requires documented methodology for SOLs, which includes system voltage limits, modifying the TOP and/or IRO standards as shown in #5 of the SAR would create redundancy with FAC-011-2. o FAC-014-2: The purpose of FAC-014-2 states, “To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.” Since this standard requires establishment of SOLs and IROLs, which includes system voltage limits, modifying the TOP and/or IRO standards as shown in #5 of the SAR would create redundancy with FAC-014-2.

Organization	Yes or No	Question 1 Comment
		o IRO-008-1 R1: Modifying the TOP and/or IRO standards as shown in #5 of the SAR would create redundancy with IRO-008-1 R1 that requires RCs to perform assessments to ensure they do not exceed IROLs, which includes system voltage limits.
MRO NERC Standards Review Forum	No	This SAR is to respond to a NOPR concerning various TOP and IRO standards. The NSRF does not see how Item 5 in the "Detailed Description" should be included in the scope of this SAR. The FERC directive referenced discusses adding the Reliability Coordinator as an applicable entity in VAR-001 and does not tie it back to the TOP or IRO standards. Please remove item 5 from the detailed description
Alliant Energy	No	This SAR is to respond to a NOPR concerning various TOP and IRO standards. Alliant Energy does not see how Item 5 in the "Detailed Description" should be included in the scope of this SAR. The FERC directive referenced discusses adding the Reliability Coordinator as an applicable entity in VAR-001 and does not tie it back to the TOP or IRO standards. Please remove item 5 from the detailed description.
Response: The SAR is proposing to evaluate how to respond to the directive. It is not a commitment to add requirements anywhere but simply to address the directive within this project. The directive links back to the TOP and IRO standards as it points to the fact that this issue isn't covered within those standards. If a change to standards is required, now that the IRO standards are opened up through this SAR and project, it may make sense to resolve the issue within the IRO standards as opposed to the VAR standards. If the issue can't be handled within this project, the directive will be returned to the VAR team. To clarify this, the language in the SAR has been modified. Address the following directive from Order 693, paragraph 1855:		
Northeast Power Coordinating Council	No	TOP-001-2 Requirements R1 and R2 have wording issues that could result in double-jeopardy for non-compliance. The original language provided for a very narrow limitation on the reasoning and the contact; and they were tied together. This language allows for the potentially different reasoning being

Organization	Yes or No	Question 1 Comment
		allowed for one's inability to provide notice. If each function needs to be separate, then Requirement R4 should be made into two requirements. Who's to say that the information is requested AND available? TOP-002 contains a potential conflict with FERC Order 888, requiring TOPs provide GOs with information about their role in SOL mitigation plans. The SAR must address these concerns.
Response: The comments will be passed to the SDT for consideration during development.		
Florida Municipal Power Agency	No	FMPA has only one comment on the SAR, and that is to not only address comments/input from the technical conference, but also the comments/input requested from industry related to the technical conference issues, and other issues raised by those commenters.
Response: The SDT will respond to all issues raised for this project regardless of whether they are explicitly noted or not. It is probably a fruitless exercise to try to list all possible sources but for additional clarity, the SDT has added the SW Outage Report as another source.		
American Transmission Company, LLC	No	When reviewing the proposed SAR, there is a series of IRO Reliability Standards listed in "Related Standards" section on pg.6 of the SAR, however, no reference to the TOP Standards. (see list below) o TOP-001-2-Transmission Operations o TOP-002-3-Operations Planning o TOP-003-2-Operational Reliability Data These TOP Standards are referenced in the FERC NOPR and also contained in the subject SAR Information (Industry Need).These TOPs are further described as part of the "Detailed Description" where the SDT Shall:1. Revise the TOP/IRO Reliability Standards filed under Projects 2007-03 and 2006-06 to address concerns expressed in the NOPR. ATC also noted that

Organization	Yes or No	Question 1 Comment
		the three TOPs listed above are included in the project tracking Spreadsheet found within the Weekly Standards Bulletin. Based on the above information, ATC recommends that the SDT consider adding the three TOPs listed above as “Related Standards” which are subject to revision as part of the scope for this Standards Project. a. Use the inputs from technical conferences to advise actions
Response: The three TOP standards referenced are part of the base project as shown in the details of the SAR and as such do not belong in the ‘Related Standards’ section of the SAR. That section shows standards that are not part of the base project and which might have to be revised in order to conform to changes made in the original subject TOP and IRO standards. No change made to the SAR. The SDT is obligated to use the inputs from the technical conferences.		
American Electric Power	No	AEP agrees with the overall approach taken by NERC to solicit industry input in addressing FERC’s concerns, however the current SAR lacks specificity, as it is not clear exactly how NERC proposes the identified standards be changed. AEP will reserve any agreement with the SAR until it is further developed.
Response: The SAR did not contain any proposed changes to the standards in question because the Technical Conferences were to provide input to the SDT as to what those changes should be. The SAR sets up the scope of work.		
Idaho Power	No	I do not believe that the SDT should address the goals in Project 2009-02. Address the FERC directives for the November 21, 2013 NOPR without increasing the scope of the project.
Response: The SAR provides discretion to the SDT in handling the goals of Project 2009-02 as needed but doesn’t mandate its inclusion in this project.		
Duke Energy	Yes	Duke Energy agrees with the scope of this project.

Organization	Yes or No	Question 1 Comment
ACES Standards Collaborators	Yes	We support the concept of deferring action on the standards to allow industry and NERC to address FERC concerns with the standards. Therefore, we are supportive of the SAR since its primary purpose is to address the concerns raised in the FERC NOPR. Since both of the original standards projects were initiated many years ago, much has changed with NERC's compliance and enforcement programs and standards processes. Reviewing the standards with these latest programs and processes in consideration makes sense at this juncture.
National Rural Electric Cooperative Association (NRECA)	Yes	NRECA filed in support the NERC filing to defer action on the subject TOP and IRO standards to allow industry and NERC to address FERC concerns with the standards. In doing so, NRECA agrees with the scope of the SAR since its primary purpose is to address the concerns raised in the FERC NOPR.
Oncor Electric Delivery Company LLC	Yes	Refer to Oncor's TOP/IRO Technical Conference comments for specific suggestions and recommendations for the SDT to consider.
PJM Interconnection	Yes	PJM supports the scope and approach of the SAR which will look to include other applicable standards, i.e., IRO standards, in response to FERC's remand of the TOP and IRO standards included in their NOPR issued November 21, 2013. PJM supported the revised TOP and IRO standards as submitted to the FERC in April, 2013 as they provided the correct authority and responsibilities for real time operations. To maintain the intent of those revised standards and to appropriately address the FERC's concerns in the NOPR, this SAR is employing a sound approach to review all applicable standards to assure situational awareness, maintain results-based standards and eliminate overlap in responsibilities and not delay response to real time operational issues that may have negative consequences.

Organization	Yes or No	Question 1 Comment

SPP RE	Yes	
Bonneville Power Administration	Yes	
SPP Standards Review Group	Yes	
Exelon	Yes	
Independent Electricity System Operator	Yes	
FirstEnergy	Yes	
Kansas City Power & Light	Yes	
California ISO	Yes	
Response: Thank you for your support.		

2. Are you aware of any regional variances associated with approved NERC Reliability Standards that will be needed as a result of this project? If yes, please identify the Regional Variance

Summary Consideration: No regional variances have been identified for relevance to this SAR.

Organization	Yes or No	Question 2 Comment
FirstEnergy	No	FE is not currently aware of any variance need, but the scope of the SAR should permit flexibility to add a variance within the development process to the extent required. The need for a variance may not arise until proposed requirements are reviewed by industry.
Response: The development process allows for the consideration of a variance at any time.		
Manitoba Hydro	No	No comments
Southern Company: Southern Company Service, Inc.; Alabama Power Company; Georgia Power Company; Gulf Power Company; Mississippi Power Company; Southern Company Generation; Southern Company Generation and Energy Marketing	No

Alliant Energy	No	
Response: Thank you for your response.		

4. Are there any other concerns with this SAR?

Summary Consideration: The SDT has added the Transmission Owner and Interchange Authority to the list of applicable entities due to industry comments pointing out that those two entities are applicable entities in proposed TOP-003.

Organization	Yes or No	Question 4 Comment
Dominion	Yes	Under the Reliability Functions; TO and IA are not selected. The TO and IA are applicable entities in TOP-003-2 and Dominion suggests selecting these entities.
Response: The SDT agrees and has made the indicated change.		
California ISO	Yes	When developing the specific standards associated with this SAR the drafting team should consider the following: 1. TOPs should operate to all SOLs, and not just a subset of SOLs. 2. The RC should have the primary responsibility for development of all IROLs. TOPs have an obligation and capability to develop SOLs. However, IROLs are a very specific subset of SOLs which require a wide area view to determine. In addition, there are IROLs that cross TOP boundaries which are therefore more suited to be identified by the RC. 3. SOLs should not all require complete mitigation within 30 minutes, as is required for more limiting IROLs. 4. The revised standards should address outage coordination as well. The RC should be required to create the overall outage coordination process and the TOP and BA should be required to follow the process.

Organization	Yes or No	Question 4 Comment
		5. The SDT should define "unknown operating state" within the revised standards. If this term cannot be adequately defined then it should not be used in the standard. 6. All TOPs should be required to know if they are not in a secure state (a state with acceptable N-1 performance). This will require that all TOPs have tools with the same (or similar) capability as RTCA.
Response: The comments will be passed to the SDT for consideration during development.		
ACES Standards Collaborators	No	We have no additional comments. Thank you for the opportunity to comment.
SPP Standards Review Group	No	We do not take issue with the SAR believing it provides very good coverage for the task at hand but we will be filing comments later on the Technical Conferences.
Oncor Electric Delivery Company LLC	No	Refer to Oncor's TOP/IRO Technical Conference comments for specific suggestions and recommendations for the SDT to consider.
Kansas City Power & Light	No	We do not take issue with the SAR believing it provides very good coverage for the task at hand but we will be filing comments later on the Technical Conferences.
Manitoba Hydro	No	No comments

END OF REPORT

TOP/IRO Technical Conference

Moderated by: Tom Bowe, PJM

March 6, 2014

Arlington, VA/Washington, DC

RELIABILITY | ACCOUNTABILITY

Agenda

- Introductory remarks
- Review of conference objectives, ground rules, and overview of next steps
- Discussion of technical issues raised in the FERC NOPR
    - Operating Concepts
    - Tools and Analysis
    - Coordination and Communication
- Recap of discussion and themes to carry forward to March 6 Technical Conference
- Concluding remarks

Antitrust Compliance Guidelines

- It is NERC's policy and practice to obey the antitrust laws and to avoid all conduct that unreasonably restrains competition. This policy requires the avoidance of any conduct that violates, or that might appear to violate, the antitrust laws. Among other things, the antitrust laws forbid any agreement between or among competitors regarding prices, availability of service, product design, terms of sale, division of markets, allocation of customers or any other activity that unreasonably restrains competition. It is the responsibility of every NERC participant and employee who may in any way affect NERC's compliance with the antitrust laws to carry out this commitment.

Public Announcement

- Participants are reminded that this meeting is public. Notice of the meeting was posted on the NERC website and widely distributed. The notice included the number for dial-in participation. Participants should keep in mind that the audience may include members of the press and representatives of various governmental authorities, in addition to the expected participation by industry stakeholders.

Introductory Remarks

Conference Objectives and Ground Rules

- Objectives
  - Discuss the technical issues raised in the FERC NOPR
  - Get everyone on the same page
  - Provide inputs to the DC Technical Conference that will provide the SDT with sufficient information and rationale to allow it to craft appropriate requirements that will resolve the concerns
- Ground Rules
  - Not the time to debate the FERC/NERC/industry model
  - Focus is on guidance that could assist SDT – so pose recommendations/solutions
  - Approximately twenty minutes per topic
    - Be concise
    - Leverage Parking Lot

Overview of Next Steps

- Draft SAR posted for comment February 21 through March 24
- Two one-day conferences to explore issues (March 3-4 and 6)
- Two weeks after conferences – Written comments due on issues
- April – SDT meets to consider inputs, revise SAR as needed, and create other supporting documents as required
- May – Post final SAR and draft standards with supporting documentation for 45 days
- August – second posting for 45 days
- October – final posting and ballot
- November 12, 2014 – Board adoption
- File by January 31, 2015

Overview

- April 16, 2013 – NERC petition for approval of three revised TOP, four revised IRO standards
- November 21, 2013 - FERC Notice of Proposed Rulemaking (NOPR) proposes to remand revised TOP and IRO standards
- December 20, 2013 – NERC motion to defer action on NOPR until January 31, 2015
- January 14, 2014 – FERC grants motion to defer action until January 15, 2015
- February 12, 2014 – Standards Committee appoints SDT for Project 2014-03 Revisions to TOP/IRO Reliability Standards

SDT Roster

- Chair – Dave Souder, PJM
- Vice Chair – Andrew Pankratz, FP&L
- David Bueche, CenterPoint Energy
- Jim Case, Entergy
- Allen Klassen, Westar Energy
- Bruce Larsen, WE Energies
- Jason Marshall, ACES Power Marketing
- Bert Peters, Arizona Public Service Co.
- Robert Rhodes, SPP
- Eric Senkowicz, FRCC
- Kevin Sherd, MISO

Discussion of Technical Issues

- Operating Concepts
- Tools and Analysis
- Coordination and Communication

Operating Concepts

- Decision making authority (paragraphs 84 & 87)
- Analysis of System Operating Limits (SOLs) (paragraphs 42 & 52)
- Mitigation Plans (paragraph 54)
- Operating to the Most Severe Single Contingency (paragraph 70)
- Unknown Operating States (paragraph 75)

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Decision Making Authority

- Submittal
- TOP-001-2, R11
- Each TOP shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.

- NOPR (paragraph 87)
- NERC's proposal with respect to mitigating IROLs appears to give both the transmission operator and reliability coordinator authority to act. Therefore, we seek clarification and technical explanation whether the RC or the TOP has primary responsibility for IROLs

Analysis of System Operating Limits

- Submittal
- TOP-001-2, R8
- Each TOP shall inform its RC of each SOL which, while not an IROL, has been identified by the TOP as supporting reliability internal to its TOP Area based on its assessment of its Operational Planning Analysis

- NOPR (paragraph 42)
- Without a requirement to analyze and operate within all SOLs in the proposed standards and by limiting non-IROL SOLs to only those identified by the TOP internal to its area, system reliability is reduced and negative consequences can occur outside of the TOP's internal area

Mitigation Plans

- Submittal
- TOP-001-2, R7: Each TOP shall not operate outside any identified IROL for a continuous duration exceeding its associated IROL T_v
- TOP-001-2, R8: Each TOP shall not operate outside any SOL identified in R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based

- NOPR (paragraph 54)
- The TOP should have operational or mitigation plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state

Operating to the Most Severe Single Contingency

- Submittal
- Replaced by TOP-001-2, R7 & R9
- R7: Each TOP shall not operate outside any identified IROL for a continuous duration exceeding its associated IROL T_v.
- R9: Each TOP shall not operate outside any SOL identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.

- NOPR (paragraph 70)
- NERC proposes to delete TOP-004-2, Requirement R2, which provides that each TOP "shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency."

Unknown Operating States

- Submittal
- Requirement deleted
- SDT viewed 'unknown operating states' as referring to lack of studies of all possible conditions. And, in today's environment, didn't feel that such a condition would exist.

- NOPR (paragraph 75)
- With regard to mitigation of unknown operating states, while NERC asserts that "unknown states" cannot exist, a transmission provider could have valid operating limits for all facilities but lack situational awareness when valid limits are exceeded. … the Commission seeks comment and technical explanation from NERC and other interested entities on the proposed retirement.

Tools and Analysis

- Time Horizons (paragraph 55)
- System Models, Monitoring, and Tools (Transmission Operator - paragraph 60) (Reliability Coordinator – paragraph 95)
- Cause of SOL Violations (paragraph 73)
- Real-time Contingency Analysis (RTCA) (paragraph 74)
- External Networks and sub-100 kV Facilities and Contingencies (paragraph 67)

Time Horizons

- Submittal
- TOP-001-2, R8
- Each TOP shall inform its RC of each SOL which, while not an IROL, has been identified by the TOP as supporting reliability internal to its TOP Area based on its assessment of its Operational Planning Analysis. *[Time Horizon: Operations Planning]*

- NOPR (paragraph 55)
- Requirement R8 should pertain to all IROLs and all SOLs for all operating time horizons

System Models, Monitoring and Tools

- Submittal
- None – SDT believed certification covered this topic.

- NOPR (paragraph 60)
- Monitoring and analysis capabilities are essential in establishing and maintaining situational awareness. NERC indicates that these functions are assured through the certification process. We are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. … certification is a one-time process that may not adequately assure continual operational responsibility would occur.

Cause of SOL Violations

- Submittal
- Requirement deleted as Real-time is not when to investigate or to do root-cause analysis – but instead is the time to ‘fix’ the problem. Causes can be determined later and off-line.

- NOPR (paragraph 73)
- Proposal deletes requirement for determining the cause of SOL violations in all time-frames, including real-time

Real-time Contingency Analysis

- Submittal
- None – deferred to Project 2009-02

- NOPR (paragraph 74)
- Should all TOPs be required to run a real-time contingency analysis (RTCA) frequently, since the lack of such analysis can impair situational awareness substantially?

External Networks and sub-100 kV Facilities and Contingencies

- Submittal
- TOP-002-3, R1
- Each TOP shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its TOP Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.

- NOPR (paragraph 67)
- Does 'projected System conditions' include external networks or sub-100 kV facilities?

Coordination and Communication

- Reliability Directive (paragraph 64)
- Corrective Action (paragraph 78)
- Notification of Emergencies (paragraph 80)
- Outage Coordination (paragraph 89)
- Secure Network (paragraph 92)

Reliability Directive

- Submittal
- Definition
- Reliability Directive — A communication initiated by an RC, TOP, or BA where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

- NOPR (paragraph 64)
- TOP now uses “reliability directive,” which does not appear to be limited to a specific set of circumstances. …, proposed definition of “Reliability Directive” appears to require compliance with directives only in emergencies, not normal or pre-emergency times. … We believe that directives from a RC or TOP should be mandatory at all times, and not just during emergencies (unless safety is violated, etc.).

Corrective Action

- Submittal
- Requirement deleted
- The SDT believes that the proposed TOP-001-2 covers this situation for operations and that the proposed TOP-002-3 covers it for operations planning. The proposed standards do not limit the circumstances for which corrective actions need to be taken or what situation caused the problem. When exceedances occur, the TOP must take the prescribed actions.

- NOPR (paragraph 78)
- The Commission seeks comment and technical explanation on how current PRC-001-1 R2 requirement for corrective action (i.e., return a system to a stable state) is addressed in its proposal.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Notification of Emergencies

- Submittal
- TOP-001-2, R3: Each TOP shall inform its RC and TOPs that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Time Horizon: Operations Planning]*
- TOP-001-2, R5: Each TOP shall inform its RC and other TOPs of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. *[Time Horizon: Same-day Operations, Real-Time Operations]*

- NOPR (paragraphs 80 – 82)
- We believe that, consistent with the currently-effective TOP Reliability Standards, the notification requirement of proposed TOP-001-2 should apply to all emergencies, including real-time and same day emergencies.

Outage Coordination

- Submittal
- IRO-008-1, R3. When an RC determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the RC shall share its results with those entities that are expected to take those actions.
- IRO-010-1a, R3**.** Each BA, GO, GOP, IA, LSE, RC, TOP, and TO shall provide data and information, as specified, to the RC(s) with which it has a reliability relationship.

- NOPR (paragraph 89)
- The Commission does not see the specified requirements as dictating outage coordination.

Secure Network

- Submittal
- Requirement deleted

- NOPR (paragraph 92)
- Is there a need for a specific requirement that the data exchange between the RC, TOP, and BA be accomplished "via a secure network?"

Recap of Discussion and Themes to Carry Forward

- Items to be added as we go and then presented

Concluding Remarks

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

TOP/IRO Technical Conference Notes

The notes contained in these slides are captured from participant discussions from technical conferences held on March 3-4, 2014 and March 6, 2014. The statements represent the views of various participants, and any conflicts or factual errors are a result of the “brainstorming” nature of the discussions.

RELIABILITY | ACCOUNTABILITY

Decision Making Authority

1. Should only be one responsible authority and that is the RC - plus RC has the wide-area view.
2. But TOP needs to protect its lines and RC can't push the 'button' - TOP & RC must work together – it is being done now, leverage existing practices.
3. Operating Plans are required and will cover majority of cases.
4. Need to differentiate between establishing IROL and enforcing it – right now IRO and TOP standards seem to conflict with both given authority to act, can't have possible conflicting actions.
5. Is there time for the RC to direct the TOP in all cases? Or are there times when the TOP must act quickly and coordinate later?
6. TOP-001-2, R10 says TOP must inform RC of actions so coordination is mandated.
7. Maybe a few words in standards needed to clarify responsibilities.
8. Need to explore 'version 0' standards to make sure that nothing got deleted that needs to be retained.

Analysis of System Operating Limits (SOLs)

1. How far outside of area does TOP look? One bus? SW Outage report said that was not sufficient (see recommendations 2 and 3).
2. Can't solve problems on other systems. But some SOLs overlap TOP areas. Need to plan & operate to all SOLs in own area. No hybrid set of SOLs.
3. TOP-003-2 takes care of data outside of area. TOP professional judgment of what it needs.
4. FAC standards mandate SOL methodology from RC but TOP should operate to all SOLs. FAC standards are not in scope of project.
5. But IROLs are different than SOLs and should be treated as such in standards. (see #9)
6. Need to review concerns in NOPR paragraphs 48 – 56 as well.
7. Need more clarity on SOLs – just thermal and stability? Need consistent understanding. SOLs are Facility Ratings and there are a lot of those. Can't exceed Facility Ratings.
8. Can we leverage how people are actually operating? Need to provide clear and simple guidelines to operator.
9. System performance should be the end result.

Mitigation Plans

1. SOLs have differing timeframes – not just 30 minutes for all. Facility ratings determine SOL timeframes as pointed out in FAC-008. SOLs in 30 minutes could cause actions that decrease reliability. 30 minutes simple for operators to work to. Don't want to get too complex. SW Outage Report talks about SOLs and the 30 minute timeframe.
2. T_v can never be more than 30 minutes. IROLs should thus be covered.
3. Special subset of SOLs is not desirable.
4. If the 4-hour rating allows 135% loading, when does an exceedance occur? If you exceed normal then do you go to emergency prior to action? Need to handle contingency after exceedance has occurred. Need to elaborate pre-contingency versus post-contingency actions.
5. White paper talks about T_m for SOLs which should be consistent with FAC-008. T_m tried in WECC but presented problems.
6. SOLs can't cause Cascading by definition. So, why is a timeframe needed for SOLs? Series of unmitigated SOLs caused problems in SW Outage. Can we use old Operating Manual for guidance on SOLs? Stay with fundamentals.
7. FRCC just says that when you reach 140%, consider as IROL. (maybe others as well)

Operating to the Most Severe Single Contingency (MSSC)

1. Doesn't operating to an IROL and T_v address this? And therefore MSSC specific language would be redundant?
   - The group in STL believed that this is the case. But DC may not agree (see #2).
2. Are there situations where you don't have a pre-determined IROL and you get pushed into an IROL?
   - If so, you need to move back to a secure state within 30 minutes or less. Is this an IROL or an unknown state?
   - If it isn't an IROL then do we need to retain old TOP-004-2, R2 to cover the situation? And should R2 only be a planning issue? Re-word to 'next n-1 should not exceed x%' instead of MSSC? Need a measurable requirement.
3. If you establish SOL & IROL correctly (as per FAC standards) then you will cover any single contingency, not just the MSSC.

Unknown Operating State

1. Unknown state is undefined and open to interpretation – 'unanalyzed and unstudied'. Always want to be operating in a 'known' state. Can you really always know what operating state you are in or will be in?
2. Seen as a loss of telemetry type situation? EOP-008-1, R1.6.2 talks of the need for plans on loss of functionality. Does this cover the issue? Should for functionality issues.
3. Today's technology should cover the limits issue. Loss of functionality is something different. Is a set of tools implied?
4. If 'unknown' remains, then it needs to be described as to what it means to an operator and clear actions spelled out. Operator needs full authority to act. Some entities have tried to define 'unknown' already – could leverage.

Time Horizons

1. Group agrees with NOPR comment in general. Need consistent approach to time horizons.
2. Would imply need for RTCA or similar. But not all TOPs can do RTCA.
3. What if something happens between next-day study and real-time? IRO-008-1, R2 talks of RC doing real-time assessment every 30 minutes – can this be adapted for TOP? Maybe. Is definition of real-time assessment lacking? Or upon topology change? Can we leverage 2009-02 white paper?
4. All SOLs issue covered previously.
5. RC doesn't really need all SOLs – it would actually distract them. Perhaps only exceedances. Would be more interested in plans to correct. If TOP needs others to act, does the RC need to get involved?

System Models, Monitoring, and Tools

1. Circuitous logic as certification is based on requirements. If requirements are removed then certification is weakened. This might work if there was a certification standard or re-certification effort.
2. Does new PER-005 cover any of this?
3. Should we just fall back to existing language in -0 standards? Then wait for 2009-02 to elaborate. We need to observe deadline and there are advances in these standards that should be implemented as quickly as possible. Might be points in 2009-02 white paper that could be used here.
4. Functional model dictates what a TOP needs to be able to do. But that doesn't set accountability.
5. Do we need to recognize size of TOP in solution? Impact of small entity could still be significant. Every Facility must be covered by someone somewhere – BES must be protected.
6. Do we need standards on tools? Some would like to see Project 2009-02 move forward. But doesn't believe timing fits for this project.

Cause of SOL Violations

1. Need to know cause to determine how to act – this is not root-cause but enough information to know how to mitigate in real-time. Tools could provide info to the extent operator needs it in real-time. Emphasis should be on fixing the problem.
2. Given other discussions (and subsequent requirements and fixes), this may be a redundant issue but need to provide rationale and mapping.

Real-time Contingency Analysis (RTCA)

1. Refer to Time Horizons issue for additional info
2. How to accommodate performance issues for any tools?
3. TOP should always know that they are n-1 secure in real-time – need to achieve acceptable system performance. How do they get this knowledge? Some sort of tool appears to be implied.
4. TOPs in WECC do not all have RTCA capability. Sometimes RC performs function for TOP who doesn’t have capability.
5. Functional model does talk about this and requires that TOP provide info to the RC on real-time situations
6. Size is issue again – every Facility needs to be covered somewhere by someone. Applicability a concern – all TOPs may not be correct.

External Networks and sub-100 kV Facilities and Contingencies

1. See *Analysis of SOLs slide* for additional info on this topic.
2. SDT may want to supplement existing language with explicit words concerning external and sub-100 kV data as needed to complete required tasks – may need to set bounds as per SW Outage report.

Reliability Directive

1. RC doesn't always know the exact conditions in a TOP area.
2. Definition of Emergency is broad and covers a lot of conditions – and no easy way to know when you have transitioned from normal to Emergency.
3. Need a way to comment on directions in 'normal' conditions but in 'emergencies' the party receiving the communication needs to act immediately. Need this tool as a 'club' to force action.
4. Need to provide clear guidance to operators on issue of directives – both as issuer and receiver. May need to identify as a Reliability Directive – no questions allowed, jump first and ask questions later. Also look at definition of Operating Instruction in COM-002-4.
5. Directives handled differently in different regions – need to study how it is done.
6. If everything is a directive then everything has same level of importance and that could be dangerous.
7. Need to check that RC, TOP, and BA both have clear and comparable requirements. Would need to make sure that DP is part of BA trail.

Corrective Action

1. Companies don't separate problems – whatever happens you need to correct it regardless of cause.
2. TOP-003 was designed to handle data on an all inclusive basis but having the data isn't the same as acting on it. Do we need to say that data recipients must utilize the data?
3. Could split out relay info as specific item in TOP-003 to provide additional weight to topic – is white paper guidance on what type of data needed required?
4. Original 693 directive (para. 1433) asked for clarification on time to correct.
5. Also concerns about R5 and R6 pertinence – are these the same as R2?

Notification of Emergencies

1. Do FAC-011 and FAC-014 cover this situation?
2. Same day operations may be problematic due to definition of Emergency – it is more real-time than anything else but some Emergencies may span multiple day timeframes.
3. What is the correct term: Emergency or Adverse Reliability Impact? Emergency may be the best term to use.
4. Shouldn’t TOP notify of any Emergency in any/all timeframe? That is, need to be sure to notify of Emergencies that emerge after OPA is completed but before real-time - but need to be careful of overloading operator. Can we prioritize?
5. Should TOP-001-2, R3 & R5 be combined?

Outage Coordination

1. Identified as a gap in the IERP report. Includes both generation and transmission.
2. Requirements inherently include coordination – can’t make a valid plan without coordination.
3. Approach should be the same for RC and TOP (and BA as needed).
4. Was existing language in TOP/IRO covering this explicitly? TOP-003-1.
5. Entities have different requirements now for coordination items.
6. Outage info is a vital concern that needs to be shown.
7. Is time line coordination an issue?
8. Outage coordination methodology requirement similar to FAC standards required? Or just general requirement(s) to have a documented plan with required participation? What does coordination really mean here?

Secure Network

1. IRO-002-2, R2 - only place in standards where term was used.
2. SDT said covered in ROP and IRO-014 and now redundant.
3. Everyone agrees that exchange should be secure and that current methods are secure.
4. How far does secure go? Once it leaves entity who is responsible?
5. Need to cover RC, TOP, and BA.
6. Need to continue concept somewhere in standards. Can existing language be retained?
7. If you adhere to COM and CIP is this covered? Need to check and perhaps provide better explanation as to why. Do we need 'security' experts to go off and draft response?
8. Could be covered in Project 2009-02 down the road.

RELIABILITY CORPORATION

Unofficial Comment Form

Technical Conferences on Revisions to TOP and IRO Reliability Standards

Please use the electronic comment form to submit comments on the issues discussed during two Technical Conferences on Revisions to TOP and IRO Reliability Standards. These comments will be posted on the project webpage as part of the development record and considered by the drafting team for Project 2014-03 Revisions to TOP and IRO Reliability Standards as it develops revisions to the standards. Comments must be submitted by **8:00 p.m. Eastern on March 24, 2014.** If you have questions please contact Ed Dobrowolski (email) or by telephone at (609) 947-3673.

Background Information:
NERC recently held two technical conferences on revisions to standards pertaining to real-time operations and reliability coordination (the TOP and IRO Reliability standards). The first technical conference was held on March 3 and 4, 2014 in St. Louis and the second was held on March 6, 2014 in the Washington, DC area. The purpose of these conferences was to obtain industry input on issues identified in the Federal Energy Regulatory Commission's (FERC) notice of proposed rulemaking (NOPR) proposing to remand these standards.

In response to this NOPR, NERC filed a motion requesting that FERC defer action until January 31, 2015 to allow NERC and the industry time to consider the issues identified in the NOPR and develop revisions as needed to address them, and FERC granted the motion. Project 2014-03 was initiated to develop revisions to the TOP and IRO standards to address issues identified in the NOPR.

During the technical conferences, a presentation was used to facilitate a discussion of each of the issues identified in the NOPR. For each issue, a slide showing the language from the proposed standards along with a brief excerpt from the NOPR (along with the paragraph number) was prepared. Key points from the discussion in St. Louis were captured in a second presentation, and this presentation was provided to the participants in the second technical conference. During the second technical conference, additional key points were captured. The two presentations are posted on the project page.

During this informal comment period, NERC is requesting industry comments pertaining to the information provided in the conferences or suggestions for further consideration of issues identified in the NOPR. For purposes of discussion, these issues were grouped in three categories within the slides:

- Operating Concepts (including treatment of SOLs, operating to Most Severe Single Contingency, and unknown operating states)

- Tools and Analysis, including Real-time Contingency Analysis
- Coordination and Communication (including Reliability Directive, notification of Emergencies, and outage coordination)

Questions

You do not have to answer all questions. Enter all comments in plain text format. Bullets, numbers, and special formatting will not be retained.

1. In paragraphs 51 through 56 of the NOPR, the Commission expresses concerns with the treatment of System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs) within the TOP standards. In particular, the Commission believes that the system should be planned and operated within all SOLs. Paragraph 73 and 74 of the NOPR asks for clarification as to whether the proposed treatment of IROLs and SOLs represents a different approach to real-time operational assessments and operation to the Most Severe Single Contingencies, and if so, what the technical justification is for the change. Paragraph 87 of the NOPR seeks clarification on who (the Transmission Operator or Reliability Coordinator) has primary responsibility for IROLs. Paragraphs 96, 97, and 98 discuss treatment of IROLs and SOLs within the proposed IRO standards and ask for clarification on monitoring of all SOLs and IROLs. Slides 12 through 15 in the Technical Conference presentation were used to discuss these issues, and slides 2 through 6 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments on the concerns identified by the Commission on the treatment of SOLs and IROLs, including planning and operating within all SOLs, planning to and operating to the Most Severe Single Contingency, and responsibility for monitoring of IROLs and SOLs, within the proposed standards.

   Comments:

2. In Paragraph 61 of the NOPR, the Commission asks for a schedule for completion of Project 2009-02 Real-time Monitoring and Analysis Capabilities. Paragraphs 74 and 75 of the NOPR identify possible concerns associated with lack of adequate situational awareness. The retirement in the proposed TOP and IRO standards of requirements to address monitoring and analysis capabilities may create a gap without the completion of Project 2009-02 or modifications to the proposed TOP and/or IRO standards. Please provide any comments or suggestions you have on the issue of system monitoring and analysis. Slides 19 and 21 in the Technical Conference presentation were used to discuss these issues, and slides 8 and 10 of the Notes presentation provides a recap of discussion from the two Technical Conferences.

   Comments:

3. Paragraphs 64 through 66 of the NOPR discuss the Commission's questions on the proposed defined term Reliability Directive. Since the proposed TOP and IRO standards and defined term were filed with FERC, the Project 2007-02 drafting team has proposed a new term, Operating

Instruction. Slide 24 in the Technical Conference presentation was used to discuss this issue, and slide 12 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments on the need for the term Reliability Directive and the questions on this term discussed in the NOPR.

Comments:

4. The currently enforceable TOP-004-2, Requirement R2 requires that a Transmission Operator that enters an unknown operating state …"restore operations to respect proven reliable power system limits within 30 minutes." The proposed TOP standards do not retain the undefined term "unknown operating state" because the parenthetical definition within TOP-004-2 indicates that an unknown operating state is "any state for which valid operating limits have not been determined" and other existing standards in the FAC family require that operating limits be established and communicated. In Paragraph 75 of the NOPR, the Commission identifies concerns with removal of the term "unknown operating state" from the proposed standards. Slide 16 in the Technical Conference presentation was used to discuss this issue, and slide 6 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments you have on the removal of the requirement to mitigate an "unknown operating state" by restoring operations to within proven reliability limits within 30 minutes.

   Comments:

5. Paragraph 78 of the NOPR concerns the proposed retirement of requirements from PRC-001-1 that address corrective actions. Slide 25 in the Technical Conference presentation was used to discuss this issue, and slide 13 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments you have on the proposed retirement of requirements from PRC-001-1.

   Comments:

6. Paragraphs 80 through 83 of the NOPR discuss concerns with notification of Emergencies, including the operational time horizon for such notifications. Slide 26 in the Technical Conference presentation was used to discuss this issue, and slide 14 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Do you agree that a Transmission Operator should inform its Reliability Coordinator of all Emergencies or anticipated Emergencies not only in the Operations Planning time horizon, as required by proposed TOP-001-2, Requirement R3, but also in the Same-day Operations and Real-time time horizons?

   Comments:

7. Paragraphs 68 and 90 of the NOPR identify concerns that the proposed standards no longer explicitly require coordination of outages. Slide 27 in the Technical Conference presentation was

used to discuss this issue, and slide 15 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments you have on the issue of outage coordination.

Comments:

8. Paragraphs 93 and 94 of the NOPR discuss concerns with removing language that requires data exchange to be conducted using a secure network. Slide 28 in the Technical Conference presentation was used to discuss this issue, and slide 16 in the Notes presentation provides a recap of discussion from the two Technical Conferences. Please provide any comments you have on this issue.

   Comments:

9. Please provide any additional comments you have for the drafting team on the issues identified in the NOPR.

[Docket Nos. RM13-12-000, RM13-14-000 and RM13-15-000]

Monitoring System Conditions - Transmission Operations Reliability Standard
Transmission Operations Reliability Standards
Interconnection Reliability Operations and Coordination Reliability Standards

(Issued November 21, 2013)

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: Pursuant to section 215 of the Federal Power Act (FPA), the Commission proposes to remand revisions to the Transmission Operations and Interconnection Reliability Operations and Coordination Reliability Standards, developed by the North American Electric Reliability Corporation (NERC), which the Commission has certified as the Electric Reliability Organization responsible for developing and enforcing mandatory Reliability Standards. In addition, the Commission proposes to approve NERC's proposed revisions to Reliability Standard TOP-006-3.

DATES: Comments are due **[Insert Date 60 days after publication in the FEDERAL REGISTER].**

ADDRESSES: Comments, identified by docket number, may be filed in the following ways:

- Electronic Filing through http://www.ferc.gov. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format.
- Mail/Hand Delivery: Those unable to file electronically may mail or hand-deliver comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street, NE, Washington, DC 20426.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Comment Procedures Section of this document.

FEDERAL ENERGY REGULATORY COMMISSION

Monitoring System Conditions - Transmission Operations Reliability Standard	Docket No. RM13-12-000
Transmission Operations Reliability Standards	Docket No. RM13-14-000
Interconnection Reliability Operations and Coordination Reliability Standards	Docket No. RM13-15-000

NOTICE OF PROPOSED RULEMAKING

(Issued November 21, 2013)

1. Pursuant to section 215(d) of the Federal Power Act (FPA),[1] the Commission proposes to remand revisions to the Transmission Operations (TOP) and Interconnection Reliability Operations and Coordination (IRO) Reliability Standards, developed by the North American Electric Reliability Corporation (NERC), which the Commission has certified as the Electric Reliability Organization (ERO) responsible for developing and enforcing mandatory Reliability Standards. In addition, the Commission proposes to approve NERC's proposed revision to Reliability Standard TOP-006-3 concerning the monitoring role and notification obligation of reliability coordinators, balancing authorities and transmission operators. The Commission seeks comments on its proposals.

[1] 16 U.S.C. 824o(d) (2012).

2. NERC filed changes to the TOP Reliability Standards (Docket No. RM13-14-000) concurrently with its proposal to modify the IRO Reliability Standards (Docket No. RM13-15-000). NERC requests that the Commission process the two proposals together. In addition, NERC separately filed revisions to Reliability Standard TOP-006-3 (Docket No. RM13-12-000) that NERC proposes to become effective prior to the effective date of the revisions to the TOP Reliability Standards in Docket No. RM13-14-000. Because the proposed TOP and IRO Reliability Standards are interrelated, and because the proposed revisions to Reliability Standard TOP-006-3 involve similar issues raised in the TOP and IRO proposals concerning monitoring of the interconnected transmission network and notification of and by registered entities, the Commission addresses the three proposals together in this Notice of Proposed Rulemaking (NOPR).

3. NERC explains that the set of TOP Reliability Standards "address the important reliability goal of ensuring that the transmission system is operating within operating limits."[2] The TOP Standards generally address real-time operations and planning for next-day operations, and apply primarily to the responsibilities of transmission operators. The set of IRO Standards apply to the responsibility and authority of reliability coordinators, the entities with the highest level of authority that are responsible for reliable operation of the bulk electric system, and have the wide-area view of the bulk

[2] NERC TOP Petition at 3.

electric system. The IRO Standards, which complement the TOP Standards, have the goal of ensuring that the bulk electric system is planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.[3] Thus, together, the TOP and IRO Reliability Standards address matters that are fundamental to grid reliability as they pertain to the coordinated efforts to operate the bulk electric system in a reliable manner during real-time operations.

4. Based on our review of the NERC petitions, it appears that the proposed TOP and IRO Reliability Standards contain some improvements over the current standards. Specifically, the revised standards include organizational and administrative improvements that reduce redundancy and clarify the delineation between applicable entities with regard to certain tasks. The Commission appreciates efforts to clarify standards and reduce redundancies.[4] However, we are concerned that the changes in the proposed standards create reliability gaps in the standards that are critical to reliable operation of the Bulk-Power System. While NERC indicates that the revised TOP Reliability Standards eliminate gaps and ambiguities in the currently-effective TOP requirements, we are concerned that NERC has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these

---

[3] *See* NERC IRO Petition at 6.

[4] *Electric Reliability Organization Proposal to Retire Requirements in Reliability Standards*, Order No. 788, 145 FERC ¶ 61,147 (2013).

aspects in the proposed standards. One area of concern is that, unlike the currently-effective TOP Reliability Standards, there is no requirement in the proposed standards for transmission operators to plan and operate within all System Operating Limits (SOLs).[5] The provisions in the proposed TOP Reliability Standards that require transmission operators to operate only within a subset of SOLs offset the potential improvements. The Commission believes that NERC's proposal for the treatment of SOLs adversely impacts multiple requirements in the proposed TOP Reliability Standards. Moreover, as discussed herein, the Commission identifies other concerns that may need to be addressed in order not to create further reliability gaps. Section 215(d)(4) requires that the Commission remand to the ERO for further consideration a Reliability Standard "that the Commission disapproves in whole *or in part*."[6] Thus, notwithstanding the improvements mentioned above, the concern regarding the treatment of SOLs, and potentially other concerns discussed below, leads us to propose to remand the proposed TOP standards. In addition, given the interrelationship between the TOP and IRO Reliability Standards

---

[5] NERC defines a SOL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits [pre- and post-Contingency] are based upon certain operating criteria. … "

[6] 16 U.S.C. 824o(d)(4) (2012) (emphasis added).

and that NERC requests that both sets of standards be addressed together,[7] we believe a remand of the proposed IRO standards in addition to those of the TOP will enable NERC to more comprehensively consider modifications to the standards that would address the reliability concerns identified in this NOPR. This approach, in turn, should allow NERC more flexibility in developing appropriate modifications that address our concerns since changes to the TOP standards might require, in some instances, commensurate changes to the IRO standards.

5. In addition to the concerns regarding the treatment of SOLs, the Commission has identified a reliability gap in the IRO Reliability Standards and accordingly proposes to direct that NERC develop modifications in these standards to ensure that reliability coordinators continue to develop and implement comprehensive generation and transmission outage coordination processes.

6. Further, we discuss below additional issues regarding the proposed TOP and IRO Reliability Standards that require clarification or further explanation and technical justification. Depending on the explanations provided by NERC and other interested entities in their comments to this NOPR, additional Commission action may be appropriate, including directives that NERC must address in response to a final rule in this proceeding.

[7] NERC TOP Petition at 2 (stating that "simultaneous approval of both petitions by the Commission will help ensure a smooth transition and implementation of the proposed Reliability Standards for both the industry and the ERO.").

I. **Background**

7. Section 215 of the FPA requires a Commission-certified ERO to develop mandatory and enforceable Reliability Standards, which are subject to Commission review and approval. Once approved, the Reliability Standards are enforced by the ERO, subject to Commission oversight, or by the Commission independently. On March 16, 2007, the Commission issued Order No. 693, approving 83 of the 107 initial Reliability Standards filed by NERC, including the existing TOP and IRO Reliability Standards.[8] In addition, in Order No. 748, the Commission approved revisions to the IRO Reliability Standards; however, none of the standards approved in Order No. 748 are at issue in this NOPR.[9]

A. **NERC's TOP Petition (Docket No. RM13-14-000)**

8. On April 16, 2013, in Docket No. RM13-14-000, NERC submitted for Commission approval three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards.

---

[8] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[9] *Mandatory Reliability Standards for Interconnection Reliability Operating Limits*, Order No. 748, 134 FERC ¶ 61,213 (2011).

NERC also seeks approval of the implementation plan for the proposed TOP Reliability Standards and approval of the retirement of eight TOP and one PER Reliability Standards,[10] and to retire Requirements R2, R5, and R6 of Reliability Standard PRC-001-1.

9. NERC states that the proposed TOP Reliability Standards represent significant revision and improvement to the current set of enforceable Reliability Standards by upgrading the overall quality of the standards, eliminating gaps in the requirements, ambiguity, redundancies, and addressing Order No. 693 directives. NERC adds that the proposed TOP Reliability Standards are also more efficient than the currently-effective standards because they incorporate the necessary requirements from today's standards into three cohesive, comprehensive Reliability Standards "that are focused on achieving a specific result."[11] NERC states that the proposed TOP Reliability Standards, along with the proposed IRO Reliability Standards, will help to ensure better coordination for

---

[10] TOP-001-1a – (Reliability Responsibilities and Authorities); TOP-002-2.1b (Normal Operations Planning); TOP-003-1 (Planned Outage Coordination); TOP-004-2 (Transmission Operations); TOP-005-2a (Operational Reliability Information); TOP-006-2 (Monitoring System Conditions); TOP-007-0 (Reporting System Operating Limit and Interconnection Reliability Operating Limit Violations); TOP-008-1(Response to Transmission Limit Violations); and on Personnel Performance, Training, and Qualifications (PER) Reliability Standard, PER-001-0.2 (Operating Personnel Responsibility and Authority).

[11] NERC TOP Petition at 4, 11, 42. NERC explains that the corresponding changes in proposed Reliability Standard PRC-001-2 are administrative in nature and are limited to removal of three requirements in currently-effective Reliability Standard PRC-001-1 that are now addressed in proposed Reliability Standard TOP-003-2.

transmission operators and reliability coordinators to "plan and operate the interconnected Bulk Electric System in a synchronized manner to perform reliably under normal and abnormal conditions."[12]

10. NERC states that the proposed TOP Reliability Standards are a significant improvement from the currently-effective TOP Reliability Standards in three ways. First, NERC explains that the proposed TOP Reliability Standards "rais[e] the bar on system performance by mandating that all IROLs be resolved within the IROL T_v, which is a significant increase in performance over the existing Reliability Standards."[13] NERC indicates that the proposed TOP Reliability Standards adopt an approach "for operating within a subset of SOLs that more closely aligns with the original NERC Operating Guidelines."[14] Second, NERC states that it improved the proposed Reliability Standards by designating requirements to apply solely to transmission operators and removing several of the requirements applicable to reliability coordinators. NERC explains that it

[12] NERC TOP Petition at 9.

[13] NERC TOP Petition at 11. The Interconnection Reliability Operating Limit (IROL) T_v is defined in the NERC Glossary of Terms as: "The maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit's T_v shall be less than or equal to 30 minutes."

[14] NERC TOP Petition at 11. NERC states that "[p]rior to becoming the ERO, NERC guidelines for power system operation and accreditation were referred to as the NERC Operating Guidelines, for which compliance was strongly encouraged yet ultimately voluntary." *Id.* at n.23.

added requirements applicable to reliability coordinators to the proposed IRO Reliability Standards. Third, NERC states it consolidated "the necessary requirements from the eight existing TOP Reliability Standards into three cohesive, comprehensive Reliability Standards."[15] The specific revisions to the TOP Reliability Standards are as follows:

<u>TOP-001-2 (Transmission Operations)[16]</u>

11. In the TOP petition, NERC explains that the requirements of proposed Reliability Standard TOP-001-2 address the following matters: (1) transmission operator "Reliability Directives" (proposed Requirements R1 and R2); (2) emergencies and emergency assistance (proposed Requirements R3-R6); and (3) IROLs and SOLs (proposed Requirements R7-R11). Proposed Requirements R1 and R2 state:

> **R1.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.
>
> **R2.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.

NERC states that proposed Requirement R1 recognizes the reliability need to give transmission operators the ability to issue Reliability Directives to various entities,

---

[15] NERC TOP Petition at 11.

[16] The proposed TOP and IRO Reliability Standards are not attached to the NOPR. The complete text of the Reliability Standards is available on the Commission's eLibrary document retrieval system in Docket Nos. RM13-14 and RM13-15 and is posted on the ERO's web site, *available at*: http://www.nerc.com.

subject to limited exceptions in cases where such actions would violate safety, equipment, regulatory, or statutory requirements. NERC explains that Requirement R2 requires entities receiving the directive from the transmission operator to inform the transmission operator in situations where an identified Reliability Directive cannot be performed. NERC explains that these requirements give transmission operators the authority to issue Reliability Directives when needed, but also provide them the flexibility to take different action in those situations where an entity notifies its transmission operator of its inability to comply with a Reliability Directive.[17]

12. With regard to emergencies and emergency assistance, NERC proposes Requirements R3 through R6:

> **R3.** Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis.
>
> **R4.** Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements.
>
> **R5.** Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load.

---

[17] NERC TOP Petition at 12-13.

> **R6.** Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.

NERC states that proposed Requirements R3, R5, and R6 apply to the coordination aspects of interconnected operation. NERC explains that proposed Requirement R3 requires a transmission operator to inform its reliability coordinators and other transmission operators of actual and anticipated emergencies based on its assessment of its "Operational Planning Analysis."[18] NERC states that, in situations "where emergency assistance is needed, proposed Requirement R4 requires that Transmission Operators render emergency assistance to other Transmission Operators when it is requested and available" and that proposed Requirement R5 "requires Transmission Operators to inform entities (Reliability Coordinators and other Transmission Operators) of operations that may adversely impact them."[19] According to NERC, this proposed requirement addresses the Order No. 693 directive to consider the need for the transmission operator to notify the reliability coordinator or the balancing authority when facilities are removed

[18] NERC defines an Operational Planning Analysis as "[a]n analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.)." NERC Glossary of Terms at 47.

[19] NERC TOP Petition at 14.

from service.[20] NERC states that proposed Requirement R6 requires balancing authorities and transmission operators to notify the reliability coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment.

13. With respect to treatment of SOLs and IROLs, NERC explains that the standard drafting team examined the requirements for SOLs and IROLs in the currently-effective TOP Reliability Standards to ensure whether they adequately addressed the handling of these limits. In particular, the standard drafting team was concerned that the transition from the NERC Operating Guidelines to the Version 0 standards had resulted in an incorrect emphasis on non-IROL SOLs as opposed to IROLs. The standard drafting team noted a discrepancy among the three currently-effective SOL/IROL-related requirements.[21] According to NERC, in Reliability Standards TOP-002-2a, Requirement R10 and TOP-004-2, Requirement R1, applicable entities are expected to plan and operate to meet all SOLs and IROLs, while in TOP-007-0, R1, entities are only instructed

---

[20] NERC TOP Petition at 14 (citing Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1588).

[21] TOP-002-2a, Requirement R10: Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs). TOP-004-2, Requirement R1: Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs). TOP-007-0, Requirement R2: Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.

to take action for IROLs. According to NERC, the standard drafting team concluded that the Version 0 standards did not accurately reflect what the operating policies stated. Nevertheless, the standard drafting team determined that non-IROL SOLs are still important. NERC explains that reliability risk to the system exists when the system is operating in conditions such that an IROL limit is exceeded for a time exceeding T_v. Consequently, NERC revised the requirements related to operating within limits by tying IROL actions to T_v. NERC proposes Requirements R7 through R11 to address the transmission operator's responsibilities over IROLs[22] or SOLs[23] that the transmission operator identifies as necessary to support reliability internal to its transmission operator area:

> **R7.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
>
> **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**

---

[22] NERC defines an IROL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) derived from, or a subset of the System Operating Limits, which if exceeded, could expose a widespread area of the Bulk Electric System to instability, uncontrolled separation(s) or cascading outages."

[23] NERC defines a SOL as "[t]he value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits [pre- and post-Contingency] are based upon certain operating criteria. … "

> **R9.** Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
>
> **R10.** Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.
>
> **R11.** Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.

NERC explains that the responsibility for monitoring and handling IROLs is primarily given to the reliability coordinator, but the transmission operator has the primary responsibility to designate any SOLs that require special attention. NERC indicates that the delineation in the proposed TOP Reliability Standards with respect to operating within an identified IROL and in designating important SOLs is an important distinction in the proposed TOP Reliability Standards that is necessary for reliability.

14. NERC adds that the proposed TOP Reliability Standards include a requirement that provides for "the identification of a sub-set of non-IROL SOLs that are identified as important for local areas."[24] NERC indicates that the proposed requirements mandate exceedances of these non-IROL SOLs to be monitored and reported to the reliability coordinator, giving transmission operators "the ability to ensure that any non-IROL SOLs

---

[24] NERC TOP Petition at 19.

that are of concern to the transmission operator will be monitored to ensure local consequences are managed."[25]

15. NERC states that the "difference between non-IROL SOLs and IROLs is expressed in the difference between the consequences to the System (or impact to reliability) should unplanned perturbations of the System occur when the limit is being exceeded. For an IROL, the consequences are described as Cascading, uncontrolled separation, or instability."[26] NERC explains that the consequences of non-IROL SOLs are typically thought of in terms of equipment damage or total loss of an element and are restricted to a limited or local area. NERC states that the revised TOP requirements move the standards to where the NERC Operating Guidelines intended them to be and ensure that the reliability of the interconnected system will be maintained and even enhanced because system operators "will not be distracted from true reliability issues by local system issues."[27] NERC states that the impact of exceeding a non-IROL SOL will not result in an Adverse Reliability Impact.[28]

16. According to NERC, transmission operators may also identify and communicate to their reliability coordinator any of the non-IROL SOLs that are believed or anticipated

[25] *Id.* at 19-20.

[26] *Id.* at 19.

[27] NERC TOP Petition at 18.

[28] NERC TOP Petition at 18-19.

to have potential to develop into IROLs and, thus, to ensure that they too are monitored and managed. NERC also explains that, while non-IROL SOLs are similar to IROLs in that non-IROL SOLs must respect the ratings of equipment associated with the facilities to which the non-IROL SOL applies, there is no specific requirement established for a time exceedance similar to the T_v of an IROL. According to NERC, because T_v may be less than 30 minutes, T_v "mandates a tighter time frame for action than the 30-minute time that is mandated in the currently-effective standards, thereby improving reliability of the bulk power system."[29]

Proposed TOP-002-3 (Operations Planning)

17. NERC states that proposed Reliability Standard TOP-002-3 Requirements R1 through R3 require transmission operators to perform Operational Planning Analyses to ensure operations within IROLs and SOLs. The requirements for proposed Reliability Standard TOP-002-3 are as follows:

> **R1.** Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
>
> **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

---

[29] NERC TOP Petition at 18.

> **R3.** Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).

NERC explains that Requirement R1 requires transmission operators to have an Operational Planning Analysis that will allow it to assess whether the planned operations for the next-day will exceed any of its facility ratings or stability limits during anticipated normal and contingency event conditions. NERC also explains that Requirement R2 requires transmission operators to develop a plan that will help ensure they do not operate in excess of limits identified in the Operational Planning Analysis. NERC indicates that Requirement R3 requires that entities be notified if they are identified in the transmission operator's plans and that the notification should inform entities of their role in the plans.

18. According to NERC, requiring transmission operators to perform Operational Planning Analyses that incorporate normal and contingency situations for next-day operations while assuring appropriate limits are not violated assures that the transmission operators "will have a plan to follow during Real-time operations that accurately reflects the anticipated conditions of the day's operations, including the ability to deliver generation to Load."[30] NERC adds that Requirement R3 is similar to the coordination requirements established in proposed Reliability Standard TOP-001-2 by ensuring that all entities know their role in next-day operations.

---

[30] NERC TOP Petition at 22.

Proposed TOP-003-2 (Operational Reliability Data)

19. NERC states that proposed Reliability Standard TOP-003-2, Requirements R1 through R5 were adapted for transmission operators and balancing authorities based on similar, Commission-approved requirements for reliability coordinators.[31] The proposed requirements include:

> **R1.** Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include:
> - **1.1.** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.
> - **1.2.** A mutually-agreeable format.
> - **1.3.** A periodicity for providing data.
> - **1.4.** The deadline by which the respondent is to provide the indicated data.
>
> **R2.** Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring…
>
> **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification…shall satisfy the obligations of the documented specifications for data.

NERC states that the proposed requirements emphasize the need for transmission operators and balancing authorities to obtain all of the data they need for reliability purposes and mandate that entities that have this data timely provide it to the transmission operator and balancing authority. According to NERC, lack of adequate data for real-time operations and modeling have contributed to system incidents in the past, and the

[31] NERC TOP Petition at 23 (citing Reliability Standard IRO-010-1a.)

data specification concept will eliminate this problem by allowing transmission operators and balancing authorities to require entities to send them any required data.

NERC's Response to Order No. 693 Directives and Analysis of Southwest Outage Report

20. NERC indicates that its staff analyzed the recommendations from the report on the Arizona-Southern California Outages on September 8, 2011, Causes and Recommendations ("2011 Southwest Outage Blackout Report") that apply to transmission operators and compared the recommendations to both the currently-effective TOP Reliability Standards and the proposed Reliability Standards.[32] The TOP Petition provides that, "[b]ased on this analysis, NERC staff believes that if entities complied with the proposed TOP Reliability Standards, the likelihood of such an event occurring would be significantly diminished."[33] NERC includes as Exhibit H a detailed report on this analysis, including the relevant 2011 Southwest Outage Blackout Report recommendations with an explanation of how the relevant recommendations would be addressed in the proposed TOP Reliability Standards.

21. The NERC TOP Petition includes a summary of nine Order No. 693 directives related to the proposed TOP Reliability Standards and NERC's responses to those directives in Exhibit I. NERC also explains that, rather than addressing two directives from Order No. 693 relating to minimum analysis and monitoring capabilities in the

---

[32] NERC TOP Petition at 6 and Exh. H.

[33] NERC TOP Petition at 6.

proposed TOP Reliability Standards and proposed IRO Reliability Standards, the standard drafting team chose to have them addressed by the Project 2009-02 Standard Drafting Team.[34] According to NERC, it "is developing a set of Reliability Standards in Project 2009-02, which is expected to be completed in 2014," that will establish requirements for the functionality, performance, and maintenance of real-time monitoring and analysis capabilities for reliability coordinators, transmission operators, generator operators, and balancing authorities for use by their system operators in support of reliable system operations.[35]

<u>TOP Implementation Plan</u>

22. NERC states that some of the proposed revisions to the TOP Reliability Standards are dependent on corresponding changes to proposed IRO Reliability Standards (IRO-001-3 and IRO-005-4) and to one Verification and Data Reporting of Generator Real and Reactive Power Capability Reliability Standard - MOD-025-2. NERC states that the proposed TOP Reliability Standards cannot be implemented until all three of the above standards have been implemented.

23. In its implementation plan, NERC also states that there "are no new definitions in the proposed set of standards" but the standard drafting teams for the TOP and IRO

---

[34] One directive is applicable to Reliability Standard IRO-002 and is described in PP 905 and 906 of Order No. 693, and the second directive is applicable to Reliability Standard TOP-006 and is described in P 1660.

[35] NERC IRO Petition at 27.

projects have coordinated on a common definition of "Reliability Directive" and agreed that the IRO standard drafting team "would write the definition and post it for vetting by the industry." The definition is as follows:

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

Further, the IRO-014-2 implementation plan indicates that a revised definition for "Adverse Reliability Impact" was approved by the NERC Board of Trustees on August 4, 2011; however, the petition does not discuss the merits of this change.[36] In addition, NERC does not discuss the impact of this revised definition on the overall body of Reliability Standards.

24. NERC requests that all requirements except proposed Reliability Standard TOP-003-2, Requirements R1 and R2 become effective the first day of the first calendar quarter twelve months following applicable regulatory approval.[37] NERC also requests that Requirements R1 and R2 of proposed Reliability Standard TOP-003-2 become effective the first day of the first calendar quarter ten months following applicable

---

[36] Adverse Reliability Impact (ARI) - Previous Definition - The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection. ARI – Revised Definition – The impact of an event that results in the Bulk Electric System instability or Cascading.

[37] NERC also requests that the existing TOP Reliability Standards be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following applicable regulatory approval.

regulatory approval. NERC explains that the twelve month period is to allow for entities to update processes and train operators on the revised requirements, and the two month differential for proposed Reliability Standard TOP-003-2, Requirements R1 and R2 is to provide time for recipients of a data specification to respond to the request for data.[38]

B. NERC's IRO Petition (Docket No. RM13-15-000)

25. Also on April 16, 2013, NERC submitted for Commission approval four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators).[39] NERC also requests approval of the implementation plan for the proposed IRO Reliability Standards, and approval of the retirement of six currently-effective Reliability Standards, effective at midnight immediately prior to the first day of the first calendar quarter that is twelve months following the effective date of a final rule in this proceeding.[40] NERC indicates that its petition also addresses two

[38] NERC TOP Petition, Exh. C at 2.

[39] NERC states that the NERC Board of Trustees approved a proposed Reliability Standard IRO-001-2 Reliability Standard on August 4, 2011, that was subsequently revised before it was filed at the Commission. The revision is designated as Reliability Standard IRO-001-3, was approved by the Board on August 16, 2012, and is included in this petition for approval. NERC IRO Petition at 4 n.5.

[40] NERC proposes to retire Reliability Standards IRO-001-1.1 (Responsibilities and Authorities); IRO-002-2 (Facilities); IRO-005-3a (Current Day Operations); IRO-014-1 (Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators); IRO-015-1 (Notifications and Information Exchange Between Reliability Coordinators); IRO-016-1 (Coordination of Real-time Activities Between Reliability Coordinators).

Order No. 693 directives associated with Reliability Standard IRO-005-1, but that it does not address a directive associated with Reliability Standard IRO-002-1 because this directive falls under the scope of Real-Time Tools Best Practices Task Force.

26. NERC identifies two "overall reliability benefits" of the proposed IRO Reliability Standards: (1) delineating a "clean division of responsibilities" between the reliability coordinator and transmission operator, giving the reliability coordinator authority to direct transmission operators to take actions to prevent or mitigate Interconnection Reliability Operating Limits (IROLs); and (2) "raising the bar" on IROL/SOL monitoring to focus on only those important to reliability. NERC also identifies four "improvements" reflected in the proposed IRO Reliability Standards, as follows:

- Interconnected bulk electric systems will be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.
- Personnel responsible for planning and operating interconnected bulk electric systems will be trained, qualified, and have the responsibility and authority to implement actions.
- The security of the interconnected bulk electric systems will be assessed, monitored and maintained on a wide-area basis.
- Plans for emergency operation and system restoration … will be developed, coordinated, maintained and implemented.[41]

---

[41] NERC IRO Petition at 11.

<u>IRO-001-3 (Responsibilities and Authorities)</u>

27. NERC proposes to replace the nine currently-effective requirements of Reliability Standard IRO-001-1 with the following three requirements in proposed IRO-001-3:

> **R1.** Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.
>
> **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.
>
> **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2.

NERC states that these requirements ensure that reliability coordinators "have the responsibility and authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact."[42] According to NERC, these proposed requirements "ensure that the responsibility and authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact is assigned to the Reliability Coordinator."[43]

---

[42] NERC IRO Petition at 12.

[43] NERC IRO Petition at 12-13.

28. NERC states that the changes to the proposed Reliability Standard IRO-001-3 are a result of the proposed retirement of the currently-effective Reliability Standard IRO-001-1.1, Requirement R7, which is now covered in proposed Reliability Standard IRO-014-2.[44] According to NERC, Reliability Standard IRO-014-2 will continue to ensure that both coordination agreements are in place to require that IROLs and SOLs are managed, and that system conditions that could cause Adverse Reliability Impacts are mitigated.

IRO-002-3 (Analysis Tools)

29. NERC proposes two new requirements pertaining to analytical tools and to retire Requirements R1 through R7 of currently-effective Reliability Standard IRO-002-2. The two proposed requirements provide:

> **R1.** Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools.
>
> **R2.** Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.

30. NERC states that the currently-effective requirements contain redundancies, which the proposed revision are intended to eliminate. NERC states that it revised Requirement R8 and incorporated it into proposed Requirements R1 and R2 of Reliability Standard

---

[44] Currently-effective Requirement R7 states: The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.

IRO-002-3. NERC also indicates that it is developing a set of Reliability Standards in Project 2009-02, that will establish requirements for the functionality, performance, and maintenance of real-time monitoring and analysis capabilities which affects Reliability Standard IRO-002.

IRO-005-4 (Current Day Operations)

31. NERC proposes the following two new requirements for proposed Reliability Standard IRO-005-4:

> **R1.** When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
>
> **R2.** Each Reliability Coordinator that identifies an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated.

32. NERC states that proposed Reliability Standard IRO-005-4 is a result of eliminating redundancies between existing and proposed standards. NERC also states that the requirements are to "ensure that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified."[45]

IRO-014-2 (Coordination Among Reliability Coordinators)

33. NERC proposes the eight requirements of Reliability Standard IRO-014-2 to replace the currently-effective Reliability Standards IRO-014-1, IRO-015-1 and

---

[45] NERC IRO Petition at 28.

IRO-016-1. NERC states that proposed Reliability Standard IRO-014-2 ensures that each reliability coordinator's operations are coordinated to avoid an Adverse Reliability Impact on other reliability coordinator areas and to preserve the reliability benefits of interconnected operations. Proposed Reliability Standard IRO-014-2 provides in part:

> **IRO-014-2 R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:
>
> > **1.1.** Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
> > **1.2.** Energy and capacity shortages.
> > **1.3.** Planned or unplanned outage information.
> > **1.4.** Control of voltage, including the coordination of reactive resources.
> > **1.5.** Coordination of information exchange to support reliability assessments.
> > **1.6.** Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.
> > **1.7.** Weekly conference calls.
>
> **R5.** Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators.
>
> **R6.** During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists.
>
> **R7.** During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact.

34. NERC states that Requirement R1 is the same as the currently-effective requirement except for the addition of Part 1.7, which requires reliability coordinators to

have weekly conference calls. Additionally, while Requirement R1 of Reliability Standard IRO-014-1 addresses "Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability," NERC states that proposed Requirement R1 defines specific information that is to be included in the procedures, processes, and plans.

IRO Implementation Plan

35. NERC proposes as the effective date for Reliability Standard IRO-001-3, the first day of the second calendar quarter beyond the date that the standard is approved by the Commission. NERC states that this time will allow applicable entities adequate time to develop the documentation and other evidence necessary to exhibit compliance with the requirements. NERC proposes as the effective date for Reliability Standards IRO-002-3 and IRO-005-4 the first day of the first calendar quarter following the effective date of a final rule because the revisions are "to an existing mandatory and enforceable standard, applicable entities are already complying with the existing standard."[46]

36. For proposed Reliability Standard IRO-014-2, NERC proposes the first day of the first calendar quarter that is twelve months following the effective date of a final rule as the effective date. NERC states that, while the revisions to this Reliability Standard are to an existing mandatory and enforceable standard, "applicable entities should only have

[46] NERC IRO Petition, Exh. A at 8.

to make minor revisions to their Operating Plans, Operating Processes or Operating Procedures to show compliance."[47]

37. NERC also proposes retirement of the six IRO Reliability Standards, effective at midnight immediately prior to the first day of the first calendar quarter that is twelve months following the effective date of a final rule.

C. Proposed Revisions to Reliability Standard TOP-006-3 (Docket No. RM13-12)

38. On April 4, 2013, NERC proposed revisions to Reliability Standard TOP-006-3 to divide the reporting responsibilities of balancing authorities and transmission operators into separate requirements. According to NERC, the proposed revisions clarify that transmission operators are responsible for monitoring and reporting available transmission resources, while balancing authorities are responsible for monitoring and reporting available generation resources. NERC states that this division is consistent with the roles and responsibilities of registered entities as set forth in NERC Reliability Functional Model.

39. NERC states that, as currently written, Requirement R1.2 could be interpreted as duplicating efforts to monitor and report the availability of generation and transmission resources. NERC explains that it specifically requires both transmission operators and balancing authorities to inform reliability coordinators and other affected transmission operators and balancing authorities of all transmission and generation resources available

[47] NERC IRO Petition, Exh. A at 8-9.

for use. To address these concerns, NERC revised Requirement R1.2 to limit a transmission operator’s monitoring and notification obligations to transmission resources available for use. NERC created Requirement R1.3 to limit a balancing authority’s monitoring and notification obligations to generation resources available for use. NERC explains that proposed Requirement R1.3 only requires balancing authorities to inform reliability coordinators of all generation resources available for use, and they are not required to report the availability of generation resources to transmission operators because transmission operators already receive this information from generator operators pursuant to currently effective Requirement R1.1. According to NERC, by defining the reporting channels from transmission operators and balancing authorities to reliability coordinators, reliability coordinators will receive necessary information in advance, as part of their operating tools, processes and procedures, to prevent and mitigate emergency operating situations in real and next day operations.

40. In addition, NERC proposes to modify currently-effective Requirement R3. According to NERC, while the currently-effective Requirement R3 requires reliability coordinators, transmission operators and balancing authorities to provide appropriate technical information concerning protective relays to their operating personnel, NERC states that it does not impose explicit geographical boundaries on the scope of this obligation. NERC indicates that revised Requirement R3 specifies that the relevant protective relays are those within these entities’ respective reliability coordinator area, transmission operator area or balancing authority area.

41. NERC has proposed medium Violation Risk Factors (VRFs) for proposed TOP-006-3, Requirements R1.2, R1.3 and R3 because these three Requirements all ensure that critical reliability parameters are monitored in real-time. NERC also states that the proposed Violation Security Levels (VSLs) for Requirement R1.3 meet NERC's VSL guidelines. NERC requests that the revisions become effective on the first day of the first calendar quarter after applicable regulatory approval.

II. <u>Discussion</u>

42. Pursuant to section 215(d) of the FPA, we propose to remand NERC's proposed revisions to the TOP and IRO Reliability Standards (Docket Nos. RM13-14-000 and RM13-15-000). While we believe that NERC's approach of condensing the requirements and removing redundancies generally has merit, we are concerned that, unlike the currently-effective TOP Reliability Standards, there is no requirement in the proposed standards for transmission operators to plan and operate within all SOLs. Without a requirement to analyze and operate within all SOLs in the proposed standards and by limiting non-IROL SOLs to only those identified by the transmission operator internal to its area, system reliability is reduced and negative consequences can occur outside of the transmission operator's internal area. As described below, this was a problem during the Southwest Outage when the loss of a 500 kV line in Arizona Public Service's area overloaded equipment, which ultimately resulted in a cascade outage

leaving approximately 2.7 million customers without power.[48] The provisions in the proposed TOP Reliability Standards that require transmission operators to operate only within a subset of SOLs offsets the potential benefits the proposed Reliability Standards may otherwise provide.

43. The Commission believes that NERC's proposal for the treatment of SOLs affects at least proposed Reliability Standard TOP-002-3, Requirements R1 and R2 as well as proposed Reliability Standard TOP-001-2, Requirements R8 through R11. Section 215(d)(4) requires that the Commission remand to the ERO for further consideration a Reliability Standard "that the Commission disapproves in whole or in part."[49] Thus, notwithstanding the organizational and administrative improvements contained in other provisions of proposed TOP Reliability Standards, our concern regarding the treatment of SOLs provides us no option other than to propose to remand the entire Reliability Standards TOP-001-2 and TOP-002-3.

44. In addition to addressing the SOL issue in the TOP Reliability Standards, we also propose to direct that NERC, on remand, develop modifications to the IRO Reliability Standards to ensure that reliability coordinators continue to develop and implement comprehensive generation and transmission outage coordination processes.

---

[48] 2011 Southwest Outage Blackout Report at 1.

[49] 16 U.S.C. 824o(d)(4) (2012) (emphasis added).

45. Given that the SOL and outage coordination process issues pertain to numerous requirements across the proposed standards, the interrelationship among the TOP standards and between the TOP and IRO Reliability Standards, and that NERC requests that both sets of standards be addressed together, we propose to remand the entire set of TOP and IRO Reliability Standards.[50] This approach will give industry and NERC flexibility to develop modifications to the standards that address the concerns identified in this NOPR.

46. Further, the Commission discusses below certain provisions of NERC's proposal that require clarification or further technical explanation. Depending on the explanations provided by NERC and other interested entities in comments to this NOPR, additional Commission action may be appropriate, including the identification of additional issues that NERC must address on remand.

47. Finally, pursuant to section 215(d) of the FPA, we also propose to approve NERC's proposed revisions to Reliability Standard TOP-006-3. We find that proposed TOP-006-3 is sufficiently separate from the standards we propose to remand above. Below, we discuss: (A) the proposed TOP Standards; (B) the proposed IRO Standards; and (C) the proposed revisions to Reliability Standard TOP-006-3.

---

[50] NERC TOP Petition at 1-2.

A. TOP Reliability Standards

1. Issue to be Addressed

a. Plan and Operate Within All SOLs

NERC Petition

48. Currently-effective Reliability Standard TOP-002-2a, Requirement R10 requires the transmission operator to plan to meet all SOLs and IROLs. Similarly, currently-effective Reliability Standard TOP-004-2, Requirement R1 requires transmission operators to operate within all IROLs and SOLs.

49. Proposed Reliability Standard TOP-002-3, Requirement R2 provides that each transmission operator still plan to operate within all IROLs but within only a sub-set of SOLs. It states that each transmission operator "shall develop a plan to operate within each [IROL] and each [SOL] which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator area" as a result of its Operational Planning Analysis performed in Reliability Standard TOP-002-3, Requirement R1.

50. NERC states that it is appropriate to limit Requirement R2 to a sub-set of "non-IROL SOLs" that are important to local areas and that the identified subset of non-IROL SOLs will be subject to the requirements of the proposed Reliability Standards. NERC states that non-IROL SOLs are typically thought of in terms of "equipment damage or

[element] loss of life" and are restricted to a limited or local area.[51] According to NERC, the standard drafting team concluded that it is not necessary to monitor all non-IROL SOLs because the "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue."[52] NERC explains that the "difference between non-IROL SOLs and IROLs is expressed in the difference between the consequences to the System (or impact to reliability) should unplanned perturbations of the system occur when the limit is being exceeded."[53] According to NERC, the consequences of exceeding an IROL are described as cascading, uncontrolled separation, or instability.[54] NERC states that the impact of exceeding a non-IROL SOL will not result in an Adverse Reliability Impact.[55]

Commission Proposal

51. The Commission is concerned with NERC's proposal because, unlike the currently-effective TOP Reliability Standards, the proposed standards do not require the

[51] NERC states that the revised TOP requirements move the standards to where the NERC Operating Guidelines intended them to be and ensure that the reliability of the interconnected system will be maintained and even enhanced because system operators will not be distracted from true reliability issues by local system issues. NERC TOP Petition at 18.

[52] NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on Second Draft of Standards for Real-Time Operations) at 23.

[53] NERC TOP Petition at 19.

[54] *Id.*

[55] NERC TOP Petition at 19.

transmission operator to plan and operate within SOLs, only non-IROL SOLs that are identified by the transmission operator as supporting reliability internal to its area and identified as a result of an Operational Planning Analysis.[56] For example, non-IROL SOLs that appear to be excluded from the proposed standard are non-IROL SOLs that are in a transmission operator's area that impact another transmission operator's area or more than one transmission operator's area.

52. During deteriorating system conditions, an SOL can rapidly degrade into an IROL. Limiting the requirement for transmission operators to analyze and operate within SOLs only to non-IROL SOLs identified by the transmission operator for its internal area can reduce system reliability because operators have less situational awareness of the system and conditions. Even if we accept the argument that our rules for operating bulk electric facilities should not be concerned with "equipment damage or [element] loss of life," NERC has not explained adequately why the only "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue." Major cascading events including the Northeast Blackout of 2003 and the 2011 Southwest Outage were initiated by a non-IROL SOL exceedance, followed by a series of non-IROL

[56] NERC's Functional Model states one of the tasks of transmission operations is to "[d]evelop system limitations such as System Operating Limits…and operate within those limits." NERC's "Reliability Functional Model Function Definitions and Functional Entities Version 5" at 37 *available* at www.nerc.com.

SOLs exceedances until the system cascaded.[57] Thus, while non-IROL SOLs are essentially defined as not posing a risk of cascading outages, instability or uncontrolled separation if they are exceeded, experience indicates that operators do not always foresee the consequences of exceeding such SOLs and thus cannot be sure of preventing harm to reliability. The Commission believes that when any facility ratings or stability limits are exceeded or expected to be exceeded (i.e. causing a SOL or an expected SOL on jurisdictional facilities), these conditions should be mitigated to avoid the possibility of further deteriorating system conditions and a cascade event.

53. We recognize that, if IROLs and non-IROL SOLs are determined accurately, the reliability consequences of an exceedance should usually be greater for the former than the latter. If NERC or commenters believe this probability warrants general exclusion of the latter from the TOP Reliability Standards (subject to an entity's specific inclusions), they should explain this view in more detail and present any information that may help us weigh its merit.

54. Moreover, we believe that proposed Reliability Standard TOP-002-3, Requirement R1 is flawed because the transmission operator should have an operational plan to operate within all Bulk-Power System IROLs and SOLs for all cases when facility ratings or stability limits are exceeded during anticipated normal and contingency event conditions. The operational plan is needed to ensure the transmission operator operates

[57] *See* 2003 Northeast Blackout Report at 74 and the 2011 Southwest Outage Blackout Report at 1.

in, or can return its system to, a reliable operating state. For example, the 2011 Southwest Outage Blackout Report raised a similar concern, stating that transmission operators should "ensure that post-contingency mitigation plans reflect the time necessary to take mitigating actions, including control actions, to return the system to secure N-1 state as soon as possible but no longer than 30 minutes following a single contingency."[58] We believe that the transmission operator should have operational or mitigation plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state. Absent such plans, system conditions can linger in an unsecure or emergency state exposing the system to cascading outages upon the next contingency. Thus, we are concerned that Requirement R1 is insufficient for the fundamental operation of the interconnected transmission network as proposed by NERC.

55. Similarly, proposed Reliability Standard TOP-001-2, Requirements R8 through R11 address transmission operator notification, operation and action with respect to IROLs and some SOLs based on the transmission operator's next-day Operational Planning Analysis. Because proposed Reliability Standard TOP-001-2, Requirement R8 requires a transmission operator's notification of only those SOLs identified in a next-day Operational Planning Analysis, the Commission believes it is possible for additional

---

[58] Southwest Outage Blackout Report (Recommendation 13 at 90). In addition, in Order No. 693 the Commission stated that operational plans for all IROLs should include the "[i]dentification and communication of control actions [to system operators] that can be implemented within 30 minutes" following a contingency to return the system to a reliable operating state...." Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1601.

SOLs to develop or occur in the same-day or real-time operational time horizon. This could impose an operational risk to the interconnected transmission network. For example, if real-time system load levels are unexpectedly higher than forecasted load conditions used in the Operational Planning Analysis, this condition could result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now exceeded under high load levels whereas under the forecasted load levels (lower load levels), facility ratings and stability limits were not expected to be exceeded. Another example is if an unplanned outage of a transmission element or generator unit occurred after the completion of the next-day Operational Planning Analysis, this condition may result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now possibly exceeded due to the change in the system topology (i.e. transmission element outage) or generation dispatch (i.e. generator unit outage) that redirected the power flow on some portions of the interconnected transmission network.[59] Thus, there are various reasons why a SOL could occur in real-time operations due to the dynamic nature of the real-time interconnected transmission network and not be identified in the next-day Operational Planning Analysis. To assure that transmission operators are equipped to react to such

[59] This condition was identified in the 2011 Southwest Outage Blackout Report, which found that Imperial Irrigation District did not perform a separate, updated next-day study and contingency analysis for September 8, 2011 and instead, referenced a previous study which was not valid because it did not match the load and generation dispatch for the day. 2011 Southwest Outage Blackout Report, Recommendation No. 1 at 66.

situations, we believe that the Requirement R8 operational responsibilities and actions should pertain to all IROLs and all SOLs for all operating time horizons.

56. Accordingly, pursuant to section 215(d)(4) of the FPA, we propose to remand proposed Reliability Standards TOP-001-2 and TOP-002-3. Specifically, we propose to direct that NERC develop modifications to Reliability Standard TOP-002-3, Requirements R1 and R2 that address our concerns discussed above to ensure that transmission operators develop mitigation plans for all IROLs and SOLs expected to be exceeded. Similarly, for proposed Reliability Standard TOP-001-2, Requirement R8, we propose to direct that NERC develop modifications to require that transmission operator actions apply to all SOLs identified in all operational time horizons (operations planning, same-day operations and real-time operations). Further, for proposed Reliability Standard TOP-001-2, Requirements R9 through R11, we propose to direct that NERC develop modifications to require that transmission operator specified actions apply to all SOLs related responsibilities in the real-time operations time horizon. Our concerns discussed above apply to specific provisions of proposed TOP-001-2 and TOP-002-3. However, as explained above, we propose to remand proposed Reliability Standards TOP-001-2 and TOP-002-3. Moreover, as explained above, because the TOP standards are so interrelated, we also propose to remand Reliability Standard TOP-003-2 to give NERC and industry flexibility to address our concerns.

2. TOP Reliability Standards – Issues Requiring Clarification

a. System Models, Monitoring and Tools

NERC Petition

57. NERC proposes to retire TOP and IRO Reliability Standards that require reliability coordinators and transmission operators to maintain and use certain models and analysis capabilities and monitoring. NERC proposes to delete requirements for transmission operators to (1) "maintain accurate computer models utilized for analyzing and planning system operations"; (2) "use monitoring equipment to bring to the attention of operating personnel important deviations"; (3) "use sufficient metering … to ensure accurate and timely monitoring"; and (4) "have sufficient information and analysis tools to determine the cause(s) of SOL violations…."[60] NERC explains that these transmission operator requirements are unnecessary because transmission operators meet these requirements as part of NERC's certification process or are in other currently-effective or proposed standards.[61]

58. Similarly, NERC proposes to retire Reliability Standard IRO-002-2 Requirements R4, R5, R6, and R7, which address real-time monitoring and analysis capabilities and functions required to enable the reliability coordinator to perform its responsibilities. According to NERC, these requirements are unnecessary because they are inherent in the

---

[60] *See* Reliability Standards TOP-002-2.1b, Requirement R19, TOP-006-2, Requirement R5, TOP-006-2, Requirement R6, and TOP-008-1, R4, respectively.

[61] NERC TOP Petition, Exhibit J at 22, 34, 35, and 38.

reliability coordinator's duty to maintain area control error or operate within IROLs/SOLs and can be verified in the certification process.[62] NERC also states that the Commission directives in Order No. 693 applicable to a minimum set of analytical tools and applicable to reliability coordinators and transmission operators will be addressed in Project 2009-02 - Real-time Monitoring and Analysis Capabilities – that has a projected completion date of 2014. Further, NERC proposes to retire other requirements of currently-effective Reliability Standard TOP-006-2 which address real-time monitoring responsibilities of the transmission operator.

Commission Proposal

59. In Order No. 693, the Commission directed NERC to develop requirements for a minimum set of analytical tools (analysis and monitoring capabilities) to ensure that a reliability coordinator has the tools it needs to perform its functions.[63] In its TOP Petition, NERC discusses the importance of analytical tools and real-time monitoring noting that, "[a]ccording to the August 2003 Blackout Report, a principal cause of the August 14, 2003 blackout was a lack of situational awareness, which was in turn the

[62] Section 500 of NERC's Rules of Procedure provide for an organization certification program that is intended to ensure that the an applicant to be a reliability coordinator, balancing authority or transmission operator "has the tools, processes, training, and procedures to demonstrate their ability to meet the Requirements/sub-Requirements of all of the Reliability Standards applicable to the function(s) for which it is applying thereby demonstrating the ability to become certified and then operational." NERC Rules of Procedure at 44.

[63] Order No. 693, FERC Stats. & Regs. ¶ 31,242, at PP 905, 906, 1660.

result of inadequate reliability tools."[64] We agree with NERC's statement and believe this is an area of reliability that requires vigilance. Moreover, our view is reinforced by the 2011 Southwest Outage Blackout Report, which found that "[a]ffected TOP's real-time tools are not adequate or, in one case, operational to provide the situational awareness necessary to identify contingencies and reliably operate their systems" and consequently recommended that "TOPs should take measures to ensure that their real-time tools are adequate, operational, and run frequently enough to provide their operators the situational awareness necessary to identify and plan for contingencies and reliably operate their systems."[65]

60. Monitoring and analysis capabilities are essential in establishing and maintaining situational awareness. While NERC indicates that these functions are assured through the certification process,[66] we are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. Monitoring and assessment capabilities must adapt to assess changing topography and system conditions so that

---

[64] NERC TOP Petition at 10. NERC also states that "the failure of control computers and alarm systems, incomplete tool sets, and the failure to supply network analysis tools with correct System data on August 14, contributed directly to this lack of situational awareness. Also, the need for improved visualization capabilities over a wide geographic area has been a recurrent theme in blackout investigations."

[65] 2011 Southwest Outage Blackout Report at 88 and Finding 12. In addition, the 2011 Southwest Outage Blackout Report , Finding 27 (at 111) states that "[a] TOP did not have tools in place to determine the phase angle difference between two terminals of its 500 kV line after it tripped."

[66] NERC TOP Petition, Exh. J at 33.

operators can continually maintain an adequate level of situational awareness. In contrast, certification is a one-time process that may not adequately assure continual operational responsibility would occur if these requirements were in a Reliability Standard.

61. In addition, as discussed above, NERC indicates that Standards Project 2009-02, Real-time Monitoring and Analysis Capabilities, will address the Commission directives in Order No. 693 that address a minimum set of analytical tools. According to NERC, this project has a projected completion date of 2014. NERC's retiring of current IRO and TOP requirements that address monitoring and analysis capabilities warrants expedition in the completion of Project 2009-02. The retirement of the current IRO and TOP requirements that address monitoring and analysis capabilities should not occur until the completion and implementation of Project 2009-02.[67] Thus, in its NOPR comments NERC should propose a schedule that it will follow to ensure it completes and implements Project 2009-02 prior to any retirement of the standard such that there would be no gap.

[67] NERC's "Standards Independent Experts Review Project" (Industry Experts Report) identifies one aspect of Project 2009-02 as a "high priority" gap. Industry Experts Report at Appendix F. The Industry Experts Report (App. F) identifies a high priority gap for Project 2009-02 to define the requirements for EMS RTCA models or performance expectations of the models; the Report also says proposed TOP-002 should incorporate current requirement for tools to determine cause of SOL violations.

b. Compliance with Reliability Directives

NERC Petition

62. Currently-effective Reliability Standard TOP-001-1, Requirements R3 and R4 require applicable entities to comply with transmission operators' and reliability coordinators' "reliability directives," which currently is an undefined term. NERC proposes Reliability Standard TOP-001-2, Requirement R1 which requires applicable entities to comply with transmission operators' "Reliability Directives," which NERC proposes to define as "[a] communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts."[68]

63. In its implementation plan, NERC states that it is not proposing any new definitions but that the TOP standard drafting team coordinated with the IRO drafting team to develop a definition of "Reliability Directive." This definition is included in the IRO implementation plan.

Commission Proposal

64. The currently-effective TOP Reliability Standards use "reliability directive," which, as an undefined term, does not appear to be limited to a specific set of circumstances. Also IRO Reliability Standards use the term "reliability directive" in the

---

[68] NERC's proposed definition of Reliability Directive does not appear in the TOP Petition. Rather, NERC proposes the definition in the IRO Petition, Exhibit C at 1 (IRO Implementation Plan).

same manner as an undefined term.[69] In contrast, application of the proposed definition of "Reliability Directive" appears to require compliance with transmission operator directives only in emergencies, not normal or pre-emergency times. We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements). For example, mandatory compliance with directives in non-emergency situations is important when a decision is made to alter or maintain the state of an element on the interconnected transmission network. NERC staff has noted in the context of how to communicate such directives that operating practices for such directives should be consistent, no matter what type of operating condition (normal, alert, emergency) exists.[70] Moreover, the transition from normal to emergency operation can be sudden and indistinguishable until recognized, often after the damage is done.[71]

65. NERC's TOP and IRO petitions do not explain the proposed, defined term "Reliability Directive," or why compliance with a transmission operator's directives should be required only during emergencies (if this is the intent). Accordingly, we seek from NERC and other interested entities clarification and technical explanation regarding

[69] *See* Reliability Standard IRO-002-2, Requirement R8.

[70] *See* COM-003-1, Operations Communications Protocols White Paper, May 2012 at 12, *available* at nerc.com.

[71] *See* NERC staff's letter to "Project 2009-22 Interpretation of COM-002-2 R2 for IRC Drafting Team" dated November 18, 2011, at 1, *available* at nerc.com.

the scope and intent of the defined term, as well as the anticipated reliability benefits and/or drawbacks of the proposed term.

66. In addition, while NERC has included the proposed definition in its implementation plan, NERC has not explained or justified its request for approval of the revised definition. The Commission has held that definitions are standards.[72] Therefore, we cannot approve the definition without a technical justification.

c. Consideration of External Networks and sub-100 kV Facilities and Contingencies in Operational Planning Analysis

NERC Petition

67. In proposed Reliability Standard TOP-002-3, Requirement R1, NERC proposes to require transmission operators to prepare an Operational Planning Analysis, i.e., next day study, which represents "projected System conditions" to determine if their planned operations will exceed facility ratings and stability limits for normal and contingency conditions. NERC does not indicate whether this includes external networks or sub-100 kV facilities.

[72] As with Reliability Standards, the Commission reviews and approves revisions to the NERC glossary pursuant to FPA section 215(d)(2). Further, the Commission may direct a modification to address a specific matter identified by the Commission pursuant to section 215(d)(5). *See also* Order No. 693, FERC Stats. & Regs. ¶ 31,242 at PP 1893-98.

Commission Proposal

68. It is unclear whether NERC's proposal would require transmission operators to include updated external networks to reflect operating conditions external to their systems and (internal and external) sub-100 kV facilities in their operational planning analyses. In Order No. 693, the Commission directed a modification to planned outage coordination to require consideration of facilities below 100 kV that, in the opinion of the registered entity (such as a transmission operator) "will have a direct impact on the reliability of the Bulk-Power System…."[73] The 2011 Southwest Outage Blackout Report includes similar recommendations that transmission operators should ensure their next-day studies include updated external networks and internal and external facilities (including those below 100 kV) that can impact Bulk-Power System reliability.[74] Although proposed Reliability Standard TOP-002-3, Requirement R1 requires the transmission operator to consider "projected System conditions," it is unclear whether "projected System conditions" include the relevant updated external networks and (internal and external) sub-100 kV facilities.

69. The Commission seeks clarification and technical explanation from NERC whether the term "projected System conditions" in proposed Reliability Standard TOP-002-3 Requirement R1 includes updated external networks to reflect operating

---

[73] Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1624.

[74] 2011 Southwest Outage Blackout Report, Recommendations Nos. 2 and 3.

conditions external to their systems and sub-100 kV facilities (internal and external) in their operational planning analyses. If not, the Commission seeks comment on the associated reliability risks and, whether it is appropriate to include updated external networks to reflect operating conditions and external and sub-100 kV facilities (internal and external) in the operational planning analyses.

d. Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating States

NERC Petition

70. NERC proposes to delete Reliability Standard TOP-004-2, Requirement R2, which provides that each transmission operator "shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency." NERC's Petition does not provide an explanation for the deletion. However, the NERC "mapping document," which is included as an exhibit to the TOP Petition indicates that NERC intends that Requirement R2 be replaced by proposed Reliability Standards TOP-001-2, Requirements R7 and R9.[75] Proposed Requirement R7 requires each transmission operator to not operate outside any identified IROL "for a continuous duration exceeding its associated IROL T_v." Proposed Requirement R9 states each transmission operator shall not operate outside any SOL identified in Requirement R8 "for a continuous duration that could cause a violation of the Facility Rating or Stability criteria upon which it is based." Further, NERC proposes to replace Reliability

[75] NERC TOP Petition, Exhibit J at 25.

Standard TOP-008-1, Requirement R4 with multiple proposed requirements from proposed Reliability Standards TOP-001-2, TOP-002-3, and TOP-003-2. Reliability Standard TOP-008-1, Requirement R4 requires that the transmission operator have information and analysis tools to determine the causes of SOL violations, such as a most severe single contingency event, and conduct this analysis in all operating timeframes.

71. With regard to unknown operating states, currently-effective Reliability Standard TOP-004-2, Requirement R4 states that, if a transmission operator "enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes."[76] Order No. 693 directed NERC to modify Requirement R4 to restore the system "to respect proven reliable power system limits as soon as possible and in no longer than 30 minutes."[77]

72. In the TOP Petition, NERC proposes to replace Requirement R4 with proposed Reliability Standard TOP-001-2, Requirements R7 through R11. Requirements R7 through 11 address the transmission operator's responsibilities over IROLs or SOLs that have been identified by the transmission operator as necessary to support reliability internal to its transmission operator area. NERC explains that the proposed requirements "do not include an explicit reference to 'unknown state' since system limits can and

---

[76] Reliability Standard TOP-004-2, Requirement R4.

[77] Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1636.

should be determined and conditions can be monitored to know when they have been exceeded."[78] NERC also states that unknown operating states "cannot exist because valid operating limits have been determined for all facilities in a TOP's footprint."[79] In addition, NERC states that the proposed requirements "prohibit operations outside of IROLs, or SOLs identified in TOP-001-2…."[80] Further, NERC explains that proposed Reliability Standard EOP-001-2, which applies to emergency operations planning, covers the general intent of being prepared to react to "Emergencies."[81]

Commission Proposal

73. NERC has proposed to retire three key rules here, i.e., the requirements to be ready for the single largest contingency, to move quickly from an "unknown operating state" to within proven limits, and to determine the cause of SOL violations in all time-frames, including real-time. We believe these three rules represent the bedrock core of real-time operating rules and practices, and it is therefore incumbent upon NERC to provide a more thorough and comprehensive explanation of how the proposed

[78] NERC TOP Petition, Exhibit H at 5.

[79] NERC TOP Petition, Exhibit I at 4.

[80] NERC TOP Petition, Exhibit H at 5.

[81] NERC TOP Petition, Exhibit I (Resolution of Order No. 693 directives) at 4.

replacement standards compare in meeting the same objectives as the current standards. We request comment on these concerns, as elaborated below.[82]

74. In particular, NERC should address whether its proposal would allow a different approach to real-time operational assessments and operation to the most severe single contingencies and, if so, NERC should explain and technically support the nature and associated reliability effects of any different approaches.[83] How are the proposed requirements to not exceed IROLs or certain SOLs for more than the specified times are the functional or implicit equivalent of the current rules? For example, do the proposed rules allow reliance on post-contingency mitigation at times when the current rules would require pre-contingency mitigation? If so, is the difference significant for reliability purposes? Do both the current and proposed rules prohibit an entity from operating for more than 30 minutes in a state where loss of a particular line would cause the loss of enough resources or load to risk cascading outages or instability? Or, if the entity is not yet operating beyond the pre-determined ratings of the particular line, would the

[82] The 2011 Southwest Outage Blackout Report indicated that the September 8, 2011 cascade event "showed that the system was not being operated in a secure N-1 state" and that "[NERC's] mandatory Reliability Standards…require that the BES be operated so that it generally remains in a reliable condition, without instability, uncontrolled separation or cascading, even with the occurrence of any single contingency." 2011 Southwest Outage Blackout Report at 5.

[83] Currently-effective Reliability Standard IRO-008-1, Requirement R2 requires that "[e]ach Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs."

proposed rules allow doing so while the current rules do not? Should all transmission operators be required to run a real-time contingency analysis (RTCA) frequently, since the lack of such analysis can impair situational awareness substantially? Or is the value of such information outweighed for smaller entities with such limited facilities and operations that they generally can maintain similar reliability based on operator experience and judgment without any extra staffing and procedures needed to ensure that the RTCA's informational inputs and modeling are valid and useful?

75. With regard to mitigation of unknown operating states, while NERC asserts that "unknown states" cannot exist, a transmission provider could have valid operating limits for all facilities but lack situational awareness when valid limits are exceeded. In addition, a transmission operator could operate in an unanalyzed or unstudied state (as a result of loss of EMS facilities that meter and report voltage, MW flow and other key system indicators). For example, the 2011 Southwest Outage Blackout Report found that Western Area Power Administration-Lower Colorado was operating in an "unknown state" when it lost its real-time contingency analysis capabilities and, at the same time, did not notify its reliability coordinator to assist with situational awareness.[84] In light of

[84] 2011 Southwest Outage Blackout Report, Recommendation 15, at 95 states that "[a]n entity should never be operating in an unknown state, as WALC [Western Area Power Administration-Lower Colorado] was when it lacked functional RTCA [real-time contingency analysis] and State Estimator, and did not ask any other entity to assist it with situational awareness." *Cf*. NERC Compliance Filing, Docket No. RM06-16-000 (Oct. 31, 2008) at 7 ("the Reliability Coordinators in the West operate only to study conditions and note that they do not operate in IROL conditions, only SOLs, unless there are one or more unanticipated outages. In these cases, when an IROL condition is

(continued…)

this concern, the Commission seeks comment and technical explanation from NERC and other interested entities on the proposed retirement. As above, our main question is whether the proposed rules are comparable to the current rules for reliability purposes and, if not, whether the difference is reasonable.

e. <u>System Protection Coordination</u>

<u>NERC Petition</u>

76. NERC proposes to replace currently-effective Requirements R2, R5 and R6 in Reliability Standard PRC-001-1, with proposed Reliability Standard TOP-003-2, Requirement R5.[85] Currently-effective Reliability Standard PRC-001-1, Requirement R2 requires generator operators and transmission operators to notify affected entities of relay or equipment failures and if the failure reduces system reliability, take corrective action as soon as possible. Requirement R5 requires generator operators and transmission operators to coordinate changes in generation, transmission, load or operating conditions with appropriate advance notice that could require changes in the protection systems of others. Requirement R6 obligates transmission operators and balancing authorities to

experienced, the Reliability Coordinators must restore the system to a known operating state within 20 minutes for stability concerns and 30 minutes for thermal concerns.”).

[85] NERC TOP Petition, Exhibit J at 40 and 41. According to NERC (petition at 4), the “corresponding changes in proposed PRC-001-2 are administrative in nature and are limited to removal of three requirements in currently-effective PRC-001-1 that are now addressed in proposed TOP-003-2, included herein for approval.”

monitor the status of each special protection system in their area and to notify affected transmission operators and balancing authorities of a change in status.

77. Proposed Reliability Standard TOP-003-2, Requirement R5 states that entities "receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data." In the standard development process, the standard drafting team explained that a "data specification" is required to contain all of the information that a transmission operator and balancing authority needs to fulfill its obligations.[86] In addition, the standard drafting team stated that the transmission operator and balancing authority "are the best ones to determine the contents of the data specification and that any attempt to provide a minimal list or other guidance would be short-sighted and possibly misleading."[87] The standard drafting team indicated that "an auditor can only question what is contained in the requirements and in this case that

[86] *E.g.,* NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on the 7th Draft) at 72. Southwest Power Pool Regional Entity stated that it "does not believe TOP-003-2 addresses the requirements in PRC-001." Exh. D at 73. Texas Reliability Entity states that "Requirements R2, R5 and R6 of PRC-001-1, which are proposed to be deleted, are not actually replaced by any new or revised requirements in other standards, resulting in reliability gaps." Exh. D at 89.

[87] NERC TOP Petition, Consideration of Comments (Consideration of Comments on the 7th Draft) at 79. Southwest Power Pool Standards Review Group states that "[t]o be sure that all the bases are covered, we would suggest that the SDT provide a guideline which incorporates the types of data and information they envisioned when drafting these requirements." *Id.*

would include only the existence of the data specification and not its contents. Any omissions of data will be caught up in failures to adhere to other standards."[88]

Commission Proposal

78. The Commission seeks comment and technical explanation from NERC and other interested entities on how current Reliability Standard PRC-001-1 Requirement R2's requirement for corrective action (i.e., return a system to a stable state) is addressed in its proposal.[89] Further, the Commission proposes that NERC issue guidance on data needed for protection system coordination that addresses the applicable Order No. 693 directives and the proposed retirement of the Reliability Standard PRC-001-1 requirements.[90]

---

[88] NERC TOP Petition, Consideration of Comments (Consideration of Comments on the 7th Draft) at 88. Southwest Power Pool Standards Review Group states that "incorporating protective relay information in the data specifications of R1 and R2 raises the potential for auditors to question the contents of an entity's specification." *Id.* at 79.

[89] In Order No. 693, the Commission required changes to Requirement R2 of Reliability Standard PRC-001-1 to clarify "corrective action" (i.e., return a system to a stable state), specify time limit for notification, and require corrective action as soon as possible but no longer than 30 minutes. Order No. 693, FERC Stats. & Regs. ¶ 31,242 at PP 1441, 1445 and 1449.

[90] In Order No. 693, the Commission directed NERC to develop a modification to Reliability Standard TOP-006-1 to clarify "the meaning of 'appropriate technical information' concerning protective relays" so that "operators can make better informed decisions. An example of such information would be the allowable reclosing angle set in the existing relays and the maximum angle at specific points in the Bulk-Power System that would be acceptable to allow closing of lines during system restoration." Order No. 693, FERC Stats. & Regs. ¶ 31,242, at P 1663 and P 1665.

f. Notification of Emergencies

NERC Petition

79. Currently-effective TOP Reliability Standard TOP-001-1a requires each transmission operator to inform its reliability coordinator and other potentially affected transmission operators "of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency."[91] In its petition, NERC proposes to retire Reliability Standard TOP-001-1a and proposes as replacements Requirements R3-R6 of Reliability Standard TOP-001-2. In particular, Requirement R3 provides "[e]ach Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis."[92] In addition, Requirement R3 has a time horizon of "Operations Planning," which NERC describes as the "operating and resource plans from day-ahead up to and including seasonal" and does not include same-day operations or real-time operations.[93]

---

[91] Reliability Standard TOP-001-1a, Requirement R5.

[92] The NERC Glossary defines Operational Planning Analysis as "[a]n analysis of the expected system conditions for the next day's operation... (That analysis may be performed either a day ahead or as much as 12 months ahead.). Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints."

[93] *See* NERC Time Horizons at 1, *available* at http://www.nerc.com/pa/Stand/Resources/Documents/TimeHorizons.pdf at 1.

Commission Proposal

80. NERC's proposed revisions warrant clarification. Read one way, proposed Requirement R3 is less comprehensive than the currently-effective requirements pertaining to notification of emergencies. Yet, it also contains provisions that, read another way, could require TOPs to notify others of all emergencies, not just day-ahead.[94] Indeed, during the standard development process, similar concerns were expressed.[95]

81. Similarly, it is not clear whether proposed Reliability Standard TOP-001-2, Requirement R5 would address same-day and real-time operating emergencies not covered by TOP-001-2, Requirement R3. Proposed TOP-001-2, Requirement R5, states that "[e]ach [TOP] shall inform its [RC] and other [TOPs] of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas…." The definition of Adverse Reliability Impact in NERC's TOP filing is "[t]he impact of an event that results in frequency related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that

---

[94] An "anticipated" emergency should apply to all operational time horizons: operations planning, same-day, and real-time. Further, an "actual" emergency could only occur during the real-time operational time horizon.

[95] NERC TOP Petition, Exh. D, Consideration of Comments (Consideration of Comments on the 7th Draft) at 21: "R3 seems to be missing some words…it is not clear if this requirement is supposed to be about planning ("expected to be affected by anticipated Emergencies") or real-time operations ("known to be affected by actual Emergencies") or both. If the latter is intended, the Time Horizon should include Real-Time Operations and Same Day Operations…." The standard drafting team responded that "it is clear as to what needs to be communicated." *Id.* at 23.

affects a widespread area of the Interconnection."[96] In contrast, NERC defines Emergency as "[a]ny abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System." An Adverse Reliability Impact is an event that results in instability, or cascade conditions, while an Emergency includes conditions that could be a precursor to an Adverse Reliability Impact. Thus, the notification provisions of Requirement R5 do not cure the possible ambiguity in proposed Requirement R3.

82. While NERC states that the obligation to notify for real-time emergency conditions was replaced by proposed Requirement R3, NERC does not indicate in its petition that the real-time or same-day obligation was purposely deleted or offer an explanation for the deletion.[97] We believe that, consistent with the currently-effective TOP Reliability Standards, the notification requirement of proposed Reliability Standard TOP-001-2 should apply to all emergencies, including real-time and same day emergencies. The Commission seeks comment from NERC and other interested entities regarding (1) the proper understanding of the scope of the notification provisions in the proposed requirements and (2) if the notification does not include all operational time

---

[96] NERC TOP Petition at 19. In the IRO Petition, NERC cites a different definition of Adverse Reliability Impact: "[t]he impact of an event that results in Bulk Electric System instability or cascading." NERC IRO Petition at 13, n20.

[97] NERC TOP Petition, Exhibit C at 3.

horizons, technical justification for why transmission operators should not be required to notify reliability coordinators and other affected transmission operators of all emergencies in all operating time horizons.

83. In addition, as noted above, NERC uses two different definitions of Adverse Reliability Impact in the TOP and IRO Petitions. NERC has not explained the intent or effect of the two definitions, and the term is used in several provisions of the proposed TOP and IRO Reliability Standards. The Commission seeks clarification and a technical explanation from NERC and other interested entities regarding the two definitions, including if it is proposing a revised definition, which definition it is proposing. In addition, if the definition NERC is proposing no longer includes the phrase "uncontrolled separation" NERC should explain the removal of the statutory phrase "uncontrolled separation."

g. Primary Decision-Making Authority for Mitigation of IROLs/SOLs

84. NERC's proposal contains a potential overlap in authority between the transmission operator and reliability coordinator with regard to the provisions pertaining to mitigation of IROLs and SOLs as set forth in the proposed TOP and IRO Standards.

85. NERC states in its TOP Petition that "[t]he responsibility for monitoring and handling IROLs is primarily given to the Reliability Coordinator, but the Transmission Operator has the primary responsibility to designate any SOLs that require special

attention."[98] Likewise, NERC also states that an improvement resulting from the changes to the IRO Reliability Standards is that they delineate a clean division of responsibilities between the reliability coordinator and transmission operators to "help to ensure that the Reliability Coordinator is responsible for identifying and controlling operations associated with IROLs and the Transmission Operator is responsible for identifying and controlling operations associated with SOLs."[99] Proposed Reliability Standard IRO-001-3, Requirement R1, provides that each reliability coordinator "shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact." Further, currently-effective Reliability Standard IRO-009-1, Requirement R4 states that "[w]hen actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's T_v."[100]

86. However, proposed Reliability Standard TOP-001-2, Requirement R11 provides similar authority for the transmission operator with respect to IROLs. NERC proposes

---

[98] NERC TOP Petition at 15.

[99] NERC IRO Petition at 5-7.

[100] Reliability Standard IRO-009-1, Requirement R4.

that each transmission operator "shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8."[101]

87. NERC's proposal with respect to mitigating IROLs appears to give both the transmission operator and reliability coordinator authority to act.[102] Therefore, we seek clarification and technical explanation whether the reliability coordinator or the transmission operator has primary responsibility for IROLs.

B. IRO Reliability Standards

88. As discussed above, because of the interrelationship of the TOP and IRO Reliability Standards, the Commission proposes to remand proposed IRO Reliability Standards: IRO-001-3, IRO-002-3; IRO-005-4; and IRO-014-2. In addition, as discussed below, as part of the remand, the Commission proposes to direct that NERC develop modifications with regard to planned outage coordination. We also seek comment from NERC and other interested entities regarding several proposed provisions

---

[101] NERC's TOP Petition (at 15) states that "the delineation in the proposed TOP Reliability Standards with respect to operating within an identified IROL…is an important distinction in the proposed TOP Reliability Standards that is necessary for reliability."

[102] NERC in its 2009 filing to revise and add new IRO standards (RM10-15-000 petition at 8) states that under its "Functional Model, the reliability coordinator is the functional entity with the highest level of responsibility and authority for the real-time reliability of the bulk power system."

of the IRO Reliability Standards. Depending on the responses in the NOPR comments, the Commissions may issue further directives in the final rule in this proceeding.

1. Issues to be Addressed

a. Planned Outage Coordination

NERC Petition

89. In its IRO petition, NERC proposes to retire Reliability Standard IRO-005-3.1a, Requirement R6, which requires reliability coordinators to "coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities and Generator Operators as needed in both the real-time and next-day reliability analysis timeframes."[103] NERC states that the "coordination aspects of this part of Requirement R6 are addressed in the requirements of currently-effective IRO-008-1,[104] Requirement R3, and IRO-010-1a, Requirement R3," which provide:

> **IRO-008-1, R3.** When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
>
> **IRO-010-1a, R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and

---

[103] NERC IRO Petition at 33-34.

[104] NERC IRO Petition at 34.

information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

Commission Proposal

90. The Commission is concerned with NERC's proposal because Reliability Standards IRO-008-1, Requirement R3 and IRO-010-1a do not require coordination of outages. Outage coordination is a critical reliability function that should be performed by the reliability coordinator. Outage coordination is an integral part of the operational planning process with generation outages being scheduled from three to five years in advance and transmission maintenance and construction outages being scheduled one to three years in advance. Outages that have been planned well in advance still must go through a month-ahead, week-ahead, and sometimes even a day-ahead approval process depending on system topography and system conditions that may change as the scheduled maintenance outage approaches. For instance, forced outages often disrupt planned outage schedules. Therefore, the Commission believes it is essential that, as the functional entity with the wide-area view, the reliability coordinator coordinates this critical area of operational planning.[105]

---

[105] The Independent Experts Report identifies outage coordination as one of the key areas where risk to the Bulk-Power System is not adequately mitigated. Industry Experts Report at 15. The Independent Experts Report proposes (Appendix H) to fill this gap "by giving the Reliability Coordinator the authority and responsibility to develop and implement a generation and transmission outage coordination process across Transmission Operators and Balancing Authorities in their footprint" and "between its adjacent Reliability Coordinators." Industry Experts Report at 31. This outage coordination process "shall cover the time period from the current operating hour out through at least 36 months." In addition, The 2011 Southwest Outage Blackout Report

(continued…)

91. Because outage coordination is critical to operations planning and the reliability coordinator has the needed wide-area view for operations planning, on remand, the Commission proposes to direct NERC to develop modifications to the IRO Reliability Standards that would require the reliability coordinator to have the authority and responsibility to develop and implement a generation and transmission outage coordination and planning process across transmission operators and balancing authorities in its footprint and between its adjacent reliability coordinators for the operations planning timeframe.[106]

2. IRO Reliability Standards – Issues Requiring Clarification

a. Use of a Secure Data Network

NERC Petition

92. Currently-effective Reliability Standard IRO-002-2, Requirement R2, requires that the data exchange between the reliability coordinator, transmission operator, and balancing authority be accomplished "via a secure network." According to NERC, the requirement to provide information via a "secure network" is now addressed in NERC

(at 67) found a problem with Imperial Irrigation District's lack of awareness of another entity's planned generation outage.

[106] This proposed directive is consistent with the Order No. 693 directive for NERC to modify Reliability Standard TOP-003-1, Planned Outage Coordination, to require communication of scheduled outages to affected entities well in advance. Order No. 693, FERC Stats. & Regs. ¶ 31,242 at P 1620 through P 1624. In addition, the Commission has a similar concern with proposed Reliability Standard TOP-003-2 because it is not clear whether it addresses planned outage coordination.

Rules of Procedure, Section 1002 (Reliability Support Services).[107] NERC also indicates that Requirement R2 is now addressed in proposed Reliability Standard IRO-014-2, Requirements R1, R2, and R3.

Commission Proposal

93. Although NERC cites Section 1002 of the Rules of Procedure and proposed Reliability Standard IRO-014-2 as providing for the use of a secured data network, NERC does not explain how secured networks are covered in those sections. While Section 1002 of the NERC Rules and Reliability Standard IRO-014-2, Requirements R1, R2, and R3 address notification and exchange of information and data and coordination of actions, no language in these provisions appears to require the data exchange or notifications to be conducted in a secure mode.

94. A secure network is essential to prevent unauthorized access to or modification of information that is critical for interconnected transmission network reliability functions performed by reliability coordinators. Therefore, we seek comment and technical explanation from NERC and other interested parties regarding how the identified section in the Rules of Procedure and Reliability Standard IRO-014-2, Requirements R1, R2, and

---

[107] NERC IRO Petition at 16, quoting section 1002 of the NERC Rules of Procedure which states in part that "NERC may assist in the development of tools and other support services for the benefit of Reliability Coordinators and other system operators to enhance reliability, operations and planning. NERC states that it will work with the industry to identify new tools, collaboratively develop requirements, support development, provide an incubation period, and at the end of that period, transition the tool or service to another group or owner for long term operation of the tool or provision of the service."

R3 ensure that the data exchange and notifications will be conducted using a secure mode in a secure environment.

b. Reliability Coordinator Monitoring of SOLs and IROLs

NERC Petition

95. NERC proposes to retire Reliability Standard IRO-002-2, Requirements R4 through R7, which require reliability coordinators to monitor IROLs and SOLs. Requirement R5 requires reliability coordinators to monitor bulk electric system elements that could result in SOL or IROL violations. NERC argues that it is appropriate to retire these requirements because: (1) an SOL is unlikely to have an impact on the wide-area reliability of the Bulk-Power System as it will generally not have an impact outside the affected transmission operator's area and (2) Requirement R4 is redundant with the requirements contained in existing Reliability Standards IRO-010-1a, and EOP-008-1.[108] NERC also asserts that these requirements are redundant with proposed Reliability Standard TOP-001-2, Requirements R8 through R11.

Commission Proposal

96. Although NERC's petition focuses on the appropriate entity to identify SOLs, it does not adequately explain the proposed retirement of the currently-effective Reliability Standard IRO-002-2 that establishes the obligation for reliability coordinators to monitor SOLs. With regard to NERC's explanation that Reliability Standard IRO-002-2

[108] NERC IRO Petition at 19-24.

Requirement R4 is redundant with the requirements contained in IRO-010-1a and EOP-008-1, neither of these Reliability Standards requires the reliability coordinator to monitor SOLs.

97. The reliability coordinator's monitoring function is important to ensure that the reliability coordinator can identify, assess and take appropriate action so that elements of the system do not operate outside established limits causing cascading outages or blackouts. Thus, monitoring is not simply a support function but a major reliability activity necessary to maintain situational awareness and ensure reliable operation of the interconnected transmission network. As we explain above, the reliability coordinator's obligation to monitor SOLs is important to reliability because an SOL can evolve into an IROL during deteriorating system conditions, and for potential system conditions such as this, the reliability coordinator's monitoring of SOLs provides a necessary backup function to the transmission operator.

98. Notwithstanding these concerns, currently-effective Reliability Standard IRO-003-2, Requirements R1 and R2 address the concern over monitoring of SOLs and IROLs, which provide:

> **R1**. Each Reliability Coordinator shall monitor all Bulk Electric System facilities, which may include sub-transmission information, within its Reliability Coordinator Area and adjacent Reliability Coordinator Areas, as necessary to ensure that, at any time, regardless of prior planned or unplanned events, the Reliability Coordinator is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit violations within its Reliability Coordinator Area.
>
> **R2**. Each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL or

> IROL violation. Reliability Coordinators shall also know the status of any facilities that may be required to assist area restoration objectives.

Thus, the Commission seeks comment on whether the currently-effective Reliability Standard IRO-003-2 Requirements R1 and R2 require reliability coordinators to monitor all SOLs and IROLs.

C. Proposed Revisions to Reliability Standard TOP-006-3

99. Pursuant to section 215(d)(5) of the FPA, we propose to approve NERC's proposed revisions to Reliability Standard TOP-006-3 as just, reasonable, not unduly discriminatory or preferential, and in the public interest. We believe that the proposed revisions reasonably clarify that transmission operators are responsible for monitoring and reporting available transmission resources and that balancing authorities are responsible for monitoring and reporting available generation resources is reasonable. Further, NERC's proposed revision to TOP-006-3 is consistent with the Commission's approval of NERC's approach to ensure that reliability entities have clear decision-making authority and capabilities to take appropriate actions with a clear division of responsibility with respect to balancing authority and transmission operator responsibilities during a system emergency.[109]

---

[109] *Electric Reliability Organization Interpretation of Transmission Operations Reliability Standard*, 136 FERC ¶ 61,176 (2011).

III. <u>Information Collection Statement</u>

100. The Commission's information collection requirements are typically subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995.[110] However, by remanding the TOP and IRO Reliability Standards, any information collection requirements are unchanged. With regard to proposed Reliability Standard TOP-006-3, the Commission estimates that the information collection burden will not change as compared to the currently-effective standard. The reporting requirements for transmission operators and balancing authorities remain unchanged because the new requirements clarify the existing standard that the transmission operators report transmission information, while the balancing authorities report generation information.

IV. <u>Environmental Analysis</u>

101. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[111] The Commission has categorically excluded certain actions from this requirement as not having a significant effect on the human environment. Included in the exclusion are rules that are clarifying, corrective, or

---

[110] 44 U.S.C. 3507(d) (2012).

[111] Order No. 486, Regulations Implementing the National Environmental Policy Act, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. Preambles 1986-1990 ¶ 30,783 (1987).

procedural or that do not substantially change the effect of the regulations being amended.[112] The actions proposed herein fall within this categorical exclusion in the Commission's regulations.

V. Regulatory Flexibility Act Certification

102. The Regulatory Flexibility Act of 1980 (RFA)[113] generally requires a description and analysis of final rules that will have significant economic impact on a substantial number of small entities. The RFA mandates consideration of regulatory alternatives that accomplish the stated objectives of a proposed rule and that minimize any significant economic impact on a substantial number of small entities. The Small Business Administration's (SBA) Office of Size Standards develops the numerical definition of a small business.[114] The SBA has established a size standard for electric utilities, stating that a firm is small if, including its affiliates, it is primarily engaged in the transmission, generation and/or distribution of electric energy for sale and its total electric output for the preceding twelve months did not exceed four million megawatt hours.[115] The RFA is not implicated by this NOPR because the Commission is proposing to remand the TOP and IRO Reliability Standards and not proposing any modifications to the existing burden or reporting requirements. With no changes to the TOP and IRO Reliability Standards as

[112] 18 CFR 380.4(a)(2)(ii).

[113] 5 U.S.C. 601-612.

[114] 13 CFR 121.201.

[115] *Id.* n.22.

approved, the Commission certifies that this NOPR will not have a significant economic impact on a substantial number of small entities.

103. In addition, for proposed Reliability Standard TOP-006-3, the Commission estimates that there will be no material change in burden for all small entities because the effect of the changes merely clarify that transmission operators are responsible for reporting transmission information while balancing authorities are responsible for reporting generation information.

VI. Comment Procedures

104. The Commission invites interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due [**INSERT DATE 60 days after publication in the FEDERAL REGISTER]**]. Comments must refer to Docket No. RM13-15-000, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments.

105. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's web site at http://www.ferc.gov. The Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

106. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC, 20426.

107. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

VII. Document Availability

108. In addition to publishing the full text of this document in the Federal Register, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the Internet through the Commission's Home Page (http://www.ferc.gov) and in the Commission's Public Reference Room during normal business hours (8:30 a.m. to 5:00 p.m. Eastern time) at 888 First Street, NE, Room 2A, Washington DC 20426.

109. From the Commission's Home Page on the Internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

110. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at (202) 502-6652 (toll free at 1-866-208-3676) or email at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. E-mail the Public Reference Room at public.referenceroom@ferc.gov.

By direction of the Commission.

(S E A L)

Nathaniel J. Davis, Sr.,
Deputy Secretary.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Monitoring System Conditions - Transmission Operations Reliability Standard	Docket No. RM13-12-000
Transmission Operations Reliability Standards	Docket No. RM13-14-000
Interconnection Reliability Operations and Coordination Reliability Standards	Docket No. RM13-15-000

MOTION OF THE NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION TO DEFER ACTION

Pursuant to Rule 212 of the Federal Energy Regulatory Commission's ("FERC" or "the Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212, the North American Electric Reliability Corporation ("NERC")[1] hereby submits this Motion to Defer Action on NERC's request to approve revisions to the Transmission Operations ("TOP") and Interconnection Reliability Operations and Coordination ("IRO") Reliability Standards until **January 31, 2015**.

I. BACKGROUND

On April 5, 2013, in Docket No. RM13-12-000, NERC proposed revisions to Reliability Standard TOP-006-3 to clarify that Transmission Operators are responsible for monitoring and reporting available transmission resources and that Balancing Authorities are responsible for monitoring and reporting available generation resources.

On April 16, 2013, in Docket No. RM13-14-000, NERC submitted for Commission approval three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection

[1] The Commission certified NERC as the electric reliability organization ("ERO") in accordance with Section 215 of the FPA on July 20, 2006. *N. Am. Elec. Reliability Corp.*, 116 FERC ¶ 61,062 (2006).

Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the "TOP Standards") to replace the eight currently-effective TOP standards. Additionally, on April 16, 2013, in Docket No. RM13-15-000, NERC submitted for Commission approval four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the "IRO Standards") to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR addressing the three petitions noted above (the TOP-006-3 petition, the TOP Standards petition, and the IRO Standards petition), which proposes to approve the proposed TOP-006-3 standard but remand the proposed TOP and IRO Standards.[2] In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards."[3] For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.[4]

III. MOTION

Consistent with NERC's responsibility as the Electric Reliability Organization ("ERO") to develop Reliability Standards that provide for an adequate level of reliability of the Bulk-Power System, NERC respectfully requests that the Commission defer action in this proceeding to allow NERC time to consider the reliability concerns raised by the Commission in the NOPR. With respect to the proposed TOP and IRO Standards, NERC recently commissioned an independent review of its Reliability Standards, which also noted concerns with the TOP and IRO Reliability Standards submitted in this proceeding.[6] Specifically, the independent review identified the proposed TOP-001-2 (Transmission Operations), PRC-001-2 (System Protection

---

[5] Persons to be included on the Commission's service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission's regulations, 18 C.F.R. § 385.203 (2013), to allow the inclusion of more than two persons on the service list in this proceeding.

[6] *Available at*: http://www.nerc.com/pa/Stand/Standards%20Development%20Plan%20Library/Standards_Independent_Experts_Review_Project_Report.pdf.

Coordination), IRO-001-3 (Responsibilities and Authorities), and IRO-005-4 (Current Day Operations) as high risk standards requiring improvement.[7] Given these concerns, and the issues identified by the Commission in the NOPR, revisions to the proposed Reliability Standards may be required. Accordingly, NERC requests that the Commission defer action in this proceeding until **January 31, 2015**.[8]

NERC recognizes that proceeding through the administrative process of responding to the NOPR, especially given the concerns articulated by the Commission, will require a significant effort by NERC and industry. While this exercise is not without merit, a more efficient use of industry, NERC, and FERC's resources is to first examine the technical issues in the standards through NERC-led technical conferences with active industry and FERC participation. As described in **Attachment A**, NERC will hold two technical conferences to identify and assess concerns regarding the TOP and IRO Standards, such as the monitoring of SOLs, unknown operating states, and outage coordination. Concurrently, NERC will work with the NERC Standards Committee to re-formulate a standard drafting team to begin development work on revisions to the proposed standards, which would be informed by the technical conferences. Additionally, in response to the concerns noted by the Commission in the NOPR on the development of a minimum set of analytical tools (analysis and monitoring capabilities) to ensure that a Reliability Coordinator has the tools it needs to perform its functions ("Real-Time Tools"), NERC will continue development of standards that address Real-Time Tools as they relate to the proposed TOP and IRO standards, which could continue to be included as part of

7 The complete *Standards Independent Experts Review Project* report is available at: http://www.nerc.com/pa/Stand/Standard%20Development%20Plan/Standards_Independent_Experts_Review_Project_Report-SOTC_and_Board.pdf.

8 With respect to the proposed TOP-006-3 Reliability Standard, while the Commission raised no significant concerns in the NOPR related to this standard, NERC requests that this Motion to Defer Action also apply to that pending standard given that it was addressed by the Commission in the same NOPR as the proposed TOP and IRO standards. NERC will re-file the proposed TOP-006-3 standard for approval separate from this proceeding.

Project 2009-02, Real-time Monitoring and Analysis Capabilities, or in revisions to the proposed TOP and IRO standards. Conforming changes to standards outside of the scope of this proceeding may be required depending on the extent of the changes made to the proposed TOP and IRO Standards.[9]

Deferring action on the NOPR until January 31, 2015 will provide NERC time to hold the technical conferences and develop any necessary revisions to the TOP and IRO standards for Commission approval. While a deferral until January 31, 2015 may seem extended at first glance, the proposed schedule is compressed given the complexity of these highly technical issues and the necessity to reach consensus through the standard development process. Given the scope of the work and the need for a deferral of Commission action on these standards, NERC commits to providing the Commission with quarterly reports regarding the status of revisions.

Accordingly, given the concerns articulated by the Commission in the NOPR, NERC respectfully requests an opportunity to work with industry and FERC to analyze the concerns and propose a new path forward. This Motion to Defer Action, if granted, would provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR, would afford time to review the proposed TOP and IRO Standards through the NERC standards development process, and would help the industry, NERC, and FERC work toward a common set of solutions to develop a set of standards that are technically justifiable and important for reliability.

---

[9] For example, in order to address the Commission's concerns with respect to the requirement in the proposed standards that a Transmission Operator must only provide notification of SOLs identified in a next-day Operational Planning Analysis rather than in the same-day or real-time operational time horizon, changes may need to be made to other IRO standards outside the scope of this proceeding.

IV. CONCLUSION

For the reasons set forth above, NERC respectfully requests that the Commission defer action in this proceeding until **January 31, 2015**.

Respectfully submitted,

/s/ Holly A. Hawkins

ATTACHMENT A

Monitoring System Conditions – Transmission Operations Reliability Standards and Interconnection Reliability Operations and Coordination Reliability Standards

DRAFT Technical Conference Agenda

I. The Need for Revisions to the TOP and IRO Reliability Standards

- Notice of Proposed Rulemaking, 145 FERC ¶ 61,158 (2013)
  - Proposed directives

II. Technical Issues

- System Operating Limits
  - Plan and Operate within all System Operating Limits
    - 30 Minute Timeframe or T_m concept

- System Models, Operating and Tools
  - Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating Status
  - Analysis capabilities in Real-time operations
  - Are requirements for monitoring necessary in standards or is certification a sufficient backstop for this capability?

- Primary Decision-Making Authority for Mitigation of Interconnection Reliability Operating Limits/System Operating Limits
  - Does the Reliability Coordinator have sole responsibility for IROLs?

- Planned Outage Coordination

- Use of the term ‘Reliability Directive’

Standards Announcement

Technical Conferences on R Revisions to TOP and IRO Standards

Comment Period Now Open through March 24, 2014

Now Available

NERC recently held two technical conferences to obtain industry input on issues identified in the Federal Energy Regulatory Commission's (FERC) notice of proposed rulemaking (NOPR) proposing to remand standards pertaining to real-time operations and reliability coordination (TOP and IRO standards). In response to this NOPR, NERC filed a motion requesting that FERC defer action until January 31, 2015 to allow NERC and the industry time to consider the issues identified in the NOPR and develop revisions as needed to address them, and FERC granted NERC's motion.

Two presentations from these technical conferences are posted on the Project 2014-03 Revisions to TOP and IRO Reliability Standards project page. The first presentation was used to facilitate a discussion of each of the issues identified in the NOPR. For each issue, a slide showing the language from the proposed standards along with a brief excerpt from the NOPR (along with the paragraph number) was prepared. The second presentation contains notes of key points from the discussion at both technical conferences, on each issue in the first presentation.

NERC is requesting industry comments on the topics discussed during the conferences or suggestions for further consideration of issues identified in the NOPR. These comments will be posted on the project webpage as part of the development record and considered by the drafting team for Project 2014-03 Revisions to TOP and IRO Reliability Standards as it develops revisions to the standards.

Please use the electronic comment form to submit comments on the issues discussed during two Technical Conferences on Revisions to TOP and IRO Reliability Standards. Comments must be submitted by **8:00 p.m. Eastern on March 24, 2014.** If you have questions please contact Ed Dobrowolski (email) or by telephone at (609) 947-3673.

If you experience any difficulties in using the electronic form, please contact Wendy Muller. An off-line, unofficial copy of the comment form is posted on the project page.

For information on the **Standards Development Process**, please refer to the Standard Processes Manual.

For more information or assistance, please contact Wendy Muller,
Standards Development Administrator, or at 404-446-2560.

Individual
Thomas Foltz
American Electric Power
AEP agrees with the following comments from the Tech Conference notes (Slide #2, on Decision Authority Responsibility): * Should only be one responsible authority and that is the RC. The RC has wide-area view and ultimately can make the most reliable decisions for their applicable systems. * But TOP needs to protect its lines and RC can't push the 'button'. The TOP & RC must work together and the TOP must have some flexibility in taking actions to protect its own system. * There are times when the TOP must act quickly and coordinate with the RC after the fact (i.e. bad weather/ storm related activities). AEP agrees with the following comments from the Tech Conference notes (Slide #3, on SOL analysis): * Need more clarity on SOLs. There is not consistency among the RC's in establishing an SOL methodology or in the implementation of the methodology. The RC's SOL methodologies are not all inclusive for any facility that has a "rating" but TOPs are responsible for maintaining reliability on all facilities that have operating limits, regardless of whether they meet the RC's SOL criteria. Some SOLs overlap TOP areas and should be planned and operated accordingly. AEP agrees with the following comments from the Tech Conference notes (Slide #4, on Mitigation Plans): * SOL mitigation needs to be simple and easily understood by an operator. Additional clarity could be provided for when an SOL exceedances has occurred (pre or post-contingency). The 30 minute rule of thumb is simple for operators to understand whereas operating above an SOL for "continuous duration" could lead to ambiguities.
AEP agrees with the following comments from the Tech Conference notes (Slide #12 on Reliability Directive): * Need to provide clear guidance to operators on issue of directives – both as issuer and receiver. May need to identify as a Reliability Directive – no questions allowed, jump first and ask questions later as long as the directives do not violate any safety requirements or endanger any equipment. Need make clear for operator to communicate with accuracy and consistency.
AEP agrees with the following comments from the Tech Conference notes (Slide #6 on Unknown Operating State): * If 'unknown' remains, then it needs to be clearly described as to what it means to an operator and clear actions spelled out. If Unknown Operating State does not become a NERC defined term, the requirement should be removed. Otherwise, the industry will continue to struggle with broad interpretation of this requirement.

AEP agrees that the proposed TOP-001-2 and TOP-002-3 standards cover the proposed retirement of requirements from PRC-001-1.
AEP agrees with the fourth bullet from the Tech Conference notes (Slide #14 on Emergency notification). The TOP should notify RC of all Emergencies (based on NERC definition). The TOP and RC continuously coordinate OPA in the operational planning timeframe as well as in real time.
AEP agrees with the second bullet from the Tech Conference notes (Slide #15, Outage Coordination). Requirements inherently include coordination – A valid operating plan cannot be created without coordination. However, AEP would also support continuing the outage coordination concept somewhere in the standards.
If necessary, the topic of secure data exchange methods should be managed within the CIP standards.

TOPs should have access to Real Time Contingency Analysis (RTCA), Project 2009-02 needs to move forward to fill this gap. Implementation of RTCA may take time, there are other options, possibly have the RC or BA perform this service.
RC directive should be left for each region to define via their own methodologies for the region.
The unknown state should be left the business practices of each TOP or RC and removed from standard.
PRC-001-1 R2 is applicable to reliability. The important parts of this requirement should be incorporated, as appropriate, into the applicable standards. For example, PRC-004 could incorporate the important aspects/requirements.
This is addressed in the standard EOP-001-2.1b. If the standard language is insufficient in this standard, the recommendation would be to fix it in EOP not add it in TOP/IRO.
* Outage coordination needs a lot of work to be able to fully utilize COS. RC does not currently approve/deny all outages. * Outage coordination methodology should be developed by each RC. Similar to SOL/IROL methodology
This concern should be addressed in the CIP standards under “Information Protection” requirements.

NERC proposed the retirement of Reliability Standard IRO-002-2 Requirements R4, R5, R6, and R7, which address real-time monitoring and analysis capabilities and functions required to enable the reliability coordinator to perform its responsibilities. NERC also believes these requirements are unnecessary because they are inherent in the reliability coordinator's duty to maintain area control error or operate within IROLs/SOLs and can be verified in the certification process. Likewise, Southern Company agrees with NERC and believes that there are requirements that require operation within SOLs and IROLs, which are more "results based." It is not practical to have a requirement to measure real-time monitoring nor is this necessary. The real reliability objective is to operate within identified parameters as required in IRO-005-3.1a, IRO-006_EAST-1, IRO-008-1, IROL-009-1, PER-005-1, TOP-001-2, TOP-002-2.1b, TOP-004-2, TOP-007-0, TOP-008-1, VAR-001-3, not to monitor.

Florida Municipal Power Agency
Frank Gaffney
FMPA agrees with FERC's proposal. By retaining the requirement for TOPs to plan and operate to all SOLs for single contingencies as is required under the existing standards, the system is more resilient to contingencies beyond planning and operating single contingency criteria. SOLs can be set to Emergency Ratings which already take into account loss of life / damage considerations. Without such a requirement, what is to prevent an operator from operating in a condition where a single contingency could result in an Facility exceeding its rating to a degree where its Protection Systems operate automatically, potentially resulting in an unforeseen cascading situation. One of the purposes of PRC-023 is to prevent such automatic operation for single contingencies, but, if the system does not recognize SOLs limited by Facility Ratings, the purpose of PRC-023 can be defeated. TOP-001-2 R8 and references to it should be deleted. TOP-002-3 R2 should also be modified. FMPA does not agree with FERC's concern for single contingencies. FAC-011 makes it clear that SOLs and IROLs established must "provide BES performance" (R2) such that, "(f)ollowing … single Contingencies …, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur" (R2.2). This includes the Most Severe Single Contingency (MSSC). It also includes the time parameters of any associated Emergency Rating. As long as the TOP standards are modified to require TOPs to operate and plan within all SOL and IROLs for single contingencies, then the MSSC is covered. On whether the RC or TOP has primary responsibility for IROLs, the answer may depend on whether it is pre-contingency or post-contingency. Pre-contingency, e.g., a current day, next day or next hour analysis indicates that an IROL may be exceeded, the RC would have primary responsibility. Post-contingency where an IROL may have been exceeded as a result of multiple contingencies, FMPA would expect the TOP to react immediately in correcting the situation since time is quite short for correcting, and coordinate with the RC as time permits. FMPA agrees with the Commission's proposal to retain the requirement of the RC to monitor all SOLs. The TOP is accountable to managing SOLS; however, the RC should be responsible to monitor the performance of the TOP in performing their responsibilities.

Generally, FMPA agrees with the Commission’s proposal. FMPA believes that there ought to be recognition somewhere in the standards of multi-contingency events for which limits are not established. Although FAC-011 and FAC-014 provide for establishing limits for single and selected double contingencies, they do not provide for multiple contingencies that could occur in the operating horizon, e.g., loss of ROW, loss of substation, etc., which are beyond operating and planning criteria and will likely result in an “unknown operating state” where the operators will not know what the next single contingency will cause from a stability / voltage stability viewpoint (thermal should be known from real time contingency analysis). There ought to be a requirement somewhere for someone to figure out what is going on and take action within a specified amount of time.
In general, FMPA agrees with the Commission’s proposal. FMPA believes that TOP-003-2 lacks sufficient detail to determine the minimum amount of data and information required for reliable operation. As we have stated in past comments, we believe that TOP-003-2 ought to specify the minimum acceptable “data specification”.
FMPA agrees with FERC’s proposal, TOP’s should inform the RC (and other impacted TOPs) of all Emergencies regardless of the operating time frame, and the standard should be clarified to say as much. In addition, the term “Emergency” should be used, not “Adverse Reliability Impact”, so that it synchronizes with the definition of Reliability Directive and to avoid ambiguity.
FMPA agrees with the Commission’s proposal to retain the requirement of the RC to coordinate outages. Although proposed IRO-002-3 provides the RC the authority to cancel planned outages; the standard suffers from two primary issues: (i) the same problem as question 5 above in that IRO-010 is not specific enough to know how far in advance entities must submit their maintenance plans; and (ii) IRO-002-3 lacks sufficient detail to assure a not unduly discriminatory or preferential treatment of planned outages, as required by FPA Section 215 (d)(2). Coordination of outages, including generator outages, must be done in advance to assure a fair and equitable process in addition to assuring reliability.
Although not raised by the Commission, FMPA continues to believe that Unit Commitment, an important activity of reliable operation, will be removed from the standards with the proposed TOP/IRO standard revisions. The current BAL standards do not have a requirement for the development of a next day operating plan, as is currently required of the BA in TOP-002-2 R4. FMPA interpreted TOP-002-2 R4 as requiring the BA to have a next day operating plan that at minimum would include a plan for Unit Commitment. The proposed TOP-002-3 R1 removes the BA as an applicable entity, causing the removal of Unit Commitment requirements from the standards. In past comments, the SDT maps this BAL-002, which is incorrect since BAL-002 is real-time, not next day. It also points to BAL-001 on ACE, but, again, the requirements of BAL-001 are either real-time or 12 month rolling average which is not next day Unit Commitment. In response to comments, the SDT claims we have confused the role of the BA with the LSE; however, FMPA believes the SDT is confused. Unit commitment is to be planned by the BA, i.e., page 32 of the Functional Model, in describing the responsibilities of the BA, is to: “5. Formulate an operational plan (generation commitment, outages, etc.) for reliability evaluation.” Such responsibility that is important to the reliable operation should be within the standards. In addition to the reliability gaps identified by the Commission, FMPA believes this to be another reliability gap created by the proposed standards.
Group
Duke Energy
Michael Lowman
(1) Duke Energy believes that a common conceptual interpretation of an SOL for the Operation Planning and Real-time time horizons is needed in order to establish the foundation for the TOP/IRO standards and requirements. Currently, there is no consistent interpretation of an SOL throughout the industry. These multiple interpretations adds to the difficulty in applying a consistent approach to the definition of an SOL moving forward. (2) Duke Energy believes a TOP/RC operating in real-time with pre-contingency or post-contingency IROLs should develop and implement a mitigation plan that would mitigate the condition within 30 minutes. However, for instances where a potential SOL could be exceeded following a contingency, a TOP/RC’s mitigation plan should be developed that could be implemented in real-time within 30 minutes post-contingency.

(1) Duke Energy believes that NERC Functional Certification is enough to satisfy the Commission's concerns .
(1) Duke Energy believes that Operating Instruction during an Emergency is unclear, vague, and subject to interpretation. By using the NERC defined term of Emergency, certain tasks that Duke Energy believes is a non-emergency action would now be considered an Emergency and subject to zero tolerance. Duke submits, for consideration by the SDT, a revised definition of Emergency in an attempt to remove this ambiguity. Emergency – Any abnormal system condition that requires automatic or immediate manual action to prevent the failure of transmission facilities or generation supply that would adversely affect the reliability of the Bulk Electric System. We continue to believe that if all instances of communication from an RC/TOP to a BA, TOP, GOP, etc. is considered a directive, then it could dilute the importance of real-time emergency situations that could be dangerous for the BES. Creating and implementing a term such as Reliability Directive would actually heighten situational awareness among Entities rather than decrease it as stated by the Commission. In addition, Duke Energy believes that maintaining the language in R1 of TOP-001-2 and adding, "each Reliability Directive issued and identified as such by its Transmission Operator(s) or Reliability Coordinator, unless such action would violate safety, equipment, regulatory, or statutory requirements." as part of this requirement would provide the clarification needed by a real-time System Operator.
(1) Duke Energy is not opposed to the removal of the term "unknown operating state" from the proposed standards based on the conclusion that the term itself is essentially undefined and is interpreted differently around the industry. We feel that the idea of an "unknown operating state" is too broad in scope to be able to narrow down to a common industry definition. If a term can and is interpreted differently by each entity, it becomes more difficult to measure compliance to a standard that is based on subjectivity.
(1) Duke Energy believes that the proposal to retire certain requirements should be revisited. We are not convinced that the proposed TOP-002-3 prescribes the necessary corrective action. With that said, if PRC-001 is to remain enforceable, we suggest that a project be initiated to re-word the standard. As is written now, the wording of PRC-001 is too broad and is problematic. The phrase "reduces system reliability" as used in R2.2 and R2.3 of the currently enforceable standard is particularly broad, and should be a candidate for clarification. Lastly, if PRC-001 is to be retired, the SDT should consider revising the proposed standards to include more adequately what will be removed by PRC-001's retirement.
(1) Duke Energy is not opposed to the intent of the notification by the TOP to an RC under certain conditions. We feel that if a TOP is re-configuring and/or re-dispatching its system, that this condition would not warrant notification to an RC. However, when a TOP decides to initiate its Emergency Plan, the TOP should notify the RC of the decision. Also, we suggest that the time horizon be limited to Current Day and Next Day. We would not be supportive of a time horizon beyond Next Day.
(1) Duke Energy believes that outage coordination is an integral part of the reliability of the BES. Based on that potential impact to the BES, we believe that outage coordination should be a coordinated effort between the TOP, its RC, and affected RC(s) and explicitly addressed in the standards.
(1) Duke Energy agrees that the exchange of data should be initiated on a secure network. We believe that the SDT should review the current reliability standards, CIP and COM, as well as Standards Project 2009-02, Real-time Monitoring and Analysis Capabilities to determine if this issue has already been addressed or will be addressed in the future.
Group
Peak Reliability
Vic Howell
IROL Versus SOL Monitoring: While the determination of the existence of an IROL should be a collaborative effort between the RC and TOPs, the RC should have primary responsibility for monitoring and implementing mitigation for IROLs, while TOPs should have primary responsibility for monitoring and implementing mitigation for other SOLs. However, since any part of the BES could become an "IROL condition" as system conditions degrade, it is very difficult to draw a bright line between what the TOPs should be responsible for monitoring versus what the RCs should be

responsible for monitoring. Operating Within All SOLs: TOPs should operate within all SOLs – not just a subset of SOLs. The SDT should consider changing the standard. But even the very concept of “operating within all SOLs” means different things to different entities. SOL Confusion: There is much confusion with – and many widely varied interpretations and applications of – the SOL term. If there are inconsistencies with the interpretation and application of the SOL term, then logically, there will be inconsistencies with the notion of “establishing SOLs”, “operating within SOLs”, and “exceeding SOLs” as referenced in the Reliability Standards. Each TOP and RC may have a different idea of what it means to establish SOLs, to operate within SOLs, and to exceed SOLs. This wide variance in interpretation of the SOL concept needs to be addressed in the Reliability Standards. While some entities have suggested that the RC SOL Methodology may be able to address this, Peak believes that it is important to have NERC-wide consistency on this issue, and that the Reliability Standards are the most appropriate mechanism for that consistency. Most Severe Single Contingency: TOP-004-2 R2 states: “Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.” While the proposed language in the revised TOP standards only addresses pre-determined IROLs, TOP-004-2 R2 addresses adverse operating states for which there may be no pre-determined IROL. Removing this requirement could result in decreased reliability. Although duplication of requirements should be avoided in Reliability Standards, it is important to reliability that the Reliability Standards address both pre-determined IROLs as well as operating states where the most severe single contingency could result in Adverse Reliability Impacts. This could be addressed by either retaining the TOP-004-2 R2 language or modifying language in the proposed standards. TOP-004-2 R2 is actually better for reliability than other Reliability Standard requirements to establish and operate within IROLs. The IROL concept is “how” RCs and TOPs achieve the ultimate reliability objective (the “what”) described in TOP-004-2 R2.
A TOP cannot have true situational awareness without the awareness that tools like RTCA provide. All TOPs should know if their TOP Area is demonstrating acceptable post-contingency system performance. This will require all TOPs to have tools that have, at least, the same or similar capability as RTCA. Otherwise, there may be facilities that are not monitored for post-contingency performance, which is a significant reliability gap. Even in cases where the RC uses RTCA, the TOP must maintain primary responsibility for monitoring performance in their system. Peak Reliability would like to see the NERC Reliability Standards somehow address this significant reliability issue.
Peak agrees with the NOPR, that following Reliability Directives should be mandatory at all times, not just in cases of emergencies (or Emergencies) or Adverse Reliability Impacts. The NERC definition of Reliability Directive should be adjusted accordingly. Peak also agrees with the notes that a Reliability Directive must be identified as such in real-time in order to clearly delineate between conversations about potential actions and the actual mandatory actions associated with a Reliability Directive. Peak Reliability agrees with the technical conference notes that the NERC definition of Emergency “is broad and covers a lot of conditions –and no easy way to know when you have transitioned from normal to Emergency.” It may be beneficial to revisit the definition of Emergency.
The SDT should define "unknown operating state". If this term is not defined, then it should not be used in Reliability Standards. The parenthetical words in TOP-004-2 R4 describing an unknown operating state, “(i.e. any state for which valid operating limits have not been determined)” does not clarify the issue, but rather leads to more questions and confusion.
TOPs should be required to take action when acceptable pre- or post-contingency system performance is not happening in real-time. If the Reliability Standards are not clear on this issue, changes should be made such that this expectation is clear.
Peak Reliability agrees that the notification should not be limited to day-ahead, but should also occur as necessary in Same-Day and Real-time horizons.
Outage coordination is arguably one of the widest, most risk laden reliability gaps in the Reliability Standards. Outage Coordination expectations need to be clarified and fully addressed in the NERC Reliability Standards. RC and TOP roles and responsibilities need to be clarified. Outage Coordination is addressed in many parts of North America via tariffs, etc., so it may not be a reliability gap for some. However, the Reliability Standards should not depend on the existence of tariffs to address significant reliability issues such as outage coordination – it should be addressed in the Reliability Standards The current Reliability Standards simply do not adequately address it. Potential solution would be to create a Reliability Standard that: 1)Requires the RC to establish and document an outage coordination process for the RC Area, 2)Requires the RC’s outage coordination process

document to address a specific list of issues (much like the new MOD-001-2 R1 concept), and 3)Requires TOPs and BAs within the RC Area to follow the RC's outage coordination process.
Many of the issues surrounding the TOP/IRO efforts here are rooted in SOL and IROL concepts – operating within some SOLs but not others, delineation of responsibility between SOLs and IROLs, etc. The St. Louis and Washington DC TOP/IRO technical conferences revealed the inconsistencies and industry confusion with these terms. Considering the wide disparity and inconsistency with the use and application of the SOL and IROL terms, it is strongly suggested that the industry revisit these terms. Results Based Reliability Standards – as quoted from NERC's website: "Results based standards are standards that focus on required actions or results (the "what") and not necessarily the methods by which to accomplish those actions or results (the "how")." The SOL and IROL concept are in direct conflict with the Results Based approach. According to FAC-011-2 R2, an SOL/IROL is intended to provide a certain level of BES system performance. The SOL/IROL is the method by which ("how") acceptable system performance ("what") is achieved in real-time operations. It is a means to an end – not the end itself. "How" a TOP or RC accomplishes that reliability objective is directly determined by the tools (real-time tools or lack thereof) employed by those entities. Despite the fact that the Reliability Standards are heavily invested in the SOL and IROL terms, the relevance of these terms needs to be reevaluated, or at the very least revisited, both in definition and their use in the Reliability Standards. Doing so would result in 1) more clarity and consistency across the industry, 2) a more streamlined operational approach to achieving the ultimate reliability objective of acceptable system performance, and 3) a compliance approach that is more aligned with the Results Based concept endorsed by NERC.

TAL agrees with the Commission's proposal in part. Many IROLs are identified for multiple conditions. While an SPS may be provided to enable controlled separation or automatic action to minimize the operators task loading, it should be clarified that the system need only be operated in real time to N-1 (and credible double) contingencies. To require operation to every conceivable IROL would unnecessarily limit use of the BES for emergency and commercial purposes. Clarity is also needed in determining "how far do we go" in determining SOL/IROLs. Any system will end up in trouble when multiple contingencies are considered. The key will be to determine what the next N-1 scenario is and prepare for it. A pre-defined IROL should not be required for a system that only shows "instability/uncontrolled separation or cascading outages" when several contingencies are stacked up. A reasonable expectation needs to be made clear and unambiguous.
While TAL agrees with the Commission, care should be taken to avoid requiring small BA/TOPs from having to obtain a Real Time CA program. Many of the entities have used the adequate modeling of the system by the RC to enable the RC to monitor the smaller system since it is not an impact to the majority of the RC Area. This practice should be allowed to continue.
TAL realizes this is a contentious area. The industry has never shown a reluctance to follow directives from the RC or a TOP. The area of concern is exposing ALL communications to be subjected to the same level of scrutiny by Compliance when there is no consideration if the action was carried out! The only concern is was 3-way communication used. If the action MUST be carried out, call it what it is, a Directive. IF there is room for negotiation, negotiate and take the proper action for the reliability of the BES. Many companies require a Directive to operate out of economics for a reliability issue in another TOPs area.
TAL believes the unknown operating state can exist during those periods that the RC's Contingency Analysis tool does not solve. If CA is solving, the state of the BES in "known". It may show some high overloads and low voltages, but it generally indicates that instability/ uncontrolled separation or cascading outages will not occur. Specific operating limits for every conceivable scenario are not necessary and do not add clarity if we are only operating to N-1 (and credible doubles). The TPL studies are good tools to be aware of what may occur, and to build certain projects, but are of little value to the real-time operation of the BES.
No comment
TAL concurs with the Commission.

TAL agrees with the commission, but not with the Independent Experts Report. Coordination of both Transmission and Generation should occur, but 36 months is excessive. Many entities do not plan that far in advance (with the exception of Nuclear Facilities). While some do plan that far in advance, they are primarily for budget purposes (major vs. minor overhaul) or to ensure vendor support/contractor schedules are coordinated. Requiring the RC to approve these at the 36 month window is an unnecessary burden on the RC with no value added to the operation of the BES. The outages do need to be coordinated as they approach the next day studies. Forced outages may affect the starting of an outage, but once you tear into a turbine, it is down for the duration of the outage.

(1) While we agree with the concept of planning and operating the system within all SOLs and IROLs, the primary issue is that not all SOLs are created equal and if not implemented properly this blanket statement could reduce operational flexibility. FAC-011-2 R1.2 states that SOLs cannot exceed Facility Ratings. This creates ambiguity and confusion for operating within all SOLs. Does this mean that an SOL cannot exceed a continuous rating? If so, then the operator cannot take advantage of short-term ratings. We believe there needs to be some clarification in the FAC-011-2 standard along with the TOP standards to make it clear that exceeding a Facility Rating is not an SOL violation if the System Operator is utilizing a short term rating. (2) We agree with the concept that the RCs have primary responsibility for the reliability of the Bulk Electric System which is typically accomplished by monitoring the limits of SOLs and IROLs and in market operations directly controlling generation dispatch. In addition, we also agree that TOPs have primary responsibility for monitoring and controlling the limits of SOLs. We also agree with the technical conference comments that TOPs need to work with RCs to accomplish this task. However, this does not mean that all coordination and responsibilities need to be documented in requirements. Some could be documented in supporting documents. In many cases, RC does not have the capability or the tools to operate facilities. The TOP has this capability. In all cases (SOL, IROL) the RC should be responsible to ensure the reliability of the BES. In practice, this does not mean that the TOP will never respond to IROLs and it does not mean that the RC will not respond to SOLs. The TOP response could be included in the RC operating plans for responding to IROLs. Perhaps, the RC responsibility for SOLs would begin when certain situations arise, such as when the TOP calls upon the RC for assistance, the TOP does not respond satisfactorily to system conditions, or the SOL affects more than one TOP. There should be clear delineation of responsibilities and we recommend including examples in the technical guidance sections of the standard. (3) Because the standards already require the TOP to plan to operate within all SOLs, the standards already require the TOP to plan to operate within the most severe single contingency. A close look at the FAC standards make this clear. FAC-014-2, Requirement R2 requires each Transmission Operator to establish SOLs for its Transmission system that is consistent with the established Reliability Coordinator SOL methodology. FAC-011-2, Requirement R2 compels the Reliability Coordinator to develop an SOL methodology that considers voltage, thermal, and stability limits while demonstrating that the BES remains stable during pre-contingent (Requirement R2, part 2.1) and post-contingent (Requirement R2, part 2.2) conditions. Requirement R2, part 2.2 would also cover the most severe single contingency. FAC-014-2, Requirement R6 compels the Planning Coordinator to identify which multiple contingencies that would result in exceedances of stability limits and to communicate the list of multiple contingencies along with the stability limits to the Reliability Coordinator. FAC-011-2 further compels the Reliability Coordinator to establish a process for identifying which stability limits associated with multiple contingencies identified by the Planning Coordinator are applicable in the operating horizon within its SOL methodology. FAC-014-2, Requirement R5, part 2 compels the Transmission Operator to communicate its SOLs to its Reliability Coordinator and Transmission Service Provider. FAC-014-2, Requirement R5, part 1 compels the Reliability Coordinator to communicate the SOLs to neighboring Reliability Coordinators and other Transmission Operators among a list of other entities. Finally, the contemplated changes to proposed TOP-002-3, Requirement R2 will require the Transmission Operator to operate within SOLs. Thus, the combination of proposed TOP-002-3, Requirement R2, FAC-011-2, and FAC-014-2 cover the most severe single contingency and more.

(1) We disagree that there should be an explicit requirement to have specific tools. Requiring specific tools applies a one-size fits all approach that could have significant financial impacts on small entities. Standing up and maintaining advanced EMS functions such as real-time contingency analysis (RTCA) capability can be quite expensive for a small TOP. While we would agree that all large TOPs should have real-time contingency analysis (RTCA) capability, we question the need for RTCA capability for all small TOPs. If a small TOP is wholly contained within a large TOP and the large TOP can see into its system with it RTCA, is it really necessary for the small TOP? Furthermore, why can't the small TOP rely on its RC's RTCA results? The small TOP may also have few enough contingencies that it could complete a comprehensive deterministic study of its transmission system by enumerating all contingencies in the study so that it knows exactly what the operational impacts would be. (2) We disagree with the technical conference comments that relying on the certification process is problematic and that certification is weakened by removing requirements to have tools. If a TOP is required to operate within all SOLs, they must have the tools to determine they are operating within SOLs. When they are certified, this capability must be verified otherwise the certification process has failed. Section IV.4 of Appendix 5A – Organization Registration and Certification Manual of the NERC Rules of Procedure requires the TOP to be recertified for significant changes such as a change in footprint, relocation of a control center or replacement of an EMS. Thus, certification is designed to remain current with the TOP's capabilities. The bottom line is that if the TOP does not have the tools to give it the capability to operate within SOLs it will not. (3) Contrary to the feedback provided in the technical conference notes on slide 9, we disagree with the need for a TOP to know the cause of an SOL violation in order to act. If a TOP has a transmission line with a generator at one end and the flow on the line is exceeding the SOL, the TOP does not need to know the cause to know that redispatching the generator will mitigate the SOL. Now, the TOP may want to investigate the cause after it has mitigated the SOL violation to prevent the problem from being exacerbated further but they do not and should not wait to act until they know the cause.
We have no additional comments than those raised in the technical conference and believe the issues were captured appropriately.
(1) We do not believe it is necessary to have an explicit requirement to move from an unknown operating state to secure state because the situation would be rare, measuring compliance with such a requirement is challenging, and its covered (or will be after changes to the standards) by the requirements to operate within all IROLs and SOLs and to return they system within SOL and IROL limits. Furthermore, we believe that when a system enters an unknown operating state it is likely due to a lack of extensive study of the system and the state likely could have been known if studied. An IROL should establish boundaries of a known operating state and it should be rare to have a situation where a pre-determined IROL does not exist and the operation of the transmission system is pushed into an IROL. If the system is well studied, all IROLs should be identified. If loss of telemetry is considered an unknown state then it would be even more difficult to move to a "known" state since you cannot see into the system.
We have no additional comments than those raised in the technical conference and believe the issues were captured appropriately.
(1) We do not see significant differences between what the Commission proposed (i.e. to require the TOP to notify the RC of all emergencies regardless of time frame) and what the drafting team proposed. The primary difference seems to be in the use of Adverse Reliability Impact versus Emergency. The technical conference notes seem to capture these minor issues caused by the differences.
(1) We agree that there may not be an explicit requirement to implement an outage coordination process, however from a practical perspective it is implicitly required. First, the Operational Planning Analysis might identify a conflict that could cause an expensive cancellation of an outage. For this reason, the TOP and RC will have processes to evaluate outages further out. Secondly, the TPL standards also include a requirement (e.g. TPL-002-0b R1.3.12) to include planned maintenance. If the drafting team determines the need to add requirements for outage coordination, they should be careful to avoid creating redundancies to avoid violating P81 criteria.
(1) We believe this is an issue that should be covered by the CIP standards. It should not be covered separately in the TOP standards.
We have no additional comments. Thank you for the opportunity to comment.

SPPRE
Bob Reynolds
SPPRE shares the same concerns as FERC.
There needs to be close coordination between Project 2009-02 (Real Time Reliablity Monitoring and Analysis) and the TOP/IRO Revisions project. Currently the NERC website indicates that Project 2009-02 is scheduled to be completed by 1/1/15 in line with the completion date of the TOP/IRO revisions. If these two efforts are coordinated, project 2009-02 should address the concerns expressed by FERC.
Defining both terms may reduce ambiguity
The term "unknown operating state" is ambiguous and many entities find it hard to describe what it is. There may be other ways to word the standard that address FERC's concern that are clearer.
Without a standard entities may not take corrective actions on their own.
All emergencies should be communicated between the TOP and RC.
Outage coordination needs to be included.
"via a secure network" is better addressed by the CIP Standards.

BPA recognizes that while “directives” from either the TOP, RC or BA where action by the recipient is required to address emergency or adverse reliability impacts is imperative during operational emergencies, having the ability to communicate freely and comment during non-emergency and normal operating times without being bound by compliance, or having to act immediately to a specific set of instructions allows operators the sovereignty to make the best informed decision to the exact conditions of the system. BPA strongly believes that to confine all communications between parties to be strictly perceived as directives is disadvantageous, greatly reduces the ability to communicate and suffers reliability.
BPA recognizes that an unknown operating state can exist when elements are out of service and studies have to be re-established for new known limit(s). Though the removal of the term “unknown operating state” may be beneficial from a monetary perspective, BPA believes that the term “unknown operating state” is best for reliability and should be clearly defined. BPA also believes that at the moment when an element is out of service is when the “unknown operating state” begins – not after a determination has been made.

Regarding who’s responsible for IROLs, the RC is responsible for IROLs but the TOP should not stand back and wait for the RC to direct action on the part of the TOP. It’s a coordinated effort between the RC and TOP. To help clarify the lines of responsibility, we suggest returning the language from TOP-007-0, R4 to the proposed TOP-001-2, R10. We believe the near-IROLs should be eliminated. We should restrict ourselves to IROLs and SOLs only.
There needs to be close coordination between Project 2009-02 and the TOP/IRO Revisions project. Currently, the NERC website indicates that Project 2009-02 is scheduled to be completed by January 31, 2015 in line with the completion date of the TOP/IRO Revisions project. If these two efforts are coordinated, Project 2009-02 should address the concerns expressed by FERC.
With all the prior discussion surrounding COM-003-1 which has now morphed into COM-002-4 including the loss of the term Reliability Directive, we are a little confused as to which way to go. Some are in favor of moving on with the term Operating Instruction while others see merit in maintaining Reliability Directive. Whichever, the TOP/IRO Revisions effort needs to be closely coordinated with the Project 2007-02 effort.
The term ‘unknown operating state’ is a very ambiguous term that is so open ended, how do you ever get a handle on identifying what it really is? We suggest that we define the term within very strict criteria or eliminate it altogether.
The requirement in PRC-001-1, R2 specifically includes taking corrective action to resolve the issue but neither TOP-001-2, R5 nor TOP-002-3, R1 include taking action. The proposed requirements

require a plan and the distribution of that plan to those impacted entities but does not mention taking action to address the situation. Perhaps we simply need to incorporate that language into the requirements.
Perhaps the best thing to do in this situation is to combine R3 and R5 and specifically clarify that this crosses all time horizons. Combination was suggested at one of the conferences.
We tend to lean toward FERC's position on this topic in that previously outage coordination was right out front. With the references now wrapped up in data exchange, the coordination effort itself is somewhat obscured.
We concur with the comment from one of the conferences which asked if this wasn't a CIPs issue. If you're compliant with the CIPs standards aren't you already addressing this concern? Also, as proposed in one of the conferences, perhaps security experts should be consulted to review this issue.
Thank you for the opportunity to comment on the proceedings of the technical conferences.

Christina Conway
Oncor Electric Delivery Company LLC
In an effort to evolve to results-based Reliability Standards, Oncor encourages the SDT to address real-time reliability monitoring and analysis capabilities by defining the results ("what") Entities are mandated to meet, and let the Entity define the "how" they meet the requirements since there is not a "one size fits all". For example, allowing the Entity to determine "how" they use their RTCA tools.
In an effort to include planned switching activities, Oncor recommends the following: A communication initiated by an RC, TOP, or BA where action by the recipient is necessary to address an Emergency, Adverse Reliability Impacts, and actions to maintain system reliability.
In an effort to evolve to results-based Reliability Standards, Oncor promotes alignment of basic functions to support the reliability of the BES. Oncor recommends any requirements regarding "secure networks" should be aligned to Communications Network Reliability Standard developed under Project 2014-02 Critical Infrastructure Protection Standards Version 5 Revisions.
Individual
Michael Moltane
ITC
The Commission's proposal to treat all non-IROL SOLs as though they were IROLs for the purposes of reporting and mitigation is simply too severe, will cause undue burden, and is unnecessary to maintain the reliability of the Bulk Electric System. The Commission is absolutely correct to observe that, "if IROLs and non-IROL SOLs are determined accurately, the reliability consequences of an exceedance should usually be greater for the former than the latter." Furthermore, Requirement R2 of this Standard permits each Transmission Operator to designate non-IROL SOLs for IROL treatment where the Transmission Operator deems it necessary for internal area reliability. No one is better positioned than the Transmission Owner to determine precisely which, if any, SOLs are important to internal area reliability, and Transmission Operators are more than sufficiently motivated to ensure that their system is not the source of an SOL which results outages that are significant but do not reach the threshold of an IROL (such as impacting a major sporting event, etc.). To be clear, ITC is fully supportive of Transmission Operators continuing to monitor all SOLs and for Transmission Operators to maintain mitigation plans for all SOLs; the proposed standards should be revised to reflect this. However, despite the contribution of non-IROL SOLs to the Northeast Blackout of 2003 and the 2011 Southwest Outage, ITC believes that treating each SOL as IROL will create a significant burden on the Bulk Electric System resulting from the significant amount of additional infrastructure necessary to meet such a requirements while maintaining the current level of service for customers in terms of both cost and availability. Such a requirement

would also impose a substantial additional compliance burden on registered entities without realizing a commensurate improvement in the reliability of the Bulk Electric System. Simply put, the proposal to treat all SOLs like IROLs will result in a significant increase in pre- and post-contingent load shedding, uneconomic dispatch, and reconfiguration of the Bulk Electric System until additional facilities can be put into place to meet the requirements. Transmission Operators must be given the discretion to define an appropriate mitigation strategy for each SOL reflecting the particular reliability issues associated with that SOL. Doing so would achieve the reliability gains of the Commission's proposal, but without the massively increased burden on consumers and registered entities which would result from a one-size-fits-all approach. Regarding NOPR Paragraph 87 in which the FERC asks for clarification regarding roles of the RC and TOP for IROLs, ITC believes the decision making authority for IROL's should clearly be with the RC. The TOP should coordinate with the RC as mandated by TOP-001-2 R10. The TOP should be responsible for SOLs. TOP-001-2 R 11 should be modified to clearly indicate that IROL decision making authority and responsibility lies with the RC.
ITC supports the tech conference comments that unknown state shall be defined clearly if the requirements are retained.
ITC supports the NOPR concept that the TOP should inform and coordinate with the RC on all IROL and SOL violations for all operations time horizons.
ITC agrees that since RC has the wide area view, RC should have the authority to coordinate transmission and generation outages across TOP, BA and adjacent RCs.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted for comment February 21, 2014 to March 24, 2014

Proposed Action Plan and Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 31, 2015.

Anticipated Actions	Anticipated Date
Additional ballot	August 2014
Final ballot	October 2014
BOT	November 2014

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1a	May 12, 2010	Added Appendix 1 – Interpretation of R8 approved by BOT on May 12, 2010	Interpretation
1a	September 15, 2011	FERC Order issued approved the Interpretation of R8 (FERC Order became effective November 21, 2011)	Interpretation
2	May 9, 2012	Adopted by Board of Trustees	Revised
3	April 2014	Revisions pursuant to Project 2014-03	Revised

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Rationale - The definition for Reliability Directive is not needed due to the work in proposed COM-002-4 on the definition of Operating Instruction (see NOPR paragraph 64).

Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Rationale - Changes made to the proposed definition were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Real-time Assessments contain sufficient details to result in an appropriate level of situational awareness. For example, analysis of phase angles may result in an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title: Transmission Operations**

2. **Number: TOP-001-3**

3. **Purpose:** To prevent instability, uncontrolled separation, or Cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability:**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

   4.5. Load-Serving Entity

5. **Effective Date:**

   The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

   On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

   On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC “has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale: The Reliability Directive replaced throughout by Operating Instruction as new definition now covers SDT intent.

New Requirements R1 and R2 added in response to IERP Report recommendations.

R1. Each Transmission Operator shall act, or direct others within its Transmission Operator Area to act by issuing Operating Instructions, to address its reliability functions within its Transmission Operator Area. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M1. Each Transmission Operator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted, or directed others to act by issuing Operating Instructions to address its reliability functions within its Transmission Operator Area.

R2. Each Balancing Authority shall act, or direct others within its Balancing Authority Area to act by issuing Operating Instructions, to address its reliability functions within its Balancing Authority Area. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M2. Each Balancing Authority shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted, or directed others to act by issuing Operating Instructions to address its reliability functions within its Balancing Authority Area.

Rationale for Requirement R3: Additional phrasing 'cannot be physically implemented' included for consistency with proposed IRO-001-4, Requirement R2. This term means that a Transmission Operator may request something to be done that is not physically possible to do due its lack of knowledge of the system involved.

R3. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M3. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available upon request, evidence that it complied with each Operating Instruction issued by the Transmission Operator(s) unless such action could not be physically implemented or it would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. In such cases, the Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Transmission Operator's Operating Instruction. If such a situation has not occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation.

R4. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by its Transmission Operator in Requirement R3 citing one of the specific reasons shown in Requirement R3. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M4. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with its Operating Instruction issued in Requirement R3 citing one of the specific reasons shown in Requirement R3. If such a situation has not occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation.

Rationale: Requirements R5 and R6 added for consistency with requirements applying to Transmission Operators. Entity list compiled from Functional Model v5 items 27 and 28 for Balancing Authority.

R5. Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M5. Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available upon request, evidence that it complied with each Operating Instruction issued by the Transmission Operator(s) unless such action could not be physically implemented or it would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. In such cases, the Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Balancing Authority's Operating Instruction. If such a situation has not occurred, the Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation.

R6. Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Balancing Authority of its inability to perform an Operating Instruction issued by that Balancing Authority. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M6. Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Balancing Authority of its inability to comply with its Operating Instruction. If such a situation has not occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation.

Rationale for Requirement R7: 'Emergency' deleted as the assistance is assistance in response to the other entities' emergency. 'Effective' added as it makes no sense to do anything unless it will be effective in mitigating the problem. 'Comparable' deleted as it is impossible to measure comparability and the main concept is that the originating entity has implemented its emergency procedures. These changes are in response to IERP recommendations.

R7. Each Transmission Operator and Balancing Authority shall assist Transmission Operators, if requested, provided that the requesting entity has implemented its emergency procedures, unless such actions cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M7. Each Transmission Operator and Balancing Authority shall make available upon request, evidence that requested assistance was provided to other Transmission Operators unless such actions cannot be physically implemented or would have violated safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no request for assistance was received, the Transmission Operator may provide an attestation.

Rationale for Requirement R8: Original Requirement R3 has been merged with original Requirement R5 in response to concerns raised in NOPR paragraphs 80 -83 to have consistent terminology and actions across all time horizons.

R8. Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M8. Each Transmission Operator shall make available upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no Emergency has occurred, the Transmission Operator may provide an attestation.

Rationale for Requirement R9: Additional terms added in response to SW Outage Report recommendation 15.

R9. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of outages of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations, Real-Time Operations]*

M9. Each Balancing Authority and Transmission Operator shall make available upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels . Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Balancing Authority or Transmission Operator may provide an attestation.

Rationale for Requirement R10: New proposed Requirement R10 is derived from approved IRO-003-2, Requirement R1, adapted to the Transmission Operator Area. This new requirement is in response to NOPR paragraph 60 concerning monitoring capabilities for the Transmission Operator. New Requirement R11 covers the Balancing Authorities.

R10. Each Transmission Operator shall monitor Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M10. Each Transmission Operator shall have, and provide upon request, evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it monitors Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area .

R11. Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M11. Each Balancing Authority shall have, and provide upon request, evidence that could include, but is not limited to, system description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it monitors its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.

R12. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M12. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL Tv. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If such a situation has not occurred, the Transmission Operator may provide an attestation that an event has not occurred.

Rationale for Requirement R13: The new Requirement R13 is in response to NOPR paragraphs 55 and 60 concerning Real-time analysis responsibilities for Transmission Operators and is copied from approved IRO-008-1, Requirement R2.

R13. Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M13. Each Transmission Operator shall have, and make available upon request, evidence to show it conducted a Real-Time Assessment at least once every 30 minutes. This evidence could include, but is not limited to, dated computer logs showing times the assessment was conducted, dated checklists, or other evidence.

Rationale for Requirement R14: The original Requirement R8 was deleted and original Requirements R9 and R11 were revised in order to respond to NOPR paragraph 42 which raised the issue of handling all SOLs and not just a sub-set of SOLs. The SDT has developed a white paper on SOL exceedances that explains its intent on what needs to be contained in such an Operating Plan. The intent is not to have a 1,000 page document with every possible Contingency cited but to have a plan and philosophy that can be followed by an operator.

R14. Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M14. Each Transmission Operator shall have evidence that it initiated its Operating Plan for mitigating SOL exceedances identified as part of its Real-time monitoring or Real-time Assessments. This evidence could include, but is not limited to, dated computer logs showing times the Operating Plan was initiated, dated checklists, or other evidence.

R15. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

M15. Each Transmission Operator shall make available evidence that it informed its Reliability Coordinator of actions taken to return the system to within limits when an SOL was exceeded. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If such a situation has not occurred, the Transmission Operator may provide an attestation.

Rationale for Requirements R16 and R17: In response IERP Report recommendation 3 on authority.

R16. Each Transmission Operator shall provide its System Operators with the authority to approve planned outages of its own monitoring and Real-time Assessment capabilities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M16. Each Transmission Operator shall have, and provide upon request, evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Transmission Operator has provided its System Operators with the authority to approve planned outages of its own monitoring and Real-time Assessment capabilities.

R17. Each Balancing Authority shall provide its System Operators with the authority to approve planned outages of its own monitoring and analysis capabilities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M17. Each Balancing Authority shall have, and provide upon request, evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Balancing Authority has provided its System Operators with the authority to approve planned outages of its own monitoring and analysis capabilities.

Rationale for Requirement R18: Moved from approved IRO-005-3.1a, Requirement R10. Transmission Service Provider, Distribution Provider, Load-Serving Entity, and Purchasing-Selling Entity deleted as those entities will receive instructions on limits from the responsible entities cited in the requirement.

R18. Each Transmission Operator, Balancing Authority, and Generator Operator shall always operate to the most limiting parameter in instances where there is a difference in derived limits. [*Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M18. Each Transmission Operator, Balancing Authority, and Generator Operator shall have, and provide upon request, evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, or equivalent evidence that will be used to determine if it operated to the most limiting parameter in instances where there is a difference in derived limits.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R11, R13, and R14 through R18 and Measure M1 through M11, M13, and M14 through M18 for the current calendar year and one previous calendar year, with the exception of voice recordings which shall be retained for a minimum of ninety calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v as specified in Requirement R12 and Measure M12 and that it initiated its Operating Plan to mitigate an SOL exceedance as specified in Requirement R14 and Measurement M14.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Transmission Operator failed to act, or direct others within its Transmission Operator Area to act, to address its reliability functions within its Transmission Operator Area.
R2	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Balancing Authority failed to act, or direct others within its Balancing Authority Area to act, to address its reliability functions within its Balancing Authority Area.
R3	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with an Operating Instruction issued by the Transmission Operator, and such action could have been physically implemented and would not have violated safety, equipment, regulatory, or statutory requirements.
R4	Operations Planning, Same-Day Operations,	High	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to perform an Operating

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
	Real-Time Operations					Instruction issued by its Transmission Operator in Requirement R3 citing one of the specific reasons shown in Requirement R3.
R5	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with an Operating Instruction issued by the Balancing Authority, and such action could have been physically implemented and would not have violated safety, equipment, regulatory, or statutory requirements.
R6	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The responsible entity did not inform its Balancing Authority of its inability to perform an Operating Instruction issued by that Balancing Authority.
R7	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not provide assistance to Transmission Operators, if requested, when the requesting entity had implemented its emergency procedures, and such actions could have been physically

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						implemented and would not have violated safety, equipment, regulatory, or statutory requirements.
For the Requirements R8 and R9 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R8	Operations Planning, Same-Day Operations, Real-Time Operations	High	The Transmission Operator did not inform one other Transmission Operator or 5% or less of the affected Transmission Operators, whichever is less, of its actual or expected operations that result in, or could result in, an Emergency on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its actual or expected operations that result in, or could result in, an Emergency on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its actual or expected operations that result in, or could result in, an Emergency on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its actual or expected operations that result in, or could result in, an Emergency on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators or more than 15% of the affected Transmission Operators, whichever is less, of its actual or expected operations that result in, or could result in, an Emergency on those respective Transmission Operator Areas when

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						conditions did permit such communications.
R9	Operations Planning, Same-Day Operations, Real-Time Operations	Medium	The responsible entity did not notify one negatively impacted interconnected NERC registered entity or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and telecommunication equipment, monitoring and assessment capabilities, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively impacted interconnected NERC registered entities or more than 5% and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and telecommunication equipment, monitoring and assessment capabilities, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively impacted interconnected NERC registered entities or more than 10% and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and telecommunication equipment, monitoring and assessment capabilities, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering and telecommunication equipment, monitoring and assessment capabilities, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively impacted interconnected NERC registered entities or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R10	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not monitor Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area.
R11	Real-Time Operations	High	N/A	N/A	N/A	The Balancing Authority did not monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.
R12	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R13	Same-Day Operations, Real-Time Operations	High	The Transmission Operator performed Real-time Assessments but did so at a periodicity of more than 30 minutes but less than 35 minutes.	The Transmission Operator performed Real-time Assessments but did so at a periodicity of more than or equal to 35 minutes and less than 40 minutes.	The Transmission Operator performed Real-time Assessments but did so at a periodicity of more than or equal to 40 minutes and less than 45 minutes.	The Transmission Operator did not perform Real-time Assessments. OR The Transmission Operator performed Real-time Assessments but did so at a periodicity of more than or equal to 45 minutes.
R14.	Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not initiate its Operating Plan for mitigating an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment
R15.	Real-Time Operations	Medium	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an SOL had been exceeded.
R16.	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The Transmission Operator did not provide its System Operators with the authority to approve planned outages of its own monitoring and Real-time Assessment capabilities.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R17.	Operations Planning, Same-Day Operations, Real-Time Operations	High	N/A	N/A	N/A	The Balancing Authority did not provide its System Operators with the authority to approve planned outages of its own monitoring and analysis capabilities.
R18	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity failed to operate to the most limiting parameter in instances where there was a difference in derived limits.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted for comment February 21, 2014 to March 24, 2014

Proposed Action Plan and Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 31, 2015.

Anticipated Actions	Anticipated Date
Additional ballot	August 2014
Final ballot	October 2014
BOT	November 2014

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	June 14, 2007	Fixed typo in R11., (subject to …)	Errata
2a	February 10, 2009	Added Appendix 1 – Interpretation of R11 approved by BOT on February 10, 2009	Interpretation
2a	December 2, 2009	Interpretation of R11 approved by FERC on December 2, 2009	Same Interpretation
2b	November 4, 2010	Added Appendix 2 – Interpretation of R10 adopted by the Board of Trustees	
2b	October 20, 2011	FERC Order issued approving the Interpretation of R10 (FERC's Order became effective on October 20, 2011)	
2.1b	March 8, 2012	Errata adopted by Standards Committee; (Removed unnecessary language from the Effective Date section. Deleted retired sub-requirements from Requirement R14)	Errata
2.1b	April 11, 2012	Additional errata adopted by Standards Committee; (Deleted language from retired sub-requirement from Measure M7)	Errata
2.1b	September 13, 2012	FERC approved	Errata
3	May 9, 2012	Adopted by Board of Trustees	Revised

4	April 2014	Revisions pursuant to Project 2014-03	Revised

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Operational Planning Analysis - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)

Rationale - Changes made to the proposed definition were made in order to respond to issues raised in NOPR paragraphs 55, 73, and 74 dealing with analysis of SOLs in all time horizons, questions on Protection Systems and Special Protection Systems in NOPR paragraph 78, and recommendations on phase angles from the SW Outage Report (recommendation 27). The intent of such changes is to ensure that Operational Planning Analyses contain sufficient details to result in an appropriate level of situational awareness. For example, analysis of post-Contingency phase angles may result in an Operating Plan to adjust generation or curtail transactions so that a Transmission facility may be returned to service post-Contingency.

Note that ‘load’ is not capitalized in load forecast as it is the whole phrase that is the item of interest and ‘load forecast’ is not a defined term.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title: Operations Planning**
2. **Number: TOP-002-4**
3. **Purpose:** To ensure that Transmission Operators and Balancing Authorities have plans for operating within specified limits.
4. **Applicability:**

    4.1. Transmission Operator

    4.2. Balancing Authority

5. **Effective Date:**

    The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

    On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination among Reliability Coordinators) to replace six currently-effective IRO standards.

    On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale: Terms deleted in Requirement R1 as they are now contained in the revised definition of Operational Planning Analysis.

R1. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis. Such evidence could include but is not limited to dated power flow study results.

Rationale: The change to Requirement R2 is in response to NOPR paragraph 42 and in concert with proposed changes made to proposed TOP-001-4.

R2. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M2. Each Transmission Operator shall have evidence that it has an Operating Plan to address potential System Operating Limits (SOLs) identified as a result of the Operational Planning Analysis performed in Requirement R1. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each SOL that was identified as a result of the Operational Planning Analysis.

Rationale for Requirement R3: Changes in response to IERP recommendation.

R3. Each Transmission Operator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Each Transmission Operator shall have evidence that it notified impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in the plan(s). Such evidence could include but is not limited to dated operator logs, or e-mail records.

Rationale: Requirements R4 and R5 added due to IERP recommendations.

R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

4.1 Expected generation resource commitment and dispatch

4.2 Interchange scheduling

4.3 Demand patterns

4.4 Capacity and energy reserve requirements, including deliverability capability

M4. Each Balancing Authority shall have evidence that it has developed a plan to operate within the criteria identified. Such evidence could include, but is not limited to, dated operator logs or e-mail records.

R5. Each Balancing Authority shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R4 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M5. Each Balancing Authority shall have evidence that it notified impacted NERC registered entities identified in the plan(s) cited in Requirement R4 as to their role in the plan(s). Such evidence could include, but is not limited to, dated operator logs or e-mail records.

Rationale for Requirements R6 and R7: Added in response to SW Outage Report recommendation 1.

R6. Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M6. Each Transmission Operator shall have evidence that it provided its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator. Such evidence could include, but is not limited to, dated operator logs or e-mail records.

R7. Each Balancing Authority shall provide its Operating Plan(s) for next-day operations identified in Requirement R4 to its Reliability Coordinator. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M7. Each Balancing Authority shall have evidence that it provided its Operating Plan(s) for next-day operations identified in Requirement R4 to its Reliability Coordinator. Such evidence could include, but is not limited to, dated operator logs or e-mail records.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator and Balancing Authority shall keep data or evidence to show compliance for each applicable Requirement for a rolling six month period for analyses, the most recent three months for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator or Balancing Authority is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis allowing it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs).
R2	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not have an Operating Plan to address potential System Operating Limit (SOL) exceedances identified as a result of the Operational Planning Analysis performed in Requirement R1.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
For the Requirement R3 and R5 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R3	Operations Planning	Medium	The Transmission Operator did not notify one impacted NERC registered entity or 5% or less of the impacted NERC registered entities whichever is less identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify two impacted NERC registered entities or more than 5% and less than or equal to 10% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three impacted NERC registered entities or more than 10% and less than or equal to 15% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more impacted NERC registered entities or more than 15% of the impacted NERC registered entities identified in the Operating Plan(s) as to their role in the plan(s).
R4	Operations Planning	Medium	The Balancing Authority has an Operating Plan but it does not address one of the criteria in Requirement R4.	The Balancing Authority has an Operating Plan but it does not address two of the criteria in Requirement R4.	The Balancing Authority has an Operating Plan but it does not address three of the criteria in Requirement R4.	The Balancing Authority does not have an Operating Plan.
R5	Operations Planning	Medium	The Balancing Authority did not	The Balancing Authority did not	The Balancing Authority did not	The Balancing Authority did not

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
			notify one impacted NERC registered entity or 5% or less of the impacted NERC registered entities whichever is less identified in the Operating Plan(s) as to their role in the plan(s).	notify two impacted NERC registered entities or more than 5% and less than or equal to 10% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to their role in the plan(s).	notify three impacted NERC registered entities or more than 10% and less than or equal to 15% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to their role in the plan(s).	notify four or more impacted NERC registered entities or more than 15% of the impacted NERC registered entities identified in the Operating Plan(s) as to their role in the plan(s).
R6	Operations Planning	Medium	N/A	N/A	N/A	The Transmission Operator did not provide its Operating Plan(s) for next-day operations as identified in Requirement R2 to its Reliability Coordinator.
R7	Operations Planning	Medium	N/A	N/A	N/A	The Balancing Authority did not provide its Operating Plan(s) for next-day operations as

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						identified in Requirement R4 to its Reliability Coordinator.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted for comment February 21, 2014 to March 24, 2014

Proposed Action Plan and Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 15, 2015.

Anticipated Actions	Anticipated Date
Additional ballot	August 2014
Final ballot	October 2014
BOT	November 2014

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1		Modified R1.2 Modified M1 Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs)	Revised
1	October 17, 2008	Adopted by NERC Board of Trustees	
1	March 17, 2011	Order issued by FERC approving TOP-003-1 (approval effective 5/23/11)	
2	May 9, 2012	Adopted by Board of Trustees	Revised
3	April 2014	Changes pursuant to Project 2014-03	Revised

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title: Operational Reliability Data**

2. **Number: TOP-003-3**

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have data needed to fulfill their operational and planning responsibilities.

4. **Applicability:**

   4.1. Transmission Operator

   4.2. Balancing Authority

   4.3. Generator Owner

   4.4. Generator Operator

   4.5. Interchange Authority

   4.6. Load-Serving Entity

   4.7. Transmission Owner

   4.8. Distribution Provider

5. **Effective Date:**

   All requirements except Requirement R5 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

   Requirement R5 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale: Changes to proposed Requirement R1, part 1.1 is in response to issues raised in NOPR paragraph 67 on the need for obtaining sub-100 kV and external network data necessary for the Transmission Operator to fulfill its responsibilities.

Proposed Requirement R1, part 1.2 is in response to NOPR paragraph 78 on relay data. Language moved from approved PRC-001-1.

Corresponding changes have been made to Requirement R2 for the Balancing Authority and to proposed IRO-010-2, Requirement R1 for the Reliability

R1. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator.

1.2. Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

M1. Each Transmission Operator shall make available its dated, current, in force documented specification for data.

R2. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

M2. Each Balancing Authority shall make available its dated, current, in force documented specification for data.

R3. Each Transmission Operator shall distribute its data specification to entities that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessment. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. Such evidence could include but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R4. Each Balancing Authority shall distribute its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring. Such evidence could include but is not limited to web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

Rationale for Requirement R5: Proposed Requirement R5, part 5.3 is in response to NOPR paragraph 92 where concerns were raised about data exchange through secured networks.

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications using: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

5.1. A mutually agreeable format

5.2. A mutually agreeable process for resolving data conflicts

5.3. A mutually agreeable security protocol

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in force, documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Balancing Authority shall retain its dated, current, in force, documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring in accordance with Requirement R2 and Measurement M2 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the Transmission Operator’s Operational Planning Analyses,

Real-time monitoring, and Real-time Assessments in accordance with Requirement R3 and Measurement M3.

- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring in accordance with Requirement R4 and Measurement M4.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90-calendar days that it has satisfied the obligations of the documented specifications in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Low	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. OR, The Transmission Operator did not have a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R2	Operations Planning	Low	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. OR, The Balancing Authority did not have a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 and R4 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R3	Operations Planning	Low	The Transmission Operator did not distribute its data	The Transmission Operator did not distribute its data	The Transmission Operator did not distribute its data	The Transmission Operator did not distribute its data

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
			specification to one entity, or 5% or less of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	specification to two entities, or more than 5% and less than or equal to10% of the reliability entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	specification to three entities, or more than 10% and less than or equal to 15% of the reliability entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	specification to four or more entities, or more than 15% of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analyses, Real-time monitoring, and real-time Assessments.
R4	Operations Planning	Low	The Balancing Authority did not distribute its data specification to one entity, or 5% or less of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring.	The Balancing Authority did not distribute its data specification to two entities, or more than 5% and less than or equal to 10% of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring.	The Balancing Authority did not distribute its data specification to three entities, or more than 10% and less than or equal to 15% of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring.	The Balancing Authority did not distribute its data specification to four or more entities, or more than 15% of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R5	Operations Planning, Same-Day Operations, Real-time Operations	Medium	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy the obligations of the documented specifications for data.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title**: Reliability Coordination – Responsibilities
2. **Number**: IRO-001-4
3. **Purpose:** To establish the responsibility of Reliability Coordinators to act or direct other entities to act.
4. **Applicability**

> **Rationale:** Purchasing-Selling Entity and Load-Serving Entity have been deleted from the approved IRO-001-1.1 as they are not listed as entities that the Reliability Coordinator directs in Functional Model v5. They do not show in this red-line as this red-line is based on IRO-001-3 as originally submitted by Project 2006-06 where they were initially removed.

4.1. Reliability Coordinator

4.2. Transmission Operator

4.3. Balancing Authority

4.4. Generator Operator

4.5. Distribution Provider

4.6. Transmission Service Provider

5. **Effective Date:**

The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale: The change from Reliability Directive to Operating Instruction throughout the standard is in response to NOPR paragraph 64 (…"*We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements). For example, mandatory compliance with directives in non-emergency situations is important when a decision is made to alter or maintain the state of an element on the interconnected transmission network…*") This change is also consistent with the proposed COM-002-4.

R1. Each Reliability Coordinator shall act, or direct others to act, by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M1. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it acted, or directed others to act, by issuing Operating Instructions to ensure the reliability of its Reliability Coordinator Area.

Rationale for Requirements R2 and R3: The addition of Transmission Service Provider to Requirements R2 and R3 allows for the retirement of IRO-004-2.

R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's Operating Instructions, unless the instruction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's Operating Instructions. If such a situation has not occurred, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, or Distribution Provider may provide an attestation.

R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator of its inability to perform the Operating Instruction issued by its Reliability Coordinator in Requirement R2 citing one of the specific reasons shown in Requirement R2. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed its Reliability Coordinator of its inability to perform an Operating Instruction issued by its Reliability Coordinator in Requirement R2 citing one of the reasons shown in Requirement R2.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1 shall retain voice recordings for the most recent 90-calendar days and documentation for the most recent 12-calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90-calendar days and documentation for the most recent 12-calendar months.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator failed to act, or direct others to act, by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area.
R2	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity did not comply with the Reliability Coordinator's Operating Instructions, and compliance with the Operating Instructions could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R3	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction Issued by its Reliability Coordinator in Requirement R2 citing one of the reasons shown in Requirement R2.

D. Regional Variances

None.

E. Interpretations

None.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted February 21, 2014 – March 24, 2014

Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 31, 2015.

Anticipated Actions	Anticipated Date
Additional ballot	August 2014
Final ballot	October 2014
BOT	November 2014

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2		Deleted R2, M3 and associated compliance elements Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs) Corrected typographical errors in BOT approved version of VSLs	Revised
2	October 17, 2008	Adopted by NERC Board of Trustees	
2	March 17, 2011	Order issued by FERC approving IRO-002-2 (approval effective 5/23/11)	
2	February 24, 2014	Updated VSLs based on June 24, 2013 approval.	
-3	August 4, 2011	Approved by Board of Trustees	
-4	April 2014	Revisions as per Project 2014-03	

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title:** **Reliability Coordination – Monitoring and Analysis**

2. **Number:** IRO-002-4

3. **Purpose:** Provide System Operators with the capabilities necessary to monitor and analyze data needed to perform their reliability functions.

4. **Applicability**

   4.1. Reliability Coordinator

5. **Effective Date:**

   The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

   On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

   On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

   On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale: Requirements R1 and R2 from IRO-002-2 have been added back into IRO-002-4 in order to ensure that there is no reliability gap. The SDT found no proposed requirements in the current project that covered the issues. The currently-effective requirement in IRO-002-2 has been separated into two parts (Requirements R1 and R2 below) to distinguish voice and data requirements. Staffing of communications and facilities in corresponding requirements from IRO-002-2 is addressed in approved PER-004-2, Requirement R1 and has been deleted from this draft.

R1. Each Reliability Coordinator shall have voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M1. Each Reliability Coordinator shall have and provide upon request, evidence that could include, but is not limited to, a document that lists its voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators.

R2. Each Reliability Coordinator shall have data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M2. Each Reliability Coordinator shall have and provide upon request, evidence that could include, but is not limited to, a document that lists its data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators.

R3. Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its monitoring and analysis capabilities. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M3. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operators with the authority to approve planned outages and maintenance of its monitoring and analysis capabilities.

> **Rationale**: Requirement R2 from IRO-002-3 has been deleted because approved EOP-008-1, Requirement R1, part 1.6.2 addresses redundancy and back-up concerns for outages of analysis tools. New Requirement R4 has been added to address NOPR paragraphs 96 and 97: *"…As we explain above, the reliability coordinator's obligation to monitor SOLs is important to reliability because an SOL can evolve into an IROL during deteriorating system conditions, and for potential system conditions such as this, the reliability coordinator's monitoring of SOLs provides a necessary backup function to the transmission operator…."*

R4. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

M4. Each Reliability Coordinator shall have, and provide upon request, evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it has monitored Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.

> **Rationale for Requirement R5**: Requirement R5 added back from approved IRO-002-2 as the SDT found no proposed requirements that covered the issues.

R5. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M5. The Reliability Coordinator shall have, and provide upon request, evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection, or other equivalent evidence that will be used to confirm that it has monitoring systems consistent with the requirement.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

- The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:
- The Reliability Coordinator shall retain its current, in force document and any documents in force for the current year and previous calendar year for Requirements R1, R2, and R3 and Measures M1, M2, and M3.
- The Reliability Coordinator shall keep data or evidence for Requirements R4 and R5 and Measures M4 and M5 for the current calendar year and one previous calendar year.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator does not have voice communication facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area or with neighboring Reliability Coordinators.
R2	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator does not have data link facilities with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area or with neighboring Reliability Coordinators.
R3	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator failed to provide its System Operator with the authority to approve planned outages and maintenance of its monitoring and analysis capabilities.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator did not monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R5	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator did not have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted for comment February 21, 2014 to March 24, 2014

Proposed Action Plan and Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 31, 2015.

Anticipated Actions	Anticipated Date
Additional ballot	August 2014
Final ballot	October 2014
BOT	November 2014

Version History

Version	Date	Action	Change Tracking
1	October 17, 2008	Adopted by NERC Board of Trustees	
1	March 17, 2011	Order issued by FERC approving IRO-008-1 (approval effective 5/23/11)	
1	February 28, 2014	Updated VSLs and VRF’s based on June 24, 2013 approval.	
2	April 2014	Changes pursuant to Project 2014-03	Revise

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title**: Reliability Coordinator Operational Analyses and Real-time Assessments

2. **Number:** IRO-008-2

3. **Purpose:** Perform analyses and assessments to prevent instability, uncontrolled separation, or Cascading.

4. **Applicability**

   4.1. Reliability Coordinator.

5. **Proposed Effective Date:**

   The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background**

   On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

   On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

   On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

> **Rationale for Requirement R1**: Revised in response to NOPR paragraph 96 on the obligation of Reliability Coordinators to monitor SOLs. Measure M1 revised for consistency with TOP-003-3, Measure M1.

R1. Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) or Interconnection Operating Reliability Limits (IROLs) within its Reliability Coordinator Wide Area. [*Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M1. Each Reliability Coordinator shall have evidence of a completed Operational Planning Analysis. Such evidence could include, but is not limited to, dated power flow study results.

> **Rationale for Requirements R2, R3, and R4**: In response to IERP and SW Outage Report recommendations concerning the coordination and review of plans.

R2. Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. [*Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M2. Each Reliability Coordinator shall have evidence that it reviewed the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. Such evidence could include, but is not limited to, dated e-mail messages.

R3. Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1 considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. [*Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Each Reliability Coordinator shall have evidence that it has a coordinated Operating Plan for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of the Operational Planning Analysis performed in Requirement R1 and that considers the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities. Such evidence could include, but is not limited to, plans for precluding operating in excess of each SOL and IROL that were identified as a result of the Operational Planning Analysis.

R4. Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M4. Each Reliability Coordinator shall have evidence that it notified impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in the plan(s). Such evidence could include but is not limited to dated operator logs, or e-mail records.

R5. Each Reliability Coordinator shall perform a Real-time Assessment at least once every 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M5. Each Reliability Coordinator shall have, and make available upon request, evidence to show it conducted a Real-Time Assessment at least once every 30 minutes. This evidence could include, but is not limited to, dated computer logs showing times the assessment was conducted, dated checklists, or other evidence.

Rationale for Requirement R6: Language changed from IROL exceedance to Emergency, as Emergency is a stronger term which includes IROL exceedance and thus raises the bar for this requirement. Requirement R7 is the extension of Requirement R6 ensuring actions are taken to deal with the Emergency. In Requirements R6 and R8 the use of the term ‘impacted’ and the tie to the Operating Plan where notification protocols will be set out should minimize the volume of notifications.

R6. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-time Operations]*

M6. Each Reliability Coordinator shall make available upon request, evidence that it informed impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, of its actual or expected operations that result in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

R7. Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6. *[Violation Risk Factor: High] [Time Horizon: Same-Day Operations, Real-time Operations]*

M7. Each Reliability Coordinator shall have evidence that it issued Operating Instructions, as necessary, to ensure that actions were taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6. Such evidence could include, but is not limited to, dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation.

R8. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Same-Day Operations, Real-time Operations]*

M8. Each Reliability Coordinator shall make available upon request, evidence that it informed impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Reliability Coordinator shall keep data or evidence to show compliance for Requirements R1 through R4, R6 through R8 and Measures M1 through M4, M6 through M8 for a rolling six month period for analyses, the most recent three months for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Reliability Coordinator shall each keep data or evidence for Requirement R5 and Measure M5 for the current calendar year and one previous calendar year, with the exception of voice recordings which shall be retained for a minimum of ninety calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

Table of Compliance Elements

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Medium	N/A	N/A	N/A	The Reliability Coordinator did not have an Operational Planning Analysis allowing it to assess whether its planned operations for the next day within its Reliability Coordinator Wide Area will exceed any of its System Operating Limits (SOLs) or Interconnection Operating Reliability Limits (IROLs).
R2	Operations Planning	Medium	N/A	N/A	N/A	The Reliability Coordinator did not review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities
R3	Operations Planning	Medium	N/A	N/A	N/A	The Reliability Coordinator did not have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						of its Operational Planning Analysis as required in Requirement R1 and considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.
For the Requirements R4, R6, and R9 VSLs, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size. If a Reliability Coordinator has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation						
R4	Operations Planning	Medium	The Reliability Coordinator did not notify one impacted NERC registered entity or 5% or less of the impacted NERC registered entities whichever is less identified in the Operating Plan(s) as to their role in the plan(s).	The Reliability Coordinator did not notify two impacted NERC registered entities or more than 5% and less than or equal to 10% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to their role in	The Reliability Coordinator did not notify three impacted NERC registered entities or more than 10% and less than or equal to 15% of the impacted NERC registered entities whichever is less, identified in the Operating Plan(s) as to	The Reliability Coordinator did not notify four or more impacted NERC registered entities or more than 15% of the impacted NERC registered entities identified in the Operating Plan(s) as to their role in the plan(s).

R#	Time Horizons	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
				the plan(s).	their role in the plan(s).	
R5	Real-time Operations	High	The Reliability Coordinator performed Real-time Assessments but did so at a periodicity of more than 30 minutes but less than 35 minutes.	The Reliability Coordinator performed Real-time Assessments but did so at a periodicity of more than or equal to 35 minutes and less than 40 minutes.	The Reliability Coordinator performed Real-time Assessments but did so at a periodicity of more than or equal to 40 minutes and less than 45 minutes.	The Reliability Coordinator did not perform Real-time Assessments. OR The Reliability Coordinator performed Real-time Assessments but did so at a periodicity of more than or equal to 45 minutes.
R6	Same-Day Operations, Real-time Operations	High	The Reliability Coordinator did not notify one impacted Transmission Operator or Balancing Authority within its Reliability Coordinator Area or 5% or	The Reliability Coordinator did not notify two impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area or more than 5%	The Reliability Coordinator did not notify three impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator	The Reliability Coordinator did not notify four or more impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area or more than 15% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area identified in the Operating Plan(s)

2	April 2014	Revisions pursuant to Project 2014-03	

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** Reliability Coordinator Data Specification and Collection
2. **Number:** IRO-010-2
3. **Purpose:** To prevent instability, uncontrolled separation, or Cascading outages that adversely impact reliability, by ensuring the Reliability Coordinator has the data it needs to monitor and assess the operation of its Reliability Coordinator Area.
4. **Applicability**

   4.1. Reliability Coordinator.

   4.2. Balancing Authority.

> **Rationale:** Changes to applicability come from IRO FYRT recommendation due to needing UVLS and UFLS information in the data specification.

   4.3. Planning Coordinator.

   4.4. Transmission Planner.

   4.5. Generator Owner.

   4.6. Generator Operator.

   4.7. Load-Serving Entity.

   4.8. Transmission Operator.

   4.9. Transmission Owner.

   4.10. Distribution Provider.

> **Rationale**: The Interchange Authority activities in the Coordinate Interchange standards are performed by software systems and not a responsible entity. The software, not a functional entity, performs the task of accepting and disseminating interchange data between entities. The Balancing Authority is the responsible functional entity for these tasks.

5. **Proposed Effective Date:**

   Requirement R1 and R2 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirements R1 and R2 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. Background

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements

Rationale for Requirement R1:

Proposed Requirement R1, part 1.1 is in response to issues raised in NOPR paragraph 67 on the need for obtaining sub-100 kV and external network data necessary for the Reliability Coordinator to fulfill its responsibilities.

Proposed Requirement R1, part 1.2 is in response to NOPR paragraph 78 on relay data.

Proposed Requirement R1, part 1.7 is in response to NOPR paragraph 92 where concerns were raised about data exchange through secured networks.

Corresponding changes have been made to proposed TOP-003-3.

R1. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: *(Violation Risk Factor: Medium) (Time Horizon: Operations Planning)*

1.1. A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator.

1.2. Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

M1. The Reliability Coordinator shall make available its dated, current, in force documented specification for data.

R2. The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. *(Violation Risk Factor: Medium) (Time Horizon: Operations Planning)*

M2. The Reliability Coordinator shall make available evidence that it has distributed its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. This evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R3. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: *(Violation Risk Factor: Medium) (Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations)*

3.1 A mutually agreeable format

3.2 A mutually agreeable process for resolving data conflicts

3.3 A mutually agreeable security protocol

M3. The Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall make available evidence that it satisfied the obligations of the documented specification using the specified criteria. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2 Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

The Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider shall each keep data or evidence to show compliance as identified below unless directed by its Compliance

Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Reliability Coordinator shall retain its dated, current, in force documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments for Requirement R1, Measure M1 as well as any documents in force since the last compliance audit.

The Reliability Coordinator shall keep evidence for three calendar years that it has distributed its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments for Requirement R2, Measure M2.

Each Reliability Coordinator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification shall retain evidence for the most recent 90-calendar days that it has satisfied the obligations of the documented specifications in accordance with Requirement R3 and Measurement M3.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
R1	Operations Planning	Medium	The Reliability Coordinator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not include four or more of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. OR, The Reliability Coordinator did not have a documented specification for the data necessary for it to perform its Operational Planning Analyses,

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
						Real-time monitoring, and Real-time Assessments.
R2	Operations Planning	Medium	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to one entity, or 5% or less of the entities, whichever is less, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to two entities, or more than 5% and less than or equal to 10% of the reliability entities, whichever is less, that have data required by the Reliability Coordinator's Operational Planning Analyses, and Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to three entities, or more than 10% and less than or equal to 15% of the reliability entities, whichever is less, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.	The Reliability Coordinator did not distribute its data specification as developed in Requirement R1 to four or more entities, or more than 15% of the entities, whichever is less, that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

R#	Time Horizon	VRF	Violation Severity Levels			
			Lower	Moderate	High	Severe
R3	Operations Planning, Same-Day Operations, Real-time Operations	Medium	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow one of the criteria shown in parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow two of the criteria shown in parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 satisfied the obligations of the documented specifications for data but failed to follow any of the criteria shown in parts 3.1 – 3.3.	The responsible entity receiving a data specification in Requirement R2 did not satisfy the obligations of the documented specifications for data.

D. Regional Variances

None

E. Interpretations

None

F. Associated Documents

None

G. Guidance

The term “mutually acceptable format” was the subject of a Commission-approved Interpretation. By specifying that the format must be mutually agreeable, the standard supports efficiency by precluding the submission of data that is in a format that cannot be used. If the parties cannot mutually agree on the format, it is expected that they will negotiate to reach agreement or enter into dispute resolution to resolve disagreement. While disputes may arise, the Reliability Standard does not dictate a specific dispute resolution process and leaves Reliability Coordinators and other entities options for informal resolution of a dispute on the format of data and flexibility in choosing a dispute resolution process to reach an agreement. *See Mandatory Reliability Standards for Interconnection Reliability Operating Limits*, 134 FERC ¶ 61,213 at P 63 (2011).

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

SAR posted February 21, 2014 – March 24, 2014

Description of Current Draft

This is the first posting of the revised standard under Project 2014-03 Revisions to the TOP/IRO Reliability Standards. The SDT is working under a deadline for filing the revised standards with FERC of January 31, 2015.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators

2. **Number:** IRO-014-3

3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not adversely impact other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

4. **Applicability:**

   4.1. Reliability Coordinator

5. **Effective Date**

   The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

6. **Background:**

   On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

   On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

   On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report.

B. Requirements and Measures

Rationale for Requirement R1: Grammatical changes for consistency with defined terms to Requirement R1.

Deletions are due to duplication with proposed IRO-008-2, Requirements R4 and R6 and proposed IRO-010-3.

Other changes are grammatical for clarity.

R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-Day Operations]*

1.1. Communications and notifications, and the process to follow in making those notifications.

1.2. Energy and capacity shortages.

1.3. Control of voltage, including the coordination of reactive resources.

1.4. Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

1.5. Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas.

1.6. Provisions for weekly conference calls.

M1. Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Operating Processes, and Operating Plans that require notifications, or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements.

R2. Each Reliability Coordinator shall maintain its Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 as follows: *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning, Same-Day Operations]*

2.1. Review and update annually with no more than 15 months between reviews.

2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

2.3. Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.

M2. Each Reliability Coordinator shall have dated evidence that the Operating Procedures, Operating Processes, and Operating Plans that require one or more other Reliability Coordinators to take action were maintained as specified. This evidence may include, but is not limited to, dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions.

R3. Each Reliability Coordinator shall make notifications and exchange reliability–related information with other impacted Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M3. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it made notifications and exchanged reliability–related information with impacted Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.

R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement R1, Part 1.6) with other Reliability Coordinators within the same Interconnection. *[Violation Risk Factor: Lower][Time Horizon: Same-Day Operations]*

M4. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls with other Reliability Coordinators within the same Interconnection.

Rationale: Terminology changed from Adverse Reliability Impact to Emergency for consistency amongst standards. Emergency is a more inclusive term.

R5. Each Reliability Coordinator, upon identification of an Emergency, shall notify other impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to, operator logs, voice recordings, or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an Emergency, notified other impacted Reliability Coordinators.

R6. Each impacted Reliability Coordinator shall operate as though the problem exists during each instance where Reliability Coordinators disagree on the existence of an Emergency. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M6. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated as though an Emergency existed during each instance where Reliability Coordinators disagreed on the existence of an Emergency.

R7. Each Reliability Coordinator that identified an Emergency shall develop an action plan to resolve the Emergency during those instances where Reliability Coordinators disagree on the existence of an Emergency. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M7. Each Reliability Coordinator that identified an Emergency shall have evidence that it developed an action plan during those instances where Reliability Coordinators disagreed on the existence of an Emergency. This evidence may include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation.

R8. Each impacted Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Emergency during those instances where Reliability Coordinators disagree on the existence of an Emergency, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

M8. Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who has identified the Emergency when Reliability Coordinators disagree on the existence of an Emergency unless such actions would have violated safety, equipment, regulatory, or statutory requirements.

Rationale for Requirement R9: Language added for consistency with proposed TOP-001-3, Requirement R7.

R9. Each Reliability Coordinator shall assist Reliability Coordinators, if requested, provided that the requesting entity has implemented its emergency procedures, unless such actions cannot be physically be implemented or would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

M9. Each Reliability Coordinator shall make available upon request, evidence that requested assistance was provided to Reliability Coordinators unless such actions could not be physically implemented or would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If such a situation has not occurred, the Reliability Coordinator may provide an attestation.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for Requirements R1 R2, and R9 and Measures M1 M2, and M9.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirements R3, R4, and R5 and Measures M3, M4, and M5.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R6, R7, and R8 and Measures M6, M7, and M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant, or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4 Additional Compliance Information

None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning, Same-Day Operations	Medium	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one of the topical areas identified in Parts 1.1 through 1.6.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address two of the topical areas identified in Parts 1.1 through 1.6.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three of the topical areas identified in Parts 1.1 through 1.6.	The Reliability Coordinator failed to have Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability.
R2	Operations Planning, Same-Day Operations	Lower	The Reliability Coordinator has the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 but failed to meet one of the criteria.	The Reliability Coordinator Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 but failed to meet two of the criteria.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 but failed to meet three of the criteria.	The Reliability Coordinator does not have Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.

For the Requirements R3 and R5 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size. If a Reliability Coordinator has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.						
R3	Operations Planning, Same-Day Operations, Real-time Operations	Medium	The Reliability Coordinator did not make notifications and exchange reliability–related information with one impacted Reliability Coordinator in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.	The Reliability Coordinator did not make notifications and exchange reliability–related information with two impacted Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.	The Reliability Coordinator did not make notifications and exchange reliability–related information with three impacted Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.	The Reliability Coordinator did not make notifications and exchange reliability–related information with four or more impacted Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.
R4	Same-Day Operations	Lower	N/A	N/A	N/A	The Reliability Coordinator failed to participate in an agreed upon (at least weekly) conference call with other Reliability Coordinators within the same Interconnection.
R5	Operations Planning, Same-Day Operations, Real-time Operations	Medium	The Reliability Coordinator did not notify one other impacted Reliability Coordinator upon identification of an Emergency.	The Reliability Coordinator did not notify two other impacted Reliability Coordinators upon identification of an Emergency.	The Reliability Coordinator did not notify three other impacted Reliability Coordinators upon identification of an Emergency.	The Reliability Coordinator did not notify four or more other impacted Reliability Coordinators upon identification of an Emergency.

R6	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator failed to operate as though the problem exists during an instance where Reliability Coordinators disagreed on the existence of an Emergency.
R7	Operations Planning, Same-Day Operations, Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator that identified the Emergency failed to develop an action plan to resolve the Emergency during an instance where Reliability Coordinators disagreed on the existence of Emergency.
R8	Real-time Operations, Same-Day Operations	High	N/A	N/A	N/A	The impacted Reliability Coordinator failed to implement the action plan developed by the Reliability Coordinator that identified the Emergency during an instance where Reliability Coordinators disagreed on the existence of the Emergency.

R9	Real-time Operations	High	N/A	N/A	N/A	The Reliability Coordinator did not provide assistance to Reliability Coordinators, if requested, provided that the requesting entity has implemented its emergency procedures, unless such actions could not be physically be implemented or would violate safety, equipment, regulatory, or statutory requirements.

1	April 2014	New standard developed by Project 2014-03	New

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

When this standard has received ballot approval, the text boxes will be moved to the Application Guidelines Section of the Standard.

A. Introduction

1. **Title: Outage Coordination**
2. **Number: IRO-017-1**
3. **Purpose:** To ensure that outages are properly coordinated.
4. **Applicability:**
   - **4.1.** Reliability Coordinator
   - **4.2.** Transmission Operator
   - **4.3.** Balancing Authority
   - **4.4.** Planning Coordinator
   - **4.5.** Transmission Planner
5. **Effective Date:**

   The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.
6. **Background:**

   On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) to replace six currently-effective IRO standards.

   On November 21, 2013, the Commission issued a NOPR proposing to remand these TOP and IRO Standards, stating that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP Standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently-effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR and afford time to review the proposed TOP and IRO Standards through the NERC standards development process to ensure that a technically justified set of solutions is in place for reliability. That motion to defer action was granted on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel and the SW Outage Report.

B. Requirements and Measures

Rationale: This standard is in response to issues raised in NOPR paragraph 90 and recommendations made by the Independent Expert Review Panel and SW Outage Report on the need for an outage coordination standard. It allows for one cohesive standard to address all outage coordination concerns as opposed to having multiple requirements spread throughout the various standards.

R1. Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. The outage coordination process shall: *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

1.1. Identify applicable roles and reporting responsibilities including:

1.1.1. Development and communication of outage schedules.

1.1.2. Assignment of coordination responsibilities for outage schedules between Transmission Operator(s) and Balancing Authority(s) prior to submitting to Reliability Coordinators.

1.2. Specify outage submission timing requirements.

1.3. Define the process to evaluate the impact of Transmission and generator outages within its Reliability Coordinator Wide Area.

1.4. Define the process to coordinate the resolution of identified outage conflicts with its Transmission Operators and Balancing Authorities, and other Reliability Coordinators.

Note on part 1.5 – Operations planning horizon is next-day to one year out. This requirement part will allow for Reliability Coordinators to request seasonal planning assessments if so desired.

1.5. Document and maintain the specifications for outage analysis during the operations planning horizon.

M1. Each Reliability Coordinator shall make available its dated, current, in force outage coordination process for generation and Transmission outages within its Reliability Coordinator Area.

R2. Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M2. Each Transmission Operator and Balancing Authority shall provide evidence upon request that it followed its Reliability Coordinator outage coordination process. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

Rationale for Requirement R3: Planning Assessment is a defined term and a document that Planning Coordinators and Transmission Planners already have to produce for approved TPL-001-4. It is not a compilation of load flow studies but a textual summary of what was found in those studies including rationales and assumptions.

R3. Each Planning Coordinator and Transmission Planner shall provide its Planning Assessment to impacted Reliability Coordinators. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

M3. Each Planning Coordinator and Transmission Planner shall provide evidence upon request showing that it provided its Planning Assessment to impacted Reliability Coordinators. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

R4. Each Reliability Coordinator, Planning Coordinator, and Transmission Planner shall coordinate solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M4. Each Reliability Coordinator, Planning Coordinator, and Transmission Planner shall provide evidence upon request showing that it coordinated solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" (CEA) means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator shall retain its dated, current, in force, outage coordination process in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.

Each Transmission Operator and Balancing Authority shall retain evidence for three calendar years that it followed its Reliability Coordinator outage coordination process in accordance with Requirement R2 and Measurement M2.

Each Planning Coordinator and Transmission Planner shall retain evidence for three calendar years that it has its Planning Assessment to impacted Reliability Coordinators in accordance with Requirement R3 and Measurement M3.

Each Reliability Coordinator, Planning Coordinator, and Transmission Planner shall retain evidence for three calendar years that it has coordinated solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment in accordance with Requirement R4 and Measurement M4.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	Operations Planning	Low	N/A	N/A	N/A	The Reliability Coordinator did not develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area
R2	Operations Planning	Low	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not follow its Reliability Coordinator outage coordination process.
R3	Operations Planning	Low	N/A	N/A	N/A	The Planning Coordinator or Transmission Planner did not provide its Planning Assessment to impacted Reliability Coordinators.
R4	Operations Planning	Low	N/A	N/A	N/A	The Reliability Coordinator, Planning Coordinator, or Transmission Planner did not coordinate solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment.

Definitions

Project 2014-03 Revisions to TOP/IRO Reliability Standards

As part of the work in Project 2014-03 Revisions to TOP/IRO Reliability Standards, the SDT is proposing changes to two existing definitions: Operational Planning Analysis and Real-time Assessment. The two definitions are used in the following proposed standards: TOP-001-3, TOP-002-4, and IRO-008-2 and are not used in any other currently-effective standards, or standards in development in any other project.

Operational Planning Analysis

Currently-effective definition: *An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).*

Proposed definition: *An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)*

Real-time Assessment

Currently-effective definition: *An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.*

Proposed definition: *An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)"*

Rationale

The definitions were revised in response to issues raised in NOPR paragraphs 55, 73, and 74 on analysis and monitoring of SOLs in all time horizons, NOPR paragraph 70 (updating study results in Real-time), and NOPR paragraph 78 (Protection System coordination). The phase angle item was added in response to SW Outage Report recommendation 27.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Implementation Plan

Project 2014-03 Revisions to TOP/IRO Reliability Standards

Requested Approvals

- TOP-001-3 Transmission Operations
- TOP-002-4 Operations Planning
- TOP-003-3 Operational Reliability Data
- IRO-001-4 Reliability Coordination - Responsibilities and Authorities
- IRO-002-4 Reliability Coordination — Analysis Tools
- IRO-008-2 Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-2 Reliability Coordinator Data Specification and Collection
- IRO-014-3 Coordination Among Reliability Coordinators
- IRO-017-1 Outage Coordination

Requested Retirements

Existing Approved Standards

- TOP-001-1a Reliability Responsibilities and Authorities
- TOP-002—2.1b Normal Operations Planning
- TOP-003-1 Planned Outage Coordination
- TOP-004-2 Transmission Operations
- TOP-005-2a Operational Reliability Information
- TOP-006-2 Monitoring System Conditions
- TOP-007-0 Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations
- TOP-008-1 Response to Transmission Limit Violations
- IRO-001-1.1 Reliability Coordination — Responsibilities and Authorities
- IRO-002-2 Reliability Coordination — Facilities
- IRO-003-2 Reliability Coordination – Wide Area View
- IRO-004-2 Reliability Coordination – Operations Planning
- IRO-005-3.1a Reliability Coordination — Current Day Operations
- IRO-008-1 Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-1a Reliability Coordinator Data Specification and Collection
- IRO-014-1 Coordination Among Reliability Coordinators
- IRO-015-1 Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 Coordination of Real-time Activities Between Reliability Coordinators
- PER-001-0.2 Operating Personnel Responsibility and Authority

Filed with FERC but not approved – these standards were filed with FERC but never approved and will be retired as part of this project, and upon Board approval of replacement standards, NERC will petition FERC to withdraw its petition for approval of these standards:

- TOP-001-2 Transmission Operations
- TOP-002-3 Operations Planning
- TOP-003-2 Operational Reliability Data
- IRO-001-3 Reliability Coordination - Responsibilities and Authorities
- IRO-002-3 Reliability Coordination — Analysis Tools
- IRO-005-4 Reliability Coordination — Current Day Operations
- IRO-014-2 Coordination Among Reliability Coordinators
- PRC-001-2 System Protection Coordination

Prerequisite Approvals

Definition of Operating Instruction (filed with proposed COM-002-4).

Revisions to Defined Terms in the NERC Glossary

The Standards Drafting Team proposes retiring the following Board-approved definitions:	
Reliability Directive	Original definition – approved by the Board but never adopted by FERC; will be withdrawn as part of this project: *A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.*
The Standards Drafting Team proposes revising the following Board-approved definitions:	
Operational Planning Analysis	**Original definition**: *An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).* **Revised definition**: *An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)*
Real-time Assessment	**Original definition**: *An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.*

	Revised definition: *An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)*

The definitions were revised in response to issues raised in NOPR paragraphs 55, 73, and 74 on analysis and monitoring of SOLs in all time horizons, NOPR paragraph 70 (updating study results in Real-time), and NOPR paragraph 78 (Protection System coordination). The phase angle item was added in response to SW Outage Report recommendation 27.

Background

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the "TOP Standards") to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the "IRO Standards") to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR proposed to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC "has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards." For example, the Commission cites the fact that the proposed TOP standards do not require Transmission Operators to plan and operate within all System Operating Limits ("SOLs"), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO standards through the NERC standards development process to address the concerns set forth in the NOPR. That motion to defer action was granted by the Commission on January 14, 2014.

On February 12, 2014, the Standards Committee appointed a Standard Drafting Team to take on the task of revising the aforementioned standards in response to the NOPR issues and the recommendations made by the Independent Expert Review Panel, the IRO FYRT, and the SW Outage Report and this implementation plan is developed from the changes made to the standards revised by that project.

General Considerations

The twelve month implementation period for all of the standards except TOP-003-3 and IRO-010-2 is intended to allow time for entities to update processes and train operators on the revised requirements. All of the Requirements in proposed TOP-003-3 and IRO-010-2 except TOP-003-3, Requirements R5 and IRO-010-2, Requirement R3 become effective two months earlier, in order to provide recipients of data requests from their RCs, TOPs, and/or BAs time to respond to the request for data.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Interchange Authority
- Transmission Owner
- Transmission Operator
- Distribution Provider
- Generator Owner
- Generator Operator
- Load-Serving Entity
- Transmission Service Provider
- Planning Coordinator
- Transmission Planner

Effective Date for Standards

- **For all standards except proposed TOP-003-3 and proposed IRO-010-2:**
  The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

- **For proposed TOP-003-3:**
  All requirements except Requirement R5 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the standard is approved by an

applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

Requirement R5 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

The reason for the difference in effective dates for proposed TOP-003-3 is to allow applicable entities to have time to properly respond to the data specification requests.

- **For proposed IRO-010-2:**
  Requirement R1 and R2 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirements R1 and R2 shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.
  Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, Requirement R3 shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

  The reason for the difference in effective dates for proposed IRO-010-2 is to allow applicable entities to have time to properly respond to the data specification requests.

- **Standards for Retirement:**
  Midnight of the day immediately prior to the Effective Date in the particular jurisdiction in which the new standard or definition is becoming effective.

Implementation Plan for Definitions

The definitions of Operational Planning Analysis and Real-time Assessment shall become effective on the first day of the first calendar quarter that is ten (10) months after the date that the definitions are approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a definitions to go into effect. Where approval by an applicable governmental authority is not required, the definitions shall become effective on the first day of the first calendar quarter that is ten (10) months after the date the definitions are adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

The definitions are used in proposed IRO-010-2, Requirements R1 and R2 and in proposed TOP-003-3, Requirements R1 and R3 so it is necessary that the definitions become effective concurrent with those requirements.

The two definitions are also employed in the following proposed project standards: TOP-001-3, TOP-002-4, and IRO-008-2. These definitions are not used in any other standards, either approved or in development in any other project.

☒ Revision to existing Standard		☐ Urgent Action	

SAR Information

Industry Need (What is the industry problem this request is trying to solve?):

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the “TOP Standards”) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the “IRO Standards”) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR proposed to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC “has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards.” For example, the Commission cites the fact that the proposed TOP standards do not require Transmission Operators to plan and operate within all System Operating Limits (“SOLs”), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO standards through the NERC standards development process to address the concerns set forth in the NOPR. That motion to defer action was granted by the Commission on January 14, 2014.

SAR Information

Purpose or Goal (How does this request propose to address the problem described above?):

The primary goal of this SAR is to allow the Standard Drafting Team (SDT) for Project 2014-03 Revisions to TOP/IRO Reliability Standards to address the concerns expressed in the NOPR while fulfilling the goals of the original projects: Project 2006-06 Reliability Coordination and Project 2007-03 Real-time Operations. In addition, the SDT should review the goals of Project 2009-02 Real-time Monitoring and Analysis Capabilities and consider whether to incorporate revisions to the TOP and/or IRO standards to address those goals in Project 2014-03.

SAR Information
Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):
Provide clear, unambiguous requirements and standards to allow Reliability Coordinators, Transmission Operators, and Balancing Authorities to operate the interconnected transmission system in a safe and reliable manner.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The SDT shall modify the TOP and IRO Reliability Standards to address the issues raised in the NOPR, while ensuring that the revisions continue to address directives previously assigned to the TOP and IRO standards under Projects 2007-03 and 2006-06. If it is decided to handle the goals of Project 2009-02 within Project 2014-03, then the directives assigned to Project 2009-02 will be addressed as well. In addition, the recommendations from the Independent Expert Review Project and the SW Outage Report will be reviewed, a directive dealing with monitoring responsibilities for the Reliability Coordinator will be resolved, and other IRO standards will be examined for consistency purposes.
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The SDT shall: 1. Revise the TOP/IRO Reliability Standards to address concerns expressed in the NOPR a. Consider the inputs from technical conferences 2. Consider the recommendations in the Independent Expert Review Report and the SW Outage Report 3. Review the IRO Reliability Standards not included in the original Project 2006-06 for coordination with any changes made for this project (see list of related standards) 4. Preserve the intent of the reliability objectives in the current, approved standards so that no reliability gaps are created 5. Decide whether to handle the goals of Project 2009-02 within Project 2014-03; and if it does so decide, then also address the directives assigned to Project 2009-02. 6. Address the directives from Order 693 originally assigned to Projects 2006-06 and 2007-03.

SAR Information	
7.	Address the following directive from Order 693, paragraph 1855: *"Since a reliability coordinator is the highest level of authority overseeing the reliability of the Bulk-Power System, the Commission believes that it is important to include the reliability coordinator as an applicable entity to assure that adequate voltage and reactive resources are being maintained. As MISO points out, other Reliability Standards address responsibilities of reliability coordinators, but we agree with EEI that it is important to include reliability coordinators in VAR-001-1 as well. Reliability coordinators have responsibilities in the IRO and TOP Reliability Standards, but not the specific responsibilities for voltage levels and reactive resources addressed by VAR-001-1, which have a great impact on system reliability. For example, voltage levels and reactive resources are important factors to ensure that IROLs are valid and operating voltages are within limits, and that reliability coordinators should have responsibilities in VAR-001-1 to monitor that sufficient reactive resources are available for reliable system operations. Accordingly, the ERO should modify VAR-001-1 to include reliability coordinators as applicable entities and include a new requirement(s) that identifies the reliability coordinator's monitoring responsibilities."*
8.	Modify the measures, Violation Risk Factors (VRF), and Violation Severity Levels (VSL) as necessary to address modified requirements.
9.	Address the issue of outage coordination as pointed out by the Independent Experts Review Panel through the creation of a new standard.
10.	Address the recommendations of the IRO Five Year Review Team (Project 2012-09) for the IRO standards revised in this project.

Reliability Functions		
The Standard will Apply to the Following Functions (Check each one that applies.)		
☐	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of Responsible Entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.

Reliability Functions		
☒	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☒	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☒	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☒	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
☒	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☒	Transmission Owner	Owns and maintains transmission facilities.
☒	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
☒	Distribution Provider	Delivers electrical energy to the End-use customer.
☒	Generator Owner	Owns and maintains generation facilities.
☒	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.

Reliability Functions	
☒ Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles	
Applicable Reliability Principles (Check all that apply).	
☒	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
☒	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
☒	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
☐	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.
☐	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
☐	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Does the proposed Standard comply with all of the following Market Interface Principles?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

SAR Type (Check as many as applicable)			
☒☐ New Standard		☐ Withdrawal of existing Standard	
☒ Revision to existing Standard		☐ Urgent Action	

NERC

SAR Information

Industry Need (What is the industry problem this request is trying to solve?):

On April 16, 2013, NERC submitted two petitions requesting Commission approval of TOP and IRO standards. One petition addresses three revised TOP Reliability Standards: TOP-001-2 (Transmission Operations), TOP-002-3 (Operations Planning), TOP-003-2 (Operational Reliability Data), and one Protection Systems (PRC) Reliability Standard, PRC-001-2 (System Protection Coordination) (collectively, the “TOP Standards”) to replace the eight currently-effective TOP standards. The second petition addresses four revised IRO Reliability Standards: IRO-001-3 (Responsibilities and Authorities), IRO-002-3 (Analysis Tools), IRO-005-4 (Current Day Operations), and IRO-014-2 (Coordination Among Reliability Coordinators) (collectively, the “IRO Standards”) to replace six currently-effective IRO standards.

On November 21, 2013, the Commission issued a NOPR in response to these petitions. The NOPR proposed to remand the proposed TOP and IRO Standards. In the NOPR, the Commission raises a concern that NERC “has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards.” For example, the Commission cites the fact that the proposed TOP standards do not require Transmission Operators to plan and operate within all System Operating Limits (“SOLs”), which is a requirement in the currently effective standards.

On December 20, 2013, NERC filed a motion requesting that the Commission defer action on the NOPR until January 31, 2015 to provide NERC and the industry the opportunity to thoroughly examine the technical concerns raised in the NOPR. This deferral would provide an opportunity for the industry, NERC, and FERC to work toward a common understanding and afford time to review the proposed TOP and IRO standards through the NERC standards development process to address the concerns set forth in the NOPR. That motion to defer action was granted by the Commission on January 14, 2014.

SAR Information

Purpose or Goal (How does this request propose to address the problem described above?):

The primary goal of this SAR is to allow the Standard Drafting Team (SDT) for Project 2014-03 Revisions to TOP/IRO Reliability Standards to address the concerns expressed in the NOPR while fulfilling the goals of the original projects: Project 2006-06 Reliability Coordination and Project 2007-03 Real-time Operations. In addition, the SDT should review the goals of Project 2009-02 Real-time Monitoring and Analysis Capabilities and consider whether to incorporate revisions to the TOP and/or IRO standards to address those goals in Project 2014-03.

SAR Information
Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):
Provide clear, unambiguous requirements and standards to allow Reliability Coordinators, Transmission Operators, and Balancing Authorities to operate the interconnected transmission system in a safe and reliable manner.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The SDT shall modify the TOP and IRO Reliability Standards to address the issues raised in the NOPR, while ensuring that the revisions continue to address directives previously assigned to the TOP and IRO standards under Projects 2007-03 and 2006-06. If it is decided to handle the goals of Project 2009-02 within Project 2014-03, then the directives assigned to Project 2009-02 will be addressed as well. In addition, the ~~suggestions~~ recommendations from the Independent Expert Review Project and the SW Outage Report will be reviewed, a directive dealing with monitoring responsibilities for the Reliability Coordinator will be resolved, and other IRO standards will be examined for consistency purposes.
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The SDT shall: 1. Revise the TOP/IRO Reliability Standards to address concerns expressed in the NOPR a. ~~Use~~ Consider the inputs from technical conferences ~~to advise actions~~ 2. Consider the ~~comments and suggestions~~ recommendations in the Independent Expert Review Report and the SW Outage Report 3. Review the IRO Reliability Standards not included in the original Project 2006-06 for coordination with any changes made for this project (see list of related standards) 4. Preserve the intent of the reliability objectives in the current, approved standards so that no reliability gaps are created ~~4.~~5. Decide whether to handle the goals of Project 2009-02 within Project 2014-03; and if it does so decide, then also address the directives assigned to Project 2009-02. 6. Address the directives from Order 693 originally assigned to Projects 2006-06 and 2007-03.

SAR Information
~~5.~~7. Address the following directive from Order 693, paragraph 1855~~ so that all monitoring responsibilities for the Reliability Coordinator are included in the IRO family of standards~~: *"Since a reliability coordinator is the highest level of authority overseeing the reliability of the Bulk-Power System, the Commission believes that it is important to include the reliability coordinator as an applicable entity to assure that adequate voltage and reactive resources are being maintained. As MISO points out, other Reliability Standards address responsibilities of reliability coordinators, but we agree with EEI that it is important to include reliability coordinators in VAR-001-1 as well. Reliability coordinators have responsibilities in the IRO and TOP Reliability Standards, but not the specific responsibilities for voltage levels and reactive resources addressed by VAR-001-1, which have a great impact on system reliability. For example, voltage levels and reactive resources are important factors to ensure that IROLs are valid and operating voltages are within limits, and that reliability coordinators should have responsibilities in VAR-001-1 to monitor that sufficient reactive resources are available for reliable system operations. Accordingly, the ERO should modify VAR-001-1 to include reliability coordinators as applicable entities and include a new requirement(s) that identifies the reliability coordinator's monitoring responsibilities*."
8. Modify the measures, Violation Risk Factors (VRF), and Violation Severity Levels (VSL) as necessary to address modified requirements.
9. Address the issue of outage coordination as pointed out by the Independent Experts Review Panel through the creation of a new standard.
~~6.~~10. Address the recommendations of the IRO Five Year Review Team (Project 2012-09) for the IRO standards revised in this project.

Reliability Functions	
The Standard will Apply to the Following Functions (Check each one that applies.)	
☐ Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of Responsible Entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.

Reliability Functions	
☒ Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒ Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☒ ~~☐~~ Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☒ ~~☐~~ Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐ Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☒ ~~☐~~ Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
☒ ~~☐~~ Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☒ ~~☐~~ Transmission Owner	Owns and maintains transmission facilities.
☒ Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
☒ Distribution Provider	Delivers electrical energy to the End-use customer.
☒ Generator Owner	Owns and maintains generation facilities.
☒ Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐ Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.

Reliability Functions		
☐	Market Operator	Interface point for reliability functions with commercial functions.
☒	Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles	
Applicable Reliability Principles (Check all that apply).	
☒	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
☒	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
☒	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
☐	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.
☐	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
☐	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Does the proposed Standard comply with all of the following Market Interface Principles?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to	Yes

Reliability and Market Interface Principles	
access commercially non-sensitive information that is required for compliance with reliability standards.

Project 2014-03 – Revisions to TOP and IRO Reliability Standards

Mapping Document | May 2014

This mapping document showing the translation of Requirements in the following approved, currently-enforceable standards to revised or new standards developed in Project 2014-03:

- IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination - Facilities
- IRO-003-2 — Reliability Coordination – Wide-Area View
- IRO-004-2 — Reliability Coordination — Operations Planning
- IRO-005-3.1a — Reliability Coordination - Current Day Operations
- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-1a — Reliability Coordinator Data Specification and Collection
- IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities Between Reliability Coordinators
- PER-001-0.2 — Operating Personnel Responsibility and Authority
- TOP-001-1a — Reliability Responsibilities and Authorities
- TOP-002-2.1b — Normal Operations Planning
- TOP-003-1 — Planned Outage Coordination
- TOP-004-2 — Transmission Operations
- TOP-005-2a — Operational Reliability Information
- TOP-006-3 — Monitoring System Conditions
- TOP-007-0 — Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations
- TOP-008-1 — Response to Transmission Limit Violations

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.	The SDT proposes retiring the requirement as it is addressed in the NERC Rules of Procedure, January 30, 2014: **Section 503.2 (2.1)** "Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4)." **Section 501 (1.4)** "**1.4** For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall: **1.4.1** Ensure that all areas are under the oversight of one and only one Reliability Coordinator. **1.4.2** Ensure that all Balancing Authorities and Transmission operator entities are under the responsibility of one and only one Reliability Coordinator. **1.4.3** Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator. **1.4.4** Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority."
R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.	**The SDT is proposing to retire this requirement.** Reliability Coordinators must comply with mandatory approved standards. The SDT proposes retiring the requirement, consistent with P81, as it is addressed in the NERC Rules of Procedure, January 30, 2014: **Section 503.2 (2.1)** "Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4)." **Section 501 (1.4)** "**1.4** For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall: **1.4.1** Ensure that all areas are under the oversight of one and only one Reliability Coordinator. **1.4.2** Ensure that all Balancing Authorities and Transmission Operator entities are under the responsibility of one and only one Reliability Coordinator. **1.4.3** Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator. **1.4.4** Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority."
R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.	**This requirement is replaced by proposed IRO-001-4, Requirements R1 and R2.** The SDT does not believe that there is a need for a decision-making authority requirement as the decision-making authority is inherent when the requirement states that the Reliability Coordinator must act, or direct others to act. **Proposed IRO-001-4, Requirements R1 and R2:** **R1**. Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area. **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.
R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability	**The SDT is proposing to retire this requirement.** The SDT contends that approved IRO-001-1.1, Requirement R4 is redundant with NERC Rules of Procedure, Section 500 (January 30, 2014) and should be retired from the standard. **(Section 501)** "The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved Reliability Standards. Organizations that are

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.	registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable Reliability Standards." **(Section 508)** Provisions Relating to Coordinated Functional Registration (CFR) Entities In addition to registering as an entity responsible for all functions that it performs itself, multiple entities may each register using a CFR for one or more Reliability Standard(s) and/or for one or more Requirements/sub-Requirements within particular Reliability Standard(s) applicable to a specific function. The CFR submission must include a written agreement that governs itself and clearly specifies the entities' respective compliance responsibilities. The Registration of the CFR is the complete Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. Neither NERC nor the Regional Entity shall be parties to any such agreement, nor shall NERC or the Regional Entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the CFR.
R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.	The SDT is proposing to retire this requirement consistent with Paragraph 81 criteria as it is strictly administrative in nature.
R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.	The SDT is proposing to retire this requirement. The Reliability Coordinator may delegate tasks but cannot delegate the responsibility for these tasks. Therefore, it is not necessary to mandate that delegated tasks must be carried out by certified personnel as it is the responsibility of the Reliability Coordinator to ensure that the task is carried out.
R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.	This requirement is replaced by proposed IRO-014-3, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability.
R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability	This requirement is replaced by proposed IRO-001-4, Requirements R2 and R3.

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.	**Proposed IRO-001-4, Requirements R2 and R3:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2.
R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.	The SDT is proposing to retire this requirement as it is redundant with the definition of Reliability Coordinator in Functional Model v5. The NERC Functional Model Version 5 defines the Reliability Coordinator function as follows: "The functional entity that maintains the Real-time operating reliability of the Bulk Electric System within a Reliability Coordinator Area." An entity performing Reliability Coordinator services must meet this definition.

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.	The first sentence of this requirement is replaced by proposed IRO-002-4 Requirement R1 for voice links and Requirement R2 for data links. The second sentence of this requirement is covered by approved PER-004-2 Requirement R1 so to eliminate redundancy, that part of the requirement is not proposed to be replaced. **Proposed IRO-002-4, Requirements R1 and R2:** **R1.** Each Reliability Coordinator shall have voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **R2.** Each Reliability Coordinator shall have data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **Approved PER-004-2, requirement R1:** **R1.** Each Reliability Coordinator shall be staffed with adequately trained and NERC-certified Reliability Coordinator operators, 24 hours per day, seven days per week.
R2. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.	This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3, part 3.3. **Proposed IRO-010-2, Requirements R1 and R3, part 3.3:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **R3.** Part 3.3. A mutually agreeable security protocol
R3. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.	This requirement is replaced by proposed IRO-002-4 Requirements R1 and R2. **Proposed IRO-002-4, Requirements R1 and R2:** **R1.** Each Reliability Coordinator shall have voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **R2**. Each Reliability Coordinator shall have data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators.
R4. Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.	This requirement is replaced by proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-002-4, Requirements R4 and R5:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
R5. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.	This requirement is replaced by proposed IRO-002-4, Requirement R4. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R6. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays.	This requirement is replaced by proposed IRO-008-5, Requirement R5 and the proposed definition of Real-time Assessment. **Proposed IRO-008, Requirement R5:** **R5**. Each Reliability Coordinator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed definition:**

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)
R7. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.	This requirement is replaced by proposed IRO-002-4, Requirement R4 and approved EOP-008-1, Requirement R1, part 1.6.2. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Approved EOP-008-1, Requirement R1, part 1.6.2:** **R1. Part 1.6.2**. Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.
R8. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.	This requirement is replaced by proposed IRO-002, Requirement R3 and approved EOP-008-1, Requirement R1, part 1.6.2. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its monitoring and analysis capabilities. **Approved EOP-008-1, Requirement R1, part 1.6.2:** **R1. Part 1.6.2.** Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor all Bulk Electric System facilities, which may include sub-transmission information, within its Reliability Coordinator Area and adjacent Reliability Coordinator Areas, as necessary to ensure that, at any time, regardless of prior planned or unplanned events, the Reliability Coordinator is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit violations within its Reliability Coordinator Area.	Replaced with proposed IRO-002-4, Requirement R4. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R2. Each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL or IROL violation. Reliability Coordinators shall also know the status of any facilities that may be required to assist area restoration objectives.	Replaced with proposed IRO-002-4, Requirement R4 and revised definitions of Operational Planning Analysis and Real-time Assessment. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels,

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: **R1.1** Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading. **R1.2.** Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.3.** Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.4.** System real and reactive reserves (actual versus required). **R1.5**. Capacity and energy adequacy conditions. **R1.6.** Current ACE for all its Balancing Authorities. **R1.7**. Current local or Transmission Loading Relief procedures in effect.	Replaced by proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5**. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1.8. Planned generation dispatches. **R1.9.** Planned transmission or generation outages. **R1.10.** Contingency events.	
R2. Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.	The first sentence is replaced by proposed IRO-002-4, Requirement R4. The second sentence is covered by approved EOP-002-3.1a, Requirement R8 and can be retired. **Proposed IRO-002-4 Requirement, R4**: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Approved EOP-002-3.1a, Requirement R8:** **R8.** A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 "Energy Emergency Alerts." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R3. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.	The SDT proposes retiring this requirement as it has been superseded by proposed EOP-010-1, Requirements R1 through R3. **Proposed EOP-010-1, Requirements R1 to R3:** **R1** Each Reliability Coordinator shall develop, maintain, and implement a GMD Operating Plan that coordinates GMD Operating Procedures or Operating Processes within its Reliability Coordinator Area. At a minimum, the GMD Operating Plan shall include: **1.1** A description of activities designed to mitigate the effects of GMD events on the reliable operation of the interconnected transmission system within the Reliability Coordinator Area.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	1.2 A process for the Reliability Coordinator to review the GMD Operating Procedures or Operating Processes of Transmission Operators within its Reliability Coordinator Area. **R2.** Each Reliability Coordinator shall disseminate forecasted and current space weather information to functional entities identified as recipients in the Reliability Coordinator's GMD Operating Plan. **R3.** Each Transmission Operator shall develop, maintain, and implement a GMD Operating Procedure or Operating Process to mitigate the effects of GMD events on the reliable operation of its respective system. At a minimum, the Operating Procedure or Operating Process shall include: **3.1.** Steps or tasks to receive space weather information. **3.2**. System Operator actions to be initiated based on predetermined conditions. **3.3**. The conditions for terminating the Operating Procedure or Operating Process.
R4. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.	This requirement has been replaced by proposed IRO-008-2, Requirements R4, R6 and R8. **Proposed IRO-008-2, Requirement R4:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area. **Proposed IRO-008-2, Requirement R8:** **R8.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated.
R5. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.	This requirement is replaced by proposed IRO-001-4, Requirement R1 and proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
R6. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.	The first sentence is replaced with proposed IRO-008-2, Requirement R2. The issue of CPS and DCS is covered in approved EOP-002-3.1, Requirements R6, R7, and R8. The second sentence is replaced by the proposed IRO-017-1, Requirement R1 as well as through the proposed definitions of Operational Planning Analysis and Real-time Assessments. Generator Operators are not included in proposed IRO-017-1 as the SDT believes that Generator Operator outage information will be sent to the respective Transmission Operators and Balancing Authorities and then sent on to the Reliability Coordinators through those entities.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-008-2, Requirement R2: **R2**. Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.) **Proposed IRO-017-1, Requirement R1:** **R1.** Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. **Approved EOP-002-3.1, Requirements R6, R7, and R8:** **R6.** If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to: R6.1. Loading all available generating capacity. **R6.2**. Deploying all available operating reserve.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R6.3. Interrupting interruptible load and exports. **R6.4.** Requesting emergency assistance from other Balancing Authorities. **R6.5**. Declaring an Energy Emergency through its Reliability Coordinator; and **R6.6.** Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads. **R7.** Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall: R7.1. Manually shed firm load without delay to return its ACE to zero; and **R7.2**. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002 "Energy Emergency Alerts." **R8.** A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 "Energy Emergency Alerts." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R8. The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.	The first sentence is replaced by proposed IRO-002-4, Requirements R4 and R5. The second sentence is replaced by proposed IRO-001-4, Requirement R1. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area.
R9. Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.	The first sentence is replaced by proposed IRO-002-4, Requirements R4 and R5. The second sentence is replaced by proposed IRO-010-2, Requirements R1, part 1.2, and R3. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. **Proposed IRO-010-4, Requirement R1, part 1.2:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability. **Proposed IRO-010-4, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator,

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.
R10. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.	For Reliability Coordinators, this requirement is replaced by approved IRO-009-1, Requirement R5. For Transmission Operators, Balancing Authorities, and Generator Operators, this requirement is replaced by proposed TOP-001-3, Requirement R18. The Transmission Service Provider and Purchasing-Selling Entity will receive instructions on limits from the previously cited entities and can thus be deleted from the requirement. **Approved IRO-009-1, Requirement R5:** **R5.** If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator, Balancing Authority, and Generator Operator shall always operate to the most limiting parameter in instances where there is a difference in derived limits.
R11. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.	This requirement is replaced by proposed MOD-001-2, Requirement R2. 10 **Proposed MOD-001-2, Requirement R2:** **R2**. Each Transmission Service Provider that determines Available Flowgate Capability (AFC) or Available Transfer Capability (ATC) shall develop an Available Transfer Capability Implementation Document (ATCID) that describes the methodology (or methodologies) for determining AFC or ATC values. The methodology (or methodologies) shall reflect the Transmission Service Provider's current practices for determining AFC or ATC values. **2.1.** Each methodology shall describe the method used to account for the following elements, provided such elements impact the determination of AFC or ATC: **2.1.1.** The simulation of transfers performed through the adjustment of generation, Load, or both; **2.1.2.** Transmission topology, including, but not limited to, additions and retirements; **2.1.3.** Expected transmission uses;

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	2.1.4. Planned outages**;** **2.1.5.** Parallel path (loop flow) adjustments; **2.1.6.** Load forecast; and **2.1.7.** Generator dispatch, including, but not limited to, additions and retirements. **2.2.** Each Transmission Service Provider that uses the Flowgate Methodology shall, for reliability-related constraints identified in part 1.3, use the AFC determined by the Transmission Service Provider for that constraint.
R12. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.	The requirement is replaced by proposed IRO-008-2, Requirements R4, R6, and R8. **Proposed IRO-008-2, Requirement R4:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). **Proposed IRO-008-2, Requirement R6:** **R6**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area. **Proposed IRO-008-2, Requirement R8:** **R8**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated.

IRO-008-1 Reliability Coordination Operational Analyses and Real-time Assessments	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions.	This requirement is replaced by proposed IRO-008-2, Requirement R1. **Proposed IRO-008-2, Requirement R1:** **R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) or Interconnection Operating Reliability Limits (IROLs) within its Reliability Coordinator Wide Area.
R2. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.	This requirement is replaced by proposed IRO-008-2, Requirement R5. **Proposed IRO-008-2, Requirement R5:** **R5.** Each Reliability Coordinator shall perform a Real-time Assessment at least once every 30 minutes.
R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.	This requirement is replaced by proposed IRO-008-2, Requirements R4 and R6. **Proposed IRO-008-2, Requirements R4 and R6:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). Proposed IRO-008-2, R6: **R6**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area.

Standard IRO-010-1a Reliability Coordinator Data Specification and Collection	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following: **R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. **R1.2.** Mutually agreeable format. **R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses). **R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.	This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.1** A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator. **1.2** Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability. **1.3** A periodicity for providing data. **1.4** The deadline by which the respondent is to provide the indicated data. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: **3.1** A mutually agreeable format **3.2** A mutually agreeable process for resolving data conflicts **3.3** A mutually agreeable security protocol
R2. The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.	This requirement is replaced by proposed IRO-010-2, Requirement R2. **Proposed IRO-010-2, Requirement R2:** **R2.** The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator's Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard IRO-010-1a Reliability Coordinator Data Specification and Collection	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.	This requirement is replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: **3.1** A mutually agreeable format **3.2** A mutually agreeable process for resolving data conflicts **3.3** A mutually agreeable security protocol

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators **R1.1** These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: **R1.1.1** Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and	This requirement is replaced by proposed IRO-014-3, Requirement R1. Data is covered in proposed IRO-010-2, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Communications and notifications, and the process to follow in making those notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
information to be exchanged with other Reliability Coordinators. **R1.1.2** Energy and capacity shortages. **R1.1.3** Planned or unplanned outage information. **R1.1.4** Voltage control, including the coordination of reactive resources for voltage control. **R1.1.5** Coordination of information exchange to support reliability assessments. **R1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.	**1.5** Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas. **1.6** Provisions for weekly conference calls. **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: **R2.1.** Agreed to by all the Reliability Coordinators required to take the indicated action(s). **R2.2**. Distributed to all Reliability Coordinators that are required to take the indicated action(s).	This requirement is replaced by proposed IRO-014-3, Requirement R2. **Proposed IRO-014-3, Requirement R2:** **R2.** Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: **2.1** Review and update annually with no more than 15 months between reviews. **2.2** Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update. **2.3** Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.
R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include: **R3.1.** A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.	R3.1 is a strictly administrative requirement with no reliability benefit and is proposed to be retired under the P81 criteria. R3.2 is replaced by proposed IRO-014-3, Requirement R1, part 1.5. **Proposed IRO-014-3, Requirement R1**: **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability. These

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R3.2. The agreed-upon actions from the associated Reliability Coordinator-to- Reliability Coordinator Operating Procedure, Process, or Plan.	Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Communications and notifications, and the process to follow in making those notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments. **1.5** Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas. **1.6** Provisions for weekly conference calls.
R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall: **R4.1.** Include version control number or date. **R4.2.** Include a distribution list. **R4.3**. Be reviewed, at least once every three years, and updated if needed	This requirement is proposed to be retired as it is strictly an administrative requirement with no reliability benefit.

Standard IRO-015-1 - Notifications and Information Exchange Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. **R1.1** The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.	This requirement is replaced by proposed IRO-014-3, Requirement R3. **Proposed IRO-014-3, Requirement R3:** **R3.** Each Reliability Coordinator shall make notifications and exchange reliability–related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.
R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. **R2.1** The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.	This requirement is replaced by proposed IRO-014-3, Requirement R4. **Proposed IRO-014-3, Requirement R4:** **R4.** Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement R1, Part 1.6) with other Reliability Coordinators within the same Interconnection.
R3. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows. **R3.1**. Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. **R3.2.** Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities.	This requirement is replaced by approved PRC-001-1.1, Requirement R3. **Approved PRC-001-1.1, Requirement R3:** **R3.** A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows. **3.1** Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. **3.2** Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities.

Standard IRO-016-1 - Coordination of Real-time Activities Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. **R1.1** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. **R1.2** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). **R1.2.1** If time permits, this re-evaluation shall be done before taking corrective actions. **R1.2.2** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved **R1.3** If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented.	Proposed IRO-014-3, Requirements R5 through R8 are revised versions of approved IRO-016-1, Requirement R1 and its sub-requirements. **Proposed IRO-014-3, Requirement R5:** **R5.** Each Reliability Coordinator, upon identification of an Emergency, shall notify all other Reliability Coordinators. **Proposed IRO-014-3, Requirement R6:** **R6.** During each instance where Reliability Coordinators disagree on the existence of an Emergency each impacted Reliability Coordinator shall operate as though the problem exists. **Proposed IRO-014-3, Requirement R7:** **R7**. During those instances where Reliability Coordinators disagree on the existence of an Emergency, the Reliability Coordinator that identified the Emergency shall develop an action plan to resolve the Emergency. **Proposed IRO-014-3, Requirement R8:** **R8.** During those instances where Reliability Coordinators disagree on the existence of an Emergency, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Emergency unless such actions would violate safety, equipment, regulatory or statutory requirements.
R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.	This retirement of this Requirement was approved by FERC effective January 21, 2014as part of the Paragraph 81 Project.

Standard PER-001-0.2 – Operating Personnel Responsibility and Authority	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System	The SDT is proposing to retire this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted. FERC Order 693a, paragraph 112: In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the Bulk Power System have been more clearly laid out in revised standards. (See FERC Order 693a, paragraph 112.) The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the Bulk Power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, makes this requirement superfluous, and, thus, it can be deleted. FERC Order 693a, paragraph 112: "In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies including curtailing transmission service or energy schedules, operating	This requirement replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:**

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	**R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed IRO-001-2, Requirements R2 and R3 and proposed TOP-001-3, Requirements R3 and R4. Proposed IRO-001-2, R2: **Proposed IRO-001-2, Requirement R2:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-001-2, Requirement R3:** **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R4:** **R4.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed TOP-001-3, Requirements R3 and R4. **Proposed TOP-001-3, Requirements R3 and R4:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. Proposed TOP-001-3, R4: **R4.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.	This requirement replaced by proposed TOP-001-3, Requirements R8, R12, and R14. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	The Generator Operator was deleted from this requirement since it will only respond to such requests if they were in the form of an Operating Instruction from its Transmission Operator or Balancing Authority which is covered in proposed TOP-001-3, Requirements R3, R4, R5 and R6. Assistance is provided through proposed TOP-001-3, Requirement R7. ‘Emergency’ deleted as the assistance is assistance in response to the other entities’ emergency.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R3: **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R4:** R4. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator. **Proposed TOP-001-3, Requirement R5:** **R5.** Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R6:** **R6.** Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Balancing Authority of its inability to perform an Operating Instruction issued by that Balancing Authority. **Proposed TOP-001-3, Requirement R7:** **R7.** Each Transmission Operator and Balancing Authority shall assist Transmission Operators, if requested, provided that the requesting entity has implemented its emergency procedures, unless such actions cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless:	The Generator Operator can't know if their actions will burden neighboring systems since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring systems and will receive this data through proposed TOP-003-3, Requirements R1 and R5 and is required to act on this information as

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R7.1 For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.2** For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.3** When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.	per proposed TOP-001-3, Requirement R8. Proposed IRO-010-2, Requirements R1 and R3 handle the notifications from the Transmission Operator to the Reliability Coordinator. **Proposed TOP-001-3, Requirement R8**: **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-003-3, Requirement R1:** **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications …
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency	First sentence – real power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance real power so that part of the sentence can be deleted per the NERC Functional Model V5.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	First sentence – reactive power: Replaced by approved VAR-001-3, Requirement R8 for the Transmission Operator which covers reactive power requirements and the meaning of balancing reactive power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power per the NERC Functional Model V5 and therefore the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power and thus the Balancing Authority is not necessary. Replaced by approved VAR-001-3, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-2, Requirement R1 for the Transmission Operator and Balancing Authority. **Approved EOP-002-3.1, Requirement R6:** **R6**. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Approved VAR-001-3, Requirement R8:** **R8.** Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits. **Approved VAR-001-3, Requirement R12:** **R12**. The Transmission Operator shall direct corrective action, including load reduction, necessary to prevent voltage collapse when reactive resources are insufficient.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Approved IRO-009-1, Requirement R1: **R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. **Approved IRO-009-1, Requirement R2:** **R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	First sentence, retained for Balancing Authority and Transmission Operator and moved to proposed TOP-002-4, Requirements R2 and R4. Second sentence – Replaced by proposed TOP-001-3, Requirements R1 and R2 for Balancing Authority and Transmission Operator, which requires action to resolve issues. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day … **Proposed TOP-001-3, Requirement R1:** **R1.** Each Transmission Operator shall act, or direct others within its Transmission Operator Area to act by issuing Operating Instructions, to address its reliability functions within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act, or direct others within its Balancing Authority Area to act by issuing Operating Instructions, to address its reliability functions within its Balancing Authority Area.
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	The SDT is proposing to retire this requirement. While it may be good utility practice to do this, it is of marginal benefit to reliability and is more of a 'how' to conduct business as opposed to a definitive 'what' to do.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall	The Transmission Operator and balancing Authority will receive the necessary data in proposed TOP-003-3, Requirement R5. The Transmission Service Provider provisions are covered in approved MOD-001-1a, Requirement R1; approved MOD-030-2, Requirement R3; and approved MOD-001-1a, Requirement R2. The coordination of plans is in proposed IRO-017-1, Requirement R2.

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	**Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Approved MOD-001-1a, Requirement R1:** **R1.** Each Transmission Operator shall select one of the methodologies1 listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. **Approved MOD-030-2, Requirement R3:** **R3.** The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that … **Approved MOD-001-1a, Requirement R2:** **R2**. Each Transmission Service Provider shall calculate ATC or AFC values as listed below using the methodology or methodologies selected by its Transmission Operator(s). **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.	Coordination of plans is covered in proposed IRO-017-1, Requirement R2. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	This requirement has been moved to proposed TOP-002-4, Requirements R2 and R4. **Proposed TOP-002-4, Requirement R2:**

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R2. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	The part of the requirement dealing with the Balancing Authority and Transmission Operator is replaced by proposed TOP-002-4, Requirements R2 and R4. The n-1 Contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to the approved FAC standards which include Contingency planning. In addition, the definition of Operational Planning Analysis has been revised to better show the intent of the Contingency aspects of the analysis. The SDT does not believe that there is a need to replace the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: 4.1 Expected generation resource commitment and dispatch. 4.2 Interchange scheduling

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	4.3 Demand patterns 4.4 Capacity and energy reserve requirements, including deliverability capability **Proposed definition: Operational Planning Analysis** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	This requirement is replaced by proposed TOP-002-4, Requirement R4. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Voltage and reactive power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-3, Requirement R1. Deliverability by the Balancing Authority is covered by proposed TOP-002-4, Requirement R4. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Proposed TOP-002-4, Requirement R4:** R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	This requirement is replaced by approved INT-003-3, Requirement R1, part 1.1.1, and proposed TOP-002-4, Requirement R4. **Approved INT-003-3, Requirement R1:** **R1.** Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation. R1.1.1. Interchange Schedule start and end time. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Balancing Authority - The Balancing Authority is only responsible to respond to Operating Instructions as per the definition of Balancing Authority in the NERC Glossary and, thus, consistent with the Commission-approved interpretation of Requirement R10, Balancing Authorities have been removed from the applicability of this requirement. SOLs and IROLs

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	are limits which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations. As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between loads and resources in real time within its Balancing Authority Area by keeping its actual interchange equal to its scheduled interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the Bulk Power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions (as shown in proposed TOP-001-3, Requirement R3) from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. The Balancing Authority must coordinate outage information and exchange data required to allow the Transmission Operator to deal with SOLs. Those items are in proposed IRO-017-1, Requirement R2 and proposed TOP-003-3, Requirement R5. That information is considered by the Transmission Operator when formulating its Operating Plans and since IROLs are a sub-set of SOLs, this is covered in proposed TOP-002-4, requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	First sentence replaced by proposed TOP-002-4, Requirement R1, proposed TOP-001-3, Requirement R13, and proposed IRO-017-1, Requirement R1, part which is designed to allow the Reliability Coordinator to request seasonal studies. Second sentence – SOLs are set by the Reliability Coordinator in approved FAC-011-2, Requirement R4, part 4.3 and distributed to the Transmission Operators thus assuring that the Transmission Operators utilize the same SOLs. Third sentence – Replaced by proposed TOP-001-3, Requirement R13 and proposed TOP-001-3, Requirement R8. **Proposed TOP-002-4, Requirement R1:** **R1**. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13**. Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed IRO-017-1, Requirement R1:** 1.5 Document and maintain the specifications for outage analysis during the operations planning horizon **Approved FAC-011-2, Requirement R4:** **R4.** The Reliability Coordinator shall issue its SOL Methodology and any changes to that methodology, prior to the effectiveness of the Methodology or of a change to the Methodology, to all of the following:

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	4.3 Each Transmission Operator that operates in the Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R8:** **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load.
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.	Replaced by approved MOD-028-2, Requirement R6.1; approved MOD-029-1a, Requirement R3; and approved MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. **Approved MOD-028-2, Requirement R6.1:** **6.1** Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing load within the source Balancing Authority area and decreasing generation and/or increasing load within the sink Balancing Authority area until either: • A System Operating Limit is reached on the Transmission Service Provider's system, or • A SOL is reached on any other adjacent system in the Transmission model that is not on the study path and the distribution factor is 5% or greater. **Approved MOD-029-1a, Requirement R3:** **R3.** Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. **Approved MOD-030-2, Requirement R2.4:** **2.4** Establish the TFC of each of the defined Flowgates as equal to: - For thermal limits, the System Operating Limit (SOL) of the Flowgate. - For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall	This requirement is replaced by proposed TOP-001-3, Requirement R2 where a Balancing Authority can issue Operating instructions to the Generator Operator which could include verification. The SDT believes that this requirement does not apply to the Transmission

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Operator since it is dealing exclusively with generation. The data coming back from the verification effort would be included in the Balancing Authority data specification as shown in proposed TOP-003-3, Requirements R2 and R5. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act, or direct others within its Balancing Authority Area to act by issuing Operating Instructions, to address its reliability functions within its Balancing Authority Area. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to: **14.1** Changes in real and reactive output capabilities. (Retired August 1, 2007) **14.2** Changes in real output capabilities(Effective August 1, 2007) **14.3** Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications …
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:**

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	**R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: **16.1** - Changes in transmission facility status. **16.2** - Changes in transmission facility rating	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using:
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	This requirement is proposed for retirement as it adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a system reliability issue. This is an administrative item as seen in the measure which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	The SDT believes that modeling starts with the model created by the Planning Coordinator and model verification for the Planning Coordinator is addressed in proposed MOD-033-1, Requirements R1 and R2. Therefore, the SDT is proposing to retire this requirement.

Standard TOP-002-2a — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed MOD-033-1, Requirement R1: **R1**. Each Planning Coordinator shall implement a documented data validation process that includes the following attributes: **1.1** Comparison of the performance of the Planning Coordinator's portion of the existing system in a planning power flow model to actual system behavior, represented by a state estimator case or other Real-time data sources, at least once every 24 calendar months through simulation; **1.2** Comparison of the performance of the Planning Coordinator's portion of the existing system in a planning dynamic model to actual system response, through simulation of a dynamic local event, at least once every 24 calendar months (use a dynamic local event that occurs within 24 calendar months of the last dynamic local event used in comparison, and complete each comparison within 24 calendar months of the dynamic local event). If no dynamic local event occurs within the 24 calendar months, use the next dynamic local event that occurs; **1.3** Guidelines the Planning Coordinator will use to determine unacceptable differences in performance under Part 1.1 or 1.2; and **1.4** Guidelines to resolve the unacceptable differences in performance identified under Part 1.3. **Proposed MOD-033-1, Requirement R2:** **R2.** Each Reliability Coordinator and Transmission Operator shall provide actual system behavior data (or a written response that it does not have the requested data) to any Planning Coordinator performing validation under Requirement R1 within 30 calendar days of a written request, such as, but not limited to, state estimator case or other Real-time data (including disturbance data recordings) necessary for actual system response validation.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Generator Operators and Transmission Operators shall provide planned outage information. **1.1** Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. **1.2** Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. **1.3** Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Parts 1.1, 1.2, and 1.3 are addressed as follows: **1.1** Generator Operators will provide planned outage information to Transmission Operators through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. **1.2** Transmission Operators will provide planned outage information to Reliability Coordinators through proposed IRO-010-2, Requirement R3. Reporting requirements are set in proposed IRO-010-2, Requirement R1. **1.3** Reporting requirements are set in proposed TOP-003-3, Requirement R1 and proposed IRO-010-2, Requirement R1. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.	Generator Operators will provide planned outage information to Transmission Operators through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. Transmission Operators and Balancing Authorities coordinate outages through proposed IRO-017-1, Requirement R2. **Proposed TOP-003-3, Requirement R5:** **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	This requirement is replaced by proposed TOP-001-3, Requirement R9. **Proposed TOP-001-3, Requirement R9:** **R9**. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of outages of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	This requirement is replaced by proposed IRO-008-2, requirements R2 and R3.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-008-2, Requirement R2: Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R3:** **R3.** Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1 considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	This requirement has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14**. Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	The SDT has revised the definitions of Operational Planning Analysis and Real-time Assessment to address all Contingencies, not just the single most severe Contingency and operations follow suit as shown in proposed TOP-001-3, Requirement R14. **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels,

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.) **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	This requirement is replaced by proposed TOP-001-3, Requirements R12 and R14. These requirements are not limited by single or multiple Contingencies. Approved FAC-011-2 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. Approved FAC-014-2, Requirement R6 requires the Planning Coordinator to identify the subset of multiple Contingencies and to provide this list to the Reliability Coordinators. Approved FAC-011-2, Requirement R3.3 requires the Reliability Coordinator to include in its SOL methodology a process for determining which of the Stability limits associated with multiple Contingencies are used to establish SOLs. Approved FAC-014-2, Requirement R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. Approved FAC-014-2, Requirement R1 also requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area while approved FAC-014-2, Requirement R2 also requires the Transmission Operator to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R12: **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Approved FAC-011-2, Requirement R1:** **R1**. The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: **R1.1**. Be applicable for developing SOLs used in the planning horizon **R1.2.** State that SOLs shall not exceed associated Facility Ratings. **R1.3.** Include a description of how to identify the subset of SOLs that qualify as IROLs. **Approved FAC-011-2, Requirement R3:** **R3.** The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: **R3.3**. A process for determining which of the stability limits associated with the list of multiple contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon given the actual or expected system conditions. **R3.3.1**. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple contingencies. **Approved FAC-014-2, Requirement R1:** **R1.**The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Approved FAC-014-2, Requirement R2: **R2.** The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. **Approved FAC-014-2, Requirement R6:** **R6.** The Planning Authority shall identify the subset of multiple contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. **R6.1.** The Planning Authority shall provide this list of multiple contingencies and the associated stability limits to the Reliability Coordinators that monitor the facilities associated with these contingencies and limits. **R6.2.** If the Planning Authority does not identify any stability related multiple contingencies, the Planning Authority shall so notify the Reliability Coordinator.
R4. If a Transmission Operator enters an unknown operating state (i.e., any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	The SDT believes that given the revised definitions for Operational Planning Analysis and Real-time Assessment, as well as the new requirement for TOPs to update their OPA results through the performance of a Real-time Assessment every 30 minutes, that entities will always be operating to valid operating limits. Therefore, this requirement is replaced by proposed TOP-001-3, Requirements R12, R13, and R14 along with the revised definitions of Operational Planning Analysis and Real-time Assessment. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the Bulk Power System. **Proposed TOP-001-3, Requirement R12:** **R12**. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R13:** **R13.** Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed definition: **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)
R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is proposed for retirement by the SDT. In the Functional Model v5, the Transmission Operator responsibilities and duties are clearly spelled out. Item 14 states that a Transmission Operator sheds load under the auspices of the Reliability Coordinator. Functional model v5: 14. Coordinates load shedding with, or as directed by, the Reliability Coordinator
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:	The first sentence has been superseded by the NERC Reliability Standards taken as a whole and is proposed to be retired. The second sentence was replaced as follows: **R6.1** is duplicative of approved VAR-001-3, Requirement R1 for reactive power. Real power flows are covered in proposed TOP-001-3, Requirements R12 and R14.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
6.1 Monitoring and controlling voltage levels and real and reactive power flows. **6.2** Switching transmission elements. **6.3** Planned outages of transmission elements. **6.4** Responding to IROL and SOL violations.	**R6.2** has been replaced by proposed TOP-001-3, Requirement R8. **R6.3** has been replaced by proposed IRO-017-1, Requirement R2. **R6.4** has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.

Standard TOP-005-2a — Operational Reliability Information	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Recognizing security concerns, the SDT has added security protocols to proposed IRO-010-2, Requirement R3, part 3.3 and to proposed TOP-003-3, Requirement R5, part 5.3 to address overall security concerns. **Proposed IRO-010-2, Requirement R3, part 3.3:** **3.3** A mutually agreeable security protocol **Proposed Top-003-3, Requirement R5, part 5.3:** **5.3** A mutually agreeable security protocol.
R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-2a "Electric System Reliability Data**,"** unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	This requirement replaced by proposed TOP-003-3, Requirement R1, R2, and R5. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted as redundant to NAESB standards – All operating data that a Purchasing-Selling Entity has that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. **1.1** - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. **1.2** - Each Transmission Operator shall inform the Reliability Coordinator and other affected Transmission Operators of all transmission resources available for use. **1.3 -** Each Balancing Authority shall inform its Reliability Coordinator of all generation resources available for use.	The main body of the requirement is replaced by proposed TOP-001-3, Requirements R10 and R11. **1.1** This Part is replaced by proposed TOP-003-3, Requirement R5. **1.2** This Part is replaced by proposed IRO-101-2, Requirement R3. **1.3** This Part is replaced by proposed IRO-010-2, Requirement R3. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	This requirement is replaced by proposed IRO-002-4, Requirement R4, proposed TOP-001-3, Requirement R10, and proposed TOP-001-3, R11. The requirements mandate that any Facility needed for an entity to perform its reliability-based functions must be monitored. This would include load-tap changers, rotating and static reactive resources, etc.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-002-4, Requirement R4: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall monitor Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide its operating personnel with appropriate technical information concerning protective relays within the Reliability Coordinator Area, the Transmission Operator Area, and the Balancing Authority Area, respectively.	This requirement replaced by proposed IRO-010-2, Requirement R1, part 1.2; proposed TOP-003-3, Requirement R1, part 1.2; and proposed TOP-003-3, Requirement R2, part 2.2. **Proposed IRO-010-2, Requirement R1, part 1.2:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed TOP-003-3, Requirement R1, part 1.2:** **R 1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-003-3, Requirement R2, part 2.2: **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: **2.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	This requirement replaced by proposed TOP-003-3, Requirement R1 and R2 with regard to load patterns. Weather forecasts are a necessary element for load forecasts which are required for Operational Planning Analysis. Therefore, this requirement can be retired. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.	This requirement replaced by proposed TOP-001-3, Requirements R10 and R11, and proposed IRO-002-4, Requirement R4. **Proposed TOP-001-3, Requirement R10:** **R10**. Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Metering accuracy for Balancing Authorities is covered under approved BAL-005 -0.2b, Requirement R17 and thus this requirement can be retired from the TOP standards. The SDT believes that this requirement truly pertains to the Balancing Authority and that the Transmission Operator is the actual entity who will be taking care of many of the meters mentioned in approved BAL-005-0.2b. Therefore, the SDT is proposing to retire the Transmission Operator part of this requirement. **Approved BAL-005-0.2b, Requirement R17:** **R17.** Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below
R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	This requirement is replaced by proposed IRO-002-4, Requirement R4, and proposed TOP-001-3, Requirements R10 and R11. **Proposed IRO-002-4, Requirement R4**: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R10: **R10.** Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.	This requirement is replaced by proposed TOP-001-3, Requirement R15. The Reliability Coordinator has the primary responsibility for IROLs and will be in communication with Transmission Operators to mitigate the situation. This is shown in proposed IRO-008-2, Requirements R6 and R7. **Proposed TOP-001-3, Requirement R15:** **R15.** Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an SOL has been exceeded. **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area.

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-008-2, Requirement R7: **R7.** Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6.
R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	This requirement is replaced by proposed TOP-001-3, Requirement R12. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
R3. A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	This requirement replaced by approved EOP-003-2, Requirement R1. **Approved EOP-003-2, Requirement R1:** **R1**. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	This requirement replaced by proposed IRO-008-2, Requirement R7. **Proposed IRO-008-2, Requirement R7:** **R7**. Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6.

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	This requirement replaced by approved EOP-003-1, Requirement R1 and proposed TOP-001-3, Requirements R12 and R14. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	First sentence – Replaced by proposed TOP-001-3, Requirements R12 and R14. Second sentence – Replaced by proposed TOP-001-3, Requirement R18. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator, Balancing Authority, and Generator Operator shall always operate to the most limiting parameter in instances where there is a difference in derived limits.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is	First sentence - Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other Reliability

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse. Therefore, the SDT is proposing to retire this requirement. Second sentence – In general, notification is replaced by proposed TOP-001-3, Requirement R8. **Proposed TOP-001-3, Requirement R8:** **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	The part of the requirement dealing with data is replaced by proposed TOP-003-3, Requirement R1. The part of the requirement dealing with analysis is replaced by proposed TOP-002-4, Requirement R1 and proposed TOP-001-3, Requirement R13. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-002-4, Requirement R1:** **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13.** Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Project 2014-03 – Revisions to TOP and IRO Reliability Standards

Mapping Document | May 2014

This mapping document showing the translation of Requirements in the following approved, currently-enforceable standards to revised or new standards developed in Project 2014-03:

- IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination - Facilities
- IRO-003-2 — Reliability Coordination – Wide-Area View
- IRO-004-2 — Reliability Coordination — Operations Planning
- IRO-005-3.1a — Reliability Coordination - Current Day Operations
- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-010-1a — Reliability Coordinator Data Specification and Collection
- IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities Between Reliability Coordinators
- PER-001-0.2 — Operating Personnel Responsibility and Authority
- TOP-001-1a — Reliability Responsibilities and Authorities
- TOP-002-2.1b — Normal Operations Planning
- TOP-003-1 — Planned Outage Coordination
- TOP-004-2 — Transmission Operations
- TOP-005-2a — Operational Reliability Information
- TOP-006-3 — Monitoring System Conditions
- TOP-007-0 — Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations
- TOP-008-1 — Response to Transmission Limit Violations

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.	The SDT proposes retiring the requirement as it is addressed in the NERC Rules of Procedure, January 30, 2014: **Section 503.2 (2.1)** "Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4)." **Section 501 (1.4)** "**1.4** For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall: **1.4.1** Ensure that all areas are under the oversight of one and only one Reliability Coordinator. **1.4.2** Ensure that all Balancing Authorities and Transmission operator entities are under the responsibility of one and only one Reliability Coordinator. **1.4.3** Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator. **1.4.4** Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority."
R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.	**The SDT is proposing to retire this requirement.** Reliability Coordinators must comply with mandatory approved standards. The SDT proposes retiring the requirement, consistent with P81, as it is addressed in the NERC Rules of Procedure, January 30, 2014: **Section 503.2 (2.1)** "Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4)." **Section 501 (1.4)** "**1.4** For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall: **1.4.1** Ensure that all areas are under the oversight of one and only one Reliability Coordinator. **1.4.2** Ensure that all Balancing Authorities and Transmission Operator entities are under the responsibility of one and only one Reliability Coordinator. **1.4.3** Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator. **1.4.4** Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority."
R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.	**This requirement is replaced by proposed IRO-001-4, Requirements R1 and R2.** The SDT does not believe that there is a need for a decision-making authority requirement as the decision-making authority is inherent when the requirement states that the Reliability Coordinator must act, or direct others to act. **Proposed IRO-001-4, Requirements R1 and R2:** **R1**. Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area. **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements.
R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability	**The SDT is proposing to retire this requirement.** The SDT contends that approved IRO-001-1.1, Requirement R4 is redundant with NERC Rules of Procedure, Section 500 (January 30, 2014) and should be retired from the standard. **(Section 501)** "The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved Reliability Standards. Organizations that are

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.	registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable Reliability Standards." **(Section 508)** Provisions Relating to Coordinated Functional Registration (CFR) Entities In addition to registering as an entity responsible for all functions that it performs itself, multiple entities may each register using a CFR for one or more Reliability Standard(s) and/or for one or more Requirements/sub-Requirements within particular Reliability Standard(s) applicable to a specific function. The CFR submission must include a written agreement that governs itself and clearly specifies the entities' respective compliance responsibilities. The Registration of the CFR is the complete Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. Neither NERC nor the Regional Entity shall be parties to any such agreement, nor shall NERC or the Regional Entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the CFR.
R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.	The SDT is proposing to retire this requirement consistent with Paragraph 81 criteria as it is strictly administrative in nature.
R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.	The SDT is proposing to retire this requirement. The Reliability Coordinator may delegate tasks but cannot delegate the responsibility for these tasks. Therefore, it is not necessary to mandate that delegated tasks must be carried out by certified personnel as it is the responsibility of the Reliability Coordinator to ensure that the task is carried out.
R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.	This requirement is replaced by proposed IRO-014-3, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability.
R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability	This requirement is replaced by proposed IRO-001-4, Requirements R2 and R3.

Standard IRO-001-1.1 — Reliability Coordination - Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.	**Proposed IRO-001-4, Requirements R2 and R3:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2.
R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.	The SDT is proposing to retire this requirement as it is redundant with the definition of Reliability Coordinator in Functional Model v5. The NERC Functional Model Version 5 defines the Reliability Coordinator function as follows: "The functional entity that maintains the Real-time operating reliability of the Bulk Electric System within a Reliability Coordinator Area." An entity performing Reliability Coordinator services must meet this definition.

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.	The first sentence of this requirement is replaced by proposed IRO-002-4 Requirement R1 for voice links and Requirement R2 for data links. The second sentence of this requirement is covered by approved PER-004-2 Requirement R1 so to eliminate redundancy, that part of the requirement is not proposed to be replaced. **Proposed IRO-002-4, Requirements R1 and R2:** **R1.** Each Reliability Coordinator shall have voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **R2.** Each Reliability Coordinator shall have data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **Approved PER-004-2, requirement R1:** **R1.** Each Reliability Coordinator shall be staffed with adequately trained and NERC-certified Reliability Coordinator operators, 24 hours per day, seven days per week.
R2. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.	This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3, part 3.3. **Proposed IRO-010-2, Requirements R1 and R3, part 3.3:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **R3.** Part 3.3. A mutually agreeable security protocol
R3. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.	This requirement is replaced by proposed IRO-002-4 Requirements R1 and R2. **Proposed IRO-002-4, Requirements R1 and R2:** **R1.** Each Reliability Coordinator shall have voice communications facilities with Transmission Operators, Balancing Authorities, and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators. **R2**. Each Reliability Coordinator shall have data links with Balancing Authorities, Planning Coordinators, Transmission Planners, Generator Owners, Generator Operators, Load-Serving

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Entities, Transmission Operators, Transmission Owners, and Distribution Providers within its Reliability Coordinator Area and with neighboring Reliability Coordinators.
R4. Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.	This requirement is replaced by proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-002-4, Requirements R4 and R5:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
R5. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.	This requirement is replaced by proposed IRO-002-4, Requirement R4. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R6. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays.	This requirement is replaced by proposed IRO-008-5, Requirement R5 and the proposed definition of Real-time Assessment. **Proposed IRO-008, Requirement R5:** **R5**. Each Reliability Coordinator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed definition:**

Standard IRO-002-2 — Reliability Coordination – Facilities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)
R7. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.	This requirement is replaced by proposed IRO-002-4, Requirement R4 and approved EOP-008-1, Requirement R1, part 1.6.2. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Approved EOP-008-1, Requirement R1, part 1.6.2:** **R1. Part 1.6.2**. Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.
R8. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.	This requirement is replaced by proposed IRO-002, Requirement R3 and approved EOP-008-1, Requirement R1, part 1.6.2. **Proposed IRO-002-4, Requirement R3:** **R3.** Each Reliability Coordinator shall provide its System Operators with the authority to approve planned outages and maintenance of its monitoring and analysis capabilities. **Approved EOP-008-1, Requirement R1, part 1.6.2:** **R1. Part 1.6.2.** Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor all Bulk Electric System facilities, which may include sub-transmission information, within its Reliability Coordinator Area and adjacent Reliability Coordinator Areas, as necessary to ensure that, at any time, regardless of prior planned or unplanned events, the Reliability Coordinator is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit violations within its Reliability Coordinator Area.	Replaced with proposed IRO-002-4, Requirement R4. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R2. Each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL or IROL violation. Reliability Coordinators shall also know the status of any facilities that may be required to assist area restoration objectives.	Replaced with proposed IRO-002-4, Requirement R4 and revised definitions of Operational Planning Analysis and Real-time Assessment. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels,

Standard IRO-003-2 — Reliability Coordination - Wide-Area View	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Standard IRO-004-2 — Reliability Coordination - Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.	Addition of Transmission Service Provider to proposed IRO-001-4, Requirements R2 and R3 allows for the retirement of this requirement. **Proposed IRO-001-4, Requirement R2:** R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-001-4, Requirement R3:** R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator of its inability to perform the Operating Instruction issued by its Reliability Coordinator in Requirement R2 citing one of the specific reasons shown in Requirement R2.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: **R1.1** Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.	Replaced by proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1.2. Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.3.** Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. **R1.4.** System real and reactive reserves (actual versus required). **R1.5**. Capacity and energy adequacy conditions. **R1.6.** Current ACE for all its Balancing Authorities. **R1.7**. Current local or Transmission Loading Relief procedures in effect. **R1.8.** Planned generation dispatches. **R1.9.** Planned transmission or generation outages. **R1.10.** Contingency events.	**Proposed IRO-002-4, Requirement R5:** **R5**. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
R2. Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.	The first sentence is replaced by proposed IRO-002-4, Requirement R4. The second sentence is covered by approved EOP-002-3.1a, Requirement R8 and can be retired. **Proposed IRO-002-4 Requirement, R4**: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Approved EOP-002-3.1a, Requirement R8:**

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R8. A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 "Energy Emergency Alerts." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R3. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.	The SDT proposes retiring this requirement as it has been superseded by proposed EOP-010-1, Requirements R1 through R3. **Proposed EOP-010-1, Requirements R1 to R3:** **R1** Each Reliability Coordinator shall develop, maintain, and implement a GMD Operating Plan that coordinates GMD Operating Procedures or Operating Processes within its Reliability Coordinator Area. At a minimum, the GMD Operating Plan shall include: **1.1** A description of activities designed to mitigate the effects of GMD events on the reliable operation of the interconnected transmission system within the Reliability Coordinator Area. **1.2** A process for the Reliability Coordinator to review the GMD Operating Procedures or Operating Processes of Transmission Operators within its Reliability Coordinator Area. **R2.** Each Reliability Coordinator shall disseminate forecasted and current space weather information to functional entities identified as recipients in the Reliability Coordinator's GMD Operating Plan. **R3.** Each Transmission Operator shall develop, maintain, and implement a GMD Operating Procedure or Operating Process to mitigate the effects of GMD events on the reliable operation of its respective system. At a minimum, the Operating Procedure or Operating Process shall include: **3.1.** Steps or tasks to receive space weather information. **3.2**. System Operator actions to be initiated based on predetermined conditions. **3.3**. The conditions for terminating the Operating Procedure or Operating Process.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R4. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.	This requirement has been replaced by proposed IRO-008-2, Requirements R4, R6 and R8. **Proposed IRO-008-2, Requirement R4:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area. **Proposed IRO-008-2, Requirement R8:** **R8.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated.
R5. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.	This requirement is replaced by proposed IRO-001-4, Requirement R1 and proposed IRO-002-4, Requirements R4 and R5. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:**

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R5. Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
R6. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.	The first sentence is replaced with proposed IRO-008-2, Requirement R2. The issue of CPS and DCS is covered in approved EOP-002-3.1, Requirements R6, R7, and R8. The second sentence is replaced by the proposed IRO-017-1, Requirement R1 as well as through the proposed definitions of Operational Planning Analysis and Real-time Assessments. Generator Operators are not included in proposed IRO-017-1 as the SDT believes that Generator Operator outage information will be sent to the respective Transmission Operators and Balancing Authorities and then sent on to the Reliability Coordinators through those entities. **Proposed IRO-008-2, Requirement R2:** **R2**. Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels,

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.) **Proposed IRO-017-1, Requirement R1:** **R1.** Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. **Approved EOP-002-3.1, Requirements R6, R7, and R8:** **R6.** If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to: R6.1. Loading all available generating capacity. **R6.2**. Deploying all available operating reserve. **R6.3.** Interrupting interruptible load and exports. **R6.4.** Requesting emergency assistance from other Balancing Authorities. **R6.5**. Declaring an Energy Emergency through its Reliability Coordinator; and **R6.6.** Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads. **R7.** Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall: R7.1. Manually shed firm load without delay to return its ACE to zero; and **R7.2**. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002 "Energy Emergency Alerts." **R8.** A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002 "Energy Emergency Alerts." The

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
R8. The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.	The first sentence is replaced by proposed IRO-002-4, Requirements R4 and R5. The second sentence is replaced by proposed IRO-001-4, Requirement R1. **Proposed IRO-002-4, Requirement R4:** **R4**. Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. **Proposed IRO-001-4, Requirement R1:** **R1.** Each Reliability Coordinator shall act, or direct others to act by issuing Operating Instructions, to ensure the reliability of its Reliability Coordinator Area.
R9. Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.	The first sentence is replaced by proposed IRO-002-4, Requirements R4 and R5. The second sentence is replaced by proposed IRO-010-2, Requirements R1, part 1.2, and R3. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities, including sub-100 kV facilities and the status of Special Protection Systems within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas, to ensure that it is able to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area. **Proposed IRO-002-4, Requirement R5:** **R5.** Each Reliability Coordinator shall have monitoring systems that provide information utilized by the Reliability Coordinator's operating personnel, giving particular emphasis to

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. **Proposed IRO-010-4, Requirement R1, part 1.2:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability. **Proposed IRO-010-4, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.
R10. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.	For Reliability Coordinators, this requirement is replaced by approved IRO-009-1, Requirement R5. For Transmission Operators, Balancing Authorities, and Generator Operators, this requirement is replaced by proposed TOP-001-3, Requirement R18. The Transmission Service Provider and Purchasing-Selling Entity will receive instructions on limits from the previously cited entities and can thus be deleted from the requirement. **Approved IRO-009-1, Requirement R5:** **R5.** If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator, Balancing Authority, and Generator Operator shall always operate to the most limiting parameter in instances where there is a difference in derived limits.

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R11. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.	This requirement is replaced by proposed MOD-001-2, Requirement R2. [10] **Proposed MOD-001-2, Requirement R2:** **R2**. Each Transmission Service Provider that determines Available Flowgate Capability (AFC) or Available Transfer Capability (ATC) shall develop an Available Transfer Capability Implementation Document (ATCID) that describes the methodology (or methodologies) for determining AFC or ATC values. The methodology (or methodologies) shall reflect the Transmission Service Provider's current practices for determining AFC or ATC values. **2.1.** Each methodology shall describe the method used to account for the following elements, provided such elements impact the determination of AFC or ATC: **2.1.1.** The simulation of transfers performed through the adjustment of generation, Load, or both; **2.1.2.** Transmission topology, including, but not limited to, additions and retirements; **2.1.3.** Expected transmission uses; **2.1.4.** Planned outages**;** **2.1.5.** Parallel path (loop flow) adjustments; **2.1.6.** Load forecast; and **2.1.7.** Generator dispatch, including, but not limited to, additions and retirements. **2.2.** Each Transmission Service Provider that uses the Flowgate Methodology shall, for reliability-related constraints identified in part 1.3, use the AFC determined by the Transmission Service Provider for that constraint.
R12. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.	The requirement is replaced by proposed IRO-008-2, Requirements R4, R6, and R8. **Proposed IRO-008-2, Requirement R4:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). **Proposed IRO-008-2, Requirement R6:** **R6**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that

Standard IRO-005-3.1a — Reliability Coordination - Current Day Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area. **Proposed IRO-008-2, Requirement R8:** **R8**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated.

IRO-008-1 Reliability Coordination Operational Analyses and Real-time Assessments	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions.	This requirement is replaced by proposed IRO-008-2, Requirement R1. **Proposed IRO-008-2, Requirement R1:** **R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) or Interconnection Operating Reliability Limits (IROLs) within its Reliability Coordinator Wide Area.
R2. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.	This requirement is replaced by proposed IRO-008-2, Requirement R5. **Proposed IRO-008-2, Requirement R5:** **R5.** Each Reliability Coordinator shall perform a Real-time Assessment at least once every 30 minutes.
R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.	This requirement is replaced by proposed IRO-008-2, Requirements R4 and R6. **Proposed IRO-008-2, Requirements R4 and R6:** **R4.** Each Reliability Coordinator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R3 as to their role in those plan(s). Proposed IRO-008-2, R6: **R6**. Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area.

<table>
<tr><th colspan="2">Standard IRO-010-1a Reliability Coordinator Data Specification and Collection</th></tr>
<tr><th>Requirement in Approved Standard</th><th>Proposed Language in New Standard or Comment</th></tr>
<tr><td>R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:

R1.1. List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

R1.2. Mutually agreeable format.

R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).

R1.4. Process for data provision when automated Real-Time system operating data is unavailable.</td><td>This requirement is replaced by proposed IRO-010-2, Requirements R1 and R3.

Proposed IRO-010-2, Requirement R1:
R1. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to:

1.1 A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator.

1.2 Provisions for notification of current Protection System and Special Protection System status, failure, or degradation that impacts System reliability.

1.3 A periodicity for providing data.

1.4 The deadline by which the respondent is to provide the indicated data.

Proposed IRO-010-2, Requirement R3:
R3. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using:

3.1 A mutually agreeable format

3.2 A mutually agreeable process for resolving data conflicts

3.3 A mutually agreeable security protocol</td></tr>
<tr><td>R2. The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.</td><td>This requirement is replaced by proposed IRO-010-2, Requirement R2.

Proposed IRO-010-2, Requirement R2:
R2. The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator’s Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.</td></tr>
</table>

R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.	This requirement is replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using: **3.1** A mutually agreeable format **3.2** A mutually agreeable process for resolving data conflicts **3.3** A mutually agreeable security protocol

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators **R1.1** These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: **R1.1.1** Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and	This requirement is replaced by proposed IRO-014-3, Requirement R1. Data is covered in proposed IRO-010-2, Requirement R1. **Proposed IRO-014-3, Requirement R1:** **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability. These Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Communications and notifications, and the process to follow in making those notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
information to be exchanged with other Reliability Coordinators. **R1.1.2** Energy and capacity shortages. **R1.1.3** Planned or unplanned outage information. **R1.1.4** Voltage control, including the coordination of reactive resources for voltage control. **R1.1.5** Coordination of information exchange to support reliability assessments. **R1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.	**1.5** Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas. **1.6** Provisions for weekly conference calls. **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: **R2.1.** Agreed to by all the Reliability Coordinators required to take the indicated action(s). **R2.2**. Distributed to all Reliability Coordinators that are required to take the indicated action(s).	This requirement is replaced by proposed IRO-014-3, Requirement R2. **Proposed IRO-014-3, Requirement R2:** **R2.** Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: **2.1** Review and update annually with no more than 15 months between reviews. **2.2** Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update. **2.3** Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.
R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include: **R3.1.** A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.	R3.1 is a strictly administrative requirement with no reliability benefit and is proposed to be retired under the P81 criteria. R3.2 is replaced by proposed IRO-014-3, Requirement R1, part 1.5. **Proposed IRO-014-3, Requirement R1**: **R1.** Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability. These

Standard IRO-014-1 — Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R3.2. The agreed-upon actions from the associated Reliability Coordinator-to- Reliability Coordinator Operating Procedure, Process, or Plan.	Operating Procedures, Operating Processes, or Operating Plans shall include, but are not limited to, the following: **1.1** Communications and notifications, and the process to follow in making those notifications. **1.2** Energy and capacity shortages. **1.3** Control of voltage, including the coordination of reactive resources. **1.4** Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments. **1.5** Authority to act to prevent and mitigate system conditions which could adversely impact other Reliability Coordinator Areas. **1.6** Provisions for weekly conference calls.
R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall: **R4.1.** Include version control number or date. **R4.2.** Include a distribution list. **R4.3**. Be reviewed, at least once every three years, and updated if needed	This requirement is proposed to be retired as it is strictly an administrative requirement with no reliability benefit.

<table>
<tr><th colspan="2">Standard IRO-015-1 - Notifications and Information Exchange Between Reliability Coordinators</th></tr>
<tr><th>Requirement in Approved Standard</th><th>Proposed Language in New Standard or Comment</th></tr>
<tr><td>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators.

R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.</td><td>This requirement is replaced by proposed IRO-014-3, Requirement R3.

Proposed IRO-014-3, Requirement R3:
R3. Each Reliability Coordinator shall make notifications and exchange reliability–related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.</td></tr>
<tr><td>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators.

R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</td><td>This requirement is replaced by proposed IRO-014-3, Requirement R4.

Proposed IRO-014-3, Requirement R4:
R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement R1, Part 1.6) with other Reliability Coordinators within the same Interconnection.</td></tr>
<tr><td>R3. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

R3.1. Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority.

R3.2. Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities.</td><td>This requirement is replaced by approved PRC-001-1.1, Requirement R3.

Approved PRC-001-1.1, Requirement R3:
R3. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

3.1 Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority.

3.2 Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities.</td></tr>
</table>

Standard IRO-016-1 - Coordination of Real-time Activities Between Reliability Coordinators	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. **R1.1** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. **R1.2** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). **R1.2.1** If time permits, this re-evaluation shall be done before taking corrective actions. **R1.2.2** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved **R1.3** If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented.	Proposed IRO-014-3, Requirements R5 through R8 are revised versions of approved IRO-016-1, Requirement R1 and its sub-requirements. **Proposed IRO-014-3, Requirement R5:** **R5.** Each Reliability Coordinator, upon identification of an Emergency, shall notify all other Reliability Coordinators. **Proposed IRO-014-3, Requirement R6:** **R6.** During each instance where Reliability Coordinators disagree on the existence of an Emergency each impacted Reliability Coordinator shall operate as though the problem exists. **Proposed IRO-014-3, Requirement R7:** **R7**. During those instances where Reliability Coordinators disagree on the existence of an Emergency, the Reliability Coordinator that identified the Emergency shall develop an action plan to resolve the Emergency. **Proposed IRO-014-3, Requirement R8:** **R8.** During those instances where Reliability Coordinators disagree on the existence of an Emergency, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Emergency unless such actions would violate safety, equipment, regulatory or statutory requirements.
R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.	This retirement of this Requirement was approved by FERC effective January 21, 2014as part of the Paragraph 81 Project.

Standard PER-001-0.2 – Operating Personnel Responsibility and Authority	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System	The SDT is proposing to retire this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted. FERC Order 693a, paragraph 112: In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the Bulk Power System have been more clearly laid out in revised standards. (See FERC Order 693a, paragraph 112.) The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the Bulk Power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, makes this requirement superfluous, and, thus, it can be deleted. FERC Order 693a, paragraph 112: "In response to Avista, the Commission clarifies that a reliability coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a reliability coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avista, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies including curtailing transmission service or energy schedules, operating	This requirement replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:**

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	**R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed IRO-001-2, Requirements R2 and R3 and proposed TOP-001-3, Requirements R3 and R4. Proposed IRO-001-2, R2: **Proposed IRO-001-2, Requirement R2:** **R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall comply with its Reliability Coordinator's Operating Instructions unless compliance with the Operating Instructions cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-001-2, Requirement R3:** **R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform an Operating Instruction in accordance with Requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R4:** **R4.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	This requirement replaced by proposed TOP-001-3, Requirements R3 and R4. **Proposed TOP-001-3, Requirements R3 and R4:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. Proposed TOP-001-3, R4: **R4.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.	This requirement replaced by proposed TOP-001-3, Requirements R8, R12, and R14. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	The Generator Operator was deleted from this requirement since it will only respond to such requests if they were in the form of an Operating Instruction from its Transmission Operator or Balancing Authority which is covered in proposed TOP-001-3, Requirements R3, R4, R5 and R6. Assistance is provided through proposed TOP-001-3, Requirement R7. 'Emergency' deleted as the assistance is assistance in response to the other entities' emergency.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R3: **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R4:** R4. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an Operating Instruction issued by that Transmission Operator. **Proposed TOP-001-3, Requirement R5:** **R5.** Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed TOP-001-3, Requirement R6:** **R6.** Each Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Balancing Authority of its inability to perform an Operating Instruction issued by that Balancing Authority. **Proposed TOP-001-3, Requirement R7:** **R7.** Each Transmission Operator and Balancing Authority shall assist Transmission Operators, if requested, provided that the requesting entity has implemented its emergency procedures, unless such actions cannot be physically implemented or would violate safety, equipment, regulatory, or statutory requirements.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless:	The Generator Operator can't know if their actions will burden neighboring systems since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring systems and will receive this data through proposed TOP-003-3, Requirements R1 and R5 and is required to act on this information as

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R7.1 For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.2** For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. **R7.3** When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.	per proposed TOP-001-3, Requirement R8. Proposed IRO-010-2, Requirements R1 and R3 handle the notifications from the Transmission Operator to the Reliability Coordinator. **Proposed TOP-001-3, Requirement R8**: **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-003-3, Requirement R1:** **R1**. Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed IRO-010-2, Requirement R1:** **R1**. The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications …
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency	First sentence – real power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance real power so that part of the sentence can be deleted per the NERC Functional Model V5.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	First sentence – reactive power: Replaced by approved VAR-001-3, Requirement R8 for the Transmission Operator which covers reactive power requirements and the meaning of balancing reactive power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power per the NERC Functional Model V5 and therefore the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power and thus the Balancing Authority is not necessary. Replaced by approved VAR-001-3, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-2, Requirement R1 for the Transmission Operator and Balancing Authority. **Approved EOP-002-3.1, Requirement R6:** **R6**. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Approved VAR-001-3, Requirement R8:** **R8.** Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits. **Approved VAR-001-3, Requirement R12:** **R12**. The Transmission Operator shall direct corrective action, including load reduction, necessary to prevent voltage collapse when reactive resources are insufficient.

Standard TOP-001-1a — Reliability Responsibilities and Authorities	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Approved IRO-009-1, Requirement R1: **R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. **Approved IRO-009-1, Requirement R2:** **R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	First sentence, retained for Balancing Authority and Transmission Operator and moved to proposed TOP-002-4, Requirements R2 and R4. Second sentence – Replaced by proposed TOP-001-3, Requirements R1 and R2 for Balancing Authority and Transmission Operator, which requires action to resolve issues. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day … **Proposed TOP-001-3, Requirement R1:** **R1.** Each Transmission Operator shall act, or direct others within its Transmission Operator Area to act by issuing Operating Instructions, to address its reliability functions within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act, or direct others within its Balancing Authority Area to act by issuing Operating Instructions, to address its reliability functions within its Balancing Authority Area.
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	The SDT is proposing to retire this requirement. While it may be good utility practice to do this, it is of marginal benefit to reliability and is more of a 'how' to conduct business as opposed to a definitive 'what' to do.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall	The Transmission Operator and balancing Authority will receive the necessary data in proposed TOP-003-3, Requirement R5. The Transmission Service Provider provisions are covered in approved MOD-001-1a, Requirement R1; approved MOD-030-2, Requirement R3; and approved MOD-001-1a, Requirement R2. The coordination of plans is in proposed IRO-017-1, Requirement R2.

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	**Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Approved MOD-001-1a, Requirement R1:** **R1.** Each Transmission Operator shall select one of the methodologies1 listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. **Approved MOD-030-2, Requirement R3:** **R3.** The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that … **Approved MOD-001-1a, Requirement R2:** **R2**. Each Transmission Service Provider shall calculate ATC or AFC values as listed below using the methodology or methodologies selected by its Transmission Operator(s). **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.	Coordination of plans is covered in proposed IRO-017-1, Requirement R2. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	This requirement has been moved to proposed TOP-002-4, Requirements R2 and R4. **Proposed TOP-002-4, Requirement R2:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	R2. Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	The part of the requirement dealing with the Balancing Authority and Transmission Operator is replaced by proposed TOP-002-4, Requirements R2 and R4. The n-1 Contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to the approved FAC standards which include Contingency planning. In addition, the definition of Operational Planning Analysis has been revised to better show the intent of the Contingency aspects of the analysis. The SDT does not believe that there is a need to replace the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1. **Proposed TOP-002-4, Requirement R4:** R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: 4.1 Expected generation resource commitment and dispatch. 4.2 Interchange scheduling

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	4.3 Demand patterns 4.4 Capacity and energy reserve requirements, including deliverability capability **Proposed definition: Operational Planning Analysis** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	This requirement is replaced by proposed TOP-002-4, Requirement R4. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Voltage and reactive power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-3, Requirement R1. Deliverability by the Balancing Authority is covered by proposed TOP-002-4, Requirement R4. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Proposed TOP-002-4, Requirement R4:** R4. Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	This requirement is replaced by approved INT-003-3, Requirement R1, part 1.1.1, and proposed TOP-002-4, Requirement R4. **Approved INT-003-3, Requirement R1:** **R1.** Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation. R1.1.1. Interchange Schedule start and end time. **Proposed TOP-002-4, Requirement R4:** **R4.** Each Balancing Authority shall have an Operating Plan(s) for the next-day that addresses: **4.1** Expected generation resource commitment and dispatch. **4.2** Interchange scheduling **4.3** Demand patterns **4.4** Capacity and energy reserve requirements, including deliverability capability
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Balancing Authority - The Balancing Authority is only responsible to respond to Operating Instructions as per the definition of Balancing Authority in the NERC Glossary and, thus, consistent with the Commission-approved interpretation of Requirement R10, Balancing Authorities have been removed from the applicability of this requirement. SOLs and IROLs

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	are limits which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations. As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between loads and resources in real time within its Balancing Authority Area by keeping its actual interchange equal to its scheduled interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the Bulk Power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions (as shown in proposed TOP-001-3, Requirement R3) from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. The Balancing Authority must coordinate outage information and exchange data required to allow the Transmission Operator to deal with SOLs. Those items are in proposed IRO-017-1, Requirement R2 and proposed TOP-003-3, Requirement R5. That information is considered by the Transmission Operator when formulating its Operating Plans and since IROLs are a sub-set of SOLs, this is covered in proposed TOP-002-4, requirement R2. **Proposed TOP-001-3, Requirement R3:** **R3.** Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Operating Instruction issued by its Transmission Operator(s), unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications **Proposed TOP-002-4, Requirement R2:** **R2.** Each Transmission Operator shall have an Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	First sentence replaced by proposed TOP-002-4, Requirement R1, proposed TOP-001-3, Requirement R13, and proposed IRO-017-1, Requirement R1, part which is designed to allow the Reliability Coordinator to request seasonal studies. Second sentence – SOLs are set by the Reliability Coordinator in approved FAC-011-2, Requirement R4, part 4.3 and distributed to the Transmission Operators thus assuring that the Transmission Operators utilize the same SOLs. Third sentence – Replaced by proposed TOP-001-3, Requirement R13 and proposed TOP-001-3, Requirement R8. **Proposed TOP-002-4, Requirement R1:** **R1**. Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13**. Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed IRO-017-1, Requirement R1:** 1.5 Document and maintain the specifications for outage analysis during the operations planning horizon **Approved FAC-011-2, Requirement R4:** **R4.** The Reliability Coordinator shall issue its SOL Methodology and any changes to that methodology, prior to the effectiveness of the Methodology or of a change to the Methodology, to all of the following:

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	4.3 Each Transmission Operator that operates in the Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R8:** **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load.
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.	Replaced by approved MOD-028-2, Requirement R6.1; approved MOD-029-1a, Requirement R3; and approved MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. **Approved MOD-028-2, Requirement R6.1:** **6.1** Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing load within the source Balancing Authority area and decreasing generation and/or increasing load within the sink Balancing Authority area until either: • A System Operating Limit is reached on the Transmission Service Provider's system, or • A SOL is reached on any other adjacent system in the Transmission model that is not on the study path and the distribution factor is 5% or greater. **Approved MOD-029-1a, Requirement R3:** **R3.** Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. **Approved MOD-030-2, Requirement R2.4:** **2.4** Establish the TFC of each of the defined Flowgates as equal to: - For thermal limits, the System Operating Limit (SOL) of the Flowgate. - For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall	This requirement is replaced by proposed TOP-001-3, Requirement R2 where a Balancing Authority can issue Operating instructions to the Generator Operator which could include verification. The SDT believes that this requirement does not apply to the Transmission

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Operator since it is dealing exclusively with generation. The data coming back from the verification effort would be included in the Balancing Authority data specification as shown in proposed TOP-003-3, Requirements R2 and R5. **Proposed TOP-001-3, Requirement R2:** **R2.** Each Balancing Authority shall act, or direct others within its Balancing Authority Area to act by issuing Operating Instructions, to address its reliability functions within its Balancing Authority Area. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to: **14.1** Changes in real and reactive output capabilities. (Retired August 1, 2007) **14.2** Changes in real output capabilities(Effective August 1, 2007) **14.3** Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications …
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a	This requirement is replaced by proposed TOP-003-3, Requirement R5. **Proposed TOP-003-3, Requirement R5:**

Standard TOP-002-2.1b — Normal Operations Planning	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	**R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: **16.1** - Changes in transmission facility status. **16.2** - Changes in transmission facility rating	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3**. Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	This requirement replaced by proposed IRO-010-2, Requirement R3. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications using:
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	This requirement is proposed for retirement as it adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a system reliability issue. This is an administrative item as seen in the measure which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	The SDT believes that modeling starts with the model created by the Planning Coordinator and model verification for the Planning Coordinator is addressed in proposed MOD-033-1, Requirements R1 and R2. Therefore, the SDT is proposing to retire this requirement.

<table>
<tr><th colspan="2">Standard TOP-002-2.1b — Normal Operations Planning</th></tr>
<tr><th>Requirement in Approved Standard</th><th>Proposed Language in New Standard or Comment</th></tr>
<tr><td></td><td>

Proposed MOD-033-1, Requirement R1:

R1. Each Planning Coordinator shall implement a documented data validation process that includes the following attributes:

1.1 Comparison of the performance of the Planning Coordinator's portion of the existing system in a planning power flow model to actual system behavior, represented by a state estimator case or other Real-time data sources, at least once every 24 calendar months through simulation;
1.2 Comparison of the performance of the Planning Coordinator's portion of the existing system in a planning dynamic model to actual system response, through simulation of a dynamic local event, at least once every 24 calendar months (use a dynamic local event that occurs within 24 calendar months of the last dynamic local event used in comparison, and complete each comparison within 24 calendar months of the dynamic local event). If no dynamic local event occurs within the 24 calendar months, use the next dynamic local event that occurs;
1.3 Guidelines the Planning Coordinator will use to determine unacceptable differences in performance under Part 1.1 or 1.2; and
1.4 Guidelines to resolve the unacceptable differences in performance identified under Part 1.3.

Proposed MOD-033-1, Requirement R2:
R2. Each Reliability Coordinator and Transmission Operator shall provide actual system behavior data (or a written response that it does not have the requested data) to any Planning Coordinator performing validation under Requirement R1 within 30 calendar days of a written request, such as, but not limited to, state estimator case or other Real-time data (including disturbance data recordings) necessary for actual system response validation.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Generator Operators and Transmission Operators shall provide planned outage information. **1.1** Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. **1.2** Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. **1.3** Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Parts 1.1, 1.2, and 1.3 are addressed as follows: **1.1** Generator Operators will provide planned outage information to Transmission Operators through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. **1.2** Transmission Operators will provide planned outage information to Reliability Coordinators through proposed IRO-010-2, Requirement R3. Reporting requirements are set in proposed IRO-010-2, Requirement R1. **1.3** Reporting requirements are set in proposed TOP-003-3, Requirement R1 and proposed IRO-010-2, Requirement R1. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R1:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.	Generator Operators will provide planned outage information to Transmission Operators through proposed TOP-003-3, Requirement R5. Reporting requirements are set in proposed TOP-003-3, Requirement R1. Transmission Operators and Balancing Authorities coordinate outages through proposed IRO-017-1, Requirement R2. **Proposed TOP-003-3, Requirement R5:** **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications … **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification … **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	This requirement is replaced by proposed TOP-001-3, Requirement R9. **Proposed TOP-001-3, Requirement R9:** **R9**. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of outages of telemetering and telecommunication equipment, control equipment, monitoring and assessment capabilities, and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	This requirement is replaced by proposed IRO-008-2, requirements R2 and R3.

Standard TOP-003-1 — Planned Outage Coordination	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-008-2, Requirement R2: Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R3:** **R3.** Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1 considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	This requirement has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14**. Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	The SDT has revised the definitions of Operational Planning Analysis and Real-time Assessment to address all Contingencies, not just the single most severe Contingency and operations follow suit as shown in proposed TOP-001-3, Requirement R14. **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels,

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.) **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	This requirement is replaced by proposed TOP-001-3, Requirements R12 and R14. These requirements are not limited by single or multiple Contingencies. Approved FAC-011-2 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. Approved FAC-014-2, Requirement R6 requires the Planning Coordinator to identify the subset of multiple Contingencies and to provide this list to the Reliability Coordinators. Approved FAC-011-2, Requirement R3.3 requires the Reliability Coordinator to include in its SOL methodology a process for determining which of the Stability limits associated with multiple Contingencies are used to establish SOLs. Approved FAC-014-2, Requirement R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. Approved FAC-014-2, Requirement R1 also requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area while approved FAC-014-2, Requirement R2 also requires the Transmission Operator to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R12: **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Approved FAC-011-2, Requirement R1:** **R1**. The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: **R1.1**. Be applicable for developing SOLs used in the planning horizon **R1.2.** State that SOLs shall not exceed associated Facility Ratings. **R1.3.** Include a description of how to identify the subset of SOLs that qualify as IROLs. **Approved FAC-011-2, Requirement R3:** **R3.** The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: **R3.3**. A process for determining which of the stability limits associated with the list of multiple contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon given the actual or expected system conditions. **R3.3.1**. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple contingencies. **Approved FAC-014-2, Requirement R1:** **R1.**The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Approved FAC-014-2, Requirement R2: **R2.** The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. **Approved FAC-014-2, Requirement R6:** **R6.** The Planning Authority shall identify the subset of multiple contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. **R6.1.** The Planning Authority shall provide this list of multiple contingencies and the associated stability limits to the Reliability Coordinators that monitor the facilities associated with these contingencies and limits. **R6.2.** If the Planning Authority does not identify any stability related multiple contingencies, the Planning Authority shall so notify the Reliability Coordinator.
R4. If a Transmission Operator enters an unknown operating state (i.e., any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	The SDT believes that given the revised definitions for Operational Planning Analysis and Real-time Assessment, as well as the new requirement for TOPs to update their OPA results through the performance of a Real-time Assessment every 30 minutes, that entities will always be operating to valid operating limits. Therefore, this requirement is replaced by proposed TOP-001-3, Requirements R12, R13, and R14 along with the revised definitions of Operational Planning Analysis and Real-time Assessment. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the Bulk Power System. **Proposed TOP-001-3, Requirement R12:** **R12**. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R13:** **R13.** Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed definition: **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed definition:** **Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)
R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is proposed for retirement by the SDT. In the Functional Model v5, the Transmission Operator responsibilities and duties are clearly spelled out. Item 14 states that a Transmission Operator sheds load under the auspices of the Reliability Coordinator. Functional model v5: 14. Coordinates load shedding with, or as directed by, the Reliability Coordinator
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:	The first sentence has been superseded by the NERC Reliability Standards taken as a whole and is proposed to be retired. The second sentence was replaced as follows: **R6.1** is duplicative of approved VAR-001-3, Requirement R1 for reactive power. Real power flows are covered in proposed TOP-001-3, Requirements R12 and R14.

Standard TOP-004-2 — Transmission Operations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
6.1 Monitoring and controlling voltage levels and real and reactive power flows. **6.2** Switching transmission elements. **6.3** Planned outages of transmission elements. **6.4** Responding to IROL and SOL violations.	**R6.2** has been replaced by proposed TOP-001-3, Requirement R8. **R6.3** has been replaced by proposed IRO-017-1, Requirement R2. **R6.4** has been replaced by proposed TOP-001-3, Requirements R12 and R14. **Approved VAR-001-3, Requirement R1:** **R1.** Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. **Proposed TOP-001-3, Requirement R8:** **R8**. Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed IRO-017-1, Requirement R2:** **R2.** Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.

Standard TOP-005-2a — Operational Reliability Information	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Recognizing security concerns, the SDT has added security protocols to proposed IRO-010-2, Requirement R3, part 3.3 and to proposed TOP-003-3, Requirement R5, part 5.3 to address overall security concerns. **Proposed IRO-010-2, Requirement R3, part 3.3:** **3.3** A mutually agreeable security protocol **Proposed Top-003-3, Requirement R5, part 5.3:** **5.3** A mutually agreeable security protocol.
R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-2a "Electric System Reliability Data**,"** unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	This requirement replaced by proposed TOP-003-3, Requirement R1, R2, and R5. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications.
R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted as redundant to NAESB standards – All operating data that a Purchasing-Selling Entity has that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. **1.1** - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. **1.2** - Each Transmission Operator shall inform the Reliability Coordinator and other affected Transmission Operators of all transmission resources available for use. **1.3 -** Each Balancing Authority shall inform its Reliability Coordinator of all generation resources available for use.	The main body of the requirement is replaced by proposed TOP-001-3, Requirements R10 and R11. **1.1** This Part is replaced by proposed TOP-003-3, Requirement R5. **1.2** This Part is replaced by proposed IRO-101-2, Requirement R3. **1.3** This Part is replaced by proposed IRO-010-2, Requirement R3. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions. **Proposed TOP-003-3, Requirement R5:** **R5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications. **Proposed IRO-010-2, Requirement R3:** **R3.** Each Reliability Coordinator, Balancing Authority, Planning Coordinator, Transmission Planner, Generator Owner, Generator Operator, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R2 shall satisfy the obligations of the documented specifications.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	This requirement is replaced by proposed IRO-002-4, Requirement R4, proposed TOP-001-3, Requirement R10, and proposed TOP-001-3, R11. The requirements mandate that any Facility needed for an entity to perform its reliability-based functions must be monitored. This would include load-tap changers, rotating and static reactive resources, etc.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-002-4, Requirement R4: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area. **Proposed TOP-001-3, Requirement R10:** **R10.** Each Transmission Operator shall monitor Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide its operating personnel with appropriate technical information concerning protective relays within the Reliability Coordinator Area, the Transmission Operator Area, and the Balancing Authority Area, respectively.	This requirement replaced by proposed IRO-010-2, Requirement R1, part 1.2; proposed TOP-003-3, Requirement R1, part 1.2; and proposed TOP-003-3, Requirement R2, part 2.2. **Proposed IRO-010-2, Requirement R1, part 1.2:** **R1.** The Reliability Coordinator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed TOP-003-3, Requirement R1, part 1.2:** **R 1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **1.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-003-3, Requirement R2, part 2.2: **R2**. Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: **2.2** Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.
R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	This requirement replaced by proposed TOP-003-3, Requirement R1 and R2 with regard to load patterns. Weather forecasts are a necessary element for load forecasts which are required for Operational Planning Analysis. Therefore, this requirement can be retired. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-003-3, Requirement R2:** **R2.** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. **Proposed definition:** **Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.	This requirement replaced by proposed TOP-001-3, Requirements R10 and R11, and proposed IRO-002-4, Requirement R4. **Proposed TOP-001-3, Requirement R10:** **R10**. Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions. **Proposed IRO-002-4, Requirement R4:** **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Metering accuracy for Balancing Authorities is covered under approved BAL-005 -0.2b, Requirement R17 and thus this requirement can be retired from the TOP standards. The SDT believes that this requirement truly pertains to the Balancing Authority and that the Transmission Operator is the actual entity who will be taking care of many of the meters mentioned in approved BAL-005-0.2b. Therefore, the SDT is proposing to retire the Transmission Operator part of this requirement. **Approved BAL-005-0.2b, Requirement R17:** **R17.** Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below
R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	This requirement is replaced by proposed IRO-002-4, Requirement R4, and proposed TOP-001-3, Requirements R10 and R11. **Proposed IRO-002-4, Requirement R4**: **R4.** Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.

Standard TOP-006-3 – Monitoring System Conditions	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed TOP-001-3, Requirement R10: **R10.** Each Transmission Operator shall monitor Facilities, sub-100 kV facilities, and the status of Special Protection Systems within its Transmission Operator Area and neighboring Transmission Operator Areas, as needed to maintain reliability within its Transmission Operator Area. **Proposed TOP-001-3, Requirement R11:** **R11.** Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.	This requirement is replaced by proposed TOP-001-3, Requirement R15. The Reliability Coordinator has the primary responsibility for IROLs and will be in communication with Transmission Operators to mitigate the situation. This is shown in proposed IRO-008-2, Requirements R6 and R7. **Proposed TOP-001-3, Requirement R15:** **R15.** Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an SOL has been exceeded. **Proposed IRO-008-2, Requirement R6:** **R6.** Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and other impacted Reliability Coordinators when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area.

Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
	Proposed IRO-008-2, Requirement R7: **R7.** Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6.
R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	This requirement is replaced by proposed TOP-001-3, Requirement R12. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
R3. A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	This requirement replaced by approved EOP-003-2, Requirement R1. **Approved EOP-003-2, Requirement R1:** **R1**. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	This requirement replaced by proposed IRO-008-2, Requirement R7. **Proposed IRO-008-2, Requirement R7:** **R7**. Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6.

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	This requirement replaced by approved EOP-003-1, Requirement R1 and proposed TOP-001-3, Requirements R12 and R14. **Approved EOP-003-2, Requirement R1:** **R1.** After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	First sentence – Replaced by proposed TOP-001-3, Requirements R12 and R14. Second sentence – Replaced by proposed TOP-001-3, Requirement R18. **Proposed TOP-001-3, Requirement R12:** **R12.** Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. **Proposed TOP-001-3, Requirement R14:** **R14.** Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment. **Proposed TOP-001-3, Requirement R18:** **R18**. Each Transmission Operator, Balancing Authority, and Generator Operator shall always operate to the most limiting parameter in instances where there is a difference in derived limits.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is	First sentence - Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other Reliability

Standard TOP-008-1 - Response to Transmission Limit Violations	
Requirement in Approved Standard	**Proposed Language in New Standard or Comment**
endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse. Therefore, the SDT is proposing to retire this requirement. Second sentence – In general, notification is replaced by proposed TOP-001-3, Requirement R8. **Proposed TOP-001-3, Requirement R8:** **R8.** Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	The part of the requirement dealing with data is replaced by proposed TOP-003-3, Requirement R1. The part of the requirement dealing with analysis is replaced by proposed TOP-002-4, Requirement R1 and proposed TOP-001-3, Requirement R13. **Proposed TOP-003-3, Requirement R1:** **R1.** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. **Proposed TOP-002-4, Requirement R1:** **R1.** Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-001-3, Requirement R13:** **R13.** Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes.

System Operating Limit Definition and Exceedance Clarification

The NERC-defined term System Operating Limit (SOL) is used extensively in the NERC Reliability Standards; however, there is much confusion with – and many widely varied interpretations and applications of – the SOL term. This whitepaper describes the Standard Drafting Team's (SDT) intent with regard to the SOL concept and brings clarity and consistency to the notion of establishing SOLs, exceeding SOLs, and implementing Operating Plans to mitigate SOL exceedances.

System Operating Limit Definition Clarification:
As stated in the NERC Glossary of Terms Used in Reliability Standards, a SOL is defined as the value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. SOLs are based upon certain operating criteria. These include, but are not limited to:

- Facility Ratings (Applicable pre- and post- Contingency equipment or Facility ratings)
- Transient Stability Ratings (Applicable pre- and/or post-Contingency Stability Limits)
- Voltage Stability Ratings (Applicable pre- and/or post- Contingency Voltage Stability)
- System Voltage Limits (Applicable pre- and post-Contingency Voltage Limits)

The concept of SOL determination is not complete without looking at the approved NERC FAC standards FAC-008-3, FAC-011-2, and FAC-014-2:

1. The purpose of approved FAC-008-3, which is applicable to both Generation and Transmission Owners, is to ensure that Facility Ratings used in the reliable planning and operation of the BES are determined based on technically sound principles. A Facility Rating is essential for the determination of SOLs. The standard requires both Generation Owners and Transmission Owners to have a documented Facility Rating that respects the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility. The scope of the Ratings addressed shall include, as a minimum, both Normal (continuous) and Emergency (short-term) Ratings (approved FAC-008-3, Requirement R3, part 3.4.2). Typical Normal (continuous) Ratings are 24 hour ratings. Typical Emergency (short-term) Ratings have a finite duration of less than 24 hours (e.g., 4 hours, 2 hours, 1 hour, 30 minutes, or 15 minutes).
2. The purpose of approved FAC-011-2, which is applicable to Reliability Coordinators, is to ensure that SOLs used in the reliable operation of the BES are determined based on an established methodology

or methodologies. Approved FAC-011-2, Requirement R2 requires that the Reliability Coordinators SOL Methodology include a requirement that SOLs provide a certain level of BES performance for the pre- and post-Contingency state. Specifically:

Pre-Contingency: Acceptable system performance for the pre-Contingency state is characterized by the following:

a. The BES shall demonstrate transient, dynamic, and voltage Stability.
b. All Facilities shall be within their Normal (continuous) Facility Ratings and thermal limits.
c. All Facilities shall be within their pre-Contingency voltage limits.
d. All Facilities shall be within their Stability limits.

Post-Contingency: Acceptable system performance for the post-Contingency state for single Contingencies is characterized by the following (approved Reliability Standard FAC-011-2, Requirement R2, part 2.2):

a. The BES shall demonstrate transient, dynamic, and voltage Stability.
b. All Facilities shall be within their applicable Emergency (short-term) Facility Ratings and thermal limits.
c. All Facilities shall be within their post-Contingency voltage limits.
d. All Facilities shall be within their Stability limits.
e. Cascading or uncontrolled separation shall not occur.

3. Approved FAC-014-2, Requirement R2 requires that Transmission Operators establish SOLs for their portion of the Reliability Coordinator Area that is consistent with its Reliability Coordinator's SOL Methodology.

Some have interpreted the language in approved FAC-011-2, Requirement R2 to imply that the objective is to perform prior studies to determine a specific MW flow value (SOL) that ensures operation within the criteria specified in approved FAC-011-2, Requirement R2 sub-requirements, the assumption being that if the system is operated within this pre-determined SOL value, then all of the pre- and post-Contingency requirements described in approved FAC-011-2, Requirement R2 will be met. The SDT believes this does not capture the complete intent of the SOL concept believing the intent of approved FAC-011-2 is both:

1. Know the Facility Ratings, voltage limits, transient Stability limits, and voltage Stability limits, and
2. Ensure that they are all observed in both the pre- and post-Contingency state by performing a Real-time Assessment.

SOLs include Facility Ratings (Normal (continuous) and Emergency (short-term) Ratings, voltage limits, transient Stability limits, and voltage Stability limits – any of which can be the most restrictive limit at any point in time pre- or post-Contingency. In order to ensure an SOL is not exceeded, the following SOL performance must be maintained:

1. **Facility Ratings:**
   In the pre- and post-Contingency state, operate within Facility capability by utilizing Normal (continuous) and Emergency (short-term) Ratings, as applicable, within their associated time parameters.
2. **Voltage Limits:**
   In the pre-Contingency state, operate within normal voltage limits. In the post-Contingency state, operate within applicable emergency voltage limits.
3. **Transient Stability Limits:**
   Transmission Operators shall establish SOLs to prevent unit/intra-area instability, inter-area instability, or tripping of Facilities due to out-of-step conditions. Transient Stability limits are typically defined as the maximum power transfer or load level for which a post-Contingency solution can be reached. Calculated flows must be maintained within appropriate pre- and/or post-Contingency limit.
4. **Voltage Stability Limits:**
   Transmission Operators shall stress Transmission Paths/Interfaces or load areas to the reasonably expected maximum transfer conditions or area load levels to determine whether steady state voltage Stability limits exist. Voltage Stability limits are typically defined as the maximum power transfer or load level for which a post-Contingency solution can be reached. Calculated flows must be maintained within appropriate pre- and/or post-Contingency limits.

System Operating Limit Exceedance Clarification:

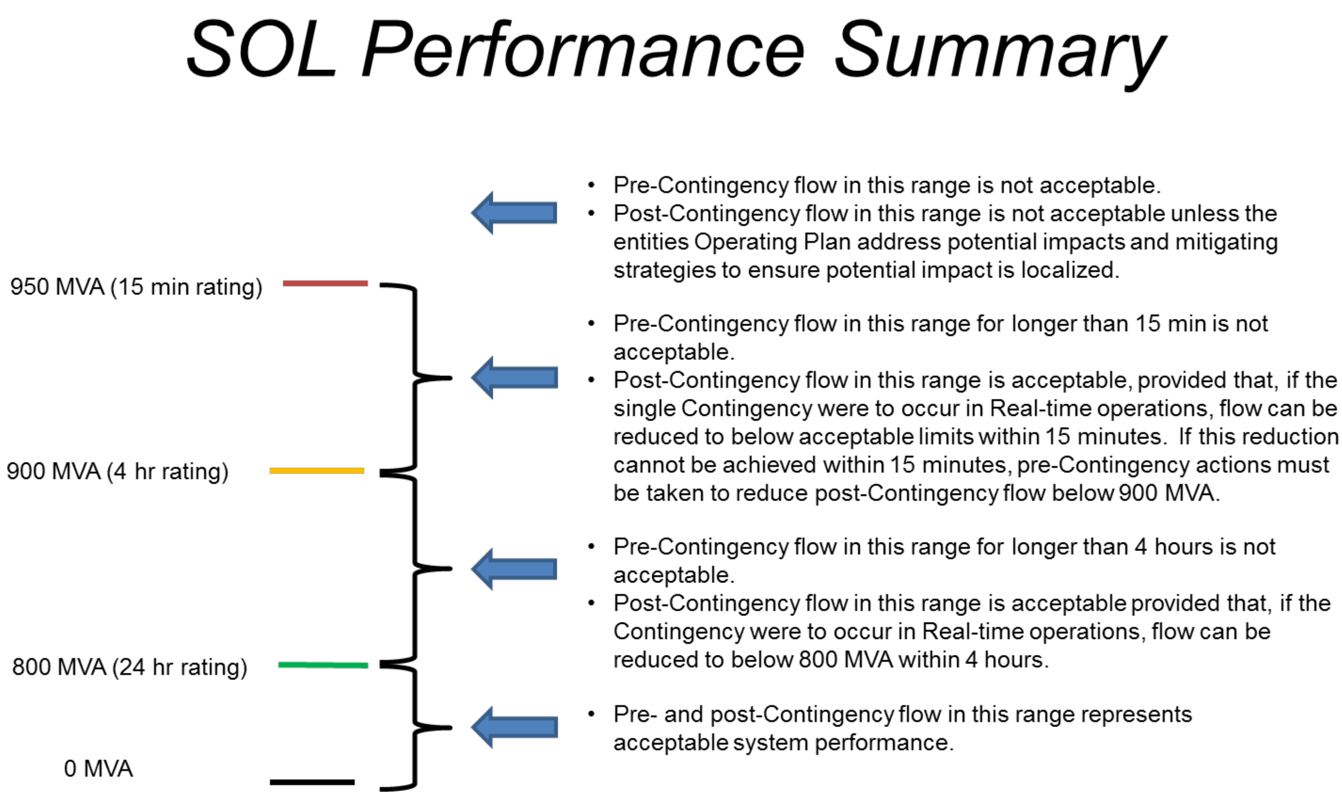
The combination of requirements contained within the approved FAC and proposed TOP standards, as well as the use of defined terms contained within those standards such as Operational Planning Analysis, Real-time Assessment, and Operating Plans when executed properly result in maintaining reliable BES performance. Specifically,

1. Approved FAC standards require clear determination of Facility Ratings and describe acceptable system performance criteria for the pre- and post-Contingency state.

2. Proposed TOP-001-3, Requirement R13 requires that a Transmission Operator perform a Real-time Assessment at least once every 30 minutes.
3. Proposed TOP-002-4, Requirement R2 requires that each Transmission Operator have an Operating Plan to address potential SOL exceedances identified as a result of its Operational Planning Analysis.
4. Proposed TOP-001-3, Requirement R14 requires the Transmission Operator to initiate Operating Plan(s) to mitigate SOL exceedances.

Facility Rating Exceedance

Facility Rating exceedance is a function of the available limit set and the magnitude of pre- or post-Contingency flows in relation to those limits as observed in Real-time monitoring or Real-time Assessments. Figure 1 illustrates an SOL Performance Summary for Facility Ratings.



Note 1: Pre-Contingency flow is the actual MVA flow observed on the Facility through Real-time operations monitoring.

Note 2: Post-Contingency flow is the calculated MVA flow expected to occur on the Facility in response to a single Contingency as indicated by Real-time Assessments.

Note 3: 24 hour, 4 hour, 15 minute ratings are provided as an example for illustration purposes and may be different based on individual TO Rating methodologies.

Figure 1. Facility Rating System Operating Limit Performance Summary

Steady State Voltage Limit Exceedance

SOL performance for steady state voltage limits is determined through Real-time Assessments. Both normal and emergency voltage limits are established that respect the Transmission Owner or the Generation Owner's Facility Ratings Methodology per approved FAC-008-3. Normal voltage limits are typically applicable for the pre-Contingency state while emergency voltage limits are applicable for the post-Contingency state. SOL exceedance with respect to these voltage limits occurs when either actual bus voltage is outside acceptable pre-Contingency (normal) bus voltage limits, or when Real-time Assessments indicate that bus voltages are expected to fall outside acceptable emergency limits in response to a Contingency event.

Stability Limit Exceedance

Transient and voltage Stability limits can be determined through prior studies, or they can be determined in Real-time.

Transient Stability limits are often expressed as flow limits on a defined interface or cut plane that, if operated within, ensures that the system will remain transiently stable should the identified Contingency(s) occur. Transient instability could take several forms, including undamped oscillations, or angular instability resulting in portions of the system losing synchronism.

Though voltage Stability limits can be determined, expressed, and monitored in several ways, the general principle is universal – voltage Stability limits are intended to ensure that the system does not experience voltage collapse in the pre- or post-Contingency state.

SOL exceedance for Stability limits occurs when the system enters into an operating state where the next Contingency could result in transient or voltage instability. Figure 2 depicts a wide-area voltage Stability based SOL that qualifies as an IROL. In this example, SOL (IROL) exceedance occurs when power transfers over the monitored Facility(s) exceeds the P_{IROL} value. Note - A localized voltage collapse may not qualify as an IROL.

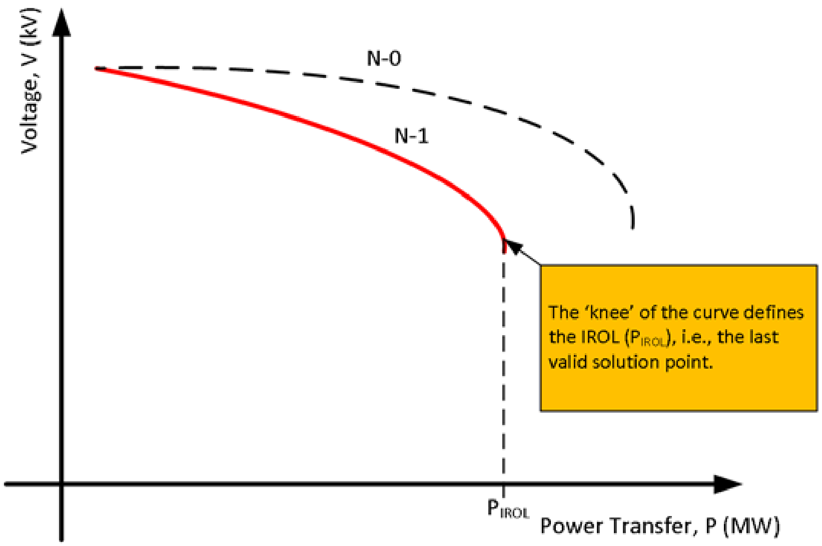


Figure 2. Voltage Stability System Operating Limit Performance Summary

SOL exceedance occurs when acceptable system performance as described in approved FAC-011-2 is not occurring in Real-time operations as determined by Real-time Assessments. In other words, unacceptable system performance equates to SOL exceedance. An SOL is exceeded when any of the following occur or are observed as part of a Real-time Assessment:

- Actual flow on a Facility is above the Facility Rating for an unacceptable time duration
- Calculated Post-Contingency flow on a Facility is above the highest available Facility Rating
- Actual bus voltage is outside acceptable pre-Contingency (normal) bus voltage limits
- Post-Contingency bus voltage is outside acceptable post-Contingency (emergency) bus voltage limits
- Defined transient or voltage Stability limits are exceeded (techniques for determining and observing Stability limits can vary)

SOL Exceedance and Operating Plans:

When an SOL is being exceeded in Real-time operations, the Transmission Operator is required to implement mitigating strategies consistent with its Operating Plan(s). Operating Plans can include specific Operating Procedures or more general Operating Processes. Operating Plans include both pre- and post-Contingency mitigation plans/strategies. Pre-Contingency mitigation plans/strategies are actions that are implemented before the Contingency occurs to prevent the potential negative impacts on reliability of the

Contingency. Post-Contingency mitigation plans/strategies are actions that are implemented after the Contingency occurs to bring the system back within limits. Operating Plans contain details to include appropriate timelines to escalate the level of mitigating plans/strategies to ensure BES performance is maintained as per approved FAC-011-2, Requirement R2, preventing SOL exceedances from becoming an IROL. Operating Plan(s) must include the appropriate time element to return the system to within acceptable Normal (continuous) and Emergency (short-term) Ratings and/or operating limits identified above. For example, in Figure 1, operating above the 950 MVA 15 minute limit would be an SOL exceedance for actual flows and may also be an exceedance for projected post-Contingency flows if a communicated post-Contingency load shed plan cannot be implemented in a timely fashion in order to prevent post-Contingency equipment damage and/or non-localized Cascading outages. However, operating between 900 MVA and 950 MVA is not an SOL exceedance unless the associated Operating Plan time parameter is exceeded as explained in Figure 1.

An example Operating Plan is shown in Table 1.

Thermal Limit Exceeded	Pre-Contingency Loading	Post-Contingency Loading
Normal (24 hr)	Non-cost actions, off-cost actions, emergency procedures except load shed consistent with timelines identified in Operating Plan.	Trend – continue to monitor. Take non-cost actions to prevent Contingency from exceeding emergency limit consistent with timelines identified in Operating Plan.
Emergency (4 hr)	All of the above plus load shed to control violation below Emergency Rating consistent with timelines identified in Operating Plan.	Use all effective actions and emergency procedures except load shed consistent with timelines identified in Operating Plan.
Load Shed	All of the above plus load shed to control violation below Emergency Rating consistent with timelines identified in Operating Plan.	All of the above however, load shed only if necessary to avoid post-Contingency Cascading consistent with timelines identified in Operating Plan.

Legend
NON-COST
OFF-COST
LOAD SHEDDING

Table 1. Operating Plan Example

APPLICABLE DEFINITIONS

Real-time Assessment – An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Operational Planning Analysis – An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)

Operating Plan – A document that identifies a group of activities that may be used to achieve some goal. An Operating Plan may contain Operating Procedures and Operating Processes. A company-specific system restoration plan that includes an Operating Procedure for black-starting units, Operating Processes for communicating restoration progress with other entities, etc., is an example of an Operating Plan.

Operating Process – A document that identifies general steps for achieving a generic operating goal. An Operating Process includes steps with options that may be selected depending upon Real-time conditions. A guideline for controlling high voltage is an example of an Operating process.

Operating Procedure – A document that identifies specific steps or tasks that should be taken by one or more specific operating positions to achieve specific operating goal(s). The steps in an Operating Procedure should be followed in the order in which they are presented, and should be performed by the position(s) identified. A document that lists the specific steps for a system operating to take in removing a specific transmission line from service is an example of an Operating Procedure.

Time Horizons

When establishing a time horizon for each requirement, the following criteria should be used:

- **Operations Planning** – operating and resource plans from day-ahead up to and including seasonal.

- **Same-Day Operations** – routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** – actions required within one hour or less to preserve the reliability of the bulk electric system.

Facility Rating – The maximum or minimum voltage, current, frequency, or real or reactive power flow through a facility that does not violate the applicable equipment rating of any equipment comprising the facility.

Normal Rating – The rating as defined by the equipment owner that specifies the level of electrical loading, usually expressed in megawatts (MW) or other appropriate units that a system, facility, or element can support or withstand through the daily demand cycles without loss of equipment life.

Emergency Rating – The rating as defined by the equipment owner that specifics the level of electrical loading or output, usually expressed in megawatts (MW) or Mvar, or other appropriate units, that a system, facility, or element can support, procedure, or withstand for a finite period. The rating assumes acceptable loss of equipment, life or other physical or safety limitations for the equipment involved.

TOP/IRO Standards - Items for SDT Discussion from FERC NOPR

Monitoring System Conditions - Transmission Operations Reliability Standard
Transmission Operations Reliability Standards
Interconnection Reliability Operations and Coordination Reliability Standards
145 FERC ¶ 61,158 (2014)

Plan and Operate within all System Operating Limits

Para 42: Without a requirement to analyze and operate within all SOLs in the proposed standards and by limiting non-IROL SOLs to only those identified by the transmission operator internal to its area, system reliability is reduced and negative consequences can occur outside of the transmission operator's internal area.

Para 43: … affects at least proposed Reliability Standard TOP-002-3, Requirements R1 and R2 as well as proposed Reliability Standard TOP-001-2, Requirements R8 through R11

SDT Consideration:

The Project 2014-03 SDT has changed the proposed requirements to include all SOLs. This resolves the first issue (analyze and operate within all SOLs) identified in paragraph 42. See proposed TOP-001-3, Requirements R14 and R15.

> Proposed TOP-001-3, Requirement R14: Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
>
> Proposed TOP-001-3, Requirement R15: Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an SOL has been exceeded.

Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. Approved FAC-011-2, Requirement R4, part 4.3 requires the Reliability Coordinator to issue its SOL methodology to Transmission Operators. Approved FAC-014-2, Requirement R2 requires each Transmission Operator to establish SOLs for its Transmission system that are consistent with the established Reliability Coordinator SOL methodology. In addition, proposed IRO-008-2, Requirements R1, R3, R6, R7, and R8 have been revised to include System Operating Limits. This resolves the second issue (only those identified… internal to its area) in paragraph 42.

> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.

Approved FAC-011-2, Requirement R3, part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.) Approved FAC-011-2, Requirement R4, part 4.3: Each Transmission Operator that operates in the Reliability Coordinator Area.

Approved FAC-014-2, Requirement R2: The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology.

Proposed IRO-008-2, Requirement R1: Each Reliability Coordinator shall perform an Operational Planning Analysis that will allow it to assess whether the planned operations for the next day will exceed System Operating Limits (SOLs) or Interconnection Operating Reliability Limits (IROLs) within its Reliability Coordinator Wide Area.

Proposed IRO-008-2, Requirement R3: Each Reliability Coordinator shall have a coordinated Operating Plan(s) for next-day operations to address potential System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) exceedances identified as a result of its Operational Planning Analysis as required in Requirement R1 considering the Operating Plans for the next-day provided by its Transmission Operators and Balancing Authorities.

Proposed IRO-008-2, Requirement R6: Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the results of a Real-time Assessment indicate an actual or expected condition that results in, or could result in, a System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance within its Reliability Coordinator Wide Area.

Proposed IRO-008-2, Requirement R7: Each Reliability Coordinator shall issue Operating Instructions, as necessary, to ensure that actions are taken to deal with the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6.

Proposed IRO-008-2, Requirement R8: Each Reliability Coordinator shall notify impacted Transmission Operators and Balancing Authorities within its Reliability Coordinator Area, and other impacted Reliability Coordinators as indicated in its Operating Plan, when the System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) exceedance identified in Requirement R6 has been prevented or mitigated.

A remaining issue would be where SOLs overlap Transmission Operator Areas as pointed out in the Technical Conferences. If the SOL overlaps Transmission Operator Areas, then the Transmission Operator would coordinate with its Reliability Coordinator with its wide-area view to cover that SOL. This topic is already covered by the SOL methodology defined in approved FAC-011-2, Requirement R1, and the requirement to coordinate operations between Reliability Coordinators as shown in proposed IRO-014-3, Requirement R1. See also proposed IRO-002-4, Requirement R4.

Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.

Proposed IRO-014-3, Requirement R1: Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans, for activities that require notification or coordination of actions that may impact other Reliability Coordinator Areas, to support Interconnection reliability.

Proposed IRO-002-4, Requirement R4: Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.

Para 52: During deteriorating system conditions, an SOL can rapidly degrade into an IROL. … NERC has not explained adequately why the only "true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue." Major cascading events including the Northeast Blackout of 2003 and the 2011 Southwest Outage were initiated by a non-IROL SOL exceedance, followed by a series of non-IROL SOL exceedances until the system cascaded.

<u>SDT consideration:</u>

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

Para 53: We recognize that, if IROLs and non-IROL SOLs are determined accurately, the reliability consequences of an exceedance should usually be greater for the former than the latter. If NERC or commenters believe this probability warrants general exclusion of the latter from the TOP Reliability Standards (subject to an entity's specific inclusions), they should explain this view in more detail and present any information that may help us weigh its merit.

<u>SDT consideration:</u>

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

Para 54: We believe that the transmission operator should have operational or mitigation plans for all Bulk-Power System IROLs and SOLs that can be implemented within 30 minutes or less to return the system to a secure state.

<u>SDT consideration:</u>

The original project teams (Projects 2006-06 and 2007-03) established the concept of operating within IROL T_v. T_v is always less than or equal to 30 minutes so the issue for IROLs is covered.

The Project 2014-03 SDT has agreed to the addition of all SOLs as explained above (see paragraph 43 response). Requirements for handling SOLs within a specified timeframe are covered under approved FAC-008-3, Requirement R6 where each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings. These Facility Ratings are part of the data required in the data specifications mandated in proposed TOP-003-3, Requirement R1. The Project 2014-03 SDT agrees the Transmission Operator shall have operational or mitigation plans for all SOLs that consider time-based rating methodology. See proposed TOP-001-3, Requirement R14. The SDT agrees that the Transmission Operator shall develop and coordinate these mitigation plans with its Reliability Coordinator – see proposed TOP-002-4, Requirement R6. Such plans shall also include steps that ensure BES performance consistent with approved FAC-011-2 Requirement R2, including provisions for pre-Contingency load shed to avoid voltage instability, uncontrolled Cascading, or separation.

> Approved FAC-008-3, Requirement R6: Each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings.
>
> Proposed TOP-003-3, Requirement R1: Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.
>
> Proposed TOP-001-3, Requirement R14: Each Transmission Operator shall initiate its Operating Plan to mitigate an SOL exceedance identified as part of its Real-time monitoring or Real-time Assessment.
>
> Proposed TOP-002-4, Requirement R6: Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator.
>
> Approved FAC-011-2, Requirement R2: The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance

Para 55: Because proposed Reliability Standard TOP-001-2, Requirement R8 requires a transmission operator's notification of only those SOLs identified in a next-day Operational Planning Analysis, the Commission believes it is possible for additional SOLs to develop or occur in the same-day or real-time operational time horizon. This could impose an operational risk to the interconnected transmission network. For example, if real-time system load levels are unexpectedly higher than forecasted load conditions used in the Operational Planning Analysis, this condition could result in real-time SOLs not identified in the Operational Planning Analysis because facility ratings and stability limits are now exceeded under high load levels whereas under the forecasted load levels (lower load levels), facility ratings and stability limits were not expected to be exceeded. … we believe that the Requirement R8 operational responsibilities and actions should pertain to all IROLs and all SOLs for all operating time horizons.

SDT consideration:

The Project 2014-03 SDT views the time horizon item as an issue that involves analysis tools in a Real-time environment. The intent of the original SDTs was that any aspect of analysis tools would be covered in Project 2009-02. For various reasons, that project has been delayed. Therefore the Project 2014-03 SDT has adapted approved IRO-008-1, Requirement R2 to the SOL and Transmission Operator Area – see proposed TOP-001-3, Requirement R13. In addition, the SDT has added proposed TOP-001-3, Requirement R16 concerning operator control of monitoring and analysis capability outages.

> Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall perform a Real-Time Assessment at least once every 30 minutes.
>
> Proposed TOP-001-3, Requirement R16: Each Transmission Operator shall provide its System Operators with the authority to approve planned outages of its own monitoring and Real-time Assessment capabilities.

As part of this process, the definition of Real-time Assessment has been revised to provide greater clarity as to the intent of the defined term.

> **Proposed: Real-time Assessment** - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

The Project 2014-03 SDT believes that approved EOP-008-1, Requirement R1, part 1.6.2 assures that any solution to the analysis issue in the preceding paragraphs is adequately covered as to redundancy and back-up concerns.

> Approved EOP-008-1, Requirement R1, part 1.6.2: Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

In addition, due to concerns raised in the Technical Conferences, the Project 2014-03 SDT has provided guidance as to when an entity has exceeded a limit. This guidance is provided in a white paper that will be shown in the Associated Documents (Section F) of proposed TOP-001-3.

Para 56: Specifically, we propose to direct that NERC develop modifications to Reliability Standard TOP-002-3, Requirements R1 and R2 that address our concerns discussed above to ensure that transmission operators develop mitigation plans for all IROLs and SOLs expected to be exceeded. Similarly, for proposed Reliability Standard TOP-001-2, Requirement R8, we propose to direct that NERC develop modifications to require that transmission operator actions apply to all SOLs identified in all operational time horizons (operations planning, same-day operations and real-time operations). Further, for proposed Reliability Standard TOP-001-2, Requirements R9 through R11, we propose to direct that NERC develop modifications to require that transmission operator specified actions apply to all SOLs related responsibilities in the real-time operations time horizon.

> SDT consideration:
>
> See responses above to previous cited paragraphs on SOLs. .

System Models, Monitoring and Tools

> **Para 60**: Monitoring and analysis capabilities are essential in establishing and maintaining situational awareness. While NERC indicates that these functions are assured through the certification process, we are not convinced that NERC's certification process is a suitable substitute for a mandatory Reliability Standard. … certification is a one-time process that may not adequately assure continual operational responsibility would occur if these requirements were in a Reliability Standard.
>
>> SDT consideration:
>>
>> With respect to monitoring, the Project 2014-03 SDT has adapted approved IRO-003-2, Requirement R1 for the Transmission Operator and Balancing Authority Areas. See proposed TOP-001-3, Requirements R10 & R11.
>>
>>> Proposed TOP-001-3, Requirement R10: Each Transmission Operator shall monitor Facilities within its Transmission Operator Area and neighboring Transmission Operator Areas to maintain reliability within its Transmission Operator Area including sub-100 kV facilities needed to maintain reliability and the status of Special Protection Systems within its Transmission Operator Area.
>>>
>>> Proposed TOP-001-3, Requirement R11: Each Balancing Authority shall monitor its Balancing Authority Area, including the status of Special Protection Systems that impact generation or Load, to ensure that it is able to perform its reliability functions.
>>
>> With respect to analysis, the Project 2014-03 SDT has adapted approved IRO-008-1, Requirement R2 for the Transmission Operator. See proposed TOP-001-3, Requirement R13.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall perform a Real-Time Assessment at least once every 30 minutes.

Para 61: The retirement of the current IRO and TOP requirements that address monitoring and analysis capabilities should not occur until the completion and implementation of Project 2009-02. Thus, in its NOPR comments NERC should propose a schedule that it will follow to ensure it completes and implements Project 2009-02 prior to any retirement of the standard such that there would be no gap.

SDT consideration:

See previous response.

Compliance with Reliability Directives

Para 64: The currently-effective TOP Reliability Standards use “reliability directive,” which, as an undefined term, does not appear to be limited to a specific set of circumstances. … In contrast, application of the proposed definition of “Reliability Directive” appears to require compliance with transmission operator directives only in emergencies, not normal or pre-emergency times. … We believe that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements).

SDT consideration:

The Project 2014-03 SDT is replacing the term ‘reliability directive’ with the defined term ‘Operating Instruction’ throughout the proposed standards. The proposal to use a new defined term ‘Reliability Directive’ is no longer being considered.

Para 65: NERC’s TOP and IRO petitions do not explain the proposed, defined term “Reliability Directive,” or why compliance with a transmission operator’s directives should be required only during emergencies (if this is the intent). Accordingly, we seek from NERC and other interested entities clarification and technical explanation regarding the scope and intent of the defined term, as well as the anticipated reliability benefits and/or drawbacks of the proposed term.

SDT consideration:

See previous response for paragraph 64.

Para 66: … NERC has not explained or justified its request for approval of the revised definition.

SDT consideration:

See previous response for paragraph 64.

Consideration of External Networks and sub-100 kV Facilities and Contingencies in Operational Planning Analysis

Para 67: In proposed Reliability Standard TOP-002-3, Requirement R1, NERC proposes to require transmission operators to prepare an Operational Planning Analysis, i.e., next day study, which represents "projected System conditions" to determine if their planned operations will exceed facility ratings and stability limits for normal and contingency conditions. NERC does not indicate whether this includes external networks or sub-100 kV facilities.

SDT consideration:

The Project 2014-03 SDT believes that standards must be viewed in aggregate to provide the complete picture of what is covered. The proposed TOP-003-3 requires applicable entities to develop a data specification that covers its needs for monitoring and analysis purposes. There is no restriction on what voltage level or area that data can be pulled from. Proposed TOP-003-3, Requirement R5 shows a Transmission Operator being required to supply requested data to another Transmission Operator which clearly shows that a Transmission Operator can request and receive data from outside of its immediate area. The original SDTs have been clear in response to questions on this matter that they did not intend to place any restrictions on the type and location of data involved as long as the request was reliability based. However, to clear up any possible misconceptions, the Project 2014-03 SDT has amended proposed TOP-003-3, Requirement R1, part 1.1 to explicitly specify that sub-100 kV data and external data should be part of the data specification for Transmission Operators. Similar requirements exist in proposed IRO-010-2 for the Reliability Coordinator.

> Proposed TOP-003-3, Requirement R1, part 1.1: A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator.
>
> Proposed IRO-010-2, Requirement R1, part 1.1: A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator.

Concerns were raised during the Technical Conferences that proposed TOP-003-2 did not require that an entity actually use the data acquired in its monitoring and analysis functions. The Project 2014-03 SDT discussed this concern and concluded that an explicit requirement to use the data was an unnecessary administrative concern.

Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. Approved FAC-011-2, Requirement R4, part 4.3 then requires the Reliability Coordinator to issue its SOL methodology to Transmission Operators. These requirements will dictate what external data a Transmission Operator needs to acquire.

> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.
>
> Approved FAC-011-2, Requirement R3, part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)
>
> Approved FAC-011-2, Requirement R4, part 4.3: Each Transmission Operator that operates in the Reliability Coordinator Area.

Para 68: In Order No. 693, the Commission directed a modification to planned outage coordination to require consideration of facilities below 100 kV that, in the opinion of the registered entity (such as a transmission operator) "will have a direct impact on the reliability of the Bulk-Power System…. The 2011 Southwest Outage Blackout Report includes similar recommendations that transmission operators should ensure their next-day studies include updated external networks and internal and external facilities (including those below 100 kV) that can impact Bulk-Power System reliability.

SDT consideration:

See previous response for data (paragraph 67).

In addition, the Project 2014-03 SDT has developed a new standard, IRO-017-1 Outage Coordination, to address all aspects of outage coordination between the Reliability Coordinator, Transmission Operator, Balancing Authority, Planning Coordinator, and Transmission Planner.

Para 69: The Commission seeks clarification and technical explanation from NERC whether the term "projected System conditions" in proposed Reliability Standard TOP-002-3 Requirement R1 includes updated external networks to reflect operating conditions external to their systems and sub-100 kV facilities (internal and external) in their operational planning analyses. If not, the Commission seeks comment on the associated reliability risks and, whether it is appropriate to include updated external networks to reflect operating conditions and external and sub-100 kV facilities (internal and external) in the operational planning analyses.

SDT consideration:

See previous responses under this heading.

Operating to Respect the Most Severe Single Contingency in Real-time Operations and Unknown Operating States

Para 70: NERC proposes to delete Reliability Standard TOP-004-2, Requirement R2, which provides that each transmission operator "shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency." NERC's Petition does not provide an explanation for the deletion. However, the NERC "mapping document," which is included as an exhibit to the TOP Petition indicates that NERC intends that Requirement R2 be replaced by proposed Reliability Standards TOP-001-2, Requirements R7 and R9.

SDT consideration:

The Project 2014-03 SDT believes that the concept of stating an explicit requirement to operate to the most severe single Contingency is not necessary as the FAC standards require an entity to analyze and operate for all Contingencies and not just the most severe single Contingency. The definitions of Operational Planning Analysis and Real-time Assessment have been strengthened to clarify this point.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Proposed: Operational Planning Analysis - An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)

Para 73: NERC has proposed to retire three key rules here, i.e., the requirements to be ready for the single largest contingency …

SDT consideration:

See previous response.

… to move quickly from an “unknown operating state” to within proven limits …

SDT consideration:

See previous responses for this heading.

… and to determine the cause of SOL violations in all time-frames, including real-time. We believe these three rules represent the bedrock core of real-time operating rules and practices, and it is therefore incumbent upon NERC to provide a more thorough and comprehensive explanation of how the proposed replacement standards compare in meeting the same objectives as the current standards.

SDT consideration:

The Project 2014-03 SDT agrees that a Transmission Operator needs to take appropriate action to mitigate the exceedance but does not agree to the inclusion of determining the ‘cause’ of the violation in Real-time. Real-time is not when to investigate or to do detailed analysis – but instead is the time to ‘fix’ the problem. Causes can be determined later and off-line. The Project 2014-03 SDT, as previously stated, has agreed to include the concept of Real-time Assessment for Transmission Operators. This assessment is believed to be sufficient in identifying ‘cause’ for operators in Real-time. See proposed TOP-001-3, Requirement R13 and the revised definition of Real-time Assessment.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall perform a Real-time Assessment at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Para 74: In particular, NERC should address whether its proposal would allow a different approach to real-time operational assessments and operation to the most severe single contingencies and, if so, NERC should explain and technically support the nature and associated reliability effects of any different approaches.

SDT consideration:

The Project 2014-03 SDT does not feel that it is advocating a different approach as shown in the previous responses above.

How are the proposed requirements to not exceed IROLs or certain SOLs for more than the specified times are the functional or implicit equivalent of the current rules?

SDT consideration:

The Project 2014-03 SDT has added all SOLs thus addressing this issue.

For example, do the proposed rules allow reliance on post-contingency mitigation at times when the current rules would require pre-contingency mitigation?

SDT consideration:

The Project 2014-03 SDT sees this item as having been addressed due to the commitments made above such as adding all SOLs to the standards and performing Real-time Assessments.

In addition, approved FAC-011-2, Requirement R2 compels the Reliability Coordinator to develop an SOL methodology that considers voltage, thermal, and Stability limits (including voltage) while demonstrating that the BES remains stable (transient, dynamic, and voltage) during pre-contingent (Requirement R2, part 2.1) and post-contingent (Requirement R2, part 2.2) conditions. Approved FAC-014-2, Requirement R2 requires each Transmission Operator to establish SOLs for its Transmission system that are consistent with the established Reliability Coordinator SOL methodology. Approved FAC-014-2, Requirement R5, part 2 compels the Transmission Operator to communicate its SOLs to its Reliability Coordinator and Transmission Service Provider and approved FAC-014-2, Requirement R5, part 1 compels the Reliability Coordinator to communicate the SOLs to neighboring Reliability Coordinators and other Transmission Operators among a list of other entities.

Approved FAC-011-2, Requirement R2, and parts 2.1 and 2.2:
The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:
2.1 In the pre-contingency state, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES

condition used shall reflect current or expected system conditions and shall reflect changes to system topology such as Facility outages.
2.2 Following the single Contingencies identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

Approved FAC-014-2, Requirement R2: The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology.

Approved FAC-014-2, Requirement R5, part 1: The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area.

If so, is the difference significant for reliability purposes?

<u>SDT consideration:</u>

See previous response.

Do both the current and proposed rules prohibit an entity from operating for more than 30 minutes in a state where loss of a particular line would cause the loss of enough resources or load to risk cascading outages or instability?

<u>SDT consideration:</u>

Yes, industry operates to T_v for all IROLs which is 30 minutes or less. By definition, only IROLs can cause Cascading or instability.

Or, if the entity is not yet operating beyond the pre-determined ratings of the particular line, would the proposed rules allow doing so while the current rules do not?

SDT consideration:

The Project 2014-03 SDT does not see that any changes are being suggested that would change the way these situations are handled today.

Should all transmission operators be required to run a real-time contingency analysis (RTCA) frequently, since the lack of such analysis can impair situational awareness substantially?

SDT consideration:

The SDT proposes to use approved IRO-008-1, Requirement R2 as the model for development for such capabilities for Transmission Operators as described above. See proposed TOP-001-3, Requirement R13 and the revised definition of Real-time Assessment.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall perform a Real-Time Assessment at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Or is the value of such information outweighed for smaller entities with such limited facilities and operations that they generally can maintain similar reliability based on operator experience and judgment without any extra staffing and procedures needed to ensure that the RTCA's informational inputs and modeling are valid and useful?

SDT consideration:

Proposed TOP-001-3, Requirement R13 states that a Transmission Operator must perform a Real-time Assessment every 30 minutes. This is 'what' must be accomplished but doesn't explain 'how' it can be done. That is left to the applicable entity. Smaller entities are free to devise equal and effective methods to accomplish this task. The ERO Rules of Procedure also allow them to contract out services for performing such assessments as long as they retain the responsibility for the final result. To clarify this concept, the Project 2014-03 SDT has added language to the definition of Real-time Assessment on the topic of contracted services.

Proposed TOP-001-3, Requirement R13: Each Transmission Operator shall perform a Real-Time Assessment at least once every 30 minutes.

Proposed: Real-time Assessment - An evaluation of system conditions using Real-time data to assess existing (pre-Contingency) and potential (post-Contingency) operating conditions. The assessment shall reflect inputs including, but not limited to: load, generation output levels, known Protection System and Special Protection System status or degradation, Transmission outages, generator outages, Interchange, Facility Ratings, and identified phase angle and equipment limitations. (Real-time Assessment may be provided through internal systems or through contracted services.)

Para 75: With regard to mitigation of unknown operating states, while NERC asserts that "unknown states" cannot exist, a transmission provider could have valid operating limits for all facilities but lack situational awareness when valid limits are exceeded. … the Commission seeks comment and technical explanation from NERC and other interested entities on the proposed retirement.

<u>SDT consideration:</u>

The Project 2014-03 SDT believes that standards must be viewed in aggregate to provide the complete picture of what is covered. Approved EOP-008-1, Requirement R1, part 1.6.2 covers this situation.

Approved EOP-008-1, Requirement R1, part 1.6.2: Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.

System Protection Coordination

Para 78: The Commission seeks comment and technical explanation from NERC and other interested entities on how current Reliability Standard PRC-001-1 Requirement R2's requirement for corrective action (i.e., return a system to a stable state) is addressed in its proposal. Further, the Commission proposes that NERC issue guidance on data needed for protection system coordination that addresses the applicable Order No. 693 directives and the proposed retirement of the Reliability Standard PRC-001-1 requirements.

SDT consideration:

Project 2014-03 SDT is no longer revising PRC-001-1. Project 2007-06 is responsible for PRC-001-1 revisions.

Notification of Emergencies

Para 80: NERC's proposed revisions warrant clarification. Read one way, proposed Requirement R3 is less comprehensive than the currently-effective requirements pertaining to notification of emergencies. Yet, it also contains provisions that, read another way, could require TOPs to notify others of all emergencies, not just day-ahead.

Para 81: Similarly, it is not clear whether proposed Reliability Standard TOP-001-2, Requirement R5 would address same-day and real-time operating emergencies not covered by TOP-001-2, Requirement R3. An Adverse Reliability Impact is an event that results in instability, or cascade conditions, while an Emergency includes conditions that could be a precursor to an Adverse Reliability Impact. Thus, the notification provisions of Requirement R5 do not cure the possible ambiguity in proposed Requirement R3.

Para 82: While NERC states that the obligation to notify for real-time emergency conditions was replaced by proposed Requirement R3, NERC does not indicate in its petition that the real-time or same-day obligation was purposely deleted or offer an explanation for the deletion. … We believe that, consistent with the currently-effective TOP Reliability Standards, the notification requirement of proposed Reliability Standard TOP-001-2 should apply to all emergencies, including real-time and same day emergencies. The Commission seeks comment from NERC and other interested entities regarding (1) the proper understanding of the scope of the notification provisions in the proposed requirements and (2) if the notification does not include all operational time horizons, technical justification for why transmission operators should not be required to notify reliability coordinators and other affected transmission operators of all emergencies in all operating time horizons.

SDT consideration:

The Project 2014-03 SDT has combined the previously proposed TOP-001-2, Requirements R3 & R5 into one requirement in proposed TOP-001-3, Requirement R5 that uses only actual and projected Emergency covering all time horizons.

Proposed TOP-001-3, Requirement R8: Each Transmission Operator shall inform its Reliability Coordinator, impacted Balancing Authorities, and impacted Transmission Operators of its actual or expected operations that result in, or could result in, an Emergency. Examples of such operations are relay or equipment failures; and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-Day Operations, Real-time Operations]*

Para 83: … NERC uses two different definitions of Adverse Reliability Impact in the TOP and IRO Petitions. … In addition, if the definition NERC is proposing no longer includes the phrase "uncontrolled separation" NERC should explain the removal of the statutory phrase "uncontrolled separation."

SDT consideration:

See previous response.

Primary Decision-Making Authority for Mitigation of IROLs/SOLs

Para 84: NERC's proposal contains a potential overlap in authority between the transmission operator and reliability coordinator with regard to the provisions pertaining to mitigation of IROLs and SOLs as set forth in the proposed TOP and IRO Standards.

Para 87: NERC's proposal with respect to mitigating IROLs appears to give both the transmission operator and reliability coordinator authority to act. Therefore, we seek clarification and technical explanation whether the reliability coordinator or the transmission operator has primary responsibility for IROLs.

SDT consideration:

The Reliability Coordinator has the responsibility for IROLs and the Transmission Operator has the responsibility for SOLs. This split in responsibilities is an important concept for the preservation of reliability within the BES and needs to be clear in the various standards and requirements. However, as discussed above, the Reliability Coordinator shall provide oversight on SOLs and assistance in mitigating SOLs as necessary.

See previous response to paragraph 43 on SOL overlap issues.

Planned Outage Coordination

Paragraph 90: The Commission is concerned with NERC's proposal because Reliability Standards IRO-008-1, Requirement R3 and IRO-010-1a do not require coordination of outages. Outage coordination is a critical reliability function that should be performed by the reliability coordinator. Outage coordination is an integral part of the operational planning process with generation outages being scheduled from three to five years in advance and transmission maintenance and construction outages being scheduled one to three years in advance. Outages that have been planned well in advance still must go through a month-ahead, week-ahead, and sometimes even a day-ahead approval process depending on system topography and system conditions that may change as the scheduled maintenance outage approaches. For instance, forced outages often disrupt planned outage schedules. Therefore, the Commission believes it is essential that, as the functional entity with the wide-area view, the reliability coordinator coordinates this critical area of operational planning.

SDT consideration:

The SDT has developed a new standard, IRO-017-1 Outage Coordination, to address the overall topic of outage coordination. In addition, the SDT has revised proposed IRO-014-2, Requirement R1, part 1.4 to show that outage information must be made available and analyzed. Also, the Planning Coordinator and Transmission Planner have been added to proposed IRO-010-2 as applicable entities to ensure the sharing of planning information with the Reliability Coordinator.

Proposed IRO-014-2, Requirement R1, part 1.4: Exchange of information including planned and unplanned outage information to support its Operational Planning Analyses and Real-time Assessments.
Proposed IRO-017-1, Requirement R1: Each Reliability Coordinator shall develop, implement, and maintain an outage coordination process for generation and Transmission outages within its Reliability Coordinator Area. The outage coordination process shall:
Identify applicable roles and reporting responsibilities.
1.1.1 Development and communication of outage schedules.
1.1.2 Assignment of coordination responsibilities for outage schedules between Transmission Operator(s) and Balancing Authority(s) prior to submitting to Reliability Coordinators.
1.2 Specify outage submission timing requirements.
1.3 Define the process to evaluate the impact of Transmission and generator outages within its Reliability Coordinator Wide Area.
1.4 Define the process to coordinate the resolution of identified outage conflicts with its Transmission Operators and Balancing Authorities, and other Reliability Coordinators.
1.5 Document and maintain the specifications for outage analysis during the operations planning horizon.

Proposed IRO-017-1, Requirement R2: Each Transmission Operator and Balancing Authority shall follow its Reliability Coordinator outage coordination process.

Proposed IRO-017-1, Requirement R3: Each Planning Coordinator and Transmission Planner shall provide its Planning Assessment to impacted Reliability Coordinators.

Proposed IRO-017-1, Requirement R4: Each Reliability Coordinator, Planning Coordinator, and Transmission Planner shall coordinate solutions within the Reliability Coordinator Area for identified issues or conflicts with planned outages in the Planning Assessment.

Secure Network

Paragraphs 92 & 93: Currently-effective Reliability Standard IRO-002-2, Requirement R2, requires that the data exchange between the reliability coordinator, transmission operator, and balancing authority be accomplished "via a secure network." According to NERC, the requirement to provide information via a "secure network" is now addressed in NERC Rules of Procedure, Section 1002 (Reliability Support Services). NERC also indicates that Requirement R2 is now addressed in proposed Reliability Standard IRO-014-2, Requirements R1, R2, and R3. Although NERC cites Section 1002 of the Rules of Procedure and proposed Reliability Standard IRO-014-2 as providing for the use of a secured data network, NERC does not explain how secured networks are covered in those sections. While Section 1002 of the NERC Rules and Reliability Standard IRO-014-2, Requirements R1, R2, and R3 address notification and exchange of information and data and coordination of actions, no language in these provisions appears to require the data exchange or notifications to be conducted in a secure mode.

SDT consideration:

The Project 2014-03 SDT understands the sensitivity around the concept of secure networks for transfer of data and has made appropriate changes to proposed TOP-003-3, Requirement R5, part 5.3 and proposed IRO-010-2, Requirement R3, part 3.3, to allow for the concept of security to be part of the mutually agreed upon data specification.

Proposed TOP-003-3, Requirement R5, part 5.3: Mutually agreeable security protocol(s).

Proposed IRO-010-2, Requirement R3, part 3.3: Mutually agreeable security protocol(s).

Reliability Coordinator Monitoring of SOLs

Paragraph 96: Although NERC's petition focuses on the appropriate entity to identify SOLs, it does not adequately explain the proposed retirement of the currently-effective Reliability Standard IRO-002-2 that establishes the obligation for reliability coordinators to monitor SOLs. With regard to NERC's explanation that Reliability Standard IRO-002-2 Requirement R4 is redundant with the requirements contained in IRO-010-1a and EOP-008-1, neither of these Reliability Standards requires the reliability coordinator to monitor SOLs.

SDT consideration:

The Project 2014-03 SDT believes that monitoring SOLs is intrinsic to the duties of a Reliability Coordinator as spelled out in Functional Model v5. However, to provide clarity, the Project 2014-03 SDT has provided explicit requirement language to address the need for monitoring SOLs at the Reliability Coordinator level. See proposed IRO-002-4, Requirement R4. As pointed out starting in paragraph 84 of the NOPR, only one entity can be responsible for SOLs and that is the Transmission Operator.

Approved FAC-011-2, Requirement R1 states that the Reliability Coordinator shall have a documented methodology for determining SOLs within its area. Approved FAC-011-2, Requirement R3, part 3.1 states that the model used by the Reliability Coordinator must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study. These requirements will dictate what external data a Reliability Coordinator needs to acquire to effectively monitor SOLs.

Proposed IRO-010-2, Requirement R1, parts 1.1 – 1.2 show additions to the data specification concept to clarify that external data, sub-100 kV data, and applicable relay data are included.

> Proposed IRO-002-4, Requirement R4: Each Reliability Coordinator shall monitor Facilities within its Reliability Coordinator Area and neighboring Reliability Coordinator Areas to determine any potential System Operating Limit and Interconnection Reliability Operating Limit exceedances within its Reliability Coordinator Area, including sub-100 kV facilities needed to make this determination and the status of Special Protection Systems in its Reliability Coordinator Area.
>
> Approved FAC-011-2, Requirement R1: The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area.
>
> Approved FAC-011-2, Requirement R3, part 3.1: Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)
>
> Proposed IRO-010-2, Requirement R1, part 1.1: A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses,

Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator.

Proposed IRO-010-2, Requirement R1, part 1.2: Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability.

Mapping of Revised TOP and IRO Reliability Standards to Address 2011 Southwest Outage Report Recommendations

The following table provides a mapping of the recommendations applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority contained in the 2011 Southwest Outage Report. Several of the recommendations are specific to the particular facts and circumstances of the 2011 Southwest Outage and are therefore not addressed here.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
1	All TOPs should conduct next-day studies and share the results with neighboring TOPs and the RC (before the next day) to ensure that all contingencies that could impact the BPS are studied.	Next-day studies are required by proposed TOP-002-4, Requirement R1. Sharing the results of those studies is required in proposed TOP-002-4, Requirement R3. Providing results to the Reliability Coordinator is required in proposed TOP-002-4, Requirement R6. **Proposed TOP-002-4, Requirement R1**: Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed TOP-002-4, Requirement R3:** Each Transmission Operator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). **Proposed TOP-002-4, Requirement R6**: Each Transmission Operator shall provide its Operating Plan(s) for next-day operations identified in Requirement R2 to its Reliability Coordinator.
2	TOPs and BAs should ensure that their next-day studies are updated to reflect next-day operating conditions external to their systems, such as generation and	This is addressed in proposed TOP-002-4, through the revised definition of Operational Planning Analysis, and by the data specification standard

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	transmission outages and scheduled interchanges, which can significantly impact the operation of their systems.	which dictates that external system data must be part of the data specification. **Proposed TOP-002-4, Requirement R1**: Each Transmission Operator shall have an Operational Planning Analysis that will allow it to assess whether its planned operations for the next day within its Transmission Operator Area will exceed any of its System Operating Limits (SOLs). **Proposed: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed TOP-003-3, Requirement R1, part 1.1:** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **1.1** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	TOPs and BAs should take the necessary steps, such as executing nondisclosure agreements, to allow the free exchange of next-day operations data between operating entities.	This item is addressed through proposed TOP-003-3. **Proposed TOP-003-3, Requirement R1:** Each Transmission Operator shall maintain a documented specification for the data necessary for it to perform its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R2:** Each Balancing Authority shall maintain a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The data specification shall include, but not be limited to: **Proposed TOP-003-3, Requirement R5**: Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications using:
	Also, RCs should review the procedures in the region for coordinating next-day studies, ensure adequate data exchange among BAs and TOPs, and facilitate the next-day studies of BAs and TOPs.	Proposed IRO-008-2, Requirement R2 requires the Reliability Coordinator to review next day operating plans of its Transmission Operators and Balancing Authorities. **Proposed IRO-008-2, Requirement R2:** Each Reliability Coordinator shall review the Operating Plans for next-day operations provided by its Transmission Operators and Balancing Authorities.
3	TOPs and RCs should ensure that their next-day studies include all internal and external facilities (including those below 100 kV) that can impact BPS reliability.	This is addressed in the data specification standards. **Proposed TOP-003-3, Requirement R1, part 1.1:** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator. **Proposed IRO-010-2, Requirement R1, part 1.1:** A list of data and information needed by the Reliability Coordinator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data, as deemed necessary by the Reliability Coordinator
4	WECC RC should improve its process for predicting interchanges in the day-ahead timeframe.	Interchange is now part of the list of things that a Reliability Coordinator must consider in the revised definition of Operational Planning Analysis. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
5	WECC RE should ensure better integration and coordination of the various subregions' seasonal studies for the entire WECC system. To ensure a thorough seasonal planning process, at a minimum, WECC RE should require a full contingency analysis of the entire WECC system, using one integrated seasonal study, and should identify and eliminate gaps between subregional studies.	This recommendation is not applicable to the Reliability Coordinator, Transmission Operator, and/or Balancing Authority and is therefore not addressed here.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
	Individual TOPs should also conduct a full contingency analysis to identify contingencies outside their own systems that can impact the reliability of the BPS within their system and should share their seasonal studies with TOPs shown to affect or be affected by their contingencies.	The proposed TOP-003-3 states that Transmission Operators must gather external network data and proposed TOP-002-4 mandates sharing the results of studies. **Proposed TOP-003-3, Requirements R1, part 1.1**: A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator. **Proposed TOP-002-4, Requirement R3**: Each Transmission Operator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). Seasonal studies are accommodated in proposed IRO-017-1, Requirement R1, part 1.5. **Proposed IRO-017-1, Requirement R1, part 1.5:** Document and maintain the specifications for outage analysis during the operations planning horizon.
6	TOPs should expand the focus of their seasonal planning to include external facilities and internal and external sub-100 kV facilities that impact BPS reliability.	The proposed TOP-003-3 explicitly states that Transmission Operators must obtain external network and sub-100 kV data. **Proposed TOP-003-3, Requirements R1, part 1.1** A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses, Real-time monitoring, and Real-time Assessments including sub-100 kV data and external network data as deemed necessary by the Transmission Operator.

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		Seasonal studies are accommodated in proposed IRO-017-1, Requirement R1, part 1.5. **Proposed IRO-017-1, Requirement R1, part 1.5:** Document and maintain the specifications for outage analysis during the operations planning horizon.
7	TOPs should expand the cases on which they run their individual planning studies to include multiple base cases, as well as generation maintenance outages and dispatch scenarios during high load shoulder periods.	The revised definition of Operational Planning Analysis states that "projected system conditions" must be considered which would include generator outages and high load periods. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.)
8	TOPs should include in the information they share during the seasonal planning process the overload relay trip settings on transformers and transmission lines that impact the BPS, and separately identify those that have overload trip settings below 150% of their normal rating, or below 115% of the highest emergency rating, whichever of these two values is greater.	The proposed TOP-003-3 states that Protection System data must be obtained. And the revised definition of Operational Planning Analysis states explicitly that Protection Systems must be included in studies. Sharing of results is addressed in proposed TOP-002-4. **Proposed TOP-003-3, Requirements R1, part 1.2**: Provisions for notification of current Protection System and Special Protection System status or degradation that impacts System reliability. **Proposed Definition: Operational Planning Analysis -** An evaluation of projected system conditions to assess anticipated (pre-Contingency) and

#	Recommendation	Mapping to Proposed TOP/IRO Reliability Standards
		potential (post-Contingency) conditions for next-day operations. The evaluation shall reflect inputs including, but not limited to, load forecasts; generation output levels; Interchange; known Protection System and Special Protection System status or degradation; Transmission outages; generator outages; Facility Ratings; and identified phase angle and equipment limitations. (Operational Planning Analysis may be provided through internal systems or through contracted services.) **Proposed TOP-002-4, Requirement R3**: Each Transmission Operator shall notify impacted NERC registered entities identified in the Operating Plan(s) cited in Requirement R2 as to their role in those plan(s). Seasonal studies are accommodated in proposed IRO-017-1, Requirement R1, part 1.5. **Proposed IRO-017-1, Requirement R1, part 1.5:** Document and maintain the specifications for outage analysis during the operations planning horizon.
