## II. BACKGROUND

### A. **Regulatory Framework**

By enacting the Energy Policy Act of 2005,<sup>5</sup> Congress entrusted the Commission with the duties of approving and enforcing rules to ensure the reliability of the Bulk-Power System, and with the duties of certifying an ERO that would be charged with developing and enforcing mandatory Reliability Standards, subject to Commission approval. Section 215(b)(1)<sup>6</sup> of the FPA states that all users, owners, and operators of the Bulk-Power System in the United States will be subject to Commission-approved Reliability Standards. Section 215(d)(5)<sup>7</sup> of the FPA authorizes the Commission to order the ERO to submit a new or modified Reliability Standard. Section 39.5(a)<sup>8</sup> of the Commission's regulations requires the ERO to file with the Commission for its

---

<sup>4</sup> Persons to be included on the Commission's service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission's regulations, 18 C.F.R. § 385.203, to allow the inclusion of more than two persons on the service list in this proceeding.

<sup>5</sup> 16 U.S.C. § 824o.

<sup>6</sup> *Id.* § 824o(b)(1).

<sup>7</sup> *Id.* § 824o(d)(5).

<sup>8</sup> 18 C.F.R. § 39.5(a).

approval each Reliability Standard that the ERO proposes should become mandatory and enforceable in the United States, each modification to a Reliability Standard that the ERO proposes should be made effective, and each Reliability Standard that the ERO proposes for retirement.

The Commission is vested with the regulatory responsibility to approve Reliability Standards that protect the reliability of the Bulk-Power System and to ensure that Reliability Standards are just, reasonable, not unduly discriminatory or preferential, and in the public interest. Pursuant to Section 215(d)(2) of the FPA<sup>9</sup> and Section 39.5(c)<sup>10</sup> of the Commission's regulations, the Commission will give due weight to the technical expertise of the ERO with respect to the content of a Reliability Standard.

A Regional Reliability Standard proposed by a Regional Entity must meet the same standards that NERC's Reliability Standards must meet; i.e., the Regional Reliability Standard must be shown to be just, reasonable, not unduly discriminatory or preferential, and in the public interest.<sup>11</sup> Order No. 672 provides additional criteria that a Regional Reliability Standard must satisfy. Specifically, a regional difference from a continent-wide Reliability Standard must either be: (1) more stringent than the continent-wide Reliability Standard (which includes a regional standard that addresses matters that the continent-wide Reliability Standard does not), or (2) necessitated by a physical difference in the Bulk-Power System.<sup>12</sup>

<sup>10</sup> 18 C.F.R. § 39.5(c)(1).

<sup>11</sup> 16 U.S.C. § 824o(d)(2) and 18 C.F.R. § 39.5(a).

<sup>12</sup> Order No. 672, *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, FERC Stats. & Regs. ¶ 31,204 at P 291, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

NPCC is not a Regional Entity organized on an Interconnection-wide basis. NPCC Reliability Standards are intended to apply only to that part of the Eastern Interconnection within the NPCC geographical footprint. NPCC develops Regional Reliability Standards in accordance with its *Regional Standard Processes Manual* (“RSPM”).<sup>13</sup> NPCC’s RSPM provides a regional standard development process that has the following key characteristics: fair due process; openness; inclusive; balanced; transparent; and conducted without undue delay. Proposed NPCC Regional Reliability Standards are subject to approval by NERC, as the ERO, and FERC before becoming mandatory and enforceable under Section 215 of the FPA.

## **B. Procedural History**

This section provides a discussion of the development and approval of the standard being proposed for retirement, NPCC Regional Reliability Standard PRC-002-NPCC-01, as well as a brief discussion of the development and approval of the continent-wide disturbance monitoring standard, Reliability Standard PRC-002-2. This section concludes with an overview of the standard development process for the proposed retirement of the regional standard.

### **1. Development and Approval of NPCC Regional Reliability Standard PRC-002-NPCC-01**

The Commission approved Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring in 2011.<sup>14</sup> The standard was developed to ensure that requirements exist in the NPCC region to ensure adequate disturbance data and equipment are available to facilitate BES event analyses. In developing the standard, NPCC drew upon previously-developed

---

<sup>13</sup> The NPCC RSPM was approved by the Commission on December 23, 2014 (*see N. Am. Elec. Reliability Corp.*, RR14-7-000 (Dec. 23, 2014) (unpublished letter order) and is available at [https://www.npcc.org/Standards/Regional%20Standards%20General/NPCC%20Regional%20%20Standard%20Processes%20Manual\\_FERC\\_Approved\\_version\\_1\\_20141223.pdf](https://www.npcc.org/Standards/Regional%20Standards%20General/NPCC%20Regional%20%20Standard%20Processes%20Manual_FERC_Approved_version_1_20141223.pdf).

<sup>14</sup> *See N. Am. Elec. Reliability Corp.*, 137 FERC ¶ 61,043 (2011). In addition to approving NPCC regional Reliability Standard PRC-002-NPCC-01, the Commission also approved two related NPCC regional terms: Current Zero Time and Generating Plant.

Regional Criteria regarding the placement of disturbance monitoring equipment.<sup>15</sup> The Commission-approved phased-in implementation plan provided for entities in the NPCC region to gradually become compliant with the standard's requirements beginning in 2013, with full compliance expected since October 2015.

While the regional standard was being developed, efforts were underway at NERC through Project 2007-11 Disturbance Monitoring to develop a revised continent-wide Reliability Standard that would establish requirements for the collection and reporting of disturbance data to facilitate event analysis and verify system models. In Order No. 693,<sup>16</sup> the Commission approved 83 of the 107 Reliability Standards proposed by NERC, including Reliability Standard PRC-018-1 - Disturbance Monitoring Equipment Installation and Data Reporting.<sup>17</sup> However, the Commission declined to take action on certain proposed "fill-in-the-blank" Reliability Standards, including Reliability Standard PRC-002-1 - Define Regional Disturbance Monitoring and

---

<sup>15</sup> See NPCC Document A-15, *Disturbance Monitoring Equipment Criteria* (adopted Aug. 23, 2007), available at <https://www.npcc.org/Standards/Criteria/A-15.pdf>.

The development of Regional Criteria is addressed in Section 313 of the NERC Rules of Procedure. NPCC Directories are developed in order to provide a consistent and comprehensive set of more stringent and specific reliability requirements for the NPCC region. NPCC Directories are developed in accordance with the *NPCC Directory Development and Revision Manual*, which is available on the NPCC website at: <https://www.npcc.org/Standards/Directories/NPCC%20Directory%20Manual%20RSC%20approved%2020141003.pdf>.

The NPCC Criteria contained within each NPCC Directory apply to NPCC Full Member organizations; however, compliance with NPCC Criteria is required by other rules and mechanisms, including FERC-approved independent system operator tariffs, generator interconnection agreements, and New York Public Service Commission approved rules that adopt the criteria as New York State Reliability Rules. (See Section 215(i)(3) of the FPA (16 U.S.C. § 824o(i)(3)), which provides that the State of New York "may establish rules that result in greater reliability within that State, as long as such action does not result in lesser reliability outside the State than that provided by the reliability standards.")

Unlike NPCC Regional Reliability Standards, NPCC Criteria are not subject to NERC or Commission approval and there are no monetary sanctions for noncompliance. However, NPCC Criteria play an important role in ensuring an enhanced level of reliability in the NPCC region.

<sup>16</sup> Order No. 693, *Mandatory Reliability Standards for the Bulk-Power System*, FERC Stats. & Regs. ¶ 31,242 (2007), *reh'g denied*, Order No. 693-A, 120 FERC ¶ 61,053 (2007) ("Order No. 693").

<sup>17</sup> Order No. 693 at PP 1550-51.

Reporting Requirements.<sup>18</sup> PRC-002-1, which never became mandatory and enforceable, would have required regional reliability organizations to establish: (i) installation requirements for sequence of event recording, fault recording, and dynamic disturbance recording; and (ii) reporting requirements for recorded disturbance data. NPCC Regional Reliability Standard PRC-002-NPCC-01 was intended to establish a standard for disturbance monitoring requirements in the NPCC region until such time that a revised continent-wide Reliability Standard could be developed through Project 2007-11.

2. Approval of Continent-Wide Reliability Standard PRC-002-2

In Order No. 814, the Commission approved the continent-wide Reliability Standard PRC-002-2 Disturbance Monitoring and Reporting Requirements, which was developed as a part of Project 2007-11.<sup>19</sup> As stated by the Commission, “Reliability Standard PRC-002-2 enhances reliability by imposing mandatory requirements concerning the monitoring and reporting of disturbances” and “provides greater continent-wide consistency regarding collection methods for data used in the analysis of disturbances on the Bulk-Power System.”<sup>20</sup> Consistent with other NERC Reliability Standards, the PRC-002-2 Reliability Standard provides a results-based approach to the capture of data, rather than prescriptive requirements on equipment necessary to capture the data.

---

<sup>18</sup> See Order No. 693 at P 1455. The term “fill-in-the blank” standards refers to those proposed Reliability Standards that required supplemental information from regional reliability organizations, such as regional criteria or procedures, that had not been submitted to the Commission for approval.

<sup>19</sup> Order No. 814, *Disturbance Monitoring and Reporting Requirements Reliability Standard*, 152 FERC ¶ 61,198 (2015). In addition, the Commission approved the retirement of PRC-018-1 due to its consolidation with PRC-002-2 and considered the pending PRC-002-1 Reliability Standard withdrawn.

<sup>20</sup> Order No. 814 at P 13.

### 3. Summary of PRC-002-NPCC-01 Retirement History

Following the NERC Board of Trustees adoption of Reliability Standard PRC-002-2 in November 2014, NPCC initiated a project to review the NPCC Regional Reliability Standard for potential revision or retirement. In accordance with NPCC's RSPM, a Regional Standard Authorization Request ("RSAR") to review PRC-002-NPCC-01 was approved by the NPCC Regional Standards Committee on February 18, 2015 and was posted publicly on February 23, 2015.

The purpose of the RSAR was as follows:

...to review the regional standard for potential revisions made necessary by the industry's adoption of the new NERC BES definition, the Paragraph 81 directive <sup>[21]</sup>, and the development of NERC's PRC-002-2 Disturbance Monitoring and Reporting Requirements standard. Retiring PRC-002-NPCC-01 is to be considered if it is determined that it can be retired without sacrificing the ability to capture post-disturbance data.<sup>22</sup>

The NPCC Task Force on System Protection, acting as a standard review/drafting team, performed a comprehensive comparison of Regional Reliability Standard PRC-002-NPCC-01 and the continent-wide Reliability Standard PRC-002-2. This review also included a comparison of NPCC Document A-15, *Disturbance Monitoring Equipment Criteria*.<sup>23</sup> Following its review, the drafting team determined that the continent-wide Reliability Standard would be sufficient to achieve the reliability objectives of the regional standard and that the regional standard should be retired. In accordance with the NPCC RSPM, the proposed retirement of PRC-002-NPCC-01 was posted for a 30-day pre-ballot review beginning October 16, 2015, followed by a 10-day

---

<sup>21</sup> See *N. Am. Elec. Reliability Corp.*, 138 FERC ¶ 61,193 (2012) at P 81 (inviting NERC to propose for revision or retirement Reliability Standards that provide little protection for Bulk-Power System reliability or that are redundant).

<sup>22</sup> See **Exhibit C** Item 7.

<sup>23</sup> See *supra* n. 15.

final ballot beginning November 16, 2015. The proposed retirement achieved a 69% quorum and 97.10% approval and received no negative ballots with comments.

In accordance with Section 312 of NERC's Rules of Procedure, NERC posted the proposed retirement of PRC-002-NPCC-01 for a 45-day comment period beginning January 6, 2016. Commenters agreed that NPCC's process was open, inclusive, balanced, transparent, and that due process was followed. The NPCC Board of Directors approved the retirement of PRC-002-NPCC-01 on March 23, 2016. The NERC Board of Trustees approved the retirement on May 5, 2016.

### III. **JUSTIFICATION FOR APPROVAL**

As discussed above, NPCC Regional Reliability Standard PRC-002-NPCC-01 was intended to establish a standard for disturbance monitoring requirements until such time that a continent-wide Reliability Standard could be developed with equivalent and adequate requirements. As also noted above, in 2015, the Commission approved such a Reliability Standard, PRC-002-2, which will become mandatory and enforceable on July 1, 2016 in accordance with the Commission-approved implementation plan.

Reliability Standard PRC-002-2 specifies disturbance data requirements for sequence of event recording ("SER"), fault recording ("FR"), and dynamic Disturbance recording ("DDR") and the recording specifications of these devices. The standard is results-based and technology neutral; it does not specify how to achieve the required disturbance monitoring capability or prescribe specific types of equipment. By contrast, the NPCC regional Reliability Standard specifies the equipment and identifies locations to achieve the adequate level of disturbance monitoring capability on the BES. The NPCC drafting team determined that the capability to capture the necessary disturbance monitoring data was the necessary component to protect reliability, not the specific equipment required for the capability.

Following a comprehensive review and comparison of the regional and the continent-wide Reliability Standards, the results of which are discussed more fully below and in **Exhibit B**, it was determined that the continent-wide Reliability Standard PRC-002-2 would ensure that the capabilities and availability of disturbance monitoring data are adequate to efficiently and effectively perform event analysis. NPCC's more stringent criteria (currently set forth in Document A-15, *Disturbance Monitoring Equipment Criteria*) would continue to apply to NPCC Full Members and those with other legal obligations to adhere to the criteria until superseded by an additional or revised NPCC Directory or alternately, made unnecessary by future Reliability Standard revisions. In light of the above, NERC and NPCC submit that NPCC Regional Reliability Standard PRC-002-NPCC-01 is redundant and no longer necessary for reliability. NERC and NPCC respectfully request that the Commission approve its retirement.

NERC and NPCC also request that the Commission approve the retirement of the related NPCC regional definitions, Current Zero Time and Generating Plant. These terms are used only within the regional standard that is proposed for retirement, and there is no reliability need to maintain the definitions with the standard being retired. Their retirement would present no risk to reliability and is in the public interest.

**A. PRC-002-NPCC-01 Requirements for Sequence of Events Recording, Fault Recording, and Equipment Siting are Addressed by the Continent-wide Reliability Standard**

NPCC Regional Reliability Standard PRC-002-NPCC-01 contains detailed requirements that specify the locations at which disturbance monitoring data is to be captured. Requirement R1 specifies that Transmission Owners and Generator Owners provide SER capabilities, either by installing sequence of event recorders or as part of another device, at specified locations. Requirement R2 specifies that each Transmission Owner must provide FR capability at certain specified locations where fault recording equipment is required to be installed. Requirement R3

specifies that this FR capability must calculate Current Zero Time for loss of BES transmission Elements.<sup>24</sup> Requirement R4 requires each Generator Owner to provide FR capabilities at certain specified Generating Plants.<sup>25</sup> Requirements R5 and R6 specify the data that must be recorded and the recording specifications for that data, such as minimum recording rate and minimum trigger settings.<sup>26</sup>

Although the approaches of NPCC Regional Reliability Standard PRC-002-NPCC-01 and the continent-wide Reliability Standard PRC-002-2 differ, the requirements of Reliability Standard PRC-002-2 cover the same reliability objectives as the regional standard and are sufficient to ensure that adequate SER and FR data is available to conduct event analysis. Reliability Standard PRC-002-2 Requirement R1 requires Transmission Owners to identify BES buses for which SER and FR data is required, notify other owners of BES Elements connected to those particular BES buses where SER and FR data will be necessary, and to re-evaluate all BES buses at least every five calendar years. Attachment 1 to the standard provides the methodology for selecting buses for capturing SER and FR data. Requirement R2 requires Transmission Owners and Generator Owners to collect SER data for circuit breaker position at specified circuit breakers. Requirement R3 specifies that Transmission Owners and Generation Owners must have FR data to determine certain electrical quantities for each triggered FR, and Requirement R4 specifies the parameters of such data, such as minimum recording rate and cycles to be

---

<sup>24</sup> Current Zero Time is an NPCC regional definition and is defined as “the time of the final current zero on the last phase to interrupt.”

<sup>25</sup> Generating Plant is an NPCC regional definition and is defined as “one or more generators at a single physical location whereby any single contingency can affect all the generators at that location.”

<sup>26</sup> In addition, PRC-002-NPCC-01 Requirement R17 provides that each Reliability Coordinator, Transmission Owner, and Generator Owner shall maintain and provide to the Regional Entity upon request certain data on disturbance monitoring equipment installed to meet the standard. A similar requirement is contained in currently-effective Reliability Standard PRC-018-1 Requirement R3. Such a requirement is not reflected in the approved but not yet effective Reliability Standard PRC-002-2 as PRC-002-2 contains requirements for recorded data and not equipment.

recorded. Because the continent-wide Reliability Standard will ensure that sufficient SER and FR data are collected, the NPCC Regional Reliability Standard requirements may be retired with no adverse effect on reliability.

**B. PRC-002-NPCC-01 Requirements for Dynamic Disturbance Recording are Addressed by the Continent-wide Reliability Standard**

NPCC Regional Reliability Standard PRC-002-NPCC-01 contains detailed requirements for capturing DDR data. PRC-002-NPCC-01 Requirement R7 provides that each Reliability Coordinator must establish its areas needs for DDR. Requirement R8 provides for each Reliability Coordinator to specify that DDR devices installed after the approval of the standard function as continuous recorders, and Requirement R9 specifies settings for DDR devices, including minimal recording duration, minimum sample rate, and triggers. Requirement R10 provides that each Reliability Coordinator shall establish requirements such that certain quantities are monitored or derived where DDR devices are installed, and Requirement R11 provides that each Reliability Coordinator shall document these monitored quantities as well as any additional settings or deviations from those specified in Requirement R9 and provide to the Regional Entity upon request. Requirement R12 provides that each Reliability Coordinator shall specify its DDR requirements to Transmission Owners and Generator Owners, and Requirement R13 provides that each Transmission Owner and Generator Owner shall install DDR capabilities as requested by the Reliability Coordinator.

The regional standard requirements will become redundant and unnecessary when continent-wide Reliability Standard PRC-002-2, which contains requirements for the capture of DDR data, becomes mandatory and enforceable. PRC-002-2 Requirement R5 provides that

Responsible Entities<sup>27</sup> shall: (i) identify the BES Elements for which DDR data is required, including those meeting certain criteria set out in Part 5.1; (ii) identify minimum DDR coverage; (iii) provide notifications to owners of the identified BES Elements; and (iv) re-evaluate all BES Elements at least once every five years. Requirements R6 and R7 require each Transmission Owner and Generator Owner, respectively, to have DDR data sufficient to determine certain specified electrical qualities for each BES Element that it owns and for which it has received notification under Requirement R5. Requirement R8 specifies that each Transmission Owner and Generator Owner responsible for DDR data shall have continuous recording and storage or else meet certain requirements for triggered data. Requirement R9 specifies that the DDR data shall meet a minimum input sampling rate and minimum output recording rate.

The requirements of the continent-wide Reliability Standard are designed to ensure that adequate wide-area DDR data is available to facilitate accurate and efficient disturbance analysis. The DDR requirements of the NPCC Regional Reliability Standard will be made redundant with those requirements and should be retired.

**C. The PRC-002-NPCC-01 Requirement for Time Synchronization is Addressed by the Continent-wide Reliability Standard**

NPCC Regional Reliability Standard PRC-002-NPCC-01 contains requirements for Transmission Owners and Generator Owners to time-synchronize data.<sup>28</sup> PRC-002-NPCC-01 Requirement R14 Part 14.4 provides that each Transmission Owner and Generator Owner shall establish a maintenance and testing program for stand-alone disturbance monitoring equipment

---

<sup>27</sup> Reliability Standard PRC-002-2 Section 4 Applicability defines “Responsible Entities” as the Planning Coordinator, Reliability Coordinator, or Planning Coordinator or Reliability Coordinator, depending on the Interconnection.

<sup>28</sup> Recommendation 28 of the 2003 blackout report recommended requiring use of time-synchronized data recorders. *See U.S.-Canada Power System Outage Task Force, Final Report on the August 14, 2003 Blackout in the United States and Canada: Causes and Recommendations* at 162 (Apr. 2004), available at <http://energy.gov/sites/prod/files/oeprod/DocumentsandMedia/BlackoutFinal-Web.pdf>.

that includes performing monthly verification of time synchronization. Because time synchronization is also addressed in the continent-wide disturbance monitoring Reliability Standard, the regional standard can be retired with no adverse effect on reliability. Specifically, currently-effective Reliability Standard PRC-018-1 Requirement R1 provides that disturbance monitoring equipment have internal clocks that are time-synchronized to within 2 milliseconds or less of Coordinated Universal Time (“UTC”). Commission-approved Reliability Standard PRC-002-2 Requirement R10 specifies time synchronization for SER, FR, and DDR data.<sup>29</sup>

**D. PRC-002-NPCC-01 Requirements for Data Specifications are Addressed by the Continent-wide Reliability Standard**

NPCC Regional Reliability Standard PRC-002-NPCC-01 provides requirements for data sharing (Requirement R15) and data format and naming (Requirement R16). Data retrieval, sharing, and detailed data format specifications are specified in Reliability Standard PRC-002-2 Requirement R11. (Data retrieval and sharing requirements are also addressed in currently-effective Reliability Standard PRC-018-1 Requirements R1, R4, and R5.) As these continent-wide data specification requirements provide that entities are to provide disturbance monitoring data upon request and establish specific guidelines to ensure the usefulness of the data in analyzing events, the NPCC Regional Reliability Standard requirements for data specifications may be retired with no adverse effect on reliability.

**E. The PRC-002-NPCC-01 Requirement for Status of Recording Capability is**

---

<sup>29</sup> Specifically, PRC-002-2 Requirement R10 provides as follows:

**R10.** Each Transmission Owner and Generator Owner shall time synchronize all SER and FR data for the BES buses identified in Requirement R1 and DDR data for the BES Elements identified in Requirement R5 to meet the following:  
[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]

**10.1** Synchronization to Coordinated Universal Time (UTC) with or without a local time offset.

**10.2** Synchronized device clock accuracy within  $\pm 2$  milliseconds of UTC.

## **Addressed by the Continent-wide Reliability Standard**

The NPCC Regional Reliability Standard requirement for status of recording capability is addressed in the continent-wide Reliability Standard and may be retired with no adverse effect on reliability. NPCC Regional Reliability Standard PRC-002-NPCC-01 Requirement R14 requires each Transmission Owner and Generator Owner to establish a maintenance and testing program for stand-alone disturbance monitoring equipment that includes, among other things, requirements for restoring failed units back to service within 90 days or keeping records of efforts to return to service if kept out of service for longer than 90 days. Reliability Standard PRC-002-2 Requirement R12 requires Transmission Owners and Generator Owners to either restore failed SER, FR, or DDR data recording capability within 90 days or implement a Corrective Action Plan that it submits to its Regional Entity.<sup>30</sup>

#### **IV. EFFECTIVE DATE**

NERC and NPCC respectfully request that the Commission approve the retirement of NPCC Regional Reliability Standard PRC-002-NPCC-01 and the related NPCC regional definitions of Current Zero Time and Generating Plant to be effective as of July 1, 2016. This would align the retirement of PRC-002-NPCC-01 with the effective date for Reliability Standard PRC-002-2. Entities in the NPCC region have been required to be fully compliant with PRC-002-NPCC-01 since October 2015. NERC and NPCC's proposal to align the effective dates would allow entities in the NPCC Region to efficiently transition from compliance with the NPCC Regional Reliability Standard to compliance with the continent-wide Reliability Standard.

---

<sup>30</sup> Currently-effective Reliability Standard PRC-018-1 Requirement R6 requires each Transmission Owner and Generator Owner required to have disturbance monitoring equipment to have a maintenance and testing program for that equipment.

V. **CONCLUSION**

For the reasons set forth above, NERC and NPCC respectfully request that the Commission approve the proposed retirement of Regional Reliability Standard PRC-002-NPCC-01 and the NPCC regional definitions Current Zero Time and Generating Plant, effective as proposed herein.

Respectfully submitted,

/s/ Lauren A. Perotti

**Exhibit A**

**Order No. 672 Criteria**

## EXHIBIT A

### Order No. 672 Criteria

In Order No. 672, the Commission identified a number of criteria it uses to analyze Reliability Standards that are proposed for approval in order to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest.<sup>1</sup> The discussion below identifies these factors and explains how the proposed retirement of the Regional Reliability Standard meets or exceeds the criteria.

- 1. Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve that goal.<sup>2</sup>**

This project proposes to retire Regional Reliability Standard PRC-002-NPCC-01 Disturbance Monitoring. The reliability-related objectives are now addressed in a recently-approved NERC Reliability Standard, PRC-002-2 - Disturbance Monitoring and Reporting Requirements.

The project to retire the PRC-002-NPCC-01 Disturbance Monitoring regional standard adhered to the applicable process contained within the FERC-approved *NPCC Regional Standard Processes Manual*. The drafting team, which was composed of subject matter experts, performed a detailed analysis of NERC Reliability Standard PRC-002-2. The purpose of continent-wide Reliability Standard PRC-002-2 is to ensure adequate data is available to facilitate analysis of Bulk Electric System (“BES”) Disturbances. Following its review, the drafting team determined that the continent-wide Reliability Standard established adequate

---

<sup>1</sup> *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, *order on reh’g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

<sup>2</sup> Order No. 672 at PP 321, 324.

requirements for data recording capabilities and obviates the need for maintaining the NPCC regional standard. Therefore, it is technically sound to retire the regional standard.

The technical analysis is included in this filing as **Exhibit B** and may also be found on the NPCC website. Biographies of the drafting team members are provided with this filing in **Exhibit C**.

NPCC's process also includes a public iterative comment/response period. No negative comments were received from the industry regarding the proposed retirement.

- 2. Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.<sup>3</sup>**

The PRC-002-NPCC-01 Disturbance Monitoring standard complies with Order No. 672 because it applies only to applicable entities as stated in the standard and it clearly identifies the specific applicable entity assigned to an associated task.

Although this filing does not propose any added regulatory language, the drafting team made every endeavor to ensure the narrative describing its rationale for retirement of the PRC-002-NPCC-01 Disturbance Monitoring Standard was clear, unambiguous, and that the retirement itself would present no reliability-related concerns.

- 3. A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.<sup>4</sup>**

This project proposes to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring. The reliability-related objectives are addressed in FERC-approved

---

<sup>3</sup> Order No. 672 at PP 322, 325.

<sup>4</sup> Order No. 672 at P 326.

NERC Reliability Standard PRC-002-2 - Disturbance Monitoring and Reporting Requirements.

As such, addition or modification of compliance elements is not required.

- 4. A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner.<sup>5</sup>**

This project proposes to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring. The reliability-related objectives are addressed in FERC-approved NERC Reliability Standard PRC-002-2 - Disturbance Monitoring and Reporting Requirements.

As such, addition or modification of measures is not required.

- 5. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect “best practices” without regard to implementation cost or historical regional infrastructure design.<sup>6</sup>**

This project is designed to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring because the reliability-related objectives are effectively and efficiently addressed in the continent-wide disturbance monitoring standard. There is no reliability or financial impact as a result of implementing the retirement of the standard.

- 6. Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect Bulk-Power System reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.<sup>7</sup>**

This project proposes to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring. The reliability-related objectives are addressed in FERC-approved NERC Reliability Standard PRC-002-2 - Disturbance Monitoring and Reporting Requirements.

There is no proposed change to the level of reliability or to the practices in place to achieve the

---

<sup>5</sup> Order No. 672 at P 327.

<sup>6</sup> Order No. 672 at P 328.

<sup>7</sup> Order No. 672 at PP 329, 330.

existing level of reliability; thus, there is no lessening of the adequacy of the standard for disturbance monitoring and no migration to a lowest common denominator.

During the retirement development history, none of the commenters reported any concerns regarding the financial impact of retiring the PRC-002-NPCC-01 standard.

Furthermore, the implementation plan for Regional Reliability Standard PRC-002-NPCC-01 required full compliance with the standard's requirements on October 2015. The establishment of this regional standard and requirements to install disturbance monitoring equipment has facilitated entity compliance with the future enforceable PRC-002-2 Reliability Standard which specifies disturbance monitoring capability.

- 7. Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one geographic area or regional model. It should take into account regional variations in the organization and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.<sup>8</sup>**

This project proposes to eliminate a regional standard that is duplicative, with respect to the reliability objective, to the requirements in the FERC-approved continent-wide Reliability Standard PRC-002-2 - Disturbance Monitoring and Reporting Requirements. Retirement of the regional standard and application of the continent-wide Reliability Standard PRC-002-2 will achieve greater continent-wide consistency regarding collection methods for data used in the analysis of BES disturbances.

- 8. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid beyond any restriction necessary for**

---

<sup>8</sup> Order No. 672 at P 331.

**reliability.**<sup>9</sup>

The retirement of NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring should cause no undue negative effect on competition or restriction of the grid.

**9. The implementation time for the proposed Reliability Standard is reasonable.**<sup>10</sup>

This project proposes to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring and the related NPCC regional definitions of Current Zero Time and Generating Plant to be effective as of July 1, 2016. This proposal would align the retirement of PRC-002-NPCC-01 with the effective date for Reliability Standard PRC-002-2. Entities in the NPCC region have been expected to be fully compliant with PRC-002-NPCC-01 since October 2015. The data requirements in Reliability Standard PRC-002-2 will result in minimal additional data requirements beyond those required to comply with PRC-002-NPCC-01. The proposed retirement of PRC-002-NPCC-01 should be seamless and will not have adverse effects on reliability. Therefore, it is reasonable to align the retirement date of PRC-002-NPCC-01 to the effective date of PRC-002-2.

**10. The Reliability Standard was developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.**<sup>11</sup>

In developing its request to retire NPCC Regional Reliability Standard PRC-002-NPCC-01-Disturbance Monitoring, NPCC adhered to the *NPCC Regional Standard Processes Manual* as approved by FERC on December 23, 2014 and posted on the NPCC website.

All meetings were open to the public. Between April 22, 2015 and October 8, 2015, the drafting team conducted three meetings open to the public. Notice of the meetings was provided

---

<sup>9</sup> Order No. 672 at P 332.

<sup>10</sup> Order No. 672 at P 333.

<sup>11</sup> Order No. 672 at P 334.

to the public via the NPCC website and through email announcements. All meetings were supported by a telephone conference bridge associated with an on-line Internet visual capability, allowing all participants to see the documents as they were being developed.

The project was posted for industry comment. No negative comments were received. The final ballot achieved quorum and sufficient votes for approval. While posted at NERC for a 45-day comment period, commenters were unanimously in accord that the development process was open, inclusive, balanced, transparent, and that due process was followed.

Additional information relating to the development of the proposed retirement is contained in the Petition and in **Exhibit C**.

**11. NERC must explain any balancing of vital public interests in the development of proposed Reliability Standards.<sup>12</sup>**

Neither NERC nor NPCC is aware of any vital public interests impacted by retirement of this standard. No such balancing concerns were raised or noted.

**12. Proposed Reliability Standards must consider any other appropriate factors.<sup>13</sup>**

This project proposes to retire NPCC Regional Reliability Standard PRC-002-NPCC-01 - Disturbance Monitoring. The reliability-related objectives are addressed in the FERC-approved NERC Reliability Standard PRC-002-2 - Disturbance Monitoring and Reporting Requirements. No additional other factors were relevant with respect to this project.

PRC-002-NPCC-01	Disturbance Monitoring	Standard Under Development	01/06/16 - 02/19/16	<a href="#">Proposed Standard for Retirement (1)</a> <a href="#">Ballot Results Announcement (2)</a> <a href="#">Info (3)</a> <a href="#">Submit Comments</a> <a href="#">Unofficial Comment Form (Word) (4)</a> <a href="#">Comments Received (4i)</a>

**A. Introduction**

- 1. Title:** **Disturbance Monitoring**
- 2. Number:** PRC-002-NPCC-01
- 3. Purpose:** Ensure that adequate disturbance data is available to facilitate Bulk Electric System event analyses. All references to equipment and facilities herein unless otherwise noted will be to Bulk Electric System (BES) elements.
- 4. Applicability:**
  - 4.1.** Transmission Owner
  - 4.2.** Generator Owner
  - 4.3.** Reliability Coordinator
- 5. (Proposed) Effective Date:** To be established.

**B. Requirements**

- R1.** Each Transmission Owner and Generator Owner shall provide Sequence of Event (SOE) recording capability by installing Sequence of Event recorders or as part of another device, such as a Supervisory Control And Data Acquisition (SCADA) Remote Terminal Unit (RTU), a generator plant Digital (or Distributed) Control System (DCS) or part of Fault recording equipment. This capability shall: *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
  - 1.1** Be provided at all substations and at locations where circuit breaker operation affects continuity of service to radial Loads greater than 300MW, or the operation of which drops 50MVA Nameplate Rating or greater of Generation, or the operation of which creates a Generation/Load island.

Be provided at generating units above 50MVA Nameplate Rating or series of generating units utilizing a control scheme such that the loss of 1 unit results in a loss of greater than 50MVA Nameplate Capacity, and at Generating Plants above 300MVA Name Plate Capacity.
  - 1.2** Monitor the following at each location listed in 1.1:
    - 1.2.1** Transmission and Generator circuit breaker positions
    - 1.2.2** Protective Relay tripping for all Protection Groups that operate to trip circuit breakers identified in 1.2.1.
    - 1.2.3** Teleprotection keying and receive

- R2.** Each Transmission Owner shall provide Fault recording capability for the following Elements at facilities where Fault recording equipment is required to be installed as per R3: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 2.1** All transmission lines.
  - 2.2** Autotransformers or phase-shifters connected to busses.
  - 2.3** Shunt capacitors, shunt reactors.
  - 2.4** Individual generator line interconnections.
  - 2.5** Dynamic VAR Devices.
  - 2.6** HVDC terminals.
- R3.** Each Transmission Owner shall have Fault recording capability that determines the Current Zero Time for loss of Bulk Electric System (BES) transmission Elements. *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- R4.** Each Generator Owner shall provide Fault recording capability for Generating Plants at and above 200 MVA Capacity and connected through a generator step up (GSU) transformer to a Bulk Electric System Element unless Fault recording capability is already provided by the Transmission Owner. *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- R5.** Each Transmission Owner and Generator Owner shall record for Faults, sufficient electrical quantities for each monitored Element to determine the following: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 5.1** Three phase-to-neutral voltages. (Common bus-side voltages may be used for lines.)
  - 5.2** Three phase currents and neutral currents.
  - 5.3** Polarizing currents and voltages, if used.
  - 5.4** Frequency.
  - 5.5** Real and reactive power.
- R6.** Each Transmission Owner and Generator Owner shall provide Fault recording with the following capabilities: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 6.1** Each Fault recorder record duration shall be a minimum of one (1) second.
  - 6.2** Each Fault recorder shall have a minimum recording rate of 16 samples per cycle
  - 6.3** Each Fault recorder shall be set to trigger for at least the following:
    - 6.3.1** Monitored phase overcurrents set at 1.5 pu or less of rated CT secondary current or Protective Relay tripping for all Protection Groups.
    - 6.3.2** Neutral (residual) overcurrent set at 0.2 pu or less of rated CT secondary current.
    - 6.3.3** Monitored phase undervoltage set at 0.85 pu or greater.
  - 6.4** Document additional triggers and deviations from the settings in 6.3.2 and 6.3.3 when local conditions dictate.
- R7.** Each Reliability Coordinator shall establish its area's requirements for Dynamic Disturbance Recording (DDR) capability that: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

- 7.1 Provides a minimum of 1 DDR per 3,000 MW of peak Load.
- 7.2 Records dynamic disturbance information with consideration of the following facilities/locations:
  - 7.2.1 Major Load centers.
  - 7.2.2 Major Generation clusters.
  - 7.2.3 Major voltage sensitive areas.
  - 7.2.4 Major transmission interfaces.
  - 7.2.5 Major transmission junctions.
  - 7.2.6 Elements associated with Interconnection Reliability Operating Limits (IROLs).
  - 7.2.7 Major EHV interconnections between operating areas.
- R8. Each Reliability Coordinator shall specify that DDRs installed, after the approval of this standard, function as continuous recorders. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R9. Each Reliability Coordinator shall specify that DDRs are installed with the following capabilities: *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
  - 9.1 A minimum recording time of sixty (60) seconds per trigger event.
  - 9.2 A minimum data sample rate of 960 samples per second, and a minimum data storage rate for RMS quantities of six (6) data points per second.
  - 9.3 Each DDR shall be set to trigger for at least one of the following (based on manufacturers' equipment capabilities):
    - 9.3.1 Rate of change of Frequency.
    - 9.3.2 Rate of change of Power.
    - 9.3.3 Delta Frequency (recommend 20 mHz change).
    - 9.3.4 Oscillation of Frequency.
- R10. Each Reliability Coordinator shall establish requirements such that the following quantities are monitored or derived where DDRs are installed: *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
  - 10.1 Line currents for most lines such that normal line maintenance activities do not interfere with DDR functionality.
  - 10.2 Bus voltages such that normal bus maintenance activities do not interfere with DDR functionality.
  - 10.3 As a minimum, one phase current per monitored Element and two phase-to-neutral voltages of different Elements. One of the monitored voltages shall be of the same phase as the monitored current.
  - 10.4 Frequency.
  - 10.5 Real and reactive power.
- R11. Each Reliability Coordinator shall document additional settings and deviations from the required trigger settings described in R9 and the required list of monitored quantities as described in R10, and

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

report this to the Regional Entity (RE) upon request. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

- R12.** Each Reliability Coordinator shall specify its DDR requirements including the DDR setting triggers established in R9 to the Transmission Owners and Generator Owners. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R13.** Each Transmission Owner and Generator Owner that receives a request from the Reliability Coordinator to install a DDR shall acquire and install the DDR in accordance with R12. Reliability Coordinators, Transmission Owners, and Generator Owners shall mutually agree on an implementation schedule. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R14.** Each Transmission Owner and Generator Owner shall establish a maintenance and testing program for stand alone DME (equipment whose only purpose is disturbance monitoring) that includes: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*
- 14.1** Maintenance and testing intervals and their basis.
  - 14.2** Summary of maintenance and testing procedures.
  - 14.3** Monthly verification of communication channels used for accessing records remotely (if the entity relies on remote access and the channel is not monitored to a control center staffed around the clock, 24 hours a day, 7 days a week (24/7)).
  - 14.4** Monthly verification of time synchronization (if the loss of time synchronization is not monitored to a 24/7 control center).
  - 14.5** Monthly verification of active analog quantities.
  - 14.6** Verification of DDR and DFR settings in the software every six (6) years.
  - 14.7** A requirement to return failed units to service within 90 days. If a DME device will be out of service for greater than 90 days the owner shall keep a record of efforts aimed at restoring the DME to service.
- R15.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall share data within 30 days upon request. Each Reliability Coordinator, Transmission Owner, and Generator Owner shall provide recorded disturbance data from DMEs within 30 days of receipt of the request in each of the following cases: *[Violation Risk Factor: Lower] [Time Horizon: Operations]*
- 15.1** NERC, Regional Entity, Reliability Coordinator.
  - 15.2** Request from other Transmission Owners, Generator Owners within NPCC.
- R16.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall submit the data files conforming to the following format requirements: *[Violation Risk Factor: Lower] [Time Horizon: Operations]*
- 16.1** The data files shall be capable of being viewed, read, and analyzed with a generic COMTRADE analysis tool as per the latest revision of IEEE Standard C37.111.
  - 16.2** Disturbance Data files shall be named in conformance with the latest revision of IEEE Standard C37.232.
  - 16.3** Fault Recorder and DDR Files shall contain all monitored channels. SOE records shall contain station name, date, time resolved to milliseconds, SOE point name, status.

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

**R17.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall maintain, record and provide to the Regional Entity (RE), upon request, the following data on the DMEs installed to meet this standard: [*Violation Risk Factor: Lower*] [*Time Horizon: Operations*]

**17.1** Type of DME.

**17.2** Make and model of equipment.

**17.3** Installation location.

**17.4** Operational Status.

**17.5** Date last tested.

**17.6** Monitored Elements.

**17.7** All identified channels.

**17.8** Monitored electrical quantities.

### C. Measures

**M1.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided Sequence of Event recording capability in accordance with 1.1 and 1.2. (R1)

**M2.** Each Transmission Owner shall have, and provide upon request, evidence that it provided Fault recording capability in accordance with 2.1 to 2.6. (R2)

**M3.** Each Transmission Owner shall have, and provide upon request, evidence that it provided Fault recording capability that determined the Current Zero Time for loss of Bulk Electric System (BES) transmission Elements in accordance with R3.

**M4.** Each Generator Owner shall have, and provide upon request, evidence that it provided Fault recording capability for its Generating Plants at and above 200 MVA Capacity in accordance with R4.

**M5.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it records for Faults, sufficient electrical quantities for each monitored Element to determine the parameters listed in 5.1 to 5.5. (R5)

**M6.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided Fault recording capability in accordance with 6.1 to 6.4. (R6)

**M7.** Each Reliability Coordinator shall have, and provide upon request, evidence that it established its area's requirements for Dynamic Disturbance Recording (DDR) capability in accordance with 7.1 and .2. (R7)

**M8.** Each Reliability Coordinator shall have, and provide upon request, evidence that DDRs installed after the approval of this standard function as continuous recorders. (R8)

**M9.** Each Reliability Coordinator shall have, and provide upon request, evidence that it developed DDR setting triggers to include the parameters listed in 9.1 to 9.3. (R9)

**M10.** Each Reliability Coordinator shall have, and provide upon request, evidence that DDRs monitor the Elements listed in 10.1 through 10.5. (R10)

**M11.** Each Reliability Coordinator shall have, and provide upon request, evidence that it documented additional settings and deviations from the required trigger settings described in R9 and the required list of monitored quantities as described in R10. (R11)

## **Standard PRC-002-NPCC-01— Disturbance Monitoring**

---

- M12.** Each Reliability Coordinator shall have, and provide upon request, evidence that it specified its DDR requirements which included the DDR setting triggers established in R9 to the Transmission Owners and Generator Owners in the Reliability Coordinator's area. (R12)
- M13.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it acquired and installed the DDRs in accordance with the specifications contained in the Reliability Coordinator's request, and a mutually agreed upon implementation schedule. (R13)
- M14.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it has a maintenance and testing program for stand alone DME (equipment whose only purpose is disturbance monitoring) that meets the requirements in 14.1 through 14.7. (R14)
- M15.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided recorded disturbance data from DMEs within 30 days of the receipt of the request from the entities listed in 15.1 and 15.2. (R15)
- M16.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it submitted the data files in a format that meets the requirements in 16.1 through 16.3. (R16)
- M17.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it maintained a record of and provided to NPCC when requested, the data on DMEs installed meeting the requirements 17.1 through 17.8. (R17)

### **D. Compliance**

#### **1. Compliance Monitoring Process**

##### **1.1. Compliance Enforcement Authority**

NPCC Compliance Committee

##### **1.2. Compliance Monitoring Period and Reset Time Frame**

Not Applicable

##### **1.3. Data Retention**

The Transmission Owner and Generator Owner shall keep evidences for three calendar years for Measures 1, 5, 6, 13, 16 and 17.

The Transmission Owner shall keep evidence for three years for Measures 2 and 3.

The Generator Owner shall keep evidence for three years for Measure 4.

The Reliability Coordinator shall keep evidence for three years for Measures 7, 8, 9, 10, 11, 12, 16 and 17.

The Transmission Owner and Generator Owner shall keep evidences for twenty-four calendar months for Measures 14 and 15.

The Reliability Coordinator shall keep evidence for twenty-four calendar months for Measure 15.

**Standard PRC-002-NPCC-01— Disturbance Monitoring**

If a Transmission Owner, Generator Owner or Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit and all subsequent record.

**1.4. Compliance Monitoring and Assessment Processes**

- Self-Certifications
- Spot Checking
- Compliance Audits
- Self-Reporting
- Compliance Violation Investigations
- Complaints

**1.5. Additional Compliance Information**

None

December 2<sup>nd</sup>, 2015

NPCC Full and General Members:

In accordance with the NPCC Regional Standard Processes Manual the ballot period for the retirement of NPCC Regional Standard PRC-002-NPCC-02 Disturbance Monitoring closed at 23:59PM on November 26<sup>th</sup>, 2015.

The results of the ballot were as follows:

Quorum: 69.69% of the Total Registered.

Approval: 97.10%

No negative ballots were received with comments therefore, in accordance with our Standards Processes Manual a recommendation for final Regional approval will be sent to the NPCC Board of Directors for consideration at their meeting on February 2, 2016.

Contingent upon the approval of the NPCC BOD, the proposal to retire PRC-002-NPCC-02 will be submitted to the NERC Board of Trustees with subsequent filings with the FERC and applicable provincial authorities.

Voting was conducted electronically and the full retirement record for the standard may be viewed at:

<https://www.npcc.org/Standards/SitePages/DevStandardDetail.aspx?DevDocumentId=120>

Thank you for your participation.

# Regional Reliability Standards Announcement

## Proposed Retirement of PRC-002-NPCC-01

Comment Period Open through February 19, 2016

### [Now Available](#)

The Northeast Power Coordinating Council (NPCC) has requested NERC to post regional reliability standard **PRC-002-NPCC-01 – Disturbance Monitoring** for a 45-day industry review as permitted by the NERC Rules of Procedure. The comment period is open through **8 p.m. Eastern, Friday, February 19, 2016**.

### Commenting

Use the [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, contact [Wendy Muller](#). An off-line, unofficial copy of the comment form is posted on the [Regional Reliability Standards Under Development Page](#).

### Background

During 2014 and 2015, NERC completed, filed, and gained the FERC approval of the NERC PRC-002-2 Disturbance Monitoring (DM) continent-wide standard. In conformance with the ERO's strategic direction with respect to regional standards, NPCC conducted a review of the DM regional and continent-wide standards. It was determined that the NPCC regional standard was no longer necessary and initiated the process to retire it.

### Regional Reliability Standards Development Process

Section 300 of [NERC's Rules of Procedures of the Electric Reliability Organization](#) governs the regional reliability standards development process.

For more information or assistance, contact Reliability Standards Analyst, [Mat Bunch](#) (via email) or at 404-446-9785.

# Unofficial Comment Form

## Recommended Retirement of Regional Reliability Standard

### PRC-002-NPCC-01

**DO NOT** use this form for submitting comments. Use the [electronic form](#) to submit comments on the proposed retirement of Regional Reliability Standard **PRC-002-NPCC-01 – Disturbance Monitoring**. The electronic form must be submitted by **8 p.m. Eastern, Friday, February 19, 2016**.

Documents and information about this project are available on the [Regional Reliability Standards Under Development](#) page. If you have questions, contact [Mat Bunch](#) (via email) or at 404-446-9785.

#### Background Information

During 2014 and 2015, NERC completed, filed, and gained the FERC approval of the NERC PRC-002-2 Disturbance Monitoring continent-wide standard. In conformance with the ERO's strategic direction with respect to regional standards, NPCC conducted a review of the DM regional and continent-wide standards. It was determined that the NPCC regional standard was no longer necessary and initiated the process to retire it.

The approval process for the retirement of a regional reliability standard requires NERC to publicly notice and request comment on the proposed standard. Comments shall be permitted only on the following criteria (technical aspects of the standard are vetted through the regional standards development process):

**Open** — Regional reliability standards shall provide that any person or entity that is directly and materially affected by the reliability of the bulk power system within the regional entity shall be able to participate in the development and approval of reliability standards. There shall be no undue financial barriers to participation. Participation shall not be conditional upon membership in the regional entity, a regional entity or any organization, and shall not be unreasonably restricted on the basis of technical qualifications or other such requirements.

**Inclusive** — Regional reliability standards shall provide that any person with a direct and material interest has a right to participate by expressing an opinion and its basis, having that position considered, and appealing through an established appeals process, if adversely affected.

**Balanced** — Regional reliability standards shall have a balance of interests and shall not be dominated by any two-interest categories and no single-interest category shall be able to defeat a matter.

**Due Process** — Regional reliability standards shall provide for reasonable notice and opportunity for public comment. At a minimum, the standard shall include public notice of the intent to develop a standard, a public comment period on the proposed standard, due consideration of those public comments, and a ballot of interested stakeholders.

**Transparent** — All actions material to the process of retiring regional reliability standards shall be transparent. All standards development meetings shall be open and publicly noticed on the regional entity's Web site.

Review the proposed retirement of PRC-002-NPCC-01 regional standard and answer the following questions:

1. Do you agree the process of retiring PRC-002-NPCC-01 met the "Open" criteria as outlined above? If "No", please explain in the comment area below.

Yes

No

Comments:

2. Do you agree the process of retiring PRC-002-NPCC-01 met the "Inclusive" criteria as outlined above? If "No", please explain in the comment area below.

Yes

No

Comments:

3. Do you agree the process of retiring PRC-002-NPCC-01 met the "Balanced" criteria as outlined above? If "No", please explain in the comment area below.

Yes

No

Comments:

4. Do you agree the process of retiring PRC-002-NPCC-01 met the "Due Process" criteria as outlined above? If "No", please explain in the comment area below.

Yes

No

Comments:

5. Do you agree the process of retiring PRC-002-NPCC-01 met the "Transparent" criteria as outlined above? If "No", please explain in the comment area below.

Yes

No

**Subject: Solicitation for NPCC Regional Standard Drafting Team Members for “Disturbance Monitoring” PRC-002-NPCC-02**

Dear Sir/Madam,

A new RSAR for NPCC Regional Standard PRC-002-NPCC-02 Disturbance Monitoring has been approved by the RSC, and assigned to TFSP by the RCC. In accordance with the [NPCC Regional Standard Processes Manual](#), NPCC is soliciting for any interested candidates to assist with the drafting of the standard. The anticipated workload is 2-3 “in-person” meetings and 4-6 teleconferences. Attached is a self-nomination form to be completed and returned by any interested persons no later than April 10<sup>th</sup>, 2015. The Regional Standards Committee will review and approve any additional qualified candidates who self nominate at its April 22-23, 2015 meeting. Please distribute this email to any potential interested candidates. This information will also be posted on the [NPCC website](#).

Sincerely,

Lee Pedowicz  
Manager of Reliability Standards  
NPCC Inc.

### Nomination Form for “PRC-002-NPCC-02”, Disturbance Monitoring, Standard Drafting Team

Please return this form to [NPCCstandard@npcc.org](mailto:NPCCstandard@npcc.org) by **April 10, 2015** with the name of the RSAR or Standard Drafting Team in the subject line. If you have any questions, please contact Lee Pedowicz at [lpedowicz@npcc.org](mailto:lpedowicz@npcc.org), or by telephone at 212-840-1040.

**All candidates’ qualifications will be reviewed and participation on a drafting team is subject to the approval by the NPCC Regional Standards Committee, RSC. Applicants are expected to be prepared to participate actively at the Drafting Team meetings.**

Name:  Organization:  Address:  Office Telephone:  E-mail:
<b>Please briefly describe your experience and qualifications to serve on the PRC-002-NPCC-02 Drafting Team.</b>

## Information in a Regional Standard Authorization Request (RSAR)

The tables below identify information to be submitted in a Regional Standard Authorization Request to the NPCC Regional Standards Process Manager, [NPCCstandard@npcc.org](mailto:NPCCstandard@npcc.org). The NPCC Regional Standards Process Manager shall be responsible for implementing and maintaining this form as needed to support the information requirements of the standards process.

### Regional Standard Authorization Request Form

Title of Proposed Standard:	PRC-002-NPCC-02
Request Date:	02-18-2015

### RSAR Requester Information

<i>Name:</i> Paul DiFilippo	<b>RSAR Type (Check box for one of these selections.)</b>
<i>Company:</i> NPCC	<input type="checkbox"/> New Standard
<i>Telephone:</i> 416-345-5042	<input checked="" type="checkbox"/> Revision to Existing Standard
<i>Fax:</i>	<input type="checkbox"/> Withdrawal of Existing Standard
<i>Email:</i> paul.difilippo@HydroOne.com	<input type="checkbox"/> Urgent Action

**Purpose** (Describe the purpose of the proposed standard – what the standard will achieve in support of reliability.)

The purpose of the proposed RSAR is to review the regional standard for potential revisions made necessary by the industry’s adoption of the new NERC BES definition, the Paragraph 81 directive, and the development of NERC’s PRC-002-2 Disturbance Monitoring and Reporting Requirements standard. Retiring PRC-002-NPCC-01 is to be considered if it is determined that it can be retired without sacrificing the ability to capture post-disturbance data.

**Industry Need** (Provide a detailed statement justifying the need for the proposed standard, along with any supporting documentation.)

To enhance efficiencies and cost effectiveness, it must be determined if PRC-002-NPCC-01 requirements should be revised or retired to address the new NERC BES definition, to incorporate Paragraph 81, and to eliminate redundancy leading to double jeopardy with PRC-002-2 requirements without sacrificing the ability to capture post-disturbance data.

**Brief Description** (Describe the proposed standard in sufficient detail to clearly define the scope in a manner that can be easily understood by others.)

The requirements in PRC-002-NPCC-01 will be reviewed individually for revision or deletion with respect to the new NERC BES definition and Paragraph 81. In addition, PRC-002-NPCC-01 will be reviewed against NERC’s PRC-002-2. PRC-002-2 mandates the capturing of adequate data to facilitate the analysis of BES disturbances. This “umbrella” encompasses the relevant requirements in PRC-002-NPCC-01. However, the relevant requirements in each of the standards are to be compared and the requirements of PRC-002-NPCC-01, if so determined, will be revised or deleted to eliminate redundancy and the concomitant double jeopardy. The review will be governed by bullet 1 of the NERC Rules of Procedure, Section 312, Regional Reliability Standards, which reads “Regional Entities may propose Regional Reliability Standards that set more stringent reliability requirements than the NERC Reliability Standard or cover matters not covered by an existing NERC Reliability Standard.”

After this review is completed, it will be determined if PRC-002-NPCC-01 should be revised, or retired.

--

### **Reliability Functions**

<b>The Standard will Apply to the Following Functions</b> (Check all applicable boxes.)		
<input checked="" type="checkbox"/>	Reliability Coordinator	The entity that is the highest level of authority who is responsible for the reliable operation of the Bulk Electric System, has the Wide Area view of the Bulk Electric System, and has the operating tools, processes and procedures, including the authority to prevent or mitigate emergency operating situations in both next-day analysis and real-time operations. The Reliability Coordinator has the purview that is broad enough to enable the calculation of Interconnection Reliability Operating Limits, which may be based on the operating parameters of transmission systems beyond any Transmission Operator's vision.
<input type="checkbox"/>	Balancing Authority	The responsible entity that integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real time.
<input type="checkbox"/>	Interchange Authority	Authorizes valid and balanced Interchange Schedules.
<input type="checkbox"/>	Planning Authority	The responsible entity that coordinates and integrates transmission facility and service plans, resource plans, and protection systems.
<input type="checkbox"/>	Transmission Service Provider	The entity that administers the transmission tariff and provides Transmission Service to Transmission Customers under applicable transmission service agreements.
<input checked="" type="checkbox"/>	Transmission Owner	The entity that owns and maintains transmission facilities.
<input type="checkbox"/>	Transmission Operator	The entity responsible for the reliability of its "local" transmission system, and that operates or directs the operations of the transmission facilities.
<input type="checkbox"/>	Transmission Planner	The entity that develops a long-term (generally one year and beyond) plan for the reliability (adequacy) of the interconnected bulk electric transmission systems within its portion of the Planning Authority Area.
<input type="checkbox"/>	Resource Planner	The entity that develops a long-term (generally one year and beyond) plan for the resource adequacy of specific loads (customer demand and energy requirements) within a Planning Authority Area.

<input type="checkbox"/>	Generator Operator	The entity that operates generating unit(s) and performs the functions of supplying energy and Interconnected Operations Services.
<input checked="" type="checkbox"/>	Generator Owner	Entity that owns and maintains generating units.
<input type="checkbox"/>	Purchasing-Selling Entity	The entity that purchases or sells, and takes title to, energy, capacity, and Interconnected Operations Services. Purchasing-Selling Entities may be affiliated or unaffiliated merchants and may or may not own generating facilities.
<input type="checkbox"/>	Distribution Provider	Provides and operates the “wires” between the transmission system and the customer.
<input type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related Interconnected Operations Services) to serve the electrical demand and energy requirements of its end-use customers.

### **Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> <i>(Check all boxes that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring, and control shall be provided, used, and maintained for the reliability of interconnected bulk power systems.
<input type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk power systems shall be assessed, monitored, and maintained on a wide-area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> <i>(Select ‘yes’ or ‘no’ from the drop-down box.)</i>	
Recognizing that reliability is a Common Attribute of a robust North American economy:	
1. A reliability standard shall not give any market participant an unfair competitive advantage. Yes	

2. A reliability standard shall neither mandate nor prohibit any specific market structure. Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard. Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

**Detailed Description (Provide enough detail so that an independent entity familiar with the industry could draft a standard based on this description.)**

Review PRC-002-NPCC-01 against PRC-002-2 to determine if revisions are necessary or retirement of PRC-002-NPCC-01 is possible.

November 16, 2015

**Subject: Notification of (10) Day Ballot Period for Retirement of Regional Standard PRC-002-NPCC-01 Disturbance Monitoring**

Dear Madam/Sir:

On October 8, 2015, in accordance with the NPCC Regional Standards Process Manual (RSPM), the NPCC Regional Standards Committee (RSC) acting on the recommendation of the PRC-002-NPCC-01 Drafting Team, initiated the process to retire NPCC Regional Standard [PRC-002-NPCC-01 Disturbance Monitoring](#).

The PRC -002-NPCC-01 standard drafting team was convened to address an RSC approved Regional Standard Authorization Request (RSAR) which proposed retiring PRC -002-NPCC-01 subsequent to FERC approval of PRC -002-2 *Disturbance Monitoring and Reporting Requirements*. PRC-002-2 was approved by the FERC on September 25, 2015 without any directives issued.

In accordance with the RSPM the retirement of PRC -002-NPCC-01 must be initially approved by the NPCC Full and General Members, with subsequent approvals by the NPCC Board of Directors, NERC Board of Trustees and finally filing with the applicable governmental authorities.

The PRC-002-NPCC-01 standard and all supporting documentation have been posted on the NPCC Website for a ten (10) day ballot period beginning November 16<sup>th</sup>, 2016.

Email: [rshu@npcc.org](mailto:rshu@npcc.org)

**A. Introduction**

- 1. Title:** **Disturbance Monitoring**
- 2. Number:** PRC-002-NPCC-01
- 3. Purpose:** Ensure that adequate disturbance data is available to facilitate Bulk Electric System event analyses. All references to equipment and facilities herein unless otherwise noted will be to Bulk Electric System (BES) elements.
- 4. Applicability:**
  - 4.1.** Transmission Owner
  - 4.2.** Generator Owner
  - 4.3.** Reliability Coordinator
- 5. (Proposed) Effective Date:** To be established.

**B. Requirements**

- R1.** Each Transmission Owner and Generator Owner shall provide Sequence of Event (SOE) recording capability by installing Sequence of Event recorders or as part of another device, such as a Supervisory Control And Data Acquisition (SCADA) Remote Terminal Unit (RTU), a generator plant Digital (or Distributed) Control System (DCS) or part of Fault recording equipment. This capability shall: [*Violation Risk Factor: Medium*] [*Time Horizon: Planning and Operations Planning*]
  - 1.1** Be provided at all substations and at locations where circuit breaker operation affects continuity of service to radial Loads greater than 300MW, or the operation of which drops 50MVA Nameplate Rating or greater of Generation, or the operation of which creates a Generation/Load island.

Be provided at generating units above 50MVA Nameplate Rating or series of generating units utilizing a control scheme such that the loss of 1 unit results in a loss of greater than 50MVA Nameplate Capacity, and at Generating Plants above 300MVA Name Plate Capacity.
  - 1.2** Monitor the following at each location listed in 1.1:
    - 1.2.1** Transmission and Generator circuit breaker positions
    - 1.2.2** Protective Relay tripping for all Protection Groups that operate to trip circuit breakers identified in 1.2.1.
    - 1.2.3** Teleprotection keying and receive

- R2.** Each Transmission Owner shall provide Fault recording capability for the following Elements at facilities where Fault recording equipment is required to be installed as per R3: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 2.1** All transmission lines.
  - 2.2** Autotransformers or phase-shifters connected to busses.
  - 2.3** Shunt capacitors, shunt reactors.
  - 2.4** Individual generator line interconnections.
  - 2.5** Dynamic VAR Devices.
  - 2.6** HVDC terminals.
- R3.** Each Transmission Owner shall have Fault recording capability that determines the Current Zero Time for loss of Bulk Electric System (BES) transmission Elements. *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- R4.** Each Generator Owner shall provide Fault recording capability for Generating Plants at and above 200 MVA Capacity and connected through a generator step up (GSU) transformer to a Bulk Electric System Element unless Fault recording capability is already provided by the Transmission Owner. *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- R5.** Each Transmission Owner and Generator Owner shall record for Faults, sufficient electrical quantities for each monitored Element to determine the following: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 5.1** Three phase-to-neutral voltages. (Common bus-side voltages may be used for lines.)
  - 5.2** Three phase currents and neutral currents.
  - 5.3** Polarizing currents and voltages, if used.
  - 5.4** Frequency.
  - 5.5** Real and reactive power.
- R6.** Each Transmission Owner and Generator Owner shall provide Fault recording with the following capabilities: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*
- 6.1** Each Fault recorder record duration shall be a minimum of one (1) second.
  - 6.2** Each Fault recorder shall have a minimum recording rate of 16 samples per cycle
  - 6.3** Each Fault recorder shall be set to trigger for at least the following:
    - 6.3.1** Monitored phase overcurrents set at 1.5 pu or less of rated CT secondary current or Protective Relay tripping for all Protection Groups.
    - 6.3.2** Neutral (residual) overcurrent set at 0.2 pu or less of rated CT secondary current.
    - 6.3.3** Monitored phase undervoltage set at 0.85 pu or greater.
  - 6.4** Document additional triggers and deviations from the settings in 6.3.2 and 6.3.3 when local conditions dictate.
- R7.** Each Reliability Coordinator shall establish its area's requirements for Dynamic Disturbance Recording (DDR) capability that: *[Violation Risk Factor: Medium]* *[Time Horizon: Planning and Operations Planning]*

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

- 7.1 Provides a minimum of 1 DDR per 3,000 MW of peak Load.
- 7.2 Records dynamic disturbance information with consideration of the following facilities/locations:
  - 7.2.1 Major Load centers.
  - 7.2.2 Major Generation clusters.
  - 7.2.3 Major voltage sensitive areas.
  - 7.2.4 Major transmission interfaces.
  - 7.2.5 Major transmission junctions.
  - 7.2.6 Elements associated with Interconnection Reliability Operating Limits (IROLs).
  - 7.2.7 Major EHV interconnections between operating areas.
- R8. Each Reliability Coordinator shall specify that DDRs installed, after the approval of this standard, function as continuous recorders. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R9. Each Reliability Coordinator shall specify that DDRs are installed with the following capabilities: *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
  - 9.1 A minimum recording time of sixty (60) seconds per trigger event.
  - 9.2 A minimum data sample rate of 960 samples per second, and a minimum data storage rate for RMS quantities of six (6) data points per second.
  - 9.3 Each DDR shall be set to trigger for at least one of the following (based on manufacturers' equipment capabilities):
    - 9.3.1 Rate of change of Frequency.
    - 9.3.2 Rate of change of Power.
    - 9.3.3 Delta Frequency (recommend 20 mHz change).
    - 9.3.4 Oscillation of Frequency.
- R10. Each Reliability Coordinator shall establish requirements such that the following quantities are monitored or derived where DDRs are installed: *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
  - 10.1 Line currents for most lines such that normal line maintenance activities do not interfere with DDR functionality.
  - 10.2 Bus voltages such that normal bus maintenance activities do not interfere with DDR functionality.
  - 10.3 As a minimum, one phase current per monitored Element and two phase-to-neutral voltages of different Elements. One of the monitored voltages shall be of the same phase as the monitored current.
  - 10.4 Frequency.
  - 10.5 Real and reactive power.
- R11. Each Reliability Coordinator shall document additional settings and deviations from the required trigger settings described in R9 and the required list of monitored quantities as described in R10, and

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

report this to the Regional Entity (RE) upon request. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

- R12.** Each Reliability Coordinator shall specify its DDR requirements including the DDR setting triggers established in R9 to the Transmission Owners and Generator Owners. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R13.** Each Transmission Owner and Generator Owner that receives a request from the Reliability Coordinator to install a DDR shall acquire and install the DDR in accordance with R12. Reliability Coordinators, Transmission Owners, and Generator Owners shall mutually agree on an implementation schedule. *[Violation Risk Factor: Medium] [Time Horizon: Planning and Operations Planning]*
- R14.** Each Transmission Owner and Generator Owner shall establish a maintenance and testing program for stand alone DME (equipment whose only purpose is disturbance monitoring) that includes: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*
- 14.1** Maintenance and testing intervals and their basis.
  - 14.2** Summary of maintenance and testing procedures.
  - 14.3** Monthly verification of communication channels used for accessing records remotely (if the entity relies on remote access and the channel is not monitored to a control center staffed around the clock, 24 hours a day, 7 days a week (24/7)).
  - 14.4** Monthly verification of time synchronization (if the loss of time synchronization is not monitored to a 24/7 control center).
  - 14.5** Monthly verification of active analog quantities.
  - 14.6** Verification of DDR and DFR settings in the software every six (6) years.
  - 14.7** A requirement to return failed units to service within 90 days. If a DME device will be out of service for greater than 90 days the owner shall keep a record of efforts aimed at restoring the DME to service.
- R15.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall share data within 30 days upon request. Each Reliability Coordinator, Transmission Owner, and Generator Owner shall provide recorded disturbance data from DMEs within 30 days of receipt of the request in each of the following cases: *[Violation Risk Factor: Lower] [Time Horizon: Operations]*
- 15.1** NERC, Regional Entity, Reliability Coordinator.
  - 15.2** Request from other Transmission Owners, Generator Owners within NPCC.
- R16.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall submit the data files conforming to the following format requirements: *[Violation Risk Factor: Lower] [Time Horizon: Operations]*
- 16.1** The data files shall be capable of being viewed, read, and analyzed with a generic COMTRADE analysis tool as per the latest revision of IEEE Standard C37.111.
  - 16.2** Disturbance Data files shall be named in conformance with the latest revision of IEEE Standard C37.232.
  - 16.3** Fault Recorder and DDR Files shall contain all monitored channels. SOE records shall contain station name, date, time resolved to milliseconds, SOE point name, status.

## Standard PRC-002-NPCC-01— Disturbance Monitoring

---

**R17.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall maintain, record and provide to the Regional Entity (RE), upon request, the following data on the DMEs installed to meet this standard: [*Violation Risk Factor: Lower*] [*Time Horizon: Operations*]

**17.1** Type of DME.

**17.2** Make and model of equipment.

**17.3** Installation location.

**17.4** Operational Status.

**17.5** Date last tested.

**17.6** Monitored Elements.

**17.7** All identified channels.

**17.8** Monitored electrical quantities.

### C. Measures

**M1.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided Sequence of Event recording capability in accordance with 1.1 and 1.2. (R1)

**M2.** Each Transmission Owner shall have, and provide upon request, evidence that it provided Fault recording capability in accordance with 2.1 to 2.6. (R2)

**M3.** Each Transmission Owner shall have, and provide upon request, evidence that it provided Fault recording capability that determined the Current Zero Time for loss of Bulk Electric System (BES) transmission Elements in accordance with R3.

**M4.** Each Generator Owner shall have, and provide upon request, evidence that it provided Fault recording capability for its Generating Plants at and above 200 MVA Capacity in accordance with R4.

**M5.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it records for Faults, sufficient electrical quantities for each monitored Element to determine the parameters listed in 5.1 to 5.5. (R5)

**M6.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided Fault recording capability in accordance with 6.1 to 6.4. (R6)

**M7.** Each Reliability Coordinator shall have, and provide upon request, evidence that it established its area's requirements for Dynamic Disturbance Recording (DDR) capability in accordance with 7.1 and .2. (R7)

**M8.** Each Reliability Coordinator shall have, and provide upon request, evidence that DDRs installed after the approval of this standard function as continuous recorders. (R8)

**M9.** Each Reliability Coordinator shall have, and provide upon request, evidence that it developed DDR setting triggers to include the parameters listed in 9.1 to 9.3. (R9)

**M10.** Each Reliability Coordinator shall have, and provide upon request, evidence that DDRs monitor the Elements listed in 10.1 through 10.5. (R10)

**M11.** Each Reliability Coordinator shall have, and provide upon request, evidence that it documented additional settings and deviations from the required trigger settings described in R9 and the required list of monitored quantities as described in R10. (R11)

## **Standard PRC-002-NPCC-01— Disturbance Monitoring**

---

- M12.** Each Reliability Coordinator shall have, and provide upon request, evidence that it specified its DDR requirements which included the DDR setting triggers established in R9 to the Transmission Owners and Generator Owners in the Reliability Coordinator's area. (R12)
- M13.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it acquired and installed the DDRs in accordance with the specifications contained in the Reliability Coordinator's request, and a mutually agreed upon implementation schedule. (R13)
- M14.** Each Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it has a maintenance and testing program for stand alone DME (equipment whose only purpose is disturbance monitoring) that meets the requirements in 14.1 through 14.7. (R14)
- M15.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it provided recorded disturbance data from DMEs within 30 days of the receipt of the request from the entities listed in 15.1 and 15.2. (R15)
- M16.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it submitted the data files in a format that meets the requirements in 16.1 through 16.3. (R16)
- M17.** Each Reliability Coordinator, Transmission Owner and Generator Owner shall have, and provide upon request, evidence that it maintained a record of and provided to NPCC when requested, the data on DMEs installed meeting the requirements 17.1 through 17.8. (R17)

### **D. Compliance**

#### **1. Compliance Monitoring Process**

##### **1.1. Compliance Enforcement Authority**

NPCC Compliance Committee

##### **1.2. Compliance Monitoring Period and Reset Time Frame**

Not Applicable

##### **1.3. Data Retention**

The Transmission Owner and Generator Owner shall keep evidences for three calendar years for Measures 1, 5, 6, 13, 16 and 17.

The Transmission Owner shall keep evidence for three years for Measures 2 and 3.

The Generator Owner shall keep evidence for three years for Measure 4.

The Reliability Coordinator shall keep evidence for three years for Measures 7, 8, 9, 10, 11, 12, 16 and 17.

The Transmission Owner and Generator Owner shall keep evidences for twenty-four calendar months for Measures 14 and 15.

The Reliability Coordinator shall keep evidence for twenty-four calendar months for Measure 15.

**Standard PRC-002-NPCC-01— Disturbance Monitoring**

If a Transmission Owner, Generator Owner or Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit and all subsequent record.

**1.4. Compliance Monitoring and Assessment Processes**

- Self-Certifications
- Spot Checking
- Compliance Audits
- Self-Reporting
- Compliance Violation Investigations
- Complaints

**1.5. Additional Compliance Information**

## **2. NPCC Antitrust Compliance Guidelines**

Lee Pedowicz read the NPCC Antitrust Compliance Guidelines.

## **3. Review Standard/Criteria Comparison Table**

Bob Pellegrini went over the objectives of the RSAR. Consideration was to be given to retiring PRC-002-NPCC-01 because of the NERC approval of PRC-002-2 (now pending with FERC). It was mentioned that Criteria A-15 was stay in place. George Wegh commented that A-15 will continue to exist because some Canadian entities did not accept PRC-002-NPCC-01. Bob Pellegrini added that A-15 might need refreshing.

PRC-002-NPCC-01 Requirement R1 was discussed.

Juan Villar commented that if it is decided to retire PRC-002-NPCC-01, then there must be an explanation in the petition to FERC as to why it is not needed.

Meeting participants said that the BES is more encompassing than NPCC's Criteria A-10 BPS.

Several participants shared the results of their internal assessments of SOE/DFR coverage differences between PRC-002-NPCC-01 and PRC-002-2. In each case the PRC-002-NPCC-01 standard was inclusive of the PRC-002-2 requirements, and in the majority of cases PRC-002-NPCC-01 required DME at 2 to 3 times the number of locations that PRC-002-2 required. The adequacy of data capture for event analysis obtainable from PRC-002-2, PRC-002-NPCC-01, and A-15 was discussed.

The intention of PRC-002-NPCC-01 was to have it applicable to BPS Elements. At the time of its writing, the formal NERC BES definition that is in force today did not exist. BES versus BPS will be an issue.

Bob Pellegrini felt that reliability would be diminished by not having a regional standard.

Lee Pedowicz will find out how enforceable is NPCC Criteria.

The question was raised as to whether or not PRC-002-2 and A-1 would be adequate to obtain disturbance monitoring data.

The question of whether refreshing A-15 would aid in the retirement of PRC-002-NPCC-01 was discussed. It was suggested to revise A-15 to fill in any reliability gaps presented by the retirement of PRC-002-NPCC-01 with PRC-002-2 being in place.

George Wegh said that TFSP will be looking to the Drafting Team to develop recommendations for revisions necessary in A-15. TFSP will be responsible for revising the A-15 Criteria document and possibly including it as part of a new directory.

How enforceable is A-15? It was felt that it applied to a smaller number of entities.

The Drafting Team will make changes to the provided table to align the necessary comparisons.

**4. Next Steps**

Another WebEx is planned for August 28, 2015 9:00 a.m. - 11:00 a.m. At that WebEx information on the enforceability of NPCC Criteria will be presented. Attendees should have hard copies of A-15, PRC-002-2, PRC-002-NPCC-01, and the Table to refer to, to facilitate comparisons.

**5. Future Meetings**

a. WebEx

Planned for Friday, August 28, 2015 from 9:00 a.m. - 11:00 a.m.

b. In person

Face-to-face meetings to be scheduled as needed.

## **Northeast Power Coordinating Council, Inc. (NPCC)**

### **Antitrust Compliance Guidelines**

It is NPCC's policy and practice to obey the antitrust laws and to avoid all conduct that unreasonably restrains competition. The antitrust laws make it important that meeting participants avoid discussion of topics that could result in charges of anti-competitive behavior, including: restraint of trade and conspiracies to monopolize, unfair or deceptive business acts or practices, price discrimination, division of markets, allocation of production, imposition of boycotts, exclusive dealing arrangements, and any other activity that unreasonably restrains competition.

It is the responsibility of every NPCC participant and employee who may in any way affect NPCC's compliance with the antitrust laws to carry out this commitment.

Participants in NPCC activities (including those participating in its committees, task forces and subgroups) should refrain from discussing the following throughout any meeting or during any breaks (including NPCC meetings, conference calls and informal discussions):

- Industry-related topics considered sensitive or market intelligence in nature that are outside of their committee's scope or assignment, or the published agenda for the meeting;
- Their company's prices for products or services, or prices charged by their competitors;
- Costs, discounts, terms of sale, profit margins or anything else that might affect prices;
- The resale prices their customers should charge for products they sell them;
- Allocating markets, customers, territories or products with their competitors;
- Limiting production;
- Whether or not to deal with any company; and
- Any competitively sensitive information concerning their company or a competitor.

Any decisions or actions by NPCC as a result of such meetings will only be taken in the interest of promoting and maintaining the reliability and adequacy of the bulk power system.

Any NPCC meeting participant or employee who is uncertain about the legal ramifications of a particular course of conduct or who has doubts or concerns about whether NPCC's antitrust compliance policy is implicated in any situation should call NPCC's Secretary, Ruta Skučas, Esq. at 1-202-470-6428.

### **2. NPCC Antitrust Compliance Guidelines**

Lee Pedowicz read the NPCC Antitrust Compliance Guidelines.

### **3. NPCC's Scott Nied--Compliance to call in to respond to enforceability questions**

Scott Nied, NPCC compliance called in. Bob Pellegrini asked Scott about the compliance and enforceability implications of retiring PRC-002-NPCC-01, making a new directory for Disturbance Monitoring, and revising A-15. Scott Nied replied that because PRC-002-NPCC-01 is FERC approved, Compliance only enforces PRC-002-NPCC-01 if an entity has a NERC Compliance Registry (NCR) numbers. Full Members have to comply with Criteria and Directories. This compliance is a voluntary obligation, and is validated by a signed document. Brian Robinson asked what are the ramifications if you don't comply? Scott Nied answered that for Full Members this is self-policing.

Bob Pellegrini asked the Drafting Team if it would be in favor of retiring PRC-002-NPCC-01, do a gap analysis and give to TFSP to revise A-15, or develop a directory. Dave Bertagnolli agreed with that course of action.

Brian Robinson asked that if it came down to a variance of the as of yet not FERC approved PRC-002-2, could it be handled with NPCC's Regional Standard Processes Manual procedure as is being done with PRC-006? Lee Pedowicz was going to find out.

A discussion of retiring PRC-002-NPCC-01 began centering on how to justify the retirement of PRC-002-NPCC-01. Justification is that A-15 and a possible new directory would be more stringent.

### **4. Review Standard/Criteria Comparison Table**

The comparison table was gone over. Paul Difilippo commented that there would be less disturbance monitoring coverage on BPS buses and generators without PRC-002-NPCC-01. A-15 would close any gaps.

George Wegh commented that the Drafting Team would have to make a recommendation on what would have to be revised in A-15.

Juan Villar commented that he liked the approach of retiring PRC-002-NPCC-01. He agreed that any gaps between PRC-002-2 and PRC-002-NPCC-01 could be addressed in A-15.

Any redundancies between A-15 and PRC-002-2 would have to be eliminated. It was suggested that the DDR section in A-15 could be removed- since PRC-002-2 is far more inclusive than A-15.

### **4. Next Steps**

The next WebEx is planned for September 11, 2015 1:00 p.m. - 3:00 p.m.

### **2. NPCC Antitrust Compliance Guidelines**

Lee Pedowicz read the NPCC Antitrust Compliance Guidelines.

### **3. Review Standard/Criteria Comparison Table**

#### **a. Revise A-15, or develop a directory**

Lee Pedowicz gave a summary of how PRC-002-NPCC-01 can be handled-- replace with a directory (and what would comprise a directory in terms of including B and C documents), revise Criteria A-15, or revise PRC-002-NPCC-01.

Robert Pellegrini asked for opinions on retiring PRC-002-NPCC-01 and developing a directory.

Lee Pedowicz discussed the directory development process, and referred the meeting to NPCC's Directory Development and Revision Manual.

Lee Pedowicz will handle all the administrative details going forward.

George Wegh led a discussion on a Directory addressing NPCC's BPS versus the continent-wide standard covering the BES. A discussion ensued over the possibility of overlapping requirements (there should not be redundancy between requirements) between PRC-002-2 and a new NPCC directory. The directory would have the more stringent requirements. **From page 4 of NPCC's Directory Development and Revision Manual directed that "...an initial translation of the existing criteria document was performed in addition to identifying and eliminating language within the criteria that duplicated existing NERC Reliability Standards." Redundancy is to be avoided to ensure that there cannot be multiple violations because of the violation of one requirement.**

Lee Pedowicz is going to get information on an overlap between Directory #1 and the relevant continent-wide standards.

Robert Pellegrini stated that because PRC-002-2 is more stringent for DDR, NPCC will follow PRC-002-2. This was agreed with by the meeting.

Lee Pedowicz mentioned that FERC will be discussing PRC-002-2 at its upcoming September 17, 2015 meeting. He will send electronically distribute FERC's announcement of the meeting, and send the Drafting Team its decision on PRC-002-2.

The question was raised regarding how compliance with PRC-002-NPCC-01 would be enforced by NPCC while the standard was being considered for retirement by FERC. Brian Robinson said that the precedent has been set for having standards not actively monitored by NPCC Compliance. Lee Pedowicz will check with NPCC Compliance to see how they would approach enforcing PRC-002-NPCC-01 while it was with FERC for retirement consideration, but

before it was officially retired, and see if it could be taken off the actively monitored list.

The development of a new directory would be given by NPCC to an outside contractor. That draft would be used as the foundation for its formal development.

Lee Pedowicz asked what the Drafting Team's role will be during this process, and George Wegh mentioned that review of the directory's development would be taken over by TFSP.

Lee Pedowicz to call in to the TFSP meeting September 16, 2015 to give an update on Disturbance Monitoring. (Note: George Wegh addressed PRC-002-NPCC-01 and Lee Pedowicz did not have to call in.)

**4. Next Steps**

Lee Pedowicz will handle the administration of the retirement of PRC-002-NPCC-01, and the development of a directory.

**5. Future Meetings**

- a. WebEx--will be held if necessary.
- b. In person

## **Northeast Power Coordinating Council, Inc. (NPCC)**

### **Antitrust Compliance Guidelines**

It is NPCC's policy and practice to obey the antitrust laws and to avoid all conduct that unreasonably restrains competition. The antitrust laws make it important that meeting participants avoid discussion of topics that could result in charges of anti-competitive behavior, including: restraint of trade and conspiracies to monopolize, unfair or deceptive business acts or practices, price discrimination, division of markets, allocation of production, imposition of boycotts, exclusive dealing arrangements, and any other activity that unreasonably restrains competition.

It is the responsibility of every NPCC participant and employee who may in any way affect NPCC's compliance with the antitrust laws to carry out this commitment.

Participants in NPCC activities (including those participating in its committees, task forces and subgroups) should refrain from discussing the following throughout any meeting or during any breaks (including NPCC meetings, conference calls and informal discussions):

- Industry-related topics considered sensitive or market intelligence in nature that are outside of their committee's scope or assignment, or the published agenda for the meeting;
- Their company's prices for products or services, or prices charged by their competitors;
- Costs, discounts, terms of sale, profit margins or anything else that might affect prices;
- The resale prices their customers should charge for products they sell them;
- Allocating markets, customers, territories or products with their competitors;
- Limiting production;
- Whether or not to deal with any company; and
- Any competitively sensitive information concerning their company or a competitor.

Any decisions or actions by NPCC as a result of such meetings will only be taken in the interest of promoting and maintaining the reliability and adequacy of the bulk power system.

Any NPCC meeting participant or employee who is uncertain about the legal ramifications of a particular course of conduct or who has doubts or concerns about

whether NPCC's antitrust compliance policy is implicated in any situation should call NPCC's Secretary, Ruta Skučas, Esq. at 1-202-470-6428.

October 16, 2015

**Subject: Notification of Pre-Ballot Review for Retirement of Regional Standard PRC-002-NPCC-01  
Disturbance Monitoring**

Dear Madam/Sir:

On October 8, 2015 NPCC's Regional Standards Committee acting on the recommendation of the PRC-002-NPCC-02 Drafting Team, authorized the use of NPCC's standards process for retirement of NPCC Regional Standard [PRC-002-NPCC-01 Disturbance Monitoring](#). The Drafting Team had been convened to address an approved Regional Standard Authorization Request (RSAR), and it decided that PRC-002-NPCC-01 could be retired dependent upon the FERC approval of continent-wide [PRC-002-2 Disturbance Monitoring and Reporting Requirements](#). PRC-00-2 was approved by the FERC September 25, 2015 without any directives issued.

In accordance with the NPCC Regional Standard Processes Manual (RSPM), this authorization for retirement is to first be approved by the NPCC Members with subsequent approvals by the NPCC Board of Directors, NERC Board of Trustees, and then filing for approval of the retirement with the applicable governmental authorities. PRC-002-NPCC-01 and the Drafting Team's supporting document for the Standard's retirement have been merged into one document, and is posted on the NPCC Website for a thirty (30) day pre-ballot review period beginning this date. Immediately following the 30-day pre-ballot review a ten (10) day ballot period will commence. The 30-day Pre-Ballot Review, as currently posted, will close November 15, 2015.

The Standard/supporting document can be viewed at:

[Retirement of PRC-002-NPCC-01 Disturbance Monitoring Authorized by NPCC's Regional Standards Committee](#)

If you have any questions, please contact me.

Thank you.

1040 AVE. OF THE AMERICAS, NEW YORK, NY 10018 (212) 840-1070 FAX (212) 302-2782

March 31, 2016

To: NERC Board of Trustees

Subject: Request for Approval, Retirement of NPCC Regional Reliability Standard PRC-002-NPCC-01 *Disturbance Monitoring*.

On March 23, 2016 in accordance with the NPCC Regional Standard Processes Manual the NPCC Board of Directors approved the retirement of NPCC Regional Standard PRC-002-NPCC-01 *Disturbance Monitoring*.

The subject standard was originally adopted by the NERC Board of Trustees on November 4, 2010 and approved by the FERC on October 20, 2011. The standard was subject to enforcement on October 20, 2013. FERC recently approved the NERC continent-wide standard PRC-002-2 *Disturbance Monitoring and Reporting Requirements*, which becomes enforceable on July 1, 2016. NPCC participated in the development of the continent-wide standard and attributes of the Regional standard were incorporated into PRC-002-2.

Upon approval of the continent-wide standard by the FERC, NPCC's Task Force on System Protection, acting as a standard review/drafting team, initiated an analysis to determine if there was a reliability related need to maintain the Regional standard. The results of the review, as attached, indicated that the continent-wide standard's requirements were sufficient and redundant in their objectives with the Regional standard and identified where any differences are addressed by NPCC's existing more stringent reliability criteria.

Further, in accordance with the NERC "Regional Reliability Standards Evaluation Procedure 2.1", the proposal to retire the standard has been posted by NERC and no non-supportive comments were received.

Accordingly, NPCC is requesting that PRC-002-NPCC-01 be retired effective the later of July 1, 2016 or the date the retirement is approved by the applicable regulatory authorities. Contingent upon the approval of the NERC BOT, NPCC will work with NERC Legal Staff in order to prepare the necessary filings and petitions.

Thank you for your consideration.

Ruida Shu

**PRC-002-NPCC-02 Disturbance Monitoring Draft Team Roster**

<b>Name:</b>	<b>Company:</b>	<b>Qualifications:</b>
Don Burkart	Con Edison	Don has 5 years in relay protection engineering and have had countless experiences in system event analyses. Additionally, He is the Lead Disciple Engineer for the company wide DME programs.
Robert Grabovickic	National Grid	Responsibilities include the analysis of events and system disturbances, protection co-ordination studies, calculations of settings for protection relays and disturbance fault recorders (DFRs), configuration of DFRs for NY PMU project, reviewing the relay settings of generators owned by customers, the development of protection standards.
Tim Kucey	PSEG	Member of current NPCC PRC-002-NPCC review SDT (joined SDT in 2013 in response to membership solicitation). Co-lead of the “Tools and Training” team of the NERC investigation of the August 2003 Northeast Blackout. Responsible for the bulk of the team’s findings/discoveries – and the associated write-ups in the NERC and US-Canada Bilateral Commission reports - regarding key entities’ implementation, usage and the performance of system monitoring and analysis “tools” (e.g. EMS, RTCAs, SEs) involved in the incident. For the period 1994 through to 2002, technical positions with process and power industry DCS/EMS, SCADA and RTU OEMs: Fisher-Rosemount (now Emerson); Moore Process Control (now Siemens); GE Harris (previously Westronics, HDAP; now GE Power). NERC Manager of Enforcement and Mitigation from 2006 until 2010, then NERC’s CEA agent (Manager of NOP Development) until late 2011. Duties included review of all compliance actions taken by NERC to the NERC BOT Compliance Committee, frequent engagement with the CCC and the Standards Committee, FERC staff, SDTs. Also involvement in several NERC events analyses/investigations and joint NERC-FERC 1B actions, typically involving transmission organizations, balancing authorities and reliability coordinators.
Brian Evans-Mongeon	Utility Services	As a prior member of the drafting team, he believe that he is qualified to serve again. He has been involved in numerous drafting teams including EOP-004, PRC-006 for both NPCC and NERC, BES, and Dispersed Generating Resources. He also serve on the NPCC RCC and the NERC PC, ERSTF, and RBRTF.
Robert Pellegrini	UI	Involved in designing P&C SCADA systems
Jim Watson	Dynegy	He has been employed in the electric utility industry for 33 years in the areas of generation operations, planning, and environmental compliance and for the last 4 years – NERC compliance.
George Wegh	Eversource	George has over 25 years of Electrical Engineering experience, of which 15 years have been in the utility industry. He is presently the Manager of Transmission Protection and Controls Engineering at Eversource Energy. He has been working in the Transmission Protection and Controls Department at Eversource Energy for over 8 years. He presently serve as the NPCC representative on the NERC System Protection and Controls Subcommittee (SPCS) and am Vice Chairman of the NPCC Task Force on System Protection (TFSP).
Paul Difilippo	Hydro One	28 years of experience in various aspects of protection systems at Hydro One including analysis of the 2003 Northeast blackout utilizing all available DME in Ontario. Member of TFSP since 2008 and current Chair. He is also the requester for the RSAR.
Ruida Shu	NPCC	NPCC Standards Staff. Ruida Shu has 8+ years of experience in

		Distribution, Transmission, SCADA, Construction, Daily Electric Operations, Facility Maintenance, Security, DOE/FEMA/APPA Grant Projects, Safety, Compliance and Reliability Standards.
Lee Pedowicz	NPCC	Manager of Reliability Standards at NPCC. Chair of PRC-002-2 Drafting Team. System operations real-time operating and outage scheduling, protective system testing, and substation design experience.
Daniel Kidney	NPCC	NPCC Compliance Staff. Daniel has been a member of the Compliance Enforcement staff at NPCC since 2014. Prior to joining NPCC, he was employed as a Transmission Planner at Central Maine Power.

NORTHEAST POWER COORDINATING COUNCIL, INC.  
1040 AVE. OF THE AMERICAS, NEW YORK, NY 10018 (212) 840-1070 FAX (212) 302-2782

December 2<sup>nd</sup>, 2015

NPCC Full and General Members:

In accordance with the NPCC Regional Standard Processes Manual the ballot period for the retirement of NPCC Regional Standard PRC-002-NPCC-01 Disturbance Monitoring closed at 23:59PM on November 26<sup>th</sup>, 2015.

The results of the ballot were as follows:

Quorum: 69% of the Total Registered

Approval: 97.10%

No negative ballots were received with comments therefore, in accordance with our Standards Processes Manual a recommendation for final Regional approval will be sent to the NPCC Board of Directors for consideration at their meeting on February 2, 2016.

Contingent upon the approval of the NPCC BOD, the proposal to retire PRC-002-NPCC-01 will be submitted to the NERC Board of Trustees with subsequent filings with the FERC and applicable provincial authorities.

Voting was conducted electronically and the full retirement record for the standard may be viewed at:

<https://www.npcc.org/Standards/SitePages/DevStandardDetail.aspx?DevDocumentId=120>

Thank you for your participation.

## REGIONAL STANDARDS COMMITTEE

**Chairman:**

Guy V. Zito  
Assistant Vice President - Standards  
Northeast Power Coordinating Council, Inc.  
Tel. (212) 840-1070  
Email: [gzito@npcc.org](mailto:gzito@npcc.org)

**Co-Vice Chairman:**

Si Truc Phan  
Engineer – Reliability Standards & Operating Procedures  
Reliability Coordinator  
2 Complexe Desjardins, 19th floor, East Tower  
Montreal, Québec, Canada H5B 1H7  
Tel. (514) 879-4100 Ext. 3610  
Email: [phan.si\\_truc@hydro.qc.ca](mailto:phan.si_truc@hydro.qc.ca)

**Co-Vice Chairman:**

Bruce Metruck  
Director, Reliability Standards & Compliance  
New York Power Authority  
F.R. Clark Energy Center  
6520 Glass Factory Road  
Marcy, NY 13403  
Tel. (315) 792-8213  
Email: [bruce.metruck@nypa.gov](mailto:bruce.metruck@nypa.gov)

### **Sector 1 - Transmission Owners**

#### **Hydro One Networks, Inc.**

Primary

Paul Malozewski, P. Eng., MBA, PMP  
Manager – Reliability Standards and Strategies  
Tel. 416-345-5005  
Email: [paul.malozewski@hydroone.com](mailto:paul.malozewski@hydroone.com)

Alternate

Payam Farahbakhsh, M. Eng, P. Eng.  
Network Management Engineer – Reliability  
Standards and Strategies  
Tel. (416) 345-5484  
Email: [Payam.Farahbakhsh@HydroOne.com](mailto:Payam.Farahbakhsh@HydroOne.com)

#### **Consolidated Edison Company of New York, Inc.**

Primary

Michael Forte  
Chief Transmission Planning Engineer  
Tel. (212) 460-3416  
Fax (212) 529-1130  
Email: [fortem@coned.com](mailto:fortem@coned.com)

Alternate

Martin Paszek  
Manager, Bulk Power System Performance and  
Analysis  
Tel. (212) 460-6415  
Fax (212) 529-1130  
Email: [paszekm@coned.com](mailto:paszekm@coned.com)

## National Grid

### Primary

Brian Shanahan  
Lead Engineer  
Transmission Control Center – NY  
National Grid, US  
Tel. (315) 460-4346  
Email: [brian.shanahan@nationalgrid.com](mailto:brian.shanahan@nationalgrid.com)

### Alternate

Michael Schiavone  
Director, Transmission Control Center – NY  
National Grid, US  
Tel. (315) 460-4472  
Email: [Michael.schiavone@nationalgrid.com](mailto:Michael.schiavone@nationalgrid.com)

## New Brunswick Power Corporation

### Primary

Rob Vance, P.Eng.  
Power System Engineer
