BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

North American Electric Reliability Corporation	**)**	**Docket No. ________________**
	)	

PETITION OF THE
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION
FOR APPROVAL OF PROPOSED EMERGENCY OPERATIONS RELIABILITY STANDARDS

Pursuant to Section 215(d)(1) of the Federal Power Act ("FPA")[1] and Section 39.5[2] of the Federal Energy Regulatory Commission's ("FERC" or "Commission") regulations, the North American Electric Reliability Corporation ("NERC")[3] hereby submits for Commission approval proposed Emergency Operations ("EOP") Reliability Standards EOP-004-4 (*Event Reporting*), EOP-005-3 (*System Restoration from Blackstart Resources*), EOP-006-3 (*System Restoration Coordination*), and EOP-008-2 (*Loss of Control Center Functionality*). NERC requests that the Commission approve the proposed Reliability Standards (**Exhibit A**) as just, reasonable, not unduly discriminatory or preferential, and in the public interest. NERC also proposes that the Commission approve: (i) the associated Implementation Plans (**Exhibit B**); (ii) the Violation Risk Factors ("VRFs") and Violation Severity Levels ("VSLs") (**Exhibit E**); and (iii) the retirement of the currently-effective Reliability Standards EOP-004-3, EOP-005-2, EOP-006-2, and EOP-008-1, upon Commission approval of the proposed Reliability Standards.

---

[1] 16 U.S.C. § 824o (2012).

[2] 18 C.F.R. § 39.5 (2016).

[3] The Commission certified NERC as the electric reliability organization ("ERO") in accordance with Section 215 of the FPA on July 20, 2006. *N. Am. Elec. Reliability Corp.*, 116 FERC ¶ 61,062 (2006).

As required by Section 39.5(a)[4] of the Commission's regulations, this petition presents the technical basis and purpose of the proposed Reliability Standards, a demonstration that the proposed Reliability Standards meet the criteria identified by the Commission in Order No. 672[5] (**Exhibit C**), and a summary of the standard development proceedings (**Exhibit G**). The NERC Board of Trustees ("Board") adopted the proposed EOP Reliability Standards on February 9, 2017.

I. EXECUTIVE SUMMARY

The primary objectives of the proposed EOP Reliability Standards are as follows:

(1) to provide accurate reporting of events to NERC's Event Analysis group to analyze the impact on the reliability of the Bulk Electric System ("BES") (EOP-004-4);

(2) to delineate the roles and responsibilities of entities that support System restoration from Blackstart Resources which generate power without the support of the grid (EOP-005-3);

(3) to clarify the procedures and coordination requirements for Reliability Coordinator personnel to execute System restoration processes (EOP-006-3); and,

(4) to refine the required elements of an Operating Plan used to continue reliable operations of the BES in the event that primary control functionality is lost (EOP-008-2).

The proposed revisions incorporate several recommendations of the Project 2015-02 Emergency Operations Periodic Review Team as well as the Independent Experts Review Panel ("Panel").[6] They also reflect collaboration with the Department of Energy ("DOE") to eliminate

---

4 18 C.F.R. § 39.5(a)(2016).

5 The Commission specified in Order No. 672 certain general factors it would consider when assessing whether a particular Reliability Standard is just and reasonable. *See Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards* ("Order No.672"), Order No. 672, FERC Stats. & Regs. ¶ 31,204, at P 262, 321-37, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

6 NERC retained five industry experts ("Panel") to independently review the content and quality of the NERC Reliability Standards, including identification of potential BPS risks that were not adequately mitigated. *See* Standards Independent Experts Review Project: An Independent Review by Industry Experts, *available at* http://www.nerc.com/pa/Stand/Resources/Documents/Standards_Independent_Experts_Review_Project_Report.pdf.

either inaccurate or duplicate reporting of events identified in DOE's Electric Emergency Incident and Disturbance Report ("OE-417") as well as in Attachment 1 to NERC's Reliability Standard EOP-004. The proposed standards substantially improve upon the existing standards by enhancing the requirements for Emergency operations, including the communication and coordination amongst reporting entities.

For reasons discussed herein, NERC requests that the Commission approve the proposed Reliability Standards and the proposed retirement of Reliability Standards EOP-004-3, EOP-005-2, EOP-006-2 and EOP-008-1 as just, reasonable, not unduly discriminatory or preferential, and in the public interest.

III. BACKGROUND

A. Regulatory Framework

By enacting the Energy Policy Act of 2005,[8] Congress entrusted the Commission with the duties of approving and enforcing rules to ensure the reliability of the nation's Bulk-Power System,

---

[7] Persons to be included on the Commission's service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission's regulations, 18 C.F.R. § 385.203 (2012), to allow the inclusion of more than two persons on the service list in this proceeding.

[8] 16 U.S.C. § 824o (2012).

and with the duties of certifying an Electric Reliability Organization (ERO) that would be charged with developing and enforcing mandatory Reliability Standards, subject to Commission approval. Section 215(b)(1) of the FPA states that all users, owners, and operators of the Bulk-Power System in the United States will be subject to Commission-approved Reliability Standards.[9] Section 215(d)(5) of the FPA authorizes the Commission to order the ERO to submit a new or modified Reliability Standard.[10] Section 39.5(a) of the Commission's regulations requires the ERO to file with the Commission for its approval each Reliability Standard that the ERO proposes should become mandatory and enforceable in the United States, and each modification to a Reliability Standard that the ERO proposes should be made effective.[11]

The Commission has the regulatory responsibility to approve Reliability Standards that protect the reliability of the Bulk-Power System and to ensure that such Reliability Standards are just, reasonable, not unduly discriminatory or preferential, and in the public interest. Pursuant to Section 215(d)(2) of the FPA[12] and Section 39.5(c) of the Commission's regulations, "the Commission will give due weight to the technical expertise of the ERO" with respect to the content of a Reliability Standard.[13]

B. NERC Reliability Standards Development Procedure

The proposed Reliability Standards were developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.[14] NERC

develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC Standard Processes Manual.[15] In its order certifying NERC as the Commission's ERO, the Commission found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards,[16] and thus satisfy certain of the criteria for approving Reliability Standards.[17] The development process is open to any person or entity with a legitimate interest in the reliability of the Bulk-Power System. NERC considers the comments of all stakeholders, and a vote of stakeholders and the NERC Board is required to approve a Reliability Standard before the Reliability Standard is submitted to the Commission for approval.

C. Development of the Proposed Reliability Standards

As further described in **Exhibit G** hereto, the proposed Emergency Preparedness and Operations ("EOP") group of Reliability Standards (EOP-004-4, EOP-005-3, EOP-006-3, and EOP-008-2) were developed to implement the revisions and retirements recommended by the EOP Standard Drafting Team from Project 2015-02 – Periodic Review of Emergency Operations ("EOP SDT"). In addition, the proposed EOP Reliability Standards are intended to (1) streamline the

standards; (2) apply Paragraph 81 criteria;[18] while making the standards more results-based; and (3) address the Commission's concern articulated in Order No. 749 regarding system restoration training.[19]

For a summary of the development history in Project 2015-08 and the complete record of development, see **Exhibit G**.

IV. JUSTIFICATION FOR APPROVAL

As discussed in detail in **Exhibit C**, the proposed Reliability Standards satisfy the Commission's criteria in Order No. 672 and are just, reasonable, not unduly discriminatory or preferential, and in the public interest.

Below, NERC (1) describes the reliability purpose of each proposed standard, (2) provides a justification for the proposed revisions to each Reliability Standard, and, (3) discusses the enforceability of the proposed standards.

---

[18] *See* North American Electric Reliability Corp., 138 FERC ¶ 61,193, at P 81 (March 2012 Order), order on reh'g and clarification, 139 FERC ¶ 61,168 (2012).

[19] Order No. 749, *System Restoration Reliability Standards*, 134 FERC ¶ 61,215, 76 Fed. Reg. 16277 (2011) ("Order No. 749") at PP 18, 24:

> Requirement R11 of EOP-005-2 requires that a minimum of two hours of system restoration training be provided every two years to field switching personnel performing "unique tasks" associated with the transmission operator's restoration plan. In the NOPR, the Commission expressed concern that the applicable entities may not understand what the term "unique tasks" means. We requested comment on what is intended by that term and on whether guidance should be provided to the transmission operators, transmission owners, and distribution providers who are responsible for providing training. In addition, the NOPR sought comment as to whether the unique tasks should be identified in each transmission operator's restoration plan.
>
> . . .
>
> Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations.

A. Proposed Reliability Standard EOP-004-4 – Event Reporting

The purpose of Reliability Standard EOP-004-4 is to improve the reliability of the BES by requiring the reporting of events by Responsible Entities. The reportable events under this standard are collected and used for operations planning and operational assessments. Specifically, these reportable events are used to examine the underlying causes of events, track subsequent corrective action to prevent recurrence of such events, and develop lessons learned for industry. The reportable events under this standard are not intended to address issues that arise in Real-time operations which often require action by Responsible Entities within one hour or less to preserve the reliability of the BES.

The proposed changes to this standard are designed to (1) eliminate redundant reporting of a single event by multiple entities, (2) assign reporting to appropriate entities, (3) clarify the threshold reporting for a given event; and, (4) where appropriate, align the reportable events and thresholds identified in Attachments 1 and 2 of the standard with the DOE's OE-417. The proposed changes improve the quality of information received by the ERO as well as the quality of analysis that the ERO produces from this information to assess the greatest risk to the BES.

1. Requirement-by-Requirement Justification

a. EOP-004-4, Proposed Requirement R2

In Requirement R2, NERC proposes to expressly reference Attachment 1. This reference was previously absent from Requirement R2 and improves the requirement by identifying the universe of events reportable under this standard. NERC also streamlines the timing language for event reporting. NERC proposes that Responsible Entities must submit reports "by the later of" either 24 hours after recognizing that a reportable event has occurred or "by the end of the Responsible Entity's next business day." The EOP SDT found that referencing "business day" eliminates the need for the requirement to further indicate that reporting is not expected on the weekend and holidays. The EOP SDT denotes the end of the business day as "4 p.m. local time" to eliminate possible confusion regarding when the reporting obligation ends on a given business day. None of these changes, as reproduced below, affect the frequency or pace at which EOP-004 reports are submitted.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan ~~within~~ by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day ~~if the event occurs on a weekend (which is recognized to be 4 PM~~ (4 p.m. local time ~~on Friday to 8 AM Monday local time).~~will be considered the end of the business day). [Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]

b. EOP-004-4, Proposed Retirement of Requirement R3

Under the currently-effective Requirement R3, Responsible Entities must validate contact information in their Operating Plans each calendar year. NERC proposes to retire Requirement R3 under Criterion B1 as an administrative task not warranting a requirement.[20] The process of validating contact lists is a good business practice of many utilities, but not a reliability priority. Furthermore, this proposed retirement of Requirement R3 is also consistent with the Panel's recommendation and rationale.

[20] Paragraph 81 Criteria B (Identifying Criteria) - B1. Administrative:
The Reliability Standard requirement requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. This criterion is designed to identify requirements that can be retired or modified with little effect on reliability and whose retirement or modification will result in an increase in the efficiency of the ERO compliance program. Administrative functions may include a task that is related to developing procedures or plans, such as establishing communication contacts. Thus, for certain requirements, Criterion B1 is closely related to Criteria B2, B3 and B4. Strictly administrative functions do not inherently negatively impact reliability directly and, where possible, should be eliminated or modified for purposes of efficiency and to allow the ERO and entities to appropriately allocate resources.

c. EOP-004 - Attachment 1: Reportable Events

In Attachment 1 NERC identifies the types and thresholds of reportable events that have the potential to impact the reliability of the BES. To report events to NERC, Responsible Entities in the U.S. must submit Attachment 2 to EOP-004, which incorporates the event types in Attachment 1. To the extent that DOE's OE-417 reflects similar event types and thresholds as Attachment 2, Responsible Entities in the U.S. may submit OE-417 in lieu of Attachment 2.

The currently-effective event types and thresholds reflected in Attachments 1 and 2 and OE-417 are not all aligned, resulting in a level of uncertainty as to whether an event is reportable. Some event types overlap (e.g., "system wide voltage reduction of 3% or more" in EOP-004 and "system-wide voltage reductions of 3 percent or more" in OE-417). In other event types, the degree of overlap is ambiguous (e.g., "physical threat to its BES control center.. .which has the potential to degrade the normal operation of the control center or suspicious device or activity at a BES control center" in EOP-004 compared to "physical attack that could potentially impact electric power system adequacy or reliability; or vandalism which targets components of any security systems" in OE-417). Certain event types exist exclusively in EOP-004 (e.g., "complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement"). In cases where a Responsible Entity is unsure whether two event types are aligned between the two forms, that entity could duplicate efforts and submit both forms for a single event. Alternatively, a Responsible Entity may fail to report a reportable event due to ambiguity in the description of an event type in either form.

The accurate reporting of disturbances and events is essential for the ERO and governmental authorities, such as DOE, to provide industry with meaningful trend and root causes analyses. The EOP SDT identified the potential for efficiency in clarifying event types and thresholds and aligning reporting requirements between EOP-004 and OE-417.[21] The proposed revisions to Attachment 1 represent an improvement in the identification and reporting of such events.

NERC's proposed revisions to Attachment 1 aim to accomplish the following:

(1) assign reporting to responsible entities with relevant operating responsibilities;

(2) align the event types between Attachment 1 and OE-417 as much as possible to eliminate redundancies in reporting of a single event thereby enhancing the efficiency of event reporting; and,

(3) establish appropriate thresholds for triggering events that pose the greatest reliability risk to the BES.

Below, NERC outlines the proposed revisions to each event type and its respective threshold.

i. Damage or Destruction to Facilities

Responsible Entities that experience damage or destruction to a Facility resulting from "actual or suspected intentional human action" are required to submit a report to NERC. NERC proposes three changes to this event type. First, NERC proposes to remove Balancing Authorities as Responsible Entities, but leaves Transmission Owners, Transmission Operators, Generation Owners, Generation Operators, and Distribution Providers as appropriate Responsible Entities. The EOP SDT found that Facility owners and operators are best suited to identify any damage or destruction to their Facilities and therefore should bear the reporting responsibility. Examples of Facilities include a Transmission line, a generator, a shunt compensation device or a transformer. Balancing Authorities do not own the relevant Facilities. To further reflect the importance of

21 The ERO has an Event Analysis Program ("EAP") which evaluates the reports submitted pursuant to EOP-004 and OE-417. Such reports may trigger further scrutiny by EAP personnel. EAP personnel may request that more data about a given event.

ownership or operations of a Facility to identification of such an event, NERC also proposes to change the event type from "Damage or destruction of a Facility" to "Damage or destruction of its Facility." Finally, NERC clarifies in the event threshold that theft from its Facility should not be reported as damage or destruction unless it degrades normal operation of its Facility. Copper theft from the infrastructure of Facilities is a frequent occurrence in the industry; however, the EOP SDT concluded that the reporting obligation for this event type should focus on those that threaten the operation of the Facility. Acts of theft were previously reported under the "physical threat" event type and NERC proposes to move it to the "damage or destruction" event type because it involves the infrastructure of a Facility.

ii. Physical Threats to Facilities

Responsible Entities that experience physical threats to a Facility, including suspicious devices or activities at a Facility, but excluding weather and natural disaster, are required to submit an event report. NERC proposes three changes to this event type. NERC again proposes that Facility owners and operators are best suited to identify any such threat and therefore should bear the reporting responsibility. As a functional entity, Balancing Authorities do not own or operate a Facility; therefore, they are removed as a Responsible Entity. Second, to reflect the importance of ownership or operation of a Facility, NERC proposes to change the event type to "Physical threats to its Facility." Finally, NERC proposes to modify the statement "Do not report theft unless it degrades normal operation of a Facility" and to modify it to read as "It is not necessary to report theft unless it degrades normal operation of its Facility." NERC also moves this modified language to the "Damage or Destruction of its Facility" threshold for reporting. An actual act of theft to a Facility more closely relates to damage or destruction of a Facility rather than a physical threat.

iii. Physical Threats to BES Control Center

Consistent with other event types, NERC proposes to change the physical threat event type and threshold to reflect the importance of ownership of a Facility. NERC proposes to change the event type to "Physical threats to its BES control center" and the threshold to "Suspicious device or activity at its BES control center."

iv. Public Appeal for Load Reduction

NERC Reliability Standard EOP-011-1 (Emergency Operations) ensures that all Reliability Coordinators understand potential and actual Energy Emergencies in the Interconnection. Energy Emergency Alert Level 2 (EEA-2) involves load management procedures such as public appeals to reduce demand, interrupting firm load commitments, and voltage reduction. Public appeals for load reduction are conducted when load is expected to exceed available generation. Such appeals often occur on extreme weather days where a local utility asks customers to reduce usage of electricity during certain hours of the day. These appeals would not include load management for economic reasons.

NERC proposes two substantive changes to the "public appeal for load reduction" event type in EOP-004-4 to report instances where an entity initiates a public appeal for load reduction. First, NERC replaces "initiating entity" with "Balancing Authority" as the entity responsible for reporting this event. Pursuant to EOP-011-1 (Emergency Operations), it is the Balancing Authority that develops, maintains and implements Reliability Coordinator-reviewed Operating Plans to mitigate Capacity Emergencies and Energy Emergencies within its Balancing Authority Area. Balancing Authorities must include processes to prepare for and mitigate Emergencies in these Operating Plans. Furthermore, the Balancing Authority, pursuant to Reliability Standard EOP-011-1, Requirement R2, Part 2.2.2, is responsible for requesting the Reliability Coordinator to declare an Energy Emergency Alert. Second, NERC clarifies that the threshold for such a load reduction event is when the requested reduction is required to maintain the continuity of the BES. This clarifying language aligns with similar language in DOE's OE-417 form which includes the event type "Public appeal to reduce the use of electricity for purposes of maintaining the continuity of the electric power system."

v. Voltage Reduction

Voltage reduction is a load management procedure in which the Transmission Operator requests or directs distribution operators to decrease voltage in the distribution portion of the System to minimize the likelihood of service interruptions. This lower voltage in turn reduces the load on home devices. For purposes of reporting voltage reduction under EOP-004-4, NERC replaces the phrase "initiating entity" with "Transmission Operator" as the Transmission Operator is in fact the entity that initiates voltage reduction and, in turn, should be responsible for reporting the event.

vi. Load Shedding

NERC proposes to combine two event types – "BES Emergency requiring manual firm load shedding" and "BES Emergency resulting in automatic firm load shedding" into a single event type – "Firm load shedding resulting from a BES Emergency." This change streamlines the list of events in Attachment 1. In the reporting threshold, NERC indicates that the 100 MWs threshold can be attributed to either manual or automatic load shedding. NERC also removes the requirement that the automatic load shedding be attributed to "undervoltage or underfrequency load shedding schemes, or [Remedial Action Schemes]." These schemes are automatic systems designed to decrease load when either the voltage or frequency of a System reaches predetermined low levels. The EOP SDT found that it was unnecessary to detail specific types of load shedding schemes in the standard. As the name of a scheme may change and new load shedding practices may be developed, NERC proposes to keep the language in the threshold broad and to eliminate specific practice references to accommodate future changes in practice or nomenclature.

For both automatic and manual load shedding, NERC identifies the Responsible Entity as the "initiating Reliability Coordinator, Balancing Authority or Transmission Operator." Pursuant to EOP-011-1 (Emergency Operations), Balancing Authorities and Transmission Operators must develop, maintain and implement Reliability Coordinator-approved Operating Plans to mitigate Capacity Emergencies, Energy Emergencies, and operating Emergencies in their respective areas. These Operating Plans shall include provisions for operator-controlled manual Load shedding that minimize the overlap with automatic Load shedding and are capable of being implemented in a timeframe adequate for mitigating the Emergency. NERC recognizes that for a given event, a single entity may be registered for all three functions or three separate entities may be registered for each of these functions. It is the intent of the EOP SDT that in either scenario, only one report is required.

Distribution Providers and Transmission Operators were previously listed as entities with reporting responsibility for automatic firm load shedding. NERC proposes to remove Distribution Providers and instead assign the reporting obligation to the "initiating Reliability Coordinator, Balancing Authority or Transmission Operator" because these entities have the appropriate level of visibility to make assessments of the condition of the System. Any one of these functions can independently generate or issue an Operating Instruction to shed firm load, but the Distribution Provider cannot do so. Reliability Standard TOP-001-3 (Transmission Operations), Requirements R1 and R2 provide that each Transmission Operator and Balancing Authority shall act to maintain the reliability of its Transmission Operator Area and Balancing Authority Area via its own actions or by issuing Operating Instructions. Requirements R3 and R5 further provide that the Distribution Provider shall comply with each Operating Instruction issued by its Transmission Operator (s) or Balancing Authority, unless such action cannot be physically implemented or it would violate safety, equipment, regulatory, or statutory requirements. Furthermore, the purpose of Reliability Standard EOP-011-1 (Emergency Operations) is to address the effects of operating Emergencies by ensuring each Transmission Operator and Balancing Authority has developed Operating Plans to mitigate operating Emergencies, and that those plans are coordinated within a Reliability Coordinator Areas. Requirements R1 and R2 apply to the Transmission Operator and Balancing Authority, but not to the Distribution Provider.

vii. Voltage Deviation

A voltage deviation is the difference, generally expressed as a percentage, between the voltage at a given instant at a point in the system, and a reference voltage (i.e., nominal voltage, a mean value of the operating voltage, or declared supply voltage). NERC proposes to clarify the event type name and threshold. NERC references "BES Emergency" in the event type to align with other event types in Attachment 1 that warrant an action to preserve the reliability of the BES, not a localized event. In the event threshold, NERC clarifies the range of deviation that threatens the reliability of the System. In the currently-effective standard, the identified range of "± 10%" could be interpreted as not requiring an event report if the voltage deviates more than 10%. Therefore, NERC proposes that the relevant deviations warranting a report are those high, positive deviations that exceed or are equal to 10% of the nominal voltage.

viii. IROL Violation

Under the currently-effective standard, Reliability Coordinators are required to report when they are operating outside of their Interconnection Reliability Operating Limit ("IROL"). Specifically, an IROL violation occurs when the Transmission Operator operates outside the IROL for a specified time known as IROL Tv. An IROL is a System Operating Limit,[22] which if violated, could lead to instability, uncontrolled separation, or Cascading outages that adversely impact the reliability of the BES. NERC proposes to retire the IROL violation event type under EOP-004-4 because EOP-004 is not designed to be a Real-time tool. During development of proposed Reliability Standard EOP-004-4, some stakeholders commented that the removal of the IROL event type deprives NERC and the Regional Entities of immediate or contemporaneous knowledge of a risk of a cascading outage, thereby preventing a Regional Entity from immediately identifying the root cause and developing appropriate mitigation. The EOP SDT found that any Real-time reporting to the ERO or the Regional Entities (i.e., contemporaneously with the Transmission Operator's notification of the IROL to the Reliability Coordinator) should be addressed in the TOP Reliability Standards which deal with the Real-time operations time horizon. In contrast, proposed EOP-004-4 is primarily a tool for trending analysis and development of lessons learned.

The EOP SDT found that Reliability Standard TOP-001-3 (Transmission Operations) is the appropriate standard for reporting such events. The purpose of Reliability Standard TOP-001-3 is to prevent instability, uncontrolled separation, or Cascading outages, in Real-time, that adversely impact the reliability of an Interconnection by ensuring "*prompt action to prevent or mitigate such occurrences*." Specifically, Requirement R12 states that "[e]ach Transmission

---

22 A "System Operating Limit" or "SOL" is the value that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria.

Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated Tv." Requirement R2 of Reliability Standard TOP-007-0 (Reporting SOL and IROL Violations) states that "[f]ollowing a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes." Finally, Requirement R3 of Reliability Standard IRO-009-2 (Reliability Coordinator Actions to Operate within IROLs) states that "[e]ach Reliability Coordinator shall act or direct others to act so that the magnitude and duration of an IROL exceedance is mitigated within the IROL's Tv, as identified in the Reliability Coordinator's Real-time monitoring or Real-time Assessment."

ix. Loss of Firm Load

Under the currently-effective standard, Balancing Authorities, Transmission Operators and Distribution Providers are required to report two types of incidents involving loss of firm load lasting at least 15 minutes: (1) loss of firm load greater than or equal to 300 MWs for those entities whose previous year's demand was greater than or equal to 3,000 MWs, or, (2) loss of firm load greater than or equal to 200 MWs for all other entities. NERC proposes to rename the event type to include "resulting from a BES Emergency" to align with other event types in Attachment 1 that use this language.

NERC also proposes three changes to the event threshold to capture reporting of loss of firm load events that pose the greatest risk to the reliability of the BES. First, NERC specifies that reporting must occur for "*uncontrolled* loss of firm load" to eliminate reporting of intentional acts by operators choosing to shed load to maintain System stability. This language aligns with the event type language in OE-417. Second, NERC underscores that the load loss specifications in this event type pertain to "a single incident" and should be reported only once by either the

Balancing Authority, Transmission Operator, or Distribution Provider, not all three. Finally, NERC notes that for entities that suffer uncontrolled loss of firm load equal to or exceeding 300 MWs, the threshold for reporting entities is the previous year's "peak" demand $\geq$ 3,000 MWs. By highlighting "peak" demand, the EOP SDT notes that this improves the quality of reports by focusing on the period posing the greatest risk to reliability.

x. Generation Loss

Under the currently-effective "Generation loss" event type, Balancing Authorities and Generator Operators must report total generation loss occurring within one minute that is either greater than or equal to 2,000 MWs (for entities in the Eastern or Western Interconnection) or greater than or equal to 1,000 MWs (for entities in the ERCOT or Quebec Interconnection). NERC proposes four changes to the generation loss event type.

First, NERC proposes to remove "Generator Operators" as a reporting entity to eliminate redundant reporting with Balancing Authorities for this event type. The EOP SDT found that the obligation to report generation loss should rest solely with the Balancing Authority which has a broader view of the system. It is the role of the Balancing Authority to maintain the generation-load-interchange balance within its entire Balancing Authority Area.

Second, NERC proposes to raise the reporting threshold for generation loss in the Quebec Interconnection from 1,000 MWs to 2,000 MWs. Generation in the Québec Interconnection is 95 % hydraulic. For efficiency reasons, generation must operate within 80 % of its operating range; therefore, there is a large spinning operating reserve available at all times. This large spinning reserve aids in the recovery period following an event. Generation is often adjusted in a Balancing Authority Area to maintain the Area Control Error or "ACE" around zero. ACE is the instantaneous difference between a Balancing Authority's Net Actual Interchange and Net Scheduled Interchange. In Quebec, the recorded average ACE recovery time for a 2,000 MWs generation loss is 5 minutes which is three times faster than the required recovery time of 15 minutes pursuant to Reliability Standard BAL-002-1a, Requirement R4.2 (Disturbance Control Performance).[23] Following a review of Under Frequency Load Shedding events since 2000 submitted by Hydro Quebec, the EOP SDT found that generation loss between 1,500 MWs and 2,000 MWs has not triggered the first stage threshold of the Under Frequency Load Shedding ("UFLS") scheme. The fact that no recent events have triggered activation of UFLS is significant. Activation of UFLS represents the last automated reliability measure associated with a decline in frequency needed to rebalance the System. UFLS is intended to be a safety net to prevent against System collapse for severe contingencies. Finally, Quebec has set 2,000 MWs as the threshold for generation loss that would warrant a deficient Balancing Authority to request its Reliability Coordinator to declare an Energy Emergency Alert ("EEA"). EEAs are emergency procedures implemented if unusually high electricity demand or an unexpected loss of generation. The EOP SDT reviewed historical EEA Level 3 alerts for the last 14 years (2000 through 2014) and found no EEA level 3 alerts have occurred during this period in the Quebec Interconnection. Under Quebec's contingency analysis to evaluate abnormal conditions in its electrical network, it has set 2,000 MWs as its loss of generation threshold in the first or primary contingency.

Third, NERC proposes to raise the generation loss reporting threshold for the ERCOT Interconnection from 1,000 MWs to 1,400 MWs. NERC notes that this is a lower threshold than the 2,000 MWs threshold for ERCOT pursuant to the ERO event analysis process. ERCOT

[23] Reliability Standard BAL-002-1a is designed to help Balancing Authorities utilize Contingency Reserves to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance.

maintains a mix of operating reserves to aid in the recovery period following an event affecting ACE or frequency. This mix comprises of 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves. ERCOT procures between 2,300 MWs and 3,000 MWs of frequency response reserves for all operating hours in addition to procuring additional regulation and non-spinning reserves. The Load Resources are set to respond automatically at 59.7 Hz to provide instantaneous frequency response. The EOP SDT also identified the recorded average ACE recovery time for a 1,400 MWs loss as 10 minutes for the period between December 2014 and November 2016, which is faster than the required 15 minutes pursuant to BAL-002-1a, Requirement R4.2 (Disturbance Control Performance). ERCOT's frequency responsive reserves are set at a level to allow ERCOT to keep frequency above the under-frequency limit up to ERCOT's resource contingency protection criteria limit of 2,750 MWs. This limit, which is almost double the proposed threshold, is significant because it represents the point at which frequency response should be adequate to avoid violating UFLS settings. This limit is also based on the most severe double contingency in ERCOT. Finally, the proposed 1,400 MWs threshold is below the currently-effective EEA level 1 alert, the lowest EEA level in ERCOT, which is set at 2,300 MWs.

Finally, NERC proposes to clarify the scope of reportable generation loss. Specifically, NERC notes that reportable generation loss covers that resulting from the removal from service availability of a generating unit for emergency reasons and the condition of the unavailable equipment due to unanticipated failure (i.e., Forced Outage). It is not intended to cover generation loss associated with weather patterns or fuel supply unavailability for dispersed power producing resources. The variable output of these sources is understood by the Reliability Coordinator, Balancing Authority, and Transmission Operator entities. Balancing Authorities responsible for balancing load and generation model these generation resources accounting for this inherent variability.

xi. Transmission Loss

Under the currently-effective standard, Transmission Operators must report unexpected transmission loss within its area if the loss occurs (1) following a common disturbance, (2) in a manner that is contrary to design or unintended, and (3) involving three of more BES Elements. For this "transmission loss" event type, NERC proposes to replace "BES Elements" with "BES Facilities" in the event threshold description to capture transmission loss events that pose the greatest risk to the reliability of the BES. The EOP SDT found that an unexpected loss of three or more BES Elements is too granular and captures three or more individual device or equipment failures (i.e., circuit breakers, disconnects, capacitor banks, reactors, bus potential devices) that are unlikely to cause a common disturbance. The EOP SDT determined that the focus should be on Facilities that cease to provide a path for BES power flows. This is also consistent with the approach taken in the ERO event analysis process.

xii. Complete Loss of Communication

NERC proposes to change the "complete loss of voice communication capability" event type to "complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center" to account for the variety of media used by operators today consistent with Reliability Standard COM-001-2 (Communications). The purpose of COM-001-2 is to establish Interpersonal Communication capabilities necessary to maintain reliability. The communication capabilities used by Reliability Coordinators, Transmission Operators and Balancing Authorities may not necessarily be using the same medium. In Order No. 808, the Commission approved two new communication definitions that NERC proposes to incorporate into this event type – "Interpersonal Communication" defined as "any medium that allows two or more individuals to interact, consult, or exchange information," and, "Alternative Interpersonal Communication" defined as "any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."[24] These expanded definitions of Communication capture more than just voice communication capability and more closely align with practices of the reporting entities.

NERC also proposes to specify that the loss of communication threshold pertains to the reporting entities' at its "staffed BES control centers." The EOP SDT found that unless a control center is staffed, the Responsible Entity could not be made aware of an issue. Since a greater number of media are accommodated by the proposed changes, NERC does not expect to see any decrease in reporting for this revised event.

xiii. Complete Loss of Monitoring Capability

NERC proposes to amend and streamline the monitoring capability event type and threshold as follows:

- Event Type - "Complete loss of monitoring or control capability at its staffed BES control center"
- Threshold for Reporting - "Complete loss of monitoring or control capability ~~affecting~~ ~~a~~ at its staffed BES control center for 30 continuous minutes or more ~~such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable~~."

[24] Order No. 808, *Communications Reliability Standards*, 151 FERC ¶ 61,039, 80 Fed. Reg.22, 385 (2015) at fn. 54*; Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standards COM-001-2 and COM-002-4*, Docket No. RM14-13-000 (filed May 14, 2014) at 18.

NERC proposes that the addition of "control capability" in both the event type and threshold adequately addresses the phrase "such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable." NERC also specifies that loss of this capability pertains to reporting entities with "a staffed BES control center." The EOP SDT found that unless a control center is staffed, the Responsible Entity would not be aware of an issue.

d. EOP-004 - Attachment 2: Event Reporting Form

NERC has collaborated with DOE to align the event types and reporting thresholds between EOP-004 and DOE's OE-417 report for U.S. entities. Under current practice, the ERO will accept DOE's OE-417 report in lieu of Attachment 2 to the extent a given event type and threshold align. The proposed event type changes to Attachment 1, as discussed above, are also reflected in Attachment 2. In addition, NERC clarifies in the instructions to Attachment 2 that EOP-004-4, Requirement R1 requires submission of either Attachment 2 or the OE-417 report to other applicable organizations outside of the ERO (i.e., the entity's Regional Entity, company personnel, the entity's Reliability Coordinator, law enforcement or other Applicable Governmental Authorities).

B. Proposed Reliability Standard EOP-005-3 – System Restoration from Blackstart Resources

The purpose of proposed Reliability Standard EOP-005-3 is to "[e]nsure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Proposed Reliability Standard EOP-005-3 improves the existing version of the standard in three ways:

(1) emphasizes the need for Transmission Operators to not only develop, but utilize restoration plans relating to Blackstart Resources;

(2) streamlines the standard and retires redundant or administrative requirements; and

(3) clarifies requirements for revising and testing restoration plans.

Additionally, NERC proposes to retire existing Reliability Standard EOP-005-2, as described in the Implementation Plan for EOP-005-3 (**See Exhibit B-1**) to ensure a seamless transition to the newly revised standard.

1. Requirement-by-Requirement Justification

a. EOP-005-3, Proposed Requirement R1

Requirement R1 has been revised as follows:

R1. Each Transmission Operator shall ~~have~~ develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~ be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shut down~~ shutdown area ~~to service~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1 Strategies for ~~s~~System restoration that are coordinated with ~~the~~ its Reliability Coordinator's high level strategy for restoring the Interconnection.

. . .

1.3 Procedures for restoring interconnections with other Transmission Operators under the direction of ~~the~~ its Reliability Coordinator.

. . .

1.9 Operating Processes for transferring ~~authority~~ operations back to the Balancing Authority in accordance with ~~the~~ its Reliability Coordinator's criteria

NERC proposes the addition of "develop and implement" to replace "have" as well as the addition of "be implemented to restore" to replace "allow for restoring" to emphasize the need for the Transmission Operator to not only possess, but to utilize its restoration plan for Real-time operations in the event of a Disturbance. The addition of the word "implement" requires the addition of "Real-time Operations" to the Time Horizon of this requirement. The addition of "implement" to Requirement R1 makes Requirement R7 redundant. Requirement R7 provides that:

> R7. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration.

As a result of this redundancy, NERC proposes to retire Requirement R7. This proposed retirement is consistent with the recommendation of the Panel to retire Requirement R7 as redundant with Requirement R1. In describing the use of Blackstart Resources to restore the shutdown area, NERC proposes to delete the words "to service" in Requirement R1 as redundant with the ensuing language calling for "restoration of a shutdown area to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System."

With respect to Requirement R1, Parts 1.1, 1.3 and 1.9, NERC proposes to replace "the Reliability Coordinator" with "its Reliability Coordinator" to clarify that strategies, procedures and operating processes for restoring interconnections and System restoration require coordination with the Reliability Coordinator in the footprint where the Transmission Operator is located.

With respect to Requirement R1, Part 1.9, NERC proposes to replace "authority" with "operations" to clarify two points. First, the EOP SDT noted that while the Transmission Operator is responsible for developing and implementing the restoration plan, the Transmission Operator does not assume any authority from the Balancing Authority. During restoration, the Transmission Operator dedicates its resources to rebuilding its System. Second, the requirement to include operating processes in a restoration plan relates to the role of the Reliability Coordinator. During restoration, the Reliability Coordinator maintains its wide area view of the System. The Reliability Coordinator takes operational authority and gives different entities assigned tasks until they are ready to resume normal operation. As restoration progresses, the Reliability Coordinator gradually transfers operations back to the appropriate entities.

b. EOP-005-3, Proposed Requirement R2

The EOP SDT replaces "implementation date" with "effective date" to clarify that the "implementation date" refers to any given use of a plan. Therefore, a given plan could have several implementation dates. "Effective date" more accurately represents the pertinent date when entities identified in a restoration plan should have a copy of a restoration plan changing roles and tasks for future implementation. Recognizing that the Reliability Coordinator has 30 days under EOP-006 to render a decision on restoration plan revisions, Transmission Operators must determine the appropriate effective date for their plans. They must take into account the potential for unknown factors (i.e., weather, system operational needs) to affect the configurations in their plans and the subsequent in-service dates.

Requirement R2 has been revised as follows:

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~ effective date of the plan. [Violation Risk Factor = Medium] [Time Horizon = Operations Planning**]**

c. EOP-005-3, Proposed Requirement R3

Requirement R3, Part 3.1, was retired by the Commission in Order No. 788.[25] NERC is not proposing any further revisions to Requirement R3 in this petition.

d. EOP-005-3, Proposed Requirement R4

In the *Report on the FERC-NERC Regional Entity Joint Review of Restoration and Recovery Plans* ("Joint FERC-NERC Report"),[26] joint staff from NERC and FERC recommended that NERC clarify when system changes trigger a requirement to update restoration plans. The joint staff recommended that NERC examine:

> [1] the kinds of events that may warrant an update to the system restoration plan . . . taking into account the length of time the system is affected (*not just permanent or planned system modifications*), as well as [2] the overall objective of ensuring that restoration plans are generally flexible enough so that system modifications can be addressed without continuous updates. [Emphasis added]

With this guidance, NERC proposes two event types of restoration plan revisions warranting submission to its Reliability Coordinator: (i) unplanned permanent BES modifications and (ii) planned, permanent BES modifications. NERC also proposes that for the former, Transmission Operators submit revised restoration plans within 90 calendar days after identifying the modification. For the latter type, NERC proposes that Transmission Operators submit revised restoration plans in time to meet its Reliability Coordinator's approval timeframe per EOP-006, which is no less than 30 calendar days after identifying the modification. Proposed Requirement R4 provides as follows:

---

[25] Order No. 788, *Electric Reliability Organization Proposal to Retire Requirements in Reliability Standards*, 145 FERC ¶ 61,147, 78 Fed. Reg. 73424 (2013).

[26] *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans* ("FERC-NERC Joint Report"), (Mar. 20, 2017), *available at* https://www.ferc.gov/legal/staff-reports/2016/01-29-16-FERC-NERC-Report.pdf.

R4. Each Transmission Operator shall ~~update~~ submit its revised restoration plan to its Reliability Coordinator for approval ~~within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan~~ when the revision would change its ability to implement its restoration plan as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. ~~Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same~~ Within 90 calendar ~~day period~~ days after identifying any unplanned permanent BES modifications; and~~.~~

~~4.1.~~4.2. Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

Detailed below is an additional discussion of the modifications in Requirement R4.

A. BES Modifications vs. System Modifications

The currently-effective standard references both "unplanned permanent System modifications" and "planned BES modifications" as two event types requiring updates to a restoration plan. NERC proposes the consistent use of "BES modifications" in lieu of "System modifications." The term "BES" was developed through the NERC Standards Development Process and is included in the *Glossary of Terms Used in NERC Reliability Standards*.[27] The use of the phrase "BES modifications" is intended to capture changes that affect the implementation of a restoration plan. Administrative changes, such as element number changes and device changes, are examples that would not have a significant impact on the implementation of a restoration plan and that would not be considered BES modifications.

B. Duration of a BES Modification

NERC proposes that the "permanence" of BES modifications is an important threshold to determine when to submit revisions to a restoration plan. In the FERC-NERC report, staff

[27] Unless otherwise designated, capitalized terms shall have the meaning set forth in the *Glossary of Terms Used in NERC Reliability Standards* ("NERC Glossary of Terms"), *available at* http://www.nerc.com/files/glossary_of_terms.pdf.

encouraged NERC to examine the length of time the system is affected. NERC maintains that the "permanence" of a BES modification is a relevant threshold, regardless of whether planned or unplanned. Using the "permanence" of a BES modification as a threshold is necessary to avoid updates due to temporary configurations required to support maintenance and construction. It also underscores that Transmission Operators should only submit changes that substantively affect the implementation of their restoration plans.

C. Timing of Updates to Restoration Plans

In the FERC-NERC Joint Report, staff recommended that NERC clarify when System changes under Requirement R4 will trigger a requirement to update restoration plans.[28] In the currently-effective standard, it is unclear whether the 90 calendar day timeframe for updating restoration plans applies to both "unplanned permanent System modifications" and "planned BES modifications." NERC proposes two different triggers for submitting restoration plans to Reliability Coordinators for "unplanned permanent BES modifications" and for "planned permanent BES modifications." Unplanned permanent BES modifications should be submitted to the Reliability Coordinator no more than 90 calendar days after identifying the need for an unplanned, permanent BES modification. Planned, permanent BES modifications should be submitted to the Reliability Coordinator in accordance with EOP-006 Requirement R5, Part5.1. EOP-006 Requirement R5, Part 5.1 provides that the Reliability Coordinator shall approve or disapprove a submitted restoration plan within 30 days of receipt. Therefore, planned, permanent BES modifications should be submitted to the Reliability Coordinator no less than 30 calendar days prior to implementation in order to afford the Reliability Coordinator the minimum required

28 FERC-NERC Joint Report at 37.

time to render a decision under EOP-006, Requirement 5, Part 5.1. Proposed Reliability Standard EOP-005, Requirement 4, Parts 4.1 and 4.2, are revised as follows:

R4. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval ~~within the same 90 calendar day period~~, when the revision would change its ability to implement its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

e. EOP-005-3, Proposed Requirement R5

Consistent with Requirement R2, "implementation date" was revised to "effective date." "Effective date" more accurately represents the pertinent date when entities identified in a restoration plan should have a copy of a restoration plan changing roles and tasks for future implementation. Recognizing that the Reliability Coordinator has 30 days under EOP-006 to render a decision on restoration plan revisions, Transmission Operators must determine the appropriate effective date for their plans. Requirement R5 has been revised as follows:

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its ~~implementation~~ effective date.

f. EOP-005-3, Proposed Requirement R6

NERC proposes to clarify the methodology and frequency of required testing of restoration plans in Requirement R6, as follows:

R6. Each Transmission Operator shall verify through analysis of actual events a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years ~~at a minimum~~. Such analysis, simulations or testing shall verify. . .

Industry indicated that currently-effective Reliability Standard EOP-005-2 could be misinterpreted to require Transmission Operators to validate every step of the restoration process with both steady state and dynamic simulation. NERC, therefore, clarifies that a Transmission Operator should perform a combination of steady state and dynamic simulations for the overall restoration process. This testing should occur at least once every five years.

g. EOP-005-2, Requirement R7

As discussed above, the proposed additional language, "develop and implement" added to EOP-005-3, Requirement R1 is redundant with EOP-005-2, Requirement R7. Therefore, NERC proposes to retire Requirement R7. This proposed retirement is consistent with a recommendation of the Panel.

The flexibility allotted to Transmission Operators to "utilize. . .restoration strategies to facilitate restoration" when "the restoration plan cannot be executed as expected" under Requirement R7 is preserved in Requirement R1, Part 1.1. Under Requirement R1, Part 1.1, restoration plans shall include "[s]trategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the Interconnection." Transmission Operators retain the ability to deviate from their restoration plans if they cannot be executed as expected, so long as that approach is outlined in their strategies. The proposed deletion of Requirement R7 is not intended to diminish Transmission Operators' adaptive capability throughout the course of restoration activities.

h. EOP-005-2, Requirement R8

NERC proposes to retire currently-effective EOP-005-2, Requirement R8 because its requirements are captured in proposed EOP-005-3, Requirement R1, Part 1.1 and existing IRO-001-1.1 Requirement R3. Currently-effective Reliability Standard EOP-005-2, Requirement R8 calls for Transmission Operators to resynchronize, with the permission of the Reliability Coordinator, along with neighboring Transmission Operators where Blackstart Resources are required, to restore one or more areas of the BES shut down by a Disturbance. The EOP SDT notes that this coordination with neighboring Transmission Operators under Requirement R8 is still captured by Requirement R1, Part 1.1. Through this part, NERC mandates that Transmission Operators implement restoration plans which include "[s]trategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the Interconnection." Even though Part 1.1 does not expressly call for such resynchronization, it is well understood by industry that such a step is integral to restoration activities. This critical restoration step helps to prevent against loss of load. The ability of the Reliability Coordinator to authorize such coordination and synchronization with neighboring Transmission Operators is captured by IRO-001-1.1, Requirement R3, which vests Reliability Coordinators with "clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System."

i. EOP-005-3, Proposed Requirement R8

Proposed Requirement R8 renumbers language from currently effective EOP-005-2, Requirement R10 and NERC proposes the following additional revisions. NERC proposes to delete language in the main body of proposed Requirement R8, as redundant language already addressed by training topics listed in Parts 8.1 through 8.5. NERC also proposes a new training topic for the Transmission Operator training program in Part 8.5. Specifically, NERC identifies a need to train on coordination with Balancing Authorities, specifically the transition of Demand

and resource balance within the Balancing Authority's Area. Proposed Requirement R8 is revised as follows:

~~R10~~ R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan~~. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R10.1~~8.1. System restoration plan including coordination with ~~the~~ its Reliability Coordinator and Generator Operators included in the restoration plan

~~R10.2~~8.2. Restoration priorities

~~R10.3~~8.3. Building of cranking paths

~~R10.4~~8.4. Synchronizing (re-energized sections of the System)

8.5. Transition to Balancing Authority for Demand and resource balance within its area.

j. EOP-005-3, Proposed Requirement R9

Proposed Requirement R9 renumbers language from currently-effective EOP-005-2, Requirement R11 and includes no revisions. Proposed Requirement R9 requires that a minimum of two hours of System restoration training be provided every two calendar years to field switching personnel performing "unique tasks" associated with the Transmission Operator's restoration plan that are outside of their normal tasks. In Order No. 749, in which the Commission approved several System Restoration Reliability Standards, the Commission stated that "[o]nce [EOP-005-2] is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."[29] The EOP SDT evaluated the use of "unique tasks" and concluded that its ordinary meaning, outside of everyday tasks conducted by switching personnel, is sufficient and does not require further clarification. While NERC may consider developing guidance in the future if

29 Order No. 749 at P 24.

compliance concerns arise surrounding defining "unique tasks," entities retain the discretion to define "unique tasks."

C. Proposed Reliability Standards EOP-006 – 3 – System Restoration Coordination

The purpose of proposed Reliability Standard EOP-006-3 is to establish how personnel should prepare, execute, and coordinate System restoration processes to maintain reliability and to restore the Interconnection. Proposed Reliability Standard EOP-006-3 improves upon the existing version of the standard in three ways:

(1) emphasizes the need for Reliability Coordinators to not only develop, but utilize their restoration plans;

(2) streamlines the standard and retires redundant or administrative requirements; and

(3) clarifies requirements around training and coordination of restoration plans amongst Reliability Coordinators.

In addition, NERC also proposes to retire Reliability Standard EOP-006-2, as described in the Implementation Plan for EOP-006-3 (See **Exhibit B**), to ensure a seamless transition to the newly revised standard.

1. Requirement-by-Requirement Justification

a. EOP-006-3, Proposed Requirement R1

NERC proposes a modification to Requirement R1 by replacing "have" with "develop and implement" language to emphasize the need for the Reliability Coordinator to possess and utilize its restoration plan for Real-time operations. The addition of the word "implement" requires the addition of "Real-time Operations" to the Time Horizon of this requirement. NERC proposes to delete Parts 1.2 through 1.4 from Reliability Standard EOP-006-2 as redundant with Reliability

Standard EOP-006-2, Part 1.5 (which is renumbered as Part 1.2 in proposed EOP-006-3) as shown below:

R1. Each Reliability Coordinator shall ~~have~~develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a ~~shut down~~shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

~~1.2. Operating Processes for restoring the Interconnection.~~

~~1.3. Descriptions of the elements of coordination between individual Transmission Operator restoration plans.~~

~~1.4. Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators.~~

~~1.5.~~1.2. Criteria and conditions for ~~reestablishing~~re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

~~1.6.~~1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

~~1.7.~~1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

~~1.8.~~1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

~~1.9.~~1.6. Criteria for transferring operations and authority back to the Balancing Authority.

b. EOP-006-3, Proposed Requirement R4

The EOP SDT found that an important step in resolving conflicts in the restoration plans of neighboring Reliability Coordinator's is for the reviewing Reliability Coordinator to provide the neighboring Reliability Coordinator with notice of the conflict. NERC proposes to add this notification requirement to Requirement R4. NERC also clarifies the timing for resolving conflicts as starting after receipt of written notification of a conflict. Requirement R4, Part 4.1 is revised as follows:

R4. Each Reliability Coordinator shall review ~~their~~<u>its</u> neighboring Reliability Coordinator's restoration plans~~.~~ <u>and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt.</u> [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. If ~~the~~<u>a</u> Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved <u>within</u> 30 calendar <u>days of receipt of written notification.</u>

c. EOP-006-3, Proposed Requirement R5

NERC proposes to clarify that the Reliability Coordinator must notify the Transmission Operator of its decision approving or disapproving a revised restoration plan per Reliability Standard EOP-005. Requirement R5, Part 5.1 is revised as follows:

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall ~~approve~~ <u>provide notification to the Transmission Operator of approval</u> or disapprove~~e~~<u>al</u>, with stated reasons, <u>of</u> the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

d. EOP-006-3, Proposed Requirement R6

NERC replaces "implementation date" with "effective date" in Requirement R6 to clarify that the "implementation date" refers to any given use of a plan. Therefore, a given plan could have several implementation dates. "Effective date" more accurately represents the pertinent date when entities identified in a restoration plan should have a copy of a restoration plan changing roles and tasks for future implementation.

Requirement R6 is revised as follows:

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the ~~implementation~~effective date. [Violation Risk Factor = Lower] [Time Horizon = Operations Planning]

e. EOP-006-2, Requirements R7 and R8

NERC proposes to retire Requirements R7 and R8 from currently-effective Reliability Standard EOP-006-2. The EOP SDT agrees with the recommendation of the Panel to retire these requirements as "a logical action that does not require a standard." The pending definition of "Reliability Coordinator" addresses all of the tasks included in Requirements R7 and R8. Requirements R7 and R8 offer examples of implementation steps taken by Reliability Coordinators and are subsumed by the proposed addition of "develop and implement" to Requirement R1 in proposed EOP-006-3.

f. EOP-006-3, Proposed Requirement R7

NERC notes that the language in currently-effective EOP-006-2, Requirement R9 is renumbered as proposed EOP-006-3, Requirement R7 due to proposed retirements in this standard. NERC proposes to delete the language "to assure the proper execution of its restoration plan" in Requirement R7,to streamline the language in the standard as follows:

R~~9~~7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan~~. This training program shall address the following: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

R7~~9~~.1. The coordination role of the Reliability Coordinator~~.~~; and

R7~~9~~.2. Re~~-~~establishing the Interconnection.

g. EOP-006-3, Proposed Requirement R8

NERC notes that the language in currently-effective EOP-006-2, Requirement R10 is renumbered as proposed EOP-006-3, Requirement R8 due to proposed retirements in this standard. NERC purposes clarifying language for proposed Requirement R8 for the frequency for Transmission Operators and Generator Operators to participate in drills, exercises or simulations.

~~R10~~R8.Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

~~R10.1~~R8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

D. Proposed Reliability Standard EOP-008-2 – Loss of Control Center Functionality

The purpose of proposed Reliability Standard EOP-008-2 is to "[e]nsure continued reliable operations of the BES in the event that a control center becomes inoperable." Proposed Reliability Standard EOP-008-2 improves upon the existing Reliability Standard EOP-008-1 by clarifying the required contents of an Operating Plan used by Reliability Coordinators, Balancing Authorities and Transmission Operators. NERC proposes to retire currently-effective Reliability Standard

EOP-008-1 as described in the Implementation Plan for proposed EOP-008-2 (**See Exhibit B**) to ensure a seamless transition to the newly revised proposed standard.

1. Requirement-by-Requirement Justification

a. EOP-008-2, Proposed Requirement R1

NERC proposes to eliminate any ambiguity regarding the contents of an Operating Plan used by a Reliability Coordinator, Balancing Authority and Transmission Operator to maintain reliability of the BES when a primary control center loses its functionality. In Requirement R1, NERC proposes that the contents of an Operating Plan for backup functionality listed in Parts 1.1 – 1.6 represent an exhaustive list rather than a minimum threshold.

NERC also proposes to change several of the elements required in the Operating Plan for backup functionality. For Part 1.1., NERC removes the timing requirement to restore primary control center functionality due to the wide range of events that could render the primary control center inoperable. The EOP SDT found that it would be difficult for entities to assess their own compliance with this restoration requirement given this variable.

For Parts 1.2 and 1.6, NERC proposes that the list of elements required to support the backup functionality be exhaustive rather than a minimum threshold list. This provides Responsible Entities with clear direction regarding the contents of their Operating Plans. NERC amends two of these backup functionality elements. First NERC replaces “Voice communications” with “Interpersonal Communications” to account for the variety of media used by operators, consistent with Reliability Standard COM-001-2.1 (Communications), which also adopts the term “Interpersonal Communications.” “Interpersonal Communications” are defined as any medium that allows *two or more individuals* to interact, consult, or exchange information. This change is also consistent with the event type change in EOP-004-4.

Second, NERC replaces "Data communications" with "Data exchange capabilities." COM-001-2.1 addresses "Interpersonal Communication" which covers Voice communications, but not "Data exchange capabilities." The term "data exchange capabilities" relates to *facilities* that directly exchange or transfer data. The Commission adopted the term in Order No. 817, which approved revisions to the Transmission Operations and Interconnection Reliability Operations and Coordination Reliability Standards.[30] In Reliability Standard TOP-001-3, Requirements R19 and R20, NERC requires each Transmission Operator and Balancing Authority to have data exchange capabilities with the entities from which it needs data in order to maintain reliability in its area. The same Requirement applies to Reliability Coordinators with respect to their Balancing Authorities and Transmission Operators pursuant to IRO-002-4, Requirement R1 (Reliability Coordination – Monitoring and Analysis). These data exchange capabilities are required to support the data specifications required in Reliability Standard TOP-003-3 (Operational Reliability Data).

E. Enforceability of the Proposed Reliability Standards

The proposed Reliability Standards include VRFs and VSLs. The VRFs and VSLs provide guidance on the way that NERC will enforce the Requirements of the proposed Reliability Standards. The VRFs and VSLs for the proposed Reliability Standards comport with NERC and Commission guidelines related to their assignment. Exhibit E provides a detailed review of the VRFs and VSLs, and the analysis of how the VRFs and VSLs were determined using these guidelines.

---

[30] Order No. 817, *Transmission Operations Reliability Standards and Interconnection Reliability Operations and Coordination Reliability Standards*, 153 FERC ¶ 61,178, 80 Fed. Reg. 73,977. (2015).

The proposed Reliability Standards also include Measures that support each Requirement by identifying what is required and how the ERO will enforce the requirement. These Measures help ensure that the Requirements will be enforced in a clear, consistent, and non-preferential manner and without prejudice to any party.[31]

V. EFFECTIVE DATE

NERC respectfully requests that the Commission approve proposed Reliability Standards EOP-004-4, EOP-005-3, EOP-006-3, and EOP-008-2 to become effective as set forth in the proposed Implementation Plans, provided in Exhibit B hereto. The proposed Implementation Plans provide that the proposed Reliability Standard shall become effective on the first day of the first calendar quarter that is 12 calendar months after the effective date of the Commission's order approving the proposed Reliability Standard, or as otherwise provided for by the Commission.

VI. CONCLUSION

For the reasons set forth above, NERC respectfully requests that the Commission approve:

- the proposed Reliability Standards included in **Exhibit A,** effective as proposed herein;
- the Implementation Plans included in **Exhibit B**; and
- the retirement of currently-effective Reliability Standards EOP-004-3, EOP-005-2, EOP-006-2, and EOP-008-1, effective as proposed herein.

[31] Order No. 672 at P 327.

Respectfully submitted,

/s/ Nina H. Jenkins-Johnston

Exhibit A

Proposed Reliability Standards

Exhibit A-1

Proposed Reliability Standard EOP-004-4

Reliability Standard EOP-004-4 Clean and Redline

EOP-004-4 Clean Version

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following Functional Entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.
R2.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients up to 24 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 48 hours after the timing requirement for submittal. None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written event report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction resulting from a BES Emergency	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction resulting from a BES Emergency	TOP	System-wide voltage reduction of 3% or more.
Firm load sheddingresulting from a BES Emergency	Initiating RC, BA, or TOP	Firm load shedding ≥ 100 MW (manual or automatic).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of =/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form

Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or voice: 404-446-9780, Option 1. Also submit to other applicable organizations per Requirement R1 "... (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."

	Task	Comments
1.	Entity filing the report include: Company name: Name of contact person: Email address of contact person: Telephone Number: Submitted by (name):	
2.	Date and Time of recognized event. Date: (mm/dd/yyyy) Time: (hh:mm) Time/Zone:	
3.	Did the event originate in your system?	Yes ☐ No☐ Unknown ☐
4.	**Event Identification and Description:**	
	(Check applicable box) ☐ Damage or destruction of a Facility ☐ Physical threat to its Facility ☐ Physical threat to its BES control center ☐ BES Emergency: ☐ firm load shedding ☐ public appeal for load reduction ☐ System-wide voltage reduction ☐ voltage deviation on a Facility ☐ uncontrolled loss of firm load ☐ System separation (islanding) ☐ Generation loss ☐ Complete loss of off-site power to a nuclear generating plant (grid supply) ☐ Transmission loss ☐ Unplanned evacuation of its BES control center ☐ Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center ☐ Complete loss of monitoring or control capability at its staffed BES control center	Written description (optional):

4	February 9, 2017	Adopted by the NERC Board of Trustees	Revised

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

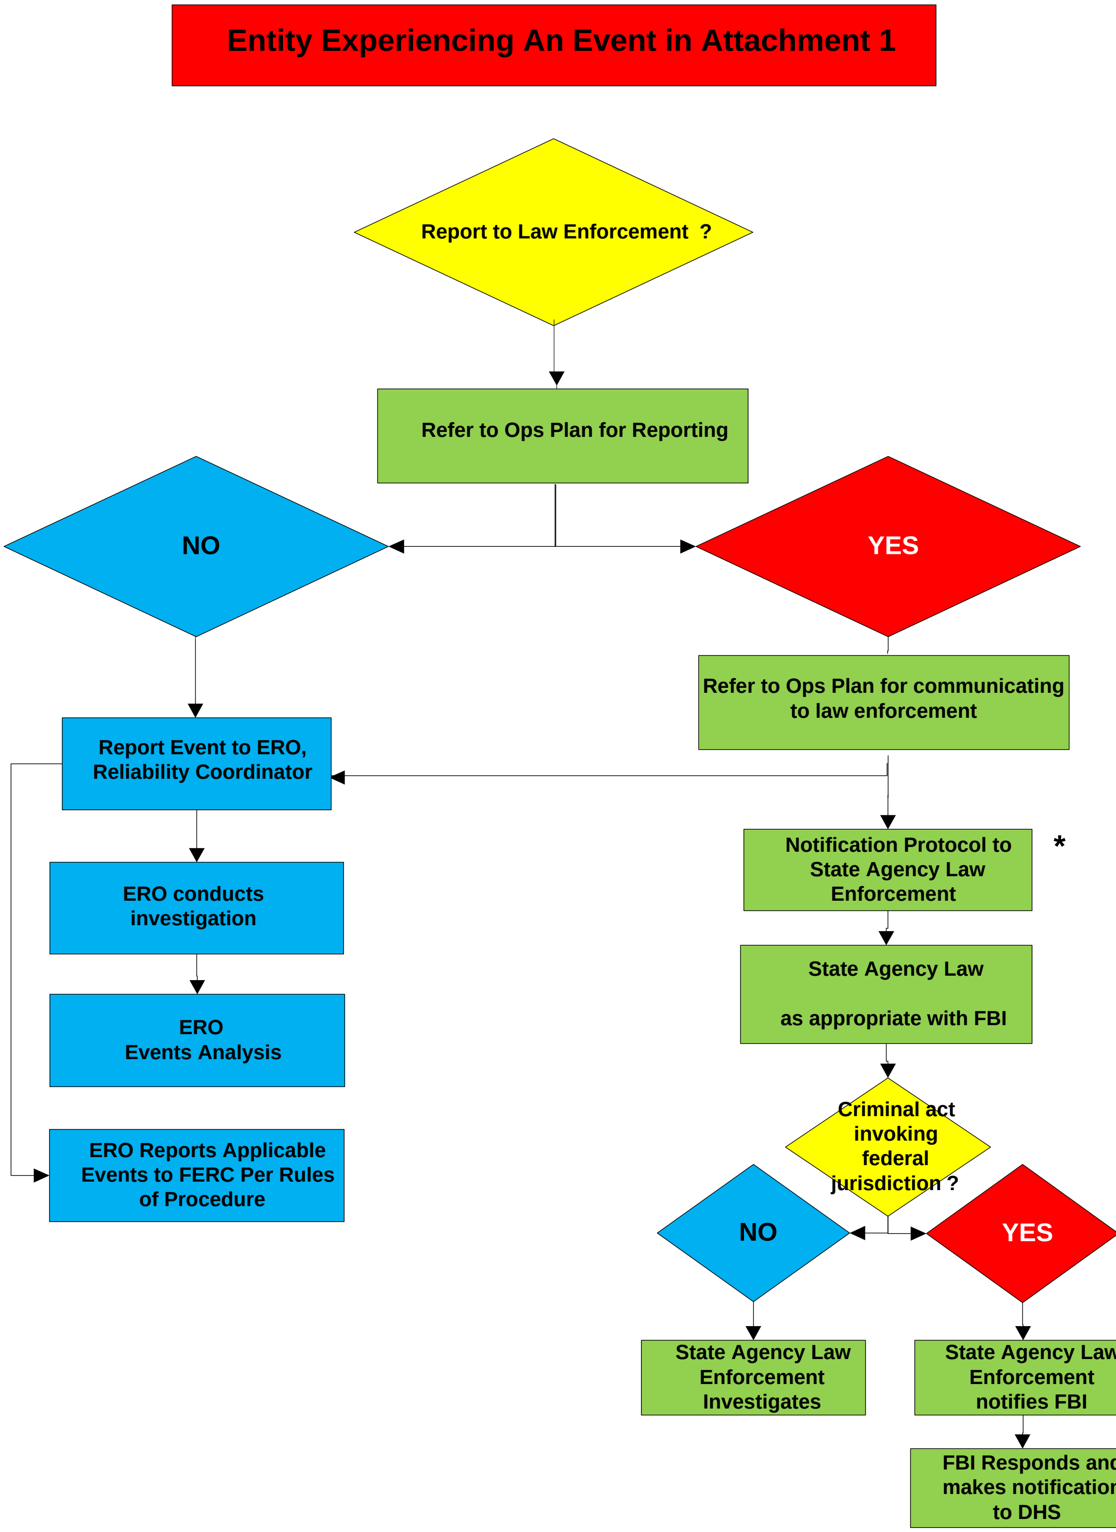
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional Entities to report the incidents and provide information known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

EOP-004-4 Redline Version

A. ~~A.~~ Introduction

1. **Title:** Event Reporting

2. **Number:** EOP-004-~~3~~4

3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following ~~functional entities~~Functional Entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

~~5.~~ Effective ~~Dates:~~

Date: See the Implementation Plan for ~~the Revised Definition of "Remedial Action Scheme"~~

~~**6. Background:**~~

5. ~~NERC established a SAR Team in 2009 to investigate and propose revisions to the CIP-001 and~~ EOP-004 ~~Reliability Standards. The team was asked to consider the following:~~ -4.

~~1. CIP-001 could be merged with EOP-004 to eliminate redundancies.~~
~~2. Acts of sabotage have to be reported to the DOE as part of EOP-004.~~
~~3. Specific references to the DOE form need to be eliminated.~~
~~4. EOP-004 had some 'fill-in-the-blank' components to eliminate.~~

~~The development included other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient Bulk Electric System reliability standards.~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009.~~

~~The DSR SDT developed a concept paper to solicit stakeholder input regarding the proposed reporting concepts that the DSR SDT had developed. The posting of the concept paper sought comments from stakeholders on the "road map" that will be used by the DSR SDT in updating or revising CIP-001 and EOP-004. The concept paper provided stakeholders the background information and thought process of the DSR SDT. The DSR SDT has reviewed the existing standards, the SAR, issues from the NERC issues database and FERC Order 693 Directives in order to determine a prudent course of action with respect to revision of these standards.~~

B. ~~B.~~ Requirements and Measures

~~R1.~~

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-~~2~~ ~~3~~4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. ~~**M1.**~~ Each Responsible Entity will have a dated event reporting Operating Plan that includes~~, but is not limited to the~~ protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-~~3~~4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. ~~**R2.**~~ Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan ~~within~~by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day ~~if the event occurs on a weekend (which is recognized to be 4 PM~~(4 p.m. local time ~~on Friday to 8 AM Monday local time).~~will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. ~~M2.~~ Each Responsible Entity will have as evidence of reporting an event~~,~~ to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-~~3~~4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted ~~within~~ by the later of 24 hours of recognition of meeting ~~the~~an event type threshold for reporting or by the end of the Responsible Entity's next business day ~~if the event occurs on a weekend (which is recognized to be~~ (4 ~~PM~~p.m. local time ~~on Friday to 8 AM Monday local time). (R2)~~will be considered the end of the business day).

~~**R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*~~

~~**M3.** Each Responsible Entity will have dated records to show that it validated all contact information contained in the Operating Plan each calendar year. Such evidence may include, but are not limited to, dated voice recordings and operating logs or other communication documentation. (R3)~~

C. ~~C.~~ Compliance

1. ~~1.~~ Compliance Monitoring Process

1.1. ~~1.1~~ Compliance Enforcement Authority:

~~The Regional Entity shall serve as the~~ "Compliance Enforcement Authority ~~(CEA) unless the applicable~~" means NERC or the Regional Entity, or any entity ~~is owned, operated, or controlled~~as otherwise designated by ~~the Regional Entity. In such cases the ERO~~ an Applicable Governmental Authority, in their respective roles of monitoring and/or ~~a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA~~enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. ~~1.2~~ Evidence Retention:

The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for ~~Requirements~~Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for ~~Requirements~~Requirement R2~~, R3~~ and Measure M2~~, M3~~.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written ~~Event Report~~event report within the timing in the standard.~~-~~ In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. ~~-~~Submit reports to the ERO via one of the following: e-mail:~~-~~ systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:
System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."
Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in ~~actions~~action(s) to avoid a BES Emergency.
Damage or destruction of ~~a~~its Facility	~~BA,~~ TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to ~~a~~its Facility	~~BA,~~ TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at ~~a Facility.~~ ~~Do not report theft unless it degrades normal operation of a~~its Facility.
Physical threats to ~~a~~its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at ~~a~~its BES control center.
~~BES Emergency requiring public~~Public appeal for load reduction resulting from a BES Emergency	~~Initiating entity is responsible for reporting~~BA	Public appeal for load reduction ~~event~~to maintain continuity of the BES.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
~~BES Emergency requiring system~~System-wide voltage reduction resulting from a BES Emergency	~~Initiating entity is responsible for reporting~~TOP	System--wide voltage reduction of 3% or more.
~~BES Emergency requiring manual firm load shedding~~	~~Initiating entity is responsible for reporting~~	~~Manual firm load shedding ≥ 100 MW.~~
Firm load sheddingresulting from a BES Emergency ~~resulting in automatic firm load shedding~~	~~DP,~~Initiating RC, BA, or TOP	~~Automatic firm~~Firm load shedding ≥ 100 MW (~~via~~manual or automatic ~~undervoltage or underfrequency load shedding schemes, or RAS~~).
~~Voltage~~BES Emergency resulting in voltage deviation on a Facility	TOP	~~Observed within its area a~~A voltage deviation of ~~±~~=/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.
~~IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only)~~	~~RC~~	~~Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL for more than 30 minutes for Major WECC Transfer Paths (WECC only).~~

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
~~Loss~~Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	~~Loss~~Uncontrolled loss of firm load for ≥ 15 ~~Minutes:~~minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA~~, GOP~~	Total generation loss, within one minute, of~~-~~: ≥ 2,000 MW ~~for entities~~ in the Eastern ~~or~~, Western ~~Interconnection~~ ~~OR~~ ~~≥ 1,000 MW for entities in the ERCOT~~ , or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface ~~Requirement~~Requirements
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES ~~Elements~~Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center ~~evacuation~~	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of ~~voice communication~~Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of ~~voice communication~~Interpersonal Communication and Alternative Interpersonal Communication capability affecting ~~a~~its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability ~~affecting a~~at its staffed BES control center for 30 continuous minutes or more ~~such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.~~.

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form		
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net~~,~~, Facsimile 404-446-9770 or voice: 404-446-9780~~.~~, Option 1. Also submit to other applicable organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."		
	Task	**Comments**
1.	Entity filing the report include: Company name: Name of contact person: Email address of contact person: Telephone Number: Submitted by (name):	
2.	Date and Time of recognized event. Date: (mm/dd/yyyy) Time: (hh:mm) Time/Zone:	
3.	Did the event originate in your system?	Yes ☐ No☐ Unknown ☐
4.	**Event Identification and Description:**	
	(Check applicable box) ☐ Damage or destruction of a Facility ☐ Physical ~~Threat~~threat to ~~a~~its Facility ☐ Physical ~~Threat~~threat to ~~a~~its BES control center ☐ BES Emergency:_______ ☐ firm load shedding ☐ public appeal for load reduction ~~☐ system~~ ☐ System-wide voltage reduction ~~☐ manual firm load shedding~~ ~~☐ automatic firm load shedding~~ ~~☐ Voltage~~ ☐ voltage deviation on a Facility ~~☐ IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only)~~ ~~☐ Loss~~ ☐ uncontrolled loss of firm load ☐ System separation (islanding)	Written description (optional):

EOP-004 Attachment 2: Event Reporting Form	
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. 2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

4	February 9, 2017	Adopted by the NERC Board of Trustees	Revised

Guideline and Technical Basis

~~**Distribution Provider Applicability Discussion**~~

~~The DSR SDT has included Distribution Providers (DP) as an applicable entity under this standard. The team realizes that not all DPs will own BES Facilities and will not meet the "Threshold for Reporting" for any event listed in Attachment 1. These DPs will not have any reports to submit under Requirement R2. However, these DPs will be responsible for meeting Requirements R1 and R3. The DSR SDT does not intend for these entities to have a detailed Operating Plan to address events that are not applicable to them. In this instance, the DSR SDT intends for the DP to have a very simple Operating Plan that includes a statement that there are no applicable events in Attachment 1 (to meet R1) and that the DP will review the list of events in Attachment 1 each year (to meet R3). The team does not think this will be a burden on any entity as the development and annual validation of the Operating Plan should not take more that 30 minutes on an annual basis. If a DP discovers applicable events during the annual review, it is expected that the DP will develop a more detailed Operating Plan to comply with the requirements of the standard.~~

Multiple Reports for a Single Organization

For entities that have multiple registrations, the ~~DSR SDT intends~~requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

~~**Summary of Key Concepts**~~

~~The DSR SDT identified the following principles to assist them in developing the standard:~~

- ~~Develop a single form to report disturbances and events that threaten the reliability of the Bulk Electric System~~
- ~~Investigate other opportunities for efficiency, such as development of an electronic form and possible inclusion of regional reporting requirements~~
- ~~Establish clear criteria for reporting~~
- ~~Establish consistent reporting timelines~~
- ~~Provide clarity around who will receive the information and how it will be used~~

~~During the development of concepts, the DSR SDT considered the FERC directive to "further define sabotage". There was concern among stakeholders that a definition may be ambiguous and subject to interpretation. Consequently, the DSR SDT decided to eliminate the term sabotage from the standard. The team felt that it was almost impossible to determine if an act or event was sabotage or vandalism without the intervention of law enforcement. The DSR SDT felt that attempting to define sabotage would result in further ambiguity with respect to reporting events. The term "sabotage" is no longer included in the standard. The events listed in EOP-004 Attachment 1 were developed to provide guidance for reporting both actual events as well as events which may have an impact on the Bulk Electric System. The DSR SDT believes that this is an equally effective and efficient means of addressing the FERC Directive.~~

~~The types of events that are required to be reported are contained within EOP-004 Attachment 1. The DSR SDT has coordinated with the NERC Events Analysis Working Group to develop the list of events that are to be reported under this standard. EOP-004 Attachment 1 pertains to those actions or events that have impacted the Bulk Electric System. These events were previously reported under EOP-004-1, CIP-001-1 or the Department of Energy form OE-417. EOP-004 Attachment 1 covers similar items that may have had an impact on the Bulk Electric System or has the potential to have an impact and should be reported.~~

~~The DSR SDT wishes to make clear that the proposed Standard does not include any real-time operating notifications for the events listed in EOP-004 Attachment 1. Real-time communication is achieved is covered in other standards. The proposed standard deals exclusively with after-the-fact reporting.~~

~~**Data Gathering**~~

~~The requirements of EOP-004-1 require that entities "promptly analyze Bulk Electric System disturbances on its system or facilities" (Requirement R2). The requirements of EOP-004-3 specify that certain types of events are to be reported but do not include provisions to analyze events. Events reported under EOP-004-3 may trigger further scrutiny by the ERO Events Analysis Program. If warranted, the Events Analysis Program personnel may request that more data for certain events be provided by the reporting entity or other entities that may have experienced the event. Entities are encouraged to become familiar with the Events Analysis Program and the NERC Rules of Procedure to learn more about with the expectations of the program.~~

Law Enforcement Reporting

The reliability objective of EOP-004-~~3~~4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

~~Present expectations of the industry under CIP-001-1a:~~

~~It has been the understanding by industry participants that an occurrence of sabotage has to be reported to the FBI. The FBI has the jurisdictional requirements to investigate acts of sabotage and terrorism. The CIP-001-1-1a standard requires a liaison relationship on behalf of the industry and the FBI or RCMP. These requirements, under the standard, of the industry have not been clear and have led to misunderstandings and confusion in the industry as to how to demonstrate that the liaison is in place and effective. As an example of proof of compliance with Requirement R4, Responsible Entities have asked FBI Office personnel to provide, on FBI letterhead, confirmation of the existence of a working relationship to report acts of sabotage, the number of years the liaison relationship has been in existence, and the validity of the telephone numbers for the FBI.~~

~~Coordination of Local and State Law Enforcement Agencies with the FBI~~

~~The Joint Terrorism Task Force (JTTF) came into being with the first task force being established in 1980. JTTFs are small cells of highly trained, locally based, committed investigators, analysts, linguists, SWAT experts, and other specialists from dozens of U.S. law enforcement and intelligence agencies. The JTTF is a multi-agency effort led by the Justice Department and FBI designed to combine the resources of federal, state, and local law enforcement. Coordination and communications largely through the interagency National Joint Terrorism Task Force, working out of FBI Headquarters, which makes sure that information and intelligence flows freely among the local JTTFs. This information flow can be most beneficial to the industry in analytical intelligence, incident response and investigation. Historically, the most immediate response to an industry incident has been local and state law enforcement agencies to suspected vandalism and criminal damages at industry facilities. Relying upon the JTTF coordination between local, state and FBI law enforcement would be beneficial to effective communications and the appropriate level of investigative response.~~

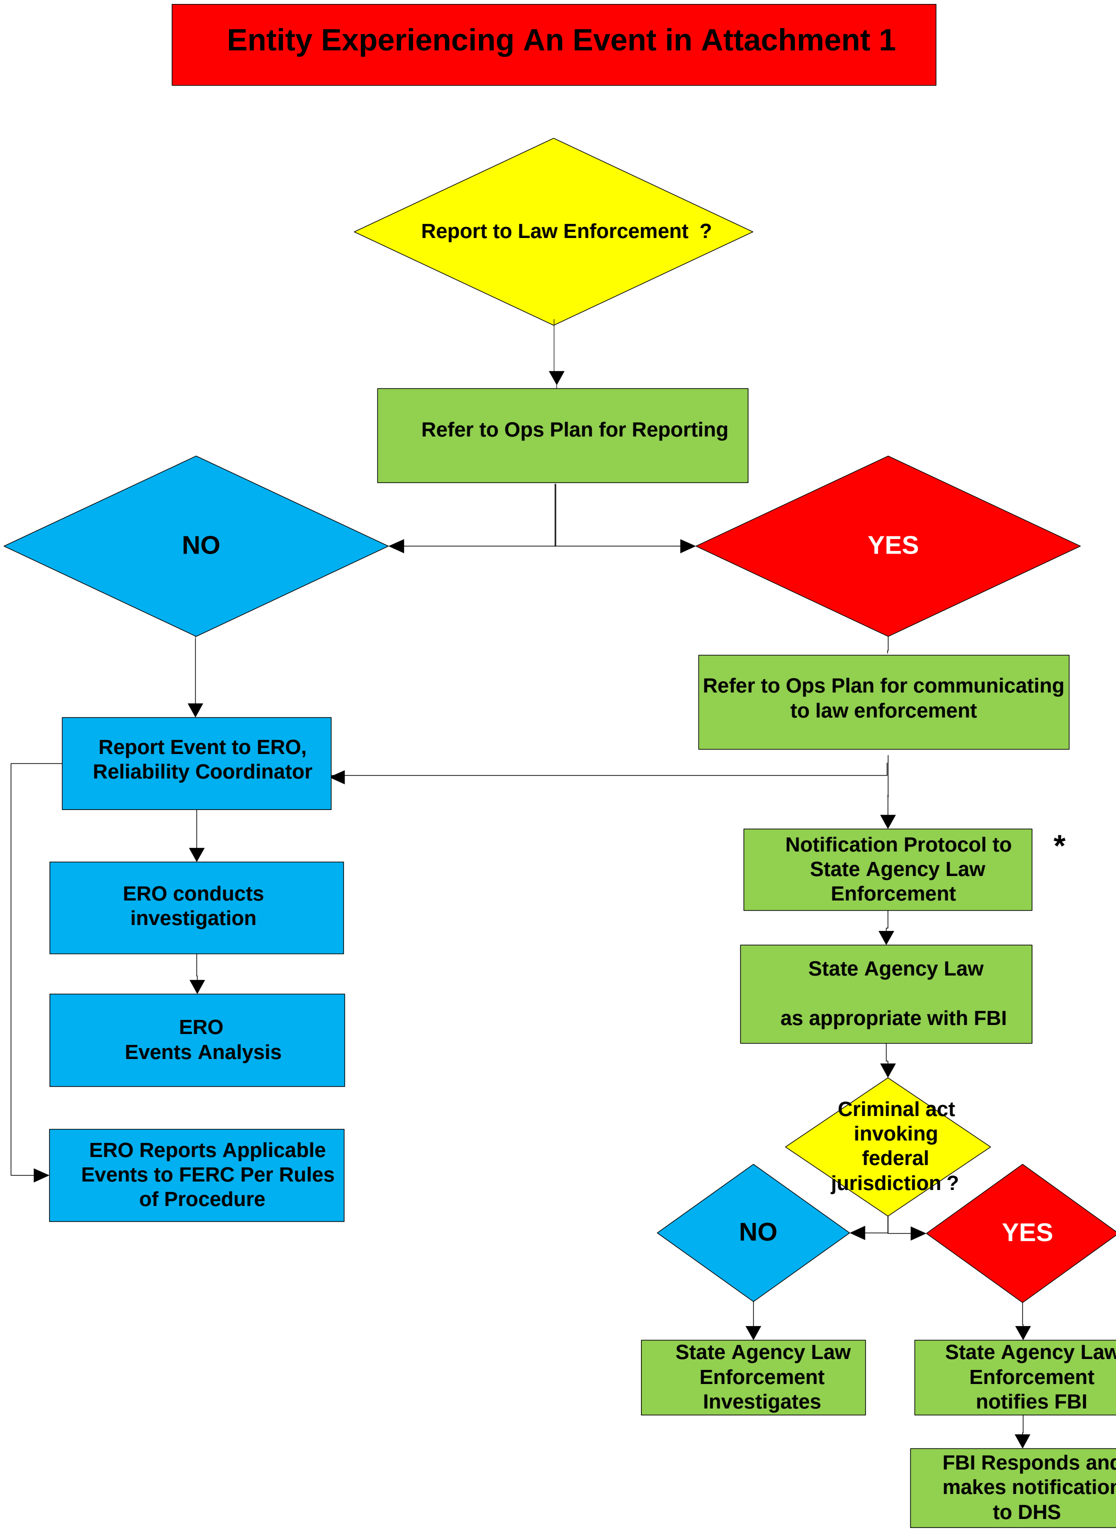
~~Coordination of Local and Provincial Law Enforcement Agencies with the RCMP~~

~~A similar law enforcement coordination hierarchy exists in Canada. Local and Provincial law enforcement coordinate to investigate suspected acts of vandalism and sabotage. The Provincial law enforcement agency has a reporting relationship with the Royal Canadian Mounted Police (RCMP).~~

~~A Reporting Process Solution – EOP-004~~

~~A proposal discussed with the FBI, FERC Staff, NERC Standards Project Coordinator and the SDT Chair is reflected in the flowchart below (Reporting Hierarchy for Reportable Events). Essentially, reporting an event to law enforcement agencies will only require the industry to notify the state or provincial or local level law enforcement agency. The state or provincial or local level law enforcement agency will coordinate with law enforcement with jurisdiction to investigate. If the state or provincial or local level law enforcement agency decides federal agency law enforcement or the RCMP should respond and investigate, the state or provincial or local level law enforcement agency will notify and coordinate with the FBI or the RCMP.~~

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

~~Disturbance and Sabotage Reporting Standard Drafting Team (Project 2009-01) - Reporting Concepts~~

~~Introduction~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009 and has developed updated standards based on the SAR.~~

~~The standards listed under the SAR are:~~

- ~~CIP-001 — Sabotage Reporting~~
- ~~EOP-004 — Disturbance Reporting~~

~~The changes do not include any real-time operating notifications for the types of events covered by CIP-001 and EOP-004. The real-time reporting requirements are achieved through the RCIS and are covered in other standards (e.g. EOP-002-Capacity and Energy Emergencies). These standards deal exclusively with after-the-fact reporting.~~

~~The DSR SDT has consolidated disturbance and sabotage event reporting under a single standard. These two components and other key concepts are discussed in the following sections.~~

~~Summary of Concepts and Assumptions:~~

~~The Standard:~~

- ~~Requires reporting of "events" that impact or may impact the reliability of the Bulk Electric System~~
- ~~Provides clear criteria for reporting~~
- ~~Includes consistent reporting timelines~~
- ~~Identifies appropriate applicability, including a reporting hierarchy in the case of disturbance reporting~~
- ~~Provides clarity around of who will receive the information~~

~~*Discussion of Disturbance Reporting*~~

~~Disturbance reporting requirements existed in the previous version of EOP-004. The current approved definition of Disturbance from the NERC Glossary of Terms is:~~

1. ~~An unplanned event that produces an abnormal system condition.~~
2. ~~Any perturbation to the electric system.~~
3. ~~The unexpected change in ACE that is caused by the sudden failure of generation or interruption of load.~~

~~Disturbance reporting requirements and criteria were in the previous EOP-004 standard and its attachments. The DSR SDT discussed the reliability needs for disturbance reporting and developed the list of events that are to be reported under this standard (EOP-004 Attachment 1).~~

~~*Discussion of Event Reporting*~~

~~There are situations worthy of reporting because they have the potential to impact reliability.~~

~~Event reporting facilitates industry awareness, which allows potentially impacted parties to prepare for and possibly mitigate any associated reliability risk. It also provides the raw material, in the case of certain potential reliability threats, to see emerging patterns.~~

~~Examples of such events include:~~

- ~~Bolts removed from transmission line structures~~
- ~~Train derailment adjacent to a Facility that either could have damaged a Facility directly or could indirectly damage a Facility (e.g. flammable or toxic cargo that could pose fire hazard or could cause evacuation of a control center)~~
- ~~Destruction of Bulk Electric System equipment~~

~~***What about sabotage?***~~

~~One thing became clear in the DSR SDT's discussion concerning sabotage: everyone has a different definition. The current standard CIP-001 elicited the following response from FERC in FERC Order 693, paragraph 471 which states in part:~~ ~~*". . . the Commission directs the ERO to develop the following modifications to the Reliability Standard through the Reliability Standards development process: (1) further define sabotage and provide guidance as to the triggering events that would cause an entity to report a sabotage event."*~~

~~Often, the underlying reason for an event is unknown or cannot be confirmed. The DSR SDT believes that by reporting material risks to the Bulk Electric System using the event categorization in this standard, it will be easier to get the relevant information for mitigation, awareness, and tracking, while removing the distracting element of motivation.~~

~~Certain types of events should be reported to NERC, the Department of Homeland Security (DHS), the Federal Bureau of Investigation (FBI), and/or Provincial or local law enforcement. Other types of events may have different reporting requirements. For example, an event that is related to copper theft may only need to be reported to the local law enforcement authorities.~~

Potential Uses of Reportable Information

~~Event analysis~~General situational awareness, correlation of data, ~~and~~ trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional ~~entities~~Entities to report the incidents and provide ~~known~~ information known at the time of the report. Further data gathering necessary for ~~event~~ analysis is provided for under the ~~Events~~ERO Event Analysis Program and the NERC Rules of Procedure. ~~Other entities (e.g. – NERC, Law Enforcement, etc) will be responsible for performing the analyses.~~ The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

~~Collection of Reportable Information or "One stop shopping"~~

~~The DSR SDT recognizes that some regions require reporting of additional information beyond what is in EOP-004. The DSR SDT has updated the listing of reportable events in EOP-004 Attachment 1 based on discussions with jurisdictional agencies, NERC, Regional Entities and stakeholder input. There is a possibility that regional differences still exist.~~

~~The reporting required by this standard is intended to meet the uses and purposes of NERC. The DSR SDT recognizes that other requirements for reporting exist (e.g., DOE-417 reporting), which may duplicate or overlap the information required by NERC. To the extent that other reporting is required, the DSR SDT envisions that duplicate entry of information should not be~~

~~necessary, and the submission of the alternate report will be acceptable to NERC so long as all information required by NERC is submitted. For example, if the NERC Report duplicates information from the DOE form, the DOE report may be sent to the NERC in lieu of entering that information on the NERC report.~~

~~Rationale:~~

~~During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT approval, the text from the rationale text boxes was moved to this section.~~

~~Rationale for R1:~~

~~The requirement to have an Operating Plan for reporting specific types of events provides the entity with a method to have its operating personnel recognize events that affect reliability and to be able to report them to appropriate parties; e.g., Regional Entities, applicable Reliability Coordinators, and law enforcement and other jurisdictional agencies when so recognized. In addition, these event reports are an input to the NERC Events Analysis Program. These other parties use this information to promote reliability, develop a culture of reliability excellence, provide industry collaboration and promote a learning organization.~~

~~Every Registered Entity that owns or operates elements or devices on the grid has a formal or informal process, procedure, or steps it takes to gather information regarding what happened when events occur. This requirement has the Responsible Entity establish documentation on how that procedure, process, or plan is organized. This documentation may be a single document or a combination of various documents that achieve the reliability objective.~~

~~The communication protocol(s) could include a process flowchart, identification of internal and external personnel or entities to be notified, or a list of personnel by name and their associated contact information. An existing procedure that meets the requirements of CIP-001-2a may be included in this Operating Plan along with other processes, procedures or plans to meet this requirement.~~

~~Rationale for R2:~~

~~Each Responsible Entity must report and communicate events according to its Operating Plan based on the information in EOP-004-3 Attachment 1. By implementing the event reporting Operating Plan the Responsible Entity will assure situational awareness to the Electric Reliability Organization so that they may develop trends and prepare for a possible next event and mitigate the current event. This will assure that the BES remains secure and stable by mitigation actions that the Responsible Entity has within its function. By communicating events per the Operating Plan, the Responsible Entity will assure that people/agencies are aware of the current situation and they may prepare to mitigate current and further events.~~

~~**Rationale for R3:**~~

~~Requirement 3 calls for the Responsible Entity to validate the contact information contained in the Operating Plan each calendar year. This requirement helps ensure that the event reporting Operating Plan is up to date and entities will be able to effectively report events to assure situational awareness to the Electric Reliability Organization. If an entity experiences an actual event, communication evidence from the event may be used to show compliance with the validation requirement for the specific contacts used for the event.~~

~~**Rationale for EOP-004 Attachment 1:**~~

~~The DSR SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as:~~

> ~~"A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)"~~

~~The DSR SDT does not intend the use of the term Facility to mean a substation or any other facility (not a defined term) that one might consider in everyday discussions regarding the grid. This is intended to mean ONLY a Facility as defined above.~~

Exhibit A-2

Proposed Reliability Standard EOP-005-3

Reliability Standard EOP-005-3 Clean and Redline

EOP-005-3 Clean Version

A. Introduction

1. **Title:** System Restoration from Blackstart Resources
2. **Number:** EOP-005-3
3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   4.1. Functional Entities:
   4.1.1. Transmission Operators
   4.1.2. Generator Operators
   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan
   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan
5. **Effective Date:** See the Implementation Plan for EOP-005-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of its Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring operations back to the Balancing Authority in accordance with its Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

R4. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has submitted the revised restoration plan to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

R6. Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation, such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. System restoration plan including coordination with its Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of a revised restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by its Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. .

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in effect since its last compliance audit for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in effect since its last compliance audit on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. The Compliance Enforcement Authority shall keep the last compliance audit records and all requested and submitted subsequent compliance audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three or more of the requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.
R3.	The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.
R4.	The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification.	The Transmission Operator has failed to submit its revised restoration plan to its Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. OR The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator prior

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				to a planned permanent BES modification.
R5.	N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.
R6.	The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.
R7.	N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				one or more of the requirement parts of Requirement R7.
R8.	The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.
R9.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train 5% or less of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 5% and up to 10% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a two-calendar-year period.
R10.	N/A	N/A	N/A	The Transmission Operator has failed to comply with a request for its participation from its Reliability Coordinator.
R11.	N/A	The Transmission Operator and Generator Operator	N/A	The Transmission Operator and Generator Operator

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
		with a Blackstart Resource do not reference Blackstart Resource Testing requirements in their written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols.		with a Blackstart resource do not have a written Blackstart Resource Agreement or mutually-agreed upon procedure or protocol.
R12.	N/A	N/A	N/A	The Generator Operator does not have documented starting and bus energizing procedures for each Blackstart Resource.
R13.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 24 hours but did make the notification within 48 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 48 hours but did make the notification within 72 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 72 hours but did make the notification within 96 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan for more than 96 hours.

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R14.	The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.
R15.	The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a two-calendar-year period.
R16.	N/A	N/A	N/A	The Generator Operator failed to participate in its Reliability Coordinator’s

3	February 9, 2017	Adopted by the NERC Board of Trustees	Revised

Rationale

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities.

The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

EOP-005-3 Redline Version

A. Introduction

1. **Title:** System Restoration from Blackstart Resources

2. **Number:** EOP-005-~~2~~3

3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ~~assure~~ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. **Applicability:**

4.1. Functional Entities:

~~4.1.~~**4.1.1.** Transmission Operators~~.~~

~~4.2.~~**4.1.2.** Generator Operators~~.~~

~~4.3.~~**4.1.3.** Transmission Owners identified in the Transmission Operators restoration plan~~.~~

~~4.4.~~**4.1.4.** Distribution Providers identified in the Transmission Operators restoration plan~~.~~

~~5. **Proposed Effective Date:** Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~

5. **Effective Date:** See the Implementation Plan for EOP-005-3.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall ~~have~~develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shut down~~shutdown area~~ to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

~~R1.1.~~**1.1.** Strategies for ~~system~~System restoration that are coordinated with ~~the~~its Reliability Coordinator's high level strategy for restoring the Interconnection.

~~R1.2.~~**1.2.** A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

~~R1.3.~~1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of ~~the~~its Reliability Coordinator.

~~R1.4.~~1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

~~R1.5.~~1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

~~R1.6.~~1.6. Identification of acceptable operating voltage and frequency limits during restoration.

~~R1.7.~~1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

~~R1.8.~~1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

~~R1.9.~~1.9. Operating Processes for transferring ~~authority~~operations back to the Balancing Authority in accordance with ~~the~~its Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

~~**R3.**~~ Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually~~-~~agreed, predetermined schedule. ~~*[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~

~~**3.1.** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to~~

~~its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. (Retirement approved by FERC effective January 21, 2014.)~~

~~R4.~~R3. ~~Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan.~~ *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

~~R4.1.~~R4. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval ~~within the same 90 calendar day period.~~ , when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has submitted the revised restoration plan to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its ~~implementation~~effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

R6. Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years ~~at a minimum.~~ . Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

~~R6.1.~~6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

~~R6.2.~~6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

~~R6.3.~~6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

~~R7. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected~~Each Transmission Operator shall ~~implement~~have documentation, such as power flow outputs, that it has verified that its latest restoration plan~~. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize~~ will accomplish its ~~restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~R8.~~M6. ~~Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or~~intended function in accordance with ~~the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~Requirement R6.

~~R9.~~R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R9.1.~~7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

~~R9.2.~~7.2. A list of required tests including:

~~R9.2.1.~~7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

~~R9.2.2.~~7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

~~R9.3.~~M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

~~R10.~~R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan.~~. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R10.1.~~8.1. System restoration plan including coordination with ~~the~~its Reliability Coordinator and Generator Operators included in the restoration plan.

~~R10.2.~~8.2. Restoration priorities.

~~R10.3.~~8.3. Building of cranking paths.

~~R10.4.~~8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

~~R11.~~R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

~~R12.~~R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

~~R13.~~R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

~~R14.~~R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

~~R15.~~R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

~~R16.~~R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

- ~~R16.1.~~14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement ~~R9~~R7.
- ~~R16.2.~~14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

~~R17.~~R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

- ~~R17.1.~~15.1. System restoration plan including coordination with the Transmission Operator~~.~~
- ~~17.2.~~ The procedures documented in Requirement ~~R14.~~

~~**R18.** Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~

~~C. Measures~~

~~**M1.** Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator.~~

~~**M2.** Each Transmission Operator shall have evidence such as e-mails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.~~

~~**M3.** Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, e-mails with receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.~~

~~**M4.** Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, e-mails with receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.~~

~~**M5.** Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available in its primary and backup control rooms and its System Operators prior to its implementation date in accordance with Requirement R5.~~

~~**M6.** Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.~~

~~**M7.** If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it implemented its restoration plan or restoration plan strategies in accordance with Requirement R7.~~

~~**M8.** If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved in such an event shall have evidence, such as voice recordings, e-mail, dated computer printouts, or operator logs, that it resynchronized shut down areas in accordance with Requirement R8.~~

~~**M9.** Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R9.~~

~~**M10.** Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R10.~~

~~**M11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R11.~~

~~**M12.**~~**15.2.** ~~Each Transmission Operator shall have evidence, such as training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement~~ R12~~.~~

~~**M13.** Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R13.~~

~~**M14.** Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R14.~~

~~**M15.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within twenty-four hours of such changes in accordance with Requirement R15.~~

~~**M16.** Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R16.~~

~~**M17.**~~**M15.** Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement ~~R17~~R15.

R16. Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~**M18.**~~**M16.** Each Generator Operator shall have evidence~~, such as dated training records,~~ that it participated in ~~the~~its Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement ~~R18~~R16.

~~D.~~C. Compliance

1. **Compliance Monitoring Process**

~~1.4.~~ Compliance Enforcement Authority

1.1. : Regional Entity~~.~~

~~1.5. Compliance Monitoring Period and Reset Time Frame~~

~~Not applicable.~~

~~1.6. Compliance Monitoring and Enforcement Processes:~~

~~Compliance Audits~~

~~Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations~~

~~Self-Reporting~~

~~Complaints~~

~~1.7. Data Retention~~

"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~o~~ Approved restoration plan and any restoration plans in ~~force~~effect since the last compliance audit for Requirement R1, Measure M1.
- ~~o~~ Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.

- ~~o~~ Submission of the Transmission Operator's annually~~-~~-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- ~~o~~ Submission of ~~an updated~~a revised restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- ~~o~~ The current~~,~~ restoration plan approved by ~~the~~its Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- ~~o~~ The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
  - ~~o Implementation of its restoration plan or restoration plan strategies on any occasion for three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R7, Measure M7.~~
  - ~~o Resynchronization of shut down areas on any occasion over three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R8, Measure M8.~~
- ~~o~~ The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement ~~R9~~R7, Measure ~~M9~~M7.
- ~~o Actual training~~Training program materials or descriptions for three calendar years for Requirement ~~R10~~R8, Measure ~~M10~~M8.
- ~~o~~ Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement ~~R12~~R10, Measure ~~M12~~M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer. The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

~~The Transmission Operator, applicable Transmission Owner, and applicable Distribution provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:~~

- ~~o~~ ~~Actual training~~Training program materials or descriptions and ~~actual~~ training records for three calendar years for Requirement ~~R11~~R9, Measure ~~M11~~M9.

If a Transmission Operator, applicable Transmission ~~owner~~Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the time period specified above, whichever is longer. .

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~o~~ Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in ~~force~~effect since its last compliance audit for Requirement ~~R13~~R11, Measure ~~M13~~M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~o~~ Current documentation and any documentation in ~~force~~effect since its last compliance audit on procedures to start each Blackstart ~~Resources~~Resource and for energizing a bus for Requirement ~~R14~~R12, Measure ~~M14~~M12.
- ~~o~~ Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement ~~R15~~R13, Measure ~~M15~~M13.
- ~~o~~ The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement ~~R16~~R14, Measure ~~M16~~M14.
- ~~o~~ ~~Actual training~~Training program materials and ~~actual~~ training records for three calendar years for Requirement ~~R17~~R15, Measure ~~M17~~M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~o~~ Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement ~~R18~~R16, Measure ~~M18.~~ M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the time period specified above, whichever is longer. The Compliance Enforcement Authority shall keep the last compliance audit records and all requested and submitted subsequent compliance audit records.

1.3. ~~The~~ **Compliance Monitoring and Enforcement** ~~Authority shall keep~~**Program**

As defined in the ~~last audit records and all requested and submitted subsequent audit records~~NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~**1.8. Additional Compliance Information**~~

~~None.~~

3	February 9, 2017	Adopted by the NERC Board of Trustees	Revised

Rationale

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities.

The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

Exhibit A-3

Proposed Reliability Standard EOP-006-3

Reliability Standard EOP-006-3 Clean and Redline

EOP-006-3 Clean Version

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   4.1. Functional Entities:
   4.1.1. Reliability Coordinators
5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability

Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its

Reliability Coordinator Area. The Reliability Coordinator shall provide notification to the Transmission Operator of approval or disapproval, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator; and

7.2. Re-establishing the Interconnection.

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.
- The current, approved restoration plan and any restoration plans in effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.

- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts 91 or more calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.
R5.	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt. A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-~~2~~ 3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**

4.1. Functional Entities:

~~4.1.~~**4.1.1.** Reliability Coordinators~~.~~

~~**5.Proposed Effective Date:** Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~

5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall ~~have~~develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a ~~shut down~~shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

~~**R1.1.**~~**1.1.** A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

~~**R1.2.** Operating Processes for restoring the Interconnection.~~

~~**R1.3.** Descriptions of the elements of coordination between individual Transmission Operator restoration plans.~~

~~**R1.4.** Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators.~~

~~**R1.5.**~~**1.2.** Criteria and conditions for ~~reestablishing~~re-establishing interconnections with other Transmission Operators within its Reliability

Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

~~R1.6.~~1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

~~R1.7.~~1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

~~R1.8.~~1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

~~R1.9.~~1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review ~~their~~its neighboring Reliability Coordinator's restoration plans~~.~~ and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If ~~the~~a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved ~~in~~within 30 calendar days~~.~~ of receipt of written notification.

~~R4.1.~~**M4.** Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R5.1.~~5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall ~~approve~~provide notification to the Transmission Operator of approval or ~~disapprove~~disapproval, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the ~~implementation~~effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

~~R7.~~**M6.** Each Reliability Coordinator shall ~~work with its affected Generator Operators, and Transmission Operators~~have documentation such as ~~well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the~~ electronic receipts that it has made the latest copy of its restoration plan ~~cannot be completed as expected the~~ and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator ~~shall utilize its restoration plan strategies to facilitate~~Area available in its primary and backup control rooms and to each of its System ~~restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~ Operators prior to the effective date in accordance with Requirement R6.

~~R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~R9.~~R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan.~~ . This training program shall address the following: ~~–~~ *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R9.1.~~7.1. The coordination role of the Reliability Coordinator ~~.~~; and

7.2. ~~Reestablishing~~Re-establishing the Interconnection.

~~R9.2.~~M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

~~R10.~~R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~R10.1.~~8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

~~C.~~Measures

~~M1.~~Each Reliability Coordinator shall have ~~available a dated copy of its restoration plan in accordance with Requirement R1.~~

~~M2.Each Reliability Coordinator shall provide~~ evidence, such as ~~e-mails with receipts, posting to a secure web site with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.~~

~~M3.M1. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.~~

~~M4.Each Reliability Coordinator shall provide evidence such as dated review signature sheets that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within 30 calendar days in accordance with Requirement R4.~~

~~M5.Each Reliability Coordinator shall provide evidence, such as a review signature sheet or emails, that it has reviewed, approved or disapproved, and notified its Transmission Operator's within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.~~

~~M6.Each Reliability Coordinator shall have documentation such as e-mail receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its~~

~~primary and backup control rooms and to each of its System Operators prior to the implementation date in accordance with Requirement R6.~~

~~**M7.**Each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it monitored and coordinated restoration progress in accordance with Requirement R7.~~

~~**M8.**If there has been a resynchronizing of an islanded area, each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, or operator logs, that it coordinated or authorized resynchronizing in accordance with Requirement R8.~~

~~**M9.**Each Reliability Coordinator shall have an~~ dated electronic ~~or hard copy of its training records available showing that it has provided training in accordance with Requirement R9.~~

~~**M10.**~~**M8.** ~~Each Reliability Coordinator shall have evidence~~documents, that it conducted two System restoration drills, exercises, or simulations per calendar year ~~and that Transmission Operators~~ in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator ~~Operators included in the Reliability Coordinator's restoration plan were invited in accordance with Requirement R10.~~Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

~~D.~~C. Compliance

1. Compliance Monitoring Process

~~1.4.~~1.1. Compliance Enforcement Authority:

~~Regional Entity.~~

~~1.2.Compliance Monitoring Period and Reset Time Frame~~

~~Not applicable.~~

~~1.3.Compliance Monitoring and Enforcement Processes:~~

~~Compliance Audits~~

~~Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations~~

~~Self-Reporting~~

~~Complaints~~

~~1.4.Data Retention~~

~~The Reliability Coordinator~~"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- The current restoration plan and any restoration plans in ~~force~~effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in ~~force~~effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.
- The current, approved restoration plan and any restoration plans in ~~force~~effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
  - ~~If there has been a restoration event, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R7, Measure M7.~~
  - ~~If there has been a resynchronization of an islanded area, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R8, Measure M8.~~
- Actual training program materials or descriptions for three calendar years for Requirements ~~R9~~R7, Measure ~~M9.~~ M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement ~~R10~~R8, Measure ~~M10~~M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

~~1.5.~~1.3. ~~Additional~~ Compliance ~~Information~~ Monitoring and Enforcement Program

~~None.~~

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~2.~~Violation Severity Levels

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Reliability Coordinator failed to include one ~~sub-~~requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two ~~sub-requirements~~requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the ~~sub-~~requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the ~~sub-requirements~~requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts 91 or more calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.
~~R4~~R5.	The Reliability Coordinator did not review and ~~resolve conflicts with~~ approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did ~~resolve conflicts~~review and approve/disapprove the plans within ~~60~~45 calendar days of receipt.	The Reliability Coordinator did not review and ~~resolve conflicts with~~ approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did ~~resolve conflicts~~review and approve/disapprove the plans within ~~90~~60 calendar days~~.~~ of receipt.	~~–~~The Reliability Coordinator did not review and ~~resolve conflicts with~~ approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did ~~resolve conflicts~~review and approve/disapprove the plans within ~~120~~90 calendar days~~.~~ of receipt.	The Reliability Coordinator did not review and ~~resolve conflicts with~~ approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators ~~within 120~~for more than 90 calendar days~~.~~ of receipt. OR

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
	OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons for disapproval within 30 calendar days of receipt but did notify the Transmission Operator of its approval or disapproval with reasons within 45 calendar days of receipt. Proposed Reliability Standard EOP-008-2

Reliability Standard EOP-008-2 Clean and Redline

EOP-008-2 Clean Version

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinator

   4.1.2. Transmission Operator

   4.1.3. Balancing Authority
5. **Effective Date:** See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data exchange capabilities.

1.2.3. Interpersonal Communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards are applicable to the primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality. To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual test of its Operating Plan that demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in effect Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in effect copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.
- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Measurement M3.
- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has

demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality in accordance with Measurement M4.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in effect Operating Plan for backup functionality, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in effect since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and the previous calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in effect document and any such documents in effect since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control

Version History

Version	Date	Action	Change Tracking
1	2009 - 2010	Project 2006-04: Revisions	Major re-write to accommodate changes noted in project file
1	August 5, 2010	Project 2006-04: Adopted by the Board	
1	April 21, 2011	Project 2006-04: FERC Order issued approving EOP-008-1 (approval effective June 27, 2011)	
1	July 1, 2013	Project 2006-04: Updated VRFs and VSLs based on June 24, 2013 approval	
2	July 9, 2017	Adopted by the NERC Board of Trustees	Revised

Rationale

Rationale for Requirement R1: The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons:

COM-001-1 (no longer enforceable) covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data.

The topic of data exchange has historically been covered in the IRO / TOP Standards. Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.

EOP-008-2 Redline Version

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-~~1~~2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**

   ~~1.1.~~**4.1. Functional** ~~Entity~~ **Entities:**

   ~~1.1.1~~**4.1.1.** Reliability Coordinator~~.~~

   ~~1.1.2~~**4.1.2.** Transmission Operator~~.~~

   ~~1.1.3~~**4.1.3.** Balancing Authority~~.~~

~~**Effective Date:** The first day of the first calendar quarter twenty-four months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the standard shall become effective on the first day of the first calendar quarter twenty-four months after Board of Trustees adoption.~~

5. **Effective Date:** See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. -This Operating Plan for backup functionality shall include ~~the following, at a minimum~~: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality ~~for the time it takes to restore the primary control center functionality.~~.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include~~, at a minimum:~~:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data ~~communications.~~ exchange capabilities.

~~**1.1.1.** Voice communications.~~

1.2.3. Interpersonal Communications.

~~1.2.3.~~**1.2.4.** Power source(s).

~~1.2.4.~~**1.2.5.** Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include ~~at a minimum~~:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards ~~that depend on~~are applicable to the primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing ~~Authority~~Authority's and Transmission Operator's primary control center functionality ~~respectively.~~ . To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~1.7.~~5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes ~~–~~to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual test of its Operating Plan that demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~1.8.~~7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

~~1.9.~~7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~C. Measures~~

~~**M1**. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, in force Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.~~

~~**M2.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, in force copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.~~

~~**M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.~~

~~**M4.** Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.~~

~~**M5.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall have evidence that its dated, current, in force Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.~~

~~**M1.** **M6.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.~~

~~**M1.** **M7.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.~~

M8. ~~**M8.**~~ Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

~~D.~~C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

~~Regional Entity.~~

~~1.2. Compliance Monitoring and Enforcement Processes:~~

~~Compliance Audits~~

~~Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations~~

~~Self-Reporting~~

~~Complaints~~

~~1.3. Data Retention~~

~~The Reliability Coordinator, Balancing Authority, and Transmission Operator~~"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall ~~retain~~keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in ~~force~~effect Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in ~~force~~effect copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.

- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality in accordance with Measurement M3.

- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing ~~Authority~~Authority's and Transmission Operator's primary control center functionality ~~respectively~~ in accordance with Measurement M4.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in ~~force~~effect Operating Plan for backup functionality, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in ~~force~~effect since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and ~~one~~the previous ~~year~~calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in ~~force~~effect document and any such documents in ~~force~~effect since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

~~1.4.~~1.3. ~~Additional~~ Compliance ~~Information~~ Monitoring and Enforcement Program

~~None.~~

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~2.~~ Violation Severity Levels

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (Requirement R1, Parts ~~(~~1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (Requirement R1, Parts ~~(~~1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (Requirement R1, Parts ~~(~~1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (Requirement R1, Parts ~~(~~1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
				facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality.

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4.	N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
				~~Authority~~Authority's and Transmission Operator's primary control center functionality ~~respectively.~~ .
R5.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved. OR, The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.
R6.	N/A	N/A	N/A	The responsible entity has primary and backup

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
				functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.
R7.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but it did not document the results. OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than two continuous hours but more than or equal to 1.5 continuous hours.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1.5 continuous hours but more than or equal to 1 continuous hour.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1 continuous hour but	The responsible entity did not conduct an annual test of its Operating Plan for backup functionality. OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 0.5 continuous hours.

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
			more than or equal to 0.5 continuous hours.	
R8.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted more than six calendar months but less than or equal to seven calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than seven calendar months but less than or equal to eight calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

Version History

Version	Date	Action	Change Tracking
1	~~TBD~~2009 - 2010	~~Revisions for~~ Project 2006-04: Revisions	Major re-write to accommodate changes noted in project file
1	August 5, 2010	Project 2006-04: Adopted by the Board ~~of Trustees~~	
1	April 21, 2011	Project 2006-04: FERC Order issued approving EOP-008-1 (approval effective June 27, 2011)	
1	July 1, 2013	Project 2006-04: Updated VRFs and VSLs based on June 24, 2013 approval~~.~~	
2	July 9, 2017	Adopted by the NERC Board of Trustees	Revised

Rationale

Rationale for Requirement R1: The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons:

COM-001-1 (no longer enforceable) covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data.

The topic of data exchange has historically been covered in the IRO / TOP Standards. Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.

Exhibit B

Implementation Plans

Exhibit B-1

Implementation Plan for Proposed Reliability Standard EOP-004-4

NERC

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standard EOP-004-4

Applicable Standard(s)

- EOP-004-4 — Event Reporting

Requested Retirement(s)

- EOP-004-3 — Event Reporting

Prerequisite Standard(s)
None.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Generator Owner
- Transmission Operator
- Generator Operator
- Distribution Provider

Background
Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standard making the standard more Results-based.

Effective Date
EOP-004-4 — Event Reporting
Where approval by an Applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the Applicable Governmental Authority.

Where approval by an Applicable Governmental Authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None.

Retirement Date

EOP-004-3 — Event Reporting
Reliability Standard EOP-004-3 shall be retired immediately prior to the effective date of EOP-004-4 in the particular jurisdiction in which the revised standard is becoming effective.

Exhibit B-2

Implementation Plan for Proposed Reliability Standards EOP-005-3, EOP-006-3 and EOP-008-2

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standard(s)

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirement(s)

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standard(s)

None.

Applicable Entities

EOP-005 — System Restoration from Blackstart Resources

- Transmission Operator
- Generator Operator
- Transmission Owners identified in the Transmission Operators restoration plan
- Distribution Providers identified in the Transmission Operators restoration plan

EOP-006 — System Restoration Coordination

- Reliability Coordinator

EOP-008 — Loss of Control Center Functionality

- Reliability Coordinator
- Transmission Operator
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing an outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Exhibit C

Order No. 672 Criteria

Order No. 672 Criteria

In Order No. 672,[1] the Commission identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The discussion below identifies these factors and explains how the proposed Reliability Standard has met or exceeded the criteria.

1. **Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve that goal.[2]**

The proposed Reliability Standards achieve specific reliability goals. Proposed Reliability Standard EOP-004-4 – Event Reporting, improves the reliability of the Bulk Electric System ("BES") by requiring the reporting of events by Responsible Entities. Proposed Reliability Standard EOP-005-3 – System Restoration from Blackstart Resources, ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection. Proposed Reliability Standard EOP-006-3 – System Restoration Coordination, ensures plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection. Proposed Reliability Standard EOP-008-2 – Loss of Control Center Functionality, ensures continued reliable operations of the BES in the event that a control center becomes inoperable.

The proposed Reliability Standards also satisfy an outstanding Commission directive from Order No. 749.

---

[1] *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

[2] Order No. 672 at PP 321, 324.

2. **Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.[3]**

The proposed Reliability Standards are clear and unambiguous as to what is required and who is required to comply, in accordance with Order No. 672. Proposed Reliability Standard EOP-004-4, applies to Reliability Coordinators, Balancing Authorities, Transmission Owners, Transmission Operators, Generator Owners, Generator Operators, and Distribution Providers. Proposed Reliability Standard EOP-005-3, applies to Transmission Operators, Generator Operators, Transmission Owners identified in the Transmission Operators restoration plan and Distribution Providers identified in the Transmission Operators restoration plan. Proposed Reliability Standard EOP-006-3, applies to Reliability Coordinators. Proposed Reliability Standard EOP-008-2, applies to Reliability Coordinators, Transmission Operators, and Balancing Authorities. The proposed standards clearly articulate the actions that each entity must take to comply.

3. **A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.[4]**

The Violation Risk Factors ("VRFs") and Violation Severity Levels ("VSLs") for each of the proposed Reliability Standards comport with NERC and Commission guidelines related to their assignment, as discussed further in **Exhibit E**. The assignment of the severity level for each VSL is consistent with the corresponding Requirement and the VSLs should ensure uniformity and consistency in the determination of penalties. The VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of

---

[3] Order No. 672 at P 322, 325.

[4] Order No. 672 at P 326.

similar penalties for similar violations. For these reasons, the proposed Reliability Standards include clear and understandable consequences in accordance with Order No. 672.

4. A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner. [5]

The proposed Reliability Standards contain Measures that support each Requirement by clearly identifying what is required to demonstrate compliance. These Measures help provide clarity regarding the manner in which the Requirements will be enforced, and help ensure that the Requirements will be enforced in a clear, consistent, and non-preferential manner and without prejudice to any party.

5. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect "best practices" without regard to implementation cost or historical regional infrastructure design.[6]

The proposed Reliability Standards achieve the reliability goals effectively and efficiently in accordance with Order No. 672. Consistent with a Commission directive in Order No. 749, the proposed Reliability Standards improve upon the prior versions of the standards by: (i) ensuring strong planning, reporting, communication, and coordination across the Functional Entities; (ii) streamlining standards; and (iii) applying Paragraph 81 criteria, while making the standards more-Results-based.

---

5 Order No. 672 at P 327.
6 Order No. 672 at P 328.

6. **Proposed Reliability Standards cannot be "lowest common denominator," i.e., cannot reflect a compromise that does not adequately protect Bulk-Power System reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.[7]**

The proposed Reliability Standards do not reflect a "lowest common denominator" approach. To the contrary, the revisions reflected in the proposed Standards provide significant benefits for the reliability of the Bulk-Power System. The requirements of the proposed Reliability Standards clarify the methodology requirements for Emergency operations, including the communication and coordination amongst reporting entities.

7. **Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one geographic area or regional model. It should take into account regional variations in the organization and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.[8]**

The proposed Reliability Standards apply throughout North America and do not favor one geographic area or regional model.

8. **Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid beyond any restriction necessary for reliability.[9]**

The proposed Reliability Standards have no undue negative effect on competition. The proposed Reliability Standards require the same performance by each applicable entity. The proposed standards do not unreasonably restrict the available transmission capability or limit use of the Bulk-Power System in a preferential manner.

---

[7] Order No. 672 at PP 329-330.
[8] Order No. 672 at P 331.
[9] Order No. 672 at P 332.

9. The implementation time for the proposed Reliability Standard is reasonable.[10]

The proposed effective dates for the proposed Reliability Standards are just and reasonable and appropriately balance the urgency in the need to implement the proposed Reliability Standards against the reasonableness of the time allowed for those who must comply to develop necessary procedures, software, facilities, staffing or other relevant capability. NERC proposes an effective date for the proposed Reliability Standards that is the first day of the first calendar quarter that is twelve (12) months after the effective date of regulatory approval.

The proposed implementation periods are designed to allow sufficient time for the applicable entities to make any changes in their internal process necessary to implement proposed standards. The proposed effective dates are explained in the proposed Implementation Plans, attached as **Exhibit B**.

10. The Reliability Standard was developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.[11]

The proposed Reliability Standards were developed in accordance with NERC's Commission-approved, ANSI- accredited processes for developing and approving Reliability Standards.[12] **Exhibit G** includes a summary of the development proceedings, and details the processes followed to develop the proposed Reliability Standards. These processes included, among other things, multiple comment periods, pre-ballot review periods, and balloting periods. Additionally, all meetings of the drafting team were properly noticed and open to the public. The initial and additional ballots achieved a quorum and exceeded the required ballot pool approval levels.

[11] Order No. 672 at P 334.

[12] *See* NERC Rules of Procedure, Section 300 (Reliability Standards Development) and Appendix 3A (Standard Processes Manual).

11. NERC must explain any balancing of vital public interests in the development of proposed Reliability Standards.[13]

NERC has identified no competing public interests regarding the request for approval of the proposed Reliability Standards. No comments were received that indicated the proposed Reliability Standards conflict with other vital public interests.

12. Proposed Reliability Standards must consider any other appropriate factors.[14]

No other negative factors relevant to whether the proposed Reliability Standards are just and reasonable were identified.

Project 2015-08 Emergency Operations

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-3, Measure M1 **M1.** Each Responsible Entity will have a dated event reporting Operating Plan that includes, but is not limited to the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-3 Attachment 1 and in accordance with the entity responsible for reporting.	EOP-004-4, Measure M1 **M1.** Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.	Updated standard version number. "…not limited to" removed from Measure M1, as unnecessary.
EOP-004-3, Requirement R2 **R2.** Each Responsible Entity shall report events per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM	EOP-004-4, Requirement R2 **R2.** Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business	Requirement R2 revisions were provided for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
local time on Friday to 8 AM Monday local time).	day (4 p.m. local time will be considered the end of the business day).	
EOP-004-3, Measure M2 **M2.** Each Responsible Entity will have as evidence of reporting an event, copy of the completed EOP-004-3 Attachment 2 form or a DOE-OE-417 form; and evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating the event report was submitted within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM Monday local time). (R2)	EOP-004-4, Measure M2 **M2.** Each Responsible Entity will have as evidence of reporting an event to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).	Measure M2 was updated for clarity and to identify 4:00 p.m. local time to be considered as the end of the entity's business day.
EOP-004-3, Requirement R3	Recommended for retirement.	The EOP SDT recommends retirement of Requirement R3 under Criterion B1, administrative; the R3 requirement in EOP-

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R3. Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year.		004-3 requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. Contact lists are administrative in nature.
EOP-004-3, Attachment 1 Event Type: Damage or destruction of a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action.	EOP-004-4, Attachment 1 Event Type: Damage or destruction of its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-3, Attachment 1	EOP-004-4, Attachment 1	The EOP SDT wanted to change the reporting responsibility to the Facility

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Event Type: Physical threats to a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at a Facility. Do not report theft unless it degrades normal operation of a Facility.	Event Type: Physical threats to its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.	owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-3, Attachment 1 Event Type: Physical threats to a BES control center Entity with Reporting Responsibility: RC, BA, TOP	EOP-004-4, Attachment 1 Event Type: Physical threats to its BES control center Entity with Reporting Responsibility: RC, BA, TOP	With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a BES control center" to "…its BES control center."

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at a BES control center.	Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.	
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring public appeal for load reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Public appeal for load reduction event.	EOP-004-4, Attachment 1 Event Type: Public appeal for load reduction resulting from a BES Emergency Entity with Reporting Responsibility: BA Threshold for Reporting: Public appeal for load reduction to maintain continuity of the BES.	To maintain the continuity of the BES was added to better align with the DOE OE-417 reporting category. Rationale: The EOP SDT changed the reporting responsibility to the BA only based on the BA requirements in EOP-011-1 (FERC approved, pending enforcement) Requirement R2 "Each Balancing Authority shall develop, maintain, and implement one or more Reliability Coordinator-reviewed Operating Plan(s) to mitigate Capacity Emergencies and Energy Emergencies within its Balancing Authority Area. The Operating Plan(s) shall include the

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		following, as applicable: *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations, Operations Planning, Long-term Planning]* **2.1.** Roles and responsibilities for activating the Operating Plan(s); **2.2.** Processes to prepare for and mitigate Emergencies including: **2.2.1.** Notification to its Reliability Coordinator, to include current and projected conditions when experiencing a Capacity Emergency or Energy Emergency; **2.2.2.** Requesting an Energy Emergency Alert, per Attachment 1; **2.2.3.** Managing generating resources in its Balancing Authority Area to address: **2.2.3.1.** capability and availability; **2.2.3.2.** fuel supply and inventory concerns; **2.2.3.3.** fuel switching capabilities; and **2.2.3.4.** environmental constraints. **2.2.4.** Public appeals for voluntary Load reductions;

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring system-wide voltage reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting. Threshold for Reporting: System wide voltage reduction of 3% or more.	EOP-004-4, Attachment 1 Event Type: System-wide voltage reduction resulting from a BES Emergency Entity with Reporting Responsibility: TOP Threshold for Reporting: System-wide voltage reduction of 3% or more.	The TOP is operating the system and is the only entity that would implement System-wide voltage reduction.
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring manual firm load shedding Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Manual firm load shedding ≥ 100 MW.	EOP-004-4, Attachment 1 Event Type: Firm load shedding resulting from a BES Emergency Entity with Reporting Responsibility: Initiating RC, BA, or TOP Threshold for Reporting: Firm load shedding ≥ 100 MW (manual or automatic).	The RC, BA and TOP are the entities that would initiate manual firm load shedding.
EOP-004-3, Attachment 1 Event Type: BES Emergency resulting in automatic firm load shedding Entity with Reporting Responsibility: DP, TOP	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Automatic firm load shedding ≥ 100 MW (via automatic undervoltage or underfrequency load shedding schemes, or RAS).		
EOP-004-3, Attachment 1 Event Type: Voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: Observed within its area a voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	EOP-004-4, Attachment 1 Event Type: BES Emergency resulting in voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: A voltage deviation of =/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.	To provide clarity to the Event Type and to the Threshold for Reporting, the language revisions were made.
EOP-004-3, Attachment 1 Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) Entity with Reporting Responsibility: RC Threshold for Reporting: Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement. Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) are in the new standard TOP-001-3, Requirement R12 that becomes effective on 4/1/17, requiring a self-report if Tv is exceeded; the TOP-007-WECC-1 standard is pending retirement.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
for more than 30 minutes for Major WECC Transfer Paths (WECC only).		
EOP-004-3, Attachment 1 Event Type: Loss of firm load Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Loss of firm load for ≥ ≥ 300 MW for entities with previous yea 3,000 MW OR ≥ 200 MW for all other entities	EOP-004-4, Attachment 1 Event Type: Uncontrolled loss of firm load resulting from a BES Emergency Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Uncontrolled loss of firm load for ≥ 15 minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities	To provide clarity to the Threshold for Reporting and to align with the DOE's OE-417 reporting category, language revisions were made.
EOP-004-3, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA, GOP Threshold for Reporting: Total generation loss, within one minute, of :	EOP-004-4, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA Threshold for Reporting: Total generation loss, within one minute, of:	The EOP SDT removed the reporting requirement from the GOPs to reduce redundant reporting. The BA should do the reporting given they have the generation status information.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
≥ 2,000 MW for entities in the Eastern or Western Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection	≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection	Technical justification for reverting back to the value of 2,000 MW for the generation loss for the Québec Interconnection and for harmonizing with NERC EA process. 1. Generation in the Québec Interconnection is 95 % hydraulic. To be efficient, generation must operate within 80 % of its operating range. There is a large spinning reserve available at all times which aids in the recovery period after an event (ACE-Area Control Error). Historically, the recorded average ACE recovery time for a 2,000 MW loss is 5 minutes which is 3 times faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. Based on the Hydro Québec's generation loss reports, generation loss between 1,500 MW to 2,000 MW does not trig the first stage threshold of the UFLS scheme.

Standard: EOP-004-4		
Requirement in Approved Standard	Translation to New Standard or Other Action	Description and Change Justification
		The frequency stayed above the underfrequency limit. 3. In order to maintain the integrity of the Québec system, the RPTC SPS in Québec (Generation Rejection and Remote Load Shedding) is designed to detect abnormal or predetermined system conditions, to take corrective actions and to deliberately remove up to 1,500 MW of preselected generation from the power system. Consequently, the system is design to remain stable upon the instantaneous loss of 1,500 MW of generation. For Hydro-Québec, a generation loss of more than 2,000 MW is considered as an issue, which is make sense with previous 2,000 MW generation loss reporting requirement. 4. The EEA Level 3 alert (EOP-002) in Québec is set generally set at 2,000 MW, based on the deficiency of

Standard: EOP-004-4		
Requirement in Approved Standard	Translation to New Standard or Other Action	Description and Change Justification
		operating reserves and margins. Up to now, no EEA Level 3 alert has occurred in the Québec Interconnection. 5. Hydro Québec's loss of generation in first contingency (n-1) is set around 2,000 MW. Technical justification for the value of 1,400 MW for the generation loss for the ERCOT Interconnection and for harmonizing with NERC EA process. 1. ERCOT maintains a mix of operating reserves (typically 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves) available at all times, which aids in the recovery period after an event affecting Area Control Error (ACE) or frequency. ERCOT typically procures between 2,300 MW to 3,000 MW of frequency responsive reserves for all

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operating hours besides procuring additional regulation and non-spinning reserves. The Load Resources controlled by Under-Frequency relay are set to respond automatically at 59.7 Hz to provide instantaneous frequency response. Historically, the recorded average ACE recovery time for a 1,400 MW loss is less than 10 minutes, which is much faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. The design criteria for ERCOT's frequency responsive reserves is to procure adequate reserves that allow frequency to stay above the under-frequency limit for up to ERCOT's resource contingency criteria limit of 2,750 MW. 3. The EEA level 1 alert (EOP-002) in ERCOT is set at 2,300 MW of Physical Responsive Capability (PRC) which is

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		a mix of operating reserves (typically 50% Load Resources and 50% frequency responsive spinning reserves).
EOP-004-3, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement	EOP-004-4, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements	The Event Analysis Program (EAP) refers to loss of off-site power as "(LOOP)". Therefore, LOOP has been added to the Threshold for Reporting to provide consistency.
EOP-004-3, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).	EOP-004-4, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).	The definition of BES Element includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event Type. It could lead to confusion as to the element count for three elements contrary to design. In addition, the EAP uses the definition of "BES Facility" in its application, which could lead to additional confusion in evaluating a

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		reporting during an event. The EOP SDT revised "BES Elements" to "BES Facilities" to add clarity to the Threshold for Reporting and to align with the EAP language.
EOP-004-3, Attachment 1 Event Type: Unplanned BES control center evacuation Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from BES control center facility for 30 continuous minutes or more.	EOP-004-4, Attachment 1 Event Type: Unplanned evacuation of its BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.	In the Threshold for Reporting, with the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…BES control center" to "…its BES control center."
EOP-004-3, Attachment 1 Event Type: Complete loss of voice communication capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of voice communication capability affecting a	EOP-004-4, Attachment 1 Event Type: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of Interpersonal Communication and	COM-001-2 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." And Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
BES control center for 30 continuous minutes or more.	Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.	not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."
EOP-004-3, Attachment 1 Event Type: Complete loss of monitoring capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.	EOP-004-4, Attachment 1 Event Type: Complete loss of monitoring or control capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.	The language revisions to this event type provides clarity to the Threshold for Reporting and better aligns with the EAP language.

Exhibit D-2

Mapping Document for Proposed Reliability Standards EOP-005-3, EOP-006-3 and EOP-008-2

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3 Requirement R1,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		EOP-005-2 Requirement R7, is redundant to EOP-005-3 Requirement R1.
EOP-005-2, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.	EOP-005-3, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the Interconnection.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.	EOP-005-3, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of its Reliability Coordinator.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with its Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.	EOP-005-3, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval, when the revision	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	would change its ability to implement its restoration plan, as follows	System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The references to unplanned permanent and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a TOP to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.	The EOP SDT revisions harmonize the use of "BES modification" and clarify the timing for unplanned permanent and planned permanent BES modifications.
EOP-005-2, Requirement R5	EOP-005-3, Requirement R5	"Implementation date" was revised to "effective date" to clarify that System

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	**R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once every five years" to eliminate any ambiguity in the prior language. Based on comments received from industry, the issue was raised that Requirement R6, as written, could be misinterpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation could result in numerous simulations having to be performed, which was outside of the intention of the drafting team. To eliminate any unintentional

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		misinterpretation of Requirement R6, it was revised to: "Each Transmission Operator shall verify through analysis of actual events, **a combination of** steady state and dynamic simulations…"
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training annually for its System Operators. This training program shall include training on	The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value. Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional*

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with its Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority.	*Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time. "The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	standard is a revision back to the original language of EOP-005-2. Federal Energy Regulatory Commission (Commission) Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."* The Project 2015-02 Emergency Operations Periodic Review Team, as well as the Project 2015-08 Emergency Operations Standards Drafting Team determined (through

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		conducted outreach and comment questions/responses during postings of periodic review templates and the SAR) that industry does not find ambiguity with the term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the TOP, TO, and the DP. A rationale box was added to the requirement to clarify "unique tasks."
EOP-005-2, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.	EOP-005-3, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as emails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within	EOP-005-3, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is GOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
24 hours of such changes in accordance with Requirement R13.	capabilities within 24 hours of such changes in accordance with Requirement R13.	
EOP-005-2, Requirement R17 **R17.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following:	EOP-005-3, Requirement R15 **R15.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following:	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2.
EOP-005-2, Measure R16 **R18.** Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator.	EOP-005-3, Measure R16 **R16.** Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Measure M16 **M16.** Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if	EOP-005-3, Measure M16 **M16.** Each Generator Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or	"…such as dated training records…" was deleted from the Measure for consistency with Measure M10.

each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	
EOP-006-2, Requirement R7 **R7.** Each Reliability Coordinator shall work with its affected Generator Operators, and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration.		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R7 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R7 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R7, is redundant to EOP-006-3, Requirement R1.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
[Violation Risk Factor = High] [Time Horizon = Real-time Operations]		
EOP-006-2, Requirement R8 **R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.	EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R9 **R9.** Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-006-3, Requirement R7 **R7.** Each Reliability Coordinator shall include within its operations training program annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"To assure the proper execution of its restoration plan" was removed because it added no additional value; the entire standard is based upon using your restoration plan when needed.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing "data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.
EOP-008-1, Requirement R4	EOP-008-1, Requirement R4	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality.	**R4.** Each ach Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality	primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.
EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance

Standard:EOP-008-2

Analysis of Violation Risk Factors and Violation Severity Levels for Reliability Standard EOP-004-4

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were slightly revised to add "event reporting." The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their event reporting Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their event reporting Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients up to 24 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 48 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 72 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 72 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable. OR The Responsible Entity failed to submit a report for an event in EOP-004-4 Attachment 1.

VSL Justifications for EOP-004-4, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event reporting Operating Plan and reporting events, and Requirement 2 language of EOP-004-4 is only slightly changed from EOP-004-3. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-004-4, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Exhibit E-2

Analysis of Violation Risk Factors and Violation Severity Levels for Reliability Standard EOP-005-3

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three or more of the ~~r~~requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirement” with “requirement part” and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing “implementation date” to “effective date” requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective” and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification.	The Transmission Operator has failed to submit its revised restoration plan to its Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. OR The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator prior to a planned permanent BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address one or more of the requirement parts of Requirement R7.

VSL Justifications for EOP-005-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Transmission Operator to include within its operations training program System restoration training. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding System restoration training. Only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to be included within its operations training program. This is a revised requirement (EOP-005-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program System restoration training would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective, which is to include within its operations training program System restoration training. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R8			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.

VSL Justifications for EOP-005-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirement” with “requirement parts.” The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
NERC VRF Discussion	R9 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R9 requires the Transmission Operator, applicable Transmission Owners, and applicable Distribution Providers to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. This is a revised requirement (EOP-005-2, Requirement R11) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R9 contains only one objective, which is to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R9			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train 5% or less of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 5% and up to 10% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a two-calendar-year period.

VSL Justifications for EOP-005-3, R9	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R9 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R9	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R10	
Proposed VRF	**Medium**
NERC VRF Discussion	R10 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R10 requires the Transmission Operator to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R12) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R10 contains only one objective, which is to participate in restoration drills. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R10			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator has failed to comply with a request for its participation from its Reliability Coordinator.

VSL Justifications for EOP-005-3, R10	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "their" with "its." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R10 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
NERC VRF Discussion	R11 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R11 requires each Transmission Operator and each Generator Operator with a Blackstart Resource to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for Blackstart Resource Agreements. This is an unrevised requirement (EOP-005-2, Requirement R13) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
	R11 contains only one objective, which is to have written Blackstart Resource Agreements. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R11			
Lower	**Moderate**	**High**	**Severe**
N/A	The Transmission Operator and Generator Operator with a Blackstart Resource do not reference Blackstart Resource Testing requirements in their written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols.	N/A	The Transmission Operator and Generator Operator with a Blackstart resource do not have a written Blackstart Resource Agreement or mutually-agreed upon procedure or protocol.

VSL Justifications for EOP-005-3, R11	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R11 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R11	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R12	
Proposed VRF	**Medium**
NERC VRF Discussion	R12 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R12 requires each Generator Operator with a Blackstart Resource to have documented procedures for starting each Blackstart Resource and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for documented procedures for starting each Blackstart Resource and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R14) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have documented procedures for starting each Blackstart Resource and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R12 contains only one objective, which is to have to have documented procedures for starting each Blackstart Resource and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R12			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator does not have documented starting and bus energizing procedures for each Blackstart Resource.

VSL Justifications for EOP-005-3, R12	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R12 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R12	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R13	
Proposed VRF	**Medium**
NERC VRF Discussion	R13 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R13 requires each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R15) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R13	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R13 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R13			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 24 hours but did make the notification within 48 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 48 hours but did make the notification within 72 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 72 hours but did make the notification within 96 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan for more than 96 hours.

VSL Justifications for EOP-005-3, R13	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R13 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R13	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
NERC VRF Discussion	R14 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R14 requires each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. This is an unrevised requirement (EOP-005-2, Requirement R16) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
	R14 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R14			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.

VSL Justifications for EOP-005-3, R14	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R14 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R14	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
NERC VRF Discussion	R15 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R15 requires each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R17) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
	R15 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R15			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a two-calendar-year period.

VSL Justifications for EOP-005-3, R15	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R15 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R15	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
NERC VRF Discussion	R16 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R16 requires each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R18) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
	R16 contains only one objective, which is to have to have each Generator Operator participate in the Reliability Coordinator's restoration drills, exercises, or simulations. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R16			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R16 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R16	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Exhibit E-3

Analysis of Violation Risk Factors and Violation Severity Levels for Reliability Standard EOP-006-3

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement
A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the annual System restoration training within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the annual System restoration training within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “annual” with “at least once each 15 calendar months” and by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-008-2 – Loss of Control Center Functionality**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.
Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to have an Operating Plan for backup facilities. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an Operating Plan for backup functionality that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance; only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** There is a similar requirement (Requirement R1) in EOP-005-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the creation of a plan: EOP-005-2 for a restoration plan and EOP-008-2 for a backup plan. The VRF assigned to EOP-008-1, Requirement R1 is lower than EOP-005-2, Requirement R1. The SDT recognizes that the VRF for EOP-008-1, Requirement R1 is lower than the VRF for the similar requirement in EOP-005-2 which is assigned a High VRF, however the SDT and stakeholders support the Medium VRF based on NERC's criteria for VRFs. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to create an Operating Plan for backup functionality. While the SDT agrees that, under some circumstances, it is possible that a failure to have an Operating Plan for backup functionality may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to have an Operating Plan for backup functionality would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to have an Operating Plan for backup functionality, it would still be expected to handle the situation if it occurred.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to have an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion Guideline 5- Treatment of	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to have an Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-008-2, R1			
Lower	**Moderate**	**High**	**Severe**
The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.

VRF Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1 with some minor edits. The VSL's for R1 were revised slightly by replacing "Part" with "part". The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that requires entities to shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. This is a requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the entity to have the Operating Plan for backup functionality at its primary and backup control centers. This is consistent with FERC guideline G1 regarding operating tools and backup facilities, however this requirement is administrative in nature.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 is unchanged from EOP-008-1, Requirement R2 and the VRF remains as Lower.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a copy of the Operating Plan for backup functionality at each of its control locations should not have an adverse impact on the bulk power system because operations at the different locations should be essentially identical. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R2			
Lower	**Moderate**	**High**	**Severe**
N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.

VSL Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R3	
Proposed VRF	**High**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R3 is unchanged from EOP-008-1, Requirement R3 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center) will impact the situational awareness of the Reliability Coordinator, and thus could affect the Reliability Coordinator's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Reliability Coordinator is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality.

VSL Justifications for EOP-008-2, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Reliability Coordinator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	The proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R4	
Proposed VRF	**High**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Balancing Authority or Transmission Operator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R4 is unchanged from EOP-008-1, Requirement R4 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have backup functionality (provided either through a facility or contracted services) will impact the situational awareness of the Transmission Operator or Balancing Authority, and thus could affect the Transmission Operator's or Balancing Authority's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Transmission Operator or Balancing Authority is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R4			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality.

VSL Justifications for EOP-008-2, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is binary and is at the Severe level. The requirement specifies that a Balancing Authority or Transmission Operator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Balancing Authority or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to update an Operating Plan for backup facilities annually. The assignment of the Medium VRF was made based on the premise that failure to annually update an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the annual review of the Operating Plan for back up functionality that is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has one part that is related to the main requirement regarding updating the Operating Plan and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R5 is unchanged from EOP-008-1, Requirement R5 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to update an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R5			
Lower	**Moderate**	**High**	**Severe**
The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved. OR The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.

VSL Justifications for EOP-008-2, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that, if violated, could prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the independence between the primary and back up control centers. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures. This is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R6 is unchanged from EOP-008-1, Requirement R46and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R6 addresses the situation applicable entities primary and backup capabilities can't depend on each other. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

VSL Justifications for EOP-008-2, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R6 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator, Balancing Authority, or Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. The Reliability Coordinator, Balancing Authority, or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires entities to conduct and document the results of an annual test of its backup facility. Violation of this requirement is not likely to cause bulk electric system instability, separation, or a cascading sequence of failures and is therefore assigned a Medium VRF consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R7 is unchanged from EOP-008-1, Requirement R7 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** EOP-008-1, Requirement R7 mandates testing of an applicable entity's Operating Plan for backup capability. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did not test their Operating Plan for backup capability it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective and only one VRF was assigned.

The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1.5 continuous hours, but more than or equal to 1 continuous hour.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct an annual test of its Operating Plan for backup functionality. OR The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 0.5 continuous hours.

VSL Justifications for EOP-008-2, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the entity that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months to provide a plan to its Regional Entity showing how it will re-establish primary or backup functionality. If an entity fails to provide a plan to the Regional Entity, this violation in and of itself is not likely to cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. This is consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R8 is unchanged from EOP-008-1, Requirement R8 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R8 mandates that entities provide a plan for re-establishing backup capabilities following a catastrophic failure. A failure to provide this plan does not affect the applicable entity's ability to effectively monitor and control the bulk power system. Violation of this requirement is unlikely, by itself, to lead to bulk power system instability, separation, or cascading failures, thus the assignment of a "Medium" VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R8			
Lower	**Moderate**	**High**	**Severe**
The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted more than six calendar months, but less than or equal to seven calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted in more than seven calendar months, but less than or equal to eight calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

VSL Justifications for EOP-008-2, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Consideration of Issues and Directives

NERC

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Consideration of Issues and Directives

Project 2015-08 Emergency Operations

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*	FERC Order Number 749	The Project 2015-02 Emergency Operations Periodic Review Team (EOP PRT), as well as the Project 2015-08 Emergency Operations Standards Drafting Team (EOP SDT) determined (through conducted outreach and comment questions/responses during postings of periodic review templates, the project SAR, and project postings) that industry does not find ambiguity with the term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the Transmission Operator (TOP), Transmission Owner (TO), and the Distribution Provider (DP). A rationale box was added to EOP-005-3, Rquirement R9 to clarify "unique tasks." **Rationale:** The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.
Clarify when system changes will trigger a requirement to update restoration plans. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for updating restoration	FERC-NERC-Regional Entity Joint Review of Restoration	The Project 2015-08 EOP SDT revised EOP-005-3, Requirement R4 and the requirement parts. The references to unplanned permanent and planned permanent BES modifications that will change the ability to implement the Reliability Coordinator (RC)-approved restoration plan are intended to require a TOP to

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
plans for all system modifications that would change the implementation of an entity's restoration plan for an extended period of time, not just permanent or planned system modifications. In considering these measures, the kinds of events that may warrant an update to the system restoration plan should be identified, taking into account the length of time the system is affected, as well as the overall objective of ensuring that restoration plans are generally flexible enough so that system modifications can be addressed without continuous updates.	and Recovery Plans. **Section IV.E**	update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RC's ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.
Verification/testing of modified restoration plan. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably, i.e., when needed to ensure that the restoration plan, when implemented, allows for restoration of the system within acceptable operating voltage and frequency limits.6 In considering such measures, the types of system changes that could impact reliable implementation of the restoration plan should be taken into account (e.g., identification of a new	FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans. **Section IV.G**	The EOP SDT discussed the recommendation to address the "…need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably…" The TOP performs detailed testing at least every five years to ensure that its restoration plan accomplishes its intended function (EOP-005, Requirement R6). In addition, the TOP 1) has to annually review its restoration plan and submit it to its RC for approval, 2) when there are revisions that would change the TOP's ability to implement its restoration plan, these also have to be submitted to the RC for review, 3) include within its operations training program annual System restoration training

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
blackstart generator location or on redefinition of a cranking path).		for its System Operators, and 4) participate in RC restoration drills, exercises or simulations (EOP-005, Requirements R3, R4, R8, and R10). The RC 1) has to review its restoration plan within 13 calendar months of the last review, 2) has to review its neighboring RC's restoration plans and provide notice of any conflicts discovered, 3) has to review and approve/disapprove its TOP's restoration plans, 4) provide annual System Restoration training for its System Operators, and 5) conduct two System Restoration drills, exercises or simulations per calendar year (EOP-006, Requirements R3, R4, R5, R7, and R8). The recommendation pointed to system changes that could impact the viability of the plan. When the RC reviews the TOP restoration plan for annual approval/disapproval, the RC is the only entity that has the wide-area view of the entire System, and the RC is the only entity that can effectively complete this approval. The EOP SDT believes that since the TOP and RC have to meet multiple requirements, that both entities are continually reviewing and testing the viability of their restoration plans; and, therefore, no changes were made in EOP-005 based on the recommendation.
Operator training: Exercises on transferring control back to the balancing authority. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to	FERC-NERC-Regional Entity Joint Review of	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised in EOP-005-3, Requirement R1, Part 1.9 to the standard: "Processes for

Summary of Development History and Complete Record of Development

Summary of Development History

Summary of Development History

The development record for proposed Reliability Standards EOP-004-4, EOP-005-3, EOP-006-3 and EOP-008-2 is summarized below.

I. Overview of the Standard Drafting Team

When evaluating a proposed Reliability Standard, the Commission is expected to give "due weight" to the technical expertise of the ERO.[1] The technical expertise of the ERO is derived from the standard drafting team selected to lead each project in accordance with Section 4.3 of the NERC Standards Process Manual.[2] For this project, the standard drafting team consisted of industry experts, all with a diverse set of experiences. A roster of the Standard Drafting team ("SDT") members is included in Exhibit H.

II. Standard Development History

A. Standard Authorization Request Development

Project 2015-08 – Emergency Operations was initiated in direct relation to recommendations provided by the Project 2015-02 – Emergency Operations Periodic Review Team ("EOP PRT") to revise a subset of Emergency Operations Reliability Standards[3] reviewed in that project. Specifically, the EOP PRT developed a recommendation to address an outstanding Commission directive in Order No. 749.[4]

1 Section 215(d)(2) of the Federal Power Act; 16 U.S.C. §824(d)(2) (2012).

2 The NERC *Standard Processes Manual* is available at http://www.nerc.com/comm/SC/Documents/Appendix_3A_StandardsProcessesManual.pdf.

3 The EOP PRT reviewed Reliability Standards EOP-004-2, EOP-005-2, EOP-006-2, and EOP-008-1 to evaluate whether the requirements are clear and unambiguous.

4 Order No. 749, *System Restoration Reliability Standards*, 134 FERC ¶ 61, 215, 76 Fed. Reg. 16, 277 (2011) at P 24.

The Standards Authorization Request ("SAR") for Project 2015-08 was initially posted on July 15, 2015 for a 30-day informal comment period from July 21, 2015 through August 19, 2015. The SAR was accepted by the Standards Committee on June 15, 2016.

B. First Posting - Comment Period, Initial Ballots and Non-binding Polls

Proposed Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2, the associated Implementation Plan, Violation Risk Factors ("VRFs"), and Violation Severity Levels ("VSLs") were posted for a 45-day formal comment period from June 30, 2016 through August 15, 2016, with parallel Initial Ballots and a Non-binding Polls of the proposed VRFs and VSLs for proposed Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2 held during the last 10 days of the comment period from August 4, 2016 through August 15, 2016. The Initial Ballot for proposed Reliability Standard EOP-005-3 received 80.45% quorum, and 52.90% approval. The Initial Ballot for proposed Reliability Standard EOP-006-3 received 81.14% quorum, and 66.87% approval. The Initial Ballot for proposed Reliability Standard EOP-008-2 received 80.79% quorum, and 84.13% approval. The Non-binding Poll for proposed Reliability Standard EOP-005-3 received 78.01% quorum and 55.74% of supportive opinions. The Non-binding Poll for proposed Reliability Standard EOP-006-3 received 79.14% quorum and 69.93% of supportive opinions. The Non-binding Poll for proposed Reliability Standard EOP-008-2 received 79.36% quorum and 85.33% of supportive opinions. There were 64 sets of responses, including comments from approximately 141 different individuals and approximately 75 companies, representing 9 of the 10 industry segments.[5]

---

5 NERC, *Consideration of Comments*, Project 2015-08 Emergency Operations (EOP-005-3, EOP-006-3, and EOP-008-2), (October 25, 2016), *available at* http://www.nerc.com/pa/Stand/Project%20201508%20Emergency%20Operations/Project_2015-08_Consideration_of_Comments_October_2016.pdf.

C. First Posting- Comment Period, Initial Ballot and Non-binding Poll

During the first posting of Proposed Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2, the SDT also began to develop proposed Reliability Standard EOP-004-4 in response to recommendations provided by stakeholders and the EOP PRT. Proposed Reliability Standard EOP-004-4, the associated Implementation Plan, VRFs and VSLs were posted for a 45-day formal comment period from July 25, 2016 through September 8, 2016, with parallel Initial Ballot and a Non-binding Poll of the proposed VRFs and VSLs for proposed EOP-004-4 held during the last 10 days of the comment period from August 30, 2016 through September 8, 2016. The Initial Ballot for proposed Reliability Standard EOP-004-4 received 82.75% quorum, and 80.32% approval. The Non-binding Poll for proposed Reliability Standard EOP-004-4 received 81.56% quorum and 81.19% of supportive opinions. There were 53 sets of responses, including comments from approximately 134 different individuals and approximately 47 companies, representing 8 of the 10 industry segments.[6]

D. Second Posting - Comment Period, Additional Ballots and Non-binding Polls

Proposed Reliability Standards EOP-005-3 and EOP-006-3 were posted for an additional 45-day formal comment period from October 26, 2016 through December 9, 2016, with parallel Additional Ballots for proposed EOP-005-3 and EOP-006-3 and Non-binding Polls of the proposed VRFs and VSLs held during the last 10 days of the comment period from November 30, 2016 through December 9, 2016. The Additional Ballot for proposed Reliability Standard EOP-005-3 reached quorum at 80.97% of the ballot pool, and the standard received sufficient affirmative votes for approval, receiving support from 76.93% of the voters. The Additional Ballot for

[6] NERC, *Consideration of Comments*, Project 2015-08 Emergency Operations (EOP-004-4) (November 2016), *available at* http://www.nerc.com/pa/Stand/Project%20201508%20Emergency%20Operations/Project_2015_08_EOP_004_Consideration_of_Comments_November_2016.pdf.

proposed Reliability Standard EOP-006-3 reached quorum at 82.71% of the ballot pool, and the standard received sufficient affirmative votes for approval, receiving support from 77.17% of the voters. The Non-binding Poll for proposed Reliability Standard EOP-005-3 received 80.28% quorum and 75.69% of supportive opinions. The Non-binding Poll for proposed Reliability Standard EOP-006-3 received 81.88% quorum and 75.64% of supportive opinions. There were 53 sets of responses, including comments from approximately 44 different individuals and approximately 41 companies, representing 9 of the 10 industry segments.[7]

E. Second Posting - Comment Period, Additional Ballot and Non-binding Poll

Proposed Reliability Standard EOP-004-4 was posted for an additional 45-day comment period from November 18, 2016 through January 6, 2017, with a parallel Additional Ballot for proposed EOP-004-4 and a Non-binding Poll of the VRFs and VSLs held during the last 10 days of the comment period from December 28, 2016 through January 6, 2017.[8] The Additional Ballot for proposed Reliability Standard EOP-004-4 reached quorum at 79.71% of the ballot pool, and the standard received sufficient affirmative votes for approval, receiving support from 93.55% of the voters. The Non-binding Poll for proposed EOP-004-4 received 79.25% quorum and 95.05% of supportive opinions. There were 38 sets of responses, including comments from approximately 33 different individuals and approximately 31 companies, representing 8 of the 10 industry segments.[9]

F. Final Ballot

Proposed Reliability Standard EOP-008-2 was posted for a 10-day final ballot period from November 30, 2016 through December 9, 2016. The final ballot for proposed Reliability Standard EOP-008-2 and associated documents reached quorum at 93.36% of the ballot pool, and the proposed standard received sufficient affirmative votes for approval, receiving support from 93.17% of the voters.[10]

G. Final Ballots

Proposed Reliability Standards EOP-005-3 and EOP-006-3 were posted for a 10-day final ballot period from December 28, 2016 through January 6, 2017. The final ballot for proposed Reliability Standard EOP-005-3 and associated documents reached quorum at 91.29% of the ballot pool, and the proposed standard received sufficient affirmative votes for approval, receiving support from 83.65% of the voters.[11] The final ballot for proposed Reliability Standard EOP-006-3 and associated documents reached quorum at 91.86% of the ballot pool, and the proposed standard received sufficient affirmative votes for approval, receiving support from 80.56% of the voters.[12]

H. Final Ballot

Proposed Reliability Standard EOP-004-4 was posted for a 10-day final ballot period from January 24, 2017 through February 2, 2017. The final ballot for proposed Reliability Standard EOP-004-4 and associated documents reached quorum at 84.71% of the ballot pool, and the

Project 2015-08 Emergency Operations

Related Files | 2015-02 Periodic Review of Emergency Operations

Status
Final ballots for the standards related to **Project 2015-08 Emergency Operations** have concluded and the voting results can be accessed via the links below. The standards will be submitted to the Board of Trustees for adoption and then filed with the appropriate regulatory authorities.

EOP-004-4 - Event Reporting concluded on **February 2, 2017.**

EOP-005-3 - System Restoration from Blackstart Resources and **EOP-006-3 - System Restoration Coordination** concluded on **January 6, 2017.**

EOP-008-2 – Loss of Control Center Functionality concluded on **December 9, 2016**.

Background
The Emergency Operations Periodic Review Team (**Project 2015-02**) performed a comprehensive review of a subset of Emergency Operations Standards (EOP-004, EOP-005, EOP-006 and EOP-008) to evaluate, for example, whether the requirements are clear and unambiguous. The Periodic Review included background information, along with any associated worksheets or reference documents, to guide a comprehensive review that resulted in the following recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 – (1) Revise the standard and (2) retire Requirements Parts R1.2, R1.3, and R1.4; and
- EOP-008-1 – Revise the standard.

The four NERC Reliability Standards in the Periodic Review project concerned methodologies for restoring, reporting, and communicating Emergencies.

Standards Affected - EOP-004-2 - Event Reporting **| EOP-005-2 -** System Restoration from Blackstart Resources **| EOP-006-2 -** System Restoration Coordination **| EOP-008-1 -** Loss of Control Center Functionality

Purpose / Industry Need
Implementation of revisions and retirements recommended by the EOP Standard Drafting Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing the outstanding directive from FERC Order No. 749.

Nomination Form

Project 2015-08 Emergency Operations Standards Drafting Team

Please return this form as soon as possible, but no later than **8:00 p.m. Eastern, Tuesday, August 4, 2015.** This unofficial version is provided to assist nominees in compiling the information necessary to submit the electronic form. If you have any questions, please contact Laura Anderson.

By submitting a nomination form, you are indicating your willingness and agreement to actively participate in the review or drafting team meetings if appointed by the Standards Committee. If appointed, you are expected to attend most of the face-to-face drafting team meetings, as well as participate in all the team meetings held via conference calls.

The time commitment for these projects is expected to be up to two face-to-face meetings per quarter (on average two full working days each meeting) with conference calls scheduled as needed to meet the agreed-upon timeline the review or drafting team sets forth. Drafting teams also will have side projects, either individually or by subgroup, to present to the larger team for discussion and review. Lastly, an important component of the review and drafting team efforts is outreach. Members of the team should be conducting outreach during development prior to posting to ensure all issues can be discussed and resolved.

Previous drafting or review team experience is beneficial, but not required. A brief description of the desired qualifications, expected commitment, and other pertinent information is included below.

Project 2015-08 Emergency Operations

The purpose of this project is to implement the recommendations of the Periodic Review Team (PRT) that resulted from the PRT's review of a subset of Emergency Operations (EOP) Standards. The Periodic Review comprehensively reviewed EOP-004, EOP-005, EOP-006 and EOP-008 to evaluate, for example, whether the requirements are clear and unambiguous. The Periodic Review included developing a recommendation based upon the language of Federal Energy Regulatory Commission (Commission) Order no. 749[1] as follows:

> *"[N]ERC, in its comments about the term, states that it "could promote the development of a guideline to aid registered entities in complying with Requirement R11." The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*[2]

[1] *System Restoration Reliability Standards*, 134 FERC ¶61,215 (2011) (Order No. 749).
[1] *Id.* at P24.
[2] *Id.* at P24.

The Periodic Review also included background information, along with associated worksheets and reference documents, to guide a comprehensive review that resulted in a Standard Authorization Request (SAR) based on the following PRT's recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 – (1) Revise the standard and (2) retire Requirements Parts R1.2, R1.3, and R1.4; and
- EOP-008-1 – Revise the standard.

Standards affected: EOP-004-2, EOP-005-2, EOP-006-2 and EOP-008-1

We are seeking a cross section of the industry to participate on the team, but in particular are seeking individuals who have experience and expertise with Emergency Operations methodologies for program planning, program training, restoring, reporting, and communicating across the United States and/or Canada.

Experience with developing standards inside or outside (e.g., IEEE, NAESB, ANSI, etc.) of the NERC process is beneficial, but is not required, and should be highlighted in the information submitted, if applicable.

Individuals who have facilitation skills and experience and/or legal or technical writing backgrounds are also strongly desired. Please include this in the description of qualifications as applicable.

Name:	
Organization:	
Address:	
Telephone:	
E-mail:	
Please briefly describe your experience and qualifications to serve on the requested Standard Drafting Team (Bio):	
If you are currently a member of any NERC drafting team, please list each team here: ☐ Not currently on any active SAR or standard drafting team. ☐ Currently a member of the following SAR or standard drafting team(s):	

If you previously worked on any NERC drafting team please identify the team(s):
☐ No prior NERC SAR or standard drafting team.
☐ Prior experience on the following team(s):

Select each NERC Region in which you have experience relevant to the Project for which you are volunteering:		
☐ ERCOT ☐ FRCC ☐ MRO	☐ NPCC ☐ RFC ☐ SERC	☐ SPP ☐ WECC ☐ NA – Not Applicable

Select each Industry Segment that you represent:	
☐	1 — Transmission Owners
☐	2 — RTOs, ISOs
☐	3 — Load-serving Entities
☐	4 — Transmission-dependent Utilities
☐	5 — Electric Generators
☐	6 — Electricity Brokers, Aggregators, and Marketers
☐	7 — Large Electricity End Users
☐	8 — Small Electricity End Users
☐	9 — Federal, State, and Provincial Regulatory or other Government Entities
☐	10 — Regional Reliability Organizations and Regional Entities
☐	NA – Not Applicable

Select each Function[3] in which you have current or prior expertise:

[3] These functions are defined in the NERC Functional Model, which is available on the NERC web site.

☐ Balancing Authority ☐ Compliance Enforcement Authority ☐ Distribution Provider ☐ Generator Operator ☐ Generator Owner ☐ Interchange Authority ☐ Load-serving Entity ☐ Market Operator ☐ Planning Coordinator	☐ Transmission Operator ☐ Transmission Owner ☐ Transmission Planner ☐ Transmission Service Provider ☐ Purchasing-selling Entity ☐ Reliability Coordinator ☐ Reliability Assurer ☐ Resource Planner

Provide the names and contact information for two references who could attest to your technical qualifications and your ability to work well in a group:

Standards Announcement

Project 2015-08 Emergency Operations

Standard Drafting Team Nomination Period Open through August 4, 2015

Now Available

Nominations are being sought for standard drafting team members through **8 p.m. Eastern, Tuesday, August 4, 2015.**

Use the electronic form to submit a nomination. An unofficial Word version of the nomination form is posted on the Standard Drafting Team Vacancies page and the project page.

By submitting a nomination form, you are indicating your willingness and agreement to actively participate in the review or drafting team meetings if appointed by the Standards Committee. If appointed, you are expected to attend most of the face-to-face drafting team meetings, as well as participate in all the team meetings held via conference calls.

The time commitment for these projects is expected to be up to two face-to-face meetings per quarter (on average two full working days each meeting) with conference calls scheduled as needed to meet the agreed-upon timeline the drafting team sets forth. Drafting teams also will have side projects, either individually or by subgroup, to present to the larger team for discussion and review. Lastly, an important component of the drafting team efforts is outreach. Members of the team should be conducting outreach during development prior to posting to ensure all issues can be discussed and resolved.

Previous drafting team experience is beneficial, but not required. A brief description of the desired qualifications, expected commitment, and other pertinent information is included below.

2015-08 Emergency Operations

The purpose of this project is to implement the recommendations of the Periodic Review Team (PRT) that resulted from the PRT's review of a subset of Emergency Operations (EOP) Standards. The Periodic Review comprehensively reviewed EOP-004, EOP-005, EOP-006 and EOP-008 to evaluate, for example, whether the requirements are clear and unambiguous. The Periodic Review included developing a recommendation based upon the language of Federal Energy Regulatory Commission (Commission) Order no. 749[1] as follows:

> "[N]ERC, in its comments about the term, states that it "could promote the development of a guideline to aid registered entities in complying with Requirement R11." The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry

determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."[2]

The Periodic Review also included background information, along with associated worksheets and reference documents, to guide a comprehensive review that resulted in a Standard Authorization Request (SAR) based on the following PRT's recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 – (1) Revise the standard and (2) retire Requirements Parts R1.2, R1.3, and R1.4; and
- EOP-008-1 – Revise the standard.

Next Steps

The Standards Committee is expected to begin appointing members to the standard drafting team for Project 2015-08 in August 2015. Nominees will be notified shortly after they have been appointed to the standard drafting team.

For information on the Standards Development Process, refer to the Standard Processes Manual.

Standards Authorization Request Form

When completed, email this form to:
Barbara.Nutter@nerc.net

For questions about this form or for assistance in completing the form, call Barb Nutter at 404-446-9692.

NERC welcomes suggestions for improving the reliability of the Bulk-Power System through improved Reliability Standards. Please use this form to submit your proposal for a new NERC Reliability Standard or a revision to an existing standard.

Request to propose a new or a revision to a Reliability Standard			
Proposed Standard:	Project 2015-08 Emergency Operations (EOP-004-2, EOP-005-2, EOP-006-2, EOP-008-1)		
Date Submitted:	July 8, 2015		
SAR Requester Information			
Name:	David McRee, Chair of Project 2015-02 Emergency Operations Periodic Review Team		
Organization:	Duke Energy		
Telephone:	704-382-9841	E-mail:	David.McRee@duke-energy.com
SAR Type (Check as many as applicable)			
☐ New Standard ☒ Revision to existing Standards		☐ Withdrawal of existing Standard ☐ Urgent Action	

SAR Information
Industry Need (What is the industry problem this request is trying to solve?):
The NERC Standard Processes Manual (see Section 13) obligates NERC to conduct Periodic Reviews of standards at a minimum interval of every ten years, with ANSI approved standards at five year intervals. NERC has responded to regulatory and industry guidance by incorporating into its Periodic Review process both principles of Results-based standards drafting and a review of each standard in relation to other standards to eliminate duplicative requirements. Additionally, Periodic Reviews evaluate whether each standard is clear, concise, and technically sound given current technologies and system conditions, whether any regulatory directives require specific changes to the standard, and whether requirements

SAR Information
that do little to ensure the reliability of the Bulk-Power System should be eliminated. Periodic Reviews also consider previously-captured stakeholder-identified issues pertaining to the affected standards. The Emergency Operations Periodic Review Team (EOP PRT) has reviewed and developed a recommendation based upon the language of Federal Energy Regulatory Commission (Commission) Order no. 749[1], as follows: *"[N]ERC, in its comments about the term, states that it "could promote the development of a guideline to aid registered entities in complying with Requirement R11." The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*[2]
Purpose or Goal (How does this request propose to address the problem described above?):
The primary goal of this SAR is to appoint a Standard Drafting Team (SDT) to address the directive of the Commission Order No. 749, Paragraph 24, for EOP-005-2, System Restoration from Blackstart Resources and to implement the recommendations of the Project 2015-02 EOP PRT to revise EOP-004-2, EOP-005-2, EOP-006-2, and EOP-008-1; as well as to implement the recommended requirement retirements in EOP-004-2 and EOP-006-2.
Identify the Objectives of the proposed standards' requirements (What specific reliability deliverables are required to achieve the goal?):
Provide clear, unambiguous requirements and Results-based Reliability standards to address the recommendations of the EOP PRT.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The SDT shall consider the recommendations of the EOP PRT and revise standards, requirements, attachments, Violation Risk Factors, Violation Severity Levels, and implementation plans. The SDT shall consider retirements to requirements under Paragraph 81 criteria. In addition, the SDT shall work with compliance on an accompanying RSAW to address each of the standards' requirements and measures

[1] *System Restoration Reliability Standards*, 134 FERC ¶61,215 (2011) (Order No. 749).
[2] *Id.* at P24.

SAR Information
and shall address Commission Order no. 749, Paragraph 24, for EOP-005-2, System Restoration from Blackstart Resources.
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The SDTs execution of this SAR requires the SDT to address each recommendation of the EOP PRT, as well as the Commission directive in Order No. 749, Paragraph 24 for EOP-005-2, System Restoration. The SDTs execution of this SAR would, in addition, address the EOP PRT's recommendations of retirements to requirements under Paragraph 81 criteria. The reliability assessment and justification is also set forth in the final recommendations of the EOP PRT. The Commission Order, Paragraph 24 (for EOP-005-2) is incorporated in its entirety into this SAR, so as not to unnecessarily repeat or paraphrase the substance of the Order. There are no market interface impacts resulting from the standard action on the implementation of the Project 2015-02, EOP PRT's recommendations.

Reliability Functions		
The Standard will Apply to the Following Functions (Check each one that applies.)		
☐	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of Responsible Entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.
☒	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.

Reliability Functions		
☐	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☐	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☐	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
☐	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☒	Transmission Owner	Owns and maintains transmission facilities.
☒	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
☒	Distribution Provider	Delivers electrical energy to the End-use customer.
☒	Generator Owner	Owns and maintains generation facilities.
☒	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.
☐	Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles	
Applicable Reliability Principles (Check all that apply).	
☐	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
☐	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
☐	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
☒	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.
☒	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
☒	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Does the proposed Standard comply with all of the following Market Interface Principles?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

Unofficial Comment Form

Project 2015-08 Emergency Operations

Please **DO NOT** use this form for submitting comments. Please use the electronic form to submit comments on the Standard Authorization Request (SAR). The electronic comment form must be completed by **8:00 p.m. Eastern, Wednesday, August 19, 2015**.

If you have questions please contact Laura Anderson via email or by telephone at (404) 446-9671.

Background Information

This posting is soliciting informal comment.

On February 3, 2015, the Standards Committee appointed the Project 2015-02 Emergency Operations Periodic Review Team (EOP PRT) and tasked them to review the following standards:

- EOP-004-2 — Event Reporting;
- EOP-005-2 — System Restoration from Blackstart Resources;
- EOP-006-2 — System Restoration Coordination; and
- EOP-008-1 — Loss of Control Center Functionality.

Based on this review, the EOP PRT developed a set of recommendations for EOP-004-2, EOP-005-2, EOP-006-2, and EOP-008-1. The EOP PRT recommendations were posted for a 45-day comment period from March 27, 2015 through May 11, 2015.

The EOP PRT carefully reviewed and considered the comments received during the posting period and, based on stakeholder comments, made revisions to the initial recommendations. To support consideration and implementation of these recommendations, the EOP PRT developed a new Standards Authorization Request (SAR). Many improvements suggested by stakeholders during the comment period were incorporated into the final recommendations.

The recommendations of the EOP PRT are attached to the SAR (Periodic Review Templates). The recommendations of the EOP PRT are as follows:

- EOP-004-2 – (1) Revise the standard and attachement and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 – (1) Revise the standard and (2) retire Requirements Parts R1.2, R1.3, and R1.4; and
- EOP-008-1 – Revise the standard.

Additional documents developed to support the Project 2015-02 team's recommendations have been posted to the 2015-02 EOP PRT project page, including: 1) the EOP PRT's consideration of comments on the draft recommendations; 2) Department of Energy OE-417 Comparison of Reporting; 3) and Standards Independent Experts Review Project.

The EOP PRT has reviewed and developed a recommendation based upon the language of Federal Energy Regulatory Commission (Commission) Order no. 749[1], as follows:

> *"[N]ERC, in its comments about the term, states that it "could promote the development of a guideline to aid registered entities in complying with Requirement R11." The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*[2]

You do not have to answer all questions. Enter comments in simple text format. Bullets, numbers, and special formatting will not be retained.

Questions

1. The scope of this project includes:

- Implement the recommendations of the periodic review team related to the following standards:
  - EOP-004-2
  - EOP-005-2
  - EOP-006-2
  - EOP-00801
- Improve quality, relevance and clarity of the standards
- Bring standards into Results-Based format
- Apply Paragraph 81 criteria and recommendations from Independent Expert Review Panel

Do you agree with this scope? If not, please explain.

☐ Yes

☐ No

Comments:

[1] *System Restoration Reliability Standards*, 134 FERC ¶61,215 (2011) (Order No. 749).

[1] *Id.* at P24.

2. The SAR identifies a list of reliability functions that may be assigned responsibility for requirements in the set of standards addressed by this SAR. Do you agree with the list of proposed applicable functional entities? If no, please explain.

☐ Yes
☐ No
Comments:

3. Are you aware of any regional variances that will be needed as a result of this project? If yes, please identify the regional variance:

☐ Yes
☐ No
Comments:

4. Are you aware of any business practice that will be needed or that will need to be modified as a result of this project? If yes, please identify the business practice:

☐ Yes
☐ No
Comments:

5. Are you aware of any Canadian provincial or other regulatory requirements that may need to be considered during this project in order to develop a continent-wide approach to the standard(s)? If yes, please identify the jurisdiction and specific regulatory requirements.

☐ Yes
☐ No
Comments:

6. If you have any other comments on this SAR that you haven't already mentioned above, please provide them here:

Selected Answer: No

Answer Comment:

We agree with the need to establish the requirements for real-time monitoring and analysis capabilities used by System Operators in support of reliable System operations. However, we believe such requirements do not rise up to the level of Reliability Standards, whose objective is to drive the proper behaviors that contribute to reliability.

We believe real-time monitoring and analysis capabilities are the "one-off" type that is required for performing a registered entity's functions. Such capabilities need to be provided and tested at the organization certification stage, and in subsequent verification stages. Another example of this type of requirement is the provision of redundant communication facilities, or the installation of disturbance monitoring devices.

Therefore, we do not support this SAR, and propose that the requirements for providing the real-time monitoring and analysis capabilities be stipulated in the concerned functional entities' organization certification requirement.

Answer Comment:

The NSRF is aware of the Commission directives and past outage reports that have set the foundation for this project. Taken singularly (looking at these objectives, only) this Project should be rather straight forward. But as the SDT knows, the newly developed Requirements will be in addition to the real-time responsibilities that (System) operators have currently, in maintaining a balanced and secure system.

The NSRF wishes to remind the SDT that awareness (within Situational Awareness) should not turn into Situational Assurance (beyond a doubt). That *awareness* is "*knowing*" that something exist that may impact you and not necessarily having an *in depth understanding* of the root cause and effect of the situation. As an example, a TOP has a 345kV line trip and lock out. The TOP should have an *in depth understanding* of how the megawatt flows of their system will change when this lock out occurs. The impact BA Area does not need to *know* much beyond that the line has tripped, but rather needs the awareness that they may be called upon to help reconfigure their system (re-dispatch generation, shed load, etc.).

All Requirements (present and future) cannot remove the possibility of human error. A contributing factor to human error is data overload (ie, alarms [actual and false] communications [phone call, radio call, blast calls], processing this tremendous amount of information, having information constantly in a state of change and being compliant with ALL currently enforceable Standards. Note that System Operators have a higher tendency to make mistakes when their systems are stressed and usually in an emergency condition (either a capacity or transmission emergency). Not that their tools failed them but rather the most critical element or system condition wasn't mitigated first. The SDT must remain aware to *complexity creep* and look at ALL real-time operator responsibilities when developing this project and that adding new responsibilities may be detrimental to system reliability..

The NSRF looks forward to working with the SDT on this Project.

Note: We have progressed and are now aware of systems and conditions since the 2003 Blackout. Please consider this. Tools should be used as a "control" within an entity's Risk Assessment.

Answer Comment:

This proposed project appears to be well-suited for a guideline document as opposed to a Standard. As written, the SAR appears to intend to write a "how" not "what" Standard (*i.e.*, it does not appear to be a results-based standard). The SRC believes that the existing Standards (*i.e.*, IRO, TOP and BAL) sufficiently define what needs to be monitored by each entity without defining the tools (*i.e.*, without defining the "how"), which is appropriate. In the alternative, this could be considered a process to be used for Certifying new entities for assurance that they have the ability to monitor appropriately in accordance with the Standards Requirements.

The SRC notes that the tools available to operators have progressed well beyond those available in 2003. If defined tools would have been hardcoded in a standard at that time, it would have limited focus and investment to those things that were in the standard. Further, expanding on our point above, the SRC believes that the "what" regarding tools is more appropriately captured in the certification expectations for BAs, RCs, and TOPs. Additionally, it would be appropriate for Regions to evaluate tools as part of the Registered Entity's Inherent Risk Assessment (IRA). This would include the scope of tools, backups, etc. and would provide an adaptable approach that would encourage continuous improvement.

Additionally, the SRC recommends that NERC coordinate with the NATF to encourage inclusion of an ongoing "care and feeding" of tools evaluation and information sharing in their efforts with the provision that they make information on good practices available to the wider NERC community so that non-members can learn from the innovation of others.

Finally, to avoid these issues in the future and to support communicating to FERC when a Standard is not needed and another tool is more suitable, the SRC suggests that future SARs be voted on by industry to determine whether they should proceed as a Standards project or another means is a more appropriate method through which to achieve the SAR's objective.

The SAR has the "NEW" Standard box checked but not the "Revision to existing Standard" box. Based on the statement below from the SAR,
FirstEnergy feels the "Revision to existing Standard" should be checked also so other Standards can be included if necessary..

- P 905: *Further, consistent with the NOPR, the Commission directs the ERO to modify IRO-002-1 to require a minimum set of tools that must be made available to the reliability coordinator. We believe this requirement will ensure that a reliability coordinator has the tools it needs to perform its functions.*

How does NERC's Project 2009-02 differ from the work about to begin in the NERC Synchrophasor Measurements Subcommittee (SMS)? Should this project be part of SMS? In my mind ther is a great deal of overlap between the new SMS and Project 2009-02 and to a large extent, Project 2009-2 is dependent on the work to be done by SMS. Entergy recommend a delay or no vote on this project until SMS work is completed.

Answer Comment:

Suggest revising the Purpose to make it more encompassing. Suggest the following wording:

To establish situational awareness capabilities with results-based requirements for monitoring and analysis used by System Operators in support of reliable Real-time System operations.

The concepts being proposed in the scope of the SAR can be realized by revising the appropriate TOP and IRO standards by either revising existing requirements, or adding requirements. A new standard may not be necessary. Therefore, the SAR should provide the Drafting Team with the flexibility to add requirements to IRO-010-2 and TOP-003. For example, Requirement R2 in IRO-010-2 stipulates that:

“R2. The Reliability Coordinator shall distribute its data specification to entities that have data required by the Reliability Coordinator’s Operational Planning Analyses, Real-time monitoring, and Real-time Assessments.”

This requirement satisfies both the posted Purpose of the SAR:

“To establish requirements for Real-time monitoring and analysis capabilities used by System Operators in support of reliable System operations.”

and our suggested revision above.

Answer Comment:

We agree with the overall scope of the SAR. However, we do have a two concerns to address.

First, the SAR indicates that it will address all recommendations of the RTBPTF while the SAR Justification indicates that not all recommendations will be implemented. If by “addressing the recommendations” the SAR indicates that recommendation will considered based on its merits, we agree. Furthermore, we agree with the disposition of the vast majority of the recommendations as written in the SAR justification.

Second, if a “common understanding of *monitoring*” means a definition will be developed, we caution the drafting team to conduct a complete wholesale review of all NERC reliability standards to be sure the definition would not change the meaning of other requirements or cause confusion on applicability of the definition.

Oshani Pathirane - Hydro One Networks, Inc. - 1,3 - NPCC

Selected Answer: Yes

Answer Comment:

Hydro One Networks Inc. would like to provide the following additional recommendations for the SDT’s consideration:

1. The effort required to capture activities/best practices the majority of entities have already employed may be of value;

2. The standard does not appear to deliver the intended future direction for system monitoring and ways to achieve this;

3. By the nature and competitiveness of the MS industry, providers will continue to develop and offer new functionalities that may or may not be desirable for every entity. The effort would be better suited to standardize requirements and allow for the industry to catch up to a common standard. In other words, this effort would provide minimal benefit for entities that already have a modern EMS and for others a large change to meet current requirements;

4. The goal should be to level-off the playing field and have all entities reach the same level of monitoring first.

Answer Comment:

Our review team believes that the standards process has resulted in a mature set of Reliability Standards that already fully address FERC Order 693. With that being said, we feel that there is no need for continuing efforts on this project for the fear of redundancy. We have concerns that the scope of the SAR could result in requirements that are redundant to other existing Standards and inappropriately set minimum capabilities based on a list of best practices. The SAR scope seems to focus on quality of information for entities in carrying out their adherence to other Standards. Additionally, we feel that perhaps the documentation of the entities capabilities should be captured in either the Rules of Procedure or other certification or registration procedures rather than in a Reliability Standard. Another option would be to include descriptions or clarification of those capabilities within the supporting documentation of the other Standards.

Rachel Coyne - Texas Reliability Entity, Inc. - 10 -

Selected Answer: Yes

Answer Comment:

Texas RE noticed communicating results was not part of the SAR. Effective communications is part of situational awareness and can directly be related to the quality of information being provided as well as awareness of key monitoring and analysis capabilities. Monitoring and analysis capabilities should include communicating results to all entities requiring information. Is the SDT considering this type of communication? Texas RE is concerned the scope seems narrow. Has the SDT or NERC clearly identified all the recommendations and FERC directives have been thoroughly covered by the changes in all the relative Standards?

Texas RE acknowledges that FERC Order No. 693 mentioned that it did not wish to identify specific tools, but rather minimum capabilities. There are, however, standard industry tools for monitoring. Texas RE recommends the SDT consider making certain tools mandatory. Tools determine the status of reliability of the system. It seems as if the industry sees the need to call specific types of tools out but does not want the compliance aspects associated with the tools. State estimator and contingency analysis tool are extremely common utility practices to help ensure reliability. Is there a part of the BES that is not being monitored by a State Estimator or Contingency Analysis tool?

Sergio Banuelos - Tri-State G and T Association, Inc. - 1,3,5 - MRO,WECC

Selected Answer: No

Answer Comment:

Tri-State Generation and Transmission supports the comments submit by the Standards Review Committee (SRC).

In addition, Tri-State also would like to add the following. Tri-State recognizes that Real-time situational awareness might have been a factor of the 2003 Northeast blackout and the 2011 Southwest blackout, however we believe that over the past four years there has been significant developments and improvement in the tools that operators have available particularly within the WECC region. Additionally, the recent bifurcation in the WECC region and the subsequent creation of a standalone Reliability Coordinator has led to significant improvements in regional coordination, operations, and overall system visibility. We believe the new TOP-003-1 standard directly addresses the 'what' leaving the 'how' up to the individual utility, specifically:

Requirement R10 for Monitoring power System data in Real-time (and TOP-003-3)
Requirement R13 for Determining the current state of the BES and Evaluating the impact of 'what if' events on the current state of the BES
Requirement R19 for Exchanging power System data in Real-time

Tri-State does not agree with the SAR and its intentions but should the SAR proceed we urge the SDT to better define the intentions of the SAR. Specifically Tri-State does not understand how the SDT intends to quantify acceptable "quality" without resulting in a subjective audit? Also what is included in the term "analysis capabilities" and how will these items be sufficiently quantified to allow for a consistent audit approach across the various Regional Entities?

Andrea Jessup - Bonneville Power Administration - 1,3,5,6 - WECC

Selected Answer: Yes

Answer Comment:

In general, BPA agrees with the scope of the SAR, and conceptually with the effort to tie performance based metrics to real time situational awareness. BPA also agrees with the SAR DT, that the scope of the Project 2009-02 should avoid prescriptive assumptions regarding the implementation of real time tools by a specific entity.

As noted in the SAR Justification, real time situational awareness is closely associated with the pending definition of Real-time Assessment. BPA suggests that the concept of providing operators with notification of Availability, as described by the SAR DT, is already implied by the pending requirements in proposed TOP-001-3 R13 and IRO-008-2 R4.

TOP-001-3 R13: Each Transmission Operator shall ensure that a Real-time Assessment is performed at least once every 30 minutes.

IRO-008-2 R4: Each Reliability Coordinator shall ensure that a Real□time Assessment is performed at least once every 30 minutes.

The process an entity develops to avoid a violation of these requirements will necessitate prompt notification any time the entity's ability to perform the Real Time Assessment is degraded. Additional requirements would therefore be either redundant or unnecessarily prescriptive.

BPA notes that a measurement of the **quality** of monitoring or analysis tools is likely to be closely dependent on the tools and processes implemented by the individual entity. However, BPA agrees with the SAR DT that ongoing assessment of the tools and processes implemented by an entity to perform Real-time Assessment is both necessary and a gap in the existing standards. It is important to avoid the pitfall of implicitly requiring a specific implementation for Real Time Assessment. Any new standards developed by Project 2009-02 must also allow the industry to continue developing and improving on the best practices described by the NERC Real Time Best Practice Task Force in 2008.

Therefore, BPA suggests that Project 2009-02 should only focus on developing requirements for entities to establish, based on their own local implementation, 1) procedures for evaluating the quality of their Real Time Assessment and the information needed to perform it, and 2) the processes for maintaining the quality of the required information to the performance thresholds the entity determines are necessary for performing the Real Time Assessment.

Oliver Burke - Entergy - Entergy Services, Inc. - 1 -

Selected Answer:

Answer Comment:

Entergy has the following additional comments: 1. When writing standards for issues that are technology driven, extreme care must be used to avoid arbitrarly increasing costs without commensurare increase in benefit to reliability. 2. Standards should be technology neutral to the extent possible. 3. Need a bright-line voltage level guidance for which these new requirements apply. Different entities have their own definition of what consitutes Transmission levels. There presently exists a range from 100 kV to 44 kV in our region. 4. Need a bright-line guidance regarding extent of external monitoring that needs to be performed. A specific number, for example 10% impact, on internal lines and transformers would be extremely helpful. Currently entities in our region monitor anywhere from 5% to 10% impact, if possible, or up to three buses away.

Amy Casuscelli - Xcel Energy, Inc. - 1,3,5,6 - MRO,WECC,SPP

Selected Answer:

Answer Comment:

Xcel Energy has questions about any new standards or proposed revisions to existing standards that would result from this project. How stringent are the requirements going to be? Will fully redundant systems be required? Can a TOP rely on the RC or other entity as a temporary backup? What about if the RC goes down?

Additionally, we have concerns about the level of detail that would be required. We believe that a requirment to analyze contingencies on neighboring systems could cause undue burden on smaller systems with larger neighbors.

Selected Answer:

Answer Comment:

Any revisions made must not address the specifics of what the situational awareness capabilities are, but must focus on the adequacy of the monitoring and analysis.

This proposed project should be considered for a guideline document as opposed to a standard. As written, the SAR appears to intend to write a "how" not "what" standard (i.e. it does appear to be a results-based standard). We believe that the existing Standards (i.e. IRO, TOP and BAL) sufficiently define what needs to be monitored by each entity without defining the tools (i.e. without defining the "how"), which is appropriate.

As an alternative, this could be considered a process to be used for certifying new entities for assurance that they have the ability to monitor appropriately in accordance with the Standard's Requirements.

To avoid these issues in the future and to support communicating to FERC that a standard is not needed but another tool is more suitable, we suggest the future SARs be voted on by industry as to whether to proceed as a Standards project or use another means to achieve the ends.

Rachel Coyne - Texas Reliability Entity, Inc. - 10 -

Selected Answer:

Answer Comment:

Texas RE agrees with the RTBPTF report which states "Develop a new weather data requirement related to situational awareness and real-time operational capabilities." The drafting team's response, "EOP-010-1 covers space weather dissemination. The SAR DT views monitoring other weather information as common utility practice that does not require a reliability standard", is concerning because registered entities might not monitor weather as they should. Weather is extremely pertinent to situational awareness and real-time operational capabilities. Weather has a significant impact and, too often, exacerbates reliability issues. If it is a common utility practice than successful compliance should not be an issue. Is the SDT considering a Guideline like what was done for the common utility practice of preparing a generator for winter operation?

Consideration of Comments

Project Name: 2015-08 Emergency Operations

Comment Period Start Date: 07/21/2015

Comment Period End Date: 08/19/2015

There were 20 sets of responses, including comments from approximately 87 different people from approximately 66 different companies representing 7 of the 10 Industry Segments as shown on the following pages.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process. If you feel there has been an error or omission, you can contact the Director of Standards, Howard Gugel (via email) or at (404) 446-2560.

Questions

1. The scope of this project includes:
    - Implement the recommendations of the periodic review team related to the following standards:
        - EOP-004-2
        - EOP-005-2
        - EOP-006-2
        - EOP-00801
    - Improve quality, relevance and clarity of the standards
    - Bring standards into Results-Based format
    - Apply Paragraph 81 criteria and recommendations from Independent Expert Review Panel

    Do you agree with this scope? If not, please explain.

2. The SAR identifies a list of reliability functions that may be assigned responsibility for requirements in the set of standards addressed by this SAR. Do you agree with the list of proposed applicable functional entities? If no, please explain.

3. Are you aware of any regional variances that will be needed as a result of this project? If yes, please identify the regional variance:

4. Are you aware of any business practice that will be needed or that will need to be modified as a result of this project? If yes, please identify the business practice:

5. Are you aware of any Canadian provincial or other regulatory requirements that may need to be considered during this project in order to develop a continent-wide approach to the standard(s)? If yes, please identify the jurisdiction and specific regulatory requirements.

6. If you have any other comments on this SAR that you haven't already mentioned above, please provide them here:

The Industry Segments are:

1 — Transmission Owners

2 — RTOs, ISOs

3 — Load-serving Entities

4 — Transmission-dependent Utilities

5 — Electric Generators

6 — Electricity Brokers, Aggregators, and Marketers

7 — Large Electricity End Users

8 — Small Electricity End Users

9 — Federal, State, Provincial Regulatory or other Government Entities

10 — Regional Reliability Organizations, Regional Entities

1. The scope of this project includes:

· *Implement the recommendations of the periodic review team related to the following standards:*

o *EOP-004-2*
o *EOP-005-2*
o *EOP-006-2*
o *EOP-008-1*

· *Improve quality, relevance and clarity of the standards*
· *Bring standards into Results-Based format*
· *Apply Paragraph 81 criteria and recommendations from Independent Expert Review Panel*

Do you agree with this scope? If not, please explain.

Summary Responses:

Many commenters made comments and recommendations for revisions to EOP-004, Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

To clarify from comments received, the EOP PRT *did not* recommend retirement of Requirement R10 in EOP-005 or Requirement R9 in EOP-006. The EOP PRT's final recommendation was that these requirements be evaluated for either *inclusion* into the PER family of standards; or, in the alternative, be *retained* in EOP-005 and EOP-006.

A comment was received regarding the approach for commenting and balloting Project 2015-08, Emergency Operations. The EOP SDT agrees with the approach utilized by the Project 2015-04 team. The EOP SDT will add commenting/balloting approach to its agenda for with the September 2015 kick-off meeting, or at its November 2015 in-person meeting. The EOP SDT will be required to have each standard's commenting and balloting conducted separately; however, since the revisions and retirements of requirements are being developed concurrently, the standards will likely post for commenting and balloting during the same time periods. The EOP SDT would not be allowed to ballot requirements and/or attachments separately from the standard they are contained within. Each standard would need to pass or fail ballot in its entirety. The EOP SDT will consider whether an informal comment period would be beneficial for each standard; in particular EOP-004 (due to attachments) during the development process, or whether focused outreach to gather industry inputs during development is more efficient and effective.

In response to a comment received, the EOP SDT will implement the recommendation of the EOP PRT by *reviewing* the VSL in Requirement R1 *to determine* if it should be revised for consistency with the VSL level in Requirement R2. The EOP SDT will consider all comments received on this revision prior to determining the appropriate action to take on the revision.

To clarify the EOP PRT's intent for the review for revision of Requirement R5 was to consider the current language of "implementation date" and consider if the use of the term "effective date," or "approval date" would provide additional clarity, or if the current language "implementation date" is clear as written.

Answer Comment:

We generally agree with the proposed scope, but would reiterate the following concerns/suggestions which we submitted when we commented on the initial posting of the PRT's recommendations. We propose that these concerns/suggestions be duly considered during standard drafting:

a. EOP-004

(IESO comment) We agree with the initial recommendation which outlines three clarifying revisions to Attachment 1 of EOP-004-2, but believe that this recommendation falls way short of providing the needed clarity to the obligations of the Responsible Entities listed in Attachment 1. We further believe that certain items listed in Attachment 1 serve to support post-mortem analysis but do not contribute to operating reliability, and may be redundant with similar requirements already stipulated in the Event Analysis Process document. We therefore offer the following comments:

· The lack of clarity can result in registered entities being found potentially noncompliant with certain requirements. As an example, on P.10 of EOP-004-2, when there is a loss of firm load ≥; 300 MW for entities with previous year’s demand ≥; 3,000 or ≥; 200 MW for all other entities, the BA, TOP or DP is held responsible for reporting. It is unclear on the size of MW in relation to which particular entity’s previous year’s demand size, and whether or not all three entities are responsible for reporting, or just one of them needs to report, and if so, which one of the three? Also, if it is meant to be one of the three, it is not clear whether or not the location or area within which the load loss occurs would dictate which one of the three entities has that obligation.

When the loss of load occurs in a distribution system, is it the DP’s obligation to report? Likewise, is the TOP obligated to report when the loss involves those loads that are tapped off the transmission network? Depending on the answer to the above, what is the role of the BA? Finally, if all three are obligated to report, doesn’t the requirement make it cumbersome and redundant when all three entities files reports to the recipient entities/authorities?

We believe that Attachment 1 needs to be revised to clarify the 3000 MW relationship with a specific entity’s previous year’s demand, and to hold a single entity responsible for reporting this type of events. The latter recommendation also applies to other events in Attachment 1 where there are multiple entities listed as having the obligation to take actions.

· We believe that the requirement to report loss of load is not needed for reliability, unlike their interruption to BES facility counterparts. Loss of load is usually caused by loss of facilities, or by frequency or voltage excursions resulting from events that are already listed in Attachment 1 (e.g., voltage deviation, generation loss, etc.). We further believe that while this information is needed for post-mortem event analysis, this information reporting requirement is already stipulated in the Event Analysis Process document, and mandated by local regulatory authorities. Reporting such events to the ERO, the RE and other entities is redundant and does not help to improve operating reliability. Further, since loss of load by itself does not have any impact on the Bulk Electric System reliability, reporting such events is inconsistent with the principle "….to report disturbances and events that threaten the reliability of the Bulk Electric System" as indicated in the Guideline and Technical Basis of the standard. We therefore suggest that this requirement be removed from Attachment 1 as it is not needed for operating reliability and is redundant with the requirement for event analysis stipulated elsewhere or mandated by local regulatory authorities.

· If for whatever reasons the loss of load reporting requirement is retained in Attachment 1, we request the SDT to provide the technical justification for the threshold values of ≥; 300 MW for entities with previous year's demand ≥; 3,000 or ≥; 200 MW for all other entities. We believe these thresholds are too low to warrant any special attention and reporting burden by the Responsible Entities. For example, an area load of several hundred MW that is normally supplied by two transmission lines may be lost due to one of the lines being out of serviced for maintenance while the other suffering a contingency loss. To avoid having to report such load loss resulting from routine operating practices and recognized contingencies (with respect to design and operating criteria), we believe the reporting threshold should be raised to a level of at least 1,000 MW. We further suggest the SDT seek input from the NERC technical committees on the threshold values if the SDT should decide to keep this requirement, which we believe is not needed for operating reliability. (End of IESO comment)

In the response to comment, the PRT indicates that:

[The EOP PRT will recommend in the SAR for the future drafting team to review recommendations based on the comments received for Attachment 1, but will not suggest specific rewrites. The EOP PRT believes all recommendations have merit and need a thorough review by the future SDT when formed for this standard.]

Also, in the redline recommendations, the PRT proposes that:

["…Attachment 1 - The EOP PRT recommends the future Standard Drafting Team (SDT) conduct a thorough review of Attachment 1 and consider the following revisions to Attachment 1 for clarity, such as…"; and "…differing regional data submittal requirements when reviewing EOP-004-2 for revisions."]

The SAR does not provide any details or specificities on which parts of Attachment 1 will be revised. It is unclear whether or not our specific comments/suggestions will be addressed during the standard drafting phase. We therefore urge the SDT to carefully consider the above comments/suggestions, as proposed in the PRT's response.

b. EOP-005

Again, we'd like to reiterate our previous comments below since the SAR does not provide any details or specificities on the treatment to the concerned requirement (R10), in the revised EOP-005 standard, or any other standard that this requirement will be mapped into:

(IESO comment) We do not agree with the proposal to retire Requirement R10 as we do not believe this requirement is duplicative of any requirements in PER-005-2.

We assess that the Independent Expert Panel's recommendation to retire R10 was based on its assessment that this requirement was duplicative of R3 of PER-005-1, which stipulates that:

R3. At least every 12 months each Reliability Coordinator, Balancing Authority and Transmission Operator shall provide each of its System Operators with at least 32 hours of emergency operations training applicable to its organization that reflects emergency operations topics, which includes system restoration using drills, exercises or other training required to maintain qualified personnel.

This recommendation appeared to be appropriate at that time. However, in PER-005-2 (revised from PER-005-1), the requirement to provide system restoration training no longer exists. In fact, the rationale to remove the minimum training requirement specific to system restoration from PER-005-1 was in part based on the existence of Requirement R10 in EOP-005-2 (and R9 in EOP-006-2).

If Requirement R10 in EOP-005 is removed, then there will not be any requirements to provide system restoration training to operating personnel in any standards. We therefore suggest that this requirement be retained. (End of IESO comment)

Note that the PRT's response (below) essentially agree with our concern, but the SAR does not provide any clear indication as to the proposed treatment to Requirement R10.

[The EOP PRT does not find that there is adequate justification providing annual system restoration training for System Operators in another standard. Therefore, the EOP PRT recommends that the future SDT evaluate moving R10 into the PER family of standards; and if unable, Requirement R10 will be maintained in EOP-005.]

c. EOP-006

Similar to EOP-005, we had a concern with the proposed retirement of Requirement R9. Therefore, we are reiterating our comments on EOP-006, below for the SDT's consideration:

(IESO comment) We agree with the proposed retirement of Parts R1.2, R1.3 and R1.4, but do not agree with retiring Requirement R9 (which mirrors R10 in EOP-005-2) as we do not believe this requirement is duplicative of any requirements in PER-005-2.

Similar to our comments on the proposed retirement of R10 in EOP-005-2, we assess that the Independent Expert Panel's recommendation to retire R9 in EOP-006-2 was based on its assessment that this requirement was duplicative of R3 in PER-005-1, which stipulates that:

R3. At least every 12 months each Reliability Coordinator, Balancing

Authority and Transmission Operator shall provide each of its System Operators with

	at least 32 hours of emergency operations training applicable to its organization that reflects emergency operations topics, which includes system restoration using drills, exercises or other training required to maintain qualified personnel. The recommendation to retire R9 of EOP-006-2 appeared to be appropriate at that time. However, in PER-005-2 (revised from PER-005-1), the requirement to provide system restoration training to RC operating personnel no longer exists. In fact, the rationale to remove the minimum training requirement specific to system restoration from PER-005-1 was in part based on the existence of Requirement R10 in EOP-005-1, and R9 in EOP-006-2. If Requirement R9 in EOP-006-2 is removed, then there will not be any requirement to provide system restoration training to operating personnel. We therefore suggest that this requirement be retained. The PRT's response is essentially the same as its response to our comment on EOP-005; hence it's not repeated here.
Response:	Thank you for your comments. Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards. EOP-005/EOP-006: The EOP PRT did not recommend retirement of Requirement R10 in EOP-005 or Requirement R9 in EOP-006. The EOP PRT's final recommendation was that these requirements be evaluated for either inclusion into the PER family of standards; or, in the alternative, be retained in EOP-005 and EOP-006.

christina bigelow - Electric Reliability Council of Texas, Inc. - 2 -

Selected Answer: Yes

Answer Comment: ERCOT agrees with the scope, but reiterates its comments and the SRC's comments on the results of the periodic review as well as the SRC's comments on the SAR.

Response: Thank you for your comment. Please see responses to SRC's comments below.

Answer Comment:

The SRC generally agrees with the proposed scope, but, as it was unclear through the PRT’s responses to comments whether or how such comments would be addressed by the SDT, the SRC would reiterate the following concerns/suggestions that were submitted as comments by the SRC on the initial posting of the PRT’s recommendations. The SRC requests that these concerns/suggestions be duly considered during standard drafting:

a. EOP-004

The SRC reiterates that the requirement to report loss of load is not needed for reliability, unlike their interruption to BES facility counterparts. Since loss of load by itself does not have any impact on the Bulk Electric System reliability, reporting such events is inconsistent with the principle “….to report disturbances and events that threaten the reliability of the Bulk Electric System” as indicated in the Guideline and Technical Basis of the standard. The SRC, therefore, suggests that this requirement be removed from Attachment 1 as it is not needed for operating reliability and is redundant with the requirement for event analysis stipulated through other regulatory authorities. If for whatever reasons the loss of load reporting requirement is retained in Attachment 1, the SRC requests that the SDT seek input from the NERC technical committees to provide the technical justification for the threshold values of

≥; 300 MW for entities with previous year's demand ≥; 3,000 or ≥; 200 MW for all other entities.

b. EOP-005

The SRC does not agree with the proposal to retire Requirement R10 as the Independent Expert Panel's recommendation to retire R10 was based on its assessment that this requirement was duplicative of R3 of PER-005-1, which stipulates that:

R3. At least every 12 months each Reliability Coordinator, Balancing Authority and Transmission Operator shall provide each of its System Operators with at least 32 hours of emergency operations training applicable to its organization that reflects emergency operations topics, which includes system restoration using drills, exercises or other training required to maintain qualified personnel.

This recommendation appeared to be appropriate at that time. However, in PER-005-2 (revised from PER-005-1), the requirement to provide system restoration training no longer exists. If Requirement R10 in EOP-005 is removed, then there will not be any requirements to provide system restoration training to operating personnel in any standards. We therefore suggest that this requirement be retained.

c. EOP-006

Similar to EOP-005, the SRC had a concern with the proposed retirement of Requirement R9. Our comments on EOP-006 are, therefore, reiterated for the SDT's consideration.

The SRC does not agree with the proposal to retire Requirement R9 as the Independent Expert Panel's recommendation to retire R9 was based on its assessment that this requirement was duplicative of R3 of PER-005-1, which stipulates that:

	R3. At least every 12 months each Reliability Coordinator, Balancing Authority and Transmission Operator shall provide each of its System Operators with at least 32 hours of emergency operations training applicable to its organization that reflects emergency operations topics, which includes system restoration using drills, exercises or other training required to maintain qualified personnel. This recommendation appeared to be appropriate at that time. However, in PER-005-2 (revised from PER-005-1), the requirement to provide system restoration training no longer exists. If Requirement R9 in EOP-005 is removed, then there will not be any requirements to provide system restoration training to operating personnel in any standards. We therefore suggest that this requirement be retained.
Response:	Thank you for your comments. Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards/attachments. EOP-005 and EOP-006: The EOP PRT did not recommend retirement of Requirement R10 in EOP-005 or Requirement R9 in EOP-006. The EOP PRT's final recommendation was that these requirements be evaluated for either inclusion into the PER family of standards; or, in the alternative, be retained in EOP-005 and EOP-006.

Ashley Stringer	Oklahoma Municipal Power Authority	SPP	4
James "Jim" Nail	City of Independence, Missouri	SPP	3,5
Ellen Watkin	Sunflower Electric Power Corporation	SPP	1

Selected Answer: Yes

Answer Comment: Our review team agrees with the scope of this project however, we would suggest to the drafting team to make sure they have implemented a strong differentiation process on what needs to be retired or proposed/recommended for all the standards involved in this project. In the past, there has been confusion in the voting process to where one project has an affliation with other projects in the Stanard Development Process and a negative vote has delayed the entire project due to small details not being communicated effectively. Additionally, we would suggest using the approach

	taken by the Alignment of Terms Drafting Team (Project 2015-04). They submitted twenty-six terms to be voted on however, the industry had to vote on each individual term. So if the industry voted no for one term or terms, it would call for an re-evaluation for those particular term(s) and not cause a delay to the entire project (unless the changes were significant enough).
Response:	Thank you for your comments. The EOP SDT agrees with the approach utilized by the Project 2015-04 team. The EOP SDT will add commenting/balloting approach to its agenda for with the September 2015 kick-off meeting, or at its November 2015 in-person meeting. The EOP SDT will be required to have each standard's commenting and balloting conducted separately; however, since the revisions and retirements of requirements are being developed concurrently, the standards will likely post for commenting and balloting during the same time periods. The EOP SDT would not be allowed to ballot requirements and/or attachments separately from the standard they are contained within. Each standard would need to pass or fail ballot in its entirety. The EOP SDT will consider whether an informal comment period would be beneficial for each standard; in particular EOP-004 (due to attachments) during the development process, or whether focused outreach to gather industry inputs during development is more efficient and effective.

Answer Comment:

We have the following concerns for EOP-004:

There is a need to clarify the obligations of the Responsible Entities listed in Attachment 1.

On page 10 of EOP-004-2, when there is a loss of firm load ≥300 MW for entities with a previous year’s demand ≥3,000 MW, or ≥200 MW for all other entities, the BA, TOP or DP is held responsible for reporting. It is unclear as to the MW in relation to which particular entity’s previous year’s demand, and whether or not all three entities are responsible for reporting, or just one of them needs to report, and if so, which one of the three? Also, if it is meant to be one of the three, it is not clear whether or not the location or area within which the load loss occurs would dictate which one of the three entities has that obligation.

When the loss of load occurs in a distribution system, is it the DP’s obligation to report? Likewise, is the TOP obligated to report when the loss involves those loads that are tapped off the transmission network? Depending on the answer to the above, what is the role of the BA? If all three are obligated to report, the requirement makes it cumbersome and redundant to have all three entities file reports to the recipient entities/authorities.

Response: Thank you for your comments. The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

Jared Shakespeare - Peak Reliability - 1 -

Selected Answer: Yes

Answer Comment:	EOP-004 – agree with retiring R3 (annual validation of contacts listed in event reporting operating plan) and with suggested changes throughout the standard (providing clarity for who is responsible for reporting) EOP-005 – Agree with the EOP PRT to *not* retire R12 as it is *not* duplicative with PER-005-1 R3. Agree with including R7 and R8 into R1 Agree with removing R3.1 which was retired by FERC on 1/21/14 Agree that R10 could possibly be moved to the PER standards if R12 remains in EOP-005 EOP-006 – neutral on retiring R1.2, R1.3, and R1.4 due to redundancy with R1.5 Agree with not retiring R10 as it is not captured in PER-005 Agree with including R7 and R8 into R1 Neutral on recommendation to add time frame for R4 (review of neighboring RC restoration plans) Agree that R9 could possibly be moved to the PER standards if R10 remains in EOP-006 Agree more precise expectations should be included in R10.1 (GOPs must participate in RC training exercise…), would prefer that only black start GOPs must attend the RC restoration training drills EOP-008 – Agree with adding clarity to timing or removing the statement in R1.1

Response:	The EOP SDT appreciates your support of the EOP PRT's final recommendations.

Andrea Jessup - Bonneville Power Administration - 1,3,5,6 - WECC

Selected Answer:	No
Answer Comment:	In regard to the Project 2015-02 PRT's recommendations, BPA disagrees with: 1 - EOP-004: R1 VSL change increase 2 - EOP-004 Attachment 1: eliminating GOP from reporting, BPA believes it should be by initiating BA or initiating GOP. If a major plant has an internal problem and trips the GOP should do the investigation (not the BA). 3 - EOP-005: Page 5 "#2 Clarity" (version 2 R5 already uses "implementation date"), with R6 change. 4 - EOP-005: elimination of "Blackstart Resources"from R7 & R8.
Response:	Thank you for your comments. EOP-004, Requirement R1: The EOP SDT will implement the recommendation of the EOP PRT by reviewing the VSL in Requirement R1 to determine if it should be revised for consistency with the VSL level in Requirement R2. The EOP SDT will consider all comments received on this revision prior to determining the appropriate action to take on the revision. EOP-004, Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards/attachments.

EOP-005: The EOP PRT's intent for the review for revision of Requirement R5 was to consider the current language of "implementation date" and consider if the use of the term "effective date," or "approval date" would provide additional clarity, or if the current language "implementation date" is clear as written.
EOP-005: Requirements R7 and R8 (Blackstart Resources). The EOP SDT is unclear as to your comment regarding these requirements. The EOP PRT did not make a recommendation for elimination of Blackstart Resources from Requirements R7 and R8; rather the recommendation was to review these two requirements for possible merging into Requirement R1.

2. The SAR identifies a list of reliability functions that may be assigned responsibility for requirements in the set of standards addressed by this SAR. Do you agree with the list of proposed applicable functional entities? If no, please explain.

Summary Responses:
Many commenters made comments and recommendations for revisions to EOP-004, Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

Answer Comment: ERCOT agrees with the functional assignments, but reiterates its comments submitted in response to the periodoc review recommendations that redundancy across functions is inefficient and onerous and should be re-evaluated.

Response: Thank you for your comments. The EOP SDT will review comments/recommendations made to the EOP PRT during comment period (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

Answer Comment: **Without knowing the extent of the changes that will incur from this project, we are unable to provide specific examples of business practices that will be needed, or will need modification as a result of this project. However, it can be reasonably inferred that some business practices such as notification protocols, as well as**

operational procedures are going to need some modification depending on the extent of the revisions proposed.

Response: Thank you for your comment. For clarification, the specific question related to NAESB business practices; and not such things as operational protocols/procedures.

5. Are you aware of any Canadian provincial or other regulatory requirements that may need to be considered during this project in order to develop a continent-wide approach to the standard(s)? If yes, please identify the jurisdiction and specific regulatory requirements.

Summary Responses:

In response to the comment received to coordinate Event Reporting obligations across agencies, the EOP PRT intends to address potential efficiencies to be gained between EOP-004, ERO Event Analysis Process, and the U.S. Department of Energy's (DOE) OE-417 report and recommends that the EOP SDT review for possible better alignment. Following extensive discussion regarding the relationship between EOP-004-2 reporting and the DOE OE-417 report, the EOP SDT has entered into an ongoing collaborative effort with the DOE to better align reporting requirements for U.S. entities.

Selected Answer: Yes

Answer Comment: An effort to coordinate Event Reporting obligations across agencies should be undertaken. Currently, entities are required to report to NERC and to the DOE, potentially in different time frames and with a different level of detail. If these could be made more consistent moving forward, it would reduce the administrative burdens associated with Event Reporting. This should be added to the scope of the SAR for consideration.

The Ontario Energy Board (Ontario energy regulator) has in place electricity reporting requirements for Ontario distribution providers. Loss of Supply is an electricity reporting requirement that is filed by Ontario distribution providers to the Ontario Energy Board (and not the Ontario IESO which is the RC, BA and TOP for the Ontario integrated grid).

Response: Thank you for your comments.

Event Reporting obligations: In response to the comment received to coordinate Event Reporting obligations across agencies, the EOP PRT intends to address potential efficiencies to be gained between EOP-004, ERO Event Analysis Process, and the U.S. Department of Energy's (DOE) OE-417 report and recommends that the EOP SDT review for possible better alignment. Following extensive discussion regarding the relationship between EOP-004-2 reporting and the DOE OE-417 report, the EOP SDT has entered into an ongoing collaborative effort with the DOE to better align reporting requirements for U.S. entities.

6. If you have any other comments on this SAR that you haven't already mentioned above, please provide them here.

Summary Responses:
Many commenters made comments and recommendations for revisions to EOP-004, Attachment 1: The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

The EOP SDT will continue to review the rationale box for dynamic simulations and any other comments that industry provides in the future.

In response to the comment received to coordinate Event Reporting obligations across agencies, the EOP PRT intends to address potential efficiencies to be gained between EOP-004, ERO Event Analysis Process, and the U.S. Department of Energy's (DOE) OE-417 report and recommends that the EOP SDT review for possible better alignment. Following extensive discussion regarding the relationship between EOP-004-2 reporting and the DOE OE-417 report, the EOP SDT has entered into an ongoing collaborative effort with the DOE to better align reporting requirements for U.S. entities.

Answer Comment:

The NSRF has reviewed the Project page containing the proposed redlined to last approved Standards and believes this is a good starting point for the SDT to complete this project.

Response: Thank you for your comment.

Thomas Foltz - AEP - 5 -

Answer Comment:

The purpose/goal for the SAR associated with Project 2015-08 (Emergency Operations) states in part "…implement the recommendations of the Project 2015-02 EOP PRT to revise EOP-004-2, EOP-005-2, EOP-006-2, and EOP-008-1". Page 4 of the Project 2015-02 EOP PRT report on PRC-005-2 has a list of items for consideration. Our comments below are in response to some of the recommendations made in this report.

Item b states that "the EOP PRT recommends the future SDT consider findings from any future-published reports as they relate to EOP-005-2." We also suggest reaching out to the North American Transmission Forum for input as appropriate.

Item h states that "the EOP PRT recommends the future SDT review Requirement R6 for clarification of the terms "steady state" and "dynamic simulations, including considering the addition of a Rationale Box." We believe there is need for practicality regarding the addition of a Rational Box to clarify dynamic simulations . System restoration is not defined as restoring power to each and every load. Rather, EOP-005-2 R1 uses practical language which states that the completion of system restoration is "…a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage…".

Response:

Thank you for your comments.
The EOP SDT will consider gathering inputs from the North American Transmission Forum (NATF), where appropriate, during development of revisions and retirements of these standards.

The EOP SDT will continue to review the rationale box for dynamic simulations and any other comments that industry provides in the future.

Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RFC

Group Member Name	Entity	Region	Segments
Doug Hils	Duke Energy	RFC	1
Lee Schuster	Duke Energy	FRCC	3
Dale Goodwine	Duke Energy	SERC	5
Greg Cecil	Duke Energy	RFC	6

Answer Comment: **While Duke Energy supports the project, we have concerns for the potential of "scope creep" due to the broad implications of the EOP-004 attachment on the requirements of reporting. There could be potential for the Drafting Team to become bogged down in trying to coordinate between Event Analysis reporting and OE-417 reporting. The Drafting Team should be given clear direction on what needs to be modified as part of the project.**

Response: Thank you for your comment.

Event Reporting obligations: In response to the comment received to coordinate Event Reporting obligations across agencies, the EOP PRT intends to address potential efficiencies to be gained between EOP-004, ERO Event Analysis Process, and the U.S. Department of Energy's (DOE) OE-417 report and recommends that the EOP SDT review for possible better alignment. Following extensive discussion regarding the relationship between EOP-004-2 reporting and the DOE OE-417 report, the EOP SDT has entered into an ongoing collaborative effort with the DOE to better align reporting requirements for U.S. entities.

Kathleen Goodman	ISO - New England	NPCC	2
Robert Pellegrini	The United Illuminating Company	NPCC	1

Answer Comment:

In the Detailed Description section of the SAR, the sentence “There are no market interface impacts resulting from the standard action on the implementation of the Project 2015-02, EOP PRT’s recommendations.” should be revised. There are no direct impacts to the market interface from “the standard action on the implementation of the Project 2015-02, EOP PRT’s recommendations.”

“The EOP Periodic Review Team (EOP PRT) is recommending that the future Standards Drafting Team (SDT) revise Requirement 1 part R1.1 to provide clarity, as the team determined it would be difficult to establish a timing requirement to restore primary control center functionality given the range of events that could render the primary control center inoperable”. Considering a system reliability need for generation, there are entities that have market interface equipment in their primary control center only. If the primary control center becomes inoperable it will have an effect on how fast an entity is able to get generation online in order for support. Please change the language to “direct impacts” instead.

It is recognized that continued operation of a market is not a reliability issue; in this situation, manual dispatch should continue to occur.

Suggest that any update to EOP-004-2 should include a re-synchronization of the EOP-004’s Attachment 1 (Reportable Events) with the list of Categories in the ERO’s

Event Analysis Process – Version 3 document. Any change to EOP-004 going forward should consider the latest version of the EAP.

Response: Thank you for your comments. The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments), as many received had merit and the EOP SDT intends to make a thorough review of these comments in consideration of developing the revisions to the standards.

Ellen Watkins	Sunflower Electric Power Corporation	SPP	1
Mark Ringhausen	Old Dominion Electric Cooperative	RFC	3,4

Answer Comment: We recommend that the drafting team consider whether there are opportunities to carve out lower risk entities from the applicability section in the standard. This would be consistent with the approaches of the Risk Based Registration initiative by right-sizing compliance responsibilities for low-risk entities.

Response:	Thank you for your comment. The EOP SDT will review comments/recommendations made to the EOP PRT during comment period of final recommendations (as well as these SAR comments).

Andrea Jessup - Bonneville Power Administration - 1,3,5,6 - WECC

Answer Comment:	N/A

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 – 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources
2. **Number:** EOP-005-3
3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Transmission Operators

   4.1.2. Generator Operators

   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan

   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan

5. **Effective Date:** See the Implementation Plan for EOP-005-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator at least once each 15 calendar months on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has at least once each 15 calendar months reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes is confusing. Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.

Therefore, the EOP SDT revisions now provide clarity. By revising this to read as "to reflect System modifications that would change the ability to implement its restoration plan," the intent was that the TOP update its restoration plan when major modifications need to be made that affect its ability to implement its restoration plan as describe in Requirement R1 Parts, not that the Transmission Operator has to make updates for minor revisions, such as element number changes or device changes that have no significance to the implementation of the plan.

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications.

4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response for each step of the restoration. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

R8. Each Transmission Operator shall include within its operations training program, System restoration training at least once each 15 calendar months for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 would allow operating personnel to gain experience and coordination needed through all of the stages of restoration, including coordination needed in the transfer of control back to the Balancing Authority.

8.1. System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition to Balancing Authority for Area Control Error and Automatic Generation Control.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Compliance Monitoring Period and Reset Time Frame:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in force since the last monitoring activity for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity, as well as one previous monitoring activity period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in force since its last monitoring activity for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in force since its last monitoring activity on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last monitoring activity records and all requested and submitted subsequent monitoring activity records.

1.3. Compliance Monitoring and Enforcement Processes

- Compliance Audits
- Self-Certifications
- Spot Checking
- Compliance Violation Investigations
- Self-Reporting
- Complaints

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

1.4. Additional Compliance Information

None.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three of the requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement it.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 – 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources
2. **Number:** EOP-005-~~2~~3
3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ~~assure~~ ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Transmission Operators
     - **4.1.2.** Generator Operators
     - **4.1.3.** Transmission Owners identified in the Transmission Operators restoration plan
     - **4.1.4.** Distribution Providers identified in the Transmission Operators restoration plan
5. **Effective Date:** See the Implementation Plan for EOP-005-3.~~Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall ~~have~~ develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shut down~~shutdown area to service.~~, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.~~ The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~ effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as ~~e-mails with~~dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~ effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator ~~annually~~ at least once each 15 calendar months on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~**3.1.** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. (Retirement approved by FERC effective January 21, 2014.)~~

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, ~~e-mails with~~dated electronic receipts, or registered mail receipts, that it has ~~annually~~ at least once each 15 calendar months reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement ~~R3~~R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes is confusing. Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.

Therefore, the EOP SDT revisions now provide clarity. By revising this to read as "to reflect System modifications that would change the ability to implement its restoration plan," the intent was that the TOP update its restoration plan when major modifications need to be made that affect its ability to implement its restoration plan as describe in Requirement R1 Parts, not that the Transmission Operator has to make updates for minor revisions, such as element number changes or device changes that have no significance to the implementation of the plan.

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan ~~within 90 calendar days after identifying any unplanned permanent~~to reflect System modifications~~,~~ that would change the ability ~~or prior~~ to ~~implementing~~ implement ~~a planned BES modification, that would change the implementation of~~ its restoration plan, as follows:~~.~~ *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. ~~Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same~~ No more than 90 calendar ~~day period~~days after the Transmission Operator identifies any unplanned System modifications; and~~.~~

~~4.1.~~4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision ~~histories, e-mails with~~histories, dated electronic receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its ~~implementation~~ effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, ~~available~~ in its primary and backup control rooms and available to its System Operators prior to its ~~implementation~~ effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response for each step of the restoration. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years~~ at a minimum~~. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. ~~Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each~~

~~affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration.~~ ~~*[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~**M7.**~~ ~~If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it implemented its restoration plan or restoration plan strategies in accordance with Requirement R7.~~

R8. ~~Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator.~~ ~~*[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~**M8.**~~M7. ~~If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved in such an event shall have evidence, such as voice recordings, e-mail, dated computer printouts, or operator logs, that it resynchronized shut down areas in accordance with Requirement R8.~~

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement ~~R9~~R7.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 would allow operating personnel to gain experience and coordination needed through all of the stages of restoration, including coordination needed in the transfer of control back to the Balancing Authority.

R8. Each Transmission Operator shall include within its operations training program, ~~annual~~ System restoration training at least once each 15 calendar months for its System Operators~~ to assure the proper execution of its restoration plan~~. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

- **8.1.** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan
- **8.2.** Restoration priorities
- **8.3.** Building of cranking paths
- **8.4.** Synchronizing (re-energized sections of the System)
- **~~8.4.~~8.5.** Transition to Balancing Authority for Area Control Error and Automatic Generation Control

~~M9.~~M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement ~~R10~~R8.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M10.~~M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement ~~R11~~R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M11.~~**M10.** Each Transmission Operator shall have evidence~~, such as training records,~~ that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement ~~R12~~R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M12.~~**M11.** Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement ~~R13~~R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M13.~~**M12.** Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement ~~R14~~R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M14.~~**M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within ~~twenty-four~~24 hours of such changes in accordance with Requirement ~~R15~~R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement ~~R9~~R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

~~M15.~~M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement ~~R16~~R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator.

15.2. The procedures documented in Requirement ~~R14~~R12.

~~M16.~~M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement ~~R17~~R15.

R16. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M17.~~M16. Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement ~~R18~~R16.

C. Compliance

1. Compliance Monitoring Process

Compliance Enforcement Authority: ~~Regional Entity.~~
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

Compliance Monitoring Period and Reset Time Frame: ~~Not applicable~~
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to

provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in force since the last ~~compliance audit~~monitoring activity for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~ effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's ~~annually~~ reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- ~~Implementation of its restoration plan or restoration plan strategies on any occasion for three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R7, Measure M7.~~
- ~~Resynchronization of shut down areas on any occasion over three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R8, Measure M8.~~
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement ~~R9~~R7, Measure ~~M9~~M7.
- ~~Actual training~~ Training program materials or descriptions for three calendar years for Requirement ~~R10~~R8, Measure ~~M10~~M8.

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last ~~compliance audit~~monitoring activity, as well as one previous ~~compliance audit~~monitoring activity period for Requirement ~~R12~~R10, Measure ~~M12~~M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution ~~provider~~ Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~Actual training~~ Training program materials or descriptions and ~~actual~~ training records for three calendar years for Requirement ~~R11~~R9, Measure ~~M11~~M9.

If a Transmission Operator, applicable Transmission ~~owner~~Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in force since its last ~~compliance audit~~monitoring activity for Requirement ~~R13~~R11, Measure ~~M13~~M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in force since its last ~~compliance audit~~monitoring activity on procedures to start each Blackstart Resource and for energizing a bus for Requirement ~~R14~~R12, Measure ~~M14~~M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement ~~R15~~R13, Measure ~~M15~~M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement ~~R16~~R14, Measure ~~M16~~M14.

- ~~Actual training~~ Training program materials and ~~actual~~ training records for three calendar years for Requirement ~~R17~~R15, Measure ~~M17~~M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last ~~compliance audit~~monitoring activity for Requirement ~~R18~~R16, Measure ~~M18~~M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last monitoring activity~~audit~~ records and all requested and submitted subsequent monitoring activity~~audit~~ records.

1.1. Compliance Monitoring and Enforcement Processes

- Compliance Audits
- Self-Certifications
- Spot Checking
- Compliance Violation Investigations
- Self-Reporting
- Complaints

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

1.4. Additional Compliance Information

None.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 – 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Reliability Coordinators
5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop, maintain, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with adjacent Transmission Operators in other Reliability Coordinator Areas, and with adjacent Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 15 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 15 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within 30 calendar days in accordance with Requirement R4.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall approve or disapprove, with stated reasons, the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, at least once each 15 calendar months, System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator

7.2. Re-establishing the Interconnection

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and R8 Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Compliance Monitoring Period and Reset Time Frame Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in force since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in force for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.
- The current, approved restoration plan and any restoration plans in force for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.

- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Processes Program

- Compliance Audits
- Self-Certifications
- Spot Checking
- Compliance Violation Investigations
- Self-Reporting
- Complaints

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

1.4. Additional Compliance Information: None

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late. 1	Nov. 1, 2006	Adopted by Board of Trustees	Revised
2		Revisions pursuant to Project 2006-03	Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-006-2 (approval effective 5/23/11)	
2	July 1, 2013	Updated VRFs and VSLs based on June 24, 2013 approval.	

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/15 – 08/19/15

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 - 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-~~2~~3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinators

5. **Proposed Effective Date:** ~~Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~ See the Implementation Plan for EOP-006-3.
6. Standard-Only Definition: None.

B. Requirements and Measures

R1. Each Reliability Coordinator shall ~~have~~ develop, maintain, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

~~**1.2.** Operating Processes for restoring the Interconnection.~~

~~**1.3.** Descriptions of the elements of coordination between individual Transmission Operator restoration plans.~~

~~**1.4.** Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators.~~

~~1.5.~~1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with adjacent Transmission Operators in other Reliability Coordinator Areas, and with ~~other~~ adjacent Reliability Coordinators.

~~1.6.~~1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

~~1.7.~~1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

~~1.8.~~1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

~~1.9.~~1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan ~~in accordance with Requirement R1~~and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as ~~e-mails with~~electronic receipts, posting to a secure web-site with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within ~~13~~ 15 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within ~~13~~ 15 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review ~~their~~ its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If ~~the~~ a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved ~~in~~ within 30 calendar days of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within 30 calendar days in accordance with Requirement R4.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall approve or disapprove, with stated reasons, the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence~~,~~ such as a dated review signature sheet or ~~emails~~electronic receipt~~,~~ that it has reviewed, approved or disapproved, and notified its Transmission Operator~~'~~s within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the ~~implementation~~ effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as ~~e-mail~~electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the ~~implementation~~ effective date in accordance with Requirement R6.

~~**R7.** Each Reliability Coordinator shall work with its affected Generator Operators, and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~**M7.** Each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it monitored and coordinated restoration progress in accordance with Requirement R7.~~

~~**R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~

~~M8.~~M7. ~~If there has been a resynchronizing of an islanded area, each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, or operator logs, that it coordinated or authorized resynchronizing in accordance with Requirement R8.~~

~~R9.~~R7. Each Reliability Coordinator shall include within its operations training program, at least once each 15 calendar months,~~annual~~ System restoration training for its System Operators~~ to assure the proper execution of its restoration plan~~. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~9.1.~~7.1. The coordination role of the Reliability Coordinator

~~9.2.~~7.2. Re-establishing the Interconnection

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement ~~R9~~R7.

~~R10.~~R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~10.1.~~8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable ~~and that~~ Transmission Operator~~s~~ and Generator Operator~~s~~ to participate per Requirement R8 and R8 Part 8.1. ~~included in the Reliability Coordinator's restoration plan were invited in accordance with Requirement R10.~~

C. Compliance

1. Compliance Monitoring Process

Compliance Enforcement Authority: ~~Regional Entity~~
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.1. Compliance Monitoring Period and Reset Time Frame Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in force since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in force for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.
- The current, approved restoration plan and any restoration plans in force for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- ~~If there has been a restoration event, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R7, Measure M7.~~

- ~~If there has been a resynchronization of an islanded area, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R8, Measure M8.~~
- Actual training program materials or descriptions for three calendar years for Requirements ~~R9~~R7, Measure ~~M9~~M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement ~~R10~~R8, Measure ~~M10~~M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.2. Compliance Monitoring and Enforcement Processes Program

- Compliance Audits
- Self-Certifications
- Spot Checking
- Compliance Violation Investigations
- Self-Reporting
- Complaints

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Additional Compliance Information: None

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Reliability Coordinator failed to include one ~~sub-~~ requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two ~~sub-~~ requirement~~s~~ parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the ~~sub-~~requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the ~~sub-~~ requirement~~s~~ parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within ~~13~~ 15 calendar months of the last review.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-008-2 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 – 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Loss of Control Center Functionality

2. **Number:** EOP-008-2

3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.

4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinator

   4.1.2. Transmission Operator

   4.1.3. Balancing Authority

5. **Effective Date:** See the Implementation Plan for EOP-008-2.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data communications.

1.2.3. Interpersonal Communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively. To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall review and approve its Operating Plan for backup functionality at least once every 15 calendar months. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved at least once every 15 calendar months and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct a test of its Operating Plan at least once every 15 calendar months and shall document the results from such a test. This test shall demonstrate: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in force Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in force copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.
- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Measurement M3.
- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively in accordance with Measurement M4.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in force Operating Plan for backup functionality, has been reviewed and approved at least once every 15 calendar months and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any

Operating Plan for backup functionality in force since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current and previous calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in force document and any such documents in force since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality but the plan was missing one of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality but the plan was missing two of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality but the plan was missing three of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality.
R4.	N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				center functionality respectively.
R5.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was reviewed and approved at least once every 15 calendar months. OR, The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.
R6.	N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R7.	The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but it did not document the results. OR, The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but the test was for less than two continuous hours but more than or equal to 1.5 continuous hours.	The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but the test was for less than 1.5 continuous hours but more than or equal to 1 continuous hour.	The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR, The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct a test of its Operating Plan for backup functionality at least once every 15 calendar months. OR, The responsible entity conducted a test of its Operating Plan for backup functionality at least once every 15 calendar months, but the test was for less than 0.5 continuous hours.
R8.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
	backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted more than six calendar months but less than or equal to seven calendar months after the date when the functionality was lost.	backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than seven calendar months but less than or equal to eight calendar months after the date when the functionality was lost.	backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-008-2 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	06/22/2016 – 08/08/2016
45-day formal comment period with additional ballot	08/30/2016 – 10/14/2016
10-day final ballot	11/01/2016 – 11/11/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-~~1~~2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinator

   4.1.2. Transmission Operator

   4.1.3. Balancing Authority

5. **Effective Date:** ~~The first day of the first calendar quarter twenty-four months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the standard shall become effective on the first day of the first calendar quarter twenty-four months after Board of Trustees adoption.~~ See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. ~~-~~This Operating Plan for backup functionality shall include~~ the following, at a minimum~~: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality~~ for the time it takes to restore the primary control center functionality~~.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include~~, at a minimum~~:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data communications.

1.2.3. ~~Voice~~ Interpersonal ~~communications~~Communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include ~~at a minimum~~:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in ~~force~~ effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in ~~force~~ effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less

- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively. ~~-~~To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall ~~annually~~ review and approve its Operating Plan for backup functionality at least once every 15 calendar months. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes ~~-~~to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator~~,~~ shall have evidence that its dated, current, and in ~~force~~ effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved ~~annually~~ at least once every 15 calendar months and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct ~~and document results of an annual~~ a test of its Operating Plan at least once every 15 calendar months and shall document the results from such a test. This test shall ~~that~~ demonstrate~~s~~: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its ~~annual~~ test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with

mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in force Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in force copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.
- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Measurement M3.
- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively in accordance with Measurement M4.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in force Operating Plan for backup functionality, has been reviewed and approved ~~annually~~ at least once every 15 calendar months and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in force since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current and previous calendar years ~~and one previous year~~, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in force document and any such documents in force since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality but the plan was missing one of the requirement's six ~~Parts~~ parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality but the plan was missing two of the requirement's six ~~Parts~~ parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality but the plan was missing three of the requirement's six ~~Parts~~ parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six ~~Parts~~ parts (Requirement R1, Parts 1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standards

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirements

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standards

None

Applicable Entities

- Transmission Operators
- Generator Operators
- Transmission Owners identified in the Transmission Operators Restoration Plan
- Distribution Providers identified in the Transmission Operators Restoration Plan
- Reliability Coordinators
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing the outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources
Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination
Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality
Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Unofficial Comment Form

2015-08 Emergency Operations

Do not use this form for submitting comments. Use the electronic form to submit comments on **Project 2015-08 Emergency Opreations; EOP-005-3 – System Restoration from Blackstart Resources, EOP-006-3 – System Restoration Coordination, and EOP-008-2 – Loss of Control Center Functionality**. The electronic form must be submitted by **8 p.m. Eastern, Friday, August 12, 2016.**

Additional information is available on the project page. If you have questions, contact Standards Developer Manager, Sean Cavote (via email), or at (404) 446-9697..

Background Information

Project 2015-08 Emergency Operations (EOP) implements the recommendations of the Project 2015-02 Periodic Review Team (PRT) that resulted from the PRT's review of a subset of EOP Standards. The PRT comprehensively reviewed EOP-004, EOP-005, EOP-006 and EOP-008 to evaluate, for example, whether the requirements are clear and unambiguous.

The Periodic Review also included background information, along with associated worksheets and reference documents, to guide a comprehensive review that resulted in a Standard Authorization Request (SAR) based on the following PRT's recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 –Revise the standard; and
- EOP-008-1 – Revise the standard.

The four NERC Reliability Standards in the Periodic Review project concerned methodologies for restoring, reporting, and communicating Emergencies. Implementation of revisions and retirements recommended by the EOP PRT clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards, while making the standards more Results-based.

Questions

1. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-005-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

2. Do you agree with the retirements proposed in EOP-005-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

3. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

4. Do you agree with the retirements proposed in EOP-006-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

5. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-008-1? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

6. Do you agree with the Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for the requirements in the proposed standards? If you do not agree, or if you agree but have comments or suggestions for the VRFs and VSLs your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

7. Please provide any additional comments for the EOP Standard Drafting Team to consider, if desired.

   Comments:

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “High” which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three of the requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement it.

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing “implementation date” to “effective date” requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "implementation" with "effective" and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan or confirmation of no change within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan or confirmation of no change more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan or confirmation of no change more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan or confirmation of no change more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator within 90 calendar days of an unplanned change. OR The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 30 calendar days prior to a planned change.	The Transmission Operator updated and submitted its restoration plan to the Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned change. OR The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 20 calendar days prior to a planned change.	The Transmission Operator updated and submitted its restoration plan to the Reliability Coordinator between 121 calendar days 150 calendar days of an unplanned change. OR The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 10 calendar days prior to a planned change.	The Transmission Operator has failed to update and submit its restoration plan to the Reliability Coordinator within 150 calendar days of an unplanned change. OR The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator prior to a planned BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "implementation" with "effective." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
NERC VRF Discussion	R14 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R14 requires each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. This is an unrevised requirement (EOP-005-2, Requirement R16) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
	R14 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R14			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.

VSL Justifications for EOP-005-3, R14	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R14 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R14	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
NERC VRF Discussion	R15 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R15 requires each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R17) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
	R15 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R15			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a two-calendar-year period.

VSL Justifications for EOP-005-3, R15	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R15 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R15	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
NERC VRF Discussion	R16 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R16 requires each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R18) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
	R16 contains only one objective, which is to have to have each Generator Operator participate in the Reliability Coordinator's restoration drills, exercises, or simulations. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R16			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R16 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R16	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “High” which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	High
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	Moderate	High	Severe
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “subrequirement” with “requirement part” and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts over 91 calendar days calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.

VSL Justifications for EOP-006-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Reliability Coordinator to review the restoration plans of Transmission operators within its reliability Coordinator Area. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a review the restoration plans of Transmission operators within its reliability Coordinator Area. This is an unrevised requirement (EOP-006-2, Requirement R5) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
	R5 contains only one objective which is to review the review the restoration plans of Transmission operators within its reliability Coordinator Area. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R5			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt, but did review and approve/disapprove the plans within 45 calendar days of receipt. OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons for disapproval within 30 calendar days of receipt, but did notify the Transmission Operator of its approval or	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt, but did review and approve/disapprove the plans within 60 calendar days of receipt. OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons for disapproval for more than 90 calendar days of receipt.

disapproval with reasons within 45 calendar days of receipt.	disapproval with reasons within 60 calendar days of receipt	notify the Transmission Operator of its approval or disapproval with reasons within 90 calendar days of receipt.	

VSL Justifications for EOP-006-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R6	
Proposed VRF	**Lower**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Reliability Coordinator to have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having copies of the latest restoration plans. This is a slightly revised requirement (EOP-006-2, Requirement R6) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have copies of the latest restoration plans would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective which is to have copies of the latest restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator did not have a copy of the latest approved restoration plan of all Transmission Operators in its Reliability Coordinator Area within its primary and backup control rooms prior to the implementation date.	The Reliability Coordinator did not have a copy of its latest restoration plan within its primary and backup control rooms prior to the implementation date.

VSL Justifications for EOP-006-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “implementation date” with “effective date.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the System restoration training at least once each 15 calendar months within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the System restoration training at least once each 15 calendar months within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “annual” with “at least once each 15 calendar months” and by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
	electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective which is to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R8			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator only held one restoration drill, exercise, or simulation during the calendar year.	The Reliability Coordinator did not request each applicable Transmission Operator or Generator Operator identified in its restoration plan to participate in a drill, exercise, or simulation within two calendar years.	N/A	The Reliability Coordinator did not hold a restoration drill, exercise, or simulation during the calendar year.

VSL Justifications for EOP-006-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-008-2 – Loss of Control Center Functionality**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to have an Operating Plan for backup facilities. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an Operating Plan for backup functionality that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance; only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** There is a similar requirement (Requirement R1) in EOP-005-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the creation of a plan: EOP-005-2 for a restoration plan and EOP-008-2 for a backup plan. The VRF assigned to EOP-008-1, Requirement R1 is lower than EOP-005-2, Requirement R1. The SDT recognizes that the VRF for EOP-008-1, Requirement R1 is lower than the VRF for the similar requirement in EOP-005-2 which is assigned a High VRF, however the SDT and stakeholders support the Medium VRF based on NERC's criteria for VRFs. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to create an Operating Plan for backup functionality. While the SDT agrees that, under some circumstances, it is possible that a failure to have an Operating Plan for backup functionality may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to have an Operating Plan for backup functionality would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to have an Operating Plan for backup functionality, it would still be expected to handle the situation if it occurred.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to have an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion Guideline 5- Treatment of	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to have an Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-008-2, R1			
Lower	**Moderate**	**High**	**Severe**
The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.

VRF Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1 with some minor edits. The VSL's for R1 were revised slightly by replacing "Part" with "part". The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that requires entities to shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. This is a requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the entity to have the Operating Plan for backup functionality at its primary and backup control centers. This is consistent with FERC guideline G1 regarding operating tools and backup facilities, however this requirement is administrative in nature.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 is unchanged from EOP-008-1, Requirement R2 and the VRF remains as Lower.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a copy of the Operating Plan for backup functionality at each of its control locations should not have an adverse impact on the bulk power system because operations at the different locations should be essentially identical. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R2			
Lower	**Moderate**	**High**	**Severe**
N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.

VSL Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R3	
Proposed VRF	**High**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R3 is unchanged from EOP-008-1, Requirement R3 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center) will impact the situational awareness of the Reliability Coordinator, and thus could affect the Reliability Coordinator's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Reliability Coordinator is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality.

VSL Justifications for EOP-008-2, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Reliability Coordinator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	The proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R4	
Proposed VRF	**High**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Balancing Authority or Transmission Operator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R4 is unchanged from EOP-008-1, Requirement R4 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have backup functionality (provided either through a facility or contracted services) will impact the situational awareness of the Transmission Operator or Balancing Authority, and thus could affect the Transmission Operator's or Balancing Authority's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Transmission Operator or Balancing Authority is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R4			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively.

VSL Justifications for EOP-008-2, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is binary and is at the Severe level. The requirement specifies that a Balancing Authority or Transmission Operator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Balancing Authority or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to update an Operating Plan for backup facilities annually. The assignment of the Medium VRF was made based on the premise that failure to annually update an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the annual review of the Operating Plan for back up functionality that is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has one part that is related to the main requirement regarding updating the Operating Plan and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R5 is unchanged from EOP-008-1, Requirement R5 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to update an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R5			
Lower	**Moderate**	**High**	**Severe**
The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved. OR The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.

VSL Justifications for EOP-008-2, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that, if violated, could prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the independence between the primary and back up control centers. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures. This is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R6 is unchanged from EOP-008-1, Requirement R46and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R6 addresses the situation applicable entities primary and backup capabilities can't depend on each other. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

VSL Justifications for EOP-008-2, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R6 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator, Balancing Authority, or Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. The Reliability Coordinator, Balancing Authority, or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP

VRF Justifications for EOP-008-2, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the entity that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months to provide a plan to its Regional Entity showing how it will re-establish primary or backup functionality. If an entity fails to provide a plan to the Regional Entity, this violation in and of itself is not likely to cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. This is consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R8 is unchanged from EOP-008-1, Requirement R8 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R8 mandates that entities provide a plan for re-establishing backup capabilities following a catastrophic failure. A failure to provide this plan does not affect the applicable entity's ability to effectively monitor and control the bulk power system. Violation of this requirement is unlikely, by itself, to lead to bulk power system instability, separation, or cascading failures, thus the assignment of a "Medium" VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R8

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The EOP SDT removed the language: "*…to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System*" in Requirement R1, as it is covered in Requirement R1, Part 1.8. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its	EOP-005-3, Requirement R3 R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator at least once each 15 calendar months on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	The language, "…at least once each 15 calendar months…" was added to provide clarity. Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.		
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R4 **R4.** Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. This language creates two ambiguities. First, the phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes; however, no time frame is specified for updating the restoration plan for a planned BES modification. One could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Second, the distinction between “System modifications” for unplanned changes and “BES modifications” for planned changes is confusing. Some “system modifications” can include “BES modifications”. Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan. For clarity, the EOP SDT revise the language in this Requirement to require a TOP to update its restoration plan to only reflect System modifications that affect its ability to implement its restoration plan as describe in Requirement R1 Parts. The intent is not to capture minor modifications that would have no impact on the implementation of a restoration, such as element number changes or device changes that have no significance to the implementation of the plan.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan	EOP-005-3, Requirement R4, Parts 4.1 and 4.2	The EOP SDT revisions harmonize the use of “System modification” and clarify the timing

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
to its Reliability Coordinator for approval within the same 90 calendar day period.	**4.1.** No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications. **4.2.** No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.	for unplanned and planned System modifications.
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once every five years" to eliminate any ambiguity in the prior language.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1.** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2.** Restoration priorities.	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training at least once each 15 calendar months for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities.	The language, "…at least once each 15 calendar months…" was added to provide clarity and to align training with the timing for updates to the restoration plan. The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value. Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
10.3. Building of cranking paths. **10.4.** Synchronizing (re-energized sections of the System).	**8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition to Balancing Authority for Area Control Error and Automatic Generation Control.	
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Federal Energy Regulatory Commission (Commission) Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop*

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		a guideline to aid entities in their compliance obligations.” The Project 2015-02 Emergency Operations Periodic Review Team, as well as the Project 2015-08 Emergency Operations Standards Drafting Team determined (through conducted outreach and comment questions/responses during postings of periodic review templates and the SAR) that industry does not find ambiguity with the term “unique tasks.” The industry understands “unique tasks” to be those tasks that are defined by the TOP, TO, and the DP.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8 , and 1.9 **R1.** Each Reliability Coordinator shall have a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shut down area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]* **1.1** A description of the high level strategy to be employed during	EOP-006-3, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 **R1.** Each Reliability Coordinator shall develop, maintain, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon*	Due to the addition of the language "implement," Real-time Operations was added to the Time Horizon. The language "adjacent" was added to distinguish between direct connection v. multiple neighbors (beyond direct connection). Requirement R1, Parts 1.2, 1.3, and 1.4 should be retired under Paragraph 81, Criterion B7, as redundant with Requirement R1, Part 1.5.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
restoration events for restoring the Interconnection including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan. **1.2** Operating Processes for restoring the Interconnection. **1.3** Descriptions of the elements of coordination between individual Transmission Operator restoration plans. **1.4** Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators. **1.5** Criteria and conditions for reestablishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.	*= Operations Planning, Real-time Operations]* **1.1** A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan. **1.2** Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with adjacent Transmission Operators in other Reliability Coordinator Areas, and with adjacent Reliability Coordinators. **1.3** Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event. **1.4** Criteria for sharing information regarding restoration with neighboring Reliability	

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
1.6 Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event. **1.7** Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area. **1.8** Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area. **1.9** Criteria for transferring operations and authority back to the Balancing Authority.	Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area. **1.5** Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area. **1.6** Criteria for transferring operations and authority back to the Balancing Authority.	

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R4, and Requirement R4, Part 4.1 **R4.** Each Reliability Coordinator shall review their neighboring Reliability Coordinator's restoration plans. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** If the Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved in 30 calendar days.	EOP-006-3, Requirement R4, and Requirement R4, Part 4.1 **R4.** Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of written notification.	Language for timeframe and written notification was added for clarity.
EOP-006-2, Requirement R6 **R6.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the	EOP-006-3, Requirement R6 **R7.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the	"Implementation date" was revised to "effective date" for clarity.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	
EOP-006-2, Requirement R7 **R7.** Each Reliability Coordinator shall work with its affected Generator Operators~~,~~ and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R7 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R7 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop, maintain, and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R7, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R8 **R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop, maintain, and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R9 **R9.** Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-006-3, Requirement R7 **R7.** Each Reliability Coordinator shall include within its operations training program, at least once each 15 calendar months, System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Language for timeframe was added for clarity. "To assure the proper execution of its restoration plan" was removed because it added no additional value; the entire standard is based upon using your restoration plan when needed.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R5 **R5.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-008-2, Requirement R5 **R5.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall review and approve its Operating Plan for backup functionality at least once every 15 calendar months. *[Violation Risk Factor =*	The language, "…at least once each 15 calendar months…" was added to provide clarity.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
	Medium] [Time Horizon = Operations Planning]	
EOP-008-1, Requirement R7 **R7.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual test of its Operating Plan that demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-008-1, Requirement R7 **R7.** Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct a test of its Operating Plan at least once every 15 calendar months and shall document the results from such a test. This test shall demonstrate: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	The language, "…at least once each 15 calendar months…" was added to provide clarity.

Reminder

Project 2015-08 Emergency Operations
EOP-005-3, EOP-006-3 and EOP-008-2

Initial Ballots and Non-binding Polls Open through August 15, 2016

Now Available

Initial ballots and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels are open through **8 p.m. Eastern, Monday, August 15, 2016** for the following standards:

- **EOP-005-3 System Restoration from Blackstart Resource**
- **EOP-006-3 System Restoration Coordination**
- **EOP-008-2 Loss of Control Center Functionality**

Balloting

Members of the ballot pools associated with this project may log in and submit their vote for the standards and non-binding polls by clicking here. If you experience any difficulties in using the electronic form, contact Nasheema Santos.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps

The ballot results will be announced and posted on the project page. The drafting team will consider all comments received during the formal comment period and determine the next steps of the project.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standards Announcement

Project 2015-08 Emergency Operations
EOP-005-3, EOP-006-3, EOP-008-2

Formal Comment Period Open through August 15, 2016
Ballot Pools Forming through July 28, 2016

Now Available

A 45-day formal comment period is open through **8 p.m. Eastern, Monday, August 15, 2016** for the following standards:

- **EOP-005-3 System Restoration from Blackstart Resource**
- **EOP-006-3 System Restoration Coordination**
- **EOP-008-2 Loss of Control Center Functionality**

Commenting
Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

Join the Ballot Pools
Ballot pools are being formed through **8 p.m. Eastern, Thursday, July 28, 2016.** Registered Ballot Body members may join the ballot pools here.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps
Initial ballots for the standards and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels will be conducted August 4 - 15, 2016.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Development, Sean Cavote (via email) or at (404) 446-9697.

There were 64 sets of responses, including comments from approximately 58 different people from approximately 54 companies representing 9 of the Industry Segments as shown in the table on the following pages.

Questions

1. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-005-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

2. Do you agree with the retirements proposed in EOP-005-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

3. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

4. Do you agree with the retirements proposed in EOP-006-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

5. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-008-1? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

6. Do you agree with the Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for the requirements in the proposed standards? If you do not agree, or if you agree but have comments or suggestions for the VRFs and VSLs your recommendation and explanation.

7. Please provide any additional comments for the EOP Standard Drafting Team to consider, if desired.

While AEP supports the overall direction and efforts of this project team, we have chosen to vote negative on EOP-005-2. Our negative vote is driven by our concerns regarding the obligation to reissue the entire restoration plan 30 days prior to the Transmission Operator's implementation of planned System modifications, even for minor revisions.

The proposed thirty-day window in R4 would be a difficult time frame to meet in many instances. Many jobs that are not directly created for the restoration plan, yet affect its restoration sequence, are often scheduled. However, these jobs are often rescheduled due to weather, system conditions or conflicting scheduled outages. Due to the possibility of multiple system improvements that may occur, which are either completed ahead of schedule or delayed during those 30 calendar days, we believe an accurate plan could not be maintained for the system operators. One option would be an addendum sheet that would contain the incremental changes and their implementation date, which could then be followed by a quarterly update to the restoration plan. This addendum sheet would be provided to all of the RTO and all the affected parties.

As the restoration plan is a voluminous document, AEP proposes to communicate with the RC only on the incremental changes (which could be only few sentences) rather than reissuing the entire, voluminous document.

AEP suggests modifying the proposed revision of R4 as suggested above, as well as completely eliminating the proposed R4.2.

The definition of a Balancing Authority is "The responsible entity that integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real time." During restoration, the local TO or TOP isolated island operations are not synchronized to the interconnection so they cannot support the interconnection frequency. Therefore, by definition, EOP-005-3 Parts 1.9 and 8.5 which refer to transference of Balancing Authority should be removed. Balancing Authority functions will always reside with the designated Balancing Authority, even when operating as an isolated island. EOP-005-3 Parts 1.9 and 8.5 which refer to transference of Balancing Authority authority should be removed. They are not universally applicable, and where applicable a variance should be made. Balancing Authority functions will always reside with the designated Balancing Authority.

Comment

In the first sentence of Requirement R1 the proposed revision is to have the Requirement read that “Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator.” However, to be consistent with the language that is already being proposed for EOP-006-3 Requirement R1 the revision should read that each Transmission Operator “shall develop, maintain and implement” a restoration plan approved by its Reliability Coordinator. The wording proposed for EOP-006-3 should be used in EOP-005-3.

There is no reference to the formation of a BES island in EOP-005-3 Requirement R1 as there is in EOP-006-3 Requirement R1 (“or an energized island has been formed on the BES”). The Drafting Team should consider its inclusion in EOP-005-3 or its removal from EOP-006-3.

Requirement R4 should be clarified to limit the type of System modifications that would require an update to the restoration plan solely to permanent System modifications that would change the Transmission Operator’s ability to implement its restoration plan.System modifications should be clearly defined. It should be limited to transmission and generation components. A definition of System modification should be added to the NERC Glossary.

EOP-005-3 Parts 1.9 and 8.5 which refer to transferring of Balancing Authority authority should be removed. They are not universally applicable, and where applicable a variance should be made. Balancing Authority functions will always reside with the designated Balancing Authority.

Xcel Energy feels that the verbiage change from "Annual" to "at least every 15 months" in R3 and R8 is unnecessary, does not improve the standard, and is not consistent with numerous other standards that currently contain "Annual" requirements.

The language to "implement" the system restoration plan has the potential to create confusion within the industry. Implementation of the a restoration plan would require a system outage to be compliant. Language should be adjusted to represent the intent of the SDT.

Emily Rousseau - MRO - 1,2,3,4,5,6 - MRO, Group Name MRO-NERC Standards Review Forum (NSRF)	
Answer	No
Document Name	
Comment	

Although generally supportive of the revisions made by the drafting team, the NSRF has concerns with the following requirements.

1.) **R1** - In consideration that developing and implementing a restoration plan represents two separate actions required by TOPs, we recommend the following change to R1 in order to clarify when the restoration plan is intended to be implemented.

"Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas…"

2. R8.5 needs to reworded. We understand the intent, which we agree with. Recommend from "Transition to Balancing Authority for Area Control Error and Automatic Generation Control" to "Transition back to Balancing Authority control for Area Control Error and Automatic Generation Control". This clearly states that a hand-off of responsibilities is warrented at the end of system restoration.

3.) We recommend retaining the current R1 language "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." We are concerned that deletion of the qualifying clause at the end of R1 will require an expansion of scope for all current Blackstart restoration plans.

Without the qualifying language, Transmission Operators are required to have a restoration plan for restoring the TOP's System, with Blackstart Resources required to restore the "shutdown area to service" without any qualification or limit to the "shutdown area" short of the TOP's entire BES "System."

In the worst case scenario when there is a total black out of the system the plan would have to be quite large. It would be difficult to cover all the variables and conditions that could likely be encountered. Maintenance of such a plan would be very difficult leading to compliance issues.

Possible alternative language: "The restoration plan shall allow for restoring the Transmission Operator's System following a disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to start generation for the restoration of the shutdown area to service."

4.) The replacement of “annual” with “at least once each 15 calendar months” in R3 & R8 introduces additional unnecessary administrative tracking requirements, restricting entities to submission or training, respectively, within a moving 4-month compliance window vs. the current flexibility of the entire calendar year. Demonstrating compliance would now require comparison with the previous completion date vs. showing annual accomplishment.

What is the justification for this complication? Preventing a possible interval of up to 23 months? What is the reliability risk of a 23-month interval vs. a 15-month interval? Such an occurrence would be self-correcting under the current annual requirement. If R3/8 were accomplished in Jan. 2018, and not again until Dec. 2019, the next occurrence would be required in Dec. 2020, no more than 12 months later, and earlier than the proposed new requirement of 15 months.

5. R4 – With Transmission Operators required to submit their updated restoration plan to the RC “no less than 30 calendar days prior to…planned System modifications”, we are concerned the new timeframe may require TOPs to maintain two versions of their restoration plan in the control room due to confusion in terms of which restoration plan is considered valid while awaiting energization of a planned System modification.

As an example, a System modification impacting the restoration plan is scheduled to occur on September 1st so a TOP submits an updated plan to their RC on July 29th. The RC reviews and approves the plan on August 19th. To comply with EOP-005 R2 and R5 which require the TOP to provide the plan to System Operators and identified entities “prior to the effective date”, the TOP distributes the newly approved plan on August 24th. Since the System modification is still over a week away from energization, which RC-approved restoration plan is considered valid?

6. R4 – Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications, …..

By inserting the previously included word “permanent” it is clear that the intent is for those permanent modifications that affect the restoration plan and not those temporary modifications that may come about due to temporary reconfiguration of the system such as may occur due to storm damage, etc.

R1: Recommend retaining “to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator’s System.” Helps to provide guidance for an end point to the plan.

R8. Deletion of Requirement 8 is not advised. The Reliability Coordinator must play a defined role when establishing ties. It’s the RC’s role to ensure each Transmission Operator’s System is ready for the connection.

R8.5 The Restoration Plan is not intended to go to the extent of having ACE nor AGC available. If this is required significant addition to the Restoration Plans is foreseen as not enough of the system is restored to the point where ACE and AGC will be viable. The generating units will not be in a range to be placed on AGC in the plans as written today. If training for ACE and AGC is required, then wouldn’t the restoration plans need to support same? If 8.5 is retained, recommend this requirement be trained in conjunction with a Balancing Authority Operator. This may require expanding applicability of

EOP-005 to BA?.

ERCOT joins with the comments of the IRC Standards Review Committee (SRC). ERCOT also offers this additional point: The SDT should add a conditional phrase to the language of Requirement R1 to clarify that the restoration plan will only be implemented during an actual blackstart event. Otherwise, the requirement as written indicates that the entity must have implemented a restoration plan absent an event. As such, we recommend language that clarifies this: “Each Transmission Operator shall develop, maintain, and, in the event of a Disturbance, implement a restoration plan…”

Comment	
Austin Energy (AE) requests the SDT provide additional clarity regarding the TOP’s scope of responsibility similar to EOP-006 R1. AE offers this suggestion: R1. Each Transmission Operator shall develop a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator’s System following a Disturbance in which one or more areas of the BES shuts down and the use fo Blackstart Resources is required to restore the affected area to service. Each Tranmission Operator shall implement its restoration plan when necessary to restore the portion of the BES under its control and interconnect with neighboring areas. If the Transmission Operator cannot execute the restoration plan as expected, it shall use its restoration strategies to facilitate restoration. AE requests the SDT clarify R4.2. As written currently, it may imply restoration plans must be updated prior to any outage including short-term maintenance outages. AE does not believe such an action is necessary. Other Transmission Operators and the Reliability Coordinator are notified of temporary outages through local outage-related requirements. Additionally, AE does not believe the requirement clearly defines when the plan must be updated.	

AE makes the following suggestions:

R4. Each Transmission Operator shall update, and submit to its Reliability Coordinator for Approval, its restoration plan to reflect System modifications which change its ability to implement its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modification; and

4.2. No less than 30 calendar days prior to the date on which the Transmission Operator energizes a permanent System configuration change.

Most training is conducted on a yearly basis, with certain training required every year. For example, TVA has three cycle training classes lasting seven weeks each cycle in order to get all of the operators through the training. At times it makes more sense to conduct specific required training in one cycle versus another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if the System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, "at least once each 15 calendar months" it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training was required "once per calendar year." That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

The revision to EOP-005 R8 adds the requirement R8.5 - "Transition to Balancing Authority for Area Control Error and Automatic Generation Control." TVA agrees with the addition of this requirement and thinks required training in this area would be good for the industry. One possible concern with the proposed language has to do with when the TOP returns control of the BA Area back to the BA, the BA isn't necessarily going back to Automatic

Generation Control right away. Our suggestion would be to reword R8.5 to say, “Transition to Balancing Authority ensuring adequate Area Control Error (ACE) configuration and generation control.”

Comment

Comment on R3 & R3.1: ATC recognizes that FERC previously approved the retirement of R3.1. However, we recommend that the R3 language be changed to not require annual submission of the entire plan if no material have occurred. Requiring submission and RC response for these instances provides, in ATC’s opinion, little value to reliability. The standard should permit notification to the RC that the plan has not changed from the previous submission. As such, we propose that R3 be modified to read:

Each Transmission Operator shall review its restoration plan *for any substantive change,* and submit it to its Reliability Coordinator at least once each 15 calendar months on a mutually agreed, predetermined schedule *or notify its Reliability Coordinator that no sustative change occurred requiring approval of a new version of the TOP restoration plan*.

Comment on R4: As the SDT notes, TOPs should not have to submit a revised restoration plan to the RC to account for temporary changes to the system. However, the proposed edits to the standard language do not provide this clarity because R4.2 pulls in all planned modifications to the system, such as temporary configurations for construction or maintenance, that are not in view under the current EOP-005-2 R4 language. The new language pulls in these types of situations since the actual implementation of the plan in an event may be affect by construction activities (e.g., lines temporarily tied together) such that a different line gets used for a restoration path covered by R1.5 (i.e. very specific switching paths have to be identified in the plan). Today’s R4 is better suited to the realities of temporary construction activities where the plan does not need to be submitted to the RC for review because the plan already conceives of the potential for paths to not be available (see EOP-005-2 R7) such that the TOP would then use its restoration strategies to accomplish the restoration task. The SDT changes do not improve reliability. Rather, they add administrative burden without reliability benefit.

R4 recommendation: language should read “reflect *permanent* System modifications” to avoid pulling in temporary configurations needed to support maintenance or construction.

R4.1 recommendation: language should read “unplanned *permanent* System modifications” to avoid pulling in temporary configurations needed to support maintenance or construction.

R4.2 recommendation: language should read “planned *permanent* System modifications” to avoid pulling in temporary configurations needed to support maintenance or construction.

Comment on new R8.5: The proposed language for R8.5 is too specific for the standard. ATC recommends that R8.5 just read, “Transition to Balancing Authority”.

Comment

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements. R1 should require a plan and define what needs to be in the plan. The proposed R1 should be modified to replace “develop and implement” with “have”. R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan.

In R4 we request the re-insertion of the word ‘permanent’ into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon ‘permanent’ System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for ‘permanent’ system modifications. As stated, they require updates to be made for ‘any’ system modification no matter how small or impactful.

R6 should be modified to clarify that the dynamic simulation or testing requirement only applies to the initial Cranking Path from the Blackstart Resource to the next generator including whatever stabilizing loads are required. As written it could be interpreted that dynamic simulation/testing is required to verify that the loads (R6.2) and generation (R6.3) have the capability to control voltages and frequency within acceptable operating limits to accomplish the intended function of the plan. The intended function of the plan is outlined in R1 and includes transferring authority back to the BA. It would be unduly burdensome to perform dynamic simulations for each step in the process to get to this point. Also, it would be impossible to perform an actual test of the plan to this point since it would require creating a blackout to accomplish.

In the data retention section for R1, it is not clear what the change to ‘monitoring activity’ means. It previously clearly stated data must be kept since the last ‘compliance audit’. ‘Monitoring activity’ is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

R1 should require a plan and define what needs to be in the plan. The proposed R1 should be modified to replace “develop and implement” with “have”. R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan.

In R4 we request the re-insertion of the word ‘permanent’ into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon ‘permanent’ System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for ‘permanent’ system modifications. As stated, they require updates to be made for ‘any’ system modification no matter how small or impactful.

R6 should be modified to clarify that the dynamic simulation or testing requirement only applies to the initial Cranking Path from the Blackstart Resource to the next generator including whatever stabilizing loads are required. As written it could be interpreted that dynamic simulation/testing is required to verify that the loads (R6.2) and generation (R6.3) have the capability to control voltages and frequency within acceptable operating limits to accomplish the intended function of the plan. The intended function of the plan is outlined in R1 and includes transferring authority back to the BA. It would be unduly burdensome to perform dynamic simulations for each step in the process to get to this point. Also, it would be impossible to perform an actual test of the plan to this point since it would require creating a blackout to accomplish.

In the data retention section for R1, it is not clear what the change to ‘monitoring activity’ means. It previously clearly stated data must be kept since the last ‘compliance audit’. ‘Monitoring activity’ is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Most training is conducted on a yearly basis, with certain training required every year. Our training consists of five cycles of training classes. Each cycle is six weeks in order to get all of the operators through each training cycle. At times we conduct specific required training in one cycle verses another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if they System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, “at least once each 15 calendar months” it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training were required annually. That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

The revision to EOP-005 R8 adds the requirement R8.5 “Transition to Balancing Authority for Area Control Error and Automatic Generation Control.” We agree with the addition of this requirement and think required training in this area would be good for the industry. One possible concern with the proposed language has to do with when the TOP returns control of the BA Area back to the BA, the BA isn’t necessarily going back to Automatic Generation Control right away. Our suggestion would be to reword R8.5 to say, “Transition to Balancing Authority ensuring adequate Area Control Error (ACE) configuration and generation control”

Under Project 2015-08, EOP-005-3 states that organizations will be required to obtain electronic confirmation/verification evidence (receipts) from entities when plans have been transmitted. This will be a challenge considering industry organizations have no control over the entities process once the plans have been received. LCRA is under the position to submit a negative vote with the proposed written revisions until further thought is given and changes are made to remove this requirement.

In the first sentence of Requirement R1 the proposed revision is to have the Requirement read that "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator." However, to be consistent with the language that is already being proposed for EOP-006-3 Requirement 1 the revision should read that each Transmission Operator "shall develop, maintain and implement" a restoration plan approved by its Reliability Coordinator. The wording proposed for EOP-006-3 should be used in EOP-005-3. Requirement R4 should be clarified to limit the type of System modifications that would require an update to the restoration plan solely to permanent System modifications that would change the Transmission Operator's ability to implement its restoration plan. A definition of System modification should be added to the NERC Glossary. Or Instead of the expression "System Modifications" in R4, "BES modifications would be a better choice. The NERC Glossary definition of BES includes "Blackstart Resource" in its inclusion list. I3 – Blackstart Resources identified in the Transmission Operator's restoration plan.

Comment	

CenterPoint Energy appreciates the SDT’s time and effort towards the improvement of the System Restoration from Blackstart Resources Standard and is generally amenable to the proposed revisions. CenterPoint Energy would like the SDT to consider the following changes to EOP-005-3. In R1, for consistency between the proposed EOP-005-3 and EOP-006-3 standards, CenterPoint Energy suggests the SDT align the proposed language in both R1s to be the same and use either, ”develop and implement”, or “develop, maintain, and implement”. Also, we are concerned that removal of the validation clause, “to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage” expands the scope of a restoration plan. We suggest the addition of language regarding the plan’s intended function of restoring the interconnecton and recommend the following: “The restoration plan shall accomplish its intended function allowing for restoration of the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service.” Without such additional language, a TOP could be expected to include in its retoration plan, steps to restore every Facility in its entire system. Furthermore, we support the retirement of R7, but believe that the language, “If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration” should be retained in the proposed R1. This language provides a TOP the flexibility to make adjustments to its restoration efforts based on Real-time System conditions and Facility availability regardless of contingency. Considering all of CenterPoint Energy’s comments R1 would state: “Each Transmission Operator shall develop, maintain, and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall accomplish its intended function allowing for restoration of the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of

Blackstart Resources is required to restore the shutdown area to service. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. The restoration plan shall include:" In R4.2, to further clarify and to better align with the SDT's proposed changes in R2, we suggest the SDT replace, "No less than" with "At least" and also replace "implementation of" with "effective date of ". The requirement would then read, "R4.2. At least 30 calendar days prior to the Transmission Operator's effective date of the planned System modifications." CenterPoint Energy also believes that the proposed EOP-005-3 R8 (currently enforceable EOP-005-2 R10) along with its sub-requirements 8.1, 8.2, 8.3, 8.4, and 8.5 should be retired as they are inherent to the systematic approach to training processes. It is not that the requirements are duplicative, but rather that they are already incorporated in the training and periodicity of training that would be identified in a TOP's PER-005-2 analysis for company-specific reliability-related tasks. The criteria required to be included in the restoration plan outlined in R1.1 thru R1.9 further ensures that specific training content would be provided on system restoration and maps to the content being required in R8.1. R8.2, R8.3, R8.4, and R8.5. Retirement of R8 and its sub-requirements does not eliminate reliability-related task training on System Restoration from Black Start Resources. This rationale was applied in the recent revisions to PRC-001-1.2 (Project 2007-06.2) and industry approval of PER-006-1 to which training related requirements for the TOP were mapped out and retired. CenterPoint Energy urges the SDT to consider soliciting assistance and guidance from the PER-005 SDT and members from the training sector in the industry to assist in this matter.

(1) R1 now includes "develop and implement" a restoration plan for the TOP. Measure M1 now calls out for evidence of implementation, including operator logs or voice recordings. This practice of including two actions, having a plan and implementing that plan, in a single requirement allows for additional scrutiny from an auditor. Our biggest concern is that R1 has nine sub-parts, which can now be reviewed under two filters – is it documented and does the entity have proof that they implemented it. We ask the SDT to consider modifying the requirement so evidence of implementation is separate from each of the nine sub-parts.

(2) We question the need for a change in R2 and R5 from "implementation date" to "effective date." They appear synonymous.

(3) We agree with the modification to R3 and R8 to remove the word "annually" and replace it with "at least once every 15 calendar months," as this aligns with several other NERC standards. We also agree with the removal of sub-part 3.1, as this was administrative in nature.

(4) Requirement R4 now requires the TOP to submit its restoration plan to the RC no more than 90 calendar days after identification of any unplanned system modification and no less than 30 calendar days prior to the TOP's implementation of planned system modifications. We question why the planned modifications were added to the requirement, as the TOP will be providing planned outages and other information to the RC already.

(5) Requirement R8 (formerly R10), added sub-part 8.5, which now includes the TOP to have training every 15 calendar months on the "transition to BA for ACE and AGC." We recommend modifying the phrase to "coordinate with the BA for restoration activities." The word "transition" could be misinterpreted that the TOP completely transfers their role to the BA in system restoration.

(6) Measure M10 (formerly M12), removed training records as proof of participation in restoration drills. Why was that type of evidence removed? It seems like the most straight-forward way to prove compliance with the requirement. Further, training records are still listed in M16 for GOP participation in restoration drills. This should be consistent throughout the standard.

R1: For the purposes of managing internal controls, and clear internal controls ownership and tracking, consider keeping this requirement as Operations Planning horizon only and then do not remove R7 and R8. Plan development and administration is an Operations Planning function. Real Time is not responsible for development and maintenance of the plan.

R4.2. Is revised to state:

4.1.4.2. No less than 30 calendar days prior to the Transmission Operator’s implementation of planned System modifications.

This revision takes away flexibility. Suggest that "No less than 30 calendar days prior to" be changed to "Up to 90 calendar days after implementation of planned System modifications". Planned implementation dates are often moving targets and can move earlier or later, due to construction and crew scheduling needs, and well outside of the control of the plan administrators. If changes to the restoration plan were still in progress at the time of an event, System Operators would use restoration strategies in order to determine the best course of action.

Requirement R4: The proposed changes to R4 cause concern for FirstEnergy. The existing FERC approved requirement R4 requires notification by a Transmission Operator (TOP) to its Reliability Coordinator (RC) for a “permanent” system modification (planned or unplanned) “that would change the implementation of its restoration plan.” The proposed revisions by the drafting team, while well intended, shifts the emphasis to changes that affect “ability to implement” the TOP restoration plan regardless of whether or not the system modification (planned or unplanned) is temporary or permanent. This change would cause numerous re-writes of restoration plans by TOPs and approval reviews by RCs resulting from planned maintenance outages of BES transmission facilities (lines, transformers, generators, etc.), many of which are short duration outages. FirstEnergy believes it is important to retain the “permanent” modification aspect of the existing FERC approved requirement. The proposed change results in an overly burdensome requirement without significant improvement to BES reliability.

FirstEnergy does support the intended 90-day notification for unplanned changes and the minimum 30-day lead-time from the effective date of planned changes.

FirstEnergy proposes the requirement be written as follows:

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications that would change the implementation of its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications.

4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

A red-line version of our proposed changes is provide in the attached version of FE comments.

We suggest the following edit to R1 for clarity:

"R1 Each Transmission Operator shall **develop** a restoration plan approved by its Reliability Coordinator. The **implemented** restoration plan shall allow…"

We believe this better aligns with the intent and doesn't create confusion that potentially an entity must have experienced a blackout in order to fully comply (a need to 'implement') with R1.

In R4 we request the re-insertion of the word 'permanent' into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon ‘permanent’ System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for ‘permanent’ system modifications. As stated, they require updates to be made for ‘any’ system modification no matter how small or impactful.

We have a concern that R6 in combination with the changes to R1 may seem to create a conflict or confusion. The changes to R1 seem to indicate the plan now covers restoration all the way up until balancing is turned over to the BA. That would seem to describe the ‘intended function’ of the plan as stated in R6. The sub-requirements in R6 seem to indicate simulation and analysis only needs to be done on energizing the Blackstart resource and connect initial loads. Perhaps R1.8 could be rephrased to better clarify the ‘intended function’ of the plan in order to better align with R6. We do not believe the intent is for dynamic simulation to be done for the entire restoration scenario all the way up to handoff to the BA in R1.9. Perhaps R6 could be rephrased such that it states:

R6 Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes **initial restoration**.

In the data retention section for R1, it is not clear what the change to ‘monitoring activity’ means. It previously clearly stated data must be kept since the last ‘compliance audit’. ‘Monitoring activity’ is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Comment

Requirement R1: In the first sentence of Requirement R1, the proposed revision is to change the requirement that each Transmission Operator “shall have” a restoration plan approved by its Reliability Coordinator to state that each Transmission Operator “shall develop and implement” a restoration plan approved by its Reliability Coordinator. However, in order to be consistent with the language that is already been used in other requirements (see, e.g., the proposed revision in EOP-006-3, Requirement R1), the revision should state that each Transmission Operator “shall develop, maintain and implement” a restoration plan approved by its Reliability Coordinator. Accordingly, the ISO/RTO Council Standards Review Committee (SRC) suggests that the word “maintain” be added to the proposed revision. [CAISO does not support this paragraph.]

Requirement R4: The proposed revision in Requirement R4 requires the Transmission Operator to update and submit to its Reliability Coordinator for approval its restoration plan to reflect System modifications that would change the ability to implement its restoration plan. The requirement, however, should be clarified to indicate that the type of System monifications that would require an update to the restoration plan are only permanent System modifications that would change the Transmission Operator’s ability to implement its restoration plan. Limiting the requirement to reflect permanent modifications is consistent with the Rationale for Requirement R4, which states that the intent of the revisions is to require the Transmission Operator to update its restoration plan when major modifications need to be made, and not to require the Transmission Operator to make updates for minor revisions. Without the qualifying word “permanent,” the proposed revision could be read as requiring updates to the restoration plan for all System modifications that would change the Transmission Operator’s ability to implement the restoration plan, even if those System modifications are not permanent (such as for planned or unplanned outages). In the event that temporary System modifications or other unforeseen system conditions prevent the Transmission Operator from implementing the restoration plan as expected, system restoration would be facilitated by implementing the restoration strategies that Requirement R1 requires to be included in the restoration plan. System modifications that would change the Transmission Operator’s ability to implement the restoration plan that are not permanent are not “major.” Requiring that the restoration plan be updated for such non-

permanent System modifications would translate into multiple, unnecessary updates to the restoration plan. For this reason, to make the requirement even clearer, the SRC suggests that the word "permanent" (which is included in the currently enforceable version of this Requirement) be added to the proposed revision. Note that, for consistency, the word "permanent" should also be added in all the Violation Severity Levels for Requirement R4. In addition, we suggest R 4.2. which currently states: "4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications" should be modified to state "4.2. Up to 90 calendar days after implementation of planned System modifications." Planned implementation dates are often moving targets due to construction and crew scheduling needs. It is well outside the control of the plan administrators. If changes to the restoration plan were still in progress at the time of an event, System Operators would use restoration strategies in order to determine the best course of action. [NYISO does not support this comment.]

The stricken phrase "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." should be retained. Since R1 is specifying that the TOP shall have an SRP to restore its system, it is imperative that the TOP has a defined state at which point it knows that it has successfully achieved the requirement. The stricken language provided that. Although R1.8 contains similar language, it is in the context of information that the TOP must include in its SRP, as opposed to defining success in achieving system restoration. Compliance with R1.8 does not inform the TOP, or an auditor, that if the TOP completes the processes contained in the subrequirement, that it has successfully achieved system restoration.

Putting the word "implement" in EOP-005-3, R1: "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator", is confusing. What is meant by "implement"? Public Utility District of Chelan County (CHPD) understands "implement" to mean to put the	

Restoration Plan into effect. The Restoration Plan is not put into effect until there is a real-time event. CHPD would prefer the sentence to read: Each Transmission Operator shall develop a restoration plan and have it approved by its Reliability Coordinator.

The proposed requirement R4.2 requires TOPs to submit revised System Restoration Plans "No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications." This is not practical or advisable as it would result in the need for TOP's to submit revised Restoration Procedures to the RC which do not align with actual system configuration during the (at least) 30 day period. Restoration plans are typically "approved" procedures that reflect current configuration and have a review and approval process internal to the TOP. Approval of revisions are closely coordinated with actual implementation of system modifications to ensure that proper configuration control is maintained between procedures and the system. Having to submit a revised (and approved) procedure at least 30 days in advance of field implementation would result in procedures having to be approved and sent to an RC that do not align with actual system configuration for "extended" periods (at least 30 days). Even if an effective date is used in a TOP's procedural control process, having to assign such a date in excess of 30 days prior, would likely result in a significantly increased administrative burden due to the higher potential for date changes to occur between procedure approval and final implementation of a modification in the field. Field implementation of system modifications are subject to a degree of uncertainty due to a variety of factors (testing results, weather, system operational needs, etc). The greater the period of time between procedure revision approval and placement of a system modification in-service, increases the potential for subsequent procedure date changes being required and also raises the potential for non-alignment between Restoration Procedures and field configuration. Even if Draft Restoration Procedures are submitted to an RC, it is not clear that this would be satisfactory from a compliance standpoint for the TOP or the RC as proposed EOP-006-3 R5 requires the RC to approve a submitted TOP plan within 30 days of its receipt. It is suggested that the proposed R4.2 be changed to delete "No less than 30 calendar days" and maintain the existing requirement to submit revised, planned, Restoration plans prior to their implementation.

Compliance (Sec C.1)

We have concerns replacing "compliance audit" with "monitoring activity." The proposed term, "monitoring activity," is vague, ambiguous, and muddies the interpretation of the retention period. We can only speculate as to the reason for the change and, so, are unable to offer a suggestion to address our concern.

R2, R5, and R8

We are supportive of replacing "implementation date" with "effective date" and believe it provides added clarity.

We are supportive of replacing "annually" with "15 months" and believe it provides added clarity.

Jared Shakespeare - Peak Reliability - 1 - WECC

Answer	No
Document Name	
Comment	

For R3, Peak already has all the TOPs scheduled on an annual submittal process. Peak is concerned that TOPs will want to switch to a 15-month submittal process, which will be more difficult to track. Every approval will require an agreement on the next submittal scheduled rather than maintaining a known, 12-month schedule.

For R10, Can R16 be combined with R10? There are other requirements that combine various entities so not sure why participating in the RC's restoration plan would need to be separate requirements for TOPs and GOPs.

The Purpose statement becomes an absolute positive by replacing “assure” with “ensure” therefore the restoration plan must reestablish reliability. System Operators need the flexibility to deviate from the plan in order to restore the system to precontingent operations.

In R1 we recommend that the first sentence be changed from “Each Transmission Operator shall develop and implement a restoration plan approved by its Relability Coordinator.”to “Each Transmission Operator shall develop and publish a restoration plan approved by its Relability Coordinator that will be implemented folwing a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down.” The reason for this recommendation is to clarify the intention of the proposed change.

In R1, we disagree with the change after the words “… is required to restore …”. Depending upon the cause of the Disturbance (for example physical damage) that requires system Restoration from Blackstart Resources, it may not be feasible to restore the entire shutdown area of service even though the BES has been restored. We recommend leaving the original wording in place.

In R4.2, we disagree with the wording “No less than 30 calendar days prior to …” in the first sentence. We recommend changing to “Up to 90 calendar days after implementation of planned System modifications”. The reason for this recommendation is that planned implementation dates are often moving targets due to factors such as construction or equipment delays; crew scheduling needs; or other factors outside the direct control of the entity.

Comment	

We support NPCC's comments.

In addition, we have the following comments.

There is no reference to the formation of a BES island in EOP-005-3 Requirement R1 as there is in EOP-006-3 Requirement R1 (“or an energized island has been formed on the BES”). The Drafting Team should consider its inclusion in EOP-005-3 or its removal from EOP-006-3. However, we recommend inclusion rather than removal. Indeed, EOP-005 ‘s scope could be expanded to “System Restoration” regardless of whether Blackstart Resources are required or not. A TOP may have a major shutdown or be islanded and restore its area by synchronizing with an adjacent area. Such a TOP should nevertheless have a Restoration Plan, perform simulations as well as training. Such a change in scope would only require changes to the title and the purpose.

We note that R16 applies to Generator Operators, not Generator Operators identified in the Transmission Operators restoration plan, as was the case in EOP-005-2 R18. Most requirements in EOP-005-3 that apply to GOPs apply to GOPs with Blackstart Resources and these are identified in the TOP’s Plan. Modifying section 4.1.2. to apply only to GOP with Blackstart Resources would be consistent with EOP-006-3 R8 part 8.1 which specifies “each Generator Operator identified in the Transmission Operators’ restoration plans”. We recognize however that R16 is consistent with EOP-006-3 R8 in a general sense and also recall that in the development of EOP-005-2, comments on the same point were submitted and rejected by the drafting team at that time. If this project's drafting team rejects this comment again, **we request the addition of a rationale to clarify the purpose of this broader scope.** We note that the Régie de l'énergie here in Québec ordered a reduction of scope of R16 to the GOPs identified in the TOP plan, based on the lack of justification provided during the development of EOP-005-2 for the broader scope of R18 (now R16 in EOP-005-3).

R1: Suggest adding a rationale to explain change of scope. Does the removal of “the choice of the next Load to be restored is not driven by the need to control frequency or voltage” imply that the scope of the TOP’s restoration plan is now until all the BES is restored?

We understand that the EOP-005-3 Parts 1.9 and 8.5 that refer to transferring of Balancing Authority authority come from a FERC-NERC report. However, we believe that Balancing Authority functions always reside with the Balancing Authority. The requirement could be rephrased as a more general requirement to 'coordinate' the restoration with the appropriate BA, per RC criteria.

Regarding R8, Bonneville Power Administration (BPA) believes 15 months is too restrictive. BPA performs training semiannually (spring and fall). BPA requests the "not to exceed 15 months" to be changed to 18 months in order to allow any training that could not be accommodated in the previous semiannual training to be included in the subsequent period.

Regarding R4, BPA understands system modifications identified less than 30 days in advance to be emergency modifications and reportable within 90 days after the system modification. BPA desires clarifying language for system modifications identified less than 30 days in advance of the modification.

Regarding R8.5 and R1.9, BPA does not agree these to be necessary sub-requirements because the transition is non-critical. BPA as both a Transmission Operator and Balancing Authority does not perform a transition and believes these sub-requirements to be unnecessary or only applicable to Transmission Operators that are not also Balancing Authorities.

FMPA generally agrees with the revisions proposed for EOP-005, but does have some comments.

R1 can still be interpreted that a TOP who would be restored via a tieline with a neighbor and not a Blackstart Resource does not need a restoration plan at all. What is the drafting team's intent here?

The phrasing of R4 needs work. FMPA recommends adding commas and removing the word "of".

"Each Transmission Operator shall update, and submit to its Reliability Coordinator for approval, its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows:"

R5 should use the defined term Control Center, rather than control room.

Comment

In spirit APS is supportive of the SDT's direction. That said, APS offers the following suggested changes with respect to the proposed wording of the standard. APS suggests the following revised wording to further clarify the language in the proposed EOP-005 standard.

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval its restoration plan to reflect System modifications that necessitate a change in how the Transmission Operator implements its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications; and

4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available to its System Operators in its primary and backup control rooms in electronic or hardcopy format prior to its effective date in accordance with Requirement R5.

In addition, APS requests the SDT clarify the text for requirement R8.5 to align the requirement language with the text in the Rationale box for R8:

R8.5 Coordination needed to transfer the following functions back to the Balancing Authority: Area Control Error and Automatic Generation Control.

Comment	

1. R4 Rationale: In the second paragraph the SDT may want to consider removing the word 'major' when describing System modifications as the requirement does not have this limitation, but instead deals with any System modifications that change the ability to implement the restoration plan. The use of the term 'minor' when describing revisions provides the appropriate context. Dominion also suggests the SDT could add examples into the Rationale to clarify the types of System modifications they are referring to.

1. Formatting observations compared to other NERC standard templates; The definition of CMEP under Section 1.1 should be at the top of Section 1 with the other definitions.

Section C. Compliance; The numbering in this section is incorrect. Section 1.1 should be the first definition and the numbering should follow from there for each distinct item.

Comment	

R1: Duke Energy recommends that the drafting team consider the following language revision to R1.

"Each Transmission Operator shall develop, maintain, and implement a restoration plan approved by its Reliability Coordinator."

We think that the addition of the term "maintain" is appropriate and would promote consistency with other EOP standards.

Also, we request clarification from the drafting team about the potential for an instance of double jeoparday. If an addition to the term "maintain" to R1 is deemed appropriate by the drafting team, does that open up entities to the possibility of violating two requirements if the restoration plan is not maintained. See Duke proposed R1 language, and SDT proposed language of R4. Does the failure to maintain a restoration plan create double jeopardy with R1 and R4?

R4: Duke Energy recommends the drafting team consider revising the proposed R4 to read as follows:

"Each Transmission Operator shall update and submit to its Reliabilty Coordinator for approval of its restoration plan to reflect system modifications, that

would inhibit its ability to implement its restoration plan, as follows:"

We feel that replacing the word "change" with "inhibit" or "adversely affect/negatively impact" is more accurate representation of what is needed in this requirement. Moreover, any planned or unplanned system modification could "change" the way an entity executes its restoration plan, but an entity would still be able to execute said plan via multiple paths. We feel that the spirit of this requirement should be geared more towards system modifications that prevent an entity from executing its restoration plan altogether.

R8: Duke Energy recommends that the drafting team consider maintaining the use of the annual system restoration training, rather than using *"at least once each 15 calendar months".* We have a couple of concerns with the use of once each 15 calendar months. First, we are not aware that NERC has defined the term(s) calendar months. Some ambiguity may exist amongs industry stakeholders about what constitutes a calendar month. The use of the term "annual" is commonly used throughout the industry, and NERC has issued a Compliance Application Notice on the use of the term, and there seems to be more guidance on the tracking of annual timeframes.

R8.5: Duke Energy requests further clarification from the drafting team on how this requirement should apply to vertically integrated BA(s) and TOP(s) that are in the same control room. Also, with regards to the transition of ACE and AGC to the BA, where in the standard is it referenced when/if control was ever passed to the RC? Does this not go beyond what is outlined in R1.9? The language as written implies that a TOP was at one time in control of ACE or AGC. Not all entities may pass control over to the TOP, especially those entities that are vertically integrated, wherein the BA and TOP are in the same control room. We understand that this addition was a result of the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans, however, we don't see this change as representative of the practices of the entire industry, and can't agree with this addition based on the complication it may provide to vertically integrated companies.

Mark Holman - PJM Interconnection, L.L.C. - 2

Answer	
Document Name	

Comment

PJM is concerned with the removal of the words in R1. In the proposed Standard, it is not clear when the use of the Restoration Plan should end. Adding the word "implement" to R1 and other requirements puts two actions in one requirement which makes the VSLs much more complicated. PJM has serious concerns with a misinterpretation of R6. The misinterpretation is that the entire Restoration Plan should be simulated using dynamics. That was not the intent of the SDT. Suggest adding "a combination of" before "steady state and dynamics simulations". PJM would also recommend the addition of language clarifying that Dynamic simulation is only required from Blackstart unit to cranked unit (along the cranking path), and not the entire restoration plan. Also, PJM finds the "30 day prior to implementation" wording in R4.2 is troubling. This Requirement could potentially lead to artificial delays in energizing new equipment just to meet the 30 day requirement. PJM considers the wording in the current standard ("prior to a permanent planned modification") sufficient, rather than introducing the 30 day prior requirement.

Comment	

Texas RE suggests Requirement R1 would be more clear if it was broken into two separate requirements: one Requirement to detail what a TOP's restoration plan should include and one Requirement for implementing the restoration plan and explaining when the plan should be implemented. As drafted, Requirement R1 does detail what the restoration plan should include, but it does not explicitly indicate when it should be implemented. This will promote consistency amongst the Standards as other Standards, such as PRC-005-6, have separate Requirements for having a plan/program and implementing the plan/program.

Texas RE is concerned EOP-005 has no requirement for TOPs to correct plans not approved by the RC. There appears to be issues if an RC does not approve the plan within 30 calendar of planned System modifications (or 90 days for unplanned). The modifications may be complete but the plan that includes the modifications may not be approved so an old copy (that cannot be utilized) will be in the Control Centers of a TOP. Texas RE recommends adding language regarding correcting unapproved plans as well as what a TOP is to do if an RC is late with its approval.

Texas RE is concerned about the proposed changes to EOP-005-2, Requirement R4. In particular, the SDT proposes to require TOPs to update and submit revised restoration plans to their RCs when there is modification "that would change the ability to implement" the restoration plan. Although Texas RE does not necessarily object to the SDT's stated intent to require updates solely for material changes, the requirement to update a plan should not hinge upon the entity's perception of its corresponding "ability" to implement the plan. That is to say, a material modification to the restoration plan should require submission of an updated plan regardless of whether the TOP believes the modification will or will not affect its ability to actually implement the existing restoration plan. This is particularly critical because EOP-005-3, Requirement R4 also serves the reliability goal of ensuring RCs have awareness regarding the steps TOPs will take in the restoration process. As such, even if a TOP believes it can still implement its current plan, providing information regarding material modifications to the restoration plan still serves the reliability goal of enhancing RC situations awareness.

If the SDT wishes to capture a materiality threshold for required updates and submissions, however, Texas RE recommends the SDT focus on the materiality of the change itself. Accordingly, the SDT could revise the proposed Requirement R4 language to simply require submission of an update "to reflect system modifications that would materially change the implementation of its restoration plan."

Comment	
R7 should be retained. It is imperative that a TOP have a fallback position in the event its SRP cannot be implemented as intended. R7 specifies to the TOP that the fall back position is to utilize its strategy. For example, a TOP’s SRP might have detailed steps to restore a certain generating unit, perhaps by specifying a particular switching scheme. If the facilities to execute that scheme are not available, the TOP should still recognize the need to restore that unit, and proceed in any manner available to do so. The strategy is to restore the unit regardless of the tactics used to accomplish that. R1.1 does obligate a TOP to include it strategies in its SRP, but it does not obligate it to operate to those strategies if need be. Further, the strategies in a TOP SRP are at a more detailed level than the strategy of the RC plan in EOP-006. An RC’s plan is, in effect, it’s strategy, and is at a much higher and more general level than the TOP plan. Therefore, there is no inconsistency with retaining R7 in EOP-005 and removing it from EOP-006. R8 should be retired.

Retirement of Requirement 8 removes the requirement for the TOP to seek approval from the RC before resynchronizing areas. Resynchronizing areas is a sensitive piece of system restoration. Much work has to go into getting systems ready for resynchronization and without proper coordination, a misstep could put all of that load in jeopardy of being dropped. Requiring the TOP to coordinate with the RC ensures adequate coordination will occur in order to maintain a reliable system during restoration and therefore it should remain a requirement.

Unless the changes AE recommends above are implemented, R7 should not be deleted in its entirety. (See AE's response to Question 1, above) Because of the vagaries of a blackstart situation, AE believes the Standard should allow the Transmission Operator to solve issues which may not be addressed in the restoration plan. AE believes it is not possible to plan for every possible contingency and, therefore, Transmission Operators need a degree of freedom to address deviations from expectations. Therefore, AE requests the sentence "If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration" remain unless included in R1 as suggested above.

R7: . Implementation documentation should remain covered under the current Requirement 7. Focus should be on developing a restoration plan in Requirement 1 and Measurement 1 should not be confused with implementation documentation. Revise the existing R7 requirement for implementation and measures for implementation as needed.

R8. Recommend retaining or at least retaining "in accordance with the established procedures of the Reliability Coordinator". Much work has been done in this venue to provide needed guidance, and see this as an efficient way to accomplish. The Reliability Coordinator must play a defined role when establishing ties. It's the RC's role to ensure each Transmission Operator's System is ready for the connection.

Justin Mosiman - Bonneville Power Administration - 1,3,5,6 - WECC

Answer	Yes
Document Name	

Comment

Regarding R8, Bonneville Power Administration (BPA) believes 15 months is too restrictive. BPA performs training semiannually (spring and fall). BPA requests the "not to exceed 15 months" to be changed to 18 months in order to allow any training that could not be accommodated in the previous semiannual training to be included in the subsequent period.

Regarding R8.5 and R1.9, BPA does not agree these to be necessary sub-requirements because the transition is non-critical. BPA as both a Transmission Operator and Balancing Authority does not perform a transition and believes these sub-requirements to be unnecessary or only applicable to Transmission Operators that are not also Balancing Authorities.

I agree with the changes however, training requred by R8.5 makes no sense if a TOP does not manage Area Control Error and/or Automatic Generation Control. My utility is a small TOP and has neither ACE management or AGC management. Training in the transition of this functionality to the BA is unnecessary since the BA provides this funcionality as part of its normal operations.

Texas RE does not necessarily object to the SDT's proposal to retire Requirements R7 and R8 from the EOP-005-3 Standard. However, Texas RE is concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-005-3 R1 restoration plan implementation requirements. Texas RE has identified two principal areas of concern, and suggests the SDT revise in proposed language in R1 to address these issues.

First, Requirement R7 provides not only that each affected Transmission Operator (TOP) shall implement its restoration plan following a Disturbance, but also that if "the restoration plan cannot be executed as expected the [TOP] shall utilize its restoration strategies to facilitate restoration." As presently drafted, there is no explicit requirement in the revised Requirement R1 requiring TOPs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. This adaptive capability serves an important function and promotes TOPs continuing to maintain situational awareness and strategic reactions throughout the course of restoration activities. As such, Texas RE recommends that if the SDT wishes to retire Requirement R7, it include the following language in the restoration plan content requirements specified in Requirement R1 in order to address this issue:

1.10 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

Second, Requirement R8 presently provides an explicit requirement that TOPs "resynchronize area(s) with neighboring [TOPs] only with the authorization of the Reliability Coordinator or in accordance with established procedures of the Reliability Coordinator." Although it is perhaps possible to read R1.1's mandate that the restoration plan include "[s]trategies for system restoration that are coordinated with the [RC's] high level strategy for restoring the interconnection" as encompassing this requirement, it is not clear that resynchronization is included within either "system restoration strategies" or the RC's "high level strategy." Moreover, there is no explicit reference to coordination activities with neighboring TOPs elsewhere in the Standard. To clarify this issue and ensure coordination activities are adequately addressed in entity restoration plans, Texas RE recommends that if the SDT wishes to retire R8, it include the following language in the restoration plan content requirements specified in R1 to address this issues:

1.11 Procedures to resynchronize area(s) with neighboring Transmission Operator area(s) after obtaining authorization from the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator.

Texas Re noticed draft EOP-005-3 does not follow the results based standards template. On the template, Section C 1.1 is the Compliance

Enforcement Authority. Section C 1.2 Is the Evidence Retention. Section C 1.3 Is the Compliance Monitoring and Enforcement Program. There is no section for Reset Time Frame, Compliance Monitoring and Enforcement Processes, or Additional Compliance Information.

Comment	
The word “neighboring” should be replaced with the word “electrically adjacent” in all instances in the standard (including the Violation Severity Levels). “Electrically adjacent” lends more clarity to the intent of the requirements than “neighboring.” It is suggested that the below changes be made to Part 4.1 so that it reads: “If a Reliability Coordinator finds conflicts between its restoration plan and the restoration plan of an electrically adjacent Reliability Coordinator, the Reliability Coordinator and the adjacent Reliability Coordinator shall resolve the conflicts within 30 calendar-days of written notification of the identified conflicts from the Reliability Coordinator to the adjacent Reliability Coordinator.” The additional revisions clarify that both the initiating Reliability Coordinator, and the electrically adjacent Reliability Coordinator have to resolve any conflicts. The timing for resolution of the conflicts will also be made clear.

Consider revising R3 to allow "Annual" review to be consistent with other NERC standards. The verbiage change from "Annual" to "at least every 15 months" in R7 is unnecessary and does not improve the standard. Additionally, it is not consistent with numerous other standards that currently contain "Annual" requirements.

The language to "implement" the system restoration plan has the potential to create confusion within the industry. Implementation of the a restoration plan would require a system outage to be compliant. Language should be adjusted to represent the intent of the SDT.

ERCOT joins with the comments of the IRC Standards Review Committee (SRC). ERCOT also offers this additional point: Similar to the comment for Question #1, we ask that a conditional phrase be added to the language of Requirement R1 to clarify that the restoration plan will only be implemented during an actual blackstart event. Otherwise, the requirement as written indicates that the entity must have implemented a restoration plan absent an event. As such, we recommend language that clarifies this: "Each Reliability Coordinator shall develop, maintain, and, in the event of a Disturbance, implement a Reliability Coordinator Area restoration plan." If the SDT intends there to be a difference in meanings of the words "adjacent" and "neighboring," we request that this difference be explained and made more explicit in the language of the standard. We also ask for clarification on the meaning of the phrases "adjacent Transmission Operators" and "adjacent Reliability Coordinators," for the ERCOT interconnection, as neither of these terms is defined. We ask the SDT to clarify that, consistent with the interpretation of Question 2 in Appendix 1 to EOP-001-2.1b, "adjacent" should not be read to apply to RCs or TOPs that are not "within the same Interconnection." This change is appropriate because ERCOT does not rely on SPP or MISO for system restoration, and SPP and MISO also do not rely on ERCOT for that purpose.

Most training is conducted on a yearly basis, with certain required training every year. For example, TVA has three cycle training classes lasting seven weeks each cycle in order to get all of the operators through the training. At times it makes more sense to conduct specific required training in one cycle versus another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if the System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, “at least once each 15 calendar months” it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training was required “once per calendar year.” That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around from year to year as needed.

EOP-006-3 R1 states, “Each Reliability Coordinator shall develop, maintain, and implement” while EOP-005-5 R1 states, “Each Transmission Operator shall develop and implement.” We recommend that the “develop and implement” language in EOP-005-3 R1 be used in EOP-006-3 R1 for consistency among the two standards.

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements and similar to EOP-005. R1 should require a plan and define what needs to be in the plan. R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan. The corresponding proposed measures would need to be modified accordingly.

We believe the wording of R8.1 is problematic and that the intent is that those that have a role in an RC drill, exercise, or simulation participate in those activities. We believe that it is better to require that the RC notify all entities that have a role in each RC drill, exercise or simulation. The identified entities should be required to participate in each activity for which they have a role. We suggest rewriting R8.1 as:

R8.1 Each Reliability Coordinator shall request each enitity which has a role in the RC drill, exercise or simulation participate in those drills, exercises, or simulations.

(1) R1 now includes “develop, maintain, and implement” a restoration plan for the RC. We question why “maintain” was included in EOP-006-3, but it only states “develop and implement” for the TOP in EOP-005-3. This is inconsistent language and should be aligned.

(2) We disagree with the inclusion of “maintain and implement.” Measure M1 now calls out for evidence of implementation, including operator logs or voice recordings. This practice of including three actions, having a plan, maintaining the plan, and implementing that plan, in a single requirement allows for additional scrutiny from an auditor. Our biggest concern is that R1 has six sub-parts, which can now be reviewed under three filters – is it documented, is it maintained, and does the entity have proof that they implemented it. We ask the SDT to consider modifying the requirement so evidence of implementation is separate from each of the six sub-parts.

(3) For R3, we agree with the change from 13 calendar months to 15 calendar months to align with other NERC standards.

(4) For R7 (formerly R9), we agree with changing annual to 15 calendar months to align with other NERC standards.

It seems that there was inconsistent use of ‘maintain’ in R1 between EOP-006-3 and EOP-005-3. We suggest removing the word ‘maintain’ in R1 since it is redundant with requirement R3. Also M1 would need to be edited to measure that the plan was appropriatel ‘maintained’ as well as implemented. As stated, it does not verify that the plan was maintained.

In the revised R1.2 we just point out that there can be ‘adjacent’ entities that may not be within the same Interconnection (example: SPP BA/RC and

ERCOT BA/RC) that it may not be appropriate or necessary to coordinate restoration plans. One way to handle this may be to specify that coordination must be performed with entities within the same Interconnection, or alternatively allow the restoration plan to dictate which entities are considered adjacent.

We believe the intent of the proposed R8.1 is to only require participation by TOPs and GOP's who 'have a role' in the restoration plan. There are TOPs and GOP's in the RC Area who may never have a role in restoration activities (aka wind farms or small TOPs). We suggest rewriting R8.1 as:

R8.1 Each Reliability Coordinator shall request each Transmission Operator **which has a role** in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least **once** every two calendar years.

Comment

In Requirement R1.2, the proposed revisions establish that the restoration plan must include criteria and conditions for re-establishing interconnections with other Transmission Operators within the Reliability Coordinator's Area, with "adjacent" Transmission Operators in other Reliability Coordinator Areas, and with "adjacent" Reliability Coordinators. The use of the word "adjacent" is more appropriate as it makes the requirement more clear. The SRC suggests a further clarification that is consistent with the interpretation of Question 2 in Appendix 1 to EOP-001-2.1b, which states that "adjacent" should not be read to apply to RCs or TOPs that are not "within the same Interconnection." The SRC suggests that the words "electrically adjacent" be used throughout the standard. Specifically, the word "neighboring" should be replaced with the word "electrically adjacent" in all instances in the standard (including the Violation Severity Levels), because "electrically adjacent" is clearer than "neighboring"or "adjacent" (alone).

In addition, the SRC suggests that clarifying changes be made in Requirement 4, Part 4.1, so that it reads as follows:

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and the restoration plans of an adjacent Reliability Coordinator, the Reliability Coordinator and the adjacent Reliability Coordinator shall resolve the conflicts within 30 calendar days of written notification from the Reliability Coordinator to the adjacent Reliability Coordinator of the identified conflicts.

The additional revisions make clear that both the Reliability Coordinator and the adjacent Reliability Coordinator have to resolve any conflicts, and the timing for resolution will also be clear.

Texas RE suggests Requirement R1 would be more clear if it was broken into two separate requirements: one Requirement to detail what a RC's restoration plan should include and one Requirement for implementing the restoration plan and explaining when the plan should be implemented. As drafted, Requirement R1 does detail what the restoration plan should include, but it does not explicitly indicate when it should be implemented. This will promote consistency amongst the Standards as other Standards, such as PRC-005-6, have separate Requirements for having a plan/program and implementing the plan/program.

Texas RE recommends clarifying the Reliability Coordinator's obligations to "maintain" a restoration plan. As currently drafted, neither the measure nor VSLs specifies the evidence or severity of an issue associated with the failure to maintain. One possible interpretation of this requirement is that RC's must use the proposed 15 month reviews to ensure their plan includes appropriate criteria and processes for the re-energization of shutdown areas. However, it possible that RCs may have additional or distinct obligations. Texas RE requests that the SDT provide additional information regarding maintenance obligations under this requirement.

Texas RE recommends defining the terms "neighboring" and "adjacent". It is unclear whether or not there is a difference in what those terms mean. Requirement R1 has "neighboring" RC reference but Requirement part 1.2 has "adjacent" referenced. In 4.1 "neighbors" is used (and is assumed to RCs). There appears to not be a requirement to provide the RC plan to neighboring/adjacent TOPs There should be consistency in terms used and it should be well understood by all RCs that adjacent/neighboring is the RC (or RCs) that is (are) touched at the boundary regardless of synchronous or asynchronous connectivity.

Texas RE is concerned that, without parts 1.2,1.3, and 1.4, there may not be clarity provided in roles and responsibilities within a restoration plan. There should be Operating Processes utilized by the RC.   The restoration plan should clearly indicate coordination efforts with TOPs and RCs. In the proposed 1.2 (old 1.5) there is a reference to "adjacent" TOPs in other RC Areas but no requirement to provide the RC restoration plan to those adjacent TOPs (nor a requirement for the adjacent RC to provide the plan). This appears to be a gap in reliability if there are criteria for "reestablishing interconnections" with TOPs in other RC Areas. It is unclear whose role or responsibility it is that to provide the information.

Texas Re noticed draft EOP-006-2 does not follow the results based standards template. On the template, Section C 1.1 is the Compliance Enforcement Authority. Section C 1.2 Is the Evidence Retention. Section C 1.3 Is the Compliance Monitoring and Enforcement Program. In the EOP-006-2 draft, compliance Enforcement Authority does not have a section. The reset Time Frame and Evidence retention is section C 1.1. C1.2 is Compliance Monitoring and Enforcement Processes Program (incorrect section and title)

Comment

There are multiple references to "neighboring RCs" in the Standard. Can these all be replaced, as appropriate, with the word "adjacent RCs?" If the intent as referenced with the change in R1.2 holds true to the whole Standard then clarifying neighbors to be "direct connection" instead of "just neighbors without electrical adjacency." This is particularly true for R4 – is it really necessary for Peak to review MISO's Restoration plan now that we have no electrical connection with them?

Old R10.1 (new R8.1): Peak seeks clarification – shouldn't the new R8.1 follow the same logic of 15 months instead of 24 months so as to keep it in line with new R7 (internal restoration drill training)? Or is the intent that every 15 months RCs train internally but only every 24 months they invite all TOPs and GOPs?

Michael Godbout - Hydro-Qu?bec TransEnergie - 1 - NPCC

Answer	No
Document Name	

Comment

We support NPCC's comments.

In addition, we have the following comments.

M4 does not reflect the written notification time requirement (60 days) in R4. We suggest :

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans, **has provided written notification of any conflicts within 60 calendar days** and resolved any conflicts within 30 calendar days of notification in accordance with Requirement R4.

The VSL table for R4 does not address situations where the RC reviews the submitted plans but does not provide written notification of a conflict. (in those situations, the timer for the resolution of conflicts between the plans never starts.)

We note that requirements 1 and 2 refer to the 'RC Area restoration plan' whereas the rest of the requirements skip 'Area'.

1. For additional clarification, Dominion suggests the following changes to R4; Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered between restoration plans during that review within 60 calendar days of receipt.
2. In Part 4.1, Dominion suggests the following change to clarify when the 30 day period starts:

If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of delivery of written notification.

1. Formatting observations compared to other NERC standard templates; The definition of CMEP under Section 1.1 should be at the top of Section 1 with the other definitions.

Section C. Compliance: The numbering in this section is incorrect. Section 1.1 should be the first definition and the numbering should follow from there for each distinct item.

One of the most important jobs of the Reliability Coordinator during system restoration is to ensure proper coordination is occurring between TOPs and Reliability Coordinators. Lack of coordination could have a large impact on system reliability during system restoration. The requirement that the RC coordinate or authorize resynchronizing of islands should remain. In the next requirement (old R9) the RC is even required to train on “The coordination role of the Reliability Coordinator and Reestablishing the Interconnection”. It seems to be in conflict for the RC to train on the coordination role but not require the TOP to coordinate with the RC when resynchronizing areas (proposed removal of EOP-005 R8) and not require the RC to coordinate the resynchronization of with neighboring TOPs and RCs.

Resynchronizing areas is a sensitive piece of system restoration. Much work has to go into getting systems ready for resynchronization and without proper coordination, a misstep could put all of that load in jeopardy of being dropped. One of the most important jobs of the Reliability Coordinator during system restoration is to ensure proper coordination is occurring between TOPs and Reliability Coordinators. Because lack of coordination could have such a large impact on system reliability during system restoration, the requirement that the RC coordinate or authorize resynchronizing of islands should remain. In the next requirement (old R9) the RC is even required to train on "The coordination role of the Reliability Coordinator and Reestablishing the Interconnection". It seems to be in conflict for the RC to train on the coordination role but not require the TOP to coordinate with the RC when resynchronizing areas (proposed removal of EOP-005 R8) and not require the RC to coordinate the resynchronization with neighboring TOPs and RCs.

Consistent with the comments in response to Question 2 above on EOP-005, Texas RE is concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-006-3 Requirement R1 restoration plan implementation requirements. Specifically, Requirement R7 provides not only that each affected RC shall implement its restoration plan following a Disturbance, but also that if "the restoration plan cannot be executed as expected the [RC] shall utilize its restoration strategies to facilitate restoration." As Texas RE indicated above, there is no explicit requirement in the revised EOP-006-3, Requirement R1 requiring RCs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. Although important for TOPs, these forms of adaptive strategies are particularly critical for RCs given their wide-area view of the BES and overall role in coordinating effective responses to Disturbances. As such, Texas RE recommends incorporating the following language into EOP-006-3, Requirement R1 if the SDT concludes the full retirement of EOP-006-3, Requirement R7 is appropriate:

1.7 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

In a similar vein, EOP-006-3, Requirement R8 presently requires the RC to "coordinate and authorize resynchronizing islanded areas that bridge boundaries between [TOPs] or [RCs]. If the resynchronization cannot be completed as expected the [RC] shall utilize its restoration plan strategies to facilitate resynchronization." Similar to EOP-005-3, Requirement R1, these elements of R8 are not explicitly included within the various required parts of the RC's restoration plan as specified in EOP-006-3, R1.1 to 1.6. As a result, there could be confusion regarding resynchronization coordination and authorization obligations, as well as a gap regarding requirements to implement strategies to address resynchronization issues if events occur differently than specified with the RC's existing restoration plan. Again, Texas RE recommends that if the SDT opts to retire EOP-006-3, Requirement R8, it incorporate the RC's existing resynchronization obligations explicitly into the required restoration plan elements specified in Requirement R1 by added the following:

1.8 Procedures for coordinating and/or authorizing the resynchronization of islanded areas that bridge the boundaries between Transmission Operators and Reliability Coordinators

5. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-008-1? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Amy Casuscelli - Xcel Energy, Inc. - 1,3,5,6 - MRO,WECC,SPP RE

Answer	No
Document Name	

Comment

Xcel Energy feels that the verbiage change from "Annual" to "at least every 15 months" in R5 and R7 is unecessary and does not improve the standard. Additionally, it is not consistent with numerous other standards that currently contain "Annual" requirements.

EOP-008 R5.1 has always been a bit ambiguous as to when it triggers a required update of the Operating Plan. “Any changes to any part of the Operating Plan” could mean that something as simple as a title change, organizational name change, or phone number change could trigger an update or approval of the Operating Plan. The drafting team should take this opportunity to clarify R5.1 in order to require that only substantive changes in the Operating Plan or changes that change the ability to implement the operating plan require an update and approval of the operating plan outside of the normal review cycle. Langaue could be modeled off the new language in EOP-005-3 R4. For example, the language could be changed to, “An update and approval of the Operating Plan for backup functionality shall take place withing sixty calendar days to reflect changes in the operating plan to items

in R1 that would change the ability to implement the operating plan.”

R1: We request further clarification regarding the inclusion of Interpersonal Communications in R1.2.3. Will the the Operating Plan for backup functionality need to also address Alternative Interpersonal Communications? The primary control center for the BA/TOP is required under COM-001-2.1 to have both Interpersonal Communications and Alternative Interpersonal Communications. To follow R1.3, it seems like BA/TOP entities would need to also have Alternative Interpersonal Communications addressed in the Operating Plan for EOP-008-2 in order to keep backup functionality consistent with the primary control center. Also, when operating from the backup, entities still must adhere to Standard COM-001-2.1. If Alternative Interpersonal Communications need to be part of the Operating Plan for EOP-008-2 that should be clear to all entities from the Standard so they know what their obligations are. The current version just says Voice communications, and that can mean something very different than having both Interpersonal Communications and Alternative Interpersonal Communications. R5: See Duke Energy’s comment regarding the replacement of “annual” with “at least once each 15 calendar months” in response to question 1 above.

Comment	

PGE thinks that the 15 month window is too restrictive and will give us less flexibility to schedule the drills outside of storm season, peak load periods, unexpected issues, etc. There is little gained by the more restrictive window, and much flexibility is lost in the ability to work around system demands.

Bonneville Power Administration (BPA) has identified a risk regarding R7. Not all utilities perform testing the same. R6 requirement of having independent functionality are not uniformly tested in R7. Some utilities do not completely sever connection to the primary functionality in order to test complete independence of primary and backup functionality. BPA recommends an additional sub-requirement for R7 to explicitly define how to test to ensure uniformity among utilities and mitigate risk of inadvertent dependence on primary functionality.

R1

We agree the revision to R1, Part 1.1. prevents a tertiary Requirement (i.e., already included in EOP -008- 2, R3 and R4).

We agree that in R1, Part 1.2.3., the defined term "Interpersonal Communications" should be used.

R5 and R7

We are supportive of replacing "annually" with "15 months" and believe it provides added clarity.

Given the shift in EOP-005-3 and EOP-006-3 away from the mere 'having' a restoration plan to 'developing and implementing' a restoration plan, would it make sense to shift EOP-008-2 R1 away from 'having' to 'developing and maintaining' the Operating Plan? The other requirements concerned with the physical plan remain valid.

Should R7 be modified to ensure consistency with R1.5 time requirement?

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct a test of its Operating Plan at least once every 15 calendar months and shall document the results from such a test. This test shall demonstrate: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality **is less than or equal to two hours**.

7.2. The backup functionality for a minimum of two continuous hours.

Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	
Document Name	
Comment	
The term “control center” (Purpose statement, Requirement R1, part 1.3, part 1.5, part 1.6, Requirement R2, Measure M2, Requirement R3, Measure M3, Requirement R4, Requirement R6, Measure M6, part 7.1, Evidence Retention section, and the VSL section) should be capitalized as it is a defined term. Texas RE recommends revising Requirement R2 to generically refer to any location capable of providing backup functionality as there are cases where there are tertiary control centers developed. Note that having multiple locations where backup functionality may exist is considered to be, or could be considered to be, an exceptional step in supporting reliability and continuity of reliable operations but there should be an expectation of similar reliability expectations coupled with compliance obligations at these locations.	

As the goal of the Reliability Standards is Reliability, Texas RE recommends revising Requirement R3 and Requirement R4 “reliable operations and subsequent compliance…”

Texas RE suggests Requirement R3 would be cleaner if the information in the parentheses were listed out as subparts. Also, replace "certified Reliability Coordinator operators" with System Operator, which is defined.

Texas RE suggests Requirement R4 would be cleaner if the information in the parentheses were listed out as subparts. Also, replace "applicable certified operators" with System Operator, which is defined.

In the “Evidence Retention” section, the changes made to the Measures do not seem to have been provided here (e.g. Measurement M1 changed “in force’ to “in effect” below the R1 but in this section still shows “in force”…multiple instances that need a quality review). Additionally there is inconsistency in the language (e.g. audit versus compliance activity) in this section as compared to EOP-005.

EOP-005-3 R3: Adjust the VSLs to match R3 due to the striking of R3.1.

EOP-005-3 R4: **Moderate VSL:** The TOP updated and submitted its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator between 91 calendar days and 120 calendar days of an **unplanned** change.

OR

The TOP failed to update and submit its restoration plan that would affect implementation of the restoration plan to the Reliability Coordinator at least 20 calendar days prior to a **planned** change.

EOP-005-003 R4: **High VSL**: The TOP updated and submitted its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator between 121 calendar days and 150 calendar days of an **unplanned** change.

OR

The TOP failed to update and submit its restoration plan that would affect implementation to the Reliability Coordinator at least 10 calendar days prior to a **planned** change.

EOP-005-003 R4: **Severe VSL:** The TOP has failed to update and submit its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator within 150 calendar days of an **unplanned** change.

OR

The TOP failed to update and submit its restoration plan that would affect implementation of the restoration plan to the Reliability Coordinator prior to a **planned** BES modification.

EOP-006-3 R8: The VSL should match the Standard Requirement R8, not R8.1.

Comment	
For EOP-005-3 R1 and EOP-006-2 R1 Severe VSLs, SRP recommends removing the verbiage regarding implementation of the plan. For EOP-005-3 R2, the first 3 VSLs are based on a discrete number, while the Severe VSL also includes the term "half". That causes a potential for contradiction. For example, if an approved restoration plan only identifies 2 entities and 1 of them is not notified of changes, that meets the criteria for both the Lower VSL and the Severe VSL.

Comment	

ReliabilityFirst provides the following comments for the **EOP-005-3** VSLs:

1. VSL for R1
   i. Requirement R1 has 9 sub-parts but the high VSL only mentions missing 3 sub-parts. This leaves a gap in cases where an entity fails to comply with 4 or more sub-parts. RF suggest the following as an additional "OR" VSL to the Severe VSL
      a. The Transmission Operator has an approved plan but failed to comply with four or more of the requirement parts within Requirement R1.
2. VSL for R6
   i. To further clarify the timing of the High VSL, RF recommends the following modification for the High VSL:
      a. The Transmission Operator performed the verification but did not complete it within [six years].
3. VSL for R8
   i. Since Requirement R8 has a timing component as well "…training at least once each 15 calendar months…", RF recommends adding additional "OR" VSLs to the Severe VSL level as follows:
      a. Severe VSL - The Transmission Operator failed to include within its operations training program, System restoration training at least once within 15 calendar months for its System Operators.
4. VSL for R12
   i. To be consistent with the language in Requirement R12, RF recommends the following language for the Severe VSL
      a. Each Generator Operator with a Blackstart Resource failed to have documented procedures for starting each Blackstart Resource and energizing a bus.

ReliabilityFirst provides the following comments for the **EOP-006-3** VSLs:

1. Requirement R2
   i. RF request clarity around the phrase "or revision" at the end of Requirement R2. Since the RC must perform a review of the restoration plan every 15 calendar months according to Requirement R3, is this considered a revision (thus prompting the RC to distribute the restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days)? If this is the intent, RF recommends the following revision for the SDTs consideration.

a. R2 - The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation, revision [or annual review].

1. VSL for R5
2.

i. Since the word “notification” is not in Requirement R5, RF suggests removing the second “OR” VSL from each of the VSL Categories and add the phrase “with stated reasons” to the first VSL. Listed below is an example of this addition to the Lower VSL Category:

a. The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans [with stated reasons] from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt.

It is suggested that the VSLs for EOP-005-3 be revised for clarification as follows:

R1--Severe VSL: The Transmission Operator does not have an approved restoration plan OR the Transmission Operator has an approved restoration plan but failed to implement it when a disturbance occurred, in accordance with Requirement R1.

R3--Lower VSL, Moderate VSL, High VSL and Severe VSL: delete the words “or confirmation of no change” in all of the VSLs to make the language consistent with the deletion of Part 3.1.

EOP-005: Consistent with Texas RE's comments above, the SDT should separate the development and implementation of restoration plans under EOP-005-3's requirements. If the SDT does this, these changes should also flow through the affected VSLs. However, the SDT should at a minimum revise the language in the VSL to reference the revised standard requirements in R1. That is, the VSL, as currently drafted, uses the term "comply." Rather, as Texas RE reads the elements in the VSL, the Lower, Medium and High categories reference a TOP's obligation to incorporate the various restoration plan elements specified in parts R1.1 through R1.9. As such, Texas RE recommends revising the VSLs to make clear that the each violation threshold applies for TOPs not including required elements in their plan. For example, the Lower VSL should read: "The [TOP] has an approved plan, but the plan is missing one of the required elements specified in the requirement parts within Requirement R1."

EOP-006: Please see the comments on EOP-006-3, R1 above. The proposed VSLs do not address a RC's maintenance obligations under R1.

EOP-008: The Requirement R2 Severe VSL should say "control locations".

Comment	

In EOP-005-3 the effective date of the restoration plan should be defined. Requirement R4 only takes into account the update and the submittal of the TOP plan to the RC for approval. Requirement R4 does not define the effective date of the TOP plan. On reading between the lines, it can be understood that the restoration plan should be effective no more than 120 (90+30) days following an unplanned System modification and prior to the implementation of a planned System modification.

The Drafting Team should consider the addition of a phrase to Requirement R4 to indicate that the TOP plan becomes effective following its approval by the RC.

Requirement R6 of EOP-005-3 requires verification and testing of the restoration plan at least once every five years.

The *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans* recommended the re-verification or re-testing of the restoration plan when there are System changes that could impact the viability of the plan.

The Drafting Team should consider the updating of Requirement R6 according to the recommendation or explain why this recommendation was not retained.

The phrase “or an energized island has been formed on the BES within the Reliability Coordinator Area” needs to be clarified by the Drafting Team regarding Requirement R1 of EOP-006-3.

The spirit of this standard applies most notably to coordination between Reliability Coordinators and between the Reliability Coordinators and their Transmission Operators. Does the “energized island” refer to an island formed that bridges boundaries between two TOPs or an island formed within one TOP in the Reliability Coordinator Area? Is the formation of the island solely in the context of a partial outage?

EOP-005-3 in Section C, 1. Compliance Monitoring Process, that the data/retention time frame for R1 (first bullet) is since the “last monitoring activity”. This is a moving target for tracking evidence retention. EOP-006-3 does not have the same retention period for the RC similar Requirement. It remains as the “last compliance audit”. Would suggest that the drafting team return the retention language for EOP-005-3 R1 back to the ‘last compliance audit’.

The webinar for Project 2015-08 mentioned that the proposed revisions to EOP-005 and -006 to address the Recommendations from the ***FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.*** In that regard, Recommendation #2 stated:

2. Verification/testing of modified restoration plan. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably, i.e., when needed to ensure that the restoration plan, when implemented, allows for restoration of the system within acceptable operating voltage and frequency limits. In considering such measures, the types of system changes that could impact reliable implementation of the restoration plan should be taken into account (e.g., identification of a new blackstart generator location or on redefinition of a cranking path). **[Section IV.G]**

R6 states that: "Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years…."while **M6** goes on to state that: "Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with **R6**."

If the SDT's intent is to have the Transmission Operator verify its plan following an update triggered by **R4**, then APS recommends requirement R6 be revised to more clearly indicate this expectation as follows:

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years or as triggered by a revision to its restoration plan following a System modification as defined under requirement R4. Such analysis, simulations or testing shall verify:…"

Under Project 2015-08, EOP-005-3 states that organizations will be required to obtain electronic confirmation/verification evidence (receipts) from entities when plans have been transmitted. This will be a challenge considering industry organizations have no control over the entities process once the plans have been received. LCRA is under the position to submit a negative vote with the proposed written revisions until further thought is given and changes are made to remove this requirement

1. In R2 and M2 of EOP-005-3, it is not clear who "their" is referring to in each statement.

2. There are several references to 15 calendar months throughout EOP-005-3. Changing the time period to 15 months does not enhance reliability but does have other negative impacts. In R3, entities already have a set period identified by their RC as to when their restoration plans are due. In R8, changing the requirement from annually to 15 months adds a significant level of complexity by requiring tracking of individual rolling time windows for each operator.

3. In R8.5 of EOP-005-3, training operators on the transition back to normal operations does not provide a reliability benefit commensurate with the level of effort required to develop training. In addition, operator training content is established using the Systematic Approach to Training as required by PER-005-2, R1. Adding training requirements outside of SAT and the PER standard is contrary to the intent of PER-005 and the philosophy of the systematic approach.

Texas RE noticed EOP-005-3 Requirement R2 only appears to only apply when there is a change to entities' roles. Texas RE is concerned those entities where there is not a change would not receive an updated restoration plan and thus have a different plan than other entities. Texas RE recommends providing an updated restoration plan to all entities identified in the plan if there are any changes to the plan. There should be information indicating a change or "no change" in the roles.

Texas RE noticed the term "system" is not capitalized in EOP-005-3 Requirements R1.1 and R1.2, but it is capitalized in the RSAW. Since "system" is a defined term in the NERC Glossary, and to be consistent with the RSAW, Texas RE recommends capitalizing the term.

Texas RE noticed EOP-005-3 is uses the term "Disturbance" but EOP-006 has no reference to a "Disturbance". Texas RE inquires as to why EOP-006-3 does not mention "Disturbance".

Texas RE is concerned with the language in EOP-005-3 Requirement R9 that says: "that are outside of their normal tasks". Specific system restoration training should always take place regardless of whether or not the unique tasks are outside [System Operators'] normal tasks". Texas RE is concerned training might not take place if registered entities do not consider System restoration a unique task.

Texas RE requests, in the future, that a full redline be provided for every project. If it is not clear what changed, the requirement language cannot be fully evaluated. Also, Texas RE requests rationale for the changes.

We support NPCC's comments. In addition we have the following comments. Comments regarding EOP-006-3 and the concept of "energized island": The phrase “or an energized island has been formed on the BES within the Reliability Coordinator Area” should be clarified by the Drafting Team regarding Requirement R1 of EOP-006-3. As argued in question 1, we support this concept in EOP-006-3 and would like this concept extended to EOP-005-3. However, we would like the concept to be clarified in order to set clear expectations and a common understanding around this concept. We note, for example, that the spirit of EOP-006-3 applies most notably to coordination between Reliability Coordinators and between the Reliability Coordinators and their Transmission Operators. RC- RC : As phrased, would an island on the BES that lies across two RC boundaries trigger R1? The third sentence implies the affirmative. If so, it could be clearer to replace the "within the RC Area" by "within **or partly within** the RC Area" or some other variant. RC -TOP : Does the concept of “energized island” distinguish an island that bridges boundaries between two TOPs and an island formed within one TOP in the Reliability Coordinator Area? Is the formation of the island in R1 solely in the context of a partial outage?

<u>Comments on EOP-005-3 – System Restoration from Blackstart Resources</u>

EOP-005-3 R1:

Each Transmission Operator shall ~~have~~ develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shuts down~~ shutdown area to service. ~~To a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.~~

Comment:

a) The wording *"develop and implement"* has led to some confusion among entities who only see the requirement (the first sentence) and do not take into account the rest of the requirement and also the measurement of compliance associated with the requirement.

   M1 states: Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other communication documentation to show that its restoration plan was <u>implemented</u> for times when a Disturbance has occurred, in accordance with R1.

   Recommend improved language for EOP-005-3 R1 to alleviate the confusion and provide clarity for the requirement. Such as "maintain" or "make effective," in any case, I believe that the SDT should further define the meaning of "implement" in the requirement.

b) Keep the language *"To a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System."* As *"to restore the ~~shuts down~~ shutdown area to service,"* could have broader implication for restoration of every part of the system down to what level of distribution?

EOP-005-3 R9:

*Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as **performing unique tasks associated with the Transmission Operator's restoration plan that are outside their normal tasks.***

Comment:

a) Recommend improved language adding clarity to the term "unique tasks" – what does this mean? Does this mean restoring islands, synchroscopes, and restoring station power? Or?

<u>Comment on EOP-006-3 – System Restoration Coordination</u>

a) This NERC standard is applicable to Reliability Coordinators therefore I have no comments.

<u>Comment on EOP-008-2 – Loss of Control Center Functionality</u>

See *Draft 1 of EOP-008-2 June 2016:* "Section C. Compliance 1.2 Evidence Retention Bullet #7 page 8 of 15"

Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current and previous calendar years ~~and one previous year,~~ such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement 7.

Comment:

a) Requires a rework of the language related to the retention of evidence as "previous calendar years" is ambiguous and open to interpretation. Recommend that language related to the retention of evidence be consistent throughout the NERC standard. That is, "…shall retain evidence for the time period since its last compliance audit."

SCANA/SCE&G Survey Responses

Questions

1. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-005-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   No

   Comments:

   a. Most training is conducted on a yearly basis, with certain training required every year. Our training consists of five cycles of training classes. Each cycle is six weeks in order to get all of the operators through each training cycle. At times we conduct specific required training in one cycle verses another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if they System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, "at least once each 15 calendar months" it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training were required annually. That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

   b. The revision to EOP-005 R8 adds the requirement R8.5 "Transition to Balancing Authority for Area Control Error and Automatic Generation Control." We agree with the addition of this requirement and think required training in this area would be good for the industry. One possible concern with the proposed language has to do with when the TOP returns control of the BA Area back to the BA, the BA isn't necessarily going back to Automatic Generation Control right away. Our suggestion would be to reword R8.5 to say, "Transition to Balancing Authority ensuring adequate Area Control Error (ACE) configuration and generation control"

2. Do you agree with the retirements proposed in EOP-005-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   No

   Comments:

Retirement of Requirement 8 removes the requirement for the TOP to seek approval from the RC before resynchronizing areas. Requiring the TOP to coordinate with the RC ensures adequate coordination will occur in order to maintain a reliable system during restoration and therefore it should remain a requirement.

Maybe add subpart to R1 to clarify RC approval of re-synchronization of islands if R8 is removed.

3. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

No

Comments:

a. Most training is conducted on a yearly basis, with certain training required every year. Our training consists of five cycles of training classes. Each cycle is six weeks in order to get all of the operators through each training cycle. At times we conduct specific required training in one cycle verses another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if they System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, "at least once each 15 calendar months" it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training were required annually. That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

b. EOP-006-3 R1 states: Each Reliability Coordinator shall develop, *maintain*, and implement..
EOP-005-5 R1 states: Each Transmission Operator shall have develop and implement..
We recommend 'develop and implement' language in EOP-005-3 R1 be used in EOP-006-3 R1 also for consistency among the two standards.

4. Do you agree with the retirements proposed in EOP-006-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

No

Comments:

a. One of the most important jobs of the Reliability Coordinator during system restoration is to ensure proper coordination is occurring between TOPs and Reliability Coordinators. Lack of coordination could have a large impact on system reliability during system restoration. The requirement that the RC coordinate or authorize resynchronizing of islands should remain. In the next requirement (old R9) the RC is even required to train on "The coordination role of the Reliability Coordinator and Reestablishing the Interconnection". It seems to be in conflict for the RC to train on the coordination role but not require the TOP to coordinate with the RC when resynchronizing areas (proposed removal of EOP-005 R8) and not require the RC to coordinate the resynchronization of with neighboring TOPs and RCs.

5. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-008-1? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

No

Comments:

"Any changes to any part of the Operating Plan" could mean that something as simple as a title change, organizational name change, or phone number change could trigger an update or approval of the Operating Plan. The drafting team should take this opportunity to clarify R5.1 in order to require that only substantive changes in the Operating Plan or changes that change the ability to implement the operating plan require an update and approval of the operating plan outside of the normal review cycle.

6. Do you agree with the Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for the requirements in the proposed standards? If you do not agree, or if you agree but have comments or suggestions for the VRFs and VSLs your recommendation and explanation.

Yes

Comments:

EOP-005-3:

a. All R3 VSLs should be revised to read as 'mutually agreed upon'.
b. R4: High VSL should be revised to read as 'between 121 calendar days and 150 calendar days…'.

7. Please provide any additional comments for the EOP Standard Drafting Team to consider, if desired.

Use the electronic form to submit comments on **Project 2015-08 Emergency Opreations; EOP-005-3 – System Restoration from Blackstart Resources, EOP-006-3 – System Restoration Coordination, and EOP-008-2 – Loss of Control Center Functionality**. The electronic form must be submitted by **8 p.m. Eastern, Friday, August 12, 2016.**

Additional information is available on the project page. If you have questions, contact Standards Developer Manager, Sean Cavote (via email), or at (404) 446-9697..

Background Information

Project 2015-08 Emergency Operations (EOP) implements the recommendations of the Project 2015-02 Periodic Review Team (PRT) that resulted from the PRT's review of a subset of EOP Standards. The PRT comprehensively reviewed EOP-004, EOP-005, EOP-006 and EOP-008 to evaluate, for example, whether the requirements are clear and unambiguous.

The Periodic Review also included background information, along with associated worksheets and reference documents, to guide a comprehensive review that resulted in a Standard Authorization Request (SAR) based on the following PRT's recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 –Revise the standard; and
- EOP-008-1 – Revise the standard.

The four NERC Reliability Standards in the Periodic Review project concerned methodologies for restoring, reporting, and communicating Emergencies. Implementation of revisions and retirements recommended by the EOP PRT clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards, while making the standards more Results-based.

Questions

1. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-005-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

☐ Yes
☒ No

Comments:

Requirement R4: The proposed changes to R4 cause concern for FirstEnergy. The existing FERC approved requirement R4 requires notification by a Transmission Operator (TOP) to its Reliability Coordinator (RC) for a "permanent" system modification (planned or unplanned) "that would change the implementation of its restoration plan." The proposed revisions by the drafting team, while well intended, shifts the emphasis to changes that affect "ability to implement" the TOP restoration plan regardless of whether or not the system modification (planned or unplanned) is temporary or permanent. This change would cause numerous re-writes of restoration plans by TOPs and approval reviews by RCs resulting from planned maintenance outages of BES transmission facilities (lines, transformers, generators, etc.), many of which are short duration outages. FirstEnergy believes it is important to retain the "permanent" modification aspect of the existing FERC approved requirement. The proposed change results in an overly burdensome requirement without significant improvement to BES reliability.

FirstEnergy does support the intended 90-day notification for unplanned changes and the minimum 30-day lead-time from the effective date of planned changes.

FirstEnergy proposes the requirement be written as follows:

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications that would change the implementation of its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications.

4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

A red-line version of our proposed changes is provide in the attached version of FE comments.

FE Propopsed R4 - Redline to Draft 1: R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications that would change the ~~ability to~~ implemention of its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning] 4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications. 4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

2. Do you agree with the retirements proposed in EOP-005-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

1. Do you agree with the revisions and clarifications made by the EOP Standard Drafting Team to standard EOP-005-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Thomas Foltz - AEP - 5	
Answer	No
Comment	

While AEP supports the overall direction and efforts of this project team, we have chosen to vote negative on EOP-005-2. Our negative vote is driven by our concerns regarding the obligation to reissue the entire restoration plan 30 days prior to the Transmission Operator's implementation of planned System modifications, even for minor revisions.

The proposed thirty-day window in R4 would be a difficult time frame to meet in many instances. Many jobs that are not directly created for the restoration plan, yet affect its restoration sequence, are often scheduled. However, these jobs are often rescheduled due to weather, system conditions or conflicting scheduled outages. Due to the possibility of multiple system improvements that may occur, which are either completed ahead of schedule or delayed during those 30 calendar days, we believe an accurate plan could not be maintained for the system operators. One option would be an addendum sheet that would contain the incremental changes and their implementation date, which could then be followed by a quarterly update to the restoration plan. This addendum sheet would be provided to all of the RTO and all the affected parties.

As the restoration plan is a voluminous document, AEP proposes to communicate with the RC only on the incremental changes (which could be only few sentences) rather than reissuing the entire, voluminous document.

AEP suggests modifying the proposed revision of R4 as suggested above, as well as completely eliminating the proposed R4.2.

Response

Thank you for your comments: The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2: **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1.** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2.** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006. The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Kelly Silver - Con Ed - Consolidated Edison Co. of New York - 1, Group Name Con Edison	
Answer	No
Comment	
The definition of a Balancing Authority is "The responsible entity that integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real time." During restoration, the local TO or TOP isolated island operations are not synchronized to the interconnection so they cannot support the	

interconnection frequency. Therefore, by definition, EOP-005-3 Parts 1.9 and 8.5 which refer to transference of Balancing Authority should be removed. Balancing Authority functions will always reside with the designated Balancing Authority, even when operating as an isolated island. EOP-005-3 Parts 1.9 and 8.5 which refer to transference of Balancing Authority should be removed. They are not universally applicable, and where applicable a variance should be made. Balancing Authority functions will always reside with the designated Balancing Authority.
Response
Thank you for your comments. The EOP SDT added the BA due to the recommendations resulting from the Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans. It is up to the TOP to define in their restoration plan how to interact with the BA v. designated BA. Requirement 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of BA is: “The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.” In response to industry comments, the EOP SDT has revised the language in Requirement R1 Part 1.9, since the BA does not relinquish any BA authority to the TOP. Revised language: “1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator’s criteria.”

Si Truc Phan - Hydro-Qu?bec TransEnergie - 1 - NPCC	
Answer	No
Comment	
In the first sentence of Requirement R1 the proposed revision is to have the Requirement read that “Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator.” However, to be consistent with the language that is already being proposed for EOP-006-3 Requirement R1 the revision should read that each Transmission Operator “shall develop, maintain and implement” a restoration plan approved by its Reliability Coordinator. The wording proposed for EOP-006-3 should be used in EOP-005-3.	

There is no reference to the formation of a BES island in EOP-005-3 Requirement R1 as there is in EOP-006-3 Requirement R1 (“or an energized island has been formed on the BES”). The Drafting Team should consider its inclusion in EOP-005-3 or its removal from EOP-006-3. Requirement R4 should be clarified to limit the type of System modifications that would require an update to the restoration plan solely to permanent System modifications that would change the Transmission Operator’s ability to implement its restoration plan.System modifications should be clearly defined. It should be limited to transmission and generation components. A definition of System modification should be added to the NERC Glossary. EOP-005-3 Parts 1.9 and 8.5 which refer to transferring of Balancing Authority authority should be removed. They are not universally applicable, and where applicable a variance should be made. Balancing Authority functions will always reside with the designated Balancing Authority.
Response
Thank you for your comments. The EOP SDT agrees that the language for Requirement R1 should be consistent across EOP-005-3 and EOP-006-3 and will revise EOP-006-3 to remove the word ‘maintain’. In EOP-005-3, ‘implement’ replaces Requirement R7; ‘maintain’ is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, ‘implement’ replaces Requirement 7; and ‘maintain’ is captured in Requirements R3 and R5. The EOP SDT discussed the suggestion to add energized islands to EOP-005-3, but believes the purpose of EOP-005-3 is to enable System Restoration from Blackstart Resources (purpose statement); and, therefore, decided it wouldn’t be appropriate to add this to EOP-005-3. The intent was that the TOP update its restoration plan when BES modifications need to be made that affect its ability to implement its restoration plan as describe in the Requirement R1 parts, not that the TOP has to make updates for minor revisions, such as element number changes or device changes that have no significance to the implementation of the plan. The EOP SDT revisions now provide clarity and separated “planned” and "unplanned” in Requirement R4 Parts 4.1 and 4.2. In Requirement 4 Part 4.2, the EOP SDT also added “subject to the RC approval requirements per EOP-006” to align the timing requirements of the RC approval.

In response to industry comments, the EOP SDT has revised the language in Requirement R1 Part 1.9, since the BA does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria." The EOP SDT discussed that 1.9 is needed to be incorporated into the TOP's Plan. Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the* Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.	
Amy Casuscelli - Xcel Energy, Inc. - 1,3,5,6 - MRO,WECC,SPP RE	
Answer	No
Comment	
Xcel Energy feels that the verbiage change from "Annual" to "at least every 15 months" in R3 and R8 is unnecessary, does not improve the standard, and is not consistent with numerous other standards that currently contain "Annual" requirements.	
Response	
The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".	
Diana McMahon - Salt River Project - 1,3,5,6 - WECC	
Answer	No
Comment	

The language to "implement" the system restoration plan has the potential to create confusion within the industry. Implementation of the a restoration plan would require a system outage to be compliant. Language should be adjusted to represent the intent of the SDT.	
Response	
In EOP-005-3, 'implement' replaces Requirement R7: "Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected TOP shall implement its restoration plan…"	
Emily Rousseau - MRO - 1,2,3,4,5,6 - MRO, Group Name MRO-NERC Standards Review Forum (NSRF)	
Answer	No
Comment	
Although generally supportive of the revisions made by the drafting team, the NSRF has concerns with the following requirements. 1.) **R1** - In consideration that developing and implementing a restoration plan represents two separate actions required by TOPs, we recommend the following change to R1 in order to clarify when the restoration plan is intended to be implemented. "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas…" 2. R8.5 needs to reworded. We understand the intent, which we agree with. Recommend from "Transition to Balancing Authority for Area Control Error and Automatic Generation Control" to "Transition back to Balancing Authority control for Area Control Error and Automatic Generation Control". This clearly states that a hand-off of responsibilities is warrented at the end of system restoration. 3.) We recommend retaining the current R1 language "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission	

Operator's System." We are concerned that deletion of the qualifying clause at the end of R1 will require an expansion of scope for all current Blackstart restoration plans.

Without the qualifying language, Transmission Operators are required to have a restoration plan for restoring the TOP's System, with Blackstart Resources required to restore the "shutdown area to service" without any qualification or limit to the "shutdown area" short of the TOP's entire BES "System."

In the worst case scenario when there is a total black out of the system the plan would have to be quite large. It would be difficult to cover all the variables and conditions that could likely be encountered. Maintenance of such a plan would be very difficult leading to compliance issues.

Possible alternative language: "The restoration plan shall allow for restoring the Transmission Operator's System following a disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to start generation for the restoration of the shutdown area to service."

4.) The replacement of "annual" with "at least once each 15 calendar months" in R3 & R8 introduces additional unnecessary administrative tracking requirements, restricting entities to submission or training, respectively, within a moving 4-month compliance window vs. the current flexibility of the entire calendar year. Demonstrating compliance would now require comparison with the previous completion date vs. showing annual accomplishment.

What is the justification for this complication? Preventing a possible interval of up to 23 months? What is the reliability risk of a 23-month interval vs. a 15-month interval? Such an occurrence would be self-correcting under the current annual requirement. If R3/8 were accomplished in Jan. 2018, and not again until Dec. 2019, the next occurrence would be required in Dec. 2020, no more than 12 months later, and earlier than the proposed new requirement of 15 months.

5. R4 – With Transmission Operators required to submit their updated restoration plan to the RC "no less than 30 calendar days prior to…planned System modifications", we are concerned the new timeframe may require TOPs to maintain two versions of their restoration plan in the control room due to confusion in terms of which restoration plan is considered valid while awaiting energization of a planned System modification.

As an example, a System modification impacting the restoration plan is scheduled to occur on September 1st so a TOP submits an updated plan to their RC on July 29th. The RC reviews and approves the plan on August 19th. To comply with EOP-005 R2 and R5 which require the TOP to provide the plan to System Operators and identified entities "prior to the effective date", the TOP distributes the newly approved plan on August 24th. Since the System modification is still over a week away from energization, which RC-approved restoration plan is considered valid?

6. R4 – Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications, …..

By inserting the previously included word "permanent" it is clear that the intent is for those permanent modifications that affect the restoration plan and not those temporary modifications that may come about due to temporary reconfiguration of the system such as may occur due to storm damage, etc.

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented** to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

Requirement 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time."

To address industry comments, the EOP SDT will be retaining the language in Requirement R1 from EOP-005-2 that states: "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System."

The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R1: Recommend retaining "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." Helps to provide guidance for an end point to the plan.

R8. Deletion of Requirement 8 is not advised. The Reliability Coordinator must play a defined role when establishing ties. It's the RC's role to ensure each Transmission Operator's System is ready for the connection. R8.5 The Restoration Plan is not intended to go to the extent of having ACE nor AGC available. If this is required significant addition to the Restoration Plans is foreseen as not enough of the system is restored to the point where ACE and AGC will be viable. The generating units will not be in a range to be placed on AGC in the plans as written today. If training for ACE and AGC is required, then wouldn't the restoration plans need to support same? If 8.5 is retained, recommend this requirement be trained in conjunction with a Balancing Authority Operator. This may require expanding applicability of EOP-005 to BA?.
Response
To address industry comments, the EOP SDT will be retaining the language in Requirement R1 from EOP-005-2 that states: "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The RC plan in EOP-006, Requirement R1 is required to have criteria for re-establishing interconnections, and the TOP plan is required to follow the RC plan (EOP-005 R1.1). Requirement R8 is duplicative of Requirement R1, Part 1.3, which states: "Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator." Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.

ERCOT joins with the comments of the IRC Standards Review Committee (SRC). ERCOT also offers this additional point: The SDT should add a conditional phrase to the language of Requirement R1 to clarify that the restoration plan will only be implemented during an actual blackstart event. Otherwise, the requirement as written indicates that the entity must have implemented a restoration plan absent an event. As such, we recommend language that clarifies this: "Each Transmission Operator shall develop, maintain, and, in the event of a Disturbance, implement a restoration plan…"

Requirement R1 does state: "The restoration plan shall allow for restoring the Transmission Operator's System **following a Disturbance** in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service…" The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."	
Andrew Gallo - Austin Energy - 6	
Answer	No
Comment	
Austin Energy (AE) requests the SDT provide additional clarity regarding the TOP's scope of responsibility similar to EOP-006 R1. AE offers this suggestion: R1. Each Transmission Operator shall develop a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the BES shuts down and the use fo Blackstart Resources is required to restore the affected area to service. Each Tranmission Operator shall implement	

its restoration plan when necessary to restore the portion of the BES under its control and interconnect with neighboring areas. If the Transmission Operator cannot execute the restoration plan as expected, it shall use its restoration strategies to facilitate restoration.

AE requests the SDT clarify R4.2. As written currently, it may imply restoration plans must be updated prior to any outage including short-term maintenance outages. AE does not believe such an action is necessary. Other Transmission Operators and the Reliability Coordinator are notified of temporary outages through local outage-related requirements. Additionally, AE does not believe the requirement clearly defines when the plan must be updated.

AE makes the following suggestions:

R4. Each Transmission Operator shall update, and submit to its Reliability Coordinator for Approval, its restoration plan to reflect System modifications which change its ability to implement its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modification; and

4.2. No less than 30 calendar days prior to the date on which the Transmission Operator energizes a permanent System configuration change.

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.3 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.4 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Most training is conducted on a yearly basis, with certain training required every year. For example, TVA has three cycle training classes lasting seven weeks each cycle in order to get all of the operators through the training. At times it makes more sense to conduct specific required training in one cycle versus another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if the System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, “at least once each 15 calendar months” it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training was required “once per calendar year.” That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

The revision to EOP-005 R8 adds the requirement R8.5 - “Transition to Balancing Authority for Area Control Error and Automatic Generation Control.” TVA agrees with the addition of this requirement and thinks required training in this area would be good for the industry. One possible concern with the proposed language has to do with when the TOP returns control of the BA Area back to the BA, the BA isn’t necessarily going back to Automatic Generation Control right away. Our suggestion would be to reword R8.5 to say, “Transition to Balancing Authority ensuring adequate Area Control Error (ACE) configuration and generation control.”

Response

The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”.

Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: “The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.” Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the* Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.

Comment		

Comment on R3 & R3.1: ATC recognizes that FERC previously approved the retirement of R3.1. However, we recommend that the R3 language be changed to not require annual submission of the entire plan if no material have occurred. Requiring submission and RC response for these instances provides, in ATC’s opinion, little value to reliability. The standard should permit notification to the RC that the plan has not changed from the previous submission. As such, we propose that R3 be modified to read:

Each Transmission Operator shall review its restoration plan *for any substantive change,* and submit it to its Reliability Coordinator at least once each 15 calendar months on a mutually agreed, predetermined schedule *or notify its Reliability Coordinator that no sustative change occurred requiring approval of a new version of the TOP restoration plan*.

Comment on R4: As the SDT notes, TOPs should not have to submit a revised restoration plan to the RC to account for temporary changes to the system. However, the proposed edits to the standard language do not provide this clarity because R4.2 pulls in all planned modifications to the system, such as temporary configurations for construction or maintenance, that are not in view under the current EOP-005-2 R4 language. The new language pulls in these types of situations since the actual implementation of the plan in an event may be affect by construction activities (e.g., lines temporarily tied together) such that a different line gets used for a restoration path covered by R1.5 (i.e. very specific switching paths have to be identified in the plan). Today’s R4 is better suited to the realities of temporary construction activities where the plan does not need to be submitted to the RC for review because the plan already conceives of the potential for paths to not be available (see EOP-005-2 R7) such that the TOP would then use its restoration strategies to accomplish the restoration task. The SDT changes do not improve reliability. Rather, they add administrative burden without reliability benefit.

R4 recommendation: language should read "reflect *permanent* System modifications" to avoid pulling in temporary configurations needed to support maintenance or construction.

R4.1 recommendation: language should read "unplanned *permanent* System modifications" to avoid pulling in temporary configurations needed to support maintenance or construction.

R4.2 recommendation: language should read "planned *permanent* System modifications" to avoid pulling in temporary configurations needed to support maintenance or construction.

Comment on new R8.5: The proposed language for R8.5 is too specific for the standard. ATC recommends that R8.5 just read, "Transition to Balancing Authority".

Response

Thank you for your comment but the EOP SDT will be retaining the language in Requirement R3 to ensure its restoration plan was reviewed and submitted.

For Requirement R4, Part 4.2 to pair together with EOP-006 Requirement R5, Part 5.1, the TOP couldn't submit planned changes less than 30 days in advance; to conform with the 30 days the RC has to review the Operating plan in EOP-006, Requirement R5, Part 5.1. There should only be one effective plan in place.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

> **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*
>
> **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications.
>
> **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements. R1 should require a plan and define what needs to be in the plan. The proposed R1 should be modified to replace "develop and implement" with "have". R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan.

In R4 we request the re-insertion of the word 'permanent' into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon 'permanent' System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for ‘permanent’ system modifications. As stated, they require updates to be made for ‘any’ system modification no matter how small or impactful.

R6 should be modified to clarify that the dynamic simulation or testing requirement only applies to the initial Cranking Path from the Blackstart Resource to the next generator including whatever stabilizing loads are required. As written it could be interpreted that dynamic simulation/testing is required to verify that the loads (R6.2) and generation (R6.3) have the capability to control voltages and frequency within acceptable operating limits to accomplish the intended function of the plan. The intended function of the plan is outlined in R1 and includes transferring authority back to the BA. It would be unduly burdensome to perform dynamic simulations for each step in the process to get to this point. Also, it would be impossible to perform an actual test of the plan to this point since it would require creating a blackout to accomplish.

In the data retention section for R1, it is not clear what the change to ‘monitoring activity’ means. It previously clearly stated data must be kept since the last ‘compliance audit’. ‘Monitoring activity’ is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. “The restoration plan <u>**shall be implemented to restore**</u> the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service.”

In EOP-005-3, ‘implement’ replaces Requirement R7; ‘maintain’ is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, ‘implement’ replaces Requirement 7; and ‘maintain’ is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that “*have a restoration plan*,” is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language “develop and implement” is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

The EOP SDT revised the rationale box of Requirement R6 based on industry comments to provide clarity. It now reads, "Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added." The EOP SDT made no substantive changes to Requirement R6 from EOP-005-2, Requirement R6.

In the Data Retention section, 'monitoring activity' has been changed back to 'compliance audit' to address comments received by industry.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

> **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*
>
> **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications.
>
> **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

The EOP SDT revised the rationale box of Requirement R6 based on industry comments to provide clarity. It now reads, "Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added." The EOP SDT made no substantive changes to Requirement R6 from EOP-005-2, Requirement R6.

In the Data Retention section, 'monitoring activity' has been changed back to 'compliance audit' to address comments received by industry.

Comment

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements. R1 should require a plan and define what needs to be in the plan. The proposed R1 should be modified to replace "develop and implement" with "have". R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan.

In R4 we request the re-insertion of the word 'permanent' into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon 'permanent' System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for 'permanent' system modifications. As stated, they require updates to be made for 'any' system modification no matter how small or impactful.

R6 should be modified to clarify that the dynamic simulation or testing requirement only applies to the initial Cranking Path from the Blackstart Resource to the next generator including whatever stabilizing loads are required. As written it could be interpreted that dynamic simulation/testing is required to verify that the loads (R6.2) and generation (R6.3) have the capability to control voltages and frequency within acceptable operating limits to accomplish the intended function of the plan. The intended function of the plan is outlined in R1 and includes transferring authority back to the BA. It would be unduly burdensome to perform dynamic simulations for each step in the process to get to this point. Also, it would be impossible to perform an actual test of the plan to this point since it would require creating a blackout to accomplish.

In the data retention section for R1, it is not clear what the change to 'monitoring activity' means. It previously clearly stated data must be kept since the last 'compliance audit'. 'Monitoring activity' is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Response

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

The EOP SDT revised the rationale box of Requirement R6 based on industry comments to provide clarity. It now reads, "Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added." The EOP SDT made no substantive changes to Requirement R6 from EOP-005-2, Requirement R6.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. In the data retention section for R1, it is not clear what the change to 'monitoring activity' means. It previously clearly stated data must be kept since the last 'compliance audit'. 'Monitoring activity' is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall

approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements. In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1. In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. Most training is conducted on a yearly basis, with certain training required every year. Our training consists of five cycles of training classes. Each cycle is six weeks in order to get all of the operators through each training cycle. At times we conduct specific required training in one cycle verses another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if they System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, "at least once each 15 calendar months" it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training were required annually. That way the operators would	

receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed. The revision to EOP-005 R8 adds the requirement R8.5 “Transition to Balancing Authority for Area Control Error and Automatic Generation Control.” We agree with the addition of this requirement and think required training in this area would be good for the industry. One possible concern with the proposed language has to do with when the TOP returns control of the BA Area back to the BA, the BA isn’t necessarily going back to Automatic Generation Control right away. Our suggestion would be to reword R8.5 to say, “Transition to Balancing Authority ensuring adequate Area Control Error (ACE) configuration and generation control”
Response
The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”. Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: “The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.” Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.

Under Project 2015-08, EOP-005-3 states that organizations will be required to obtain electronic confirmation/verification evidence (receipts) from entities when plans have been transmitted. This will be a challenge considering industry organizations have no control over the entities process once the plans have been received. LCRA is under the position to submit a negative vote with the proposed written revisions until further thought is given and changes are made to remove this requirement.	

Response

Measure M2 is stating that you have a receipt verifying any changes to the roles and specific tasks in the restoration plan. It does not speak to the entities' process once received. Dated electronic receipts and registered mail receipts are provided examples of possible verification.

In the first sentence of Requirement R1 the proposed revision is to have the Requirement read that “Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator.” However, to be consistent with the language that is already being proposed for EOP-006-3 Requirement 1 the revision should read that each Transmission Operator “shall develop, maintain and implement” a restoration plan approved by its Reliability Coordinator. The wording proposed for EOP-006-3 should be used in EOP-005-3.

Requirement R4 should be clarified to limit the type of System modifications that would require an update to the restoration plan solely to permanent System modifications that would change the Transmission Operator’s ability to implement its restoration plan.

A definition of System modification should be added to the NERC Glossary. Or Instead of the expression “System Modifications” in R4, “BES modifications would be a better choice. The NERC Glossary definition of BES includes “Blackstart Resource” in its inclusion list. I3 – Blackstart Resources identified in the Transmission Operator’s restoration plan.
Response
The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. “The restoration plan <u>**shall be implemented to restore**</u> the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service.” In EOP-005-3, ‘implement’ replaces Requirement R7; ‘maintain’ is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, ‘implement’ replaces Requirement 7; and ‘maintain’ is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1. In this industry it is widely understood that “*have a restoration plan*,” is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language “develop and implement” is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2: **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Michael Cruz-Montes - CenterPoint Energy Houston Electric, LLC - 1 - Texas RE	
Answer	No
Comment	
CenterPoint Energy appreciates the SDT's time and effort towards the improvement of the System Restoration from Blackstart Resources Standard and is generally amenable to the proposed revisions. CenterPoint Energy would like the SDT to consider the following changes to EOP-005-3. In R1, for consistency between the proposed EOP-005-3 and EOP-006-3 standards, CenterPoint Energy suggests the SDT align the proposed language in both R1s to be the same and use either, "develop and implement", or "develop, maintain, and implement". Also, we are concerened that removal of the validation clause, "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage" expands the scope of a restoration plan. We suggest the addition of language regarding the plan's intended function of restoring the interconnecton and recommend the following: "The restoration plan shall accomplish its intended function allowing for restoration of the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service." Without such additional language, a TOP could be expected to include in its retoration plan, steps to restore every Facility in its entire system. Furthermore, we support the retirement of R7, but believe that the language, "If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration" should be retained in the proposed R1. This language provides a TOP the flexibility to make adjustments to its restoration efforts based on Real-time System conditions and Facility availability regardless of contingency. Considering all of CenterPoint Energy's comments R1 would state: "Each Transmission Operator shall develop, maintain, and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall accomplish its intended function allowing for restoration of the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. The restoration plan shall include:" In R4.2, to further clarify and to better align with the SDT's proposed changes in R2, we suggest the SDT replace, "No less than" with "At least" and also replace "implementation of" with "effective date of ". The requirement would then read, "R4.2. At least 30 calendar days prior to the Transmission Operator's effective date of the planned System modifications." CenterPoint Energy also believes that the proposed EOP-005-3 R8 (currently enforceable EOP-005-2 R10)	

along with its sub-requirements 8.1, 8.2, 8.3, 8.4, and 8.5 should be retired as they are inherent to the systematic approach to training processes. It is not that the requirements are duplicative, but rather that they are already incorporated in the training and periodicity of training that would be identified in a TOP's PER-005-2 analysis for company-specific reliability-related tasks. The criteria required to be included in the restoration plan outlined in R1.1 thru R1.9 further ensures that specific training content would be provided on system restoration and maps to the content being required in R8.1. R8.2, R8.3, R8.4, and R8.5. Retirement of R8 and its sub-requirements does not eliminate reliability-related task training on System Restoration from Black Start Resources. This rationale was applied in the recent revisions to PRC-001-1.2 (Project 2007-06.2) and industry approval of PER-006-1 to which training related requirements for the TOP were mapped out and retired. CenterPoint Energy urges the SDT to consider soliciting assistance and guidance from the PER-005 SDT and members from the training sector in the industry to assist in this matter.

Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

The EOP SDT held extensive discussions on Requirement R10. Requirement R10 is being retained in EOP-005, as it is specific training with high impact, low occurrence. The PER-005 standard entails more of training processes.

In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Comment

(1) R1 now includes "develop and implement" a restoration plan for the TOP. Measure M1 now calls out for evidence of implementation, including operator logs or voice recordings. This practice of including two actions, having a plan and implementing that plan, in a single requirement allows for additional scrutiny from an auditor. Our biggest concern is that R1 has nine sub-parts,

which can now be reviewed under two filters – is it documented and does the entity have proof that they implemented it. We ask the SDT to consider modifying the requirement so evidence of implementation is separate from each of the nine sub-parts.

(2) We question the need for a change in R2 and R5 from "implementation date" to "effective date." They appear synonymous.

(3) We agree with the modification to R3 and R8 to remove the word "annually" and replace it with "at least once every 15 calendar months," as this aligns with several other NERC standards. We also agree with the removal of sub-part 3.1, as this was administrative in nature.

(4) Requirement R4 now requires the TOP to submit its restoration plan to the RC no more than 90 calendar days after identification of any unplanned system modification and no less than 30 calendar days prior to the TOP's implementation of planned system modifications. We question why the planned modifications were added to the requirement, as the TOP will be providing planned outages and other information to the RC already.

(5) Requirement R8 (formerly R10), added sub-part 8.5, which now includes the TOP to have training every 15 calendar months on the "transition to BA for ACE and AGC." We recommend modifying the phrase to "coordinate with the BA for restoration activities." The word "transition" could be misinterpreted that the TOP completely transfers their role to the BA in system restoration.

(6) Measure M10 (formerly M12), removed training records as proof of participation in restoration drills. Why was that type of evidence removed? It seems like the most straight-forward way to prove compliance with the requirement. Further, training records are still listed in M16 for GOP participation in restoration drills. This should be consistent throughout the standard.

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The SDT interprets "effective date" to refer to a plan that is approved and ready for implementation. The "Implementation date" of any given plan pertains to any given use of a restoration plan by an entity.

The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall

approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements. Requirement 8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the [Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans](). Measure M10 was revised for consistency to the language of the requirement, which is a requirement for restoration drills, exercise, or simulations.	
Richard Vine - California ISO - 2	
Answer	No
Comment	
R1: For the purposes of managing internal controls, and clear internal controls ownership and tracking, consider keeping this requirement as Operations Planning horizon only and then do not remove R7 and R8. Plan development and administration is an Operations Planning function. Real Time is not responsible for development and maintenance of the plan. R4.2. Is revised to state: **4.1.4.2.** No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications. This revision takes away flexibility. Suggest that "No less than 30 calendar days prior to" be changed to "Up to 90 calendar days after implementation of planned System modifications". Planned implementation dates are often moving targets and can move earlier or later, due to construction and crew scheduling needs, and well outside of the control of the plan administrators. If changes to the restoration plan were still in progress at the time of an event, System Operators would use restoration strategies in order to determine the best course of action.	
Response	
With the clarifications the team added to include "implement," therefore, Real-Time horizon was added.	

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Comment	

Requirement R4: The proposed changes to R4 cause concern for FirstEnergy. The existing FERC approved requirement R4 requires notification by a Transmission Operator (TOP) to its Reliability Coordinator (RC) for a "permanent" system modification (planned or unplanned) "that would change the implementation of its restoration plan." The proposed revisions by the drafting team, while well intended, shifts the emphasis to changes that affect "ability to implement" the TOP restoration plan regardless of whether or not the system modification (planned or unplanned) is temporary or permanent. This change would cause numerous re-writes of restoration plans by TOPs and approval reviews by RCs resulting from planned maintenance outages of BES transmission facilities (lines, transformers, generators, etc.), many of which are short duration outages. FirstEnergy believes it is important to retain the "permanent" modification aspect of the existing FERC approved requirement. The proposed change results in an overly burdensome requirement without significant improvement to BES reliability.

FirstEnergy does support the intended 90-day notification for unplanned changes and the minimum 30-day lead-time from the effective date of planned changes.

FirstEnergy proposes the requirement be written as follows:

R4. Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect permanent System modifications that would change the implementation of its restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

4.1. No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications.

4.2. No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications.

A red-line version of our proposed changes is provide in the attached version of FE comments.

Response

Thank you for your comments. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

We suggest the following edit to R1 for clarity:

"R1 Each Transmission Operator shall **develop** a restoration plan approved by its Reliability Coordinator. The **implemented** restoration plan shall allow…"

We believe this better aligns with the intent and doesn't create confusion that potentially an entity must have experienced a blackout in order to fully comply (a need to 'implement') with R1.

In R4 we request the re-insertion of the word 'permanent' into the requirement regarding the need to update the plan. Specifically the plan should be updated and re-submitted for approval upon 'permanent' System modifications. R4.1 and R4.2 should also get some additional language clarifying that the updates should only be made for ‘permanent’ system modifications. As stated, they require updates to be made for ‘any’ system modification no matter how small or impactful.

We have a concern that R6 in combination with the changes to R1 may seem to create a conflict or confusion. The changes to R1 seem to indicate the plan now covers restoration all the way up until balancing is turned over to the BA. That would seem to describe the ‘intended function’ of the plan as stated in R6. The sub-requirements in R6 seem to indicate simulation and analysis only needs to be done on energizing the Blackstart resource and connect initial loads. Perhaps R1.8 could be rephrased to better clarify the ‘intended function’ of the plan in order to better align with R6. We do not believe the intent is for dynamic simulation to be done for the entire restoration scenario all the way up to handoff to the BA in R1.9. Perhaps R6 could be rephrased such that it states:

R6 Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes **initial restoration**.

In the data retention section for R1, it is not clear what the change to ‘monitoring activity’ means. It previously clearly stated data must be kept since the last ‘compliance audit’. ‘Monitoring activity’ is undefined and may include spot checks, audits, or any number of monitoring actions. The corresponding language in EOP-006-3 still says data must be kept since the last compliance audit. We recommend changing the language back to match EOP-006-3.

Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. “The restoration plan **shall be implemented to restore** the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service.”

In EOP-005-3, ‘implement’ replaces Requirement R7; ‘maintain’ is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, ‘implement’ replaces Requirement 7; and ‘maintain’ is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that “*have a restoration plan*,” is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language “develop and implement” is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP’s ability to implement the restoration plan or impact the RC’s ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP’s ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

The EOP SDT revised the rationale box of Requirement R6 based on industry comments to provide clarity. It now reads, “Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.” The EOP SDT made no substantive changes to Requirement R6 from EOP-005-2, Requirement R6.

In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: “1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator’s criteria.”

In the Data Retention section, 'monitoring activity' has been changed back to 'compliance audit' to address comments received by industry.

Answer	No
Comment	

Requirement R1: In the first sentence of Requirement R1, the proposed revision is to change the requirement that each Transmission Operator "shall have" a restoration plan approved by its Reliability Coordinator to state that each Transmission Operator "shall develop and implement" a restoration plan approved by its Reliability Coordinator. However, in order to be consistent with the language that is already been used in other requirements (see, e.g., the proposed revision in EOP-006-3, Requirement R1), the revision should state that each Transmission Operator "shall develop, maintain and implement" a restoration plan approved by its Reliability Coordinator. Accordingly, the ISO/RTO Council Standards Review Committee (SRC) suggests that the word "maintain" be added to the proposed revision. [CAISO does not support this paragraph.]

Requirement R4: The proposed revision in Requirement R4 requires the Transmission Operator to update and submit to its Reliability Coordinator for approval its restoration plan to reflect System modifications that would change the ability to implement its restoration plan. The requirement, however, should be clarified to indicate that the type of System monifications that would require an update to the restoration plan are only permanent System modifications that would change the Transmission Operator's ability to implement its restoration plan. Limiting the requirement to reflect permanent modifications is consistent with the Rationale for Requirement R4, which states that the intent of the revisions is to require the Transmission Operator to update its restoration plan when major modifications need to be made, and not to require the Transmission Operator to make updates for minor revisions. Without the qualifying word "permanent," the proposed revision could be read as requiring updates to the restoration plan for all System modifications that would change the Transmission Operator's ability to implement the restoration plan, even if those System modifications are not permanent (such as for planned or unplanned outages). In the event that temporary System modifications or other unforeseen system conditions prevent the Transmission Operator from implementing the restoration plan as expected, system restoration would be facilitated by implementing the restoration strategies that Requirement R1 requires to be included in the restoration plan. System modifications that would change the Transmission Operator's ability to implement the restoration plan that are not permanent are not "major." Requiring that the restoration plan be updated for such non-permanent System modifications would translate into multiple, unnecessary updates to the restoration plan. For this reason, to make the requirement even clearer, the SRC suggests that the word "permanent" (which is included in the currently enforceable version of this Requirement) be added to the proposed revision. Note that, for consistency, the word “permanent” should also be added in all the Violation Severity Levels for Requirement R4.

In addition, we suggest R 4.2. which currently states: “4.2. No less than 30 calendar days prior to the Transmission Operator’s implementation of planned System modifications” should be modified to state ”4.2. Up to 90 calendar days after implementation of planned System modifications.

Planned implementation dates are often moving targets due to construction and crew scheduling needs. It is well outside the control of the plan administrators. If changes to the restoration plan were still in progress at the time of an event, System Operators would use restoration strategies in order to determine the best course of action. [NYISO does not support this comment.]

Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. “The restoration plan <u>shall be implemented to restore</u> the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service.”

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP’s ability to implement the restoration plan or impact the RC’s ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP’s ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and

submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements. In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1. In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The stricken phrase "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." should be retained. Since R1 is specifying that the TOP shall have an SRP to restore its system, it is imperative that the TOP has a defined state at which point it knows that it has successfully achieved the requirement. The stricken language provided that. Although R1.8 contains similar language, it is in the context of information that the TOP must include in its SRP, as opposed to defining success in achieving system restoration. Compliance with R1.8 does not inform the TOP, or an auditor, that if the TOP completes the processes contained in the subrequirement, that it has successfully achieved system restoration.	
Likes 1	New York State Reliability Council, 10, ADAMSON ALAN
Response	

Thank you for your comments. To address industry comments, the EOP SDT will be retaining the language in Requirement R1 from EOP-005-2 that states: "to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System."	
Janis Weddle - Public Utility District No. 1 of Chelan County - 1,3,5,6	
Answer	No
Comment	
Putting the word "implement" in EOP-005-3, R1: "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator", is confusing. What is meant by "implement"? Public Utility District of Chelan County (CHPD) understands "implement" to mean to put the Restoration Plan into effect. The Restoration Plan is not put into effect until there is a real-time event. CHPD would prefer the sentence to read: Each Transmission Operator shall develop a restoration plan and have it approved by its Reliability Coordinator.	
Response	
The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **<u>shall be implemented to restore</u>** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service." In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1. In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The SDT interprets "effective date" to refer to a plan that is approved and ready for implementation. The "Implementation date" of any given plan pertains to any given use of a restoration plan by an entity.

Answer	No

Comment

The proposed requirement R4.2 requires TOPs to submit revised System Restoration Plans “No less than 30 calendar days prior to the Transmission Operator’s implementation of planned System modifications.” This is not practical or advisable as it would result in the need for TOP’s to submit revised Restoration Procedures to the RC which do not align with actual system configuration during the (at least) 30 day period. Restoration plans are typically “approved” procedures that reflect current configuration and have a review and approval process internal to the TOP. Approval of revisions are closely coordinated with actual implementation of system modifications to ensure that proper configuration control is maintained between procedures and the system. Having to submit a revised (and approved) procedure at least 30 days in advance of field implementation would result in procedures having to be approved and sent to an RC that do not align with actual system configuration for “extended” periods (at least 30 days). Even if an effective date is used in a TOP’s procedural control process, having to assign such a date in excess of 30 days prior, would likely result in a significantly increased administrative burden due to the higher potential for date changes to occur between procedure approval and final implementation of a modification in the field. Field implementation of system modifications are subject to a degree of uncertainty due to a variety of factors (testing results, weather, system operational needs, etc). The greater the period of time between procedure revision approval and placement of a system modification in-service, increases the potential for subsequent procedure date changes being required and also raises the potential for non-alignment between Restoration Procedures and field configuration. Even if Draft Restoration Procedures are submitted to an RC, it is not clear that this would be satisfactory from a compliance standpoint for the TOP or the RC as proposed EOP-006-3 R5 requires the RC to approve a submitted TOP plan within 30 days of its receipt.

It is suggested that the proposed R4.2 be changed to delete “No less than 30 calendar days” and maintain the existing requirement to submit revised, planned, Restoration plans prior to their implementation.

Response

Thank you for your comments. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Answer	No
Comment	
Portland General Electric Company (PGE) appreciates the efforts of the STD and being able to provide comments throughout this project. In the measure for R1 (M1) the term Disturbance is used, "…when a Disturance occurred…" Since not all Disturbances are Blackstart events, PGE suggests changing Disturbance to applicable event.	
Response	
Thank you for your comment. EOP-005-3 is a Blackstart Resource standard.

Compliance (Sec C.1)

We have concerns replacing “compliance audit” with “monitoring activity.” The proposed term, “monitoring activity,” is vague, ambiguous, and muddies the interpretation of the retention period. We can only speculate as to the reason for the change and, so, are unable to offer a suggestion to address our concern.

R2, R5, and R8

We are supportive of replacing “implementation date” with “effective date” and believe it provides added clarity.

We are supportive of replacing “annually” with “15 months” and believe it provides added clarity.

Response

Thank you for your comments. In the Data Retention section, ‘monitoring activity’ has been changed back to ‘compliance audit’ to address comments received by industry.

The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”.

Jared Shakespeare - Peak Reliability - 1 - WECC	
Answer	No
Comment	

For R3, Peak already has all the TOPs scheduled on an annual submittal process. Peak is concerned that TOPs will want to switch to a 15-month submittal process, which will be more difficult to track. Every approval will require an agreement on the next submittal scheduled rather than maintaining a known, 12-month schedule. For R10, Can R16 be combined with R10? There are other requirements that combine various entities so not sure why participating in the RC's restoration plan would need to be separate requirements for TOPs and GOPs.	
Response	
Thank you for your comments. The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards* Requirements also provides guidance on defining "annual". The EOP SDT discussed your comment and made no revisions to Requirement R10 nor to Requirement R16. The separation of the Functional Entities provides clarity to the standard.	
Sandra Shaffer - Berkshire Hathaway - PacifiCorp - 6	
Answer	No
Comment	
The Purpose statement becomes an absolute positive by replacing "assure" with "ensure" therefore the restoration plan must reestablish reliability. System Operators need the flexibility to deviate from the plan in order to restore the system to precontingent operations.	
Response	
Thank you for your comments. The EOP SDT discussed this issue and decided, for clarity, as well as consistency throughout the standards, to revise the Purpose of the standard from "assure" to "ensure."

Comment
In R1 we recommend that the first sentence be changed from "Each Transmission Operator shall develop and implement a restoration plan approved by its Relability Coordinator."to "Each Transmission Operator shall develop and publish a restoration plan approved by its Relability Coordinator that will be implemented folwing a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down." The reason for this recommendation is to clarify the intention of the proposed change. In R1, we disagree with the change after the words "… is required to restore …". Depending upon the cause of the Disturbance (for example physical damage) that requires system Restoration from Blackstart Resources, it may not be feasible to restore the entire shutdown area of service even though the BES has been restored. We recommend leaving the original wording in place. In R4.2, we disagree with the wording "No less than 30 calendar days prior to …" in the first sentence. We recommend changing to "Up to 90 calendar days after implementation of planned System modifications". The reason for this recommendation is that planned implementation dates are often moving targets due to factors such as construction or equipment delays; crew scheduling needs; or other factors outside the direct control of the entity.
Response
The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan <u>**shall be implemented to restore**</u> the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service." In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1. In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Michael Godbout - Hydro-Qu?bec TransEnergie - 1 - NPCC

Answer	No
Comment	

We support NPCC's comments.

In addition, we have the following comments.

There is no reference to the formation of a BES island in EOP-005-3 Requirement R1 as there is in EOP-006-3 Requirement R1 (“or an energized island has been formed on the BES”). The Drafting Team should consider its inclusion in EOP-005-3 or its removal from EOP-006-3. However, we recommend inclusion rather than removal. Indeed, EOP-005 ‘s scope could be expanded to “System Restoration” regardless of whether Blackstart Resources are required or not. A TOP may have a major shutdown or be islanded and restore its area by synchronizing with an adjacent area. Such a TOP should nevertheless have a Restoration Plan, perform simulations as well as training. Such a change in scope would only require changes to the title and the purpose.

We note that R16 applies to Generator Operators, not Generator Operators identified in the Transmission Operators restoration plan, as was the case in EOP-005-2 R18. Most requirements in EOP-005-3 that apply to GOPs apply to GOPs with Blackstart Resources and these are identified in the TOP’s Plan. Modifying section 4.1.2. to apply only to GOP with Blackstart Resources would be consistent with EOP-006-3 R8 part 8.1 which specifies “each Generator Operator identified in the Transmission Operators’ restoration plans”. We recognize however that R16 is consistent with EOP-006-3 R8 in a general sense and also recall that in the development of EOP-005-2, comments on the same point were submitted and rejected by the drafting team at that time. If this project's drafting team rejects this comment again, **we request the addition of a rationale to clarify the purpose of this broader scope.** We note that the Régie de l'énergie here in Québec ordered a reduction of scope of R16 to the GOPs identified in the TOP plan, based on the lack of justification provided during the development of EOP-005-2 for the broader scope of R18 (now R16 in EOP-005-3).

R1: Suggest adding a rationale to explain change of scope. Does the removal of “the choice of the next Load to be restored is not driven by the need to control frequency or voltage” imply that the scope of the TOP’s restoration plan is now until all the BES is restored?

We understand that the EOP-005-3 Parts 1.9 and 8.5 that refer to transferring of Balancing Authority authority come from a FERC-NERC report. However, we believe that Balancing Authority functions always reside with the Balancing Authority. The requirement could be rephrased as a more general requirement to 'coordinate' the restoration with the appropriate BA, per RC criteria.

Response

Thank you for your comments. The EOP SDT discussed the suggestion to add energized islands to EOP-005-3, but believes the purpose of EOP-005-3 is to enable System Restoration from Blackstart Resources (purpose statement); and, therefore, decided it wouldn’t be appropriate to add this to EOP-005-3.

Requirement R1 does state: "The restoration plan shall allow for restoring the Transmission Operator's System **following a Disturbance** in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service…" The EOP SDT added the BA due to the recommendations resulting from the Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans. It is up to the Transmission Operator to define in their restoration plan how to interact with the BA v. designated BA. In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria." Requirement R16: This requirement was developed in coordination with the RC requirements (EOP-006, Requirement 8); therefore, based on the RC's scenario, any Generation Operator (GOP) identified will need to participate in the RC's Restoration drill.

Document Name	Comments on EOP 5.docx
Comment	

EOP-005-3 R1:

Each Transmission Operator shall ~~have~~ develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shuts down~~ shutdown area to service. ~~To a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.~~

Comment:

a) The wording *"develop and implement"* has led to some confusion among entities who only see the requirement (the first sentence) and do not take into account the rest of the requirement and also the measurement of compliance associated with the requirement.

M1 states: Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its

Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with R1

"To a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." As *"to restore the ~~shuts down~~ shutdown area to service,"* could have broader implication for restoration of every part of the system down to what level of distribution?

EOP-005-3 R9:

Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as ***performing unique tasks associated with the Transmission Operator's restoration plan that are outside their normal tasks.***

Comment:

a) Recommend improved language adding clarity to the term "unique tasks" – what does this mean? Does this mean restoring islands, synchroscopes, and restoring station power? Or?

Response

The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The EOP SDT has added a rationale box for Requirement R9 to address "unique tasks." The rationale box says, "The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider."

Regarding R8, Bonneville Power Administration (BPA) believes 15 months is too restrictive. BPA performs training semiannually (spring and fall). BPA requests the "not to exceed 15 months" to be changed to 18 months in order to allow any training that could not be accommodated in the previous semiannual training to be included in the subsequent period. Regarding R4, BPA understands system modifications identified less than 30 days in advance to be emergency modifications and reportable within 90 days after the system modification. BPA desires clarifying language for system modifications identified less than 30 days in advance of the modification. Regarding R8.5 and R1.9, BPA does not agree these to be necessary sub-requirements because the transition is non-critical. BPA as both a Transmission Operator and Balancing Authority does not perform a transition and believes these sub-requirements to be unnecessary or only applicable to Transmission Operators that are not also Balancing Authorities.	
Response	
The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. Answer	Yes
Comment	
FMPA generally agrees with the revisions proposed for EOP-005, but does have some comments. R1 can still be interpreted that a TOP who would be restored via a tie line with a neighbor and not a Blackstart Resource does not need a restoration plan at all. What is the drafting team's intent here? The phrasing of R4 needs work. FMPA recommends adding commas and removing the word "of". "Each Transmission Operator shall update, and submit to its Reliability Coordinator for approval, its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows:" R5 should use the defined term Control Center, rather than control room.	
Response	
Thank you for your comments. If there is a disturbance in which one or more areas of the BES shuts down and the use of Blackstart resources is required, a restoration plan is still required. R1. "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator." And the purpose statement of EOP-005-3 states, "**Purpose:** Ensure plans, Facilities,	

and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Requirement R1, Part 1.1 states, "Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection." The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2: **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006. The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements. The EOP SDT discussed your comment regarding Control Center v. control room; however, the copy of the restoration plan needs to reside within the control room.	
Jeri Freimuth - APS - Arizona Public Service Co. - 3	
Answer	Yes

Comment
In spirit APS is supportive of the SDT's direction. That said, APS offers the following suggested changes with respect to the proposed wording of the standard. APS suggests the following revised wording to further clarify the language in the proposed EOP-005 standard. **R4.** Each Transmission Operator shall update and submit to its Reliability Coordinator for approval its restoration plan to reflect System modifications that necessitate a change in how the Transmission Operator implements its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1.** No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications; and **4.2.** No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications. **M5**. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available to its System Operators in its primary and backup control rooms in electronic or hardcopy format prior to its effective date in accordance with Requirement R5. *In addition, APS requests the SDT clarify the text for requirement R8.5 to align the requirement language with the text in the Rationale box for R8:* **R8.5** Coordination needed to transfer the following functions back to the Balancing Authority: Area Control Error and Automatic Generation Control.
Response
Thank you for your comments. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2: **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Requirement 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time."

Ken Simmons - Gainesville Regional Utilities - 1,3,5

Answer	Yes

Comment

GRU generally agrees with the revisions proposed for EOP-005, but does have some comments.

R1 can still be interpreted that a TOP who would be restored via a tieline with a neighbor and not a Blackstart Resource does not need a restoration plan at all. What is the drafting team's intent here?

The phrasing of R4 needs work. GRU recommends adding commas and removing the word "of".

"Each Transmission Operator shall update, and submit to its Reliability Coordinator for approval, its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows:"

R5 should use the defined term Control Center, rather than control room.

Response

Thank you for your comments. The intent of R1 has not changed. If there is a disturbance in which one or more areas of the BES shuts down and the use of Blackstart resources is required, a restoration plan is still required. R1. "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator." And the purpose statement of EOP-005-3 states, "**Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Requirement R1, Part 1.1 states, "Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection."

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Sean Bodkin - Dominion - Dominion Resources, Inc. - 6	
Answer	Yes

Comment

1. R4 Rationale: In the second paragraph the SDT may want to consider removing the word 'major' when describing System modifications as the requirement does not have this limitation, but instead deals with any System modifications that change the ability to implement the restoration plan. The use of the term 'minor' when describing revisions provides the appropriate context. Dominion also suggests the SDT could add examples into the Rationale to clarify the types of System modifications they are referring to.

1. Formatting observations compared to other NERC standard templates; The definition of CMEP under Section 1.1 should be at the top of Section 1 with the other definitions.

Section C. Compliance; The numbering in this section is incorrect. Section 1.1 should be the first definition and the numbering should follow from there for each distinct item.

Response

Thank you for your comments.
The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

Comment	

Hydro One Networks Inc. would like to inquire from the drafting team on what an auditor would be required to view as evidence for measure M1 in the case that a Disturbance has not occurred over a given period in time?

Response

Thank you for your comment. Consistent with the revision to Requirement R1, the EOP SDT intends to underscore the need for Transmission Operators to utilize their restoration plans. The evidence identified in this Measure is exemplary and not exclusive and its inclusion is consistent with the Standards Process Manual's intended purpose of a Measure. The SPM states that a Measures "[p]rovides identification of the evidence or types of evidence that may demonstrate compliance with the associated requirements."

R1: Duke Energy recommends that the drafting team consider the following language revision to R1.

"Each Transmission Operator shall develop, maintain, and implement a restoration plan approved by its Reliability Coordinator."

We think that the addition of the term "maintain" is appropriate and would promote consistency with other EOP standards.

Also, we request clarification from the drafting team about the potential for an instance of double jeoparday. If an addition to the term "maintain" to R1 is deemed appropriate by the drafting team, does that open up entities to the possibility of violating two requirements if the restoration plan is not maintained. See Duke proposed R1 language, and SDT proposed language of R4. Does the failure to maintain a restoration plan create double jeopardy with R1 and R4?

R4: Duke Energy recommends the drafting team consider revising the proposed R4 to read as follows:

"Each Transmission Operator shall update and submit to its Reliabilty Coordinator for approval of its restoration plan to reflect system modifications, that would inhibit its ability to implement its restoration plan, as follows:"

We feel that replacing the word "change" with "inhibit" or "adversely affect/negatively impact" is more accurate representation of what is needed in this requirement. Moreover, any planned or unplanned system modification could "change" the way an entity executes its restoration plan, but an entity would still be able to execute said plan via multiple paths. We feel that the spirit of this requirement should be geared more towards system modifications that prevent an entity from executing its restoration plan altogether.

R8: Duke Energy recommends that the drafting team consider maintaing the use of the annual system restoration training, rather than using *"at least once each 15 calendar months".* We have a couple of concerns with the use of once each 15 calendar months. First, we are not aware that NERC has defined the term(s) calendar months. Some ambiguity may exist amongs industry stakeholders about what constitutes a calendar month. The use of the term "annual" is commonly used throughout the industry, and NERC has issued a Compliance Application Notice on the use of the term, and there seems to be more guidance on the tracking of annual timeframes.

R8.5: Duke Energy requests further clarification from the drafting team on how this requirement should apply to vertically integrated BA(s) and TOP(s) that are in the same control room. Also, with regards to the transition of ACE and AGC to the BA, where in the standard is it referenced when/if control was ever passed to the RC? Does this not go beyond what is outlined in R1.9? The language as written implies that a TOP was at one time in control of ACE or AGC. Not all entities may pass control over to the TOP, especially those entities that are vertically integrated, wherein the BA and TOP are in the same control room. We understand that this addition was a result of the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans, however, we don't see this change as representative of the practices of the entire industry, and can't agree with this addition based on the complication it may provide to vertically integrated companies.

Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”.

In this industry it is widely understood that “*have a restoration plan*,” is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language “develop and implement” is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R5. **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP’s ability to implement the restoration plan or impact the RC’s ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP’s ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Requirement 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time."

Mark Holman - PJM Interconnection, L.L.C. - 2

Answer	

Comment

PJM is concerned with the removal of the words in R1. In the proposed Standard, it is not clear when the use of the Restoration Plan should end. Adding the word "implement" to R1 and other requirements puts two actions in one requirement which makes the VSLs much more complicated. PJM has serious concerns with a misinterpretation of R6. The misinterpretation is that the entire Restoration Plan should be simulated using dynamics. That was not the intent of the SDT. Suggest adding "a combination of" before "steady state and dynamics simulations". PJM would also recommend the addition of language clarifying that Dynamic simulation is only required from Blackstart unit to cranked unit (along the cranking path), and not the entire restoration plan. Also, PJM finds the "30 day prior to implementation" wording in R4.2 is troubling. This Requirement could potentially lead to artificial delays in energizing new equipment just to meet the 30 day requirement. PJM considers the wording in the current standard ("prior to a permanent planned modification") sufficient, rather than introducing the 30 day prior requirement.

Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan **shall be implemented to restore** the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R6. **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Rachel Coyne - Texas Reliability Entity, Inc. - 10

Answer	

Comment
Texas RE suggests Requirement R1 would be more clear if it was broken into two separate requirements: one Requirement to detail what a TOP's restoration plan should include and one Requirement for implementing the restoration plan and explaining when the plan should be implemented. As drafted, Requirement R1 does detail what the restoration plan should include, but it does not explicitly indicate when it should be implemented. This will promote consistency amongst the Standards as other Standards, such as PRC-005-6, have separate Requirements for having a plan/program and implementing the plan/program. Texas RE is concerned EOP-005 has no requirement for TOPs to correct plans not approved by the RC. There appears to be issues if an RC does not approve the plan within 30 calendar of planned System modifications (or 90 days for unplanned). The modifications may be complete but the plan that includes the modifications may not be approved so an old copy (that cannot be utilized) will be in the Control Centers of a TOP. Texas RE recommends adding language regarding correcting unapproved plans as well as what a TOP is to do if an RC is late with its approval. Texas RE is concerned about the proposed changes to EOP-005-2, Requirement R4. In particular, the SDT proposes to require TOPs to update and submit revised restoration plans to their RCs when there is modification "that would change the ability to implement" the restoration plan. Although Texas RE does not necessarily object to the SDT's stated intent to require updates solely for material changes, the requirement to update a plan should not hinge upon the entity's perception of its corresponding "ability" to implement the plan. That is to say, a material modification to the restoration plan should require submission of an updated plan regardless of whether the TOP believes the modification will or will not affect its ability to actually implement the existing restoration plan. This is particularly critical because EOP-005-3, Requirement R4 also serves the reliability goal of ensuring RCs have awareness regarding the steps TOPs will take in the restoration process. As such, even if a TOP believes it can still implement its current plan, providing information regarding material modifications to the restoration plan still serves the reliability goal of enhancing RC situations awareness. If the SDT wishes to capture a materiality threshold for required updates and submissions, however, Texas RE recommends the SDT focus on the materiality of the change itself. Accordingly, the SDT could revise the proposed Requirement R4 language to simply require submission of an update "to reflect system modifications that would materially change the implementation of its restoration plan."
Response

Thank you for your comments. The EOP SDT added language to provide clarity, and also pertains to the deletion of the implementation plan in retirement of Requirement R7. "The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service."

In EOP-005-3, 'implement' replaces Requirement R7; 'maintain' is captured in Requirements R2, R3, R4 and R6, so it would create a redundancy to be written within the language of Requirement R1. In EOP-006-3, 'implement' replaces Requirement 7; and 'maintain' is captured in Requirements R3 and R5. This is consistent with other standards, such as EOP-011-1 and EOP-010-1.

In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT in adding the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized.

The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:

R7. R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

2. Do you agree with the retirements proposed in EOP-005-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Janis Weddle - Public Utility District No. 1 of Chelan County - 1,3,5,6

Answer	No

Comment

Requirement 7 as it appears in EOP-005-2 is a better way to address the “implement” intent of EOP-005-3 R1.

Response

Thank you for your comment. “Implement” replaces the requirements of R7 and R8. The intent of “implement” is within R1. The RC obligation is triggered by the use of Blackstart Resources.

Gregory Campoli - New York Independent System Operator - 2

Answer	No

Comment

R7 should be retained. It is imperative that a TOP have a fallback position in the event its SRP cannot be implemented as intended. R7 specifies to the TOP that the fall back position is to utilize its strategy. For example, a TOP’s SRP might have detailed steps to restore a certain generating unit, perhaps by specifying a particular switching scheme. If the facilities to execute that scheme are not available, the TOP should still recognize the need to restore that unit, and proceed in any manner available to do so. The strategy is to restore the unit regardless of the tactics used to accomplish that. R1.1 does obligate a TOP to include it strategies in its SRP, but it does not obligate it to operate to those strategies if need be. Further, the strategies in a TOP SRP are at a more detailed level than the strategy of the RC plan in EOP-006. An RC’s plan is, in effect, it’s strategy, and is at a much higher and more general level than the TOP plan. Therefore, there is no inconsistency with retaining R7 in EOP-005 and removing it from EOP-006.

R8 should be retired.

Marsha Morgan - Southern Company - Southern Company Services, Inc. - 1,3,5,6 - SERC, Group Name Southern Company	
Answer	No
Comment	
It is the responsibility of the TOP to notify the RC before resynchronization with neighbors, Southern believes that without specifically being addressed in a standard that some TOPs may not be compeled to consult with the RC before restoring tie-lines creates a potential reliability gap. Comment for EOP-005-3 R4.1: No more than 90 calendar days after the Transmission Operator identifies any unplanned System modifications that would affect implementing the restoration plan. Comment for EOP-005-3 R4.2: No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications that would affect implementing the restoration plan.	
Response	
Thank you for your comments. The following revisions were made to Requirement 4 and Requirement 4, Parts 4.1 and 4.2:	

R8. **R4.** Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

RoLynda Shumpert - SCANA - South Carolina Electric and Gas Co. - 1,3,5,6 - SERC

Answer	No

Comment

Retirement of Requirement 8 removes the requirement for the TOP to seek approval from the RC before resynchronizing areas. Requiring the TOP to coordinate with the RC ensures adequate coordination will occur in order to maintain a reliable system during restoration and therefore it should remain a requirement.

Maybe add subpart to R1 to clarify RC approval of re-synchronization of islands if R8 is removed.

Response	
Thank you for your comments. “Implement” replaces the requirements of R7 and R8. The intent of “implement” is within R1. The RC obligation is triggered by the use of Blackstart Resources.

Answer	No
Comment	
If the draft R1 is modified to remove “implement”, which we agree it should be, then R7 needs to stay. Changing R1 and removing R7 will result in a requirement to have a plan but no requirement to actually use the plan when needed. We agree that R8 is not needed since the RC plan required in EOP-006 is required to have criteria for re-establishing interconnections and the TOP plan is required to follow the RC plan (EOP-005 R1.1).

If the draft R1 is modified to remove “implement”, which we agree it should be, then R7 needs to stay. Changing R1 and removing R7 will result in a requirement to have a plan but no requirement to actually use the plan when needed. We agree that R8 is not needed since the RC plan required in EOP-006 is required to have criteria for re-establishing interconnections and the TOP plan is required to follow the RC plan (EOP-005 R1.1).	
Response	
Thank you for your comments. “Implement” replaces the requirements of R7 and R8. The intent of “implement” is within R1. The RC obligation is triggered by the use of Blackstart Resources.

Retirement of Requirement 8 removes the requirement for the TOP to seek approval from the RC before resynchronizing areas. Resynchronizing areas is a sensitive piece of system restoration. Much work has to go into getting systems ready for resynchronization and without proper coordination, a misstep could put all of that load in jeopardy of being dropped. Requiring the TOP to coordinate with the RC ensures adequate coordination will occur in order to maintain a reliable system during restoration and therefore it should remain a requirement.

Unless the changes AE recommends above are implemented, R7 should not be deleted in its entirety. (See AE's response to Question 1, above) Because of the vagaries of a blackstart situation, AE believes the Standard should allow the Transmission Operator to solve issues which may not be addressed in the restoration plan. AE believes it is not possible to plan for every possible contingency and, therefore, Transmission Operators need a degree of freedom to address deviations from expectations. Therefore, AE requests the sentence "If the	

restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration" remain unless included in R1 as suggested above.

R7: . Implementation documentation should remain covered under the current Requirement 7. Focus should be on developing a restoration plan in Requirement 1 and Measurement 1 should not be confused with implementation documentation. Revise the existing R7 requirement for implementation and measures for implementation as needed. R8. Recommend retaining or at least retaining "in accordance with the established procedures of the Reliability Coordinator". Much work has been done in this venue to provide needed guidance, and see this as an efficient way to accomplish. The Reliability Coordinator must play a defined role when establishing ties. It's the RC's role to ensure each Transmission Operator's System is ready for the connection.

Justin Mosiman - Bonneville Power Administration - 1,3,5,6 - WECC

Answer	Yes

Comment

Regarding R8, Bonneville Power Administration (BPA) believes 15 months is too restrictive. BPA performs training semiannually (spring and fall).   BPA requests the "not to exceed 15 months" to be changed to 18 months in order to allow any training that could not be accommodated in the previous semiannual training to be included in the subsequent period.

Regarding R8.5 and R1.9, BPA does not agree these to be necessary sub-requirements because the transition is non-critical. BPA as both a Transmission Operator and Balancing Authority does not perform a transition and believes these sub-requirements to be unnecessary or only applicable to Transmission Operators that are not also Balancing Authorities.

Response

Thank you for your comments. The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements also provides guidance on defining “annual”.

Thank you for your comment. In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Jack Stamper - Clark Public Utilities - 3	
Answer	Yes
Comment	
I agree with the changes however, training requred by R8.5 makes no sense if a TOP does not manage Area Control Error and/or Automatic Generation Control. My utility is a small TOP and has neither ACE management or AGC management. Training in the transition of this functionality to the BA is unnecessary since the BA provides this funcionality as part of its normal operations.

No. Texas RE does not necessarily object to the SDT's proposal to retire Requirements R7 and R8 from the EOP-005-3 Standard. However, Texas RE is concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-005-	

3 R1 restoration plan implementation requirements. Texas RE has identified two principal areas of concern, and suggests the SDT revise in proposed language in R1 to address these issues.

First, Requirement R7 provides not only that each affected Transmission Operator (TOP) shall implement its restoration plan following a Disturbance, but also that if "the restoration plan cannot be executed as expected the [TOP] shall utilize its restoration strategies to facilitate restoration." As presently drafted, there is no explicit requirement in the revised Requirement R1 requiring TOPs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. This adaptive capability serves an important function and promotes TOPs continuing to maintain situational awareness and strategic reactions throughout the course of restoration activities. As such, Texas RE recommends that if the SDT wishes to retire Requirement R7, it include the following language in the restoration plan content requirements specified in Requirement R1 in order to address this issue:

1.10 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

Second, Requirement R8 presently provides an explicit requirement that TOPs "resynchronize area(s) with neighboring [TOPs] only with the authorization of the Reliability Coordinator or in accordance with established procedures of the Reliability Coordinator." Although it is perhaps possible to read R1.1's mandate that the restoration plan include "[s]trategies for system restoration that are coordinated with the [RC's] high level strategy for restoring the interconnection" as encompassing this requirement, it is not clear that resynchronization is included within either "system restoration strategies" or the RC's "high level strategy." Moreover, there is no explicit reference to coordination activities with neighboring TOPs elsewhere in the Standard. To clarify this issue and ensure coordination activities are adequately addressed in entity restoration plans, Texas RE recommends that if the SDT wishes to retire R8, it include the following language in the restoration plan content requirements specified in R1 to address this issues:

1.11 Procedures to resynchronize area(s) with neighboring Transmission Operator area(s) after obtaining authorization from the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator.

Texas Re noticed draft EOP-005-3 does not follow the results based standards template. On the template, Section C 1.1 is the Compliance Enforcement Authority. Section C 1.2 Is the Evidence Retention. Section C 1.3 Is the Compliance Monitoring and Enforcement Program. There is no section for Reset Time Frame, Compliance Monitoring and Enforcement Processes, or Additional Compliance Information.

Response

Thank you for your comments. In response to industry comments, the EOP SDT has revised the language in Requirement R1, Part 1.9, since the Balancing Authority does not relinquish any BA authority to the TOP. Revised language: "1.9 Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria." Requirement 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board-approved definition of Balancing Authority is: "The Responsible Entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time."

Answer	No

Comment

The word "neighboring" should be replaced with the word "electrically adjacent" in all instances in the standard (including the Violation Severity Levels). "Electrically adjacent" lends more clarity to the intent of the requirements than "neighboring."

It is suggested that the below changes be made to Part 4.1 so that it reads:

"If a Reliability Coordinator finds conflicts between its restoration plan and the restoration plan of an electrically adjacent Reliability Coordinator, the Reliability Coordinator and the adjacent Reliability Coordinator shall resolve the conflicts within 30 calendar-days of written notification of the identified conflicts from the Reliability Coordinator to the adjacent Reliability Coordinator."

The additional revisions clarify that both the initiating Reliability Coordinator, and the electrically adjacent Reliability Coordinator have to resolve any conflicts. The timing for resolution of the conflicts will also be made clear.

Response

Thank you for your comments. The EOP SDT determined that the addition of "adjacent" in R1.2 is unnecessary and is captured by the use of "neighboring" in Requirement R1. "Neighboring" gives the RC the latitude to define which applicable entities are to be included in its restoration plan.

The EOP SDT has addressed your concern in Requirement 4 and Requirement 4, Part 4.1 as follows:
R4. Each Reliability Coordinator shall review its adjacent Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt.

4.1 If a Reliability Coordinator finds conflicts between its restoration plans and any adjacent Reliability Coordinator's restoration plan, the conflicts shall be resolved within 30 calendar days of written notification.	
Amy Casuscelli - Xcel Energy, Inc. - 1,3,5,6 - MRO,WECC,SPP RE	
Answer	No
Comment	
Consider revising R3 to allow "Annual" review to be consistent with other NERC standards. The verbiage change from "Annual" to "at least every 15 months" in R7 is unnecessary and does not improve the standard. Additionally, it is not consistent with numerous other standards that currently contain "Annual" requirements.	
Response	
Thank you for your comments. The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The language to "implement" the system restoration plan has the potential to create confusion within the industry. Implementation of the a restoration plan would require a system outage to be compliant. Language should be adjusted to represent the intent of the SDT.	
Response	
Thank you for your comment. The EOP SDT removed "maintain" from R1 in which the team felt "maintain" is contained in Requirements R3, R4, and R5. "Implement" replaces the requirements of Requirements R7 and R8. The intent of "implement" is within Requirement R1. The RC obligation is triggered by the use of Blackstart Resources.	
Elizabeth Axson - Electric Reliability Council of Texas, Inc. - 2	

Answer	No
Comment	

ERCOT joins with the comments of the IRC Standards Review Committee (SRC). ERCOT also offers this additional point:

Similar to the comment for Question #1, we ask that a conditional phrase be added to the language of Requirement R1 to clarify that the restoration plan will only be implemented during an actual blackstart event. Otherwise, the requirement as written indicates that the entity must have implemented a restoration plan absent an event. As such, we recommend language that clarifies this: “Each Reliability Coordinator shall develop, maintain, and, in the event of a Disturbance, implement a Reliability Coordinator Area restoration plan.”

If the SDT intends there to be a difference in meanings of the words “adjacent” and “neighboring,” we request that this difference be explained and made more explicit in the language of the standard.

We also ask for clarification on the meaning of the phrases “adjacent Transmission Operators” and “adjacent Reliability Coordinators,” for the ERCOT interconnection, as neither of these terms is defined. We ask the SDT to clarify that, consistent with the interpretation of Question 2 in Appendix 1 to EOP-001-2.1b, “adjacent” should not be read to apply to RCs or TOPs that are not “within the same Interconnection.” This change is appropriate because ERCOT does not rely on SPP or MISO for system restoration, and SPP and MISO also do not rely on ERCOT for that purpose.

Most training is conducted on a yearly basis, with certain required training every year. For example, TVA has three cycle training classes lasting seven weeks each cycle in order to get all of the operators through the training. At times it makes more sense to conduct specific required training in one cycle versus another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if the System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, “at least once each 15 calendar months” it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training was required “once per calendar year.” That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around from year to year as needed.

EOP-006-3 R1 states, “Each Reliability Coordinator shall develop, maintain, and implement” while EOP-005-5 R1 states, “Each Transmission Operator shall develop and implement.” We recommend that the “develop and implement” language in EOP-005-3 R1 be used in EOP-006-3 R1 for consistency among the two standards.

Response

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements and similar to EOP-005. R1 should require a plan and define what needs to be in the plan. R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan. The corresponding proposed measures would need to be modified accordingly. We believe the wording of R8.1 is problematic and that the intent is that those that have a role in an RC drill, exercise, or simulation participate in those activities. We believe that it is better to require that the RC notify all entities that have a role in each RC drill, exercise or simulation. The identified entities should be required to participate in each activity for which they have a role. We suggest rewriting R8.1 as: R8.1 Each Reliability Coordinator shall request each enitity which has a role in the RC drill, exercise or simulation participate in those drills, exercises, or simulations.

Comment	

We agree with the concept of requiring a plan, maintainance of the plan, and implementation of the plan. However, we believe these should be separate requirements and similar to EOP-005. R1 should require a plan and define what needs to be in the plan. R7 should be retained to require implementation of the plan. Other requirements already address maintaining the plan. The corresponding proposed measures would need to be modified accordingly.

We believe the wording of R8.1 is problematic and that the intent is that those that have a role in an RC drill, exercise, or simulation participate in those activities. We believe that it is better to require that the RC notify all entities that have a role in each RC drill, exercise or simulation. The identified entities should be required to participate in each activity for which they have a role. We suggest rewriting R8.1 as:

Most training is conducted on a yearly basis, with certain training required every year. Our training consists of five cycles of training classes. Each cycle is six weeks in order to get all of the operators through each training cycle. At times we conduct specific required training in one cycle verses another cycle. One year it might make sense to have the System Restoration training occur in the spring cycle. Another year, it may work better if they System Restoration training were to occur in the fall cycle. By changing the System Restoration training to, "at least once each 15 calendar months" it limits the ability to move the training from one cycle to another. It would give the operator trainers more flexibility if the training were required annually. That way the operators would receive System Restoration training every year but it would also give the trainers the flexibility to move the training around within the year as needed.

EOP-006-3 R1 states: Each Reliability Coordinator shall develop, *maintain*, and implement.

EOP-005-5 R1 states: Each Transmission Operator shall have develop and implement.

We recommend 'develop and implement' language in EOP-005-3 R1 be used in EOP-006-3 R1 also for consistency among the two standards.

Response

Thank you for your comments. The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".

The EOP SDT removed "maintain" from Requirement R1 in which the team felt "maintain" is contained in Requirements R3, R4, and R5. "Implement" replaces the requirements of Requirements R7 and R8. Requirement 8 should NOT be retired. It is a critical step in the Restoration Plan that requires RC approval.	

Response	
Thank you for your comments. The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.	
Colleen Campbell - ACES Power Marketing - 6 - NA - Not Applicable, Group Name ACES Standards Collaborators	
Answer	No
Comment	
(1) R1 now includes "develop, maintain, and implement" a restoration plan for the RC. We question why "maintain" was included in EOP-006-3, but it only states "develop and implement" for the TOP in EOP-005-3. This is inconsistent language and should be aligned. (2) We disagree with the inclusion of "maintain and implement." Measure M1 now calls out for evidence of implementation, including operator logs or voice recordings. This practice of including three actions, having a plan, maintaining the plan, and implementing that plan, in a single requirement allows for additional scrutiny from an auditor. Our biggest concern is that R1 has six sub-parts, which can now be reviewed under three filters – is it documented, is it maintained, and does the entity have proof that they implemented it. We ask the SDT to consider modifying the requirement so evidence of implementation is separate from each of the six sub-parts. (3) For R3, we agree with the change from 13 calendar months to 15 calendar months to align with other NERC standards. (4) For R7 (formerly R9), we agree with changing annual to 15 calendar months to align with other NERC standards.	
Response	
Thank you for your comment. "Implement" replaces the requirements of R7 and R8. The intent of "implement" is within R1. The RC obligation is triggered by the use of Blackstart Resources. Answer	No
Comment	
It seems that there was inconsistent use of 'maintain' in R1 between EOP-006-3 and EOP-005-3. We suggest removing the word 'maintain' in R1 since it is redundant with requirement R3. Also M1 would need to be edited to measure that the plan was appropriatel 'maintained' as well as implemented. As stated, it does not verify that the plan was maintained. In the revised R1.2 we just point out that there can be 'adjacent' entities that may not be within the same Interconnection (example: SPP BA/RC and ERCOT BA/RC) that it may not be appropriate or necessary to coordinate restoration plans. One way to handle this may be to specify that coordination must be performed with entities within the same Interconnection, or alternatively allow the restoration plan to dictate which entities are considered adjacent.	

We believe the intent of the proposed R8.1 is to only require participation by TOPs and GOP's who 'have a role' in the restoration plan. There are TOPs and GOP's in the RC Area who may never have a role in restoration activities (aka wind farms or small TOPs). We suggest rewriting R8.1 as: R8.1 Each Reliability Coordinator shall request each Transmission Operator **which has a role** in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least **once** every two calendar years.	
Response	
Thank you for your comments. The EOP SDT removed "maintain" from Requirement R1 in which the team felt "maintain" is contained in Requirements R3, R4, and R5. "Implement" replaces the requirements of Requirements R7 and R8. The intent of "implement" is within R1. The RC obligation is triggered by the use of Blackstart Resources. The EOP SDT determined that the addition of "adjacent" in R1.2 is unnecessary and is captured by the use of "neighboring" in Requirement R1. "Neighboring" gives the RC the latitude to define which applicable entities are to be included in its restoration plan. The EOP SDT did not elect to change the wording contained in Requirement Part 8.1 and believes all GOPs and TOPs should be included, as identified in the TOPs restoration plan.	
Robert Coughlin - Robert Coughlin On Behalf of: Michael Puscas, ISO New England, Inc., 2; - Robert Coughlin, Group Name SRC	
Answer	No
Comment	
In Requirement R1.2, the proposed revisions establish that the restoration plan must include criteria and conditions for re-establishing interconnections with other Transmission Operators within the Reliability Coordinator's Area, with "adjacent" Transmission Operators in other Reliability Coordinator Areas, and with "adjacent" Reliability Coordinators. The use of the word "adjacent" is more appropriate as it makes the requirement more clear. The SRC suggests a further clarification that is consistent with the interpretation of Question 2 in Appendix 1 to EOP-001-2.1b, which states that "adjacent" should not be read to apply to RCs or TOPs that are not "within the same Interconnection." The SRC suggests that the words "electrically adjacent" be used throughout the standard. Specifically, the word "neighboring" should be replaced with the word "electrically adjacent" in all instances in the standard (including the Violation Severity Levels), because "electrically adjacent" is clearer than "neighboring"or "adjacent" (alone).	

In addition, the SRC suggests that clarifying changes be made in Requirement 4, Part 4.1, so that it reads as follows: 4.1. If a Reliability Coordinator finds conflicts between its restoration plans and the restoration plans of an adjacent Reliability Coordinator, the Reliability Coordinator and the adjacent Reliability Coordinator shall resolve the conflicts within 30 calendar days of written notification from the Reliability Coordinator to the adjacent Reliability Coordinator of the identified conflicts. The additional revisions make clear that both the Reliability Coordinator and the adjacent Reliability Coordinator have to resolve any conflicts, and the timing for resolution will also be clear.
Response
Thank you for your comments. The EOP SDT determined that the addition of “adjacent” in R1.2 is unnecessary and is captured by the use of “neighboring” in Requirement R1. “Neighboring” gives the RC the latitude to define which applicable entities are to be included in its restoration plan. The EOP SDT has addressed your concern in Requirement 4 and Requirement 4, Part 4.1 as follows: **R4.** Each Reliability Coordinator shall review its adjacent Reliability Coordinator’s restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. **4.1** If a Reliability Coordinator finds conflicts between its restoration plans and any adjacent Reliability Coordinator’s restoration plan, the conflicts shall be resolved within 30 calendar days of written notification.

Comment	

Texas RE suggests Requirement R1 would be more clear if it was broken into two separate requirements: one Requirement to detail what a RC's restoration plan should include and one Requirement for implementing the restoration plan and explaining when the plan should be implemented. As drafted, Requirement R1 does detail what the restoration plan should include, but it does not explicitly indicate when it should be implemented. This will promote consistency amongst the Standards as other Standards, such as PRC-005-6, have separate Requirements for having a plan/program and implementing the plan/program.

Texas RE recommends clarifying the Reliability Coordinator's obligations to "maintain" a restoration plan. As currently drafted, neither the measure nor VSLs specifies the evidence or severity of an issue associated with the failure to maintain. One possible interpretation of this requirement is that RC's must use the proposed 15 month reviews to ensure their plan includes appropriate criteria and processes for the re-energization of shutdown areas. However, it possible that RCs may have additional or distinct obligations. Texas RE requests that the SDT provide additional information regarding maintenance obligations under this requirement.

Texas RE recommends defining the terms "neighboring" and "adjacent". It is unclear whether or not there is a difference in what those terms mean. Requirement R1 has "neighboring" RC reference but Requirement part 1.2 has "adjacent" referenced. In 4.1 "neighbors" is used (and is assumed to RCs). There appears to not be a requirement to provide the RC plan to neighboring/adjacent TOPs There should be consistency in terms used and it should be well understood by all RCs that adjacent/neighboring is the RC (or RCs) that is (are) touched at the boundary regardless of synchronous or asynchronous connectivity.

Texas RE is concerned that, without parts 1.2,1.3, and 1.4, there may not be clarity provided in roles and responsibilities within a restoration plan. There should be Operating Processes utilized by the RC. The restoration plan should clearly indicate coordination efforts with TOPs and RCs. In the proposed 1.2 (old 1.5) there is a reference to "adjacent" TOPs in other RC Areas but no requirement to provide the RC restoration plan to those adjacent TOPs (nor a requirement for the adjacent RC to provide the plan). This appears to be a gap in reliability if there are criteria for "reestablishing interconnections" with TOPs in other RC Areas. It is unclear whose role or responsibility it is that to provide the information.

Texas Re noticed draft EOP-006-2 does not follow the results based standards template. On the template, Section C 1.1 is the Compliance Enforcement Authority. Section C 1.2 Is the Evidence Retention. Section C 1.3 Is the Compliance Monitoring and

Enforcement Program. In the EOP-006-2 draft, compliance Enforcement Authority does not have a section. The reset Time Frame and Evidence retention is section C 1.1. C1.2 is Compliance Monitoring and Enforcement Processes Program (incorrect section and title)
Response
Thank you for your comments. The EOP SDT removed “maintain” from Requirement R1 in which the team felt “maintain” is contained in Requirements R3, R4, and R5. “Implement” replaces the requirements of Requirements R7 and R8. The intent of “implement” is within R1. The RC obligation is triggered by the use of Blackstart Resources. The EOP SDT determined that the addition of “adjacent” in R1.2 is unnecessary and is captured by the use of “neighboring” in Requirement R1. “Neighboring” gives the RC the latitude to define which applicable entities are to be included in its restoration plan.

Jared Shakespeare - Peak Reliability - 1 - WECC	
Answer	No
Comment	
There are multiple references to “neighboring RCs” in the Standard. Can these all be replaced, as appropriate, with the word “adjacent RCs?” If the intent as referenced with the change in R1.2 holds true to the whole Standard then clarifying neighbors to be “direct connection” instead of “just neighbors without electrical adjacency.” This is particularly true for R4 – is it really necessary for Peak to review MISO’s Restoration plan now that we have no electrical connection with them? Old R10.1 (new R8.1): Peak seeks clarification – shouldn’t the new R8.1 follow the same logic of 15 months instead of 24 months so as to keep it in line with new R7 (internal restoration drill training)? Or is the intent that every 15 months RCs train internally but only every 24 months they invite all TOPs and GOPs?	
Response	
Thank you for your comment. The EOP SDT determined that the addition of “adjacent” in Requirement R1, Part 1.2 is unnecessary and is captured by the use of “neighboring” in Requirement R1. “Neighboring” gives the RC the latitude to define which applicable entities are to be included in its restoration plan.	

There were no proposed revisions to the language from 10.1 (New R8.1). The EOP SDT decided to keep two calendar years (revised to 24 calendar months for consistency) for drills, exercises and simulations.	
Michael Godbout - Hydro-Qu?bec TransEnergie - 1 - NPCC	
Answer	No
Comment	
We support NPCC's comments. In addition, we have the following comments. M4 does not reflect the written notification time requirement (60 days) in R4. We suggest : M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator’s restoration plans, **has provided written notification of any conflicts within 60 calendar days** and resolved any conflicts within 30 calendar days of notification in accordance with Requirement R4. The VSL table for R4 does not address situations where the RC reviews the submitted plans but does not provide written notification of a conflict. (in those situations, the timer for the resolution of conflicts between the plans never starts.) We note that requirements 1 and 2 refer to the 'RC Area restoration plan' whereas the rest of the requirements skip 'Area'.	
Response	
Thank you for your comments. The EOP SDT revised the language in Measure 4, as follows: “Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator’s restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.” The VSL table focuses on the step most salient to reliability, which is the resolution of any identified conflict. The EOP SDT reviewed your comment pertaining to “RC Area” and does not find any revisions are needed.

Answer	Yes
Comment	
FMPA generally agrees with the revisions proposed for EOP-005, but has one comment. R6 should use the defined term Control Center, rather than control room.	
Response	
Thank you for your comments. The NERC Glossary of Terms defines Control Center as: One or more facilities hosting operating personnel that monitor and control the Bulk Electric System (BES) in real-time to perform the reliability tasks, including their associated data centers, of: 1) a Reliability Coordinator, 2) a Balancing Authority, 3) a Transmission Operator for transmission Facilities at two or more locations, or 4) a Generator Operator for generation Facilities at two or more locations.	

The EOP SDT is discussed the defined term Control Center, which could include the RC and BA. The defined term Control Center could create confusion regarding whether RCs and BAs should be added as an applicable entity; therefore, the EOP SDT decided to use the non-defined term of control center.

Ken Simmons - Gainesville Regional Utilities - 1,3,5

Answer	Yes

Comment

GRU generally agrees with the revisions proposed for EOP-005, but has one comment. R6 should use the defined term Control Center, rather than control room.

Response

Sean Bodkin - Dominion - Dominion Resources, Inc. - 6

Answer	Yes

Comment

1. For additional clarification, Dominion suggests the following changes to R4; Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered between restoration plans during that review within 60 calendar days of receipt.

2. In Part 4.1, Dominion suggests the following change to clarify when the 30 day period starts:

If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of delivery of written notification.

1. Formatting observations compared to other NERC standard templates; The definition of CMEP under Section 1.1 should be at the top of Section 1 with the other definitions.

Section C. Compliance: The numbering in this section is incorrect. Section 1.1 should be the first definition and the numbering should follow from there for each distinct item.

Response	
Thank you for your comments. The EOP SDT reviewed your comment and did not find the change was needed. The EOP SDT revised Requirement 4 Part 4.1, as follows: If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days **of receipt of** written notification. Thank you for your comments. NERC will align the templates of the standards.	
Michael Cruz-Montes - CenterPoint Energy Houston Electric, LLC - 1 - Texas RE	
Answer	Yes
Comment	
CenterPoint Energy believes that for consistency between the EOP-005-3 and EOP-006-3 proposed standards the language proposed in both R1s should be consistent and use either, ”develop and implement”, or “develop, maintain, and implement”.	
Response	
Thank you for your comment. The EOP SDT removed “maintain” from Requirement R1 in which the team felt “maintain” is contained in Requirements R3, R4, and R5. “Implement” replaces the requirements of Requirements R7 and R8. The intent of “implement” is within Requirement R1.

4. Do you agree with the retirements proposed in EOP-006-3 of Requirement 7 and Requirement 8? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Sandra Shaffer - Berkshire Hathaway - PacifiCorp - 6

Answer	No

Comment

R7 requires at least once each 15 calendar months, annual System restoration training for its System Operators. R8 requires two System restoration drills, exercises, or simulations per calendar year. Need to assure that System Operators attend at least one of two annual drills, exercises or simulations every 15 months. The intent is that all entities within the restoration plan are adequately trained and aware of the attributes of the restoration plan.

Response

The EOP SDT is not removing the training or drill requirements from this standard. The currently-enforced Requirement R9 is proposed Requirement R7 for EOP-006-3 and the currently-enforced Requirement R10 is proposed Requirement R8 for EOP-006-3.

The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”.

One of the most important jobs of the Reliability Coordinator during system restoration is to ensure proper coordination is occurring between TOPs and Reliability Coordinators. Lack of coordination could have a large impact on system reliability during system restoration. The requirement that the RC coordinate or authorize resynchronizing of islands should remain. In the next requirement (old R9) the RC is even required to train on “The coordination role of the Reliability Coordinator and Reestablishing the Interconnection”. It seems to be in conflict for the RC to train on the coordination role but not require the TOP to coordinate with the RC when resynchronizing areas (proposed removal of EOP-005 R8) and not require the RC to coordinate the resynchronization of with neighboring TOPs and RCs.	
Response	
The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as “a logical action that does not require a standard.” The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, the EOP SDT discussed the content in Requirement R1, Part 1.2 which contains criteria and conditions for re-establishing interconnections.

Resynchronizing areas is a sensitive piece of system restoration. Much work has to go into getting systems ready for resynchronization and without proper coordination, a misstep could put all of that load in jeopardy of being dropped. One of the most important jobs of the Reliability Coordinator during system restoration is to ensure proper coordination is occurring between TOPs and Reliability Coordinators. Because lack of coordination could have such a large impact on system reliability during system restoration, the requirement that the RC coordinate or authorize resynchronizing of islands should remain. In the next requirement (old R9) the RC is even required to train on “The coordination role of the Reliability Coordinator and Reestablishing the Interconnection”. It seems to be in conflict for the RC to train on the coordination role but not require the TOP to coordinate with the RC when resynchronizing areas (proposed removal of EOP-005 R8) and not require the RC to coordinate the resynchronization with neighboring TOPs and RCs.	
Response	
The EOP SDT discussed your comment and agrees that Requirement R1, Part 1.2 requires the RC to have coordination with other TOPs and RCs.

R7 requires System Operator training every 15 months and R8 requires two drills, exercises or simulations every calendar year. The NSRF requests that R7 and R8 be combined to to assure that System Operators attend at least one of two annual drills, exercises or simulations every 15 months. The SDT can add in the sub-Requirements to capture all concerned parties. The intent is that all entities within the restoration plan are adequately trained and aware of the attributes of the restoration plan.	
Response	
The EOP SDT reviewed your comment but the two requirements have distinct processes and goals (training vs. drills) and should be kept separated.

Answer	
Comment	
Consistent with the comments in response to Question 2 above on EOP-005, Texas RE is concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-006-3 Requirement R1 restoration plan implementation requirements. Specifically, Requirement R7 provides not only that each affected RC shall implement its restoration plan following a	

Disturbance, but also that if "the restoration plan cannot be executed as expected the [RC] shall utilize its restoration strategies to facilitate restoration." As Texas RE indicated above, there is no explicit requirement in the revised EOP-006-3, Requirement R1 requiring RCs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. Although important for TOPs, these forms of adaptive strategies are particularly critical for RCs given their wide-area view of the BES and overall role in coordinating effective responses to Disturbances. As such, Texas RE recommends incorporating the following language into EOP-006-3, Requirement R1 if the SDT concludes the full retirement of EOP-006-3, Requirement R7 is appropriate: 1.7 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected. In a similar vein, EOP-006-3, Requirement R8 presently requires the RC to "coordinate and authorize resynchronizing islanded areas that bridge boundaries between [TOPs] or [RCs]. If the resynchronization cannot be completed as expected the [RC] shall utilize its restoration plan strategies to facilitate resynchronization." Similar to EOP-005-3, Requirement R1, these elements of R8 are not explicitly included within the various required parts of the RC's restoration plan as specified in EOP-006-3, R1.1 to 1.6. As a result, there could be confusion regarding resynchronization coordination and authorization obligations, as well as a gap regarding requirements to implement strategies to address resynchronization issues if events occur differently than specified with the RC's existing restoration plan. Again, Texas RE recommends that if the SDT opts to retire EOP-006-3, Requirement R8, it incorporate the RC's existing resynchronization obligations explicitly into the required restoration plan elements specified in Requirement R1 by added the following: 1.8 Procedures for coordinating and/or authorizing the resynchronization of islanded areas that bridge the boundaries between Transmission Operators and Reliability Coordinators	
Response	
The EOP SDT discussed and the high-level strategies are included in Requirement R1 Part 1.1. The EOP SDT discussed your resynchronization comment and agrees that Requirement R1, Part 1.2 requires the RC to have coordination with other TOPs and RCs.

SRP recommends clarifying the revision of the next to last bullet of Section 1.2 Evidence Retention. How many previous calendar years is evidence to be retained for?	
Response	
Thank you for your comment. The EOP SDT revised the language in Section 1.2 Evidence Retention to read: "Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and the previous calendar year, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7."	

Dennis Chastain - Tennessee Valley Authority - 1,3,5,6 - SERC, Group Name Tennessee Valley Authority	
Answer	No
Comment	
EOP-008 R5.1 has always been a bit ambiguous as to when it triggers a required update of the Operating Plan. "Any changes to any part of the Operating Plan" could mean that something as simple as a title change, organizational name change, or phone number change could trigger an update or approval of the Operating Plan. The drafting team should take this opportunity to clarify R5.1 in order to require that only substantive changes in the Operating Plan or changes that change the ability to implement the operating plan require an update and approval of the operating plan outside of the normal review cycle. Language could be modeled off the new language in EOP-005-3 R4. For example, the language could be changed to, "An update and approval of the Operating Plan for backup functionality shall take place withing sixty calendar days to reflect changes in the operating plan to items in R1 that would change the ability to implement the operating plan."	
Response	
Thank you for your comment. As Requirement R1 is currently written, the intent is to keep the plan updated. Therefore, the EOP SDT suggested no change to Requirement R5, Part 5.1.	
Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RF, Group Name Duke Energy	
Answer	No
Comment	
R1: We request further clarification regarding the inclusion of Interpersonal Communications in R1.2.3. Will the the Operating Plan for backup functionality need to also address Alternative Interpersonal Communications? The primary control center for the BA/TOP is required under COM-001-2.1 to have both Interpersonal Communications and Alternative Interpersonal Communications. To follow R1.3, it seems like BA/TOP entities would need to also have Alternative Interpersonal Communications addressed in the Operating Plan for EOP-008-2 in order to keep backup functionality consistent with the primary control center. Also, when operating from the backup, entities still must adhere to Standard COM-001-2.1.	

If Alternative Interpersonal Communications need to be part of the Operating Plan for EOP-008-2 that should be clear to all entities from the Standard so they know what their obligations are. The current version just says Voice communications, and that can mean something very different than having both Interpersonal Communications and Alternative Interpersonal Communications. R5: See Duke Energy's comment regarding the replacement of "annual" with "at least once each 15 calendar months" in response to question 1 above.	
Response	
Thank you for your comments. The EOP SDT does not agree that Alternate Interpersonal Communications should be included in EOP-008. Alternative Interpersonal Communications is included in COM-001-2.1. The EOP SDT decided to maintain "annual" in EOP-008 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".

Angela Gaines - Portland General Electric Co. - 3, Group Name PGE - Group 1	
Answer	No
Comment	

PGE thinks that the 15 month window is too restrictive and will give us less flexibility to schedule the drills outside of storm season, peak load periods, unexpected issues, etc. There is little gained by the more restrictive window, and much flexibility is lost in the ability to work around system demands.

Response
The EOP SDT decided to maintain "annual" in EOP-008 based on industry comments through postings and multiple outreach sessions. Justin Mosiman - Bonneville Power Administration - 1,3,5,6 – WECC

Answer	Yes
Comment	

Bonneville Power Administration (BPA) has identified a risk regarding R7. Not all utilities perform testing the same. R6 requirement of having independent functionality are not uniformly tested in R7. Some utilities do not completely sever connection to the primary functionality in order to test complete independence of primary and backup functionality. BPA recommends an additional sub-requirement for R7 to explicitly define how to test to ensure uniformity among utilities and mitigate risk of inadvertent dependence on primary functionality.

Response
Thank you for your comment. Requirement R6 is about the functionality and Requirement R7 is about the plan itself. Therefore, the EOP SDT suggests no additional changes to these requirements.

Justin Mosiman - Bonneville Power Administration - 1,3,5,6 – WECC

Answer	Yes

Answer	Yes
Comment	
The replacement of "annual" with "at least once each 15 calendar months" in R7 introduces additional unnecessary administrative tracking requirements, suggest that this requirement remains an annual requirement.	
Response	
The EOP SDT decided to maintain "annual" in EOP-008 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".	
Nick Vtyurin - Manitoba Hydro - 1,3,5,6 - MRO	
Answer	Yes
Comment	
Manitoba Hydro suggests to keep using Voice communications for R1.2.3 as it provides more clarity than Interpersonal Communications and eliminates redundancy with R1.2.2. Other type of communication mediums such as email and web messaging would already be covered under R1.2.2 Data communications.	
Response	

Thank you for your comment. Interpersonal Communications brings the requirement into alignment with COM-001-2.1. The definition of Interpersonal Communications in the NERC Glossary of Terms is: "Any medium that allows **two or more individuals** to interact, consult, or exchange information." Which includes human interaction; the EOP SDT's intent of Requirement R1 Part 1.2.2 Data communications is non-human interaction.	
Chris Gowder - Chris Gowder On Behalf of: Carol Chinn, Florida Municipal Power Agency, 5, 6, 4, 3; Chris Adkins, City of Leesburg, 3; David Schumann, Florida Municipal Power Agency, 5, 6, 4, 3; Don Cuevas, Beaches Energy Services, 1, 3; Ginny Beigel, City of Vero Beach, 9; Joe McKinney, Florida Municipal Power Agency, 5, 6, 4, 3; Richard Montgomery, Florida Municipal Power Agency, 5, 6, 4, 3; Thomas Parker, Fort Pierce Utilities Authority, 4, 3; Tom Reedy, Florida Municipal Power Pool, 6; - Chris Gowder, Group Name FMPA	
Answer	Yes
Comment	
FMPA generally agrees with the revsions proposed for EOP-008, but again believes the defined term Control Center should be used throughout the standard.	
Response	
Thank you for your comment. The NERC Glossary of Terms defines Control Center as: One or more facilities hosting operating personnel that monitor and control the Bulk Electric System (BES) in real-time to perform the reliability tasks, including their associated data centers, of: 1) a Reliability Coordinator, 2) a Balancing Authority, 3) a Transmission Operator for transmission Facilities at two or more locations, or 4) a Generator Operator for generation Facilities at two or more locations. The EOP SDT discussed the defined term Control Center, which could include the GOP. This standard requires backup functionality for RCs. BAs, and TOPs. The defined term Control Center could create confusion regarding whether GOPs should be added as an applicable entity; therefore, the EOP SDT decided to use the non-defined term of control center.	
Ken Simmons - Gainesville Regional Utilities - 1,3,5	
Answer	Yes
Comment	

GRU generally agrees with the revsions proposed for EOP-008, but again believes the defined term Control Center should be used throughout the standard.

Response	
Thank you for your comment. The NERC Glossary of Terms defines Control Center as: One or more facilities hosting operating personnel that monitor and control the Bulk Electric System (BES) in real-time to perform the reliability tasks, including their associated data centers, of: 1) a Reliability Coordinator, 2) a Balancing Authority, 3) a Transmission Operator for transmission Facilities at two or more locations, or 4) a Generator Operator for generation Facilities at two or more locations. The EOP SDT discussed the defined term Control Center, which could include the GOP. This standard requires backup functionality for RCs. BAs, and TOPs. The defined term Control Center could create confusion regarding whether GOPs should be added as an applicable entity; therefore, the EOP SDT decided to use the non-defined term of control center.	
David Jendras - Ameren - Ameren Services - 3	
Answer	Yes
Comment	
We believe the SDT should add language "with respect to loss of control center functionality" in Requirement 7 immediately after "Operating Plan"	
Response	
Thank you for your comment. Based on the Title and the Purpose of EOP-008, the EOP SDT agrees there is no change needed.	
Mark Holman - PJM Interconnection, L.L.C. - 2	
Answer	Yes
Comment	
PJM has concerns with R6 and its implecations to other standards. Specifically, TOP-001-4 and its requirement to maintain redundancy.	

Response	
Thank you for your comments. The EOP SDT discussed and agree that EOP-008, Requirement R6 relates to backup functionality and TOP-001-4 (which is currently in development) refers to data redundancy; therefore, we suggest no changes.

Michael Cruz-Montes - CenterPoint Energy Houston Electric, LLC - 1 - Texas RE	
Answer	Yes
Comment	
CenterPoint Energy generally agrees with and supports the SDT's revisions and clarifications proposed for EOP-008-2. We would like the SDT to consider changing R1.2.2 from, "Data communications" to "Data exchange capabilities" for consistency and alignment with revisions to the upcoming January 2017 enforceable requirements in TOP-001-3 R19 and IRO-002-4 R1 which are required to support the data specification concept in TOP-003-3.	
Response	
Thank you for your comment. After reviewing Commission Order No. 817 and Project 2016-01, the EOP SDT supports your comment for using "data exchange capabilities" to align EOP-008 with TOP-001-3 and IRO-002-4.	
Colleen Campbell - ACES Power Marketing - 6 - NA - Not Applicable, Group Name ACES Standards Collaborators	
Answer	Yes
Comment	

(1) We agree with the R1 changes from voice communications to Interpersonal Communication capabilities to align with other NERC standards.

(2) We question the need for a change in M1, M2, and M5 from "in force" to "in effect." They appear synonymous.

(3) For R5 and R7, we agree with changing annually to 15 calendar months to align with other NERC standards.

Response
Thank you for your comments. The EOP SDT adopted "in effect" to align with other Measures. The EOP SDT revised the words "in force" to "in effect" for clarity and consistency. The EOP SDT decided to maintain "annual" in EOP-008 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual".

Answer	Yes

Comment

R1

We agree the revision to R1, Part 1.1. prevents a tertiary Requirement (i.e., already included in EOP-008-2, R3 and R4).

We agree that in R1, Part 1.2.3., the defined term "Interpersonal Communications" should be used.

R5 and R7

We are supportive of replacing "annually" with "15 months" and believe it provides added clarity.

Response	
Thank you for your comments. The EOP SDT decided to maintain “annual” in EOP-008 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. *The NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”.

Response	
Thank you for your support of the standard.	
Michael Godbout - Hydro-Qu?bec TransEnergie - 1 - NPCC	
Answer	Yes
Comment	
Given the shift in EOP-005-3 and EOP-006-3 away from the mere 'having' a restoration plan to 'developing and implementing' a restoration plan, would it make sense to shift EOP-008-2 R1 away from 'having' to 'developing and maintaining' the Operating Plan? The other requirements concerned with the physical plan remain valid. Should R7 be modified to ensure consistency with R1.5 time requirement? R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct a test of its Operating Plan at least once every 15 calendar months and shall document the results from such a test. This test shall demonstrate: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]	

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality **is less than or equal to two hours**. 7.2. The backup functionality for a minimum of two continuous hours.
Response
Thank you for your comment. The EOP SDT discussed but agrees there are several requirement parts that address implementation. EOP SDT reviewed 1.5 in Requirement R7 and believes these are separate purposes and should remain as drafted.

Requires a rework of the language related to the retention of evidence as "previous calendar years" is ambiguous and open to interpretation. Recommend that language related to the retention of evidence be consistent throughout the NERC standard. That is, "…shall retain evidence for the time period since its last compliance audit."	
Response	
Thank you for your comment. The EOP SDT revised the language in Section 1.2 Evidence Retention to read: "Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and the previous	

calendar year, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.”

Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	
Comment	

The term “control center” (Purpose statement, Requirement R1, part 1.3, part 1.5, part 1.6, Requirement R2, Measure M2, Requirement R3, Measure M3, Requirement R4, Requirement R6, Measure M6, part 7.1, Evidence Retention section, and the VSL section) should be capitalized as it is a defined term.

Texas RE recommends revising Requirement R2 to generically refer to any location capable of providing backup functionality as there are cases where there are tertiary control centers developed. Note that having multiple locations where backup functionality may exist is considered to be, or could be considered to be, an exceptional step in supporting reliability and continuity of reliable operations but there should be an expectation of similar reliability expectations coupled with compliance obligations at these locations.

As the goal of the Reliability Standards is Reliability, Texas RE recommends revising Requirement R3 and Requirement R4 “reliable operations and subsequent compliance…”

Texas RE suggests Requirement R3 would be cleaner if the information in the parentheses were listed out as subparts. Also, replace "certified Reliability Coordinator operators" with System Operator, which is defined.

Texas RE suggests Requirement R4 would be cleaner if the information in the parentheses were listed out as subparts. Also, replace "applicable certified operators" with System Operator, which is defined.

In the “Evidence Retention” section, the changes made to the Measures do not seem to have been provided here (e.g. Measurement M1 changed “in force’ to “in effect” below the R1 but in this section still shows “in force”…multiple instances that need a quality review). Additionally there is inconsistency in the language (e.g. audit versus compliance activity) in this section as compared to EOP-005.

Response

Thank you for your comment. The NERC Glossary of Terms defines Control Center as: One or more facilities hosting operating personnel that monitor and control the Bulk Electric System (BES) in real-time to perform the reliability tasks, including their associated data centers, of: 1) a Reliability Coordinator, 2) a Balancing Authority, 3) a Transmission Operator for transmission Facilities at two or more locations, or 4) a Generator Operator for generation Facilities at two or more locations.

The EOP SDT discussed the defined term Control Center, which could include the GOP. This standard requires backup functionality for RCs. BAs, and TOPs. The defined term Control Center could create confusion regarding whether GOPs should be added as an applicable entity; therefore, the EOP SDT decided to use the non-defined term of control center.
As written in Requirement R2, you can have a copy of your backup plan at any backup site. It is not limited.

The EOP SDT discussed and changed “depend on” to “applicable to.” The intent was not to have the backup facility “depend on” the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.
Requirement R3 is written specific to a RC function. Use of the defined term (System Operator) introduces the BA and TOP system operator.

Requirement R4 is written specific to the BA and TOP functions. Use of the defined term (System Operator) introduces the RC.
The EOP SDT adopted “in effect” to align with other measures and for added clarity and consistency.

6. Do you agree with the Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for the requirements in the proposed standards? If you do not agree, or if you agree but have comments or suggestions for the VRFs and VSLs your recommendation and explanation.

The SRC suggests that the VSLs for EOP-00-3 be clarified as follows: R1 – Severe VSL: The Transmission Operator does not have an approved restoration plan OR The Transmission Operator has an approved restoration plan but failed to implement it when a disturbance occurred, in accordance with Requirement R1. R3 – Lower VSL, Moderate VSL, High VSL and Severe VSL: delete the words "or confirmation of no change" in all of the VSLs to make the language consistent with the deletion of Requirement R3.1.	
Response	
Thank you for your comment. As written, "The Transmission Operator has an approved restoration plan, but failed to implement it," it is implied that a disturbance occurred that required the utilization of your restoration plan. For VSL of Requirement R3, the EOP SDT has made the deletion of "or confirmation of no change."	

Colleen Campbell - ACES Power Marketing - 6 - NA - Not Applicable, Group Name ACES Standards Collaborators	
Answer	No
Comment	
(1) For the requirements that added “implement” to the requirement, we disagree with the corresponding changes to the VRFs and VSLs. The reasons for disagreement are captured in previous comments. (2) For the requirements that were proposed to be retired or requirements that had timelines clarified, we agree with the corresponding VRFs and VSLs.	
Response	
Thank you for your comments. Please see the drafting team’s response in your previous comments.

Answer	No
Comment	
EOP-005-3 R3: Adjust the VSLs to match R3 due to the striking of R3.1. EOP-005-3 R4: **Moderate VSL:** The TOP updated and submitted its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator between 91 calendar days and 120 calendar days of an **unplanned** change. OR The TOP failed to update and submit its restoration plan that would affect implementation of the restoration plan to the Reliability Coordinator at least 20 calendar days prior to a **planned** change. EOP-005-003 R4: **High VSL**: The TOP updated and submitted its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator between 121 calendar days and 150 calendar days of an **unplanned** change. OR	

The TOP failed to update and submit its restoration plan that would affect implementation to the Reliability Coordinator at least 10 calendar days prior to a **planned** change. EOP-005-003 R4: **Severe VSL:** The TOP has failed to update and submit its restoration plan that would affect implementation of the restoration plan, to the Reliability Coordinator within 150 calendar days of an **unplanned** change. OR The TOP failed to update and submit its restoration plan that would affect implementation of the restoration plan to the Reliability Coordinator prior to a **planned** BES modification. EOP-006-3 R8: The VSL should match the Standard Requirement R8, not R8.1.
Response
For VSL of Requirement R3, the EOP SDT has made the deletion of “or confirmation of no change.” The EOP SDT has updated Requirement R4 to read as below and VSLs have been updated accordingly; R4 Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* 4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications. 4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006 EOP-006-3 R8 VSL; The EOP SDT agrees with your comment and made conforming changes.

Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RF, Group Name Duke Energy	
Answer	No
Comment	

R4: Duke Energy suggests that the drafting team revisit the language for Severe VSL for R4. It appears that the phrase *"to a planned BES modification"* was left in the VSL, whereas the language used in the other VSL(s) use *"to a planned change".*	
Response	
R4 Part 4.2 was updated as; 4.2 Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006. Therefore the Severe VSL was updated to read as; The Transmission Operator failed to update and submit it revised restoration plan to the Reliability Coordinator prior to a planned permanent BES modification.

For EOP-005-3 R1 and EOP-006-2 R1 Severe VSLs, SRP recommends removing the verbiage regarding implementation of the plan. For EOP-005-3 R2, the first 3 VSLs are based on a discrete number, while the Severe VSL also includes the term "half". That causes a potential for contradiction. For example, if an approved restoration plan only identifies 2 entities and 1 of them is not notified of changes, that meets the criteria for both the Lower VSL and the Severe VSL.	

Response	
The EOP SDT reviewed your comments for the Severe VSLs for EOP-005-3 R1 and EOP-006-2 and believes these VSLs should remain as they pertain R1 which requires implementation of the restoration plans.	
Anthony Jablonski - ReliabilityFirst - 10	
Answer	No
Comment	

ReliabilityFirst provides the following comments for the **EOP-005-3** VSLs:

1. VSL for R1
    i. Requirement R1 has 9 sub-parts but the high VSL only mentions missing 3 sub-parts. This leaves a gap in cases where an entity fails to comply with 4 or more sub-parts. RF suggest the following as an additional “OR” VSL to the Severe VSL
        a. The Transmission Operator has an approved plan but failed to comply with four or more of the requirement parts within Requirement R1.
2. VSL for R6
    i. To further clarify the timing of the High VSL, RF recommends the following modification for the High VSL:
        a. The Transmission Operator performed the verification but did not complete it within [six years].
3. VSL for R8
    i. Since Requirement R8 has a timing component as well “…training at least once each 15 calendar months…”, RF recommends adding additional “OR” VSLs to the Severe VSL level as follows:
        a. Severe VSL - The Transmission Operator failed to include within its operations training program, System restoration training at least once within 15 calendar months for its System Operators.

4. VSL for R12

   i. To be consistent with the language in Requirement R12, RF recommends the following language for the Severe VSL

      a. Each Generator Operator with a Blackstart Resource failed to have documented procedures for starting each Blackstart Resource and energizing a bus.

ReliabilityFirst provides the following comments for the **EOP-006-3** VSLs:

1. Requirement R2

   i. RF request clarity around the phrase "or revision" at the end of Requirement R2. Since the RC must perform a review of the restoration plan every 15 calendar months according to Requirement R3, is this considered a revision (thus prompting the RC to distribute the restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days)? If this is the intent, RF recommends the following revision for the SDTs consideration.

      a. R2 - The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation, revision [or annual review].

1. VSL for R5

2.

   i. Since the word "notification" is not in Requirement R5, RF suggests removing the second "OR" VSL from each of the VSL Categories and add the phrase "with stated reasons" to the first VSL. Listed below is an example of this addition to the Lower VSL Category:

      a. The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans [with stated reasons] from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt.

Response

EOP-005 VSL
1. VSL R1 - The EOP SDT reviewed your comment and has updated the Severe VLS to read as; The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
2.VSL for R6 - High VSL no change made, the language in the VSL of “required timeframe” is a reference to the time frame within Requirement R6.
3.VSL for R8 - The EOP SDT reviewed your comment and made conforming changes.
4. VSL forR12 - The EOP SDT reviewed your comment and did not believe changes need to be made to this VSL.

EOP-006-3
1. R2 and R3 comments - The EOP SDT believes if there is an RC review completed in R3 and there is a revision made to the restoration plan, then the RC shall follow the distribution requirements in R2.
2. VSL for R5 - The EOP SDT reviewed your comments, but agreed that ‘notified’ is in M5; and, therefore, did not make any changes. The EOP SDT did agree with the revisions suggested to include “with stated reasons for disapproval, and made the conforming change.

Si Truc Phan - Hydro-Qu?bec TransEnergie - 1 - NPCC

Answer	No

Comment

It is suggested that the VSLs for EOP-005-3 be revised for clarification as follows:

R1--Severe VSL: The Transmission Operator does not have an approved restoration plan OR the Transmission Operator has an approved restoration plan but failed to implement it when a disturbance occurred, in accordance with Requirement R1.

R3--Lower VSL, Moderate VSL, High VSL and Severe VSL: delete the words “or confirmation of no change” in all of the VSLs to make the language consistent with the deletion of Part 3.1.

Response

Thank you for your comments. The EOP SDT made the following revisions to Requirement R1 Severe VSL: "The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1." The EOP SDT deleted the words "or confirmation of no change" from all four levels of VSLs.

EOP-005: Consistent with Texas RE's comments above, the SDT should separate the development and implementation of restoration plans under EOP-005-3's requirements. If the SDT does this, these changes should also flow through the affected VSLs. However, the SDT should at a minimum revise the language in the VSL to reference the revised standard requirements in R1. That is, the VSL, as currently drafted, uses the term "comply." Rather, as Texas RE reads the elements in the VSL, the Lower, Medium and High categories reference a TOP's obligation to incorporate the various restoration plan elements specified in parts R1.1 through R1.9. As such, Texas RE recommends revising the VSLs to make clear that the each violation threshold applies for TOPs not including required elements in their plan. For example, the Lower VSL should read: "The [TOP] has an approved plan, but the plan is missing one of the required elements specified in the requirement parts within Requirement R1." EOP-006: Please see the comments on EOP-006-3, R1 above. The proposed VSLs do not address a RC's maintenance obligations under R1. EOP-008: The Requirement R2 Severe VSL should say "control locations".	
Response	
Thank you for your comments. The EOP SDT made the following revisions to Requirement R1 Severe VSL: "The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1."	

The EOP SDT deleted the words “or confirmation of no change” from all four levels of VSLs.

In EOP-005-3 the effective date of the restoration plan should be defined. Requirement R4 only takes into account the update and the submittal of the TOP plan to the RC for approval. Requirement R4 does not define the effective date of the TOP plan. On reading between the lines, it can be understood that the restoration plan should be effective no more than 120 (90+30) days following an unplanned System modification and prior to the implementation of a planned System modification.

The Drafting Team should consider the addition of a phrase to Requirement R4 to indicate that the TOP plan becomes effective following its approval by the RC.

Requirement R6 of EOP-005-3 requires verification and testing of the restoration plan at least once every five years.

The *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans* recommended the re-verification or re-testing of the restoration plan when there are System changes that could impact the viability of the plan.

The Drafting Team should consider the updating of Requirement R6 according to the recommendation or explain why this recommendation was not retained.

The phrase "or an energized island has been formed on the BES within the Reliability Coordinator Area" needs to be clarified by the Drafting Team regarding Requirement R1 of EOP-006-3.

The spirit of this standard applies most notably to coordination between Reliability Coordinators and between the Reliability Coordinators and their Transmission Operators. Does the "energized island" refer to an island formed that bridges boundaries between two TOPs or an island formed within one TOP in the Reliability Coordinator Area? Is the formation of the island solely in the context of a partial outage?

Response

Thank you for your comments. The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements. The EOP SDT vetted Requirement R6 and the *FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.* These were recommendations that the EOP SDT considered. The posting supporting document, Consideration of Issues and Directives, address this issue: "The TOP performs detailed testing at least every five years to ensure that its restoration plan accomplishes its intended function (EOP-005, Requirement R6). In addition, the TOP 1) has to annually review its restoration plan and submit it to its RC for approval, 2) when there are revisions that would change the TOP's ability to implement its restoration plan (these also have to be submitted to the RC for review), 3) include within its operations training program annual System restoration training for its System Operators, and 4) participate in RC restoration drills, exercises or simulations (EOP-005, Requirements R3, R4, R8, and R10). The RC has to 1) review its restoration plan within 13 calendar months of the last review, 2) review its neighboring RC's restoration plans and provide notice of any conflicts discovered, 3) review and approve/disapprove its TOP's restoration plans, 4) provide annual System Restoration training for its System Operators, and 5) conduct two System Restoration drills, exercises or simulations per calendar year (EOP-006, Requirements R3, R4, R5, R7, and R8). The recommendation pointed out when there are system changes that could impact the viability of the plan. When the RC reviews the TOP restoration plan for annual approval/disapproval, the RC is the only entity that has the wide-area view of the entire System and is the only entity that can effectively complete this approval. The EOP SDT believes that since the TOP and RC have to meet multiple requirements, they are both continually reviewing and testing the viability of their restoration plans; and, therefore, no changes were made in EOP-005 based on the recommendation."

Answer	
Comment	

EOP-005-3 in Section C, 1. Compliance Monitoring Process, that the data/retention time frame for R1 (first bullet) is since the "last monitoring activity". This is a moving target for tracking evidence retention. EOP-006-3 does not have the same retention period for the RC similar Requirement. It remains as the "last compliance audit". Would suggest that the drafting team return the retention language for EOP-005-3 R1 back to the 'last compliance audit'.	
Response	
Thank you for your comments. The language has been revised back to "last compliance audit."

The webinar for Project 2015-08 mentioned that the proposed revisions to EOP-005 and -006 to address the Recommendations from the ***FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.*** In that regard, Recommendation #2 stated:

2. Verification/testing of modified restoration plan. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably, i.e., when needed to ensure that the restoration plan, when implemented, allows for restoration of the system within acceptable operating voltage and frequency limits. In considering such measures, the types of system changes that could impact reliable implementation of the restoration plan should be taken into account (e.g., identification of a new blackstart generator location or on redefinition of a cranking path). **[Section IV.G]**

R6 states that: "Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years…."while **M6** goes on to state that: "Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with **R6**."

If the SDT's intent is to have the Transmission Operator verify its plan following an update triggered by **R4**, then APS recommends requirement R6 be revised to more clearly indicate this expectation as follows:

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years or as triggered by a revision to its restoration plan following a System modification as defined under requirement R4. Such analysis, simulations or testing shall verify:…"

Response

Thank you for your comments.

The EOP SDT vetted Requirement R6 and the *FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans.* These were recommendations that the EOP SDT considered. The posting supporting document, Consideration of Issues and Directives, address this issue:

"The TOP performs detailed testing at least every five years to ensure that its restoration plan accomplishes its intended function (EOP-005, Requirement R6). In addition, the TOP 1) has to annually review its restoration plan and submit it to its RC for approval, 2) when there are revisions that would change the TOP's ability to implement its restoration plan (these also have to be submitted to the RC for review), 3) include within its operations training program annual System restoration training for its System Operators, and 4) participate in RC restoration drills, exercises or simulations (EOP-005, Requirements R3, R4, R8, and R10). The RC has to 1) review its restoration plan within 13 calendar months of the last review, 2) review its neighboring RC's restoration plans and provide notice of any conflicts discovered, 3) review and approve/disapprove its TOP's restoration plans, 4) provide annual System Restoration training for its System Operators, and 5) conduct two System Restoration drills, exercises or simulations per calendar year (EOP-006, Requirements R3, R4, R5, R7, and R8). The recommendation pointed out when there are system changes that could impact the viability of the plan. When the RC reviews the TOP restoration plan for annual approval/disapproval, the RC is the only entity that has the wide-area view of the entire System and is the only entity that can effectively complete this approval. The EOP SDT believes that since the TOP and RC have to meet multiple requirements, they are both continually reviewing and testing the viability of their restoration plans; and, therefore, no changes were made in EOP-005 based on the recommendation."

Under Project 2015-08, EOP-005-3 states that organizations will be required to obtain electronic confirmation/verification evidence (receipts) from entities when plans have been transmitted. This will be a challenge considering industry organizations have no control over the entities process once the plans have been received. LCRA is under the position to submit a negative vote with the proposed written revisions until further thought is given and changes are made to remove this requirement
Response
Thank you for your comment. Consistent with the revision to Requirement R1, the EOP SDT intends to underscore the need for Transmission Operators to utilize their restoration plans. The evidence identified in this Measure is exemplary and not exclusive and its inclusion is consistent with the Standards Process Manual's intended purpose of a Measure. The SPM states that a Measures "[p]rovides identification of the evidence or types of evidence that may demonstrate compliance with the associated requirements."

The two separate postings caused confusion because the same project has different due dates and overlapping comment periods. We strongly recommend delaying the posting until all standards are ready. We have concerns that the announcements to industry were not clearly announced and stakeholders may not be aware of the two separate and distinct deadlines for submitting comments and balloting on this project.

Thank you for the opportunity to comment.

Response

Thank you for your comments. The ballot period for all four standards will be the same; however, EOP-004 and EOP-008 will announce at a separate time, due to being in final ballot. EOP-005 and EOP-006 will post previous to allow for comment period.

1. In R2 and M2 of EOP-005-3, it is not clear who "their" is referring to in each statement. **2. There are several references to 15 calendar months throughout EOP-005-3. Changing the time period to 15 months does not enhance reliability but does have other negative impacts. In R3, entities already have a set period identified by their RC as to when their restoration plans are due. In R8, changing the requirement from annually to 15 months adds a significant level of complexity by requiring tracking of individual rolling time windows for each operator.** **3. In R8.5 of EOP-005-3, training operators on the transition back to normal operations does not provide a reliability benefit commensurate with the level of effort required to develop training. In addition, operator training content is established using the Systematic Approach to Training as required by PER-005-2, R1. Adding training requirements outside of SAT and the PER standard is contrary to the intent of PER-005 and the philosophy of the systematic approach.**	
Response	
Thank you for your comments. The "their" is referring to the entities identified in the TOP's approved restoration plan. "Each transmission Operator shall provide *the entities identified in its approved restoration plan* with a description of any changes to their…" This is from the original language in EOP-005-2. This EOP SDT made no revisions to that language. The EOP SDT decided to maintain "annual" in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining "annual". The EOP SDT held extensive discussions on the training requirements of EOP-005. The training requirements are being retained in EOP-005, as it is specific training with high impact, low occurrence. The PER-005 standard entails more of training processes.	
Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	
Comment	

Texas RE noticed EOP-005-3 Requirement R2 only appears to only apply when there is a change to entities' roles. Texas RE is concerned those entities where there is not a change would not receive an updated restoration plan and thus have a different plan than other entities. Texas RE recommends providing an updated restoration plan to all entities identified in the plan if there are any changes to the plan. There should be information indicating a change or "no change" in the roles.

Texas RE noticed the term "system" is not capitalized in EOP-005-3 Requirements R1.1 and R1.2, but it is capitalized in the RSAW. Since "system" is a defined term in the NERC Glossary, and to be consistent with the RSAW, Texas RE recommends capitalizing the term.

Texas RE noticed EOP-005-3 is uses the term "Disturbance" but EOP-006 has no reference to a "Disturbance". Texas RE inquires as to why EOP-006-3 does not mention "Disturbance".

Texas RE is concerned with the language in EOP-005-3 Requirement R9 that says: "that are outside of their normal tasks". Specific system restoration training should always take place regardless of whether or not the unique tasks are outside [System Operators'] normal tasks". Texas RE is concerned training might not take place if registered entities do not consider System restoration a unique task.

Texas RE requests, in the future, that a full redline be provided for every project. If it is not clear what changed, the requirement language cannot be fully evaluated. Also, Texas RE requests rationale for the changes.

Response

Thank you for your comments.

The EOP SDT understands Requirement R2 to require a TOP to provide all entities identified in its restoration plan with a description c any change to their roles and specific tasks. The requirement does not state that the TOP provide this to only those entities having a change, but to all entities identified in its restoration plan.

EOP-005 Purpose; Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

EOP-006 Purpose; Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

In EOP-005 the restoration plan is enabled if the Disturbance has occurred, and EOP-006 is applicable to the RC to direct the 'coordination of the System restoration process'.

The standard has been updated for "System" to be capitalized.

Requirement R9 training is specific to field switching personnel that perform unique tasks associated with the TOPs restoration plan that are outside of their normal tasks, it does not pertain to System Operators. EOP-006-3, Requirement R7 requires the RC to have annual System restoration training for its System Operators, and Requirement R8 requires the RC to have two System Restoration drills which shall include TOPs and GOPs; and, therefore, the EOP SDT believes the System Operators will still receive System restoration training. Additionally, RC System Operators are subject PER-005-2 and restoration tasks would be subject to inclusion in the entities systematic approach to training based training program.

The EOP SDT has created rationale boxes and a mapping document for this additional ballot and posting, which will include all changes that have been made. A full redline to each last-approved standard was included on the project page during the initial comment/ballot period. The additional comment/ballot periods will include redlines to the last posted, and the final ballot period will have final redlines to the last approved standards.

We support NPCC's comments. In addition we have the following comments.

Comments regarding EOP-006-3 and the concept of "energized island":

The phrase “or an energized island has been formed on the BES within the Reliability Coordinator Area” should be clarified by the Drafting Team regarding Requirement R1 of EOP-006-3. As argued in question 1, we support this concept in EOP-006-3 and would like this concept extended to EOP-005-3. However, we would like the concept to be clarified in order to set clear expectations and a common understanding around this concept.

We note, for example, that the spirit of EOP-006-3 applies most notably to coordination between Reliability Coordinators and between the Reliability Coordinators and their Transmission Operators.

RC- RC : As phrased, would an island on the BES that lies across two RC boundaries trigger R1? The third sentence implies the affirmative. If so, it could be clearer to replace the "within the RC Area" by "within **or partly within** the RC Area" or some other variant.

RC -TOP : Does the concept of “energized island” distinguish an island that bridges boundaries between two TOPs and an island formed within one TOP in the Reliability Coordinator Area? Is the formation of the island in R1 solely in the context of a partial outage?

Response

Thank you for your comment. The EOP SDT discussed your comment. An energized island that has been formed on the BES within the RC area could be an energized island formed between TOPs in the RC area, or it could also be an energized island formed in one TOP area within the RC area. There are multiple events that could occur with “energized islands” within an RC area, and each event/outag will have to be addressed differently. An electrical island is not solely in the context of a partial outage. There are several scenarios where an energized island could be formed as part of a wide area outage.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-004-4 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	07/25/2016 – 09/08/2016
45-day formal comment period with additional ballot	09/26/2016 – 11/09/2016
10-day final ballot	12/01/2016 – 12/12/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following functional entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes, but is not limited to the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday).

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Responsible Entity had an Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.
R2.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 36 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				OR The Responsible Entity failed to submit a report for an event in EOP-004 Attachment 1.

D. Regional Variances

None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Generation loss: The EOP SDT discussed dispersed power producing resources and their generation loss due to weather patterns or fuel source unavailability, but NERC confirmed that reporting of generation loss would be used to report Forced Outages not weather patterns or fuel source unavailability for these resources.

Complete loss of Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the Glossary of Terms as: “Any medium that allows two or more individuals to interact, consult, or exchange information.”

Complete loss of monitoring or control capability at a BES control center: Language revisions to: “Complete loss of monitoring or control at a BES control center for 30 continuous minutes or more” provides clarity to the “Threshold for Reporting” and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction to maintain the continuity of the BES	TOP	System wide voltage reduction of 3% or more.
Firm load shedding resulting from a BES Emergency	RC, BA, TOP	Firm load shedding ≥ 100 MW.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,000 MW in the ERCOT Interconnection
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).
Unplanned BES control center evacuation	RC, BA, TOP	Unplanned evacuation from BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication capability at a BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at a BES control center	RC, BA, TOP	Complete loss of monitoring or control at a BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

Version History

Version	Date	Action	Change Tracking
2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

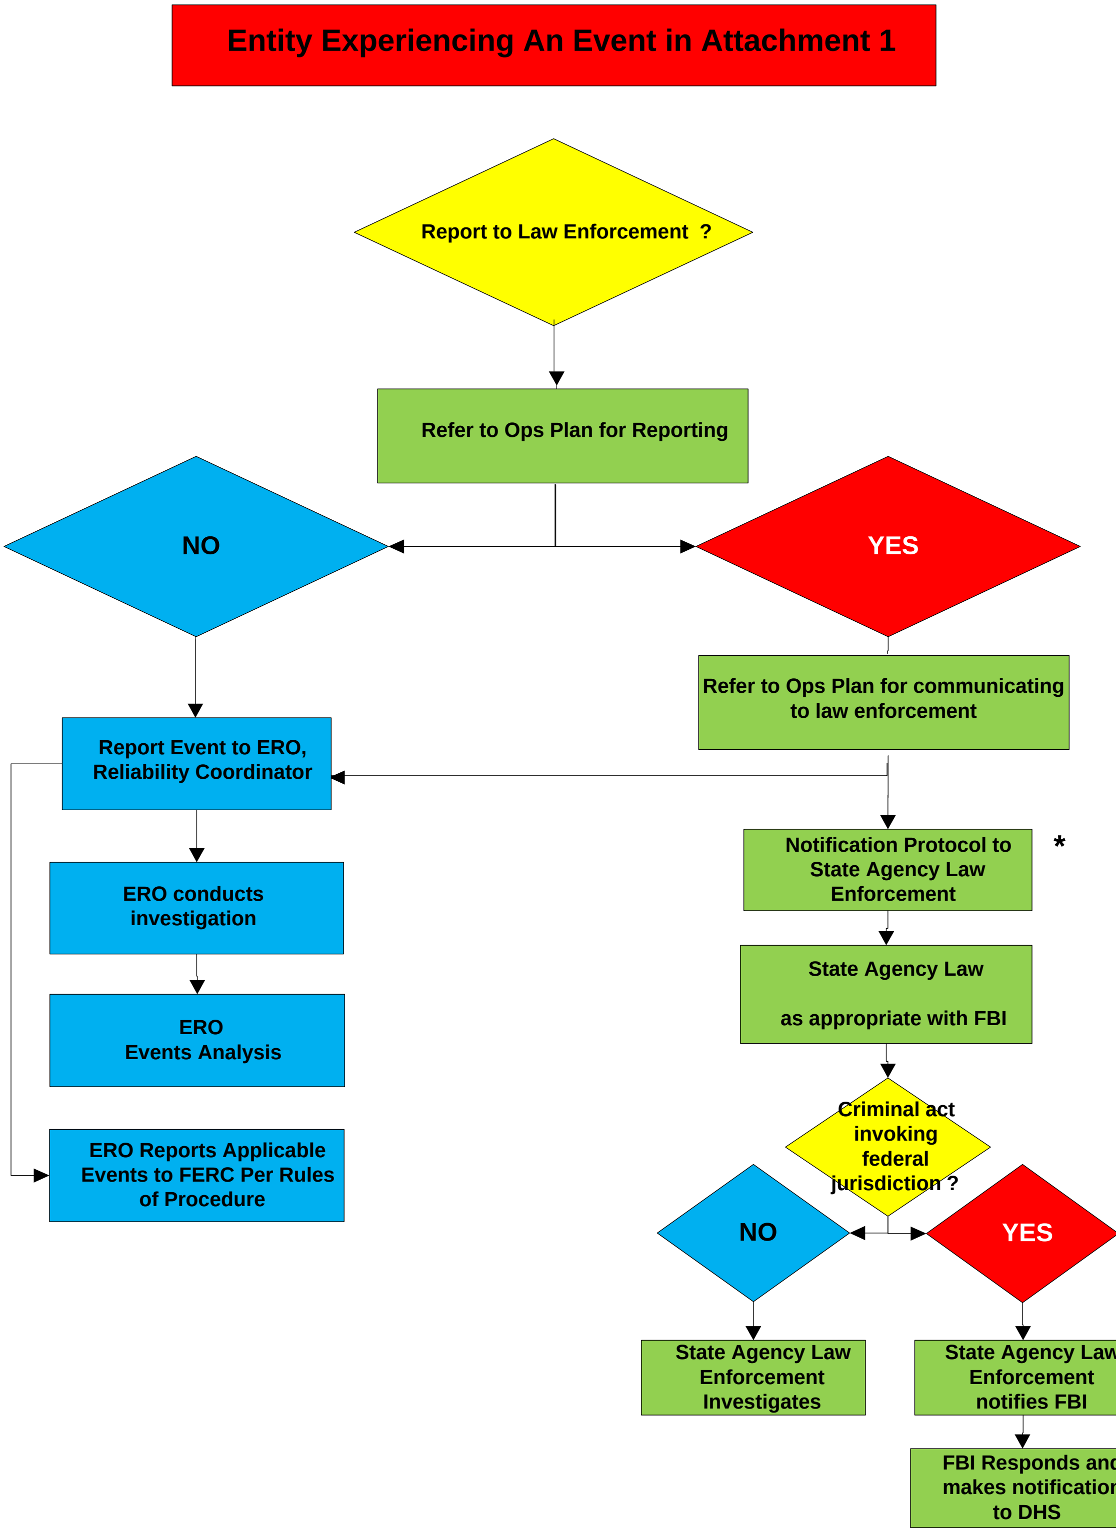
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional entities to report the incidents and provide known information as known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-004-4 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015

Anticipated Actions	Date
45-day formal comment period with ballot	07/25/2016 – 09/08/2016
45-day formal comment period with additional ballot	09/26/2016 – 11/09/2016
10-day final ballot	12/01/2016 – 12/12/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following functional entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

~~6. **Background:** NERC established a SAR Team in 2009 to investigate and propose revisions to the CIP-001 and EOP-004 Reliability Standards. The team was asked to consider the following:~~

~~1. CIP-001 could be merged with EOP-004 to eliminate redundancies.~~
~~2. Acts of sabotage have to be reported to the DOE as part of EOP-004.~~
~~3. Specific references to the DOE form need to be eliminated.~~
~~4. EOP-004 had some 'fill-in-the-blank' components to eliminate.~~

~~The development included other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient Bulk Electric System reliability standards.~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009.~~

~~The DSR SDT developed a concept paper to solicit stakeholder input regarding the proposed reporting concepts that the DSR SDT had developed. The posting of the concept paper sought comments from stakeholders on the "road map" that will be used by the DSR SDT in~~

~~updating or revising CIP-001 and EOP-004. The concept paper provided stakeholders the background information and thought process of the DSR SDT. The DSR SDT has reviewed the existing standards, the SAR, issues from the NERC issues database and FERC Order 693 Directives in order to determine a prudent course of action with respect to revision of these standards.~~

~~**7. Standard-Only Definition:** None~~

B. Requirements and Measures

~~**Rationale for Requirement R1:** Text~~

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-~~2~~ ~~3~~ 4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes, but is not limited to the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-~~3~~4 Attachment 1 and in accordance with the entity responsible for reporting.

~~**Rationale for Requirement R2:** Text~~

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday ~~local time~~). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event either a~~,~~ copy of the completed EOP-004-~~3~~ 4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday ~~local time~~). ~~(R2)~~

~~**Rationale for Requirement R3:** Text~~

~~**R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*~~

~~**M3.** Each Responsible Entity will have dated records to show that it validated all contact information contained in the Operating Plan each calendar year. Such evidence may include, but are not limited to, dated voice recordings and operating logs or other communication documentation. (R3)~~

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement~~s~~ R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement~~s~~ R2~~, R3~~ and Measure M2~~, M3~~.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Responsible Entity had an Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.
R2.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 36 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours.

R #	Violation Severity Levels			
				OR The Responsible Entity failed to submit a report for an event in EOP-004 Attachment 1.
~~R3.~~	~~The Responsible Entity validated all contact information contained in the Operating Plan but was late by less than one calendar month.~~ ~~OR~~ ~~The Responsible Entity validated 75% but less than 100% of the contact information contained in the Operating Plan.~~	~~The Responsible Entity validated all contact information contained in the Operating Plan but was late by one calendar month or more but less than two calendar months.~~ ~~OR~~ ~~The Responsible Entity validated 50% and less than 75% of the contact information contained in the Operating Plan.~~	~~The Responsible Entity validated all contact information contained in the Operating Plan but was late by two calendar months or more but less than three calendar months.~~ ~~OR~~ ~~The Responsible Entity validated 25% and less than 50% of the contact information contained in the Operating Plan.~~	~~The Responsible Entity validated all contact information contained in the Operating Plan but was late by three calendar months or more.~~ ~~OR~~ ~~The Responsible Entity validated less than 25% of contact information contained in the Operating Plan.~~

D. Regional Variances

None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Generation loss: The EOP SDT discussed dispersed power producing resources and their generation loss due to weather patterns or fuel source unavailability, but NERC confirmed that reporting of generation loss would be used to report Forced Outages not weather patterns or fuel source unavailability for these resources.

Complete loss of Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the Glossary of Terms as: “Any medium that allows two or more individuals to interact, consult, or exchange information.”

Complete loss of monitoring or control capability at a BES control center: Language revisions to: “Complete loss of monitoring or control at a BES control center for 30 continuous minutes or more” provides clarity to the “Threshold for Reporting” and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of ~~a~~ its Facility	~~BA,~~ TO, ~~TOP,~~ GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to ~~a~~ its Facility	~~BA,~~ TO, ~~TOP,~~ GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at ~~a~~ its Facility. ~~Do not report theft unless it degrades normal operation of a Facility.~~
Physical threats to ~~a~~ its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at ~~a~~ its BES control center.
~~BES Emergency requiring public~~ Public appeal for load reduction	~~Initiating entity is responsible for reporting~~BA	~~Public appeal for load reduction event.~~Public appeal for load reduction to maintain continuity of the BES.
~~BES Emergency requiring system~~System-wide voltage reduction to maintain the continuity of the BES	~~Initiating entity is responsible for reporting~~TOP	System wide voltage reduction of 3% or more.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
~~BES Emergency requiring manual f~~Firm load shedding resulting from a BES Emergency	~~Initiating entity is responsible for reporting~~RC, BA, TOP	~~Manual firm~~ Firm load shedding ≥ 100 MW.
~~BES Emergency resulting in automatic firm load shedding~~	~~DP, TOP~~	~~Automatic firm load shedding ≥ 100 MW (via automatic undervoltage or underfrequency load shedding schemes, or RAS).~~
BES Emergency resulting in ~~Voltage~~ voltage deviation on a Facility	TOP	~~Observed within its area a~~ A voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.
~~IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only)~~	~~RC~~	~~Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL for more than 30 minutes for Major WECC Transfer Paths (WECC only).~~
Uncontrolled ~~Loss~~ loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled ~~Loss~~ loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA~~, GOP~~	Total generation loss, within one minute, of~~-~~: ≥ 2,000 MW ~~for entities~~ in the Eastern, ~~or~~ Western, or Quebec Interconnection OR ≥ 1,000 MW ~~for entities~~ in the ERCOT ~~or Quebec~~ Interconnection
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).
Unplanned BES control center evacuation	RC, BA, TOP	Unplanned evacuation from BES control center facility for 30 continuous minutes or more.
Complete loss of ~~voice communication~~Interpersonal Communication capability at a BES control center	RC, BA, TOP	Complete loss of ~~voice~~ Interpersonal ~~communication~~ Communication capability affecting a staffed BES control center for 30 continuous minutes or more.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of monitoring or control capability at a BES control center	RC, BA, TOP	Complete loss~~Complete loss~~ of monitoring or control at ~~capability affecting~~ a BES control center for 30 continuous minutes or more. ~~such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.~~

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form		
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net , Facsimile 404-446-9770 or voice: 404-446-9780. Guideline and Technical Basis

~~**Distribution Provider Applicability Discussion**~~

~~The DSR SDT has included Distribution Providers (DP) as an applicable entity under this standard. The team realizes that not all DPs will own BES Facilities and will not meet the "Threshold for Reporting" for any event listed in Attachment 1. These DPs will not have any reports to submit under Requirement R2. However, these DPs will be responsible for meeting Requirements R1 and R3. The DSR SDT does not intend for these entities to have a detailed Operating Plan to address events that are not applicable to them. In this instance, the DSR SDT intends for the DP to have a very simple Operating Plan that includes a statement that there are no applicable events in Attachment 1 (to meet R1) and that the DP will review the list of events in Attachment 1 each year (to meet R3). The team does not think this will be a burden on any entity as the development and annual validation of the Operating Plan should not take more that 30 minutes on an annual basis. If a DP discovers applicable events during the annual review, it is expected that the DP will develop a more detailed Operating Plan to comply with the requirements of the standard.~~

Multiple Reports for a Single Organization

For entities that have multiple registrations, the ~~DSR SDT intends~~requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

~~**Summary of Key Concepts**~~

~~The DSR SDT identified the following principles to assist them in developing the standard:~~

- ~~Develop a single form to report disturbances and events that threaten the reliability of the Bulk Electric System~~
- ~~Investigate other opportunities for efficiency, such as development of an electronic form and possible inclusion of regional reporting requirements~~
- ~~Establish clear criteria for reporting~~
- ~~Establish consistent reporting timelines~~
- ~~Provide clarity around who will receive the information and how it will be used~~

~~During the development of concepts, the DSR SDT considered the FERC directive to "further define sabotage". There was concern among stakeholders that a definition may be ambiguous and subject to interpretation. Consequently, the DSR SDT decided to eliminate the term sabotage from the standard. The team felt that it was almost impossible to determine if an act or event was sabotage or vandalism without the intervention of law enforcement. The DSR SDT felt that attempting to define sabotage would result in further ambiguity with respect to reporting events. The term "sabotage" is no longer included in the standard. The events listed in EOP-004 Attachment 1 were developed to provide guidance for reporting both actual events~~

~~as well as events which may have an impact on the Bulk Electric System. The DSR SDT believes that this is an equally effective and efficient means of addressing the FERC Directive.~~

~~The types of events that are required to be reported are contained within EOP-004 Attachment 1. The DSR SDT has coordinated with the NERC Events Analysis Working Group to develop the list of events that are to be reported under this standard. EOP-004 Attachment 1 pertains to those actions or events that have impacted the Bulk Electric System. These events were previously reported under EOP-004-1, CIP-001-1 or the Department of Energy form OE-417. EOP-004 Attachment 1 covers similar items that may have had an impact on the Bulk Electric System or has the potential to have an impact and should be reported.~~

~~The DSR SDT wishes to make clear that the proposed Standard does not include any real-time operating notifications for the events listed in EOP-004 Attachment 1. Real-time communication is achieved is covered in other standards. The proposed standard deals exclusively with after-the-fact reporting.~~

~~**Data Gathering**~~

~~The requirements of EOP-004-1 require that entities "promptly analyze Bulk Electric System disturbances on its system or facilities" (Requirement R2). The requirements of EOP-004-3 specify that certain types of events are to be reported but do not include provisions to analyze events. Events reported under EOP-004-3 may trigger further scrutiny by the ERO Events Analysis Program. If warranted, the Events Analysis Program personnel may request that more data for certain events be provided by the reporting entity or other entities that may have experienced the event. Entities are encouraged to become familiar with the Events Analysis Program and the NERC Rules of Procedure to learn more about with the expectations of the program.~~

Law Enforcement Reporting

The reliability objective of EOP-004-~~3~~ 4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC

- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

~~Present expectations of the industry under CIP-001-1a~~:

~~It has been the understanding by industry participants that an occurrence of sabotage has to be reported to the FBI. The FBI has the jurisdictional requirements to investigate acts of sabotage and terrorism. The CIP-001-1-1a standard requires a liaison relationship on behalf of the industry and the FBI or RCMP. These requirements, under the standard, of the industry have not been clear and have led to misunderstandings and confusion in the industry as to how to demonstrate that the liaison is in place and effective. As an example of proof of compliance with Requirement R4, Responsible Entities have asked FBI Office personnel to provide, on FBI letterhead, confirmation of the existence of a working relationship to report acts of sabotage, the number of years the liaison relationship has been in existence, and the validity of the telephone numbers for the FBI.~~

~~Coordination of Local and State Law Enforcement Agencies with the FBI~~

~~The Joint Terrorism Task Force (JTTF) came into being with the first task force being established in 1980. JTTFs are small cells of highly trained, locally based, committed investigators, analysts, linguists, SWAT experts, and other specialists from dozens of U.S. law enforcement and intelligence agencies. The JTTF is a multi-agency effort led by the Justice Department and FBI designed to combine the resources of federal, state, and local law enforcement. Coordination and communications largely through the interagency National Joint Terrorism Task Force, working out of FBI Headquarters, which makes sure that information and intelligence flows freely among the local JTTFs. This information flow can be most beneficial to the industry in analytical intelligence, incident response and investigation. Historically, the most immediate response to an industry incident has been local and state law enforcement agencies to suspected vandalism and criminal damages at industry facilities. Relying upon the JTTF coordination between local, state and FBI law enforcement would be beneficial to effective communications and the appropriate level of investigative response.~~

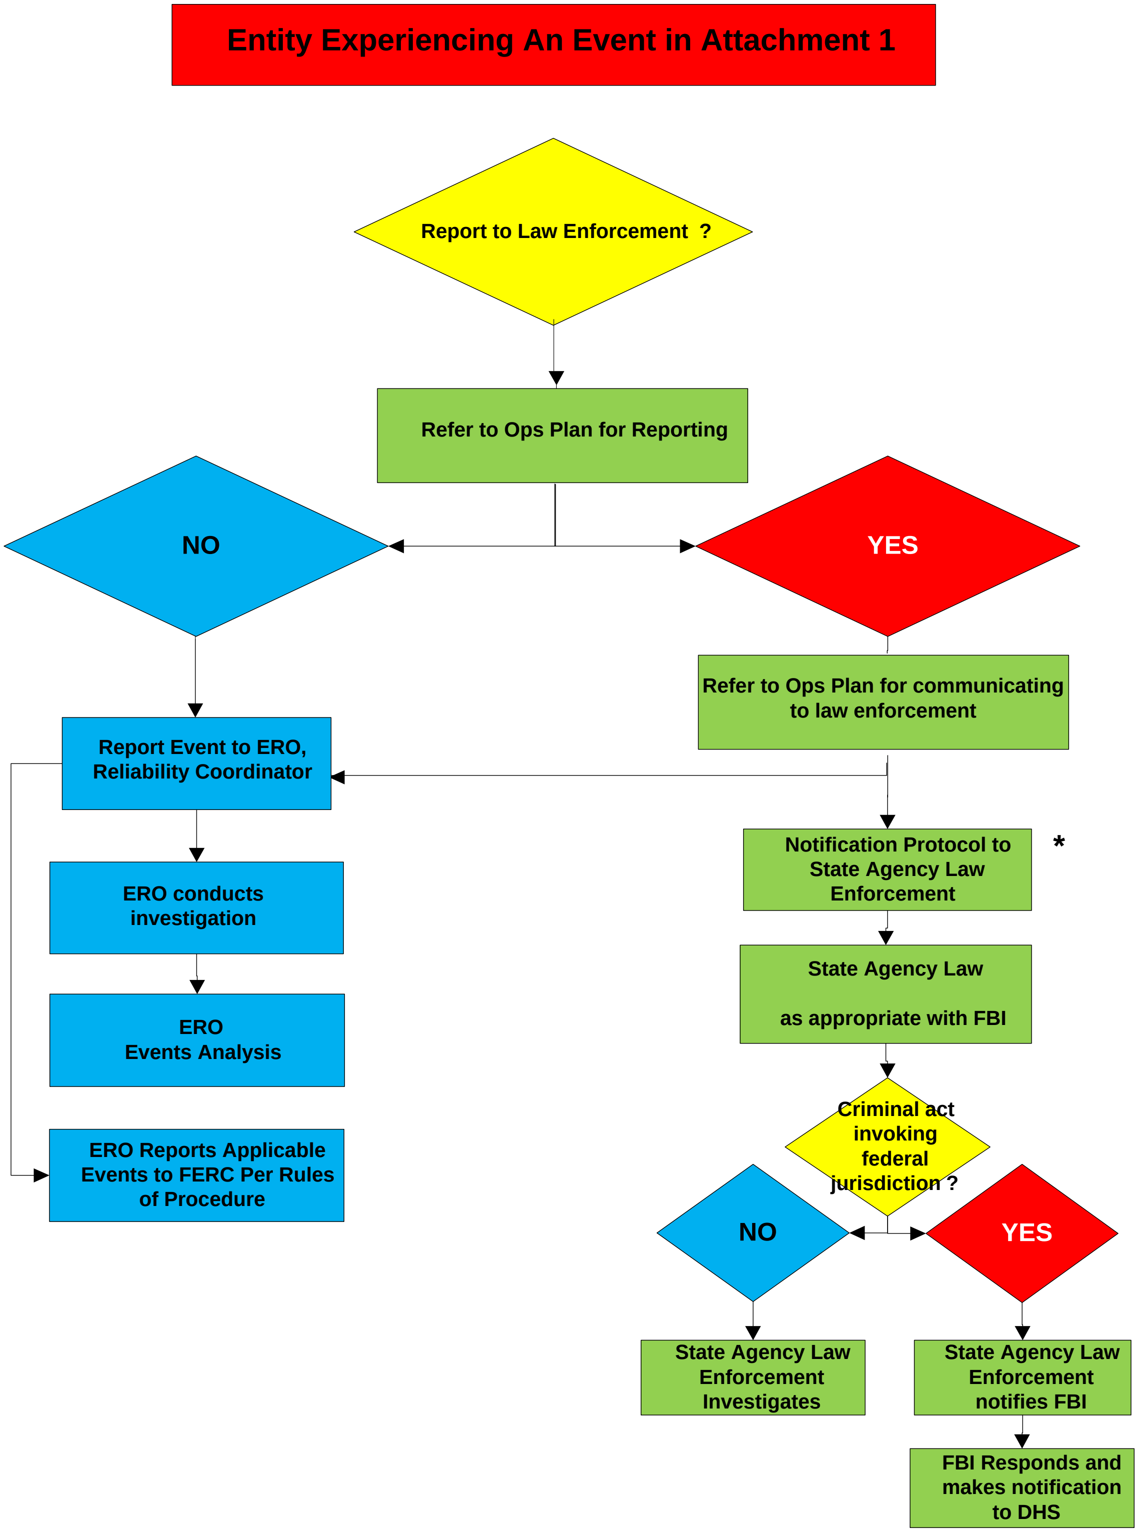
~~Coordination of Local and Provincial Law Enforcement Agencies with the RCMP~~

~~A similar law enforcement coordination hierarchy exists in Canada. Local and Provincial law enforcement coordinate to investigate suspected acts of vandalism and sabotage. The Provincial law enforcement agency has a reporting relationship with the Royal Canadian Mounted Police (RCMP).~~

~~A Reporting Process Solution – EOP-004~~

~~A proposal discussed with the FBI, FERC Staff, NERC Standards Project Coordinator and the SDT Chair is reflected in the flowchart below (Reporting Hierarchy for Reportable Events). Essentially, reporting an event to law enforcement agencies will only require the industry to notify the state or provincial or local level law enforcement agency. The state or provincial or local level law enforcement agency will coordinate with law enforcement with jurisdiction to investigate. If the state or provincial or local level law enforcement agency decides federal agency law enforcement or the RCMP should respond and investigate, the state or provincial or local level law enforcement agency will notify and coordinate with the FBI or the RCMP.~~

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

~~**Disturbance and Sabotage Reporting Standard Drafting Team (Project 2009-01) - Reporting Concepts**~~

~~Introduction~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009 and has developed updated standards based on the SAR.~~

~~The standards listed under the SAR are:~~

~~CIP-001 — Sabotage Reporting~~

~~EOP-004 — Disturbance Reporting~~

~~The changes do not include any real-time operating notifications for the types of events covered by CIP-001 and EOP-004. The real-time reporting requirements are achieved through the RCIS and are covered in other standards (e.g. EOP-002-Capacity and Energy Emergencies). These standards deal exclusively with after-the-fact reporting.~~

~~The DSR SDT has consolidated disturbance and sabotage event reporting under a single standard. These two components and other key concepts are discussed in the following sections.~~

~~Summary of Concepts and Assumptions:~~

~~**The Standard:**~~

- ~~Requires reporting of "events" that impact or may impact the reliability of the Bulk Electric System~~
- ~~Provides clear criteria for reporting~~
- ~~Includes consistent reporting timelines~~
- ~~Identifies appropriate applicability, including a reporting hierarchy in the case of disturbance reporting~~
- ~~Provides clarity around of who will receive the information~~

~~**Discussion of Disturbance Reporting**~~

~~Disturbance reporting requirements existed in the previous version of EOP-004. The current approved definition of Disturbance from the NERC Glossary of Terms is:~~

1. ~~An unplanned event that produces an abnormal system condition.~~
2. ~~Any perturbation to the electric system.~~
3. ~~The unexpected change in ACE that is caused by the sudden failure of generation or interruption of load.~~

~~Disturbance reporting requirements and criteria were in the previous EOP-004 standard and its attachments. The DSR SDT discussed the reliability needs for disturbance reporting and~~

~~developed the list of events that are to be reported under this standard (EOP-004 Attachment 1).~~

~~*Discussion of Event Reporting*~~

~~There are situations worthy of reporting because they have the potential to impact reliability.~~

~~Event reporting facilitates industry awareness, which allows potentially impacted parties to prepare for and possibly mitigate any associated reliability risk. It also provides the raw material, in the case of certain potential reliability threats, to see emerging patterns.~~

~~Examples of such events include:~~

~~Bolts removed from transmission line structures~~

~~Train derailment adjacent to a Facility that either could have damaged a Facility directly or could indirectly damage a Facility (e.g. flammable or toxic cargo that could pose fire hazard or could cause evacuation of a control center)~~

~~Destruction of Bulk Electric System equipment~~

~~**What about sabotage?**~~

~~One thing became clear in the DSR SDT's discussion concerning sabotage: everyone has a different definition. The current standard CIP-001 elicited the following response from FERC in FERC Order 693, paragraph 471 which states in part: *". . . the Commission directs the ERO to develop the following modifications to the Reliability Standard through the Reliability Standards development process: (1) further define sabotage and provide guidance as to the triggering events that would cause an entity to report a sabotage event."*~~

~~Often, the underlying reason for an event is unknown or cannot be confirmed. The DSR SDT believes that by reporting material risks to the Bulk Electric System using the event categorization in this standard, it will be easier to get the relevant information for mitigation, awareness, and tracking, while removing the distracting element of motivation.~~

~~Certain types of events should be reported to NERC, the Department of Homeland Security (DHS), the Federal Bureau of Investigation (FBI), and/or Provincial or local law enforcement. Other types of events may have different reporting requirements. For example, an event that is related to copper theft may only need to be reported to the local law enforcement authorities.~~

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional entities to report the incidents and provide known information as known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

~~Event analysis, correlation of data, and trend identification are a few potential uses for the information reported under this standard. The standard requires Functional entities to report the incidents and provide known information at the time of the report. Further data gathering necessary for event analysis is provided for under the Events Analysis Program and the NERC Rules of Procedure. Other entities (e.g. – NERC, Law Enforcement, etc) will be responsible for performing the analyses. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.~~

~~Collection of Reportable Information or "One stop shopping"~~

~~The DSR SDT recognizes that some regions require reporting of additional information beyond what is in EOP-004. The DSR SDT has updated the listing of reportable events in EOP-004 Attachment 1 based on discussions with jurisdictional agencies, NERC, Regional Entities and stakeholder input. There is a possibility that regional differences still exist.~~

~~The reporting required by this standard is intended to meet the uses and purposes of NERC. The DSR SDT recognizes that other requirements for reporting exist (e.g., DOE-417 reporting), which may duplicate or overlap the information required by NERC. To the extent that other reporting is required, the DSR SDT envisions that duplicate entry of information should not be necessary, and the submission of the alternate report will be acceptable to NERC so long as all information required by NERC is submitted. For example, if the NERC Report duplicates information from the DOE form, the DOE report may be sent to the NERC in lieu of entering that information on the NERC report.~~

~~ill assure situational awareness to the Electric Reliability Organization so that they may develop trends and prepare for a possible next event and mitigate the current event. This will assure that the BES remains secure and stable by mitigation actions that the Responsible Entity has within its function. By communicating events per the Operating Plan, the Responsible Entity will assure that people/agencies are aware of the current situation and they may prepare to mitigate current and further events.~~

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standard EOP-004-4

Applicable Standard(s)

- EOP-004-4 — Event Reporting

Requested Retirement(s)

- EOP-004-3 — Event Reporting

Prerequisite Standard(s)

None.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Generator Owner
- Transmission Operator
- Generator Operator
- Distribution Provider

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standard making the standard more Results-based.

Effective Date

EOP-004-4 — Event Reporting

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority’s order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None.

Retirement Date

EOP-004-3 — Event Reporting
Reliability Standard EOP-004-3 shall be retired immediately prior to the effective date of EOP-004-4 in the particular jurisdiction in which the revised standard is becoming effective.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Unofficial Comment Form

2015-08 Emergency Operations – EOP-004-4

Do not use this form for submitting comments. Use the electronic form to submit comments on **Project 2015-08 Emergency Operations; EOP-004-4 – Event Reporting**. The electronic form must be submitted by **8 p.m. Eastern, Thursday, September 8, 2016.**

Additional information is available on the project page. If you have questions, contact Manager of Standards Development, Sean Cavote (via email), or at (404) 446-9697.

Background Information

Project 2015-08 Emergency Operations (EOP) implements the recommendations of the Project 2015-02 Periodic Review Team (PRT), including the recommendation to revise EOP-004-3 Attachment 1, and retire Requirement R3.[1] The EOP standards drafting team (SDT) considered those recommendations, along with additional input from the industry during the comment period on the project Standard Authorization Request (SAR) for this project. Additionally, the SDT has entered into collaborative efforts among NERC and the U.S. Department of Energy (DOE) to better align reporting requirements pursuant to EOP-004-3 and OE-417. Based on those inputs, the SDT proposes the changes to EOP-004-3 as indicated in this posting.

With respect to DOE collaboration, the SDT has discussed with DOE changes that would be necessary to EOP-004 Attachment 1 and to OE-417 to more closely align EOP-004-4 Attachment 1 Reportable Events with events reported on OE-417. Based on those discussions and the changes proposed in this posting, the SDT and DOE have made significant progress in harmonizing reporting requirements, which would relieve many entities from having to report Reportable Events on both forms. That collaboration continues, but it is important to note that **regardless of whether OE-417 is harmonized with EOP-004-4 Attachment 1, entities will be required to report all Reportable Events as required by EOP-004-4**.

The EOP SDT recommends the following changes to EOP-004-3:

- Update and clarify language in Requirements R1 and R2
- Retire Requirement R3
- Revise Attachment 1: Reportable Events and Attachment 2: Event Reporting Form

[1] The review included EOP-004-3, EOP-005-2, EOP-006-2 and EOP-008-1 to evaluate, for example, whether the requirements are clear and unambiguous. Recommended revisions to EOP-005-2, EOP-006-2, and EOP-008-1 have been posted for comment and ballot in a separate posting.

Update and Clarify Requirements R1 and R2

The SDT proposes a conforming edit in Requirement R1 to reference the correct version number of EOP-004-4 assuming EOP-004-4 ultimately is approved. Specifically, reference to “EOP-004-3” has been changed to “EOP-004-4.” That conforming change also is made to Measure M1.

The SDT proposes to clarify in Requirement R2 that each Responsible Entity shall report events “specified in EOP-004-4 Attachment 1 to the entities specified” in its Operating Plan. The SDT proposes this addition to ensure the Responsible Entity is reporting on the event types and thresholds from EOP-004-4 Attachment 1. Additionally, the SDT proposes to clarify what constitutes a weekend for the purpose of implementing the requirement, i.e., “4 PM local time on Friday to 8 AM local time on Monday.” The SDT proposes similar language and additional clarifications in Measure M2.

Retire Requirement R3

The SDT recommends retiring Requirement R3 under Criterion B1, administrative, because it requires responsible entities to perform a function that is administrative in nature, does not support reliability, and is needlessly burdensome. The SDT notes that contact lists are administrative in nature and should not be part of a mandatory reliability standard.

Revise Attachment 1: Reportable Events and Attachment 2: Event Reporting Form

The SDT proposes several changes to the Event Type, Entity with Reporting Responsibility, and Threshold for Reporting in response to SAR comments and its own analyses. The SDTs changes intend to: clarify appropriate Responsible Entity responsibilities; eliminate duplicative reporting by the Generator Operator (GOP) and Balancing Authority (BA); clarify Generation loss criteria specific to Quebec Interconnection; and align reporting requirements OE-417 where appropriate. The SDT provided its reasoning in the redlined standard, also repeated here:

- System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.
- Generation loss: The EOP SDT discussed dispersed power producing resources and their generation loss due to weather patterns or fuel source unavailability and determined that reporting of generation loss would be used to report Forced Outages not weather patterns or fuel source unavailability for these resources.
- Complete loss of Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the Glossary of Terms as: “Any medium that allows two or more individuals to interact, consult, or exchange information.”
- Complete loss of monitoring or control capability at a BES control center: Language revisions to: “Complete loss of monitoring or control at a BES control center for 30 continuous minutes or

more” provides clarity to the “Threshold for Reporting” and better aligns with the ERO Event Analysis Process.

The SDT proposes several changes to Attachment 2 to clarify to whom the Event Reporting Form should be submitted and to more appropriately describe the “Event Identification and Description” field on the form.

Questions

1. Do you agree with the SDT's recommended changes to EOP-004-3, Requirements R1 and R2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

2. Do you agree with the recommendation to retire EOP-004,-3 Requirement R3? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

4. Do you agree with the proposed revisions to EOP-004-3, Attachment 2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

5. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

   Comments:

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Requirement R3 **R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*	Recommended for retirement.	The EOP SDT recommends retirement of Requirement R3 under Criterion B1, administrative; the R3 requirement in EOP-004-3 requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. Contact lists are administrative in nature.

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were not revised. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures. .
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 36 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours.

VSL Justifications for EOP-004-4, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event reporting Operating Plan and reporting events, and Requirement 2 language of EOP-004-4 is only slightly changed from EOP-004-3. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-004-4, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Standards Announcement
Reminder
Project 2015-08 Emergency Operations
EOP-004-4

Initial Ballot and Non-binding Poll Open through September 8, 2016

Now Available

An initial ballot for **EOP-004-4 - Event Reporting** and a non-binding poll of the associated Violation Risk Factors and Violation Severity Levels are open through **8 p.m. Eastern, Thursday, September 8, 2016**.

Balloting

Members of the ballot pools associated with this project may log in and submit their vote for the standard and non-binding poll by clicking here. If you experience any difficulties in using the electronic form, contact Nasheema Santos.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

The ballot results will be announced and posted on the project page. The drafting team will consider all comments received during the formal comment period and determine the next steps of the project.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standards Announcement

Project 2015-08 Emergency Operations
EOP-004-4

Formal Comment Period Open through September 8, 2016
Ballot Pools Forming through August 23, 2016

Now Available

A 45-day formal comment period for **EOP-004-4 – Event Reporting**, is open through **8 p.m. Eastern, Thursday, September 8, 2016**.

Commenting

Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

Join the Ballot Pools

Ballot pools are being formed through **8 p.m. Eastern, Tuesday, August 23, 2016.** Registered Ballot Body members may join the ballot pools here.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps

Initial ballots for the standards and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels will be conducted **August 30 – September 8, 2016**.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Manager of Standards Development, Sean Cavote (via email) or at (404) 446-9697.
