Standards Announcement

Project 2015-08 Emergency Operations
EOP-004-4

Formal Comment Period Open through September 8, 2016
Ballot Pools Forming through August 23, 2016

Now Available

A 45-day formal comment period for **EOP-004-4 – Event Reporting**, is open through **8 p.m. Eastern, Thursday, September 8, 2016**.

Commenting
Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

Join the Ballot Pools
Ballot pools are being formed through **8 p.m. Eastern, Tuesday, August 23, 2016.** Registered Ballot Body members may join the ballot pools here.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps
Initial ballots for the standards and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels will be conducted **August 30 – September 8, 2016**.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Manager of Standards Development, Sean Cavote (via email) or at (404) 446-9697.

There were 53 sets of responses, including comments from approximately 50 different people from approximately 47 companies representing 8 of the Industry Segments as shown in the table on the following pages.

Questions

1. Do you agree with the SDT's recommended changes to EOP-004-3, Requirements R1 and R2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

2. Do you agree with the recommendation to retire EOP-004,-3 Requirement R3? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

4. Do you agree with the proposed revisions to EOP-004-3, Attachment 2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

5. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday).

R2 Recommendation:

NPPD recommends that the parenthetical text be updated to read: (which is usually recognized to be 4PM local time on Friday to 8AM local time on Monday**, unless the entity is observing a holiday. For any holiday, the event report shall be submitted no later than then the end of the next business day). Also, for events occurring after noon (12:00 p.m. local time) on a day prior to a weekend or holiday, the event report shall be submitted no later than the end of the next business day.**

Rationale:

Events occurring on a Friday after 12:00 p.m. local time or within the same timing prior to a holiday would have to be reported that day. This does not allow enough time for evaluation and development of a report. In addition, consideration for reporting should also be given to holidays observed by the reporting entity.

Comment

Texas RE noticed Requirement R1 has the term “event reporting Operating Plan”, while Requirement R2 just says “Operating Plan”. Texas RE recommends adding the descriptor “event reporting” to Requirement R2 or removing it from R1 for consistency. The Requirement R1 VSLs do not include the descriptor except part of the Severe VSL. It appears that the event report should be a written report yet the VSLs for R2 consider a written

or verral event report. Texas RE noticed there is no requirement specifically indicating how events should be reported. Additionally, the VSLs indicate that a verbal report is acceptable. Since an event reporting form exists, Texas RE recommends the requirements specify the form in Attachment 2 be used for event reporting. The language in R2 incorporates the various changes within Attachment 1 by reference. As such, Texas RE's concerns regarding changes to Attachment 1 should be incorporated herein by reference.

Comment

The proposed changes to R2 are not substantive, which raises the question for the need to revise R2 at all. R2 states, "Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type…" This change does not propose any new action, as this is already listed in the Operating Plan. The revision to R2 is not needed.

Comment

We request that the SDT confirm that the time clock starts in R2 upon 'recognition' of the event threshold rather than when the event occurred. There may be analysis of the event that later reveals that the threshold was crossed.

We suggest the following clarification to M2 in order to provide additional clarity that this requirement does not supersede any OE-417 reporting timelines. This requirement may allow additional time to report to NERC, but OE-417 requirements may still require reporting within a shorter timeframe.

Perhaps all that is needed is the following addition to the proposed M2:

M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted **to NERC** within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday).

Kansas City Power and Light Company endorses and incorporates by reference Nebraska Public Power District’s response in opposition to Question 1.

In addition, we offer the following:

Capitalization: The words “control center” are used in the Rationale. Since the term is an approved NERC Glossary Term, we suggest it be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of “control center.”

Comment	

SRP recommends adjusting the language in R2 to clarify the requirement is referring to events “recognized” during a weekend as opposed to events “occurring” on a weekend.

As the current language stands, an event occurring at 7:00 AM on a Monday would have to be reported by the end of the same business day.

SMUD/BANC agrees with the intention that the drafting team is heading with the EOP-004 Draft 4 posting. However, we suggest the Standard Drafting Team consider a minor change to the language in Requirement R2 to address reportable events that occur during holiday periods. We suggest reportable events occurring during holiday be handled in a similar manner that the 'weekend' reportable event schedule that is reported events over the holiday would be reported on next business day.

We recommend removing the words "but is not limited to" in M1. This language is no used in R1 and adds no value. It could be interpreted that the Operating Plan must not be limited to the protocols and therefore create an obligation that is not intended to include other elements which are no defined in R1.

M1 should read:

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-3 Attachment 1 and in accordance with the entity responsible for reporting.

Drafting team should consider adding more specificity to the "other organizations" from Requirement 1. As written this is a potential compliance issue if the Registered Entity elects not to include any "other organizations" such as the Regional Entity or the RC. It is unclear if adding other organizations is voluntary or specifically required by the Requirement.

The examples should be removed unless they are required. These would be more appropriate in the measure, not the language of the requirement. If it is not removed, then the Drafting team should consider removing any entities from the example section not specifically related to the ERO Enterprise. For example, the inclusion of law enforcement is unclear. There are many events listed in Attachment 1 in which law enforcement would not need to be notified. Conversely, there are many types of situations that should be reported to law enforcement that are not considered in Attachment 1. Further, all entities that need to be notified of conditions in real-time should be removed from consideration, such as the RC. Notifications to these types of entities is already required within other standards (changes in operating conditions or capabilities in IRO and TOP standards). As this is in the "Operation Planning" time horizon and will be used to inform the industry as needed and support events analysis the only entities that should be listed in this standard is NERC and the Applicable Regional Entity.

In R1 and R2 all provisions related to weekends should be removed. The standard requires notification within 24 hours of recognition. If an event occurs on the weekend at an unstaffed location and is not recognized until Monday morning, the entity should still have the 24-hour time frame to complete the notification. As the reporting obligation time frame begins upon "…recognition of meeting an event type threshold for reporting…" there is no need to have a weekend provision. This also removes an ambiguity in R2 which does not have the provision for "recognition of meeting an event type…" for events on the weekend. As written, weekend occurring events must be reported by the end of business Monday regardless of recognizing it as an event identified in Attachment 1.

M2 should be revised to remove the implication that EOP-004-4 Attachment 2 or the DOE-OE-417 forms are the only acceptable forms of evidence. As these forms are not specifically listed in the requirement language there should be flexibility written into the measure allowing for other evidence of event reporting. Conversely, the Attachment 2 and OE-417 forms should be listed in the R2 if they are required to demonstrate compliance.

NV Energy agrees with R1 and recommends a minor change to R2 to consider holidays and recommends that for any holiday, the event report shall be submitted no later than then the end of the next business day. Also, for events occurring after noon (12:00 p.m. local time) on a day prior to a weekend or holiday, the event report shall be submitted no later than the end of the next business day.

We do not agree with the following changes:

1. **For the Event Type "Public appeal for load reduction": It is unclear what "maintain the continuity of the BES" really means. By "continuity", does it mean "integrity of the BES" or "continuity of supply"? This needs to be revised to be more specific and to improve clarity.**

2. **Assigning the TOP to be the responsible entity for reporting system wide voltage reduction**

Voltage reduction is intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend changing it to the BA. Also, similar to the comment above, it is unclear what "maintain the continuity of the BES" really means. By "continuity", does it mean "integrity" or "continuity of supply"? Either way, we do not see the value added or the necessity of the having this qualifier. We suggest to revise the Event Type to "System wide voltage reduction" or where a qualifier is deemed to add value, change it to "System wide voltage reduction to maintain load supply" or "to meet system demand".

3. **The Event Type "Firm load shedding resulting from a BES Emergency": the basis for the reporting threshold, i.e., 100 MW, etc. has**

not been provided. We would appreciate the SDT providing the technical basis/justification other than just because it existed before.

Robert Tallman - PPL - Louisville Gas and Electric Co. - 3,5,6 - SERC, Group Name LG&E and KU Energy

Answer	No
Document Name	

Comment

LG&E and KU Energy ("LG&E/KU") appreciates the opportunity to submit this comment for the Standard Drafting Team's consideration.

The reportable event type "Complete loss of Interpersonal Communication capability at a BES control center" has a threshold for reporting of "Complete loss of Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more." LG&E/KU proposes the event type be rewritten as "Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability at a BES control center". Furthermore, LG&E/KU proposes changing the threshold for reporting to read "Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability affecting a staffed BES control center for 30 continuous minutes or more."

Michael Cruz-Montes - CenterPoint Energy Houston Electric, LLC - 1 - Texas RE

Answer	No
Document Name	

Comment

CenterPoint Energy appreciates the SDT's time and effort towards the improvement of the Event Reporting Standard and is agreeable to the proposed revisions to R1 and R2, and the retirement of R3. However, CenterPoint Energy believes that proposed revisions to Attachment 1 may not be completely clear to the industry and would like the SDT to consider the following:

The proposed revisions regarding the "public appeal for load reduction" Event Type appears to expand the threshold to include events beyond the NERC defined "BES Emergency" which is defined as: "Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System". CenterPoint Energy believes removing BES Emergency as a threshold and adding the phrase "continuity of the BES" is ambiguous. The Company appreciates the SDT aligning the language with DOE OE-417; however, DOE OE-417 instructions state that the report should be made only if an appeal is made during emergency conditions. Therefore CenterPoint Energy recommends the reporting threshold read, "BES Emergency requiring public appeal for load reduction to maintain continuity of the BES.

CenterPoint Energy also has a similar concern regarding the use of “continuity of the BES” for the proposed changes to the “System-wide voltage reduction…” event type. CenterPoint Energy believes that for consistency the Event type should read, “System-wide voltage reduction” and the threshold for reporting should read, “BES Emergency requiring system wide voltage reduction of 3% or more to maintain continuity of the BES.”

In the “BES Emergency requiring manual Firm load shedding” event type, removing the word “manual” potentially broadens the scope and may also include automatic firm load shed, which would incorporate UFLS and UVLS. With these revisions and with the deletion of the Event Type, “BES Emergency resulting in automatic firm load shedding”; is it the SDT’s intent to consolidate all firm load shedding into one event type regardless of whether it is performed automatically or manually? If this is so, are UVLS, UFLS , and RASs still considered as automatic firm load shedding as it would be considered in the revised “Firm load shedding resulting from a BES Emergency” Event Type?

CenterPoint Energy considers manual and automatic Firm load shedding to be “controlled” actions that are deliberate and by design, regardless of whether initiated by a System Operator or relay scheme that is triggered by a threshold being met. CenterPoint Energy recommends the “Threshold for Reporting” to read, “Controlled Firm load shedding, manual or automatic via an Undervoltage Load Shedding Program, under-frequency load shedding scheme, or by Remedial Action Scheme ≥ 100 MW.

Comment

First Recommendation: Delete the Transmission loss Event Type in Attachment 1.

Rationale:

1. The EOP-004 reporting should stay focused on larger events, such as the criteria under Generation loss (Total generation loss, within one minute, of greater than or equal to 2,000 MW for entities in the Eastern or Western interconnection). Three transmission elements provide a very low threshold identified in the Transmission loss section. These low impact events can be better handled through the NERC Event Analysis Program (EAP). The EAP has matured over time and now provides an excellent means to identify and document lessons learned from events.
2. The Event Analysis Program (EAP) is providing a back door for changes to the EOP-004 reporting process without changes to the EOP-004 reporting process being vetted through the Standards Development Process. Case in point, an entity recently filed an EAP notification for a slow breaker trip impacting three or more elements and in which all related relaying operated by design. The Regional Entity directed that the entity report under the EOP-004 reporting process. The EOP-004 Event Type clearly states three elements “contrary to design”. With continual

changes to the EAP and the dissimilarities in the two processes (EAP/EOP) these changes and differences are clearly leading to confusion for both the reporting entity and the Regional Entities.

3. The EAP is a robust and documented process that provides for interaction between the Regional Entity and the reporting entity in the classification of Event types. All reporting for NERC/FERC classification of Events can be handled under the EAP process for this Event type, along with the current reporting under TADS and GADS. Lessons Learned are developed through this EAP process for the industry to learn from these events. The Transmission loss Event type under the EOP provides no further benefit and, in fact, as noted creates confusion on application for reporting.

4. The definition of BES Element in this EOP-004 Event type (Transmission loss) includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event type and also leads to confusion as to the element count for three elements contrary to design. In addition, the Event Analysis Program (EAP) uses the definition of “BES Facility” in its application and not “BES Element” as used in the EOP Event type which leads to further confusion in evaluating reporting during an Event.

Second Recommendation: Add “Alternate Interpersonal Communication” to the Event type “Complete loss of Interpersonal Communication capability at a BES control center.

Rationale: Prior to the implementation of COM-001-2, an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provides for actions to be taken for the loss of Interpersonal Communications. We suggest that the “Complete” loss of voice communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event.

It may be beneficial to provide general guidance (perhaps at the very top of the table), exactly which entity has the reporting responsibility. If an entity directs another entity to perform an action, the entity issuing the directive would have the reporting responsibility. In all other instances, the responsible party would be the entity who actually experienced the event. For example, such clarity might be beneficial in cases where the RC is the TOP.

First Recommendation: Delete the Transmission loss Event Type in Attachment 1.

Rationale:

1. The EOP-004 reporting should stay focused on larger events, such as the criteria under Generation loss (Total generation loss, within one minute, of greater than or equal to 2,000 MW for entities in the Eastern or Western interconnection). Three transmission elements provide a very low threshold identified in the Transmission loss section. These low impact events can be better handled through the NERC Event Analysis Program (EAP). The EAP has matured over time and now provides an excellent means to identify and document lessons learned from events.

2. The Event Analysis Program (EAP) is providing a back door for changes to the EOP-004 reporting process without changes to the EOP-004 reporting process being vetted through the Standards Development Process. Case in point, an entity recently filed an EAP notification for a slow breaker trip impacting three or more elements and in which all related relaying operated by design. The Regional Entity directed that the entity report under the EOP-004 reporting process. The EOP-004 Event Type clearly states three elements “contrary to design”. With continual changes to the EAP and the dissimilarities in the two processes (EAP/EOP) these changes and differences are clearly leading to confusion for both the reporting entity and the Regional Entities.

3. The EAP is a robust and documented process that provides for interaction between the Regional Entity and the reporting entity in the classification of Event types. All reporting for NERC/FERC classification of Events can be handled under the EAP process for this Event type, along with the current reporting under TADS and GADS. Lessons Learned are developed through this EAP process for the industry to learn from these events. The Transmission loss Event type under the EOP provides no further benefit and, in fact, as noted creates confusion on application for reporting.

4. The definition of BES Element in this EOP-004 Event type (Transmission loss) includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event type and also leads to confusion as to the element count for three elements contrary to design. In addition, the Event Analysis Program (EAP) uses the definition of “BES Facility” in its application and not “BES Element” as used in the EOP Event type which leads to further confusion in evaluating reporting during an Event.

Second Recommendation: Add “Alternate Interpersonal Communication” to the Event type “Complete loss of Interpersonal Communication capability at a BES control center.

Rationale: Prior to the implementation of COM-001-2, an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provides for actions to be taken for the loss of Interpersonal Communications. We suggest that the “Complete” loss of voice communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event.

Suggested Change:

Complete loss of Interpersonal Communication and Alternate Interpersonal Communication capability at a BES control center.

Comment

We request that the proposed revision to the category for 'Complete Loss of Interpersonal Communication Capability at a BES control center' be clarified to state that the threshold requires loss of both Interpersonal Communication and Alternative Interpersonal Communication capabilities. We believe that is the intent of the threshold which is consistent with the EAP. However, since both Interpersonal Communication and Alternative Interpersonal Communication are defined terms it is unclear from the posted Attachment 1 language whether this is the intention of the SDT. Accordingly, we propose rewording the reporting threshold to:

Complete loss of both Interpersonal Communication and Alternative Interpersonal Communication capabilities at a BES control center.

In addition, the category for a 'Complete loss of off-site power to a nuclear generating plant (grid supply)' could be better aligned with the EAP. The EAP refers to a 'LOOP event' which could be referenced here to provide consistency. Alternatively, the EAP could be updated to better align with the proposed revision. In addition, the current use of the phrase "complete loss of off-site power" in the Event Type as well as the Threshold for Reporting is problematic for the TO, TOP to be the Entity Responsible for Reporting. Loss of off-site power (LOOP) is a well-defined term in the nuclear industry and is heavily dependent on in-plant alignments and operating conditions as well as transmission configuration which the TO/TOP has only has a partial awareness of. Nuclear Plant Interface Requirements are intended to ensure that the NPGO has all of the information necessary to determine the operability of off-site power per the plant license agreement. Should the existing wording of the Event Type and Threshold for Reporting be kept the Entity with Reporting Responsibility should be changed to the Nuclear Plant Generator Operator rather than the TO/TOP since the TO/TOP does not have the knowledge nor expertise to determine when a loss of off-site power condition exists. Similar to NERC accepting the DOE OE-417 report there is a higher degree of efficiencies and effectiveness of reporting for the NPGO since loss of offsite power events are reportable to other regulators under plant licensing requirements. Different Functional Entities independently reporting of the same event to different regulators creates a significant opportunity for confusing or even possibly conflicting information.

Comment

Texas RE is concerned that the following proposed changes to EOP-004 Reportable Events could lead to gaps in reliability and confusion among registered entities.

- Texas RE is concerned that the proposed revisions eliminate the requirement that Reliability Coordinators (RC) submit event reports in connection with situations in which there are operations outside the IROL for a time greater than the IROL's Tv (typically 30 minutes). The management of IROLs is a key aspect of a RC's constraint management activities. In particular, situations in which an IROL is exceeded for a period sufficient to trigger an unacceptable risk to the interconnection or other Reliability Coordinator Areas represents a significant systemic event. While such an exceedance may be investigated in the compliance or enforcement process, there is necessarily a delay in these activities. The contemporaneous reporting obligations serve to ensure that the NERC regions have immediate knowledge that a significant risk of a cascading outage has occurred, permitting the region or regions to begin steps to identify the root cause and develop appropriate mitigation. Because such awareness appears critical to the core reliability functions performed within the NERC regions, Texas RE cautions against eliminating this requirement. At a minimum, Texas RE requests that the SDT provide a rationale for why the IROL Tv event reporting requirement should be removed, including whether the SDT believes that the event reporting aspects of EOP-004 are adequately addressed in other standards.

- Texas RE has noted that the SDT proposes to eliminate the event reporting obligations of certain NERC functions. For example, the proposed revisions would no longer require DPs to report automatic firm load shedding resulting from a BES Emergency. Similarly, the proposed revisions no longer require GOPs to report generation loss in excess of 1000 MW in the ERCOT region. Texas RE requests that the SDT provide the rationale for narrowing these event reporting obligations. If the SDT believes that such reporting obligations are duplicative, Texas RE would also request evidence supporting that assertion.

- Based on its own engagement with registered entities in the ERCOT region, Texas RE also believes there is some confusion regarding event reporting terms. In particular, the distinction between "Firm load shedding resulting from a BES Emergency" and "Uncontrolled loss of firm load resulting from a BES Emergency" appears unclear. "Firm load shedding" could be read to refer solely to intended load shedding events (either manual or automatic). If so, the SDT may wish to consider replacing the term "uncontrolled" with "unintended" to better capture the distinction between intentional and unintentional firm load shedding.

- It appears the "Public appeal" for load reduction ignores localized situations that may still require a localized public appeal that may be better facilitated by a TOP or DP (and actually recognized later in the loss of load issues). Texas RE requests rationale for the change.

- Texas RE noticed the event type "Voltage deviation on a Facility" did not include the GOP. "Voltage deviation on a Facility" could occur at a GOP site as well and should be recognized since the GOP is to maintain that voltage. Texas RE inquires as to why was the GOP is not included.

- It appears the eliminated event type "BES Emergency resulting in automatic firm load shedding" is intended to be captured in the event type "Firm load shedding resulting from a BES Emergency", however the same functions are not captured. Texas RE requests clarification and rationale from the SDT regarding this change. Texas RE is concerned the removal of reporting UVLS/UFLS/RAS load shedding reduces situational awareness for the RC and other functional entities.

- Texas RE requests rationale for the event type "Complete loss of Interpersonal Communication capability at a BES control center". Texas RE is concerned the term "BES control center" is undefined and might cause confusion. Additionally, it ignores the DP and GOP responsibilities for having Interpersonal Communication.

- Texas RE inquires as to why a GOP Control Center is not considered in any of the event thresholds (and why is the undefined term "BES control center" limited to BA, RC, and TOP functions?)

- For the event type "Firm load shedding resulting from a BES Emergency", Texas RE inquires if the SDT intends for an event to be reported in a case where a RAS intentionally sheds load in response to a contingency for which the RAS was designed?

- For the event type "Transmission loss", Texas RE suggests adding the RC to the reporting responsibility. This event type implies that the three or more elements that are lost are within a single TOP boundary. We have numerous examples of events affecting multiple entities and elements outside of a single TOP boundary.

- To maintain alignment between EOP-004 and the NERC Events Analysis Process, we suggest adding an event type for reporting the failure or misoperation of a RAS.

Comment

Duke Energy provides comment on the following Event Types:

Public Appeal for load reduction: The proposed language for this event includes the phrase *"to maintain continuity of the BES"*. While we agree with the intent of the revisions, we disagree with the verbiage used. We do not believe that maintaining continuity of the BES is a concept that is widely understood by the industry, and suggest that using "to maintain reliability of the BES" would be more widely understood and accepted by the industry.

System-wide voltage reduction to maintain the continuity of the BES: Please see our comment above regarding the use of the phrase "*to maintain continuity of the BES*". Also, we request further explanation from the drafting team on singling out the TOP as the entity with reporting responsibility. This concept may be particularly troublesome for vertically integrated entities. Entities that are integrated BA/TOP, either the BA or TOP can initiate voltage reduction. Lastly, the voltage reduction actually takes place on the distribution system, so we request further clarification of the singling out of the TOP only for this event, and request the drafting team consider adding the BA as an entity responsible for reporting for this event type.

Firm load shedding resulting from a BES Emergency: Some ambiguity may exist with having the multiple entities listed as being responsible for reporting per event. For example, a BES Emergency arises wherein an RC directs a BA/TOP to shed firm load. Following the language found in Attachment 1 of this standard, it is unclear whether the RC should file the event report, the BA/TOP would file the event report, or both. Is it the drafting team's intent to have all or both functions submit an event report. If the intent is just for one report per event type to be filed, some language needs to be added affording entities the opportunity to discuss and decide which function will submit the event report. In the Guidelines and Technical Basis section of this standard, there is a section for Multiple Reports for a Single Organization. Perhaps a section could be added regarding reports involving multiple functions that stems from one event, and who is the responsible party for the reporting.

Uncontrolled loss of Firm load resulting from a BES Emergency: We requests further clarification from the drafting team on the addition of the term "Uncontrolled", and whether or not using the term now negates the use of the DOE form for NERC reporting. This may result in an entity having to fill out two separate reports. Was this the drafting team's intent? Also, is the term "Uncontrolled" referring to Operator controlled? Please clarify.

Transmission Loss: There appears to be a disconnect between the definition of BES Element in the NERC standards process, and the NERC Events Analysis process. We feel that a great deal of confusion exists on the reporting for this type of event. We request the drafting team to consider revising the associated language of this event type to help narrow down the intended scope of this event. As of now, the language is so broad that entities spend a considerable amount of time creating reports for this event type, and would greatly benefit by narrowing the scope or revising the language to better demonstrate intended expectations.

Complete loss of Interpersonal Communication capability at a BES control center: Duke Energy questions the necessity of reporting for this event type. Currently, there is already a NERC standards regarding Interpersonal Communication and actions that must be taken if the capability is lost. Also, an entity is already required to have Alternative Interpersonal Communication as well. Does this reporting of this event type include an event where Alternative Interpersonal Communication capabilities are also lost? The standard already requires that an entity notify neighboring entities of the loss of communications, and now it appears that with this revision, an entity will need to file an event report to NERC regarding the loss, even if the loss has been mitigated. We feel that this reporting requirement is redundant with COM-001 where notifications around the loss of communications is already required.

Complete loss of monitoring or control capability at a BES control center: Duke Energy requests clarification on the addition of the term "staffed" under Threshold for Reporting for the event type, Complete loss of Interpersonal Communication capability at a BES control center, but the term was not used in the Threshold for Reporting for this event type. The drafting team may have intended to include the term "staffed" to the language of this event but may have overlooked it. If the omission was intentional, please clarify why it was not included for this event type.

Comment

There are numerous “its” references in the description of the Event Type, but not clear who this is in reference to? Is it intended to imply that “its” is in referencing the Functional Entity that’s identified in the respective row of the second column – “Entity with Reporting Responsibility”? Will these always match up? Are there instances where the reporting entity and the owning entity are different? For example, in ISO-NE the RC submits all the reports. This may need some clarity.

GOP should be removed from the “Entity with Reporting Responsibility” for the “Physical Threats to its Facility” event type and added to the “Physical threats to its BES control center” event type. Facility is defined as – “A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)” and thus does not capture a GOP control center. So in order for these critical assets to be captured in the physical threats reporting requirements of the Attachment 1, GOP must be added to the “Physical threats to its BES control center” event type.

Same as comment 2 for “Physical threats to its Facility” event type.

For the “Public appeal for load reduction” event type, TOP should be added to the “Entity with Reporting Responsibility”. EOP-001-2.1b, R4 – “R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001 when developing an emergency plan.”

Attachment 1-EOP-001, Elements for Consideration in Development of Emergency Plans

5. Public appeals — Appeals to the public through all media for voluntary load reductions and energy conservation including educational messages on how to accomplish such load reduction and conservation.

“System-wide voltage reduction to maintain the continuity of the BES” event type

a. BAs and RCs can potentially implement a system-wide VR due to capacity and energy emergencies in accordance with their emergency plans, as required under EOP-002-3.1 - Capacity and Energy Emergencies, so we don’t see why these functions are being excluded from the reporting requirement.

b. should be better aligned with the EAP event category 1d –

Recommend –

Threshold for reporting – no change

Event Type –System-wide voltage reduction in accordance with the entity’s emergency plan resulting from a BES Emergency.

c. Threshold requirement of “system wide” should be clarified to specify whose system it is. This is a similar ambiguity as the one being requested for clarity in item 1 above. Are we implying that it’s the TOP’s (Entity withy Reporting Responsibility) system? Are there instances when the requesting entity is a BA/RC requesting a voltage reduction for a particular TOP? In such cases, would it be reportable and who would be the Entity with reporting responsibility. Is the intent to require reporting of such events? Should BAs and RCs be added to the Reporting Entities?

EOP-002-3_1 R6 -

R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to:

R6.1. Loading all available generating capacity.

R6.2. Deploying all available operating reserve.

R6.3. Interrupting interruptible load and exports.

R6.4. Requesting emergency assistance from other Balancing Authorities.

R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and

R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.

For “Transmission Loss” event type please consider changing “Element” to “Facility” in the description of the Threshold for Reporting (as category 1.a. in the EAP).

For the transmission loss category: The term “contrary to design” should be better defined. In October 2015 an addendum for Category 1a Events was created for the Event Analysis Process. This addendum indicates that breaker failure operations are not as intended. Is the intent to mimic the EA Process? Also, the term “excluding successful automatic reclosing” does not align with the EA Process language for Transmission loss.

NERC Definition of Element - Any electrical device with terminals that may be connected to other electrical devices such as a generator, transformer, circuit breaker, bus section, or transmission line. An Element may be comprised of one or more components.

NERC Definition of Facility - A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.

The intent is to capture the outage of three or more Facilities (each Facility can be comprised of two or more Elements), not the underlying Elements.

Loss of firm load (BA, TOP, DP) - Loss of firm load for ≥ 15 Minutes: ≥ 300 MW for entities with previous year’s demand ≥ 3,000 OR ≥ 200 MW for all other entities.

Recommend adding the following qualifiers:

· This does not include the loss of load when it is caused by “customer actions to protect their systems” and not the utility (e.g. customer’s relays settings to swap over to own generation set higher than the utility’s UFLS/UVLS settings).

· This excludes radially connected industrial load loss. Design and level of reliability was approved and accepted.

Suggest replacing the “uncontrolled” in the Event Type with the “unintended” language (similar to the EAP category). “Uncontrolled” implies or may get interpreted as a cascading type of an event, limiting the reporting requirement to only those types of events.

Unplanned BES control center evacuation (RC, BA, TOP) - Unplanned evacuation from BES control center facility for 30 continuous minutes or more.

Add GOP to the Entity with Reporting Responsibility. Similar reasons specified in the Attachment 1, Item 2 above. Additionally, if the GOP BES control centers are subject to consideration and classification as High, Medium and Low impact facilities in accordance with the CIP-002 evaluation, they should be considered in this reporting criteria, at least for the GOP’s Control Centers that meet the reporting threshold for “Generation Loss” event type (≥ 2,000 MW for entities in the Eastern, or Western, or Quebec Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection); or, as an alternative, High Impact (as classified under the CIP-002) control centers – CIP-002-5.1 - Attachment 1 Impact Rating

Criteria

The criteria defined in Attachment 1 do not constitute stand ... he level of impact and are
referenced by requirements.

1. High Impact Rating (H) Each BES Cyber System used by and located at any of the following: 1.4 Each Control Center or backup Control Center used to perform the functional obligations of the Generator Operator for one or more of the assets that meet criterion 2.1, 2.3, 2.6, or 2.9.

Complete loss of monitoring capability (RC, BA, TOP)- Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or {more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.}

Add the word “staffed” to the threshold column for “Complete loss of monitoring or control at a BES control center” so that it is consistent with the event Type above it which states: Complete loss of Interpersonal Communication capability affecting a “staffed” BES control center for 30 continuous minutes or more.

The BA should also be identified as an “Entity with Reporting Responsibility” for System-wide voltage reduction since according to the functional model the BA may request the TOP or directly address a DP to reduce voltage to ensure balance within its BA area.

Agree with the changes eliminating the bracketed statement as it is not indicative of a complete loss of monitoring capability and has caused confusion throughout the industry.

We do not agree with the elimination of “BES Emergency requiring” for a public appeal for load reduction. During periods of very hot weather or other high load situations, even though there is not a BES emergency there are public appeals to exercise conservation to ensure sufficient resources on a regional or statewide basis. Reporting to NERC of public appeals for load reduction or conservation should only be required for BES emergency conditions as written in the current version.

ERCOT joins the comments of the ISO RTO Council (IRC) Standards Review Committee (SRC). In addition, ERCOT provides the additional comment below.

a. We ask the SDT to consider setting the reporting criteria for the "Generation loss" event type in ERCOT at 1,400 MW rather than 1,000 MW. This would align the current reportable MW threshold for ERCOT with the NERC Event Analysis process threshold for a Category 3 event.[1] As currently written, entities in the Eastern Interconnection are required to report in the event of a Category 3 event with a loss of generation of 2,000 MW or more, while ERCOT would be required to report in the event of a Category 1 event with a loss of generation of 1,000 MW. Setting the reporting threshold at 1,400 MW for generation loss in ERCOT would establish equitable criteria for reporting in the ERCOT interconnection.

We do not agree with the following changes:

a. For the Event Type "Public appeal for load reduction": It is unclear what "maintain the continuity of the BES" means. Does "continuity" mean "integrity of the BES" or something else? This needs to be revised to be more specific and to improve clarity.

b. The phrase "Public appeal for load reduction to maintain continuity of the BES" could also unreasonably expand the number of required reporting instances. Public appeals are made in many different types of situations. Reliability Coordinators often make appeals when an emergency is only a possibility and not a likelihood. In many of these cases, the risk of an emergency condition is somewhat lower and should not rise to the level of concern to justify official event reporting. SRC therefore recommends that the SDT retain the defined term "BES Emergency" and use the phrase "Public appeal for load reduction in a BES Emergency to maintain integrity of the BES."

c. The SRC also disagrees with assigning the TOP the responsibility for reporting system wide voltage reduction. Voltage reduction is

intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend making the BA the responsible entity. Further, we don't agree with making every public appeal for demand reduction a reportable event. The redline removes the words "BES Emergency requiring…" and we believe that the words should remain so that only voltage reduction associated with BES Emergencies are reportable. " Also, similar to the comment above, it is unclear what "maintain the continuity of the BES" means. We suggest to revise the Event Type to "Voltage reduction" or where a qualifier is deemed to add value, change it to "Voltage reduction to meet system demand".

d. For consistency with comment (b) above "Public Appeal" should remain under the "BES Emergency" heading.

e. Having proposed the above, the SRC suggests that Public Appeal be removed from the list of Events to be reported since public appeal by its nature require the involvement of media. This is often done in advance of real time because of the required effort and coordination with media. Therefore, public appeal is more a cautionary action driven by anticipated conditions, and not actual conditions in real time. Given the nature of the appeal and the involvement of the media, there is sufficient information provided to NERC and the concerned government agencies, making a separate report is thus redundant.

f. The Event Type "Firm load shedding resulting from a BES Emergency": the basis for the reporting threshold, i.e., 100 MW, etc. has not been provided. We would appreciate the SDT providing the technical basis for this threshold.

g. In Attachment 1, the event "Unplanned BES control center evacuation" applies to RC, BA, and TOP. If the evacuated control center belongs to a TOP, the TOP should have the obligation to report this, and not the RC or BA, which could be one reading of this. Consistent with the SDT's use of the word "its" for the second, third, and fourth events listed in Attachment 1 to signify that only the entity experiencing the event has the reporting responsibility, SRC recommends changing the event type description in this case to "Unplanned evacuation of its BES control center." Similarly, SRC recommends changing the next two event type descriptions to address this same issue, so that they read "Complete loss of Interpersonal Communication capability at its BES control center" and "Complete loss of monitoring or control capability at its BES control center."

Jeffrey Watkins - Jeffrey Watkins On Behalf of: Eric Schwarzrock, Berkshire Hathaway - NV Energy, 5; - Jeffrey Watkins

Answer	No
Document Name	

Comment

NV Energy supports the comments made by MRO-NERC Standards Review Forum:

Suggestion: Delete or clarify the Transmission loss Event Type in Attachment 1.

Rationale: Conflicting Event Analysis Program guidance, NERC Glossary definitions, and dispersed generation combine to make this Event Type confusing and challenging to evaluate within reporting timelines, subject to minimal impact, and requiring TOP's to have greater visibility of generation resources than they possess.

Conflicting Guidance

Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design.

NERC Addendum for EAP Category 1a Events, footnote 2, page 2, explains “contrary to design”: “If a single line fault results in the faulted line tripping along with two other lines misoperating and tripping, that is three elements outaged due to a common disturbance, contrary to design. That would be a qualified event.” Likewise, page 3 states “Protection system misoperations are considered contrary to design.” We can therefore conclude that protection system operations that operate as designed are not misoperations and not contrary to design.

This is so obvious that it shouldn’t need to be pointed out here, except that the EAP Addendum contradicts this understanding of protection system operations with respect to breaker failures. In an attempt to collect circuit breaker failure data “through the EA process to facilitate identification of trends with regards to circuit breaker failures… facilities that are tripped due to breaker failure are counted as facilities outaged in determining categorization” regardless of whether that tripping is caused by the correct operation of protection systems. Examples 5 and 6 explicitly state that lines outaged by correct operation of protection systems are to be counted “since it was a breaker failure.”

While a guidance document can circumvent the plain meaning of “contrary to design” for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4 reliability standard. This results in differing criteria for evaluating which lost/outaged BES Elements/Facilities count towards the three-element threshold.

Includes Minimum Impact Losses

The NERC Glossary definitions of Elements and Facilities specifically list generators as examples. BES Elements and BES Facilities include BES generators. With the revision of the BES definition, Inclusion I4 defines each and all individual dispersed power producing resources as individual BES facilities once they aggregate to greater than 75 MVA and are connected at a voltage of 100 kV or above.

By definition, every outage, contrary to design, of three or more BES wind turbines or solar cells caused by a common disturbance must be reported as a Transmission loss event under EOP-004, even though the loss is labeled as Transmission, contains no transmission elements, and does not meet the threshold for reporting a generation loss.

Blurs Event Types

Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Generation loss has BA reporting loss of MW. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss. This blurs the line between Event Types, obligating the TOP to make determinations to file an Event Report each and every time 3 or more BES wind turbines or solar cells and/or a combination thereof with transmission elements that are lost contrary to design due to a common disturbance. The blurred event types and previously identified conflicting guidance is not conducive to a 24 hour reporting requirement.

TOP’s are unlikely to have this level of visibility into wind/solar farms, necessitating GOP’s to report the loss of these BES Elements to their TOP, so the TOP, as the Responsible Entity, can submit the report. The TOP should not have the responsibility of reporting event types for generator disturbances.

Suggested Remedy

Delete the Transmission loss Event Type from Attachment 1. Events can and should be analyzed under EAP. The EAP is the preferred method as there is collaboration between the reporting entity and the Regional Entity. The data is collected by the RE and NERC and can be analyzed appropriately and lessons learned developed.

Alternatively, clarify the Transmission loss Threshold for Reporting as follows:

“Unexpected loss within its area, contrary to design, of three or more BES Elements (transmission lines or transformers) caused by a common disturbance (excluding successful automatic reclosing, and as-designed protection system operations for the initiating disturbance).

By explicitly stating “BES transmission lines and transformers” we exclude generators as well as the Elements (circuit breakers, busses, and shunt and series devices) that the EAP Addendum says do not need to be included. Adding “as-designed protection system operations” as an exclusion reinforces and reiterates the limitation of losses to those “contrary to design.” The qualifier “for the initiating disturbance” prevents a TOP from claiming that lines tripping on zone 3 relaying for a slow or stuck breaker is operating “as-designed.”

Page 12 of 16 , Row 6

Prior to the implementation of COM-001-2 an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provided for actions to be taken for the loss of Interpersonal Communications. We suggest that the “Complete” loss of voice communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event.

Suggested Change:

Complete loss of Interpersonal Communication and Alternate Interpersonal Communication capability at a BES control center.

Comment

1. With regard to Attachment 1, the majority of our comments agree with the proposed changes. However, there are a few event categories that need to be clarified.
2. We disagree with the deviation from NERC Glossary Terms for the complete loss of monitoring or control capability at a BES control center. We recommend that the SDT choose the NERC-defined term “Control Center” instead of the current proposal as lower-case “control center.” The NERC glossary definition would meet the criteria because this event category applies to the RC, BA, and TOP.
3. We question the removal of the RC reporting IROL violations or SOL violations on WECC Major Transfer Paths. This is a risk to reliability and NERC should be notified with an event report.
4. We also question the assignment of the RC, BA, and TOP to have reporting responsibility for Firm load shedding (> 100 MW) resulting from a BES Emergency. We are not sure if this assignment of three functions provides clarity. Are there any additional benefits to reliability for having all three entities be required to report a single load shedding event? We would like the SDT to clarify if there is an option for applicable registered entities to receive credit for reporting if one of the entities involved in a load shedding event reports on their behalf. The ability to file a report for multiple entities that are party to a single load shedding event would alleviate the burden of having to submit multiple reports for a single event.
5. We question the assignment of the BA as being solely responsible for reporting public appeals for load reduction, because some BA Areas (such as MISO or SPP) are too large for the BA to initiate such appeals. We ask the SDT to consider assigning the task to the TOP.
6. We agree with the current proposal to remove the DP from being required to report any automatic firm load shedding (> 100 MW), as this is covered by the BA, RC, and TOP.
7. Finally, we agree with the SDT that assigning the TOP as solely responsible for reporting system-wide voltage reduction (of 3% or more) to maintain the continuity of the BES provides more clarity regarding the reporting responsibilities.

Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design; however with differing definitions. EAP defines “BES Facility” and EOP-004 defines “BES Element”.

EOP-004 reporting threshold for loss of three elements uses “BES Elements”. The BES definition includes generators, the EOP reporting for the unexpected loss is for the TOP. This is confusing on how to count elements and how the TOP is to get notification of loss of generator elements to report. Actually the TOP should not be required to do so. Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss.

In addition, we are finding that the application of the EAP definition/process is being applied to EOP-004 reporting. While an EAP guidance document can circumvent the plain meaning of “contrary to design” for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4 reliability standard. This results in differing criteria for evaluating which lost/outage BES Elements/Facilities count towards the three-element threshold and an application that ignores the Standards approval process in the NERC Rules of Procedure.

The EAP process has examples for application, provides for collaboration between the entity and the regional entity provides for categorization for the NERC/FERC process and eventual lessons learned. As noted, the EOP-004 reporting item is confusing (and not correct) by definition and by application. The EOP line item for Transmission Loss needs to be eliminated in favor of the better defined and applied EAP process.

We also request that the category for ‘Loss of Interpersonal Communication Capability’ be clarified to state that the threshold requires loss of both Primary and Alternative Interpersonal Communication Capability. We believe that is the intent of the threshold, but with the language now in COM-001-2 using ‘primary and Alternative Interpersonal Communication’, we believe the addition would make it as clear as possible. As currently stated, it requires an interpretation as to whether it means complete loss of ‘just’ Primary or both. Such as:

Complete loss of **both primary and Alternative** Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more.

The category for loss of offsite power to a nuclear generator could be better aligned with the EAP. The EAP refers to a ‘LOOP event’ which could be referenced here to provide consistency. We also recommend that the Nuclear Plant Generator Operator be the responsible entity for reporting instead of the TO or TOP.

Comment	

Kansas City Power and Light Company endorses and incorporates by reference Nebraska Public Power District's response in opposition to Question 3.

In addition, we offer the following:

BES Emergency: There is inconsistent use of the NERC Glossary Term, "BES Emergency." We can only speculate as to the SDT's intent. For example, removing the term is basically removing the qualifier and expanding the applicability of the event. The opposite would be true, limiting the applicability, by including the term. We would be interested in understanding the SDT's intent for determining inclusion or exclusion of the term, BES Emergency.

Capitalization: As noted in our Question No. 1 comments, the words "control center" are used in Attachments. Since the term, "Control Center," is an approved NERC Glossary Term, we suggest it be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of "control center."

Comment

I wasn't given the option to skip the survey and support another's response after voting negatively for EOP-004-4. Please accept this response. PSE supports IESO, OGE and LG&E comments.

We do not agree with the following changes:

1. **For the Event Type "Public appeal for load reduction": It is unclear what "maintain the continuity of the BES" really means. By**

“continuity”, does it mean “integrity of the BES” or “continuity of supply”? This needs to be revised to be more specific and to improve clarity.

2. **Assigning the TOP to be the responsible entity for reporting system wide voltage reduction**

Voltage reduction is intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend changing it to the BA. Also, similar to the comment above, it is unclear what “maintain the continuity of the BES” really means. By “continuity”, does it mean “integrity” or “continuity of supply”? Either way, we do not see the value added or the necessity of the having this qualifier. We suggest to revise the Event Type to “System wide voltage reduction” or where a qualifier is deemed to add value, change it to “System wide voltage reduction to maintain load supply” or “to meet system demand”.

3. **The Event Type “Firm load shedding resulting from a BES Emergency”: the basis for the reporting threshold, i.e., 100 MW, etc. has not been provided. We would appreciate the SDT providing the technical basis/justification other than just because it existed before.**

Leonard Kula, Independent Electricity System Operator, 2, 8/30/2016

LG&E and KU Energy (“LG&E/KU”) appreciates the opportunity to submit this comment for the Standard Drafting Team's consideration.

The reportable event type “Complete loss of Interpersonal Communication capability at a BES control center” has a threshold for reporting of “Complete loss of Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more.” LG&E/KU proposes the event type be rewritten as “Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability at a BES control center”. Furthermore, LG&E/KU proposes changing the threshold for reporting to read “Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability affecting a staffed BES control center for 30 continuous minutes or more.”

In Attachment 1, the removal of the TOP as a responsible reporting Entity for "Damage or destruction of its Facility" and "Physical threats to its Facility" potentially causes concern. This could be problematic for facilities that are owned by one entity but operated by another. We request that the SDT have continued discussion around these types of scenarios and consider putting the TOP back in as a responsible Entity.

Comment

At times there may be a need for a TOP to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. We recommend replacing "BA" with "Initiating BA or TOP."

The event types with multiple applicable entities such as, "Firm load shedding resulting from a BES Emergency", "Uncontrolled loss of firm load resulting from a BES Emergency", and "System separation (islanding)" will most likely have the same event reported multiple times if the BA, TOP or RC are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type, "Firm load shedding resulting from a BES Emergency" to "Initiating RC, BA, or TOP". We recommend changing the Entity with Reporting Responsibility for the Event Type, "Uncontrolled loss of firm load resulting from a BES Emergency" to just the BA. We recommend changing the Entity with Reporting Responsibility for the Event Type, "System separation (islanding)" to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported.

For Event Type *Uncontrolled loss of firm load resulting from a BES Emergency,* the MW lost amount may be better representative of an impact to a BA if it was a specific percentage of peak load. The current threshold goes from a 10% of total load value for a 3000 MW BA to less than 1% of total load for the bigger BAs.

For Event Type *Complete Loss of Interpersonal Communications capabilities at a BES control center*, consider also adding Alternative Communication Capabilities. This will differentiate an event from a COM standard requirement. On the Event Type include "staffed" to match wording in the Threshold section.

For Event Type *Unplanned BES control center evacuation*, revise to: 'Unplanned evacuation of its BES control center' to more specifically identify the control center the Functional Entity is required to report on. This also makes the wording similar to that in the Physical threat Event Type.

Suggestion: Delete or clarify the Transmission loss Event Type in Attachment 1.

Rationale: Conflicting Event Analysis Program guidance, NERC Glossary definitions, and dispersed generation combine to make this Event Type confusing and challenging to evaluate within reporting timelines, subject to minimal impact, and requiring TOP's to have greater visibility of generation resources than they possess.

Conflicting Guidance

Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design.

NERC Addendum for EAP Category 1a Events, footnote 2, page 2, explains "contrary to design": "If a single line fault results in the faulted line tripping along with two other lines misoperating and tripping, that is three elements outaged due to a common disturbance, contrary to design. That would be a qualified event." Likewise, page 3 states "Protection system misoperations are considered contrary to design." We can therefore conclude that protection system operations that operate as designed are not misoperations and not contrary to design.

This is so obvious that it shouldn't need to be pointed out here, except that the EAP Addendum contradicts this understanding of protection system operations with respect to breaker failures. In an attempt to collect circuit breaker failure data “through the EA process to facilitate identification of trends with regards to circuit breaker failures… facilities that are tripped due to breaker failure are counted as facilities outaged in determining categorization” regardless of whether that tripping is caused by the correct operation of protection systems. Examples 5 and 6 explicitly state that lines outaged by correct operation of protection systems are to be counted “since it was a breaker failure.”

While a guidance document can circumvent the plain meaning of “contrary to design” for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4 reliability standard. This results in differing criteria for evaluating which lost/outaged BES Elements/Facilities count towards the three-element threshold.

Includes Minimum Impact Losses

The NERC Glossary definitions of Elements and Facilities specifically list generators as examples. BES Elements and BES Facilities include BES generators. With the revision of the BES definition, Inclusion I4 defines each and all individual dispersed power producing resources as individual BES facilities once they aggregate to greater than 75 MVA and are connected at a voltage of 100 kV or above.

By definition, every outage, contrary to design, of three or more BES wind turbines or solar cells caused by a common disturbance must be reported as a Transmission loss event under EOP-004, even though the loss is labeled as Transmission, contains no transmission elements, and does not meet the threshold for reporting a generation loss.

Blurs Event Types

Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Generation loss has BA reporting loss of MW. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss. This blurs the line between Event Types, obligating the TOP to make determinations to file an Event Report each and every time 3 or more BES wind turbines or solar cells and/or a combination thereof with transmission elements that are lost contrary to design due to a common disturbance. The blurred event types and previously identified conflicting guidance is not conducive to a 24 hour reporting requirement.

TOP’s are unlikely to have this level of visibility into wind/solar farms, necessitating GOP’s to report the loss of these BES Elements to their TOP, so the TOP, as the Responsible Entity, can submit the report. The TOP should not have the responsibility of reporting event types for generator disturbances.

Suggested Remedy

Delete the Transmission loss Event Type from Attachment 1. Events can and should be analyzed under EAP. The EAP is the preferred method as there is collaboration between the reporting entity and the Regional Entity. The data is collected by the RE and NERC and can be analyzed appropriately and lessons learned developed.

Alternatively, clarify the Transmission loss Threshold for Reporting as follows:

“Unexpected loss within its area, contrary to design, of three or more BES Elements (transmission lines or transformers) caused by a common disturbance (excluding successful automatic reclosing, and as-designed protection system operations for the initiating disturbance).

By explicitly stating “BES transmission lines and transformers” we exclude generators as well as the Elements (circuit breakers, busses, and shunt and series devices) that the EAP Addendum says do not need to be included. Adding “as-designed protection system operations” as an exclusion reinforces and reiterates the limitation of losses to those “contrary to design.” The qualifier “for the initiating disturbance” prevents a TOP from claiming that lines tripping on zone 3 relaying for a slow or stuck breaker is operating “as-designed.”

Page 12 of 16 , Row 6

Prior to the implementation of COM-001-2 an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provided for actions to be taken for the loss of Interpersonal Communications. We suggest that the “Complete” loss of voice communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event.

Suggested Change: Complete loss of Interpersonal Communication and Alternate Interpersonal Communication capability at a BES control center.

Comemnts as follows:

1. At times there may be a need for a Transmission Operator (“TOp”) to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. Entergy recommends replacing “BA” with initiating Balancing Authority (“BA”) or TOp.

2. The event types with multiple applicable entities such as, “Firm load shedding resulting from a BES Emergency”, “Uncontrolled loss of firm load resulting from a BES Emergency” and “System separation (islanding)” will most likely have the same event reported multiple times if the BA, TOp, or Reliability Coordinator (“RC”) are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type. “Firm load shedding resulting from a BES Emergency” to “Initiating RC, BA, or TOp”. We recommend changing the Entity with Reporting Responsibility for Event Type, “Uncontrolled loss of firm load resulting from a BES Emergency” to just BA. We recommend changing the Entity with Reporting Responsibility for the Even Type, “System separation (islanding)” to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported.

3. Under Event Type “Uncontrolled loss of firm load resulting from a BES Emergency” the MW lost amount may be better representative of an

impact to a BA if it was a specific percentage of peak load. The current threshold goes from a 10% of total load value for a 3000 MW BA to less than 1% of total load for the bigger BAs.

4. For Event Type Complete Loss of Interpersonal Communications capability at a BES control center, consider also adding Alternative Communication Capability. This will differentiate the event form a COM standard requirement. On event type include the word “staffed” to match working in the Threshold section. Entergy does not agree that the loss of primary/use of backup control center should be a reportable event. Please provide clarification of this point.

In the header of the Attachment 2, add “select Option 1” after the voice number provided for the submittal of the form. Similar as in the Attachment 1. Under section 4, there are two instances of “Unplanned BES control center evacuation.” Remove the first instance so that the order of the list in Attachment 2 matches the Attachment 1. Attachment 2 is not required for use and it should be stated in Attachment 2 that it is a guidance document, not tied to compliance. The change to attachment 2 implies that it is a compliance obligation to supply a completed Attachment 2 to all entities listed in the Event Reporting Operating Plan. This is not the case as written in R2 and a correction to either Attachment 2 or the requirement language should be made.

“Unplanned BES control center evacuation” is listed twice on Attachment 2; i.e. as part of the original form (p. 16) and as a new addition (p. 15). Recommend the bullet on p. 16 be retained (as it mirrors the order found in Attachment 1) and the duplicative bullet on p. 15 deleted.

Texas RE recommends aligning the event types in Attachment 1 with the tasks in Attachment 2. For example, Texas RE noticed the event types "System-wide voltage reduction to maintain the continuity of the BES" and "Firm load shedding resulting from a BES Emergency" are included in Attachment 1, but not listed in Attachment 2.

No suggested changes to the text that has been modified. In addition, suspious activity must be listed. Currently, suspicious activity would fall under physical threat to a facility. Taking pictures or flying a drone over a facility could fall under suspicious activity but not always under a physical threat. Suggest adding a suspicious activity line with a check box.

Capitalization: As previously noted in our comments, the words "control center" are used in multiple places. Since the term "Control Center" is an approved NERC Glossary Term, we suggest it should be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of control center.

1. We question if there are any compliance impacts if an entity reports within the required timelines, but uses the previous version of the event reporting form. There are several modifications to Attachment 1. We would like the SDT to clarify whether reporting an event on the previous version of the form would be a violation. This seems to be a potential administrative burden, both for the entities submitting the information, and the Regional Entities and NERC that receive the event reports.
2. We recommend implementing a reporting software tool on the NERC website, which has the capabilities to notify applicable Regional Entities and the DOE of an event. This would alleviate the need to include Attachment 2 as part of the standard and would further streamline the process with a centralized portal for all entities to submit event reports. We ask the NERC standards developer assigned to this project to share this comment with NERC IT department to see if this type of solution is viable.

In the introductory section of the form, the SDT could consider adding the qualifier 'applicable' to organizations to clarify that the reporting requirement is not to all the enumerated organizations: "**Also submit to other applicable organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."**

"PSEG is pleased to have the opportunity to comment and is in general agreement with the revisions to the standard. The EOP-004 form (Attachment 2) states "Also submit to other organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)." We recommend replacing the term "submit" with "report", or determine if reporting via a different form would meet compliance. Law enforcement, in particular the Regional Operations centers (ROIC) in New Jersey and Connecticut, have a different form (Suspicious Activity Reporting or SAR form) that is used to report events. Therefore, replacing the term "submit" with "report" would aid in harmonizing reporting EOP-004 reporting requirements with processes for reporting events to law enforcement."

5. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

Sing Tay - OGE Energy - Oklahoma Gas and Electric Co. - NA - Not Applicable - SPP RE	
Answer	
Document Name	
Comment	
OGE is concerned that the SDT has not looked at some of the CIP standards and how it is tied to the requirements in EOP-004. Currently, there appears to be redundant reporting requirements between CIP-008 and EOP-004. For example, CIP-006 Standard, Part 1.5 states that the Physical Security Plan must describe issuance of an alarm or alert in response to the unauthorized access into or through a Physical Security Access Point, and the alarm or alert must be communicated as identified in the Entity's CIP-008 BES Cyber Security Incident Response Plan. The Response Plan includes reporting of the event to the appropriate agencies (including NERC and DOE). This ties in to the Physical Threats event type in Attachment 1 of EOP-004-4. We believe there is some overlap or at least touchpoints between the two standards, although the CIP standards are focused on protection of the cyber assets, it still includes physical access to these cyber assets. We are requesting the SDT to review the latest versions of the CIP standards (specifically CIP-006 and CIP-008) to ensure there is no overlapping or redundant reporting requirements.

There should be further revisions to Attachment 1. Specifically, "suspicious device or activity" is ambiguous. Further clarification on "suspicious activity" is needed. For example, does this include photography near a Facility? Also, Attachment 1 should specifically cover cyber related suspicious activity – for example, solicitation attempts or phishing calls at Facilities. There should also be instruction on what an Entity should do if they later realize the incident was NOT suspicious – for example, a prior reported incident which, after further investigation, turns out to be innocuous. The effect of using ambiguous terms and no mechanism for correcting incidents post investigation has left the industry with an output that contains more "trash" than value – many incidents that do not truly meet the definition of EOP 004 are sent out via EISAC which leads to the dilution of truly important incidents.

Texas RE requests the SDT provide rationale for each change made to the Standard. Texas RE would like to better understand the SDT's reasoning in the changings and how they affect reliability. Additionally, Texas RE requests rationale for the implementation plan. The Implementation Plan for the proposed EOP-004 provides that "the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority." Given that registered entities presently are required to submit event reports under the current version of EOP-004 and the revised version largely narrows the scope of such reporting activities, it is unclear why a 12-month implementation period is necessary.

Please continue the effort to harmonize NERC Event Reporting requirements with DOE reporting requirements as listed on the OE-417. Currently; it is needlessly burdensome to ensure we meet reporting requirements for both NERC and DOE within specified timeframes. This is particularly difficult considering DOE's 1 or 6 hour submittal requirements and the circumstances a System Operator is likely to be faced with while attempting to submit these reports. **Ideally, DOE would defer to NERC for Event Reporting as required by EOP-004; thus alleviating the potential for separate submissions, on separate forms, with different time requirements for submittal.**

Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RF, Group Name Duke Energy

Answer	
Document Name	

Comment

Duke Energy recommends that the drafting team revisit the language used in the VSL(s) for R2. The revisions posted for R2 include the addition of the phrase *"specified in EOP-004-4 Attachment 1 to the entities specified"*. The use of *"the entities specified",* does not match up with the language used in the VSL(s) for R2 which use the verbiage "to all required recipients" when describing who an event report should be submitted to. We suggest the drafting team consider using identical language in the Requirements and complementing VSL(s).

SRC suggests one additional improvement to the baseline language. The note in Attachment 1 states that "Under certain adverse conditions (e.g. severe weather, multiple events), it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification." However, this exception doesn’t appear in Requirement R2, which is the source of the reporting obligation. SRC recommends modifying Requirement R2 to explicitly recognize this exception. Also, the above-noted language in Attachment 1 lacks clarity as to exactly what sort of reporting is required when the responsible entity experiences an	

adverse condition and also as to when such a report must be provided. SRC suggests that, when a responsible entity experiences adverse conditions that preclude timely notification of a reportable event, the entity should be allowed to provide either verbal or written notification, and should do so as soon as practicable following the expiration of the 24-hour period for reporting the event. SRC further suggests that, if verbal notification of the event is provided, the responsible entity should submit written notification of the event as soon as practicable after providing the verbal notification. To address these concerns, SRC recommends deleting the exception described above from Attachment 1 and adding the following language at the end of R2: "However, if the Responsible Entity experiences an adverse condition (e.g., severe weather, multiple events) that prevents it from submitting an event report before the expiration of the 24-hour reporting period, it shall provide verbal or written notification of the event to the entities specified in its Operating Plan as soon as practicable thereafter. If the Responsible Entity provides verbal notification pursuant to this exception, it shall provide written notification of the event as soon as practicable thereafter."

Capitalization: The Standard's Applicability section states, "…the following functional entities..."

Additionally, the Supplemental Materials, Potential Uses of Reportable Information, the words, "Functional entities" are used.

The term "Functional Entity" is a defined term in the NERC Rules of Procedure, App. 2. Since the references are to Functional Entities defined by the intent and authority under the Rules of Procedure, we suggest functional entity or entities should be capitalized.

Although the implementation plan is not specifically referenced in the survey, AECI requests the SDT to revise the proposed effective date of EOP-004-4. The revisions to EOP-004-4 require procedural and reporting changes for Responsible Entities. These modifications should not take a full 12 months to implement and the industry would benefit immediately from the enhanced reporting process. AECI requests the SDT to revise the implementation plan and establish an effective date that is the first calendar quarter that is three (3) months after the date of applicable governmental authority's order approving the standard.

1. Event Type 2 and 3 on page 10 ("Physical threats to its Facility" and "Physical threats to its BES control center") is too broad and will require entities to file a report for any suspicious activity or device within 24 hours. In the Threshold for Reporting column of these Event Types, it would be better to eliminate "OR Suspicious device or activity at a its Facility. Do not report theft unless it degrades normal operation of a Facility." This elimination would give entities some latitude on determining when a suspicious activity was worthy of a report.

NPPD recommends that the parenthetical text be updated to read: (which is usually recognized to be 4PM local time on Friday to 8AM local time on Monday**, unless the entity is observing a holiday. For any holiday, the event report shall be submitted no later than then the end of the next business day). Also, for events occurring after noon (12:00 p.m. local time) on a day prior to a weekend or holiday, the event report shall be submitted no later than the end of the next business day**

Response	
Thank you for your comment. The addition of "usually" to the wording does not add any additional clarity to the timing definition. The EOP SDT feels that an addition of "usually" would, in fact, actually lead to reducing clarity to the timing definition. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

The NSRF agrees with R1 and recommends a small change to R2. Recommend the follow additions to clarify that all entities experience "holidays" and those holidays should be included in the same manner as weekends.

Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday). The NSRF recommend that the parenthetical text be updated to read (which is usually recognized to be 4PM local time on Friday to 8AM local time on Monday, unless the entity is observing a holiday. For any holiday, the event report shall be submitted no later than then the end of the next business day). Also, for events occurring after noon (12:00 p.m. local time) on a day prior to a weekend or holiday, the event report shall be submitted no later than the end of the next business day.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday).

R2 Recommendation:

NPPD recommends that the parenthetical text be updated to read: (which is usually recognized to be 4PM local time on Friday to 8AM local time on Monday**, unless the entity is observing a holiday. For any holiday, the event report shall be submitted no later than then the end of the next business day). Also, for events occurring after noon (12:00 p.m. local time) on a day prior to a weekend or holiday, the event report shall be submitted no later than the end of the next business day.** Rationale: Events occurring on a Friday after 12:00 p.m. local time or within the same timing prior to a holiday would have to be reported that day. This does not allow enough time for evaluation and development of a report. In addition, consideration for reporting should also be given to holidays observed by the reporting entity.

Rachel Coyne - Texas Reliability Entity, Inc. – 10	
Answer	No
Comment	
Texas RE noticed Requirement R1 has the term “event reporting Operating Plan”, while Requirement R2 just says “Operating Plan”. Texas RE recommends adding the descriptor “event reporting” to Requirement R2 or removing it from R1 for consistency. The Requirement R1 VSLs do not include the descriptor except part of the Severe VSL. It appears that the event report should be a written report yet the VSLs for R2 consider a written or verbal event report. Texas RE noticed there is no requirement specifically indicating how events should be reported. Additionally, the VSLs indicate that a verbal report is acceptable. Since an event reporting form exists, Texas RE recommends the requirements specify the form in Attachment 2 be used for event reporting. The language in R2 incorporates the various changes within Attachment 1 by reference. As such, Texas RE’s concerns regarding changes to Attachment 1 should be incorporated herein by reference.	
Response	
Thank you for your comments. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays. **“Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2”** has been added back into Attachment 1 of the standard. Measure M2 also indicates Attachment 2 can be used as evidence for event reporting.	
Ben Engelby - ACES Power Marketing - 6, Group Name ACES Standards Collaborators - EOP Project	
Answer	No
Comment	

The proposed changes to R2 are not substantive, which raises the question for the need to revise R2 at all. R2 states, "Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their Operating Plan within 24 hours of recognition of meeting an event type…" This change does not propose any new action, as this is already listed in the Operating Plan. The revision to R2 is not needed.
Response
Thank you for your comment. The EOP SDT drafted revisions to the language in Requirement R2 to tie the types of reporting events as indicated for Attachment 1. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

Answer	No
Comment	
We request that the SDT confirm that the time clock starts in R2 upon 'recognition' of the event threshold rather than when the event occurred. There may be analysis of the event that later reveals that the threshold was crossed. We suggest the following clarification to M2 in order to provide additional clarity that this requirement does not supersede any OE-417 reporting timelines. This requirement may allow additional time to report to NERC, but OE-417 requirements may still require reporting within a shorter timeframe. Perhaps all that is needed is the following addition to the proposed M2: M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted **to NERC** within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday).	
Response	

Thank you for your comments. Requirement R2 and Measure M2 confirms entities shall report events within 24 hours of recognition of meeting the event type threshold. NERC EOP-004 and DOE OE-417 have separate reporting timeline requirements. In lieu of the EOP-004, Attachment 2, NERC will accept the DOE-OE-417 form as type of evidence for Measure M2.

Kansas City Power and Light Company endorses and incorporates by reference Nebraska Public Power District's response in opposition to Question 1. In addition, we offer the following: **Capitalization**: The words "control center" are used in the Rationale. Since the term is an approved NERC Glossary Term, we suggest it be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of "control center."	
Response	
Thank you for your comment. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

SRP recommends adjusting the language in R2 to clarify the requirement is referring to events "recognized" during a weekend as opposed to events "occurring" on a weekend. As the current language stands, an event occurring at 7:00 AM on a Monday would have to be reported by the end of the same business day.	
Response	
Thank you for your comments. Requirement R2 and Measure M2 confirms entities shall report events within 24 hours of recognition of meeting the event type threshold. NERC EOP-004 and DOE OE-417 have separate reporting timeline requirements. In lieu of the EOP-004, Attachment 2, NERC will accept the DOE-OE-417 form as type of evidence for Measure M2. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

SMUD/BANC agrees with the intention that the drafting team is heading with the EOP-004 Draft 4 posting. However, we suggest the Standard Drafting Team consider a minor change to the language in Requirement R2 to address reportable events that occur during holiday periods. We suggest reportable events occurring during holiday be handled in a similar manner that the 'weekend' reportable event schedule that is reported events over the holiday would be reported on next business day.	
Response	
Thank you for your comment. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

We recommend removing the words “but is not limited to” in M1. This language is no used in R1 and adds no value. It could be interpreted that the Operating Plan must not be limited to the protocols and therefore create an obligation that is not intended to include other elements which are no defined in R1.

M1 should read:

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-3 Attachment 1 and in accordance with the entity responsible for reporting.

Drafting team should consider adding more specificity to the “other organizations” from Requirement 1. As written this is a potential compliance issue if the Registered Entity elects not to include any “other organizations” such as the Regional Entity or the RC. It is unclear if adding other organizations is voluntary or specifically required by the Requirement.

The examples should be removed unless they are required. These would be more appropriate in the measure, not the language of the requirement. If it is not removed, then the Drafting team should consider removing any entities from the example section not specifically related to the ERO Enterprise. For example, the inclusion of law enforcement is unclear. There are many events listed in Attachment 1 in which law enforcement would not need to be notified. Conversely, there are many types of situations that should be reported to law enforcement that are not considered in Attachment 1. Further, all entities that need to be notified of conditions in real-time should be removed from consideration, such as the RC. Notifications to these types of entities is already required within other standards (changes in operating conditions or capabilities in IRO and TOP standards). As this is in the “Operation Planning” time horizon and will be used to inform the industry as needed and support events analysis the only entities that should be listed in this standard is NERC and the Applicable Regional Entity.

In R1 and R2 all provisions related to weekends should be removed. The standard requires notification within 24 hours of recognition. If an event occurs on the weekend at an unstaffed location and is not recognized until Monday morning, the entity should still have the 24-hour

time frame to complete the notification. As the reporting obligation time frame begins upon "…recognition of meeting an event type threshold for reporting…" there is no need to have a weekend provision. This also removes an ambiguity in R2 which does not have the provision for "recognition of meeting an event type…" for events on the weekend. As written, weekend occurring events must be reported by the end of business Monday regardless of recognizing it as an event identified in Attachment 1. M2 should be revised to remove the implication that EOP-004-4 Attachment 2 or the DOE-OE-417 forms are the only acceptable forms of evidence. As these forms are not specifically listed in the requirement language there should be flexibility written into the measure allowing for other evidence of event reporting. Conversely, the Attachment 2 and OE-417 forms should be listed in the R2 if they are required to demonstrate compliance.	
Response	
Thank you for your comments. The EOP SDT agrees with your comment to strike "but is not limited to." It is up to the RE in their event reporting Operating Plan to identify all organizations that should be notified, as stated in Measure M1. The EOP SDT finds the language in Requirement R1 is clear as written. The EOP SDT drafted revisions to the language in Requirement R2 for clarity; to remove the ambiguity for weekends and to add clarity for holidays. **"Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2"** has been added back into Attachment 1 of the standard. Measure M2 also indicates Attachment 2 can be used as evidence for event reporting. Measure M2 lists the following examples of evidence to demonstrate compliance: "(e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile)."

Answer	Yes

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

Jeffrey DePriest - DTE Energy - Detroit Edison Company – 5

Answer	No

Comment

No suggested changes to the text that has been modified. In addition, suspicious activity must be defined.

Response

Thank you for your comment. Suspicious Activity should be defined by each entity. Suspicious Activity is company-specific in its event reporting Operating Plan.

Leonard Kula - Independent Electricity System Operator – 2

Answer	No

Comment

We do not agree with the following changes:

1. For the Event Type "Public appeal for load reduction": It is unclear what "maintain the continuity of the BES" really means. By "continuity", does it mean "integrity of the BES" or "continuity of supply"? This needs to be revised to be more specific and to improve clarity.
2. Assigning the TOP to be the responsible entity for reporting system wide voltage reduction

Voltage reduction is intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend changing it to the BA. Also, similar to the comment above, it is unclear what "maintain the continuity of the BES" really means. By "continuity", does it mean "integrity" or "continuity of supply"? Either way, we do not see the value added or the necessity of the having this qualifier. We

suggest to revise the Event Type to "System wide voltage reduction" or where a qualifier is deemed to add value, change it to "System wide voltage reduction to maintain load supply" or "to meet system demand". 3. The Event Type "Firm load shedding resulting from a BES Emergency": the basis for the reporting threshold, i.e., 100 MW, etc. has not been provided. We would appreciate the SDT providing the technical basis/justification other than just because it existed before.

Response	
Thank you for your response regarding Public Appeal for load reduction to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. The OE-417 says, "Maintain the continuity of the electric power system." And continuity of the BES is intended as to remain interconnected. EOP-011-1 and the VAR standards puts the requirements of the voltage reduction (transmission system reconfiguration) on the TOP; therefore, the BA should not be added to the reporting category. Thank you for your response regarding Firm load shedding resulting from a BES Emergency to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. NERC and the U.S. Department of Energy request this information in order maintain better situational awareness.	
Robert Tallman - PPL - Louisville Gas and Electric Co. - 3,5,6 - SERC, Group Name LG&E and KU Energy	
Answer	No
Comment	
LG&E and KU Energy ("LG&E/KU") appreciates the opportunity to submit this comment for the Standard Drafting Team's consideration. The reportable event type "Complete loss of Interpersonal Communication capability at a BES control center" has a threshold for reporting of "Complete loss of Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more." LG&E/KU proposes the event type be rewritten as "Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability at a BES control center". Furthermore, LG&E/KU proposes changing the threshold for reporting to read "Complete	

loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability affecting a staffed BES control center for 30 continuous minutes or more.”	
Likes 1	OGE Energy - Oklahoma Gas and Electric Co., NA - Not Applicable, Tay Sing
Response	
Thank you for your comment. The EOP SDT agrees with your comment and has added “Alternative Interpersonal Communications.” The EOP SDT discussed your comment on the 30-minute requirement and it is appropriately covered in the threshold.	
Michael Cruz-Montes - CenterPoint Energy Houston Electric, LLC - 1 - Texas RE	
Answer	No
Comment	

CenterPoint Energy appreciates the SDT’s time and effort towards the improvement of the Event Reporting Standard and is agreeable to the proposed revisions to R1 and R2, and the retirement of R3. However, CenterPoint Energy believes that proposed revisions to Attachment 1 may not be completely clear to the industry and would like the SDT to consider the following:

The proposed revisions regarding the “public appeal for load reduction” Event Type appears to expand the threshold to include events beyond the NERC defined “BES Emergency” which is defined as: “Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System”. CenterPoint Energy believes removing BES Emergency as a threshold and adding the phrase “continuity of the BES” is ambiguous. The Company appreciates the SDT aligning the language with DOE OE-417; however, DOE OE-417 instructions state that the report should be made only if an appeal is made during emergency conditions. Therefore CenterPoint Energy recommends the reporting threshold read, “BES Emergency requiring public appeal for load reduction to maintain continuity of the BES.

CenterPoint Energy also has a similar concern regarding the use of “continuity of the BES” for the proposed changes to the “System-wide voltage reduction…” event type. CenterPoint Energy believes that for consistency the Event type should read, “System-wide voltage reduction” and the threshold for reporting should read, “BES Emergency requiring system wide voltage reduction of 3% or more to maintain continuity of the BES.”

In the “BES Emergency requiring manual Firm load shedding” event type, removing the word “manual” potentially broadens the scope and may also include automatic firm load shed, which would incorporate UFLS and UVLS. With these revisions and with the deletion of the Event

Type, “BES Emergency resulting in automatic firm load shedding”; is it the SDT’s intent to consolidate all firm load shedding into one event type regardless of whether it is performed automatically or manually? If this is so, are UVLS, UFLS , and RASs still considered as automatic firm load shedding as it would be considered in the revised “Firm load shedding resulting from a BES Emergency” Event Type?

CenterPoint Energy considers manual and automatic Firm load shedding to be “controlled” actions that are deliberate and by design, regardless of whether initiated by a System Operator or relay scheme that is triggered by a threshold being met. CenterPoint Energy recommends the “Threshold for Reporting” to read, “Controlled Firm load shedding, manual or automatic via an Undervoltage Load Shedding Program, under-frequency load shedding scheme, or by Remedial Action Scheme ≥ 100 MW.

Response

Thank you for your comment. The EOP SDT agrees with your comments for public appeal for load reduction, as well as your comment for system-wide voltage reduction and have made the conforming changes. The EOP SDT added “(manual and automatic)” to the reporting threshold for Firm load shedding.

Don Schmit - Nebraska Public Power District – 5

Answer	No

First Recommendation: Delete the Transmission loss Event Type in Attachment 1.

Rationale:

1. The EOP-004 reporting should stay focused on larger events, such as the criteria under Generation loss (Total generation loss, within one minute, of greater than or equal to 2,000 MW for entities in the Eastern or Western interconnection). Three transmission elements provide a very low threshold identified in the Transmission loss section. These low impact events can be better handled through the NERC Event Analysis Program (EAP). The EAP has matured over time and now provides an excellent means to identify and document lessons learned from events.

2. The Event Analysis Program (EAP) is providing a back door for changes to the EOP-004 reporting process without changes to the EOP-004 reporting process being vetted through the Standards Development Process. Case in point, an entity recently filed an EAP notification for a slow breaker trip impacting three or more elements and in which all related relaying operated by design. The Regional Entity directed that the entity report under the EOP-004 reporting process. The EOP-004 Event Type clearly states three

elements “contrary to design”. With continual changes to the EAP and the dissimilarities in the two processes (EAP/EOP) these changes and differences are clearly leading to confusion for both the reporting entity and the Regional Entities. 3. The EAP is a robust and documented process that provides for interaction between the Regional Entity and the reporting entity in the classification of Event types. All reporting for NERC/FERC classification of Events can be handled under the EAP process for this Event type, along with the current reporting under TADS and GADS. Lessons Learned are developed through this EAP process for the industry to learn from these events. The Transmission loss Event type under the EOP provides no further benefit and, in fact, as noted creates confusion on application for reporting. 4. The definition of BES Element in this EOP-004 Event type (Transmission loss) includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event type and also leads to confusion as to the element count for three elements contrary to design. In addition, the Event Analysis Program (EAP) uses the definition of “BES Facility” in its application and not “BES Element” as used in the EOP Event type which leads to further confusion in evaluating reporting during an Event.

Transmission loss: The SDT appreciates your comment about removing Transmission Loss from Attachment 1; but after many discussions, the SDT felt there was still a need for this reporting requirement. Threshold changes: “Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).”Element: The EOP SDT agrees with your comment and has made the conforming change from “Element” to “Facility.”	
Thomas Foltz - AEP – 5	
Answer	No

Comment	
It may be beneficial to provide general guidance (perhaps at the very top of the table), exactly which entity has the reporting responsibility. If an entity directs another entity to perform an action, the entity issuing the directive would have the reporting responsibility. In all other instances, the responsible party would be the entity who actually experienced the event. For example, such clarity might be beneficial in cases where the RC is the TOP.	
Response	
If an event applies to any of the entities listed as the "entities with reporting responsibilities," then it is up to those entities to ensure reporting is done. Whether it be reporting the event themselves or delegating reporting responsibilities, this should all be covered in the entity's event reporting Operating Plan.

Comment
We request that the proposed revision to the category for 'Complete Loss of Interpersonal Communication Capability at a BES control center' be clarified to state that the threshold requires loss of both Interpersonal Communication and Alternative Interpersonal Communication capabilities. We believe that is the intent of the threshold which is consistent with the EAP. However, since both Interpersonal Communication and Alternative Interpersonal Communication are defined terms it is unclear from the posted Attachment 1 language whether this is the intention of the SDT. Accordingly, we propose rewording the reporting threshold to: Complete loss of both Interpersonal Communication and Alternative Interpersonal Communication capabilities at a BES control center. In addition, the category for a 'Complete loss of off-site power to a nuclear generating plant (grid supply)' could be better aligned with the EAP. The EAP refers to a 'LOOP event' which could be referenced here to provide consistency. Alternatively, the EAP could be updated to better align with the proposed revision. In addition, the current use of the phrase "complete loss of off-site power" in the Event Type as well as the Threshold for Reporting is problematic for the TO, TOP to be the Entity Responsible for Reporting. Loss of off-site power (LOOP) is a well-defined term in the nuclear industry and is heavily dependent on in-plant alignments and operating conditions as well as transmission configuration which the TO/TOP has only has a partial awareness of. Nuclear Plant Interface Requirements are intended to ensure that the NPGO has all of the information necessary to determine the operability of off-site power per the plant license agreement. Should the existing wording of the Event Type and Threshold for Reporting be kept the Entity with Reporting Responsibility should be changed to the Nuclear Plant Generator Operator rather than the TO/TOP since the TO/TOP does not have the knowledge nor expertise to determine when a loss of off-site power condition exists. Similar to NERC accepting the DOE OE-417 report there is a higher degree of efficiencies and effectiveness of reporting for the NPGO since loss of offsite power events are reportable to other regulators under plant licensing requirements. Different Functional Entities independently reporting of the same event to different regulators creates a significant opportunity for confusing or even possibly conflicting information.
Response
Thank you for your comment. The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications." The EOP SDT discussed your comment on the 30-minute requirement and it is appropriately covered in the threshold. The EOP SDT has added loss of off-site power"(LOOP)." The EOP SDT discussed your comment but will leave the TO/TOP for reporting responsibility.
Rachel Coyne - Texas Reliability Entity, Inc. - 10

Answer	No
Comment	

Texas RE is concerned that the following proposed changes to EOP-004 Reportable Events could lead to gaps in reliability and confusion among registered entities.

- Texas RE is concerned that the proposed revisions eliminate the requirement that Reliability Coordinators (RC) submit event reports in connection with situations in which there are operations outside the IROL for a time greater than the IROL's Tv (typically 30-minutes). The management of IROLs is a key aspect of a RC's constraint management activities. In particular, situations in which an IROL is exceeded for a period sufficient to trigger an unacceptable risk to the interconnection or other Reliability Coordinator Areas represents a significant systemic event. While such an exceedance may be investigated in the compliance or enforcement process, there is necessarily a delay in these activities. The contemporaneous reporting obligations serve to ensure that the NERC regions have immediate knowledge that a significant risk of a cascading outage has occurred, permitting the region or regions to begin steps to identify the root cause and develop appropriate mitigation. Because such awareness appears critical to the core reliability functions performed within the NERC regions, Texas RE cautions against eliminating this requirement. At a minimum, Texas RE requests that the SDT provide a rationale for why the IROL Tv event reporting requirement should be removed, including whether the SDT believes that the event reporting aspects of EOP-004 are adequately addressed in other standards.

- Texas RE has noted that the SDT proposes to eliminate the event reporting obligations of certain NERC functions. For example, the proposed revisions would no longer require DPs to report automatic firm load shedding resulting from a BES Emergency. Similarly, the proposed revisions no longer require GOPs to report generation loss in excess of 1000 MW in the ERCOT region. Texas RE requests that the SDT provide the rationale for narrowing these event reporting obligations. If the SDT believes that such reporting obligations are duplicative, Texas RE would also request evidence supporting that assertion.

- Based on its own engagement with registered entities in the ERCOT region, Texas RE also believes there is some confusion regarding event reporting terms. In particular, the distinction between "Firm load shedding resulting from a BES Emergency" and "Uncontrolled loss of firm load resulting from a BES Emergency" appears unclear. "Firm load shedding" could be read to refer solely to intended load shedding events (either manual or automatic). If so, the SDT may wish to consider replacing the term "uncontrolled" with "unintended" to better capture the distinction between intentional and unintentional firm load shedding.

- It appears the "Public appeal" for load reduction ignores localized situations that may still require a localized public appeal that may be better facilitated by a TOP or DP (and actually recognized later in the loss of load issues). Texas RE requests rationale for the change.
- Texas RE noticed the event type "Voltage deviation on a Facility" did not include the GOP. "Voltage deviation on a Facility" could occur at a GOP site as well and should be recognized since the GOP is to maintain that voltage. Texas RE inquires as to why was the GOP is not included.
- It appears the eliminated event type "BES Emergency resulting in automatic firm load shedding" is intended to be captured in the event type "Firm load shedding resulting from a BES Emergency", however the same functions are not captured. Texas RE requests clarification and rationale from the SDT regarding this change. Texas RE is concerned the removal of reporting UVLS/UFLS/RAS load shedding reduces situational awareness for the RC and other functional entities.
- Texas RE requests rationale for the event type "Complete loss of Interpersonal Communication capability at a BES control center". Texas RE is concerned the term "BES control center" is undefined and might cause confusion. Additionally, it ignores the DP and GOP responsibilities for having Interpersonal Communication.
- Texas RE inquires as to why a GOP Control Center is not considered in any of the event thresholds (and why is the undefined term "BES control center" limited to BA, RC, and TOP functions?)
- For the event type "Firm load shedding resulting from a BES Emergency", Texas RE inquires if the SDT intends for an event to be reported in a case where a RAS intentionally sheds load in response to a contingency for which the RAS was designed?
- For the event type "Transmission loss", Texas RE suggests adding the RC to the reporting responsibility. This event type implies that the three or more elements that are lost are within a single TOP boundary. We have numerous examples of events affecting multiple entities and elements outside of a single TOP boundary.
- To maintain alignment between EOP-004 and the NERC Events Analysis Process, we suggest adding an event type for reporting the failure or misoperation of a RAS.

Response

The EOP SDT appreciates your comments.

IROL proposed retirement: TOP-001-3, Requirement R12 becomes effective 4/1/17, requiring a self-report if Tv is exceeded; TOP-007-WECC-1 is pending retirement. Even though the EOP SDT removed the reporting requirement from the GOPs that this should be the requirement of the BA. The EOP SDT added "(manual and automatic)" to the reporting threshold for Firm load shedding. Thank you for your response regarding Public Appeal. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. Voltage deviation: The TOP is the correct entity for reporting. The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications." The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers. Transmission loss: The intention is that the TOP, where the disturbance originated, will have the reporting responsibility. The EOP SDT discussed your RAS comment but do not agree with your comment to add an event type for reporting.	
Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RF, Group Name Duke Energy	
Answer	No
Comment	
Duke Energy provides comment on the following Event Types: Public Appeal for load reduction: The proposed language for this event includes the phrase *"to maintain continuity of the BES"*. While we agree with the intent of the revisions, we disagree with the verbiage used. We do not believe that maintaining continuity of the BES is a concept that is widely understood by the industry, and suggest that using "to maintain reliability of the BES" would be more widely understood and accepted by the industry. System-wide voltage reduction to maintain the continuity of the BES: Please see our comment above regarding the use of the phrase "*to maintain continuity of the BES*". Also, we request further explanation from the drafting team on singling out the TOP as the entity with reporting responsibility. This concept may be particularly troublesome for vertically integrated entities. Entities that are integrated BA/TOP, either the BA or TOP can initiate voltage reduction. Lastly, the voltage reduction actually takes place on the distribution system, so we	

request further clarification of the singling out of the TOP only for this event, and request the drafting team consider adding the BA as an entity responsible for reporting for this event type. Firm load shedding resulting from a BES Emergency: Some ambiguity may exist with having the multiple entities listed as being responsible for reporting per event. For example, a BES Emergency arises wherein an RC directs a BA/TOP to shed firm load. Following the language found in Attachment 1 of this standard, it is unclear whether the RC should file the event report, the BA/TOP would file the event report, or both. Is it the drafting team's intent to have all or both functions submit an event report. If the intent is just for one report per event type to be filed, some language needs to be added affording entities the opportunity to discuss and decide which function will submit the event report. In the Guidelines and Technical Basis section of this standard, there is a section for Multiple Reports for a Single Organization. Perhaps a section could be added regarding reports involving multiple functions that stems from one event, and who is the responsible party for the reporting. Uncontrolled loss of Firm load resulting from a BES Emergency: We requests further clarification from the drafting team on the addition of the term "Uncontrolled", and whether or not using the term now negates the use of the DOE form for NERC reporting. This may result in an entity having to fill out two separate reports. Was this the drafting team's intent? Also, is the term "Uncontrolled" referring to Operator controlled? Please clarify. Transmission Loss: There appears to be a disconnect between the definition of BES Element in the NERC standards process, and the NERC Events Analysis process. We feel that a great deal of confusion exists on the reporting for this type of event. We request the drafting team to consider revising the associated language of this event type to help narrow down the intended scope of this event. As of now, the language is so broad that entities spend a considerable amount of time creating reports for this event type, and would greatly benefit by narrowing the scope or revising the language to better demonstrate intended expectations.
Response
Thank you for your response regarding Public Appeal for load reduction to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. And continuity of the BES is intended as to remain interconnected. EOP-011-1 and the VAR standards puts the requirements of the voltage reduction (transmission system reconfiguration) on the TOP; therefore, the BA should not be added to the reporting category.

Given there are regional and registration differences, the intent of the EOP SDT is for one of the entities to have the reporting responsibility. Thank you for your response regarding Uncontrolled loss of firm load, the updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. The EOP SDT is working with the DOE to have all EOP-004 event categories listed on the OE-417 reporting form that is available online; therefore, this could be the one place for EOP-004 and DOE reporting to be done. The EOP SDT has added “Alternative Interpersonal Communications.” Staffed: Staffed has been added to the event types and thresholds.

Answer	No
Comment	

There are numerous “its” references in the description of the Event Type, but not clear who this is in reference to? Is it intended to imply that “its” is in referencing the Functional Entity that’s identified in the respective row of the second column – “Entity with Reporting Responsibility”? Will these always match up? Are there instances where the reporting entity and the owning entity are different? For example, in ISO-NE the RC submits all the reports. This may need some clarity.

GOP should be removed from the “Entity with Reporting Responsibility” for the “Physical Threats to its Facility” event type and added to the “Physical threats to its BES control center” event type. Facility is defined as – “A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)” and thus does not capture a GOP control center. So in order for these critical assets to be captured in the physical threats reporting requirements of the Attachment 1, GOP must be added to the “Physical threats to its BES control center” event type.

Same as comment 2 for “Physical threats to its Facility” event type.

For the “Public appeal for load reduction” event type, TOP should be added to the “Entity with Reporting Responsibility”. EOP-001-2.1b, R4 – “R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001 when developing an emergency plan.”

Attachment 1-EOP-001, Elements for Consideration in Development of Emergency Plans

5. Public appeals — Appeals to the public through all media for voluntary load reductions and energy conservation including educational messages on how to accomplish such load reduction and conservation.

"System-wide voltage reduction to maintain the continuity of the BES" event type

a. BAs and RCs can potentially implement a system-wide VR due to capacity and energy emergencies in accordance with their emergency plans, as required under EOP-002-3.1 - Capacity and Energy Emergencies, so we don't see why these functions are being excluded from the reporting requirement.

b. should be better aligned with the EAP event category 1d –

Recommend –

Threshold for reporting – no change

Event Type –System-wide voltage reduction in accordance with the entity's emergency plan resulting from a BES Emergency.

c. Threshold requirement of "system wide" should be clarified to specify whose system it is. This is a similar ambiguity as the one being requested for clarity in item 1 above. Are we implying that it's the TOP's (Entity withy Reporting Responsibility) system? Are there instances when the requesting entity is a BA/RC requesting a voltage reduction for a particular TOP? In such cases, would it be reportable and who would be the Entity with reporting responsibility. Is the intent to require reporting of such events? Should BAs and RCs be added to the Reporting Entities?

EOP-002-3_1 R6 -

R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to:

R6.1. Loading all available generating capacity.

R6.2. Deploying all available operating reserve.

R6.3. Interrupting interruptible load and exports.

R6.4. Requesting emergency assistance from other Balancing Authorities.

R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and

R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.

For “Transmission Loss” event type please consider changing “Element” to “Facility” in the description of the Threshold for Reporting (as category 1.a. in the EAP).

For the transmission loss category: The term “contrary to design” should be better defined. In October 2015 an addendum for Category 1a Events was created for the Event Analysis Process. This addendum indicates that breaker failure operations are not as intended. Is the intent to mimic the EA Process? Also, the term “excluding successful automatic reclosing” does not align with the EA Process language for Transmission loss.

NERC Definition of Element - Any electrical device with terminals that may be connected to other electrical devices such as a generator, transformer, circuit breaker, bus section, or transmission line. An Element may be comprised of one or more components.

NERC Definition of Facility - A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.

The intent is to capture the outage of three or more Facilities (each Facility can be comprised of two or more Elements), not the underlying Elements.

Loss of firm load (BA, TOP, DP) - Loss of firm load for ≥ 15 Minutes: ≥ 300 MW for entities with previous year’s demand ≥ 3,000 OR ≥ 200 MW for all other entities.

Recommend adding the following qualifiers:

· This does not include the loss of load when it is caused by “customer actions to protect their systems” and not the utility (e.g. customer’s relays settings to swap over to own generation set higher than the utility’s UFLS/UVLS settings).

· This excludes radially connected industrial load loss. Design and level of reliability was approved and accepted.

Suggest replacing the “uncontrolled” in the Event Type with the “unintended” language (similar to the EAP category). “Uncontrolled” implies or may get interpreted as a cascading type of an event, limiting the reporting requirement to only those types of events.

Add GOP to the Entity with Reporting Responsibility. Similar reasons specified in the Attachment 1, Item 2 above. Additionally, if the GOP BES control centers are subject to consideration and classification as High, Medium and Low impact facilities in accordance with the CIP-002 evaluation, they should be considered in this reporting criteria, at least for the GOP's Control Centers that meet the reporting threshold for "Generation Loss" event type (≥ 2,000 MW for entities in the Eastern, or Western, or Quebec Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection); or, as an alternative, High Impact (as classified under the CIP-002) control centers – CIP-002-5.1 - Attachment 1 Impact Rating Criteria

The criteria defined in Attachment 1 do not constitute stand-alone compliance requirements, but are criteria characterizing the level of impact and are referenced by requirements.

1. High Impact Rating (H) Each BES Cyber System used by and located at any of the following: 1.4 Each Control Center or backup Control Center used to perform the functional obligations of the Generator Operator for one or more of the assets that meet criterion 2.1, 2.3, 2.6, or 2.9.

Complete loss of monitoring capability (RC, BA, TOP)- Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or {more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.}

Add the word "staffed" to the threshold column for "Complete loss of monitoring or control at a BES control center" so that it is consistent with the event Type above it which states: Complete loss of Interpersonal Communication capability affecting a "staffed" BES control center for 30 continuous minutes or more.

The BA should also be identified as an "Entity with Reporting Responsibility" for System-wide voltage reduction since according to the functional model the BA may request the TOP or directly address a DP to reduce voltage to ensure balance within its BA area.

Agree with the changes eliminating the bracketed statement as it is not indicative of a complete loss of monitoring capability and has caused confusion throughout the industry.

Response

Thank you for your comments. The three event types that include 'its' are; Damage or destruction of its Facility (TO, TOP, GO, GOP, DP), Physical threats to its Facility (TO, TOP, GO, GOP, DP) and Physical Threats to its BES control center (RC, BA, TOP) and with the specific entities listed for reporting, the event type and reporting entity will match up.

There could be instances where the reporting entity and owner are different, but that is up to the entity to ensure reporting is done based on their registration type. The SDT tried to streamline this as much as we could; to try to reduce multiple reports and focus on the 'owner' or best qualified entity, to do the necessary reporting. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers. EOP-011-1 puts the responsibility of having Public Appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. EOP-011-1 and the VAR standards puts the requirements of the voltage reduction (transmission system reconfiguration) on the TOP; therefore, the BA should not be added to the reporting category. Thank you for your response regarding System-wide voltage reduction, the updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. The EOP SDT is working with the DOE to have all EOP-004 event categories listed on the OE-417 reporting form that is available online; therefore, this could be the one place for EOP-004 and DOE reporting to be done. EOP-004 Attachment 2 and OE-417 are mandatory reporting forms; whereas, EAP reporting is not mandatory. The current EOP-001, EOP-002 and EOP-003 standards will be retired 4/1/17 and EOP-011-1 will replace these standards and become effective on 4/1/17. EOP-011 will incorporate requirements from EOP-001, EOP-002 and EOP-003. The SDT used EOP-011 as a guide, which separated the BA and TOP responsibilities that need to be included in their Operating Plan to mitigate operating Emergencies. Your Question C above related to system-wide and TOP as reporting entity: It is the intent of the EOP SDT that the TOP only reports System-wide voltage reduction events. The intent is for TOP to report and initiate System-wide voltage reductions. The SDT developed this Rationale for the above;"System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction." The EOP SDT agrees with your comment and has made the conforming change from "Element" to "Facility." In response to your comment on firm load reporting, the EOP SDT updated the event type to read: "Uncontrolled loss of firm load resulting from a BES Emergency;" and therefore closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. So if the qualifiers you mentioned above are not from a BES Emergency, then the loss would not need to be reported. Staffed: Staffed has been added to the event types and thresholds.

Answer	No
Comment	

We do not agree with the elimination of "BES Emergency requiring" for a public appeal for load reduction. During periods of very hot weather or other high load situations, even though there is not a BES emergency there are public appeals to exercise conservation to ensure sufficient resources on a regional or statewide basis. Reporting to NERC of public appeals for load reduction or conservation should only be required for BES emergency conditions as written in the current version.

Response

Thank you for your response regarding Public Appeal for load reduction to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. The EOP SDT has updated the reporting category to: Public appeal for load reduction resulting from a BES Emergency. The EOP SDT agrees with your comment and has made the conforming change from "Element" to "Facility."

Elizabeth Axson - Electric Reliability Council of Texas, Inc. - 2

Answer	No
Comment	

ERCOT joins the comments of the ISO RTO Council (IRC) Standards Review Committee (SRC). In addition, ERCOT provides the additional comment below.

a. We ask the SDT to consider setting the reporting criteria for the "Generation loss" event type in ERCOT at 1,400 MW rather than 1,000 MW. This would align the current reportable MW threshold for ERCOT with the NERC Event Analysis process threshold for a Category 3 event.[1] As currently written, entities in the Eastern Interconnection are required to report in the event of a Category 3 event with a loss of generation of 2,000 MW or more, while ERCOT would be required to report in the event of a Category 1 event with a loss of generation of 1,000 MW. Setting the reporting threshold at 1,400 MW for generation loss in ERCOT would establish equitable criteria for reporting in the ERCOT interconnection.

[1] http://www.nerc.com/pa/rrm/ea/EA%20Program%20Document%20Library/ERO_EAP_V3_final.pdf

Response

Thank you for your comments. Please see responses to ISO RTO Council (IRC) Standards Review Committee (SRC). To establish the equitable criteria for reporting in the ERCOT interconnection, the EOP SDT has revised the reporting threshold from 1,000 MW to 1,400 MW for generation loss in the ERCOT interconnection. Please refer to the project's mapping document for the technical justification regarding this revision.

Ben Li - Independent Electricity System Operator - 2 - NPCC, Group Name ISO/RTO Council Standards Review Committee

Answer	No

Comment

We do not agree with the following changes:

a. For the Event Type "Public appeal for load reduction": It is unclear what "maintain the continuity of the BES" means. Does "continuity" mean "integrity of the BES" or something else? This needs to be revised to be more specific and to improve clarity.

b. The phrase "Public appeal for load reduction to maintain continuity of the BES" could also unreasonably expand the number of required reporting instances. Public appeals are made in many different types of situations. Reliability Coordinators often make appeals when an emergency is only a possibility and not a likelihood. In many of these cases, the risk of an emergency condition is somewhat lower and should not rise to the level of concern to justify official event reporting. SRC therefore recommends that the SDT retain the defined term "BES Emergency" and use the phrase "Public appeal for load reduction in a BES Emergency to maintain integrity of the BES."

c. The SRC also disagrees with assigning the TOP the responsibility for reporting system wide voltage reduction. Voltage reduction is intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend making the BA the responsible entity. Further, we don't agree with making every public appeal for demand reduction a reportable event. The redline removes the words "BES Emergency requiring…" and we believe that the words should remain so that only voltage reduction associated with BES Emergencies are reportable. " Also, similar to the comment above, it is unclear what "maintain the continuity of the BES" means. We suggest to revise the Event Type to "Voltage reduction" or where a qualifier is deemed to add value, change it to "Voltage reduction to meet system demand".

d. For consistency with comment (b) above "Public Appeal" should remain under the "BES Emergency" heading.

e. Having proposed the above, the SRC suggests that Public Appeal be removed from the list of Events to be reported since public appeal by its nature require the involvement of media. This is often done in advance of real time because of the required effort and coordination with media. Therefore, public appeal is more a cautionary action driven by anticipated conditions, and not actual conditions in real time. Given the nature of the appeal and the involvement of the media, there is sufficient information provided to NERC and the concerned government agencies, making a separate report is thus redundant. f. The Event Type "Firm load shedding resulting from a BES Emergency": the basis for the reporting threshold, i.e., 100 MW, etc. has not been provided. We would appreciate the SDT providing the technical basis for this threshold. g. In Attachment 1, the event "Unplanned BES control center evacuation" applies to RC, BA, and TOP. If the evacuated control center belongs to a TOP, the TOP should have the obligation to report this, and not the RC or BA, which could be one reading of this. Consistent with the SDT's use of the word "its" for the second, third, and fourth events listed in Attachment 1 to signify that only the entity experiencing the event has the reporting responsibility, SRC recommends changing the event type description in this case to "Unplanned evacuation of its BES control center." Similarly, SRC recommends changing the next two event type descriptions to address this same issue, so that they read "Complete loss of Interpersonal Communication capability at its BES control center" and "Complete loss of monitoring or control capability at its BES control center."
Response
Thank you for your response regarding Public Appeal for load reduction to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. And continuity of the BES is intended as to remain interconnected. Thank you for your response regarding System-wide voltage reduction, the updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. It is the intent of the EOP SDT that the TOP only reports System-wide voltage reduction events. The intent is for TOP to report and initiate System-wide voltage reductions. The SDT developed this Rationale for the above;"System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction." Thank you for your comment on Public appeal. The EOP SDT agrees and has updated the Event Type to read: "Public appeal for load reduction resulting from a BES Emergency." The MW threshold is unchanged from EOP-004-3.

Attachment 1: Thank you for your comments regarding changing event type descriptions to add the word “its” to signify that only the entity experiencing the event has the reporting responsibility. The EOP SDT agreed with your comment and has made the conforming changes to Attachment 1, as well as to Attachment 2.

Answer	No
Comment	

NV Energy supports the comments made by MRO-NERC Standards Review Forum:

Suggestion: Delete or clarify the Transmission loss Event Type in Attachment 1.

Rationale: Conflicting Event Analysis Program guidance, NERC Glossary definitions, and dispersed generation combine to make this Event Type confusing and challenging to evaluate within reporting timelines, subject to minimal impact, and requiring TOP’s to have greater visibility of generation resources than they possess.

Conflicting Guidance

Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design.

NERC Addendum for EAP Category 1a Events, footnote 2, page 2, explains “contrary to design”: “If a single line fault results in the faulted line tripping along with two other lines misoperating and tripping, that is three elements outaged due to a common disturbance, contrary to design. That would be a qualified event.” Likewise, page 3 states “Protection system misoperations are considered contrary to design.” We can therefore conclude that protection system operations that operate as designed are not misoperations and not contrary to design.

This is so obvious that it shouldn’t need to be pointed out here, except that the EAP Addendum contradicts this understanding of protection system operations with respect to breaker failures. In an attempt to collect circuit breaker failure data “through the EA process to facilitate identification of trends with regards to circuit breaker failures… facilities that are tripped due to breaker failure are counted as facilities outaged in determining categorization” regardless of whether that tripping is caused by the correct operation of protection systems. Examples 5 and 6 explicitly state that lines outaged by correct operation of protection systems are to be counted “since it was a breaker failure.”

While a guidance document can circumvent the plain meaning of "contrary to design" for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4 reliability standard. This results in differing criteria for evaluating which lost/outaged BES Elements/Facilities count towards the three-element threshold.

Includes Minimum Impact Losses

The NERC Glossary definitions of Elements and Facilities specifically list generators as examples. BES Elements and BES Facilities include BES generators. With the revision of the BES definition, Inclusion I4 defines each and all individual dispersed power producing resources as individual BES facilities once they aggregate to greater than 75 MVA and are connected at a voltage of 100 kV or above.

By definition, every outage, contrary to design, of three or more BES wind turbines or solar cells caused by a common disturbance must be reported as a Transmission loss event under EOP-004, even though the loss is labeled as Transmission, contains no transmission elements, and does not meet the threshold for reporting a generation loss.

Blurs Event Types

Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Generation loss has BA reporting loss of MW. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss. This blurs the line between Event Types, obligating the TOP to make determinations to file an Event Report each and every time 3 or more BES wind turbines or solar cells and/or a combination thereof with transmission elements that are lost contrary to design due to a common disturbance. The blurred event types and previously identified conflicting guidance is not conducive to a 24 hour reporting requirement.

TOP's are unlikely to have this level of visibility into wind/solar farms, necessitating GOP's to report the loss of these BES Elements to their TOP, so the TOP, as the Responsible Entity, can submit the report. The TOP should not have the responsibility of reporting event types for generator disturbances.

Suggested Remedy

Delete the Transmission loss Event Type from Attachment 1. Events can and should be analyzed under EAP. The EAP is the preferred method as there is collaboration between the reporting entity and the Regional Entity. The data is collected by the RE and NERC and can be analyzed appropriately and lessons learned developed.

Alternatively, clarify the Transmission loss Threshold for Reporting as follows:

"Unexpected loss within its area, contrary to design, of three or more BES Elements (transmission lines or transformers) caused by a common disturbance (excluding successful automatic reclosing, and as-designed protection system operations for the initiating disturbance).

By explicitly stating "BES transmission lines and transformers" we exclude generators as well as the Elements (circuit breakers, busses, and shunt and series devices) that the EAP Addendum says do not need to be included. Adding "as-designed protection system operations" as an exclusion reinforces and reiterates the limitation of losses to those "contrary to design." The qualifier "for the initiating disturbance" prevents a TOP from claiming that lines tripping on zone 3 relaying for a slow or stuck breaker is operating "as-designed."

Page 12 of 16 , Row 6

Prior to the implementation of COM-001-2 an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provided for actions to be taken for the loss of Interpersonal Communications. We suggest that the "Complete" loss of voice communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event.

Suggested Change:

Complete loss of Interpersonal Communication and Alternate Interpersonal Communication capability at a BES control center.

Response

Transmission loss: The SDT appreciates your comment about removing Transmission Loss from Attachment 1 but after many discussions the SDT felt there was still a need for this reporting requirement. Threshold changes: "Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing)."
EOP-004 Attachment 2 and OE-417 are mandatory reporting forms; whereas, EAP reporting is not mandatory.

The EOP SDT agrees with your comment and has made the conforming change from "Element" to "Facility." The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications."

Ben Engelby - ACES Power Marketing - 6, Group Name ACES Standards Collaborators - EOP Project	
Answer	No

Comment

1. With regard to Attachment 1, the majority of our comments agree with the proposed changes. However, there are a few event categories that need to be clarified.
2. We disagree with the deviation from NERC Glossary Terms for the complete loss of monitoring or control capability at a BES control center. We recommend that the SDT choose the NERC-defined term "Control Center" instead of the current proposal as lower-case "control center." The NERC glossary definition would meet the criteria because this event category applies to the RC, BA, and TOP.
3. We question the removal of the RC reporting IROL violations or SOL violations on WECC Major Transfer Paths. This is a risk to reliability and NERC should be notified with an event report.
4. We also question the assignment of the RC, BA, and TOP to have reporting responsibility for Firm load shedding (> 100 MW) resulting from a BES Emergency. We are not sure if this assignment of three functions provides clarity. Are there any additional benefits to reliability for having all three entities be required to report a single load shedding event? We would like the SDT to clarify if there is an option for applicable registered entities to receive credit for reporting if one of the entities involved in a load shedding event reports on their behalf. The ability to file a report for multiple entities that are party to a single load shedding event would alleviate the burden of having to submit multiple reports for a single event.
5. We question the assignment of the BA as being solely responsible for reporting public appeals for load reduction, because some BA Areas (such as MISO or SPP) are too large for the BA to initiate such appeals. We ask the SDT to consider assigning the task to the TOP.
6. We agree with the current proposal to remove the DP from being required to report any automatic firm load shedding (> 100 MW), as this is covered by the BA, RC, and TOP.
7. Finally, we agree with the SDT that assigning the TOP as solely responsible for reporting system-wide voltage reduction (of 3% or more) to maintain the continuity of the BES provides more clarity regarding the reporting responsibilities.

Response

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity

with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers. The EOP SDT recommended removal of IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) due to the relatively low number of reports for EOP-004 because of the requirements in the TOP standards; TOP-001-3, Requirement R12 becomes effective 4/1/17 and it requires self-report if Tv is exceeded; and TOP-007-WECC-1 pending retirement. For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity. EOP-011-1 puts the responsibility of having Public Appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. Thank you for your support.	
Shannon Mickens - Southwest Power Pool, Inc. (RTO) - 2 - SPP RE, Group Name SPP Standards Review Group	
Answer	No
Comment	
Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design; however with differing definitions. EAP defines "BES Facility" and EOP-004 defines "BES Element". EOP-004 reporting threshold for loss of three elements uses "BES Elements". The BES definition includes generators, the EOP reporting for the unexpected loss is for the TOP. This is confusing on how to count elements and how the TOP is to get notification of loss of generator elements to report. Actually the TOP should not be required to do so. Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss. In addition, we are finding that the application of the EAP definition/process is being applied to EOP-004 reporting. While an EAP guidance document can circumvent the plain meaning of "contrary to design" for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4	

reliability standard. This results in differing criteria for evaluating which lost/outage BES Elements/Facilities count towards the three-element threshold and an application that ignores the Standards approval process in the NERC Rules of Procedure. The EAP process has examples for application, provides for collaboration between the entity and the regional entity provides for categorization for the NERC/FERC process and eventual lessons learned. As noted, the EOP-004 reporting item is confusing (and not correct) by definition and by application. The EOP line item for Transmission Loss needs to be eliminated in favor of the better defined and applied EAP process. We also request that the category for 'Loss of Interpersonal Communication Capability' be clarified to state that the threshold requires loss of both Primary and Alternative Interpersonal Communication Capability. We believe that is the intent of the threshold, but with the language now in COM-001-2 using 'primary and Alternative Interpersonal Communication', we believe the addition would make it as clear as possible. As currently stated, it requires an interpretation as to whether it means complete loss of 'just' Primary or both. Such as: Complete loss of **both primary and Alternative** Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more. The category for loss of offsite power to a nuclear generator could be better aligned with the EAP. The EAP refers to a 'LOOP event' which could be referenced here to provide consistency. We also recommend that the Nuclear Plant Generator Operator be the responsible entity for reporting instead of the TO or TOP.	
Response	
Thank you for your comment. The EOP SDT agrees with your comment and has made the conforming change from "Element" to "Facility." The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications." The EOP SDT has added loss of off-site power"(LOOP)."	
Douglas Webb - Douglas Webb On Behalf of: Chris Bridges, Great Plains Energy - Kansas City Power and Light Co., 3, 6, 5, 1; Harold Wyble, Great Plains Energy - Kansas City Power and Light Co., 3, 6, 5, 1; James McBee, Great Plains Energy - Kansas City Power and Light Co., 3, 6, 5, 1; Jessica Tucker, Great Plains Energy - Kansas City Power and Light Co., 3, 6, 5, 1; - Douglas Webb

Comment	

Kansas City Power and Light Company endorses and incorporates by reference Nebraska Public Power District's response in opposition to Question 3.

In addition, we offer the following:

BES Emergency: There is inconsistent use of the NERC Glossary Term, "BES Emergency." We can only speculate as to the SDT's intent. For example, removing the term is basically removing the qualifier and expanding the applicability of the event. The opposite would be true, limiting the applicability, by including the term. We would be interested in understanding the SDT's intent for determining inclusion or exclusion of the term, BES Emergency.

Capitalization: As noted in our Question No. 1 comments, the words "control center" are used in Attachments. Since the term, "Control Center," is an approved NERC Glossary Term, we suggest it be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of "control center."

Response

Thank you for your comments. The EOP SDT's intent in "BES Emergency" is to differentiate between a localized event and event that would affect the BES; therefore, the impact of the BES Emergency is the trigger for reporting. The Purpose in the EOP-004 standard is: "**Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities."
The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

Mark Riley - Associated Electric Cooperative, Inc. - 1	
Answer	No

Comment

AECI agrees with the revisions to Attachment 1. However, AECI requests the SDT to revise the term BES control center. Control Center is already defined in the NERC Glossary of Terms and should be used in lieu of BES control center throughout the attachment.

Response	
Thank you for your comment. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. I wasn't given the option to skip the survey and support another's response after voting negatively for EOP-004-4. Please accept this response. PSE supports IESO, OGE and LG&E comments.

We do not agree with the following changes:

1. For the Event Type “Public appeal for load reduction”: It is unclear what “maintain the continuity of the BES” really means. By “continuity”, does it mean “integrity of the BES” or “continuity of supply”? This needs to be revised to be more specific and to improve clarity.

2. Assigning the TOP to be the responsible entity for reporting system wide voltage reduction

Voltage reduction is intended to reduce system demand to address capacity deficiency. While the TOP may be the entity to actually direct actions (e.g. transformer tap changes) to achieve voltage reduction, the BA is the entity that decides and gives the direction to implement the system wide voltage action/measure to achieve a reduction in system demand. We recommend changing it to the BA. Also, similar to the comment above, it is unclear what “maintain the continuity of the BES” really means. By “continuity”, does it mean “integrity” or “continuity of supply”? Either way, we do not see the value added or the necessity of the having this qualifier. We suggest to revise the Event Type to “System wide voltage reduction” or where a qualifier is deemed to add value, change it to “System wide voltage reduction to maintain load supply” or “to meet system demand”.

3. The Event Type “Firm load shedding resulting from a BES Emergency”: the basis for the reporting threshold, i.e., 100 MW, etc. has not been provided. We would appreciate the SDT providing the technical basis/justification other than just because it existed before.

Leonard Kula, Independent Electricity System Operator, 2, 8/30/2016

LG&E and KU Energy (“LG&E/KU”) appreciates the opportunity to submit this comment for the Standard Drafting Team's consideration.

The reportable event type “Complete loss of Interpersonal Communication capability at a BES control center” has a threshold for reporting of “Complete loss of Interpersonal Communication capability affecting a staffed BES control center for 30 continuous minutes or more.” LG&E/KU proposes the event type be rewritten as “Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability at a BES control center”. Furthermore, LG&E/KU proposes changing the threshold for reporting to read “Complete loss of Interpersonal Communication (including Alternative Interpersonal Communication) capability affecting a staffed BES control center for 30 continuous minutes or more.”

LG&E and KU Energy, Segment(s) 3, 5, 6, 5/26/2016

Response

Thank you for your response regarding Public Appeal for load reduction to maintain continuity of the BES. The updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417. And continuity of the BES is intended as to remain interconnected.
Voltage reduction: EOP-011-1 and the VAR standards puts the requirements of the voltage reduction (transmission system reconfiguration) on the TOP; therefore, the BA should not be added to the reporting category.
The MW threshold is unchanged from EOP-004-3.
The EOP SDT has added “Alternative Interpersonal Communications.”

RoLynda Shumpert - SCANA - South Carolina Electric and Gas Co. - 1,3,5,6 - SERC

Answer	Yes

Comment

Under Event Type “BES Emergency resulting in voltage deviation on a Facility” the threshold should be updated to include the word ‘exceeding’. The threshold should read ‘A voltage deviation exceeding +/- 10% of nominal voltage sustained for >/= 15 continuous minutes.”

Response	
Thank you for your comment. The EOP SDT made the following change for clarity in response to your comment: “A voltage deviation of =/> ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.”	
Amy Casuscelli - Xcel Energy, Inc. - 1,3,5,6 - MRO,WECC,SPP RE	
Answer	Yes
Comment	
In Attachment 1, the removal of the TOP as a responsible reporting Entity for "Damage or destruction of its Facility" and "Physical threats to its Facility" potentially causes concern. This could be problematic for facilities that are owned by one entity but operated by another. We request that the SDT have continued discussion around these types of scenarios and consider putting the TOP back in as a responsible Entity.	
Response	
Thank you for your comment. The EOP SDT believes in many cases that the GO/GOP and TO/TOP are both the same owner of the Facility. But there are times when the GOP function is not done by the GO, therefore we felt the GOP also needed to be included in the reporting since they could also be the entity ‘recognizing the event’. The EOP SDT is continuing to try to stream line reporting to specific entities and those entities that own Facilities. The EOP SDT reviewed the NERC Reliability Functional Model, which defines the TOP as the functional entity that ensures the Real-time operating reliability of the transmission assets within a Transmission Operator Area. Therefore, the EOP SDT agrees with your comment and has added the TOP back in as a Responsible Entity.

Answer	Yes
Comment	
Event Type: Public appeal for load reduction: There may be a need for a TOP to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. We recommend leaving the “Entity with Reporting Responsibility” as it currently reads: **Initiating entity is responsible for reporting.** (Attachment 1, Page 10, 4th Row)	

Event Type: Firm load shedding resulting from a BES Emergency: We recommend leaving the "Entity with Reporting Responsibility" as it currently reads: **Initiating entity is responsible for reporting.** (Attachment 1, Page 11, 1st Row) Event Type: Generation loss; We recommend the following statement for "Threshold for Reporting:" **Reporting of generation loss would be used to report Forced Outages, not weather patterns or fuel source unavailability for these resources.** (Attachment 1, Page 12, 2nd Row)		
Response		
EOP-011-1 puts the responsibility of having Public Appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. The entity that sheds load from a BES Emergency is responsible for reporting. Given there are regional and registration differences, the intent of the EOP SDT is for one of the entities to have the reporting responsibility. For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity. Generation loss: The EOP SDT discussed dispersed power producing resources and their generation loss due to weather patterns or fuel source unavailability and determined that reporting of generation loss would be used to report Forced Outages not weather patterns or fuel source unavailability for these resources.

Answer	Yes	
Comment		
At times there may be a need for a TOP to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. We recommend replacing "BA" with "Initiating BA or TOP." The event types with multiple applicable entities such as, "Firm load shedding resulting from a BES Emergency", "Uncontrolled loss of firm load resulting from a BES Emergency", and "System separation (islanding)" will most likely have the same event reported multiple times if the BA, TOP or RC are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type, "Firm load shedding resulting from a BES Emergency" to "Initiating RC, BA, or TOP". We recommend changing the Entity with Reporting Responsibility for the Event Type, "Uncontrolled loss of firm load resulting from a BES Emergency" to just the BA. We recommend changing the Entity with Reporting Responsibility for the Event Type,		

"System separation (islanding)" to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported. For Event Type *Uncontrolled loss of firm load resulting from a BES Emergency,* the MW lost amount may be better representative of an impact to a BA if it was a specific percentage of peak load. The current threshold goes from a 10% of total load value for a 3000 MW BA to less than 1% of total load for the bigger BAs.	
Response	
EOP-011-1 puts the responsibility of having Public Appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity. Thank you for your response regarding Uncontrolled loss of firm load, the updated event type and reporting threshold closely aligned EOP-004-4 with the U.S. Department of Energy OE-417.

Answer	Yes
Comment	
Add the word 'staffed' to the threshold column for 'Complete loss of monitoring or control at a BES control center' so that it is consistent with the Event Type above it which states: Complete loss of Interpersonal Communication capability affecting a **staffed** BES control center for 30 continuous minutes or more.	
Response	
Thank you for your comments. The EOP SDT has added "Alternative Interpersonal Communications." The EOP SDT agrees with your comment and has added "staffed" to the event types and thresholds.	
Sean Bodkin - Dominion - Dominion Resources, Inc. - 6	

Answer	Yes
Comment	

Consider adding ‘its’ to unplanned evacuation of (its) BES control center for consistency.

Consider adding ‘Alternate Interpersonal Communications’ in addition to complete loss of Interpersonal Communications to add clarity.

Consider adding ‘staffed’ to both event type and threshold for loss of control center Interpersonal Communications (p.12 of 16) for consistency.

Response

Thank you for your comments.
The EOP SDT agrees with your comment to add “its” and made the conforming change.
The EOP SDT agrees with your comment and has added “Alternative Interpersonal Communications.”
Staffed: Staffed has been added to the event types and thresholds.

Suggestion: Delete or clarify the Transmission loss Event Type in Attachment 1.

Rationale: Conflicting Event Analysis Program guidance, NERC Glossary definitions, and dispersed generation combine to make this Event Type confusing and challenging to evaluate within reporting timelines, subject to minimal impact, and requiring TOP’s to have greater visibility of generation resources than they possess.

Conflicting Guidance

Both EOP-004-4 Transmission loss Threshold for Reporting and EAP Category 1a apply to unexpected loss/outage of three or more BES Elements/Facilities contrary to design.

NERC Addendum for EAP Category 1a Events, footnote 2, page 2, explains “contrary to design”: “If a single line fault results in the faulted line tripping along with two other lines misoperating and tripping, that is three elements outaged due to a common disturbance, contrary to design. That would be a qualified event.” Likewise, page 3 states “Protection system misoperations are considered contrary to design.” We can therefore conclude that protection system operations that operate as designed are not misoperations and not contrary to design.

This is so obvious that it shouldn’t need to be pointed out here, except that the EAP Addendum contradicts this understanding of protection system operations with respect to breaker failures. In an attempt to collect circuit breaker failure data “through the EA process to facilitate identification of trends with regards to circuit breaker failures… facilities that are tripped due to breaker failure are counted as facilities outaged in determining categorization” regardless of whether that tripping is caused by the correct operation of protection systems. Examples 5 and 6 explicitly state that lines outaged by correct operation of protection systems are to be counted “since it was a breaker failure.”

While a guidance document can circumvent the plain meaning of “contrary to design” for the voluntary data-gathering EAP, it cannot do so for the EOP-004-4 reliability standard. This results in differing criteria for evaluating which lost/outaged BES Elements/Facilities count towards the three-element threshold.

Includes Minimum Impact Losses

The NERC Glossary definitions of Elements and Facilities specifically list generators as examples. BES Elements and BES Facilities include BES generators. With the revision of the BES definition, Inclusion I4 defines each and all individual dispersed power producing resources as individual BES facilities once they aggregate to greater than 75 MVA and are connected at a voltage of 100 kV or above.

By definition, every outage, contrary to design, of three or more BES wind turbines or solar cells caused by a common disturbance must be reported as a Transmission loss event under EOP-004, even though the loss is labeled as Transmission, contains no transmission elements, and does not meet the threshold for reporting a generation loss.

Blurs Event Types

Transmission loss and Generation loss are distinct Event Types with differing Reporting Thresholds appropriate to the Event Type and Responsible Entity. Generation loss has BA reporting loss of MW. Transmission loss has TOP reporting number of BES Elements, presumably transmission elements. As written, BES Generators are not excluded as BES Elements for Transmission loss. This blurs the line between Event Types, obligating the TOP to make determinations to file an Event Report each and every time 3 or more BES wind turbines or solar cells and/or a combination thereof with transmission elements that are lost contrary to design due to a common disturbance. The blurred event types and previously identified conflicting guidance is not conducive to a 24 hour reporting requirement.

TOP's are unlikely to have this level of visibility into wind/solar farms, necessitating GOP's to report the loss of these BES Elements to their TOP, so the TOP, as the Responsible Entity, can submit the report. The TOP should not have the responsibility of reporting event types for generator disturbances.

Suggested Remedy

Delete the Transmission loss Event Type from Attachment 1. Events can and should be analyzed under EAP. The EAP is the preferred method as there is collaboration between the reporting entity and the Regional Entity. The data is collected by the RE and NERC and can be analyzed appropriately and lessons learned developed.

Alternatively, clarify the Transmission loss Threshold for Reporting as follows:

"Unexpected loss within its area, contrary to design, of three or more BES Elements (transmission lines or transformers) caused by a common disturbance (excluding successful automatic reclosing, and as-designed protection system operations for the initiating disturbance).

By explicitly stating "BES transmission lines and transformers" we exclude generators as well as the Elements (circuit breakers, busses, and shunt and series devices) that the EAP Addendum says do not need to be included. Adding "as-designed protection system operations" as an exclusion reinforces and reiterates the limitation of losses to those "contrary to design." The qualifier "for the initiating disturbance" prevents a TOP from claiming that lines tripping on zone 3 relaying for a slow or stuck breaker is operating "as-designed."

Page 12 of 16 , Row 6

Prior to the implementation of COM-001-2 an Event under EOP-004-2 was the complete loss of voice communications. With the restructuring of COM-001-2 to include the defined terms Interpersonal Communications and Alternate Interpersonal Communications, the Standard provided for actions to be taken for the loss of Interpersonal Communications. We suggest that the "Complete" loss of voice

communications is now the loss of Interpersonal Communications and Alternate Interpersonal Communications and which rises to the level of reporting for an EOP-004 event. Suggested Change: Complete loss of Interpersonal Communication and Alternate Interpersonal Communication capability at a BES control center.	
Response	
Transmission loss: The SDT appreciates your comment about removing Transmission Loss from Attachment 1 but after many discussions the SDT felt there was still a need for this reporting requirement. Threshold changes: "Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing)." EOP-004 Attachment 2 and OE-417 are mandatory reporting forms; whereas, EAP reporting is not mandatory. The EOP SDT agrees with your comment and has made the conforming change from "Element" to "Facility." The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications."

Comment	
On Attachment 1 recommend rewording Event Type "Complete Loss of Interpersonal Communications capability at a BES Control Center" to be "Complete loss of Interpersonal Communication and Alternative Communication capability at a staffed BES Control Center". The COM-001-2 Standard addresses loss of Interpersonal Communication capability.	
Response	
Thank you for your comment. The EOP SDT agrees with your comment and has added "Alternative Interpersonal Communications."	
Michelle Amarantos - APS - Arizona Public Service Co. - 1	
Answer	Yes
Comment	

With regard to Attachment 1, a change has been made with respect to the Reporting Responsibility for damage or destruction and physical threats to a facility. Accountability has been moved to the Transmission Owner (i.e. Transmission Operator and Balancing Authority have been removed). If this is deemed to be an Owner versus Operator responsibility, why is the same not true for the GO/GOP functions?	
Response	
Thank you for your comment. The EOP SDT believes in many cases that the GO/GOP and TO/TOP are both the same owner of the Facility. But there are times when the GOP function is not done by the GO, therefore we felt the GOP also needed to be included in the reporting since they could also be the entity 'recognizing the event'. The EOP SDT is continuing to try to stream line reporting to specific entities and those entities that own Facilities. The EOP SDT reviewed the NERC Reliability Functional Model, which defines the TOP as the functional entity that ensures the Real-time operating reliability of the transmission assets within a Transmission Operator Area. Therefore, the EOP SDT agrees with your comment and has added the TOP back in as a Responsible Entity.

Comemnts as follows:	

1. At times there may be a need for a Transmission Operator (“TOp”) to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. Entergy recommends replacing “BA” with initiating Balancing Authority (“BA”) or TOp.

2. The event types with multiple applicable entities such as, “Firm load shedding resulting from a BES Emergency”, “Uncontrolled loss of firm load resulting from a BES Emergency” and “System separation (islanding)” will most likely have the same event reported multiple times if the BA, TOp, or Reliability Coordinator (“RC”) are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type. “Firm load shedding resulting from a BES Emergency” to “Initiating RC, BA, or TOp”. We recommend changing the Entity with Reporting Responsibility for Event Type, “Uncontrolled loss of firm load resulting from a BES Emergency” to just BA. We recommend changing the Entity with Reporting Responsibility for the Even Type, “System separation (islanding)” to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported.

3. Under Event Type “Uncontrolled loss of firm load resulting from a BES Emergency” the MW lost amount may be better representative of an impact to a BA if it was a specific percentage of peak load. The current threshold goes from a 10% of total load value for a 3000 MW BA to less than 1% of total load for the bigger BAs.

4. For Event Type Complete Loss of Interpersonal Communications capability at a BES control center, consider also adding Alternative Communication Capability. This will differentiate the event form a COM standard requirement. On event type include the word “staffed” to match working in the Threshold section. Entergy does not agree that the loss of primary/use of backup control center should be a reportable event. Please provide clarification of this point.

Response

Thank you for your comments.
EOP-011-1 puts the responsibility of having Public Appeals for load reduction in the BA’s Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004.
For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.
The MW threshold is unchanged from EOP-004-3.
The EOP SDT agrees with your comment and has added “Alternative Interpersonal Communications.”

The EOP SDT agrees with your comment and has added “staffed” to the event types and thresholds.

Answer	No
Comment	
In the header of the Attachment 2, add "select Option 1" after the voice number provided for the submittal of the form. Similar as in the Attachment 1. Under section 4, there are two instances of "Unplanned BES control center evacuation." Remove the first instance so that the order of the list in Attachment 2 matches the Attachment 1. Attachment 2 is not required for use and it should be stated in Attachment 2 that it is a guidance document, not tied to compliance. The change to attachment 2 implies that it is a compliance obligation to supply a completed Attachment 2 to all entities listed in the Event Reporting Operating Plan. This is not the case as written in R2 and a correction to either Attachment 2 or the requirement language should be made.	
Response	
Thank you for your comments. The EOP SDT has revised Attachment 2 to include: "Option 1". The duplicate 'Unplanned BES control center evacuation' from the Event Identification and Description in Attachment 2 has been deleted.	

Measure M2 lists the Attachment 2 form as one type of evidence that can be used for Requirement R2. Requirement R2 and Measure M2 confirms entities shall report events within 24 hours of recognition of meeting the event type threshold. NERC EOP-004 and DOE OE-417 have separate reporting timeline requirements. In lieu of the EOP-004, Attachment 2, NERC will accept the DOE-OE-417 form as type of evidence for Measure M2. **“Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2”** has been added back into Attachment 1 of the standard. Measure M2 also indicates Attachment 2 can be used as evidence for event reporting.

Michelle Amarantos - APS - Arizona Public Service Co. - 1

Answer	Yes

Comment

Capitalization: As previously noted in our comments, the words "control center" are used in multiple places. Since the term "Control Center" is an approved NERC Glossary Term, we suggest it should be capitalized. If the intent of the SDT was not to use the Glossary Term, Control Center, additional definition and parameters are needed to provide clarity to the meaning of control center.

Response

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

Answer	Yes

Comment

1. We question if there are any compliance impacts if an entity reports within the required timelines, but uses the previous version of the event reporting form. There are several modifications to Attachment 1. We would like the SDT to clarify whether reporting an event on the previous version of the form would be a violation. This seems to be a potential administrative burden, both for the entities submitting the information, and the Regional Entities and NERC that receive the event reports.
2. We recommend implementing a reporting software tool on the NERC website, which has the capabilities to notify applicable Regional Entities and the DOE of an event. This would alleviate the need to include Attachment 2 as part of the standard and would further streamline the process with a centralized portal for all entities to submit event reports. We ask the NERC standards developer assigned to this project to share this comment with NERC IT department to see if this type of solution is viable.

Response	
The EOP SDT has an Implementation Plan for the revised standard; therefore, it would give entities time to update their reporting process to include the newly-updated Attachment 2. The violation question could be submitted to your Regional Entity. The EOP SDT is working with the DOE to have all EOP-004 event categories listed on the OE-417 reporting form that is available online; therefore, this could be the one place for EOP-004 and DOE reporting to be done.

Thank you for your comment. The EOP SDT has updated Attachment 2 task list.	
Christy Koncz - Public Service Enterprise Group - 1,3,5,6 - NPCC,RF, Group Name PSEG	
Answer	Yes
Comment	
"PSEG is pleased to have the opportunity to comment and is in general agreement with the revisions to the standard. The EOP-004 form (Attachment 2) states "Also submit to other organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)." We recommend replacing the term "submit" with "report", or determine if reporting via a different form would meet compliance. Law enforcement, in particular the Regional Operations centers (ROIC) in New Jersey and Connecticut, have a different form (Suspicious Activity Reporting or SAR form) that is used to report events. Therefore, replacing the term "submit" with "report" would aid in harmonizing reporting EOP-004 reporting requirements with processes for reporting events to law enforcement."	
Response	

Thank you for your comment. The EOP SDT finds the language is clear as written.

Answer	
Comment	
OGE is concerned that the SDT has not looked at some of the CIP standards and how it is tied to the requirements in EOP-004. Currently, there appears to be redundant reporting requirements between CIP-008 and EOP-004. For example, CIP-006 Standard, Part 1.5 states that the Physical Security Plan must describe issuance of an alarm or alert in response to the unauthorized access into or through a Physical Security Access Point, and the alarm or alert must be communicated as identified in the Entity's CIP-008 BES Cyber Security Incident Response Plan. The Response Plan includes reporting of the event to the appropriate agencies (including NERC and DOE). This ties in to the Physical Threats event type in Attachment 1 of EOP-004-4. We believe there is some overlap or at least touchpoints between the two standards, although the CIP standards are focused on protection of the cyber assets, it still includes physical access to these cyber assets. We are requesting the SDT to review the latest versions of the CIP standards (specifically CIP-006 and CIP-008) to ensure there is no overlapping or redundant reporting requirements.	
Likes 1	Puget Sound Energy, Inc., 1, Rakowsky Theresa
Response	
Thank you for your comment and the EOP SDT discussed that there is no specific requirement in CIP-006 to report any physical threats to a Facility. CIP-006 says to refer to CIP-008 Cyber Security response plan. The Cyber Security response plan requires notification to E-SIAC only, which not related to EOP-004 reporting.

Answer	
Comment	
There should be further revisions to Attachment 1. Specifically, "suspicious device or activity" is ambiguous. Further clarification on "suspicious activity" is needed. For example, does this include photography near a Facility? Also, Attachment 1 should specifically cover	

cyber related suspicious activity – for example, solicitation attempts or phishing calls at Facilities. There should also be instruction on what an Entity should do if they later realize the incident was NOT suspicious – for example, a prior reported incident which, after further investigation, turns out to be innocuous. The effect of using ambiguous terms and no mechanism for correcting incidents post investigation has left the industry with an output that contains more "trash" than value – many incidents that do not truly meet the definition of EOP 004 are sent out via EISAC which leads to the dilution of truly important incidents.
Response
The EOP SDT believes that "suspicious device or activity" is broad enough to include any type of abnormalities noticed. The EOP SDT also believes the entity's event reporting Operating Plan is not limited and can be detailed as needed to identify Physical threats to its Facility. If an entity determines an incident was not suspicious, they have 24 hours to report. If there is a question as to whether an incident meets reporting thresholds or not, weighing on the cautious side and reporting the event is the right thing to do.

Comment
Change 'control center' to 'Control Center' throughout the document to be consistent with the NERC Glossary
Response
The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

Texas RE requests the SDT provide rationale for each change made to the Standard. Texas RE would like to better understand the SDT's reasoning in the changings and how they affect reliability. Additionally, Texas RE requests rationale for the implementation plan. The Implementation Plan for the proposed EOP-004 provides that "the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority." Given that registered entities presently are required to submit event reports under the current version of EOP-004 and the revised version largely narrows the scope of such reporting activities, it is unclear why a 12-month implementation period is necessary.
Response
Thank you for your comments. The EOP SDT will be adding additional Rationale boxes to the standard, where it is appropriate to do so. The Rationale boxes are carried into the "Supplemental Material" section of the standard upon applicable governmental approval. Not all revisions to the standard would be appropriate in a Rationale box; for example, if there is a retirement of a requirement or subpart. The Mapping Document is a good source for revisions made to the standard, as well as the Rationale boxes and other supporting documents. The EOP SDT has created rationale boxes and a mapping document for this project, which will include all changes that have been made. A full redline to each last-approved standard was included on the project page during the initial comment/ballot period. The final ballot period will have final redlines to the last-approved standard.

The Implementation Plan takes into account any barriers to implementation. The EOP SDT intent for the twelve-month Implementation Plan was to give all entities an appropriate time frame for implementation.

Marc Donaldson - Tacoma Public Utilities (Tacoma, WA) - 3

Comment

Please continue the effort to harmonize NERC Event Reporting requirements with DOE reporting requirements as listed on the OE-417. Currently; it is needlessly burdensome to ensure we meet reporting requirements for both NERC and DOE within specified timeframes. This is particularly difficult considering DOE's 1 or 6 hour submittal requirements and the circumstances a System Operator is likely to be faced with while attempting to submit these reports.

Ideally, DOE would defer to NERC for Event Reporting as required by EOP-004; thus alleviating the potential for separate submissions, on separate forms, with different time requirements for submittal.

Response

Thank you for your comments. With respect to DOE collaboration, the SDT has discussed with DOE changes that would be necessary to EOP-004 Attachment 1 and to OE-417 to more closely align EOP-004-4 Attachment 1 Reportable Events with events reported on OE-417. Based on those discussions and the changes proposed in this posting, the SDT and DOE have made significant progress in harmonizing reporting requirements, which would relieve many entities from having to report Reportable Events on both forms. That collaboration continues, but it is important to note that **regardless of whether OE-417 is harmonized with EOP-004-4 Attachment 1, entities will be required to report all Reportable Events as required by EOP-004-4**. The EOP SDT discussed the reporting timeframes of the OE-417 reporting with the DOE and the DOE plans to keep the 1 or 6 hour reporting timeframes for the OE-417.

Colby Bellville - Duke Energy - 1,3,5,6 - FRCC,SERC,RF, Group Name Duke Energy

Comment

Duke Energy recommends that the drafting team revisit the language used in the VSL(s) for R2. The revisions posted for R2 include the addition of the phrase *"specified in EOP-004-4 Attachment 1 to the entities specified"*. The use of *"the entities specified",* does not match up with the language used in the VSL(s) for R2 which use the verbiage "to all required recipients" when describing who an event report should be submitted to. We suggest the drafting team consider using identical language in the Requirements and complementing VSL(s).

Response
Thank you for your comment. The EOP SDT has revised the language in VSLs for Requirement R2 to align with the requirement language.

Based on those discussions and the changes proposed in this posting, the SDT and DOE have made significant progress in harmonizing reporting requirements, which would relieve many entities from having to report Reportable Events on both forms. That collaboration continues, but it is important to note that **regardless of whether OE-417 is harmonized with EOP-004-4 Attachment 1, entities will be required to report all Reportable Events as required by EOP-004-4**.	
Ben Li - Independent Electricity System Operator - 2 - NPCC, Group Name ISO/RTO Council Standards Review Committee	
Comment	
SRC suggests one additional improvement to the baseline language. The note in Attachment 1 states that "Under certain adverse conditions (e.g. severe weather, multiple events), it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification." However, this exception doesn't appear in Requirement R2, which is the source of the reporting obligation. SRC recommends modifying Requirement R2 to explicitly recognize this exception. Also, the above-noted language in Attachment 1 lacks clarity as to exactly what sort of reporting is required when the responsible entity experiences an adverse condition and also as to when such a report must be provided. SRC suggests that, when a responsible entity experiences adverse conditions that preclude timely notification of a reportable event, the entity should be allowed to provide either verbal or written notification, and should do so as soon as practicable following the expiration of the 24-hour period for reporting the event. SRC further suggests that, if verbal notification of the event is provided, the responsible entity should submit written notification of the event as soon as practicable after providing the verbal notification. To address these concerns, SRC recommends deleting the exception described above from Attachment 1 and adding the following language at the end of R2: "However, if the Responsible Entity experiences an adverse condition (e.g., severe weather, multiple events) that prevents it from submitting an event report before the expiration of the 24-hour reporting period, it shall provide verbal or written notification of the event to the entities specified in its Operating Plan as soon as practicable thereafter. If the	

Responsible Entity provides verbal notification pursuant to this exception, it shall provide written notification of the event as soon as practicable thereafter."
Response
Thank you for your comment. In response to your comment concerning Attachment 1 lacking clarity as to exactly what sort of reporting is required when the responsible entity experiences an adverse condition and also as to when such a report must be provided, the entity needs to report on all of the event types and thresholds applicable to them, and when they cannot complete an Attachment 2 report due to adverse conditions, there is no limit as to how the entity shall otherwise notify parties per Requirement R2. This reporting could be done via verbal, email, etc. The entities event reporting Operating Plan should address these types of situations. The RSAW also contains this "Note to auditor: if the entity cannot distribute the report due to adverse conditions as specified in EOP-004-Attachment 1. The auditor should document the delay and reason for the delay. Late reporting due to these adverse conditions is not considered a non-compliance with R2."
Justin Mosiman - Bonneville Power Administration - 1,3,5,6 - WECC
Comment
Bonneville Power Administration (BPA) recommends any reference to "BES control center" or "control center" be capitalized and replaced with "BES Control Center" or "Control Center" as a NERC defined term.
Response
Thank you for your comment. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. Comment

Capitalization: The Standard's Applicability section states, "…the following functional entities..."

Additionally, the Supplemental Materials, Potential Uses of Reportable Information, the words, "Functional entities" are used.

The term "Functional Entity" is a defined term in the NERC Rules of Procedure, App. 2. Since the references are to Functional Entities defined by the intent and authority under the Rules of Procedure, we suggest functional entity or entities should be capitalized.

Response

Thank you for your comment. The EOP SDT has capitalized Functional Entity.

Mark Riley - Associated Electric Cooperative, Inc. - 1

Comment

Although the implementation plan is not specifically referenced in the survey, AECI requests the SDT to revise the proposed effective date of EOP-004-4. The revisions to EOP-004-4 require procedural and reporting changes for Responsible Entities. These modifications should not take a full 12 months to implement and the industry would benefit immediately from the enhanced reporting process. AECI requests the SDT to revise the implementation plan and establish an effective date that is the first calendar quarter that is three (3) months after the date of applicable governmental authority's order approving the standard.

Response

Thank you for your comment. The Implementation Plan takes into account any barriers to implementation. The EOP SDT intent for the twelve-month Implementation Plan was to give all entities an appropriate time frame for implementation.

Jaclyn Massey - Entergy - Entergy Services, Inc. - 5

Comment

Entergy recommends going to a 72 hour reporting deadline to match the final report deadline for the Department of Energy's form OE-417.

Response

Thank you for your comment. With respect to DOE collaboration, the SDT has discussed with DOE changes that would be necessary to EOP-004 Attachment 1 and to OE-417 to more closely align EOP-004-4 Attachment 1 Reportable Events with events reported on OE-417. Based on those discussions and the changes proposed in this posting, the SDT and DOE have made significant progress in harmonizing reporting requirements, which would relieve many entities from having to report Reportable Events on both forms. That collaboration continues, but it is important to note that **regardless of whether OE-417 is harmonized with EOP-004-4 Attachment 1, entities will be required to report all Reportable Events as required by EOP-004-4**.

Mike Anctil - Los Angeles Department of Water and Power - 3

Comment

1. Event Type 2 and 3 on page 10 ("Physical threats to its Facility" and "Physical threats to its BES control center") is too broad and will require entities to file a report for any suspicious activity or device within 24 hours. In the Threshold for Reporting column of these Event Types, it would be better to eliminate "OR Suspicious device or activity at a its Facility. Do not report theft unless it degrades

normal operation of a Facility." This elimination would give entities some latitude on determining when a suspicious activity was worthy of a report.

Response
Thank you for your comment, but the EOP SDT chose to keep the threshold for reporting as it was previously written to be all-inclusive of types of physical threats.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/25/2016 – 12/08/2016
10-day final ballot	12/27/2016 – 01/10/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources

2. **Number:** EOP-005-3

3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Transmission Operators

   4.1.2. Generator Operators

   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan

   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan

5. **Effective Date:** See the Implementation Plan for EOP-005-3.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for System restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform:

(1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities. Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.

The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every 24 calendar months to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every 24 calendar months to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in effect since the last monitoring activity for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity, as well as one previous monitoring activity period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in effect since its last monitoring activity for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in effect since its last monitoring activity on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last monitoring activity records and all requested and submitted subsequent monitoring activity records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three of the ~~r~~equirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
~~45-day formal comment period with ballot~~	~~06/22/2016 – 08/08/2016~~
45-day formal comment period with additional ballot	~~08~~10/~~30~~25/2016 – ~~10~~12/~~14~~08/2016
10-day final ballot	~~11~~12/~~01~~27/2016 – ~~11~~01/~~11~~10/~~2016~~2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources
2. **Number:** EOP-005-3
3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Transmission Operators

   4.1.2. Generator Operators

   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan

   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan
5. **Effective Date:** See the Implementation Plan for EOP-005-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for ~~system~~ System restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually- ~~-~~agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring ~~authority~~ operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator ~~at least once each 15 calendar months~~annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has ~~at least once each 15 calendar months~~annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes ~~is confusing~~has been seen as confusing to some Responsible Entities. Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.

~~Therefore, the EOP SDT revisions now provide clarity. By revising this to read as "that would change the ability to implement its restoration planto reflect System modifications that would change the ability to implement its restoration plan," the intent iswas that the TOP update its restoration plan when major modifications need to be made that affect its ability to implement its restoration plan as describe in Requirement R1 Parts 4.1 and 4.2, not that the Transmission Operator has to make updates for minor revisions, such as element number changes or device changes that have no significance to the implementation of the plan.~~ The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R4. Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement ~~of~~ its restoration plan ~~to reflect System modifications that would change the ability to implement its restoration plan~~, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. ~~No more than~~Within 90 calendar days after identifying ~~the Transmission Operator identifies~~ any unplanned permanent ~~System~~ BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006~~No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications~~.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response ~~for each step of the restoration~~. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 ~~would allow~~ allows operating personnel to gain experience on all stages of restoration~~and coordination needed through all of the stages of restoration~~, including coordination needed ~~in the transfer~~transferring ~~of~~ Demand and resource balance~~control~~ operations back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

R8. Each Transmission Operator shall include within its operations training program, annual System restoration training ~~at least once each 15 calendar months~~ for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority. ~~for Area Control Error and Automatic Generation Control.~~

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every ~~two calendar years~~24 calendar months to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as ~~e-mails with~~dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every ~~two~~ 24 calendar ~~years~~ months to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence~~, such as dated training records,~~ that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. ~~Compliance Monitoring Period and Reset Time Frame~~Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in ~~force~~ effect since the last monitoring activity for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.

- The current restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity, as well as one previous monitoring activity period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in ~~force~~ effect since its last monitoring activity for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in ~~force~~ effect since its last monitoring activity on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last monitoring activity for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last monitoring activity records and all requested and submitted subsequent monitoring activity records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~**1.3. Compliance Monitoring and Enforcement Processes**~~

- ~~Compliance Audits~~
- ~~Self-Certifications~~
- ~~Spot Checking~~
- ~~Compliance Violation Investigations~~
- ~~Self-Reporting~~
- ~~Complaints~~

~~As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.~~

~~1.4. Additional Compliance Information~~

~~None.~~

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1. Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/25/2016 – 12/08/2016
10-day final ballot	12/27/2016 – 01/10/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Reliability Coordinators
5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall approve or disapprove, with stated reasons, the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator; and

7.2. Re-establishing the Interconnection

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.

- The current, approved restoration plan and any restoration plans in effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts 91 or more calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.
R5.	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt. OR	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 60 calendar days of receipt. OR	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 90 calendar days of receipt. OR	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators for more than 90 calendar days of receipt. OR The Reliability Coordinator failed to notify the Transmission Operator of its

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	Nov. 1, 2006	Adopted by Board of Trustees	Revised
2		Revisions pursuant to Project 2006-03	Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-006-2 (approval effective 5/23/11)	
2	July 1, 2013	Updated VRFs and VSLs based on June 24, 2013 approval.	

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon Board adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
~~45-day formal comment period with ballot~~	~~06/22/2016 – 08/08/2016~~
45-day formal comment period with additional ballot	~~08~~10/~~30~~25/2016 – ~~10~~12/~~14~~08/2016
10-day final ballot	~~11~~12/~~01~~27/2016 – ~~11~~01/~~11~~10/~~2016~~2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinators
5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop~~, maintain,~~ and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with ~~adjacent~~ Transmission Operators in other Reliability Coordinator Areas, and with ~~adjacent~~ Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within ~~15~~ 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within ~~15~~ 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within ~~30 calendar days in accordance with Requirement R4~~the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall approve or disapprove, with stated reasons, the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, ~~at least once each 15 calendar months~~annual~~,~~ System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator; and

7.2. Re-establishing the Interconnection

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months~~two calendar years~~.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. ~~Compliance Monitoring Period and Reset Time Frame~~ Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in ~~force~~ effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in ~~force~~ effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.

- The current, approved restoration plan and any restoration plans in ~~force~~ effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement ~~Processes~~ Program

- ~~Compliance Audits~~
- ~~Self-Certifications~~
- ~~Spot Checking~~
- ~~Compliance Violation Investigations~~
- ~~Self-Reporting~~
- ~~Complaints~~

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~**1.4. Additional Compliance Information:** None~~

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within ~~15~~ 13 calendar months of the last review.

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R4.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts 91 or more calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.
R5.	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt. Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon ~~BOT~~ Board adoption, the text from the rationale text boxes was moved to this section.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standard(s)

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirement(s)

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standard(s)

None.

Applicable Entities

EOP-005 — System Restoration from Blackstart Resources

- Transmission Operator
- Generator Operator
- Transmission Owners identified in the Transmission Operators restoration plan
- Distribution Providers identified in the Transmission Operators restoration plan

EOP-006 — System Restoration Coordination

- Reliability Coordinator

EOP-008 — Loss of Control Center Functionality

- Reliability Coordinator
- Transmission Operator
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing an outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3 Requirement R1,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		EOP-005-2 Requirement R7, is redundant to EOP-005-3 Requirement R1.
EOP-005-2, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.	EOP-005-3, Requirement R3 R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.	The EOP SDT revisions harmonize the use of "BES modification" and clarify the timing for unplanned permanent and planned permanent BES modifications.
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	every five years" to eliminate any ambiguity in the prior language.
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training	The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value. Requirement R8, Part 8.5 was added to Requirement R8 to address findings from

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	annually for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority.	the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. Federal Energy Regulatory Commission (Commission) Order no. 749:

shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	*Factor = Medium] [Time Horizon = Operations Planning]*	

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.

evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.	evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.	with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. ~~The EOP SDT removed the language: "*…to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System*" in Requirement R1, as it is covered in Requirement R1, Part 1.8.~~ Due to the addition of the word "implement," the phrase, "Real-time

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3~~,~~ Requirement R1, EOP-005-2~~,~~ Requirement R7, is redundant to EOP-005-3~~,~~ Requirement R1.
EOP-005-2, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R3 R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator ~~at least once each 15 calendar months~~annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	~~The language, "…at least once each 15 calendar months…" was added to provide clarity.~~

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.		Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall update and submit its revised restoration plan to ~~to~~ its Reliability Coordinator for approval, ~~that~~when the revision would change ~~the~~its ability to implement its restoration plan, as follows~~Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. ~~This language creates two ambiguities. First, the phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes; however, no time frame is specified for~~

Standard: EOP-005-3		
Requirement in Approved Standard	Translation to New Standard or Other Action	Description and Change Justification
		~~updating the restoration plan for a planned BES modification. One could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications.~~ ~~Second, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes is confusing. Some "system modifications" can include "BES modifications". Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.~~ ~~For clarity, the EOP SDT revise the language in this Requirement to require a TOP to update its restoration plan to only reflect System modifications that affect its ability to implement its restoration plan as describe in Requirement R1 Parts. The intent is not to capture minor modifications that would have no impact on the implementation of a restoration, such as element number changes or device changes~~

Standard: EOP-005-3		
Requirement in Approved Standard	Translation to New Standard or Other Action	Description and Change Justification
		~~that have no significance to the implementation of the plan.~~ The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within ~~No more than~~ 90 calendar days after identifying ~~the Transmission Operator identifies~~ any unplanned permanent ~~System~~ BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements ~~in order to meet~~	The EOP SDT revisions harmonize the use of "BES modification" and clarify the timing for unplanned permanent and planned permanent BES modifications.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
	~~the Reliability Coordinator approval requirement~~ per EOP-006~~No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications~~.	
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation*	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation*	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once every five years" to eliminate any ambiguity in the prior language.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Risk Factor = Medium] [Time Horizon = Long-term Planning]	*Risk Factor = Medium] [Time Horizon = Long-term Planning]*	
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following:	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training ~~at least once each 15 calendar months~~annually for its System Operators. This training program shall include training on the	~~The language, "…at least once each 15 calendar months…" was added to provide clarity and to align training with the timing for updates to the restoration plan.~~ The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
[Violation Risk Factor = Medium] [Time Horizon = Operations Planning] **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority. ~~for Area Control Error and Automatic Generation Control.~~	Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards.

EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing "data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Unofficial Comment Form

Project 2015-08 – Emergency Operations

Do not use this form for submitting comments. Use the electronic form to submit comments on **Project 2015-08 Emergency Operations; EOP-005-3 – System Restoration from Blackstart Resources** and **EOP-006-3 – System Restoration Coordination**. The electronic form must be submitted by **8 p.m. Eastern, Friday, December 9, 2016.**

Additional information is available on the project page. If you have questions, contact Standards Developer, Laura Anderson (via email), or at (404) 446-9671.

Background Information

Project 2015-08 Emergency Operations (EOP) implements the recommendations of the Project 2015-02 Periodic Review Team (PRT) that resulted from the PRT's review of a subset of EOP Standards. The Periodic Review comprehensively reviewed EOP-004, EOP-005, EOP-006 and EOP-008 to evaluate, for example, whether the requirements are clear and unambiguous.

The Periodic Review also included background information, along with associated worksheets and reference documents, to guide a comprehensive review that resulted in a Standard Authorization Request (SAR) based on the following PRT's recommendations:

- EOP-004-2 – (1) Revise the standard and attachment and (2) retire Requirement R3;
- EOP-005-2 – Revise the standard;
- EOP-006-2 –Revise the standard; and
- EOP-008-1 – Revise the standard.

The four NERC Reliability Standards in the Periodic Review project concerned methodologies for restoring, reporting, and communicating Emergencies. Implementation of revisions and retirements recommended by the EOP PRT clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards, while making the standards more Results-based.

Questions

1. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-005-2, Requirement R4 and parts? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

2. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-005-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

3. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

4. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-006-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

   ☐ Yes
   ☐ No

   Comments:

5. Please provide any additional comments for the EOP SDT to consider, if desired.

   Comments:

Consideration of Issues and Directives

Project 2015-08 Emergency Operations

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*	FERC Order Number 749	The Project 2015-02 Emergency Operations Periodic Review Team (EOP PRT), as well as the Project 2015-08 Emergency Operations Standards Drafting Team (EOP SDT) determined (through conducted outreach and comment questions/responses during postings of periodic review templates, the project SAR, and project postings) that industry does not find ambiguity with the term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the Transmission Operator (TOP), Transmission Owner (TO), and the Distribution Provider (DP). A rationale box was added to EOP-005-3, Rquirement R9 to clarify "unique tasks." **Rationale:** The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.
Clarify when system changes will trigger a requirement to update restoration plans. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for updating restoration	FERC-NERC-Regional Entity Joint Review of Restoration	The Project 2015-08 EOP SDT revised EOP-005-3, Requirement R4 and the requirement parts. The references to unplanned permanent and planned permanent BES modifications that will change the ability to implement the Reliability Coordinator (RC)-approved restoration plan are intended to require a TOP to

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
plans for all system modifications that would change the implementation of an entity's restoration plan for an extended period of time, not just permanent or planned system modifications. In considering these measures, the kinds of events that may warrant an update to the system restoration plan should be identified, taking into account the length of time the system is affected, as well as the overall objective of ensuring that restoration plans are generally flexible enough so that system modifications can be addressed without continuous updates.	and Recovery Plans. **Section IV.E**	update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RC's ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.
Verification/testing of modified restoration plan. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably, i.e., when needed to ensure that the restoration plan, when implemented, allows for restoration of the system within acceptable operating voltage and frequency limits.6 In considering such measures, the types of system changes that could impact reliable implementation of the restoration plan should be taken into account (e.g., identification of a new	FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans. **Section IV.G**	The EOP SDT discussed the recommendation to address the "…need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably…" The TOP performs detailed testing at least every five years to ensure that its restoration plan accomplishes its intended function (EOP-005, Requirement R6). In addition, the TOP 1) has to annually review its restoration plan and submit it to its RC for approval, 2) when there are revisions that would change the TOP's ability to implement its restoration plan, these also have to be submitted to the RC for review, 3) include within its operations training program annual System restoration training

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
blackstart generator location or on redefinition of a cranking path).		for its System Operators, and 4) participate in RC restoration drills, exercises or simulations (EOP-005, Requirements R3, R4, R8, and R10). The RC 1) has to review its restoration plan within 13 calendar months of the last review, 2) has to review its neighboring RC's restoration plans and provide notice of any conflicts discovered, 3) has to review and approve/disapprove its TOP's restoration plans, 4) provide annual System Restoration training for its System Operators, and 5) conduct two System Restoration drills, exercises or simulations per calendar year (EOP-006, Requirements R3, R4, R5, R7, and R8). The recommendation pointed to system changes that could impact the viability of the plan. When the RC reviews the TOP restoration plan for annual approval/disapproval, the RC is the only entity that has the wide-area view of the entire System, and the RC is the only entity that can effectively complete this approval. The EOP SDT believes that since the TOP and RC have to meet multiple requirements, that both entities are continually reviewing and testing the viability of their restoration plans; and, therefore, no changes were made in EOP-005 based on the recommendation.
Operator training: Exercises on transferring control back to the balancing authority. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to	FERC-NERC-Regional Entity Joint Review of	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised in EOP-005-3, Requirement R1, Part 1.9 to the standard: "Processes for

address system restoration training and drilling for transitioning from transmission operator island control to balancing authority ACE/AGC7 control.	Restoration and Recovery Plans. **Section IV.H.**	transferring operations ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three of the ~~r~~requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirement” with “requirement part” and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing “implementation date” to “effective date” requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective” and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to update and submit its revised restoration plan to the Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator updated and submitted its revised restoration plan to the Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator updated and submitted its revised restoration plan to the Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification.	The Transmission Operator has failed to update and submit its revised restoration plan to the Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. OR The Transmission Operator failed to update and submit its revised restoration plan to the Reliability Coordinator prior to a planned permanent BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7

Lower	**Moderate**	**High**	**Severe**
The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.

VSL Justifications for EOP-005-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
NERC VRF Discussion	R9 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R9 requires the Transmission Operator, applicable Transmission Owners, and applicable Distribution Providers to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. This is a revised requirement (EOP-005-2, Requirement R11) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R9 contains only one objective, which is to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. Since the requirement has only one objective, only one VRF was assigned.

The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 within a 24-calendar-month period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a 24-calendar-month period.

VSL Justifications for EOP-005-3, R9	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R9 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R9	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R10	
Proposed VRF	**Medium**
NERC VRF Discussion	R10 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R10 requires the Transmission Operator to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R12) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R10 contains only one objective, which is to participate in restoration drills. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R10

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
NERC VRF Discussion	R11 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R11 requires each Transmission Operator and each Generator Operator with a Blackstart Resource to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for Blackstart Resource Agreements. This is an unrevised requirement (EOP-005-2, Requirement R13) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
	R11 contains only one objective, which is to have written Blackstart Resource Agreements. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R11			
Lower	**Moderate**	**High**	**Severe**
N/A	The Transmission Operator and Generator Operator with a Blackstart Resource do not reference Blackstart Resource Testing requirements in their written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols.	N/A	The Transmission Operator and Generator Operator with a Blackstart resource do not have a written Blackstart Resource Agreement or mutually-agreed upon procedure or protocol.

VSL Justifications for EOP-005-3, R11	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R11 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R11	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R12	
Proposed VRF	**Medium**
NERC VRF Discussion	R12 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R12 requires each Generator Operator with a Blackstart Resource to have documented procedures for starting each Blackstart Resource and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for documented procedures for starting each Blackstart Resource and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R14) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have documented procedures for starting each Blackstart Resource and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R12 contains only one objective, which is to have to have documented procedures for starting each Blackstart Resource and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R12			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator does not have documented starting and bus energizing procedures for each Blackstart Resource.

VSL Justifications for EOP-005-3, R12	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R12 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R12	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R13	
Proposed VRF	**Medium**
NERC VRF Discussion	R13 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R13 requires each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R15) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R13	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R13 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R13			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 24 hours but did make the notification within 48 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 48 hours but did make the notification within 72 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 72 hours but did make the notification within 96 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan for more than 96 hours.

VSL Justifications for EOP-005-3, R13	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R13 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R13	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
NERC VRF Discussion	R14 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R14 requires each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. This is an unrevised requirement (EOP-005-2, Requirement R16) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
	R14 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R14			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.

VSL Justifications for EOP-005-3, R14	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R14 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R14	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
NERC VRF Discussion	R15 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R15 requires each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R17) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
	R15 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R15			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a 24-calendar-month period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a 24-calendar-month period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a 24-calendar-month period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a 24-calendar-month period.

VSL Justifications for EOP-005-3, R15	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R15 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R15	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
NERC VRF Discussion	R16 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R16 requires each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R18) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
	R16 contains only one objective, which is to have to have each Generator Operator participate in the Reliability Coordinator's restoration drills, exercises, or simulations. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R16			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	High
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three of the ~~r~~requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.~~it.~~

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing “implementation date” to “effective date” requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~ effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective” and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to update and submit its revised restoration plan to the Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification~~change~~. ~~OR~~ ~~The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 30 calendar days prior to a planned change.~~	The Transmission Operator updated and submitted its revised restoration plan to the Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification~~change~~. ~~OR~~ ~~The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 20 calendar days prior to a planned change.~~	The Transmission Operator updated and submitted its revised restoration plan to the Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification~~change~~. ~~OR~~ ~~The Transmission Operator failed to update and submit its restoration plan to the Reliability Coordinator at least 10 calendar days prior to a planned change.~~	The Transmission Operator has failed to update and submit its revised restoration plan to the Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification~~change~~. OR The Transmission Operator failed to update and submit its revised restoration plan to the Reliability Coordinator prior to a planned permanent BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address one or more of the requirement parts of Requirement R7.

VSL Justifications for EOP-005-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Transmission Operator to include within its operations training program System restoration training. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding System restoration training. Only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to be included within its operations training program. This is a revised requirement (EOP-005-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program System restoration training would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective, which is to include within its operations training program System restoration training. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R8			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.

VSL Justifications for EOP-005-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
NERC VRF Discussion	R9 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R9 requires the Transmission Operator, applicable Transmission Owners, and applicable Distribution Providers to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. This is a revised requirement (EOP-005-2, Requirement R11) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R9 contains only one objective, which is to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R9			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train 5% or less of the personnel required by Requirement R9 within a 24-calendar-month~~two-calendar-year~~ period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 5% and up to 10% of the personnel required by Requirement R9 within a 24-calendar-month~~two-calendar-year~~ period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 within a 24-calendar-month~~two-calendar-year~~ period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a 24-calendar-month~~two-calendar-year~~ period.

VSL Justifications for EOP-005-3, R9	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R9 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R9	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R10	
Proposed VRF	**Medium**
NERC VRF Discussion	R10 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R10 requires the Transmission Operator to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R12) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R10 contains only one objective, which is to participate in restoration drills. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R10			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator has failed to comply with a request for its participation from the Reliability Coordinator.

VSL Justifications for EOP-005-3, R10	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "their" with "its." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R10 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
NERC VRF Discussion	R11 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R11 requires each Transmission Operator and each Generator Operator with a Blackstart Resource to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for Blackstart Resource Agreements. This is an unrevised requirement (EOP-005-2, Requirement R13) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols that specify the terms and conditions of their agreement would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R11	
Proposed VRF	**Medium**
	R11 contains only one objective, which is to have written Blackstart Resource Agreements. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R11			
Lower	**Moderate**	**High**	**Severe**
N/A	The Transmission Operator and Generator Operator with a Blackstart Resource do not reference Blackstart Resource Testing requirements in their written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols.	N/A	The Transmission Operator and Generator Operator with a Blackstart resource do not have a written Blackstart Resource Agreement or mutually-agreed upon procedure or protocol.

VSL Justifications for EOP-005-3, R11	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R11 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R16 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R16	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “High” which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts over 91 calendar days calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.

VSL Justifications for EOP-006-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Reliability Coordinator to review the restoration plans of Transmission operators within its reliability Coordinator Area. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a review the restoration plans of Transmission operators within its reliability Coordinator Area. This is an unrevised requirement (EOP-006-2, Requirement R5) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
	R5 contains only one objective which is to review the review the restoration plans of Transmission operators within its reliability Coordinator Area. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R5

VSL Justifications for EOP-006-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R6	
Proposed VRF	**Lower**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Reliability Coordinator to have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having copies of the latest restoration plans. This is a slightly revised requirement (EOP-006-2, Requirement R6) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have copies of the latest restoration plans would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective which is to have copies of the latest restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator did not have a copy of the latest approved restoration plan of all Transmission Operators in its Reliability Coordinator Area within its primary and backup control rooms prior to the implementation date.	The Reliability Coordinator did not have a copy of its latest restoration plan within its primary and backup control rooms prior to the implementation date.

VSL Justifications for EOP-006-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "implementation date" with "effective date." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the annual System restoration training within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the annual System restoration training within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "annual" with "at least once each 15 calendar months" and by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
	electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective which is to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R8			
Lower	**Moderate**	**High**	**Severe**
N/A	The Reliability Coordinator only held one restoration drill, exercise, or simulation during the calendar year.	N/A	The Reliability Coordinator did not hold a restoration drill, exercise, or simulation during the calendar year.

VSL Justifications for EOP-006-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement
A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report
FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	High
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	Moderate	High	Severe
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts over 91 calendar days calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.

VSL Justifications for EOP-006-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Reliability Coordinator to review the restoration plans of Transmission operators within its reliability Coordinator Area. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a review the restoration plans of Transmission operators within its reliability Coordinator Area. This is an unrevised requirement (EOP-006-2, Requirement R5) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
	R5 contains only one objective which is to review the review the restoration plans of Transmission operators within its reliability Coordinator Area. Since the requirement has only one objective, only one VRF was assigned.

OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators for more than 90 calendar days of receipt. OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons for disapproval for more than 90 calendar days of receipt.

notify the Transmission Operator of its approval or disapproval with reasons within 45 calendar days of receipt.	notify the Transmission Operator of its approval or disapproval with reasons within 60 calendar days of receipt	for disapproval within 30 calendar days of receipt but did notify the Transmission Operator of its approval or disapproval with reasons within 90 calendar days of receipt.	

VSL Justifications for EOP-006-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R6	
Proposed VRF	**Lower**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Reliability Coordinator to have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having copies of the latest restoration plans. This is a slightly revised requirement (EOP-006-2, Requirement R6) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have copies of the latest restoration plans would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective which is to have copies of the latest restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator did not have a copy of the latest approved restoration plan of all Transmission Operators in its Reliability Coordinator Area within its primary and backup control rooms prior to the implementation date.	The Reliability Coordinator did not have a copy of its latest restoration plan within its primary and backup control rooms prior to the implementation date.

VSL Justifications for EOP-006-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “implementation date” with “effective date.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the annual System restoration training ~~at least once each 15 calendar months~~ within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the annual System restoration training ~~at least once each 15 calendar months~~ within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “annual” with “at least once each 15 calendar months” and by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
	electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective which is to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R8			
Lower	**Moderate**	**High**	**Severe**
~~The Reliability Coordinator only held one restoration drill, exercise, or simulation during the calendar year.~~N/A	The Reliability Coordinator only held one restoration drill, exercise, or simulation during the calendar year.~~The Reliability Coordinator did not request each applicable Transmission Operator or Generator Operator identified in its restoration plan to participate in a drill, exercise, or simulation within two calendar years.~~	N/A	The Reliability Coordinator did not hold a restoration drill, exercise, or simulation during the calendar year.

VSL Justifications for EOP-006-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Standards Announcement

Reminder

Project 2015-08 Emergency Operations
EOP-005-3 and EOP-006-3

Additional Ballots and Non-binding Polls Open through December 9, 2016

Now Available

Additional ballots for **EOP-005-3 - System Restoration from Blackstart Resources** and **EOP-006-3 - System Restoration Coordination** and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels are open through **8 p.m. Eastern, Friday, December 9, 2016**.

The standard drafting team's considerations of the responses received from the last comment period are reflected in these drafts of the standards.

Balloting

Members of the ballot pools associated with this project may log in and submit their vote for the standards and non-binding polls by clicking here. If you experience any difficulties in using the electronic form, contact Nasheema Santos.

Note: If a member cast a vote in the previous ballot, that vote will not carry over to this additional ballot. It is the responsibility of the registered voter in the ballot pool to cast a vote again in this ballot. To ensure a quorum is reached, if you do not want to vote affirmative or negative, cast an abstention.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

The ballot results will be announced and posted on the project page. The drafting team will review all responses received during the comment period and determine the next steps of the project.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standards Announcement

Project 2015-08 Emergency Operations
EOP-005-3 and EOP-006-3

Formal Comment Period Open through December 9, 2016

Now Available

A 45-day formal comment period for **EOP-005-3 - System Restoration from Blackstart Resource** and **EOP-006-3 - System Restoration Coordination** is open through **8 p.m. Eastern, Friday, December 9, 2016.**

The standard drafting team's considerations of the responses received from the last comment period are reflected in these drafts of the standards.

Commenting

Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps

Additional ballots for the standards and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels will be conducted November 30 – December 9, 2016.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Development, Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standards Announcement

Project 2015-08 Emergency Operations
EOP-005-3 and EOP-006-3

Formal Comment Period Open through December 9, 2016

Now Available

A 45-day formal comment period for **EOP-005-3 - System Restoration from Blackstart Resource** and **EOP-006-3 - System Restoration Coordination** is open through **8 p.m. Eastern, Friday, December 9, 2016.**

The standard drafting team's considerations of the responses received from the last comment period are reflected in these drafts of the standards.

Commenting

Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 8 p.m. Eastern).

Next Steps

Additional ballots for the standards and non-binding polls of the associated Violation Risk Factors and Violation Severity Levels will be conducted November 30 – December 9, 2016.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Development, Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Comment Report

Project Name:	2015-08 Emergency Operations | EOP-005-3 and EOP-006-3
Comment Period Start Date:	10/26/2016
Comment Period End Date:	12/9/2016
Associated Ballots:	2015-08 Emergency Operations | EOP-005-3, EOP-006-3, EOP-008-2 EOP-005-3 AB 2 ST 2015-08 Emergency Operations | EOP-005-3, EOP-006-3, EOP-008-2 EOP-005-3 NBP AB 2 NB 2015-08 Emergency Operations | EOP-005-3, EOP-006-3, EOP-008-2 EOP-006-3 AB 2 ST 2015-08 Emergency Operations | EOP-005-3, EOP-006-3, EOP-008-2 EOP-006-3 NBP AB 2 NB

There were 53 sets of responses, including comments from approximately 44 different people from approximately 41 companies representing 9 of the Industry Segments as shown in the table on the following pages.

Questions

1. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-005-2, Requirement R4 and parts? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

2. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-005-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

3. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

4. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-006-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

5. Please provide any additional comments for the EOP SDT to consider, if desired.

The revisions as posted to R4 create redundant language. SRP recommends removal of the language requiring the TOP to “update” from R4. Additionally, It is also unclear how significant of a change “would change [the TOP’s] ability to implement its restoration plan”. This could work for many entities allowing administrative changes to the restoration plan without requiring RC approval. However, this language creates a potential for issues with R1, R2, and R5 which all reference an “approved restoration plan”.

While AEP supports the overall direction and efforts of this project team, and believe that the latest draft is an improvement to the previous version, we have chosen once again to vote negative on EOP -005-3. The text “upd to the RC where the modification would substantively change the TOP’s ability to implement the restoration plan or impact the RC’s ability to monitor and direct restoration efforts” is only included in the callout, and is not in any way included within the obligation itself. In addition, what might be considered a substanitive change could be very subjective. As a result, there is a risk of inconsistent interpretation of the obligation by Responsible Entities and Auditors alike. At the very least, verbiage within the callout should be moved, at least in part, to the obligations themselves. In addition, it may be beneficial to also provide some clarity as to what a substantive change *is* to supplement the examples already provided for what it *is not*. For example, additional scenarios could be given related to changes that increase restoration time significantly or change the primary cranking path. These examples of what would and would-not be sustanitive changes could be provided in a Guidelines and Techical Basis section

Part 4.2 of the proposed standard is still unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that. The proposed wording on part 4.2 is not clear what the intent is. R4 requires a Transmission Operator to "update and submit" its revised restoration plan for approval subject to parts 4.1 and 4.2. The phrase "subject to the Reliability Coordinator approval requirements per EOP-006" doesn't make sense when the requirement and part 4.2 are read in total.

The proposed language of R4 is unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that.	

The NSRF suggests changing R4 to read: “Each Transmission Operator, who identifies a change in its restoration plan that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts, shall, within 90 days, revise and submit its restoration plan to its Reliability Coordinator for approval.” Subrequirements, 4.1 and 4.2 can be deleted.

R4.2 refers to another standard, EOP-006. Requirements should refrain from referring to another standard and should stand on its own. The language, “prior to implemnenting a planned permanent BES modification” is ambigiuous.

The proposed language of R4 is unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that.

LES suggests modifing R4 as follows:

R4: “Each Transmission Operator, who identifies a change in its restoration plan that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts, shall, revise and submit its restoration plan to its Reliability Coordinator for approval.”

R4.1 “Within 90 calendar days after identifying any unplanned permanent BES modifications.

R4.2 “At least 30 days prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.” (EOP-006 just states that the RC shall determine whether the TOP’s restoration plan is coordinated with and compatible with other TOPs’ restoration plans within its RC Area. At least 30 days prior to will allow the RC the 30 days it is allowed for approval before the planned modification is energized.

The rationale box expresses that Unplanned System Modifications could include Natural Disasters or major equipment failures.... and then suggests that outages are not unplanned system modifications; however most natural disasters and equipment failures results in outages. This does not clarify the intent of Unplanned System Modifications

Comment	

As written the language causes confusion regarding the TOP's ability to implement changes to its restoration; language implies that a revised plan would change the entitiy's ability to implement that revised plan. To remedy this it is suggested that the SDT consider making changes to the effect as follows:

R4. *Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its the currently approved RC restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. *Within 90 calendar days after identifying any unplanned permanent BES modifications.*

4.2. *Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.*

In addition, the implementation period for the revised restoration plan's approval creates a compliance time gap that could result with potentially different interpretations between auditors, entities, and the RC. During the timeframe of RC reviewing and approving an entity's revised restoration plan, it would be helpful to identify a defined period that allows implementation of an entity's revised plan that provides implementation of the "unapproved" plan to be valid through the end of the RC approval process.

Comment

We believe the wording of the requirement could be improved to better reflect the apparent intent. The words "revised" and "revision" are used in different contexts in the same sentence which causes confusion. Also, system modifications may not be the only reason to update the plan. We suggest the wording be modified to something along the lines of:

R4. Each TOP shall update and resubmit its restoration plan to its RC for review and approval, when a System modification or other change has or will occur which invalidates or makes the approved plan unable to be implemented. Such updates shall be made as follows: 4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications. 4.2 Prior to implementing a planned permanent BES modification or procedural change subject to the RC approval requirements per EOP-006.

Comment	
The EOP-005's purpose is to "[e]nsure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Similarly, EOP-006's purpose is to "[e]nsure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Simply put, the EOP Standards at issue in this project exist to ensure that personnel have clear, effective understanding of the System restoration process, that understanding is shared between TOPs and RCs through coordination and situational awareness, and priority is placed on such efforts. This is a critical reliability task. In light of this importance of these Standards to restoring grid operations, Texas RE continues to be concerned that the proposed changes to these Standards could result in confusion in implementing restoration plans, undermining their stated goals. Simply put, the proposed Standards, as currently drafted, presents a real risk that TOPs and RCs will not have single, clear restoration plans that both entities fully understand during the restoration process and will, therefore, not be able to effectively coordinate restoration efforts. This constitutes a significant reliability issue that the SDT must address in this process.	

Texas RE has identified two significant areas in the proposed EOP-005 Standard in particular that could result in confusion in the ultimate implementation of restoration plans.

First, as Texas RE noted previously, the SDT proposes to require TOPs to update and submit revised restoration plans to their RCs when there is modification “that would change the ability to implement” the restoration plan (EOP-005-3, Requirement R4). Although, Texas RE does not necessarily object to the SDT’s stated intent to require formal updates requiring RC approval solely for material changes, the requirement to update a plan and obtain such an approval should not hinge upon the entity’s perception of its corresponding “ability” to implement the plan. That is to say, a material modification to the restoration plan should require submission of an updated plan regardless of whether the TOP believes the modification will or will not affect its ability to actually implement the existing restoration plan. This is particularly critical because EOP-005-3, Requirement R4 also serves the reliability goal of ensuring RCs have awareness regarding the steps TOPs will take in the restoration process. As such, even if a TOP believes it can still implement its current plan, providing information regarding modifications to the restoration plan still serves the reliability goal of enhancing RC situations awareness.

In addition, Texas RE is concerned that Requirement R4 does not capture the fact that both planned and unplanned permanent BES modifications are subject to RC approval requirements per EOP-006. Texas RE recommends changing the R4 parent requirement to: "Each TOP shall update and submit its revised restoration to its Reliability Coordinator for approval in accordance with EOP-006.” This would indicate EOP-006 approval requirements apply to both 4.1 and 4.2.

If the SDT wishes to capture a materiality threshold for required updates and submissions, Texas RE recommends the SDT focus on the materiality of the change itself. Accordingly, the SDT could revise the proposed Requirement R4 language to simply require submission of an update “to reflect system modifications that would materially change the implementation of its restoration plan.” Texas RE further recommends that the SDT include language requiring summaries of non-material revisions to the plan be at least provided to the RC through a streamlined information sharing process. As such, the SDT should also include language in R3 along the following lines: “Each Transmission Operator shall submit summaries of any immaterial revisions to its restoration plan to its Reliability Coordinator within 45 days of such immaterial changes. For such immaterial changes, no approval by the Reliability Coordinator shall be necessary.” Such language will facilitate effective communication between the TOP and the RC, which is critical to ultimately ensure personnel are prepared to enable System restoration and reliability is maintained throughout the process, while retaining a more streamlined approach for smaller changes.

Second, Texas RE remains concerned EOP-005 has no requirement for TOPs to correct plans not approved by the RC. There appears to be issues if an RC does not approve the plan within 30 calendar days of planned System modifications (or 90 days for unplanned). The modifications may be complete but the plan that includes the modifications may not be approved so an old copy (that cannot be utilized) will be in the Control Centers of a TOP. Texas RE recommends adding language regarding correcting unapproved plans as well as what a TOP is to do if an RC is late with its approval.

The purpose of EOP-005 is to have a clear, understood restoration process. While Texas RE appreciates the SDT’s efforts, the SDT should address areas in which the proposed Standard could result in overlapping, conflicting, or multiple versions of restoration plans.

We suggest changing the proposed R4 from:

R4 Each TOP shall update and submit its revised restoration plan to its RC for approval when the revision would change its ability to implement its restoration plan as follows:

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification subject to the RC approval requirements per EOP-006

First of all, the revision doesn't affect your ability to implement the Restoration Plan, it is the Plan. We think what the SDT really means here is you have experienced some change that impacts your ability to implement the approved Plan, and therefore you have to make a revision.

Second, as written, this only addresses a change that you would make due to a BES modification. What if the revision is due to a procedural/organizational change?

We think a better wording would be something like:

R4. Each TOP shall update and resubmit its restoration plan to its RC for review and approval, when a System modification or other change has or will occur which invalidates or makes the approved plan unable to be implemented. Such updates shall be made as follows:

4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2 Prior to implementing a planned permanent BES modification or procedural change subject to the RC approval requirements per EOP-006.

Comment	

(1) We thank the SDT for attempting to develop a requirement that would apply to TOPs, but only after the identification of a substantive change that impacts the TOP's ability to implement its restoration plan or impact the RC's ability to monitor and direct restoration efforts.

(2) We find the proposed Requirement R4 is confusing regarding when a TOP is required to revise its system restoration plan, particularly since a revision appears to be tied solely to a BES modification. This could be a significant burden for entities to track. We believe the requirement should clarify upfront its application to a selective set of TOPs, and only under certain conditions identified by the SDT. We propose the following language

instead, “Each Transmission Operator, who identifies a change in its restoration plan that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts, shall revise and submit its restoration plan to its Reliability Coordinator for approval.” (3) We have concerns with the SDT’s proposal for Part 4.2, particularly to a general reference to the EOP-006 System Restoration Coordination Standard, and not a specific revision to the standard. We feel this standard could easily become unbundled or change in the future. (4) Moreover, could the RC or other NERC functional entities have an opportunity to influence a planned permanent BES modification other than through the System Restoration Coordination Standard, such as with a retirement of a large generator or introduction of a RAS? (5) Furthermore, we ask the SDT to clarify the exact moment just “prior to implementing a planned permanent BES modification.” Is it just before the modification is permanently and electrically connected or disconnected from the System, or during its construction phase when the availability of other existing Facilities are affected? (6) Likewise, the SDT has assumed that a TOP will revise its restoration plan only under anticipated BES modifications. We believe other reasons could exist, such as for information or operational technology infrastructure modifications or organizational restructuring, which could impact its ability to implement its plan. Hence, we proposed the following language for Part 4.2 instead, “Within 90 calendar days of identifying a change that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts.”

Preston Walker - PJM Interconnection, L.L.C. - 2 - SERC,RF	
Answer	Yes
Document Name	
Comment	
PJM’s concern with Requirement R6 as written is that it can and has been interpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation may result in thousands of simulations having to be performed and is beyond the intention of the original EOP-005 drafting team. To eliminate any unintentional misinterpretation of this standard (e.g. to make it clear that full steady state and dynamic simulation of the entire Restoration Plan is not required) and to ensure that the right studies and testing are performed to ensure a reliable plan without overly burdening staff, PJM recommends the inclusion of the following language to the requirement: “R6 Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify”

Although the Rationale for Requirement R4 explains the qualification criteria for a BES modification, when the Rationale section is removed from the EOP-005-3 standard, Reclamation respectfully suggests a footnote be added to R4.4.1 to clarify a BES modification.

2. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language “at least once each 15 calendar months” back to “annual” or “annually,” as drafted in EOP-005-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Shannon Mickens - Southwest Power Pool, Inc. (RTO) - 2 - SPP RE, Group Name SPP Standards Review Group

Answer	No
Document Name	

Comment

We believe there could be some obligation changes between EOP-005-3 and EOP-006-3 regarding the timing of review of restoration plans and submission to the RC. The proposed EOP-005-3 seems to dictate how long a TOP can take between reviews of its plan, but that review must be done according to a schedule agreed to with the RC (EOP-006-3 R5). It may be an improvement to move the timing requirements to the RC side of this obligation and add the ‘outer bounds’ of the review timing to the RC requirement. Then EOP-005-3 R3 could simply remove the word annually and refer only to the ‘agreed upon schedule’ with the RC. Also, the clear, unambiguous language regarding the 15 month outer bound on review, does not preclude an ‘annual’ review.

The proposed R5 of EOP-006-3 would read:

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area, on a mutually agreed, pre-determined schedule not to exceed 15 calendar months.

The proposed R3 of EOP-005-3 would read:

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator on a mutually-agreed, predetermined schedule.

Based on Operations Training programs, we support the change to “annual” in R8. There is no need to arbitrarily limit the length of time to 15 calendar months.

We disagree with the change in R9 and R15 of EOP-005-3 of requiring training within 24 calendar months rather than ‘every two years’. We feel two calendar years provides more flexibility to match up training schedules and equipment availability. We are not simply looking for more time, just looking for flexibility to match schedules.

Any corresponding changes to annual, 24 calendar months, or 15 calendar months need to be reflect in the VRF/VSL tables as well.

Rachel Coyne - Texas Reliability Entity, Inc. - 10

Answer	No
Document Name	

Comment

Texas RE supports retention of the 15 calendar month requirement and opposes the change back to “annual” or “annually.” Under the interpretation language cited by the SDT, this change would permit TOPs to delay the review and submit restoration plans for almost two calendar years. Again, EOP-005’s stated purpose is to “ensure plans, Facilities and personnel are prepared to enable System restoration.” Consistent with this principle, a clear 15-month requirement to review and submit restoration plans appears to advance the stated goal of ensuring preparedness to enable System restoration. At a minimum, Texas RE requests that the SDT provide a reliability-based reason for retaining the “annual” submission requirement as opposed to the previously proposed 15-month requirement.

If the language is changed to “annual”; “Annual” needs to be defined and included in the NERC Glossary of Terms.

Kerry LaCoste - U.S. Bureau of Reclamation - 1,5 - WECC

Answer	No
Document Name	

Comment

Reclamation is aware that some EROs believe that the term “annual” may be misinterpreted by Responsible Entites such that a Responsible Entity would allege compliance if the “annual” review took place once in 2015 and once in 2016, albeit January 2015 and December 2016, thereby resulting in potentially bi-annual reviews. Although the NERC CAN-0010, Revised 11-16-11, provided instructions to the Compliance Enforcement Authority on how to assess compliance when a standard requires an “annual” activity, Reclamation believes a more defined time frame in the Standard is beneficial to reduce a Registered Entity’s potential confusion and compliance violations. Therefore, Reclamation recommends the language “at least once ***every*** 15 calendar months” be retained.

Comment	

The standards are a minimum that must be met in order to be compliant. There is nothing in the standards saying an entity cannot do something, such as in this case a review, more often. The standard if left alone clearly states “at least once every 15 calendar months”, which can mean:

- the review can be completed on January 1, 2016 and then again on March 29, 2017;
- or it could mean once on January 1, 2016 and again on January 1, 2017;
- or on January 1, 2016 then again on February 1, 2016, then again on March 1, 2016, then etc. etc.

LES believes the entities that commented asking for the change back to “annual” are misunderstanding the intent of “at least once each 15 calendar months”. By changing the language to “annual” you are creating several issues:

- misinterpretation of the word “annual” as it is not a NERC Glossary Term
- reliance on a Compliance Application Notices (CANs) which are not industry approved or enforceable
- an unnecessary burden on entities as it tightens the timeline for reviews
- the term “annual” has been removed from multiple standards in favor of “at least once each 15 calendar months”

If the language is changed to “annual”; “Annual” needs to be defined and included in the NERC Glossary of Terms, however, this is in contradiction to other standards moving away from the term annual (i.e. CIP V5)

We appreciate the SDT’s efforts to move back to using annual references within the standard. We also applaud the SDT for not attempting to define the meaning of “annual” within this standard. Industry has adapted its processes to align with the current language, and we feel modifying such processes could cause confusion for both operations and compliance.

IPC agrees with changing the language back to "Annual/Annually". However, the term Annual should be defined or point to where it is defined. Is annual 11–13 months? Or is it calendar year? If it is calendar year, there is some concern around what happens if an operator is trained each year, but the time between training is well over 12 months. For example, training occurs in March of 2017 and then the next training is December of 2018. This would be 21 months apart, but training was completed each year.

Xcel Energy strongly agrees with the change back to “annual” (per our comments to the previous revision), but questions the change in R9 and R15 from “every two calendar years” to “every 24 calendar months”. We feel this is the same issue previously raised with the “annual” language and question why the SDT, in the same revision where they went back on the previous change to “annual”, would at the same time change this language to apply in a way that is not consistent with the “annual” requirements. Xcel Energy recommends reverting to “every two calendar years”.

1. LES believes R3 should be changed to "at least once every 15 calendar months" to match EOP-005. The RC timeline and the TOP timeline should not be different. 2. LES agrees with R7, however 'annual' could be better stated as "at least once each calendar year". LES believes all training should be done on an annual (calendar year basis). 3. LES believes every two calendar years is much easier to track than 24 calendar months, since that makes it rolling.

We disagree with the removal of the approved R8 that requires the RC to provide authorization before resynchronizing islands. We feel this is an important reliability concept that should not have been removed and should be reinstated in the drafts. By not specifically requiring RC authorization before resynchronizing islands, islands could be synched or sync attempted resulting in threats to the fledgling restoration.

We also disagree with the removal of “adjacent” in the proposed R1.2. If adjacent is left out, then there needs to be a clarification of which RCs and/or TOPs are necessary to be coordinated with. As currently stated it is not clear which RCs need to have interconnection criteria with each other and could lead to an interpretation that ALL RC’s should coordinate when that is unnecessary for reliability. We understand the intent of the requirement to require coordination only with only neighboring RCs. We prefer the word “adjacent” be included there as this provides the needed clarity.

We believe the SDT should use its authority, as outlined within this project’s SAR, to review Requirement R7 as a training-related requirement whose retirement is based on Paragraph 81, B7 Redundant criteria. Many aspects of this training requirement are already incorporated within a RC’s systematic approach to training program, as required within various PER standards. At the very least, we ask the SDT to remove the reference to annual training and instead focus the requirement on training topics that should be included in an operations training program. This similar approach was taken by the 2007-06.2 Phase 2 of System Protection Coordination SDT with the introduction of NERC Reliability Standard PER-006-1.

ERCOT appreciates the efforts to clarify the issue of interpretation on the words "neigbboring" and "adjacent." However, the term “’neighboring’ in no ways gives the RC the latitude to define which applicable entities are to be included in its restoration plan, since this term could be interpreted either way by entities and auditors allike until a NERC project or NERC SDT defines the meaning of "neighboring" or "adjacent" in reference to the ERCOT interconnection. ERCOT would prefer specificity on what this means, rather than leaving it unclear, given the duty to coordinate if we are "neighboring." ERCOT asks the SDT to clarify the meaning of the words "adjacent" or "neigboring" and provides this example:

1. Each Reliability Coordinator shall develop, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring ***(i.e., within the same interconnection)*** Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include:..."

Comment

Texas RE is concerned there is no requirement for the Reliability Coordinator to provide its restoration plan to Transmission Operators outside the Reliability Coordinator Area. There is also no requirement for a Transmission Operator to provide its restoration plan with a Reliability Coordinator that is not its own contained within EOP-005.) If there is criteria required to re-establish interconnections with other TOPs in other Reliability Coordinator Areas, it is prudent to provide the restoration plan to those TOPs. Simply providing the restoration plan to the neighboring RC does not mean the TOP (in the neighboring RC Area) will be aware as the neighboring RC is under no obligation to provide that specific plan to its TOPS.

Texas RE noticed there is a different time period between the Reliability Coordinator and the Transmission Operators to review their restoration plans. EOP-005-2 Requirement, R3 which requires Transmission Operators to review and submit its restoration plan annually while EOP-006-3, R3 requires the Reliability Coordinator to review its plan within 13 calendar months. Texas RE is concerned the two plans may not be coordinated if they are reviewed (and potentially revised) at different times.

In addition, Texas RE respectfully requests rationale as to why EOP-006-3 Requirement R3 changed the review to within 13 months from 15 months.

4. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language “at least once each 15 calendar months” back to “annual” or “annually,” as drafted in EOP-006-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	No
Document Name	
Comment	
Texas RE supports retention of the 15 calendar month requirement and opposes the change back to “annual” or “annually.” Texas RE is concerned CAN-010 could allow for training on critical tasks to take place almost two years apart.

Kerry LaCoste - U.S. Bureau of Reclamation - 1,5 - WECC	
Answer	No
Document Name	
Comment	
Reclamation is aware that some EROs believe that the term “annual” may be misinterpreted by Responsible Entites such that a Responsible Entity would allege compliance if the “annual” review took place once in 2015 and once in 2016, albeit January 2015 and December 2016, thereby resulting in potentially bi-annual reviews. Although the NERC CAN-0010, Revised 11-16-11, provided instructions to the Compliance Enforcement Authority on how to assess compliance when a standard requires an “annual” activity, Reclamation believes a more defined time frame in the Standard is beneficial to reduce a Registered Entity’s potential confusion and compliance violations. Therefore, Reclamation recommends the language “at least once ***every*** 15 calendar months” be retained.

LES believes training should be required either every calendar year or every other calendar year, but disagrees with changing the wording to “annual” in R7 as it is too ambiguous. LES also disagrees with changing EOP-006 R3 (for reviewing restoration plan) from “within 15 calendar months” to “within 13 calendar months” too.

5. Please provide any additional comments for the EOP SDT to consider, if desired.

Diana McMahon - Salt River Project - 1,3,5,6 - WECC	
Answer	
Document Name	
Comment	
We would like the SDT to consider separating EOP-005-2 R1 into 2 requirements for a few reasons. The subparts of the requirement are not applicable to the implementation of the plan resulting in a awkwardly worded requirement. The assessment of the plan is critical to the reliability of the BES and the plan should linclude all of the identified parts, but it becomes obscure, secondary even in consideration with the implementation of the plan. Additionally, the EROs within NERC are working to develop an updated violation calculator for consideration when addressing potential violations. Per a recent WECC compliance workshop, the calculator is likely to include the consideration of “Time-Horizon”, which given that R1 has 2, creates confusion.

Dominion suggests that “the TOP’s ability to implemenet the plan” be struck from the R4 Rationale. Dominion is of the opinion that sentence will be	

clearer without this information and that it more closely mirrors the intention of the Standards Drafting Team.

The sentence should now read: “The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts.”

Comment

Based on the draft of RSAW, HQT suggest to add the obligation to submit to the TOP a corrective action plan on the R14 when the TOP testing requirement(s) are not met :

Actual requirement

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

Corrective action plan :

14.3 Each Generator Operator shall, within 10 calendar days of an indication of any testing requirements not met under Requirement R7: [*Violation Risk Factor:*

High] [*Time Horizon: Operations Planning, Long*]-*Term Planning*

☐ Develop a Corrective Action Plan (CAP) for the identified Blackstart Resource, and an evaluation of the CAP’s applicability to the entity’s other Blackstart Ressource including other locations; or

☐ Explain in a declaration why corrective actions are beyond the entity's control owould not improve BES reliability, and that no further corrective actions will be taken.

☐Submit the conclusion(s) to the Transmission Operator

Typo from M15 to be corrected in coordination with R15 :

M15 Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

Angela Gaines - Portland General Electric Co. - 3, Group Name PGE - Group 1

Answer	
Document Name	

Comment

Although Portland General Electric Company (PGE) voted "affirmative" during this round of balloting, PGE feels strongly that ANY training requirements identified in the development of a standard should be addressed in the PER training standards and not in separate standards and requirements. The Systematic Approach to Training is as such that training requirements from other standards are easily adoptable into the training regimen. Adding requirements outside of the PER standards becomes an administrative nightmare by duplicating efforts relating to tracking and the application of the actual training.

Additionally, similar to the change made in Requirement R8, there is no reason to change Requirement R9 from two calendar years to 24 calendar months. Perhaps it seems like every two calendar years and every 24 calendar months are the same thing but it isn't. By changing the measurement to months, the tracking that is required starts in the month the training is given for any particular individual. Based on the individual schedules the tracking takes on a scattered approach, akin to herding cats. Please seriously consider changing R9 back to every two calendar years.

We find EOP-005 -3 R1 redline changes to be confusing. The requiremnt needs additional clarification or should be restated. Does the requiremnt address real-time or study mode? Consider replacing the comma after "service" with a period and restating the second clause as a seperate sentence.

Comment

In EOP-005 R9, recommend the following language: “Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every **two calendar years** to their field switching personnel identified as performing unique tasks associated with the Transmission Operator’s restoration plan that are outside of their normal tasks. **Unique tasks are those tasks that are defined by each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider.”**

In EOP-005 R 9 and R15, 24 calendar months should remain two calendar years. The rolling monthly requirements are difficult to track and provide no real value over the calendar year requirement.

In the first round of comments we provided the comment in regards to Section C1.1.2 Evidence Retention for replacing "last monitoring acitivity" to "last compliance audit".

In the new draft of EOP-005-3 the drafting team did not change the verbiage to “last compliance audit” as they suggested that they would. In fact the Evidence retention section now has the term “last monitoring activity” in an additional four other places under record retention. In addition, evidence retention for R10 states “…since it last monitoring activity as well as one previous monitoring activity period…”. Monitoring activities are Audits, Spot checks and Self Certifications. An etity should not be required to track evidence retention on a moving target. In addition, if a requirement is not audited, spot-checked or self certified, does an entity then need to retain evidence back to the last “monitoring activity” which may have been several years and several audit cycles?

Our suggestion is that the drafting team remove all references to “last monitoring activity” and replace with the proper retention period that is not a moving target; such as last compliance audit, for three calendar years or whatever the appropriate retention period is.

Also in section C.1.1.2 it is noted that there is new wording in four separate places regarding evidence retention for issues of non-compliance. One such statement reads “If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant”. For the underlined portion of this sentence ‘until found compliant’ we would suggest a wording change to some other statement, as a Regional Entity typically does not find anyone “compliant”. One suggestion is “..until the entity is notified that the remedy for non-compliance is complete”.

RF provides a negative opinion for the EOP-005-3 VSLs and offers the following comments:

1. VSL for R1 –
   i. RF notes the SDT had updated the Severe VSL for Requirement R1 but still believes there is a gap. For example, as modified it now states "…but failed to implement the applicable requirement parts within Requirement R1." Since all sub-parts under Requirement R1 are applicable, this new language is basically stating the entity failed to implement all nine sub-parts. Once again there is a gap when an entity fails to meet between four and eight sub-parts. RF suggest the following as an additional "OR" VSL to the Severe VSL to address our concern.
      a. The Transmission Operator has an approved plan but failed to comply with four or more of the requirement parts within Requirement R1.
2. VSL for R8 –
   i. In the consideration of comments report, the SDT responded: "The EOP SDT reviewed your comment and made conforming changes." When RF reviews the new redline version, there are no changes shown for the VSLs for R8. RF understands Requirement R8 had been modified and had replaced the "15 months" language with "annual", but this should still be reflected in the VSLs. RF recommends modifying the Severe VSL level as follows:
      a. Severe VSL - The Transmission Operator has not included [annual] System restoration training in its operations training program

RF provides a negative opinion for the EOP-006-3 VSLs and offers the following comments:

1. VSL for R5 –
   i. In the previous comment period, RF noted that since word "notification" is not in Requirement R5, there is subsequently no requirement for notifications. RF suggested removing the second "OR" VSL from each of the VSL Categories. In the consideration of comments the SDT responded: "The EOP SDT reviewed your comments, but agreed that 'notified' is in M5; and, therefore, did not make any changes." RF would like to remind the SDT that the NERC *Violation Severity Level Guidelines* document states: "A Violation Severity

	Level (VSL) is a post-violation measurement of the degree to which a Reliability Standard Requirement was violated (Lower, Moderate, High, or Severe)." As we can see, it references Requirements being violated and not Measures. If the SDT believes notification is an important piece, RF suggests including notifications to the language in Requirement R5. Absent including notification language in Requirement R5, RF continues to suggest removing the second "OR" VSL from each of the VSL Categories as "notifications" are not required by the Requirement.

In EOP-005 R 9 and R15, 24 calendar months should remain two calendar years. The rolling monthly requirements are difficult to track and provide no real value over the calendar year requirement.

In the first round of comments we provided the following comment in regards to Section C1.1.2 Evidence Retention and we are also providing the drafting team response here:

In the new draft of EOP-005-3 the drafting team did not change the verbiage to "last compliance audit" as they suggested that they would. In fact the Evidence retention section now has the term "last monitoring activity" in an additional four other places under record retention. In addition, evidence retention for R10 states "…since it last monitoring activity as well as one previous monitoring activity period…". Monitoring activities are Audits, Spot checks and Self Certifications. An etity should not be required to track evidence retention on a moving target. In addition, if a requirement is not audited, spot-checked or self certified, does an entity then need to retain evidence back to the last "monitoring activity" which may have been several years and several audit cycles?

Our suggestion is that the drafting team remove all references to "last monitoring activity" and replace with the proper retention period that is not a moving target; such as last compliance audit, for three calendar years or whatever the appropriate retention period is.

Also in section C.1.1.2 it is noted that there is new wording in four separate places regarding evidence retention for issues of non-compliance. One such statement reads "If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant". For the underlined portion of this sentence 'until found compliant' we would suggest a wording change to some other statement, as a Regional Entity typically does not find anyone "compliant". One suggestion is "..until the entity is notified that the remedy for non-compliance is complete".

IPC does not agree with the new requirement 1.9 of requiring a process to transfer operations back to the Balancing Authority in accordance with RC criteria. Based on NERC definition of Balancing Authority, this function includes "maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." So, a Balancing Authority function is maintained at all times, even during a System Restoration, so there is no process "to transfer operation back to the BA." The Balancing Authority should be involved in the Restoration of the system from initiation of event to resumption of "Normal Operations." The NERC functional Model describes real-time actions of the Balancing Authority entity to "Implement System Restoration plans as directed by the Transmission Operator."

In R9, maintain calendar year language throughout whole standard.

AZPS agrees with requirement R1 and offers the following suggested wording for the proposed standard to enhance clarity:

Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System **to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage** following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service...

Response

Kerry LaCoste - U.S. Bureau of Reclamation - 1,5 - WECC

Answer	
Document Name	

Comment

Reclamation recommends the following additional change to the existing Draft Standard EOP-005-3, R1, second sentence:

Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state wherein the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart resource is located within the Transmission Operator's System.

Reclamation recommends replacing "the Reliability Coordinator" with "its Reliability Coordinator" in the following locations: EOP-005-3, Requirements and measures R10, R16, M16, and VSL Table R4, VSL Table R10, and VSL Table R16 to be consistent throughout the Standard.

Response

Dennis Chastain - Tennessee Valley Authority - 1,3,5,6 - SERC

Answer	
Document Name	

Comment

In EOP-006-3, R1, the requirement states "The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or **an energized island has been formed on the BES within the Reliability Coordinator Area**." On the other hand the restoration plan ends, "…when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas." If an island was created internal to a TOP around a hydro plant for example, this would fall within the scope of the RC restoration plan to start since it would be an island on the BES within the Reliability Coordinator Area. It would also meet the requirement to end the RC restoration plan because all TOPs and RC Areas would still be interconnected. It is reasonable to assume that the drafting team does not anticipate a Reliability Coordinator implementing their RC restoration plan and then ending their RC restoration plan at the same time. The drafting team should clarify when the RC restoration plan should be implemented such that the Requirement does not conflict with itself.

In EOP-005-3, it is very clear the TOP restoration plan begins when a Blackstart Resource is required to restore a shut down area to service. This is different than when the RC restoration plan begins in EOP-006-3. There could be instances where the RC implements their restoration plan but no TOP within that RC implements their restoration plan. It is recommended that the standard drafting team also update EOP-006-3 R1 to better coordinate with the start and end of the TOP restoration plans.

The RC restoration plan is developed for the RC but it contains criteria that the TOP will need to follow during system restoration. For example, EOP-006 R1.2 sets criteria and conditions for re-establishing interconnections for neighboring TOPs. R1.6 sets criteria for transferring operations and authority back to the Balancing Authority. It could be more clear in EOP-005 that the TOP's restoration plan should be developed in coordination with its Reliability Coordinator's restoration plan. For example, the criteria and conditions for re-establishing interconnections with other Transmission Operator defined in the RC restoration plan according to EOP-006 R1.2 should inform the TOP restoration plan when the TOP is developing language to meet EOP-005 R1.3 procedures for restoring interconnections with other Transmission Operators. We recommend changing the subrequirement R1.1 in EOP-005 to state the TOP restoration plan shall include, “Strategies for system restoration that ***meet the criteria defined in the Reliability Coordinator’s restoration plan and*** are coordinated with the Reliability Coordinator’s high level strategy for restoring the interconnection.”

We recommend that where requirements are removed from the standard (such as in EOP-005-3), that the number for the deleted requirement remain and be notated as “Retired,” “Removed,” or “Intentionally left blank,” so that utilities do not have to perform unnecessary updates of compliance documentation simply for the sake of renumbering requirement references.

Comment

I wish to adopt the following PJM comments:

Comments: R6

PJM's concern with this requirement as written is that it can and has been interpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation may result in thousands of simulations having to be performed and is beyond the intention of the original EOP-005 drafting team. To eliminate any unintentional misinterpretation of this standard (e.g. to make it clear that full steady state and dynamic simulation of the entire Restoration Plan is not required) and to ensure that the right studies and testing are performed to ensure a reliable plan without overly burdening staff, PJM recommends the inclusion of the following language to the requirement:

"R6 Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify"

Comment

We appreciate the re-insertion of the language in EOP-005-3 R1 describing the 'end scope' of the TOP Restoration plan. The removal in the first posting created uncertainty as to what the scope of the TOP plan should be. This is a good change and we support the re-inclusion of this language.

We believe the following change to the proposed **R1.9** would provide better clarity as to the intent of the SDT. If the intent is different, we request additional clarity be provided in a response to our comment.

1.9. Operating Processes for transferring operational control back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

In **R6** of **EOP-005-3**, we are disappointed that further clarity is not given on the scope or breadth of the steady state and dynamic simulation that would be required. Please expand the rationale with more explanation of the SDT's intent of what constitutes an acceptable steady state and dynamic simulation. Perhaps a whitepaper or guidance document could be created out of one of the NERC Technical Committees providing this guidance.

Also in **R8** of the proposed **EOP-005-3**, we suggest adding the phrase 'operational control' in the rationale for R8 to support the link to R1.9. The rationale would be worded as follows:

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring operational control, to include Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

In the proposed **R8.1** of **EOP-006-3**, we would like to see the GOPs identified with the qualifier "as having a defined role in the TOP's restoration plan", rather than leaving it open-ended. As currently stated, any GOP, even without a role in restoration, would be required to participate. The edited language would read:

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified as having a defined role in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.

In **EOP-006-3, R3**, the SDT references a change to 13 months for consistency with other standards. When providing the response to comments, can you please provide other locations within the approved body of Standards where 13 months is currently stated?

EOP-006-3 R7 is worded in seeming conflict with the M7 language. R7 simply requires the RC to 'include within its training program, annual System restoration training'. However the action verb in the requirement never mentions actually providing the training. The M7 language however seems to indicate needing to provide evidence of 'providing' the training. Either the M7 language or R7 language should be edited to match the SDT's intent.

Comment

FMPA believes many of the requirements in these standards are administrative in nature and should be considered for retirement. We also believe the revisions being proposed will not improve stakeholder understanding of the requirements or reliability, and may even lead to further confusion. Furthermore, the redlines posted by the drafting team lead reviewers to believe changes are being proposed that are not in fact changes from the current approved versions. A redline comparison to the current approved version should be provided to allow voters to easily understand the revisions being proposed. FMPA suggests leaving the current approved versions in place.

Comment

Texas RE remains concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-005-3 R1 restoration plan implementation requirements. Texas RE has identified two principal areas of concern, and suggests the SDT revise in proposed language in R1 to address these issues.

First, Requirement R7 provides not only that each affected Transmission Operator (TOP) shall implement its restoration plan following a Disturbance, but also that if “the restoration plan cannot be executed as expected the [TOP] shall utilize its restoration strategies to facilitate restoration.” As presently drafted, there is no explicit requirement in the revised Requirement R1 requiring TOPs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. This adaptive capability serves an important function and promotes TOPs continuing to maintain situational awareness and strategic reactions throughout the course of restoration activities. As such, Texas RE recommends that if the SDT wishes to retire Requirement R7, it include the following language in the restoration plan content requirements specified in Requirement R1 in order to address this issue:

1.10 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

Second, Requirement R8 presently provides an explicit requirement that TOPs “resynchronize area(s) with neighboring [TOPs] only with the authorization of the Reliability Coordinator or in accordance with established procedures of the Reliability Coordinator.” Although it is perhaps possible to read R1.1’s mandate that the restoration plan include “[s]trategies for system restoration that are coordinated with the [RC’s] high level strategy for restoring the interconnection” as encompassing this requirement, it is not clear that resynchronization is included within either “system restoration strategies” or the RC’s “high level strategy.” Moreover, there is no explicit reference to coordination activities with neighboring TOPs elsewhere in the Standard. To clarify this issue and ensure coordination activities are adequately addressed in entity restoration plans, Texas RE recommends that if the SDT wishes to retire R8, it include the following language in the restoration plan content requirements specified in R1 to address this issues:

1.11 Procedures to resynchronize area(s) with neighboring Transmission Operator area(s) after obtaining authorization from the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator..

Texas RE also notes that several substantive elements are also not explicitly incorporated into the proposed EOP-006-3 Requirement R1 restoration plan implementation requirements. Specifically, Requirement R7 provides not only that each affected RC shall implement its restoration plan following a Disturbance, but also that if “the restoration plan cannot be executed as expected the [RC] shall utilize its restoration strategies to facilitate restoration.” As Texas RE indicated above, there is no explicit requirement in the revised EOP-006-3, Requirement R1 requiring RCs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. Although important for TOPs, these forms of adaptive strategies are particularly critical for RCs given their wide-area view of the BES and overall role in coordinating effective responses to Disturbances. As such, Texas RE recommends incorporating the following language into EOP-006-3, Requirement R1 if the SDT concludes the full retirement of EOP-006-3, Requirement R7 is appropriate:

1.7 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

In a similar vein, EOP-006-3, Requirement R8 presently requires the RC to “coordinate and authorize resynchronizing islanded areas that bridge boundaries between [TOPs] or [RCs]. If the resynchronization cannot be completed as expected the [RC] shall utilize its restoration plan strategies to facilitate resynchronization.” Similar to EOP-005-3, Requirement R1, these elements of R8 are not explicitly included within the various required parts of the RC’s restoration plan as specified in EOP-006-3, R1.1 to 1.6. As a result, there could be confusion regarding resynchronization coordination and authorization obligations, as well as a gap regarding requirements to implement strategies to address resynchronization issues if events occur differently than specified with the RC’s existing restoration plan. Again, Texas RE recommends that if the SDT opts to retire EOP-006-3, Requirement

R8, it incorporate the RC's existing resynchronization obligations explicitly into the required restoration plan elements specified in Requirement R1 by added the following:

1.8 Procedures for coordinating and/or authorizing the resynchronization of islanded areas that bridge the boundaries between Transmission Operators and Reliability Coordinators

Texas RE identified several other areas for improvement:

- Texas RE requests the SDT provide a reason for removing the phrase "for each step of the restoration" from the rationale for EOP-005-3 Requirement R6.

- Texas RE disagrees with use of the term "unique tasks" in EOP-005-3 Requirement 9. That could cause confusion since it is undefined. Texas RE recommends using the term "restoration tasks" instead to indicate these are tasks are specific to restoration.

- Texas RE recommends the VSL for EOP-006-3 Requirement R8 include the piece about requesting the each Transmission Operator and Generator Operator identified in the restoration plan to participate in Reliability Coordinator drills per 8.1. While the VSLs address that the RC should conduct a drill, it does not reference who should participate.

- Texas RE respectfully requests the SDT provide a basis for its decision to adopt a 12-month implementation plan for both EOP-005-3 and EOP-006-3, including any data it considered in determining that this was an appropriate window for affected entities to meet their compliance obligations under the revised Standards.

-

As suggested before, Texas RE recommends there be a project to define and distinguish the terms "neighboring" and "adjacent". Texas RE noticed the mapping document states "The term "neighboring" should be interpreted as "adjacent" and no further clarification is necessary." Texas RE does believe further clarification is necessary as these terms appear throughout Standards and are undefined.

We appreciate the re-insertion of the language in EOP-005-3 R1 describing the 'end scope' of the TOP Restoration plan. The removal in the first posting created uncertainty as to what the scope of the TOP plan should be. This is a good change and we support the re-inclusion of this language.

We have discussed and believe the following change to the proposed R1.9 would provide some better clarity as to the intent of the SDT. If the intent is different, we request some additional clarity be provided in a response to our comment. Thank you.

1.9. Operating Processes for transferring operationsal control back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

Also in R8 of the proposed EOP-005-3, we suggest adding the phrase 'operational control' in the rationale for R8 to support the link to R1.9. The rationale would be worded as follows:

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring operational control, to include Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

In the proposed **R8.1** of **EOP-006-3**, we would like to see the GOPs identified with the qualifier "as having a defined role in the TOP's restoration plan", rather than leaving it open-ended. As currently stated, any GOP, even without a role in restoration, would be required to participate. The edited language would read:

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified as having a defined role in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.

In **R6** of **EOP-005-3**, we are disappointed that further clarity is not given on the scope or breadth of the steady state and dynamic simulation that would be required. Please expand the rationale with more explanation of the SDT's intent of what constitutes an acceptable steady state and dynamic simulation. Perhaps a whitepaper or guidance document could be created out of one of the NERC Technical Committees providing this guidance.

In **EOP-006-3, R3**, the SDT references a change to 13 months for consistency with other standards. When providing the response to comments, can you please provide other locations within the approved body of Standards where 13 months is currently stated?

EOP-006-3 R7 is worded in seeming conflict with the M7 language. R7 simply requires the RC to 'include within its traingin program, annual System restoration training'. However the action verb in the requirement never mentions actually providing the training. The M7 language however seems to indicate needing to provide evidence of 'providing' the training. Either the M7 language or R7 language should be edited to match the SDT's intent.

Comment

(1) We thank the SDT for listening to our previously submitted comments, specifically the removal of "maintain" from requirement language and incorporation of "annual" within appropriate requirements.

(2) However, we question the language listed within Requirement R1 of EOP-005-1. We question if the SDT meant to remove "to service" from the

phrase "…required to restore the shutdown area to service," before adding the proposed language "to a state whereby the choice of the next Load to be restored is not driven…" We recommend removing the "to service" reference from the requirement to alleviate confusion.

(3) We caution the SDT on its capitalization of "Load" in Requirement R1 of EOP-005-1. According to the NERC Glossary of Terms, the definition refers to an "end-use device or customer that receives power from the electric system." While a TOP who is part of a vertically integrated utility may have the ability to choose which end-use customers it can restore and in what order, other utility business models rely on BAs and DPs to select pre-defined load block quantities as part of its restoration strategy. We recommend that the term "load" should not be capitalized in this context.

(4) We believe the SDT should use its authority, as outlined within this project's SAR, to review Requirement R8 as a training-related requirement whose retirement is based on Paragraph 81, B7 Redundant criteria. Many aspects of this training requirement are already incorporated within a TOP's systematic approach to training program, as required within various PER standards. At the very least, we ask the SDT to remove the reference to annual training and instead focus the requirement on training topics that should be included in an operations training program. This similar approach was taken by the 2007-06.2 Phase 2 of System Protection Coordination SDT with the introduction of NERC Reliability Standard PER-006-1.

(5) We believe the wording with Part 8.5 of EOP-005-3 needs to be clarified. The assumption is the TOP will transfer Demand and resource balance operations within its Transmission Operator Area over to the Balancing Authority. However, there could exist multiple BAs within the TOP's Area. Even the NERC Glossary definition for a BA identifies that a BA can only maintain Demand and resource balance within its own Balancing Authority Area. We believe the language should be clarified to read "Transition of Demand and resource balance to an affected Balancing Authority."

(6) We find the Section C.1.2 of the EOP-005-3 standard confusing with references to "last monitoring activity." We believe the SDT should revise the entire section and replicate the language listed in an already approved standard, like EOP-004-3. Within that specific standard, the Responsible Entity retains evidence of compliance since the last compliance audit, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

(7) We disagree with the SDT's assessment that the VSLs for R10 and R16 "meet or exceed the current level of compliance." We believe the VSLs for these requirements should be structured according to a percentage of the applicable personnel who need to be trained. This is a similar concept as used for defining the VSLs for R15.

(8) We thank the SDT for this opportunity to provide comments on these standards.

Based on the draft of RSAW, we suggest to add the obligation to submit to the TOP a corrective action plan on the R14 when the TOP testing requirement(s) are not met :

Actual requirement

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan.

[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

Corrective action plan :

14.3 Each Generator Operator shall, within 10 calendar days of an indication of any testing requirements not met under Requirement R7: [*Violation Risk Factor:*

High] [*Time Horizon: Operations Planning, Long*]-*Term Planning*

-Develop a Corrective Action Plan (CAP) for the identified Blackstart Resource, and an evaluation of the CAP's applicability to the entity's other Blackstart Ressource including other locations; or

-Explain in a declaration why corrective actions are beyond the entity's control or

would not improve BES reliability, and that no further corrective actions will be

taken.

-Submit the conclusion(s) to the Transmission Operator

Typo from M15 to be corrected in coordination with R15.quirement :

M15 Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and energizing a bus of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

In EOP-006-3 R1 the requirement states “The scope of the Reliability Coordinator’s restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or **an energized island has been formed on the BES within the Reliability Coordinator Area**.” On the other hand the restoration plan ends, “…when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas.” If an island was created internal to a TOP around a hydro plant for example, this would fall within the scope of the RC Restoration plan to start since it would be an island on the BES within the Reliability Coordinator Area. It would also meet the requirement to end the RC Restoration Plan because all TOps and RC Areas would still be interconnected. It is reasonable to assume that the drafting team does not anticipate a Reliability Coordinator implementing their RC Restoration Plan and then ending their RC Restoration plan at the same time. The drafting team should clarify when the RC Restoration Plan should be implemented such that the Requirement does not conflict with itself.

In EOP-005-3, it is very clear the TOp restoration plan begins when a Blackstart Resource is required to restore the a shut down area to service. This is different than when the RC Restoration Plan begins in EOP-006-3. There could be instances where the RC implements their restoration plan but no TOp within that RC implements their restoration plan. It is recommended that the standard drafting team also update EOP-006-3 R1 to better coordinate with the start and end of the TOp Restoration plans .

The RC restoration plan is developed for the RC but it contains criteria that the TOp will need to follow during system restoration. For example, EOP-006 R1.2 sets criteria and conditions for re-establishing interconnections for neighboring TOps. R1.6 sets criteria for transferring operations and authority back to the Balancing Authority. It could be more clear in EOP-005 that the TOps restoration plan should be developed in coordination with its Reliability Coordinator restoration plan. For example, the criteria and conditions for re-establishing interconnections with other Transmission Operators defined in the RC restoration plan according to EOP-006 R1.2 should inform the TOp restoration plan when the TOp is developing language to meet EOP-005 R1.3 procedures for restoring interconnections with other Transmission Operators. We recommend changing the subrequirement R1.1 in EOP-005 to state the TOp restoration plan shall include, “Strategies for system restoration that ***meet the criteria defined in the Reliability Coordinator’s restoration plan and*** are coordinated with the Reliability Coordinator’s high level strategy for restoring the interconnection.”

We recommend that where requirements are removed from the standard, that the number for the deleted requirement remain and be notated as “Retired,” “Removed,” or “Intentionally left blank,” so that utilities do not have to perform unnecessary updates of compliance documentation simply for the sake of renumbering requirement references.

We do not understand the justifications for the change made to R1 (“to a state whereby the choice of the next Load to be restored…”). We’d like to request for the Standard Drafting Team to provide Rationale on the purpose of the change and example of where the choice of next Load to be restored “would be” driven by the need to control the frequency or voltage. Alternatively, the SDT may modify the wording to clarify.

There were 53 sets of responses, including comments from approximately 44 different people from approximately 41 companies representing 9 of the Industry Segments as shown in the table on the following pages.

Questions

1. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-005-2, Requirement R4 and parts? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

2. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-005-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

3. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

4. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-006-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

5. Please provide any additional comments for the EOP SDT to consider, if desired.

The Industry Segments are:

1 — Transmission Owners

2 — RTOs, ISOs

3 — Load-serving Entities

4 — Transmission-dependent Utilities

5 — Electric Generators

6 — Electricity Brokers, Aggregators, and Marketers

7 — Large Electricity End Users

8 — Small Electricity End Users

9 — Federal, State, Provincial Regulatory or other Government Entities

10 — Regional Reliability Organizations, Regional Entities

The revisions as posted to R4 create redundant language. SRP recommends removal of the language requiring the TOP to “update” from R4. Additionally, It is also unclear how significant of a change “would change [the TOP’s] ability to implement its restoration plan”. This could work for many entities allowing administrative changes to the restoration plan without requiring RC approval. However, this language creates a potential for issues with R1, R2, and R5 which all reference an “approved restoration plan”.

Thank you for your comments. The EOP SDT agrees with your comment regarding redundant language and revised Requirement R4 as follows: Requirement R4 “Each Transmission Operator shall ~~update and~~ submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows:” The rationale for Requirement R4 addresses changes that would substantively change the TOP’s ability to implement its restoration plan: “The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.” Administrative changes would not substantively change the TOP’s ability to implement its restoration plan.

Comment	

While AEP supports the overall direction and efforts of this project team, and believe that the latest draft is an improvement to the previous version, we have chosen once again to vote negative on EOP-005-3. The text “update and submit a restoration plan to the RC when the modification would substantively change the TOP’s ability to implement the restoration plan or impact the RC’s ability to monitor and direct restoration efforts” is only included in the callout, and is not in any way included within the obligation itself. In addition, what might be considered a substanitive change could be very subjective. As a result, there is a risk of inconsistent interpretation of the obligation by Responsible Entities and Auditors alike.

At the very least, verbiage within the callout should be moved, at least in part, to the obligations themselves. In addition, it may be beneficial to also provide some clarity as to what a substantive change *is* to supplement the examples already provided for what it *is not*. For example, additional scenarios could be given related to changes that increase restoration time significantly or change the primary cranking path. These examples of what would and would-not be sustanitive changes could be provided in a Guidelines and Techical Basis section

Thank you for your comments. Requirement 4, Parts 4.1 and 4.2 reference BES modifications. BES is defined in the NERC Glossary of Terms. The EOP SDT‘s intent is discussed in the Rationale Box for Requirement R4, which is retained with the standard in the Rationale Section upon FERC approval, that has the additional language: “Examples of instances that do not require update and submission of a restoration plan include element number changes, ~~or~~ device changes, or administrative changes that have no significance to the implementation of the plan.”

Comment	
Part 4.2 of the proposed standard is still unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that. The proposed wording on part 4.2 is not clear what the intent is. R4 requires a Transmission Operator to "update and submit" its revised restoration plan for approval subject to parts 4.1 and 4.2. The phrase "subject to the Reliability Coordinator approval requirements per EOP-006" doesn't make sense when the requirement and part 4.2 are read in total.

The proposed language of R4 is unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that. The NSRF suggests changing R4 to read: “Each Transmission Operator, who identifies a change in its restoration plan that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts, shall, within 90 days, revise and submit its restoration plan to its Reliability Coordinator for approval.” Subrequirements, 4.1 and 4.2 can be deleted. R4.2 refers to another standard, EOP-006. Requirements should refrain from referring to another standard and should stand on its own. The language, “prior to implemnenting a planned permanent BES modification” is ambiguious.

The proposed language of R4 is unclear. If the intent is that the Transmission Operator submit its revised restoration plan to the Reliability Coordinator in time that it can be approved by the Reliabilty Coordinator and implemented by the Transmission Operator on the date the planned BES modifications are placed in-service, the requirement should simply state that.

LES suggests modifing R4 as follows:

R4: "Each Transmission Operator, who identifies a change in its restoration plan that would affect its ability to implement its plan or its Reliability Coordinator's ability to monitor and direct restoration efforts, shall, revise and submit its restoration plan to its Reliability Coordinator for approval."

R4.1 "Within 90 calendar days after identifying any unplanned permanent BES modifications.

R4.2 "At least 30 days prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006." (EOP-006 just states that the RC shall determine whether the TOP's restoration plan is coordinated with and compatible with other TOPs' restoration plans within its RC Area. At least 30 days prior to will allow the RC the 30 days it is allowed for approval before the planned modification is energized.

The rationale box expresses that Unplanned System Modifications could include Natural Disasters or major equipment failures.... and then suggests that outages are not unplanned system modifications; however most natural disasters and equipment failures results in outages. This does not clarify the intent of Unplanned System Modifications	
Likes 0	
Dislikes 0	
Response	
Thank you for your comment. The EOP SDT has updated the Rationale Box to remove both "The changes made in Requirement R4 and the requirement parts do not refer to outages," and "Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan." to the updated language refers to permanent BES modifications.

As written the language causes confusion regarding the TOP's ability to implement changes to its restoration; language implies that a revised plan would change the entitiy's ability to implement that revised plan. To remedy this it is suggested that the SDT consider making changes to the effect as follows: ***R4.*** *Each Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its the currently approved RC restoration plan, as follows: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* ***4.1***. *Within 90 calendar days after identifying any unplanned permanent BES modifications.* ***4.2.*** *Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.* In addition, the implementation period for the revised restoration plan's approval creates a compliance time gap that could result with potentially different interpretations between auditors, entities, and the RC. During the timeframe of RC reviewing and approving an entity's	

revised restoration plan, it would be helpful to identify a defined period that allows implementation of an entity's revised plan that provides implementation of the "unapproved" plan to be valid through the end of the RC approval process.

Thank you for your comments. The EOP SDT has revised Requirement R4 to read: "Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows:" The EOP SDT discussed your comment regarding revisions to Requirement R4, but concluded the requirement is clear as written. Based on your implementation period question, EOP-005, Requirement R1, Part 1.1 requires strategies for System restoration. If your revised plan is currently in the approval process, you would refer to your strategies in your approved plan. For either permanent unplanned or permanent planned BES modifications, the RC still needs to approve the plan.

Comment	
We believe the wording of the requirement could be improved to better reflect the apparent intent. The words "revised" and "revision" are used in different contexts in the same sentence which causes confusion. Also, system modifications may not be the only reason to update the plan. We suggest the wording be modified to something along the lines of: R4. Each TOP shall update and resubmit its restoration plan to its RC for review and approval, when a System modification or other change has or will occur which invalidates or makes the approved plan unable to be implemented. Such updates shall be made as follows: 4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications. 4.2 Prior to implementing a planned permanent BES modification or procedural change subject to the RC approval requirements per EOP-006.

The EOP-005's purpose is to "[e]nsure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Similarly, EOP-006's purpose is to "[e]nsure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." Simply put, the EOP Standards at issue in this project exist to ensure that personnel have clear, effective understanding of the System restoration process, that understanding is shared between TOPs and RCs through coordination and situational awareness, and priority is placed on such efforts. This is a critical reliability task.

In light of this importance of these Standards to restoring grid operations, Texas RE continues to be concerned that the proposed changes to these Standards could result in confusion in implementing restoration plans, undermining their stated goals. Simply put, the proposed Standards, as currently drafted, presents a real risk that TOPs and RCs will not have single, clear restoration plans that both entities fully understand during the restoration process and will, therefore, not be able to effectively coordinate restoration efforts. This constitutes a significant reliability issue that the SDT must address in this process.

Texas RE has identified two significant areas in the proposed EOP-005 Standard in particular that could result in confusion in the ultimate implementation of restoration plans.

First, as Texas RE noted previously, the SDT proposes to require TOPs to update and submit revised restoration plans to their RCs when there is modification "that would change the ability to implement" the restoration plan (EOP-005-3, Requirement R4). Although, Texas RE does not necessarily object to the SDT's stated intent to require formal updates requiring RC approval solely for material changes, the requirement to update a plan and obtain such an approval should not hinge upon the entity's perception of its corresponding "ability" to implement the plan. That is to say, a material modification to the restoration plan should require submission of an updated plan regardless of whether the TOP believes the modification will or will not affect its ability to actually implement the existing restoration plan. This is particularly critical because EOP-005-3, Requirement R4 also serves the reliability goal of ensuring RCs have awareness regarding the steps TOPs will take in the restoration process. As such, even if a TOP believes it can still implement its current plan, providing information regarding modifications to the restoration plan still serves the reliability goal of enhancing RC situations awareness.

In addition, Texas RE is concerned that Requirement R4 does not capture the fact that both planned and unplanned permanent BES modifications are subject to RC approval requirements per EOP-006. Texas RE recommends changing the R4 parent requirement to: "Each TOP shall update and submit its revised restoration to its Reliability Coordinator for approval in accordance with EOP-006." This would indicate EOP-006 approval requirements apply to both 4.1 and 4.2.

If the SDT wishes to capture a materiality threshold for required updates and submissions, Texas RE recommends the SDT focus on the materiality of the change itself. Accordingly, the SDT could revise the proposed Requirement R4 language to simply require submission of an update "to reflect system modifications that would materially change the implementation of its restoration plan." Texas RE further recommends that the SDT include language requiring summaries of non-material revisions to the plan be at least provided to the RC through a streamlined information sharing process. As such, the SDT should also include language in R3 along the following lines: "Each Transmission Operator shall submit summaries of any immaterial revisions to its restoration plan to its Reliability Coordinator within 45 days of such immaterial changes. For such immaterial changes, no approval by the Reliability Coordinator shall be necessary." Such language will facilitate effective communication between the TOP and the RC, which is critical to ultimately ensure personnel are prepared to enable System restoration and reliability is maintained throughout the process, while retaining a more streamlined approach for smaller changes.

Second, Texas RE remains concerned EOP-005 has no requirement for TOPs to correct plans not approved by the RC. There appears to be issues if an RC does not approve the plan within 30 calendar days of planned System modifications (or 90 days for unplanned). The modifications may be complete but the plan that includes the modifications may not be approved so an old copy (that cannot be utilized) will be in the Control Centers of a TOP. Texas RE recommends adding language regarding correcting unapproved plans as well as what a TOP is to do if an RC is late with its approval.

The purpose of EOP-005 is to have a clear, understood restoration process. While Texas RE appreciates the SDT's efforts, the SDT should address areas in which the proposed Standard could result in overlapping, conflicting, or multiple versions of restoration plans.

Response

The EOP SDT reviewed your first comment and does not agree that all changes should be submitted to the RC; only changes that affect the ability to implement your plan should be submitted.

Requirement R4, Part 4.1 is still subject to the 30-day RC approval per EOP-006. The EOP SDT concluded the requirement is clear as written. Requirement R4 states that the TOP shall submit its revised restoration plan to its RC for approval when the revision would change its ability to implement its restoration plan.

Requirement 4, Parts 4.1 and 4.2 reference BES modifications. BES is defined in the NERC Glossary of Terms. The Requirements also discuss permanent unplanned and permanent planned BES modifications and the reporting timeframes. The EOP SDT discussed your comment regarding providing the RC a "streamlined" information process for immaterial changes, and does not agree that this should be a requirement. The RC has 30 days to approve or disapprove a TOP restoration plan after submittal per EOP-006, Requirement R5, for permanent planned or unplanned BES modifications. EOP-005, Requirement R1, Part 1.1 requires strategies for System restoration. If your revised plan is currently in the approval process, you would refer to your strategies in your approved plan.

We suggest changing the proposed R4 from: R4 Each TOP shall update and submit its revised restoration plan to its RC for approval when the revision would change its ability to implement its restoration plan as follows: 4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications. 4.2 Prior to implementing a planned permanent BES modification subject to the RC approval requirements per EOP-006 First of all, the revision doesn't affect your ability to implement the Restoration Plan, it is the Plan. We think what the SDT really means here is you have experienced some change that impacts your ability to implement the approved Plan, and therefore you have to make a revision. Second, as written, this only addresses a change that you would make due to a BES modification. What if the revision is due to a procedural/organizational change? We think a better wording would be something like:	

R4. Each TOP shall update and resubmit its restoration plan to its RC for review and approval, when a System modification or other change has or will occur which invalidates or makes the approved plan unable to be implemented. Such updates shall be made as follows: 4.1 Within 90 calendar days after identifying any unplanned permanent BES modifications. 4.2 Prior to implementing a planned permanent BES modification or procedural change subject to the RC approval requirements per EOP-006.

Response	
Thank you for your comments. Requirement 4, Parts 4.1 and 4.2 reference BES modifications. BES is defined in the NERC Glossary of Terms. The EOP SDT's intent is discussed in the Rationale Box for Requirement R4, which is retained with the standard in the Rationale Section upon FERC approval. The EOP SDT also added language to the Rationale Box: "Examples of instances that do not require update and submission of a restoration plan include element number changes, ~~or~~ device changes, or administrative changes that have no significance to the implementation of the plan." If the procedural/organizational revision changes the ability to implement the restoration plan, the restoration plan would need to be submitted to the RC for approval.

(1) We thank the SDT for attempting to develop a requirement that would apply to TOPs, but only after the identification of a substantive change that impacts the TOP's ability to implement its restoration plan or impact the RC's ability to monitor and direct restoration efforts. (2) We find the proposed Requirement R4 is confusing regarding when a TOP is required to revise its system restoration plan, particularly since a revision appears to be tied solely to a BES modification. This could be a significant burden for entities to track. We believe the requirement should clarify upfront its application to a selective set of TOPs, and only under certain conditions identified by the SDT. We propose the following language instead, "Each Transmission Operator, who identifies a change in its restoration plan that would affect its	

ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts, shall revise and submit its restoration plan to its Reliability Coordinator for approval.” (3) We have concerns with the SDT’s proposal for Part 4.2, particularly to a general reference to the EOP-006 System Restoration Coordination Standard, and not a specific revision to the standard. We feel this standard could easily become unbundled or change in the future. (4) Moreover, could the RC or other NERC functional entities have an opportunity to influence a planned permanent BES modification other than through the System Restoration Coordination Standard, such as with a retirement of a large generator or introduction of a RAS? (5) Furthermore, we ask the SDT to clarify the exact moment just “prior to implementing a planned permanent BES modification.” Is it just before the modification is permanently and electrically connected or disconnected from the System, or during its construction phase when the availability of other existing Facilities are affected? (6) Likewise, the SDT has assumed that a TOP will revise its restoration plan only under anticipated BES modifications. We believe other reasons could exist, such as for information or operational technology infrastructure modifications or organizational restructuring, which could impact its ability to implement its plan. Hence, we proposed the following language for Part 4.2 instead, “Within 90 calendar days of identifying a change that would affect its ability to implement its plan or its Reliability Coordinator’s ability to monitor and direct restoration efforts.”

Thank you for your comments. If the revision changes the ability to implement the restoration plan, the restoration plan would need to be submitted to the RC for approval. If the RC approval time period changes in EOP-006 then the timeframe in EOP-005 will also change. Referencing EOP-006 ensures EOP-005 remains consistent if EOP-006 changes. There are NERC standards that require coordination of BES modifications for the TOP and RC.	

In reference to your question on RCs or other NERC functional entities having an opportunity to influence a planned permanent BES modification other than through the System Restoration Coordination Standard. This standard focuses on "restoring the Interconnection" and the TOP having a restoration plan, it's up to the TOP to revise their restoration plan, when a planned permanent or unplanned permanent BES modification is made that would change their ability to implement their plan. In reference to your comment regarding implementing a planned permanent BES modification, it is up to the TOP to identify when there is a change that impacts their ability to implement the restoration plan and when the change needs to take effect. If a revision changes the ability to implement the restoration plan, the restoration plan would need to be submitted to the RC for approval.

PJM's concern with Requirement R6 as written is that it can and has been interpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation may result in thousands of simulations having to be performed and is beyond the intention of the original EOP-005 drafting team. To eliminate any unintentional misinterpretation of this standard (e.g. to make it clear that full steady state and dynamic simulation of the entire Restoration Plan is not required) and to ensure that the right studies and testing are performed to ensure a reliable plan without overly burdening staff, PJM recommends the inclusion of the following language to the requirement: "R6 Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify"

Although the Rationale for Requirement R4 explains the qualification criteria for a BES modification, when the Rationale section is removed from the EOP-005-3 standard, Reclamation respectfully suggests a footnote be added to R4.4.1 to clarify a BES modification.

2. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language “at least once each 15 calendar months” back to “annual” or “annually,” as drafted in EOP-005-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Shannon Mickens - Southwest Power Pool, Inc. (RTO) - 2 - SPP RE, Group Name SPP Standards Review Group	
Answer	No
Document Name	
Comment	

We believe there could be some obligation changes between EOP-005-3 and EOP-006-3 regarding the timing of review of restoration plans and submission to the RC. The proposed EOP-005-3 seems to dictate how long a TOP can take between reviews of its plan, but that review must be done according to a schedule agreed to with the RC (EOP-006-3 R5). It may be an improvement to move the timing requirements to the RC side of this obligation and add the ‘outer bounds’ of the review timing to the RC requirement. Then EOP-005-3 R3 could simply remove the word annually and refer only to the ‘agreed upon schedule’ with the RC. Also, the clear, unambiguous language regarding the 15 month outer bound on review, does not preclude an ‘annual’ review.

The proposed R5 of EOP-006-3 would read:

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area, on a mutually agreed, pre-determined schedule not to exceed 15 calendar months.

The proposed R3 of EOP-005-3 would read:

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator on a mutually-agreed, predetermined schedule.

Based on Operations Training programs, we support the change to “annual” in R8. There is no need to arbitrarily limit the length of time to 15 calendar months.

We disagree with the change in R9 and R15 of EOP-005-3 of requiring training within 24 calendar months rather than 'every two years'. We feel two calendar years provides more flexibility to match up training schedules and equipment availability. We are not simply looking for more time, just looking for flexibility to match schedules. Any corresponding changes to annual, 24 calendar months, or 15 calendar months need to be reflect in the VRF/VSL tables as well.

Response	
Thank you for your comments. EOP-006, Requirement R3, requires the RC to review its plan every 13 calendar months. EOP-006, Requirement R5, requires the RC to review the TOP's plans within 30 days of receipt. EOP-005, Requirement R3, requires the TOP to review and submit its plan to the RC on an annual basis. Therefore, since these are individual requirements there is no gap or need for any revisions to these requirements. The EOP SDT agrees with your suggestion for Requirements R9 and R15 to change 24 calendar months back to two calendar years. It provides flexibility for training schedules and equipment availability. In addition, it better aligns with "annual" language in the requirements.

Comment	
Texas RE supports retention of the 15 calendar month requirement and opposes the change back to "annual" or "annually." Under the interpretation language cited by the SDT, this change would permit TOPs to delay the review and submit restoration plans for almost two calendar years. Again, EOP-005's stated purpose is to "ensure plans, Facilities and personnel are prepared to enable System restoration." Consistent with this principle, a clear 15-month requirement to review and submit restoration plans appears to advance the stated goal of ensuring preparedness to enable System restoration. At a minimum, Texas RE requests that the SDT provide a reliability-based reason for retaining the "annual" submission requirement as opposed to the previously proposed 15-month requirement.

The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”. The EOP SDT discussed your comment on TOPs waiting two calendar years to review and submit the plan but disagree, given there is a mutually-agreed, predetermined review schedule.

Reclamation is aware that some EROs believe that the term “annual” may be misinterpreted by Responsible Entites such that a Responsible Entity would allege compliance if the “annual” review took place once in 2015 and once in 2016, albeit January 2015 and December 2016, thereby resulting in potentially bi-annual reviews. Although the NERC CAN-0010, Revised 11-16-11, provided instructions to the Compliance Enforcement Authority on how to assess compliance when a standard requires an “annual” activity, Reclamation believes a more defined time frame in the Standard is beneficial to reduce a Registered Entity’s potential confusion and compliance violations. Therefore, Reclamation recommends the language “at least once ***every*** 15 calendar months” be retained.

Comment

The standards are a minimum that must be met in order to be compliant. There is nothing in the standards saying an entity cannot do something, such as in this case a review, more often. The standard if left alone clearly states “at least once every 15 calendar months”, which can mean:

- the review can be completed on January 1, 2016 and then again on March 29, 2017;
- or it could mean once on January 1, 2016 and again on January 1, 2017;

- or on January 1, 2016 then again on February 1, 2016, then again on March 1, 2016, then etc. etc.

LES believes the entities that commented asking for the change back to “annual” are misunderstanding the intent of “at least once each 15 calendar months”. By changing the language to “annual” you are creating several issues:

- misinterpretation of the word “annual” as it is not a NERC Glossary Term
- reliance on a Compliance Application Notices (CANs) which are not industry approved or enforceable
- an unnecessary burden on entities as it tightens the timeline for reviews
- the term “annual” has been removed from multiple standards in favor of “at least once each 15 calendar months”

If the language is changed to “annual”; “Annual” needs to be defined and included in the NERC Glossary of Terms, however, this is in contradiction to other standards moving away from the term annual (i.e. CIP V5)

We appreciate the SDT's efforts to move back to using annual references within the standard. We also applaud the SDT for not attempting to define the meaning of "annual" within this standard. Industry has adapted its processes to align with the current language, and we feel modifying such processes could cause confusion for both operations and compliance.

IPC agrees with changing the language back to "Annual/Annually". However, the term Annual should be defined or point to where it is defined. Is annual 11–13 months? Or is it calendar year? If it is calendar year, there is some concern around what happens if an operator is trained each year, but the time between training is well over 12 months. For example, training occurs in March of 2017 and then the next training is December of 2018. This would be 21 months apart, but training was completed each year.

Xcel Energy strongly agrees with the change back to "annual" (per our comments to the previous revision), but questions the change in R9 and R15 from "every two calendar years" to "every 24 calendar months". We feel this is the same issue previously raised with the "annual" language and question why the SDT, in the same revision where they went back on the previous change to "annual", would at the same time change this language to apply in a way that is not consistent with the "annual" requirements. Xcel Energy recommends reverting to "every two calendar years".

3. Do you agree with the revisions and clarifications made by the EOP SDT to standard EOP-006-2? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.

Marsha Morgan - Southern Company - Southern Company Services, Inc. - 1,3,5,6 - SERC, Group Name Southern Company	
Answer	No

Comment	
In EOP-006-3, Draft #2, R1.2, SOCO does not agree with the removal of the word “adjacent”. The TOP should only have to document in the restoration plan the process to interconnect with ADJACENT TOPs and not TOPs in general.	
Likes 0	
Dislikes 0	
Response	
Thank you for your comment. The EOP SDT determined that the addition of “adjacent” in R1.2 is unnecessary and is captured by the use of “neighboring” in Requirement R1. “Neighboring” gives the RC the latitude to define which applicable entities are to be included in its restoration plan. The EOP SDT has added the following rationale box: “The Purpose statement of EOP-006-3 states: “Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.”

Comments: Part 1.2 should at least have the word “other” inserted befor the last use of Reliability Coordinators. In R3, 13 calendar months should be annually to match the changes made in EOP-005. The rolling monthly requirements are difficult to track and provide no real value over the calendar year requirement. In R8, 24 calendar months should remain two calendar years. The rolling monthly requirements are difficult to track and provide no real value over the calendar year requirement.

Response	

Thank you for your comment. The SDT agrees with adding the word “other” before the last use of Reliability Coordinators in Requirement 1, Requirement part 1.2. The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”. The 13-month-review provides flexibility for restoration plans; to closely align with TOP’s restoration plan and the “annual” review language in the requirements. The EOP SDT agrees with your suggestion for Requirement R8, changing 24 calendar months back to two calendar years. It provides flexibility for training schedules and equipment availability. In addition, it better aligns with “annual” language in the requirements.

1. LES believes R3 should be changed to "at least once every 15 calendar months" to match EOP-005. The RC timeline and the TOP timeline should not be different. 2. LES agrees with R7, however 'annual' could be better stated as "at least once each calendar year". LES believes all training should be done on an annual (calendar year basis). 3. LES believes every two calendar years is much easier to track than 24 calendar months, since that makes it rolling.

We disagree with the removal of the approved R8 that requires the RC to provide authorization before resynchronizing islands. We feel this is an important reliability concept that should not have been removed and should be reinstated in the drafts. By not specifically requiring RC authorization before resynchronizing islands, islands could be synched or sync attempted resulting in threats to the fledgling restoration. We also disagree with the removal of “adjacent” in the proposed R1.2. If adjacent is left out, then there needs to be a clarification of which RCs and/or TOPs are necessary to be coordinated with. As currently stated it is not clear which RCs need to have interconnection criteria with each other and could lead to an interpretation that ALL RC’s should coordinate when that is unnecessary for reliability. We understand the intent of the requirement to require coordination only with only neighboring RCs. We prefer the word “adjacent” be included there as this provides the needed clarity.

Thank you for your comments. The EOP SDT agrees with the Independent Experts Review Panel (IERP) to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1. The EOP SDT determined that the addition of "adjacent" in R1.2 is unnecessary and is captured by the use of "neighboring" in Requirement R1. "Neighboring" gives the RC the latitude to define which applicable entities are to be included in its restoration plan. The Purpose statement of EOP-006-3 states: "Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection."

We believe the SDT should use its authority, as outlined within this project's SAR, to review Requirement R7 as a training-related requirement whose retirement is based on Paragraph 81, B7 Redundant criteria. Many aspects of this training requirement are already incorporated within a RC's systematic approach to training program, as required within various PER standards. At the very least, we ask the SDT to remove the reference to annual training and instead focus the requirement on training topics that should be included in an operations training program. This similar approach was taken by the 2007-06.2 Phase 2 of System Protection Coordination SDT with the introduction of NERC Reliability Standard PER-006-1.

ERCOT appreciates the efforts to clarify the issue of interpretation on the words "neigbboring" and "adjacent." However, the term "'neighboring' in no ways gives the RC the latitude to define which applicable entities are to be included in its restoration plan, since this term could be interpreted either way by entities and auditors allike until a NERC project or NERC SDT defines the meaning of "neighboring" or "adjacent" in reference to the ERCOT interconnection. ERCOT would prefer specificity on what this means, rather than leaving it unclear,	

given the duty to coordinate if we are "neighboring." ERCOT asks the SDT to clarify the meaning of the words "adjacent" or "neigboring" and provides this example: 1. Each Reliability Coordinator shall develop, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring ***(i.e., within the same interconnection)*** Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include:..."

Texas RE is concerned there is no requirement for the Reliability Coordinator to provide its restoration plan to Transmission Operators outside the Reliability Coordinator Area. There is also no requirement for a Transmission Operator to provide its restoration plan with a Reliability Coordinator that is not its own contained within EOP-005.) If there is criteria required to re-establish interconnections with other TOPs in other Reliability Coordinator Areas, it is prudent to provide the restoration plan to those TOPs. Simply providing the restoration plan to the neighboring RC does not mean the TOP (in the neighboring RC Area) will be aware as the neighboring RC is under no obligation to provide that specific plan to its TOPS.

Texas RE noticed there is a different time period between the Reliability Coordinator and the Transmission Operators to review their restoration plans. EOP-005-2 Requirement, R3 which requires Transmission Operators to review and submit its restoration plan annually while EOP-006-3, R3 requires the Reliability Coordinator to review its plan within 13 calendar months. Texas RE is concerned the two plans may not be coordinated if they are reviewed (and potentially revised) at different times.

In addition, Texas RE respectfully requests rationale as to why EOP-006-3 Requirement R3 changed the review to within 13 months from 15 months.

Response	
Thank you for your comments.	

The RCs in Requirement R2 are distributing their restoration plan to neighboring RCs and in Requirement R4 the RC is reviewing the neighboring RC plans and looking for conflicts. During restoration, it is up to the RCs to decide any restoration coordination that is needed from TOPs within their areas. There is nothing that precludes the RC or TOP from sending their plan to other entities.

The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”. With the revision back to “annual” in both EOP-005 and EOP-006, EOP-006, Requirement R3 was also revised back to the 13 months, as stated in the currently-enforced standard. The 13-month-review provides flexibility for restoration plans and closely aligns with TOP’s restoration plan and the “annual” review language in the requirements.

4. Do you agree with the revisions and clarifications made by the EOP SDT, based on industry comments, to revise the language "at least once each 15 calendar months" back to "annual" or "annually," as drafted in EOP-006-02? If you do not agree, or if you agree but have comments or suggestions for the proposed standard, please provide your recommendation and explanation.	
Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	No

Comment	
Texas RE supports retention of the 15 calendar month requirement and opposes the change back to "annual" or "annually." Texas RE is concerned CAN-010 could allow for training on critical tasks to take place almost two years apart.

Reclamation is aware that some EROs believe that the term “annual” may be misinterpreted by Responsible Entites such that a Responsible Entity would allege compliance if the “annual” review took place once in 2015 and once in 2016, albeit January 2015 and December 2016, thereby resulting in potentially bi-annual reviews. Although the NERC CAN-0010, Revised 11-16-11, provided instructions to the Compliance Enforcement Authority on how to assess compliance when a standard requires an “annual” activity, Reclamation believes a more defined time frame in the Standard is beneficial to reduce a Registered Entity’s potential confusion and compliance violations. Therefore, Reclamation recommends the language “at least once ***every*** 15 calendar months” be retained.

Thank you for your comments. The EOP SDT decided to maintain “annual” in EOP-005 and EOP-006 based on industry comments through postings and multiple outreach sessions. Many comments received from industry stated that their annual schedules are already in place based on how entities define annually. The *NERC CAN-0010 - Implementation of Annual in Reliability Standards Requirements* also provides guidance on defining “annual”. EOP-006, Requirement R3, requires the RC to review its plan every 13 calendar months. EOP-006, Requirement R5, requires the RC to review the TOP’s plans within 30 days of receipt. EOP-005, Requirement R3, requires the TOP to review and submit its plan to the RC on an annual basis. Therefore, since these are individual requirements there is no gap or need for any revisions to these requirements. EOP-006, Requirement R3, was revised back to the 13 months.

Comment	

LES believes training should be required either every calendar year or every other calendar year, but disagrees with changing the wording to "annual" in R7 as it is too ambiguous. LES also disagrees with changing EOP-006 R3 (for reviewing restoration plan) from "within 15 calendar months" to "within 13 calendar months" too.

We appreciate the SDT's efforts to move back to using annual references within the standard. We also applaud the SDT for not attempting to define the meaning of "annual" within this standard. Industry has adapted its processes to align with the current language, and we feel modifying such processes could cause confusion for both operations and compliance.

We would like the SDT to consider separating EOP-005-2 R1 into 2 requirements for a few reasons. The subparts of the requirement are not applicable to the implementation of the plan resulting in a awkwardly worded requirement. The assessment of the plan is critical to the reliability of the BES and the plan should linclude all of the identified parts, but it becomes obscure, secondary even in consideration with the implementation of the plan. Additionally, the EROs within NERC are working to develop an updated violation calculator for consideration when addressing potential violations. Per a recent WECC compliance workshop, the calculator is likely to include the consideration of “Time-Horizon”, which given that R1 has 2, creates confusion.

The intent of the EOP SDT in adding the language “develop and implement” is for the TOP to develop its restoration plan and for the restoration plan to be utilized. The EOP SDT believes the RSAW covers the separation of “develop and implement” with the use of the following language: “Verify that the restoration plan was implemented (such as during Disturbances).” “Verify each Transmission Operator has a dated, documented System restoration plan developed in accordance with R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator.”

Comment	
Dominion suggests that "the TOP's ability to implemenet the plan" be struck from the R4 Rationale. Dominion is of the opinion that sentence will be clearer without this information and that it more closely mirrors the intention of the Standards Drafting Team. The sentence should now read: "The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts."

Based on the draft of RSAW, HQT suggest to add the obligation to submit to the TOP a corrective action plan on the R14 when the TOP testing requirement(s) are not met :

Actual requirement

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

Corrective action plan :

14.3 Each Generator Operator shall, within 10 calendar days of an indication of any testing requirements not met under Requirement R7: [*Violation Risk Factor:*

High] [*Time Horizon: Operations Planning, Long-Term Planning*]

 Develop a Corrective Action Plan (CAP) for the identified Blackstart Resource, and an evaluation of the CAP’s applicability to the entity’s other Blackstart Ressource including other locations; or

Explain in a declaration why corrective actions are beyond the entity's control owould not improve BES reliability, and that no further corrective actions will be taken. Submit the conclusion(s) to the Transmission Operator Typo from M15 to be corrected in coordination with R15 : M15 Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

Dislikes 0	
Response	
Thank you for your comments. The EOP SDT does not agree a requirement needs to be added to the standard. If a Blackstart Resource fails a test, it is up to the TOP to resolve. The EOP SDT has updated Measure M15 as follows: "Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15."

Comment	

Although Portland General Electric Company (PGE) voted "affirmative" during this round of balloting, PGE feels strongly that ANY training requirements identified in the development of a standard should be addressed in the PER training standards and not in separate standards and requirements. The Systematic Approach to Training is as such that training requirements from other standards are easily adoptable into the training regimen. Adding requirements outside of the PER standards becomes an administrative nightmare by duplicating efforts relating to tracking and the application of the actual training.

Additionally, similar to the change made in Requirement R8, there is no reason to change Requirement R9 from two calendar years to 24 calendar months. Perhaps it seems like every two calendar years and every 24 calendar months are the same thing but it isn't. By changing the measurement to months, the tracking that is required starts in the month the training is given for any particular individual. Based on the individual schedules the tracking takes on a scattered approach, akin to herding cats. Please seriously consider changing R9 back to every two calendar years.

Response

Thank you for your comment. The EOP SDT held extensive discussions on Requirement R10. Requirement R10 is being retained in EOP-005, as it is specific training with high impact, low occurrence. The PER-005 standard pertains to training processes.

The EOP SDT agrees with your suggestion for Requirement R9, changing 24 calendar months back to two calendar years. It provides flexibility for training schedules and equipment availability. In addition, it better aligns with “annual” language in the requirements.

We find EOP-005 -3 R1 redline changes to be confusing. The requiremnt needs additional clarification or should be restated. Does the requiremnt address real-time or study mode? Consider replacing the comma after "service" with a period and restating the second clause as a seperate sentence.

Response	
Thank you for your comment. The EOP SDT revised Requirement R1 for clarity. Requirement R1 refers to Real-time and Operations Planning horizons and now states: ”Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator’s System. The restoration plan shall include:”

In EOP-005 R9, recommend the following language: “Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every **two calendar years** to their field switching personnel identified as performing unique tasks associated with the Transmission Operator’s restoration plan that are outside of their normal tasks. **Unique tasks are those tasks that are defined by each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider.”** In EOP-005 R 9 and R15, 24 calendar months should remain two calendar years. The rolling monthly requirements are difficult to track and provide no real value over the calendar year requirement.	

In the first round of comments we provided the comment in regards to Section C1.1.2 Evidence Retention for replacing "last monitoring acitivity" to "last compliance audit". In the new draft of EOP-005-3 the drafting team did not change the verbiage to "last compliance audit" as they suggested that they would. In fact the Evidence retention section now has the term "last monitoring activity" in an additional four other places under record retention. In addition, evidence retention for R10 states "…since it last monitoring activity as well as one previous monitoring activity period…". Monitoring activities are Audits, Spot checks and Self Certifications. An etity should not be required to track evidence retention on a moving target. In addition, if a requirement is not audited, spot-checked or self certified, does an entity then need to retain evidence back to the last "monitoring activity" which may have been several years and several audit cycles? Our suggestion is that the drafting team remove all references to "last monitoring activity" and replace with the proper retention period that is not a moving target; such as last compliance audit, for three calendar years or whatever the appropriate retention period is. Also in section C.1.1.2 it is noted that there is new wording in four separate places regarding evidence retention for issues of non-compliance. One such statement reads "If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant". For the underlined portion of this sentence 'until found compliant' we would suggest a wording change to some other statement, as a Regional Entity typically does not find anyone "compliant". One suggestion is "..until the entity is notified that the remedy for non-compliance is complete".

RF provides a negative opinion for the EOP-005-3 VSLs and offers the following comments:

1. VSL for R1 –

   i. RF notes the SDT had updated the Severe VSL for Requirement R1 but still believes there is a gap. For example, as modified it now states "…but failed to implement the applicable requirement parts within Requirement R1." Since all sub-parts under Requirement R1 are applicable, this new language is basically stating the entity failed to implement all nine sub-parts. Once again there is a gap when an entity fails to meet between four and eight sub-parts. RF suggest the following as an additional "OR" VSL to the Severe VSL to address our concern.

      a. The Transmission Operator has an approved plan but failed to comply with four or more of the requirement parts within Requirement R1.

2. VSL for R8 –

   i. In the consideration of comments report, the SDT responded: "The EOP SDT reviewed your comment and made conforming changes." When RF reviews the new redline version, there are no changes shown for the VSLs for R8. RF understands Requirement R8 had been modified and had replaced the "15 months" language with "annual", but this should still be reflected in the VSLs. RF recommends modifying the Severe VSL level as follows:

a. Severe VSL - The Transmission Operator has not included [annual] System restoration training in its operations training program

RF provides a negative opinion for the EOP-006-3 VSLs and offers the following comments:

1. VSL for R5 –

   i. In the previous comment period, RF noted that since word “notification” is not in Requirement R5, there is subsequently no requirement for notifications. RF suggested removing the second “OR” VSL from each of the VSL Categories. In the consideration of comments the SDT responded: “The EOP SDT reviewed your comments, but agreed that ‘notified’ is in M5; and, therefore, did not make any changes.” RF would like to remind the SDT that the NERC *Violation Severity Level Guidelines* document states: "A Violation Severity Level (VSL) is a post-violation measurement of the degree to which a Reliability Standard Requirement was violated (Lower, Moderate, High, or Severe)." As we can see, it references Requirements being violated and not Measures. If the SDT believes notification is an important piece, RF suggests including notifications to the language in Requirement R5. Absent including notification language in Requirement R5, RF continues to suggest removing the second “OR” VSL from each of the VSL Categories as “notifications” are not required by the Requirement.

Response

Thank you for your comments. The EOP SDT updated the high VSL for Requirement R1 to read:
“The Transmission Operator has an approved plan but failed to comply with three or more of the ~~r~~equirement parts within Requirement R1.”
The EOP SDT discussed your comment regarding adding “annual” to severe VSL for Requirement R8. Requirement R8 addresses annual training, you are measured on whether system operations training is included in your operations training program.

To align Requirement R5, Part 5.1, the EOP SDT has updated the language of Requirement R5, Part 5.1 to state:

“5.1. The Reliability Coordinator shall determine whether the Transmission Operator’s restoration plan is coordinated and compatible with the Reliability Coordinator’s restoration plan and other Transmission Operators’ restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall provide notification to the Transmission Operator of approval or disapproval,

with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator."

Comment	
IPC does not agree with the new requirement 1.9 of requiring a process to transfer operations back to the Balancing Authority in accordance with RC criteria. Based on NERC definition of Balancing Authority, this function includes "maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time." So, a Balancing Authority function is maintained at all times, even during a System Restoration, so there is no process "to transfer operation back to the BA." The Balancing Authority should be involved in the Restoration of the system from initiation of event to resumption of "Normal Operations." The NERC functional Model describes real-time actions of the Balancing Authority entity to "Implement System Restoration plans as directed by the Transmission Operator." In R9, maintain calendar year language throughout whole standard.

Thank you for your comments. The Balancing Authority does not relinquish any BA authority to the TOP. In draft 2 of EOP-005 the EOP SDT revised Requirement R1, Part 1.9 to read: “Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator’s criteria.” The EOP SDT agrees with your suggestion for Requirement R9, changing 24 calendar months back to two calendar years. It provides flexibility for training schedules and equipment availability. In addition, it better aligns with “annual” language in the requirements.

AZPS agrees with requirement R1 and offers the following suggested wording for the proposed standard to enhance clarity:	

Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System **to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage** following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service...

Thank you for your comment. The EOP SDT revised Requirement R1 for clarity. Requirement R1 refers to Real-time and Operations Planning horizons and states: "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include:"

Comment
Reclamation recommends the following additional change to the existing Draft Standard EOP-005-3, R1, second sentence: Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state wherein the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart resource is located within the Transmission Operator's System.

Reclamation recommends replacing "the Reliability Coordinator" with "its Reliability Coordinator" in the following locations: EOP-005-3, Requirements and measures R10, R16, M16, and VSL Table R4, VSL Table R10, and VSL Table R16 to be consistent throughout the Standard.

Comment	
In EOP-006-3, R1, the requirement states "The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or **an energized island has been formed on the BES within the Reliability Coordinator Area**." On the other hand the restoration plan ends, "…when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas." If an island was created internal to a TOP around a hydro plant for example, this would fall within the scope of the RC restoration plan to start since it would be an island on the BES within the Reliability Coordinator Area. It would also meet the requirement to end the RC restoration plan because all TOPs and RC Areas would still be interconnected. It is reasonable to assume that the drafting team does not anticipate a Reliability Coordinator implementing their RC restoration plan and then ending their RC	

restoration plan at the same time. The drafting team should clarify when the RC restoration plan should be implemented such that the Requirement does not conflict with itself. In EOP-005-3, it is very clear the TOP restoration plan begins when a Blackstart Resource is required to restore a shut down area to service. This is different than when the RC restoration plan begins in EOP-006-3. There could be instances where the RC implements their restoration plan but no TOP within that RC implements their restoration plan. It is recommended that the standard drafting team also update EOP-006-3 R1 to better coordinate with the start and end of the TOP restoration plans. The RC restoration plan is developed for the RC but it contains criteria that the TOP will need to follow during system restoration. For example, EOP-006 R1.2 sets criteria and conditions for re-establishing interconnections for neighboring TOPs. R1.6 sets criteria for transferring operations and authority back to the Balancing Authority. It could be more clear in EOP-005 that the TOP's restoration plan should be developed in coordination with its Reliability Coordinator's restoration plan. For example, the criteria and conditions for re-establishing interconnections with other Transmission Operator defined in the RC restoration plan according to EOP-006 R1.2 should inform the TOP restoration plan when the TOP is developing language to meet EOP-005 R1.3 procedures for restoring interconnections with other Transmission Operators. We recommend changing the subrequirement R1.1 in EOP-005 to state the TOP restoration plan shall include, "Strategies for system restoration that ***meet the criteria defined in the Reliability Coordinator's restoration plan and*** are coordinated with the Reliability Coordinator's high level strategy for restoring the interconnection." We recommend that where requirements are removed from the standard (such as in EOP-005-3), that the number for the deleted requirement remain and be notated as "Retired," "Removed," or "Intentionally left blank," so that utilities do not have to perform unnecessary updates of compliance documentation simply for the sake of renumbering requirement references.

Response	
Thank you for your comments. If an island was created internal to a TOP, then this is a localized TOP outage. If the outage rises to the level that you require the RC assistance, then you would need to communicate with the RC at that point. The EOP SDT discussed your concerns, but EOP-005 Requirement 1.1 covers strategies in which the TOP should coordinate with the RC and states: "Strategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the	

Interconnection." We agree with your comment that in EOP-006 Requirement R1 the scope of the restoration plan starts and ends in this situation, but the TOP still needs to restore the System.

Retired requirements are not retained in subsequent versions of a standard.

I wish to adopt the following PJM comments:

Comments: R6

PJM's concern with this requirement as written is that it can and has been interpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation may result in thousands of simulations having to be performed and is beyond the intention of the original EOP-005 drafting team. To eliminate any unintentional misinterpretation of this standard (e.g. to make it clear that full steady state and dynamic simulation of the entire Restoration Plan is not required) and to ensure that the right studies and testing are performed to ensure a reliable plan without overly burdening staff, PJM recommends the inclusion of the following language to the requirement:

"R6 Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify"

Comment

We appreciate the re-insertion of the language in EOP-005-3 R1 describing the 'end scope' of the TOP Restoration plan. The removal in the first posting created uncertainty as to what the scope of the TOP plan should be. This is a good change and we support the re-inclusion of this language.

We believe the following change to the proposed **R1.9** would provide better clarity as to the intent of the SDT. If the intent is different, we request additional clarity be provided in a response to our comment.

1.9. Operating Processes for transferring operational control back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

In **R6** of **EOP-005-3**, we are disappointed that further clarity is not given on the scope or breadth of the steady state and dynamic simulation that would be required. Please expand the rationale with more explanation of the SDT's intent of what constitutes an acceptable steady state and dynamic simulation. Perhaps a whitepaper or guidance document could be created out of one of the NERC Technical Committees providing this guidance.

Also in **R8** of the proposed **EOP-005-3**, we suggest adding the phrase 'operational control' in the rationale for R8 to support the link to R1.9. The rationale would be worded as follows:

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring operational control, to include Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

In the proposed **R8.1** of **EOP-006-3**, we would like to see the GOPs identified with the qualifier "as having a defined role in the TOP's restoration plan", rather than leaving it open-ended. As currently stated, any GOP, even without a role in restoration, would be required to participate. The edited language would read:

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified as having a defined role in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.

In **EOP-006-3, R3**, the SDT references a change to 13 months for consistency with other standards. When providing the response to comments, can you please provide other locations within the approved body of Standards where 13 months is currently stated?

EOP-006-3 R7 is worded in seeming conflict with the M7 language. R7 simply requires the RC to 'include within its training program, annual System restoration training'. However the action verb in the requirement never mentions actually providing the training. The M7

language however seems to indicate needing to provide evidence of 'providing' the training. Either the M7 language or R7 language should be edited to match the SDT's intent.

Response	
Thank you for your comments. In response to industry comments, the EOP SDT revised the language in Requirement R1, Part 1.9, in draft 2 of EOP-005. The Balancing Authority does not relinquish any BA authority to the TOP. The revised language for Part 1.9 is as follows: "Operating Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria." The EOP SDT made no substantive changes to Requirement R6 from EOP-005-2. Steady state and dynamic simulations were discussed and the drafting team does not believe that this team should expand detailed explanations. The EOP SDT created a rationale box for Requirement R6 that reads: "Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added." The EOP SDT did not elect to change the wording contained in Requirement 8, Part 8.1 and believes all GOPs and TOPs should be included, as identified in the TOP's restoration plan. The EOP SDT has updated the standard to align with the "annual/annually" language. EOP-006, Requirement R3, was revised back to the 13 months, as stated in the currently-enforced EOP-006-2. The EOP SDT finds Requirement R7 is clear as written and Measure M7 requires the training records for evidence.

Comment	
FMPA believes many of the requirements in these standards are administrative in nature and should be considered for retirement. We also believe the revisions being proposed will not improve stakeholder understanding of the requirements or reliability, and may even lead to further confusion. Furthermore, the redlines posted by the drafting team lead reviewers to believe changes are being proposed that are not in fact changes from the current approved versions. A redline comparison to the current approved version should be provided to allow voters to easily understand the revisions being proposed. FMPA suggests leaving the current approved versions in place.

Thank you for your comments. The purpose statement of EOP-005 states: "Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." The purpose statement of EOP-006 states: "Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection." The EOP SDT concluded both standards are needed for reliability. A redline comparison to the currently-enforced standards will be posted when the standards are posted for final ballot. Draft 1 of the standards provided a redline to the currently-enforced standards; Draft 2 provided redlines to the last-posted drafts of the standards.

Comment	
Texas RE remains concerned that several substantive elements of those Requirements are not explicitly incorporated into the proposed EOP-005-3 R1 restoration plan implementation requirements. Texas RE has identified two principal areas of concern, and suggests the SDT revise in proposed language in R1 to address these issues.	

First, Requirement R7 provides not only that each affected Transmission Operator (TOP) shall implement its restoration plan following a Disturbance, but also that if "the restoration plan cannot be executed as expected the [TOP] shall utilize its restoration strategies to facilitate restoration." As presently drafted, there is no explicit requirement in the revised Requirement R1 requiring TOPs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. This adaptive capability serves an important function and promotes TOPs continuing to maintain situational awareness and strategic reactions throughout the course of restoration activities. As such, Texas RE recommends that if the SDT wishes to retire Requirement R7, it include the following language in the restoration plan content requirements specified in Requirement R1 in order to address this issue:

1.10 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

Second, Requirement R8 presently provides an explicit requirement that TOPs "resynchronize area(s) with neighboring [TOPs] only with the authorization of the Reliability Coordinator or in accordance with established procedures of the Reliability Coordinator." Although it is perhaps possible to read R1.1's mandate that the restoration plan include "[s]trategies for system restoration that are coordinated with the [RC's] high level strategy for restoring the interconnection" as encompassing this requirement, it is not clear that resynchronization is included within either "system restoration strategies" or the RC's "high level strategy." Moreover, there is no explicit reference to coordination activities with neighboring TOPs elsewhere in the Standard. To clarify this issue and ensure coordination activities are adequately addressed in entity restoration plans, Texas RE recommends that if the SDT wishes to retire R8, it include the following language in the restoration plan content requirements specified in R1 to address this issues:

1.11 Procedures to resynchronize area(s) with neighboring Transmission Operator area(s) after obtaining authorization from the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator..

Texas RE also notes that several substantive elements are also not explicitly incorporated into the proposed EOP-006-3 Requirement R1 restoration plan implementation requirements. Specifically, Requirement R7 provides not only that each affected RC shall implement its restoration plan following a Disturbance, but also that if "the restoration plan cannot be executed as expected the [RC] shall utilize its restoration strategies to facilitate restoration." As Texas RE indicated above, there is no explicit requirement in the revised EOP-006-3, Requirement R1 requiring RCs to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed. Although important for TOPs, these forms of adaptive strategies are particularly critical for RCs given their wide-area view of the BES and overall role in coordinating effective responses to Disturbances. As such, Texas RE recommends incorporating the following language into EOP-006-3, Requirement R1 if the SDT concludes the full retirement of EOP-006-3, Requirement R7 is appropriate:

1.7 Strategies to facilitate restoration if the other elements of the restoration plan cannot be executed as expected.

In a similar vein, EOP-006-3, Requirement R8 presently requires the RC to "coordinate and authorize resynchronizing islanded areas that bridge boundaries between [TOPs] or [RCs]. If the resynchronization cannot be completed as expected the [RC] shall utilize its restoration plan strategies to facilitate resynchronization." Similar to EOP-005-3, Requirement R1, these elements of R8 are not explicitly included within the various required parts of the RC's restoration plan as specified in EOP-006-3, R1.1 to 1.6. As a result, there could be confusion regarding resynchronization coordination and authorization obligations, as well as a gap regarding requirements to implement strategies to address resynchronization issues if events occur differently than specified with the RC's existing restoration plan. Again, Texas RE recommends that if the SDT opts to retire EOP-006-3, Requirement R8, it incorporate the RC's existing resynchronization obligations explicitly into the required restoration plan elements specified in Requirement R1 by added the following:

1.8 Procedures for coordinating and/or authorizing the resynchronization of islanded areas that bridge the boundaries between Transmission Operators and Reliability Coordinators

Texas RE identified several other areas for improvement:

- Texas RE requests the SDT provide a reason for removing the phrase "for each step of the restoration" from the rationale for EOP-005-3 Requirement R6.
- Texas RE disagrees with use of the term "unique tasks" in EOP-005-3 Requirement 9. That could cause confusion since it is undefined. Texas RE recommends using the term "restoration tasks" instead to indicate these are tasks are specific to restoration.
- Texas RE recommends the VSL for EOP-006-3 Requirement R8 include the piece about requesting the each Transmission Operator and Generator Operator identified in the restoration plan to participate in Reliability Coordinator drills per 8.1. While the VSLs address that the RC should conduct a drill, it does not reference who should participate.
- Texas RE respectfully requests the SDT provide a basis for its decision to adopt a 12-month implementation plan for both EOP-005-3 and EOP-006-3, including any data it considered in determining that this was an appropriate window for affected entities to meet their compliance obligations under the revised Standards.
- As suggested before, Texas RE recommends there be a project to define and distinguish the terms "neighboring" and "adjacent". Texas RE noticed the mapping document states "The term "neighboring" should be interpreted as "adjacent" and no

further clarification is necessary." Texas RE does believe further clarification is necessary as these terms appear throughout Standards and are undefined.

Response

The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant. EOP-005-3 Requirement R1 states: "Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System." Requirement R1, Part 1.3 states: "Procedures for restoring interconnections with other Transmission Operators under the direction of its Reliability Coordinator." The EOP SDT agrees that this language addresses the issue of the Requirement R7 retirement based upon your comment "…to employ such restoration strategies in implementing their restoration plan if the primary processes and procedures specified in the document cannot be executed."

The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant. Requirement R1, Parts 1.1, 1.3 and 1.7 covers re-establishing connections.

The rationale for EOP-005-3, Requirement R6 (draft 2) was previously written that dynamic simulations were needed for every step, which was not the intent of the current EOP SDT.

The EOP SDT agreed that the best way to address the intent of unique tasks was to draft the following rationale: "The intent of the term "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider."

The EOP SDT's intent for EOP-006-3, Requirement R8 requires the RC to conduct two drills per calendar year. The EOP SDT added a moderate VSL to capture Requirement R8, Part 8.1.

The Implementation Plan takes into account any barriers to implementation. The EOP SDT intent for the twelve-month Implementation Plan was to give all entities an appropriate time frame for implementation. The EOP SDT determined that the addition of "adjacent" in R1.2 is unnecessary and is captured by the use of "neighboring" in Requirement R1. "Neighboring" gives the RC the latitude to define which applicable entities are to be included in its restoration plan. The Purpose statement of EOP-006-3 states: "Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection."

We appreciate the re-insertion of the language in EOP-005-3 R1 describing the 'end scope' of the TOP Restoration plan. The removal in the first posting created uncertainty as to what the scope of the TOP plan should be. This is a good change and we support the re-inclusion of this language. We have discussed and believe the following change to the proposed R1.9 would provide some better clarity as to the intent of the SDT. If the intent is different, we request some additional clarity be provided in a response to our comment. Thank you. **1.9.** Operating Processes for transferring operationsal control back to the Balancing Authority in accordance with the Reliability Coordinator's criteria. Also in R8 of the proposed EOP-005-3, we suggest adding the phrase 'operational control' in the rationale for R8 to support the link to R1.9. The rationale would be worded as follows: **Rationale for Requirement R8:** The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring operational control, to include Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.	

In the proposed **R8.1** of **EOP-006-3**, we would like to see the GOPs identified with the qualifier "as having a defined role in the TOP's restoration plan", rather than leaving it open-ended. As currently stated, any GOP, even without a role in restoration, would be required to participate. The edited language would read:

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified as having a defined role in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.

In **R6** of **EOP-005-3**, we are disappointed that further clarity is not given on the scope or breadth of the steady state and dynamic simulation that would be required. Please expand the rationale with more explanation of the SDT's intent of what constitutes an acceptable steady state and dynamic simulation. Perhaps a whitepaper or guidance document could be created out of one of the NERC Technical Committees providing this guidance.

In **EOP-006-3, R3**, the SDT references a change to 13 months for consistency with other standards. When providing the response to comments, can you please provide other locations within the approved body of Standards where 13 months is currently stated?

EOP-006-3 R7 is worded in seeming conflict with the M7 language. R7 simply requires the RC to 'include within its traingin program, annual System restoration training'. However the action verb in the requirement never mentions actually providing the training. The M7 language however seems to indicate needing to provide evidence of 'providing' the training. Either the M7 language or R7 language should be edited to match the SDT's intent.

Comment	
(1) We thank the SDT for listening to our previously submitted comments, specifically the removal of "maintain" from requirement language and incorporation of "annual" within appropriate requirements. (2) However, we question the language listed within Requirement R1 of EOP-005-1. We question if the SDT meant to remove "to service" from the phrase "…required to restore the shutdown area to service," before adding the proposed language "to a state whereby the choice of the next Load to be restored is not driven…" We recommend removing the "to service" reference from the requirement to alleviate confusion. (3) We caution the SDT on its capitalization of "Load" in Requirement R1 of EOP-005-1. According to the NERC Glossary of Terms, the definition refers to an "end-use device or customer that receives power from the electric system." While a TOP who is part of a vertically integrated utility may have the ability to choose which end-use customers it can restore and in what order, other utility business models rely on BAs and DPs to select pre-defined load block quantities as part of its restoration strategy. We recommend that the term "load" should not be capitalized in this context. (4) We believe the SDT should use its authority, as outlined within this project's SAR, to review Requirement R8 as a training-related requirement whose retirement is based on Paragraph 81, B7 Redundant criteria. Many aspects of this training requirement are already incorporated within a TOP's systematic approach to training program, as required within various PER standards. At the very least, we ask the	

SDT to remove the reference to annual training and instead focus the requirement on training topics that should be included in an operations training program. This similar approach was taken by the 2007-06.2 Phase 2 of System Protection Coordination SDT with the introduction of NERC Reliability Standard PER-006-1. (5) We believe the wording with Part 8.5 of EOP-005-3 needs to be clarified. The assumption is the TOP will transfer Demand and resource balance operations within its Transmission Operator Area over to the Balancing Authority. However, there could exist multiple BAs within the TOP's Area. Even the NERC Glossary definition for a BA identifies that a BA can only maintain Demand and resource balance within its own Balancing Authority Area. We believe the language should be clarified to read "Transition of Demand and resource balance to an affected Balancing Authority." (6) We find the Section C.1.2 of the EOP-005-3 standard confusing with references to "last monitoring activity." We believe the SDT should revise the entire section and replicate the language listed in an already approved standard, like EOP-004-3. Within that specific standard, the Responsible Entity retains evidence of compliance since the last compliance audit, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. (7) We disagree with the SDT's assessment that the VSLs for R10 and R16 "meet or exceed the current level of compliance." We believe the VSLs for these requirements should be structured according to a percentage of the applicable personnel who need to be trained. This is a similar concept as used for defining the VSLs for R15. (8) We thank the SDT for this opportunity to provide comments on these standards.

Response
Thank you for your comments. The EOP SDT revised Requirement R1 for clarity. Requirement R1 refers to Real-time and Operations Planning horizons and states: "Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include:"

The EOP SDT has not changed the lowercase word "load."

The EOP SDT held extensive discussions on Requirement R7. Requirement R7 is being retained in EOP-006, as it is specific training with high impact, low occurrence. The PER-005 standard pertains to training processes.

The EOP SDT discussed this situation and that the TOP needs to address this in their restoration plan when they are also a BA.

The Evidence Retention Section has been updated to state "last compliance audit."

Based on the draft of RSAW, we suggest to add the obligation to submit to the TOP a corrective action plan on the R14 when the TOP testing requirement(s) are not met :

Actual requirement

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

Corrective action plan :

14.3 Each Generator Operator shall, within 10 calendar days of an indication of any testing requirements not met under Requirement R7: [*Violation Risk Factor:* *High*] [*Time Horizon: Operations Planning, Long-Term Planning*] -Develop a Corrective Action Plan (CAP) for the identified Blackstart Resource, and an evaluation of the CAP's applicability to the entity's other Blackstart Ressource including other locations; or -Explain in a declaration why corrective actions are beyond the entity's control or would not improve BES reliability, and that no further corrective actions will be taken. -Submit the conclusion(s) to the Transmission Operator Typo from M15 to be corrected in coordination with R15.quirement : M15 Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and energizing a bus of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

Response
The EOP SDT has updated Measure M15 to state: "Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a BUS and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15."

In EOP-006-3 R1 the requirement states "The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or **an energized island has been formed on the BES within the Reliability Coordinator Area**." On the other hand the restoration plan ends, "…when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas." If an island was created internal to a TOP around a hydro plant for example, this would fall within the scope of the RC Restoration plan to start since it would be an island on the BES within the Reliability Coordinator Area. It would also meet the requirement to end the RC Restoration Plan because all TOps and RC Areas would still be interconnected. It is reasonable to assume that the drafting team does not anticipate a Reliability Coordinator implementing their RC Restoration Plan and then ending their RC Restoration plan at the same time. The drafting team should clarify when the RC Restoration Plan should be implemented such that the Requirement does not conflict with itself.

In EOP-005-3, it is very clear the TOp restoration plan begins when a Blackstart Resource is required to restore the a shut down area to service. This is different than when the RC Restoration Plan begins in EOP-006-3. There could be instances where the RC implements their

restoration plan but no TOp within that RC implements their restoration plan. It is recommended that the standard drafting team also update EOP-006-3 R1 to better coordinate with the start and end of the TOp Restoration plans . The RC restoration plan is developed for the RC but it contains criteria that the TOp will need to follow during system restoration. For example, EOP-006 R1.2 sets criteria and conditions for re-establishing interconnections for neighboring TOps. R1.6 sets criteria for transferring operations and authority back to the Balancing Authority. It could be more clear in EOP-005 that the TOps restoration plan should be developed in coordination with its Reliability Coordinator restoration plan. For example, the criteria and conditions for re-establishing interconnections with other Transmission Operators defined in the RC restoration plan according to EOP-006 R1.2 should inform the TOp restoration plan when the TOp is developing language to meet EOP-005 R1.3 procedures for restoring interconnections with other Transmission Operators. We recommend changing the subrequirement R1.1 in EOP-005 to state the TOp restoration plan shall include, “Strategies for system restoration that ***meet the criteria defined in the Reliability Coordinator’s restoration plan and*** are coordinated with the Reliability Coordinator’s high level strategy for restoring the interconnection.” We recommend that where requirements are removed from the standard, that the number for the deleted requirement remain and be notated as “Retired,” “Removed,” or “Intentionally left blank,” so that utilities do not have to perform unnecessary updates of compliance documentation simply for the sake of renumbering requirement references.

Thank you for your comments. The EOP SDT revised Requirement R1 for clarity. Requirement R1 refers to Real-time and Operations Planning horizons and states: ”Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator’s System. The restoration plan shall include:” If an island was created internal to a TOP, then this is a localized TOP outage. And if it rises to the level that you require the RC assistance, then you would need to communicate with the RC at that point.	

EOP-005 Requirement 1.1 covers strategies in which the TOP should coordinate with the RC and states: “Strategies for System restoration that are coordinated with its Reliability Coordinator’s high level strategy for restoring the Interconnection.” We agree with your comment, in EOP-006 Requirement R1 that the scope of the restoration plan starts and ends in this situation, but the TOP still needs to restore the System. Retired requirements are not retained in subsequent versions of a standard.

We do not understand the justifications for the change made to R1 (“to a state whereby the choice of the next Load to be restored…”). We’d like to request for the Standard Drafting Team to provide Rationale on the purpose of the change and example of where the choice of next Load to be restored “would be” driven by the need to control the frequency or voltage. Alternatively, the SDT may modify the wording to clarify.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-004-4 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	07/25/2016 – 09/08/2016
45-day formal comment period with additional ballot	11/18/2016 – 01/06/2016

Anticipated Actions	Date
10-day final ballot	01/05/2017 – 01/16/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**
   - **4.1. Functional Entities:** For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following Functional Entities will be collectively referred to as "Responsible Entity."
     - **4.1.1.** Reliability Coordinator
     - **4.1.2.** Balancing Authority
     - **4.1.3.** Transmission Owner
     - **4.1.4.** Transmission Operator
     - **4.1.5.** Generator Owner
     - **4.1.6.** Generator Operator
     - **4.1.7.** Distribution Provider
5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

D. Regional Variances

None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction resulting from a BES Emergency	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction	TOP	System-wide voltage reduction of 3% or more to maintain the continuity of the BES.
Firm load shedding resulting from a BES Emergency	Initiating RC, BA, TOP	Firm load shedding ≥ 100 MW (manual or automatic).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of =/> ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirement
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form

Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or voice: 404-446-9780, Option 1. Also submit to other applicable organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."

	Task	Comments
1.	Entity filing the report include: Company name: Name of contact person: Email address of contact person: Telephone Number: Submitted by (name):	
2.	Date and Time of recognized event. Date: (mm/dd/yyyy) Time: (hh:mm) Time/Zone:	
3.	Did the event originate in your system?	Yes ☐ No☐ Unknown ☐
4.	**Event Identification and Description:**	
	(Check applicable box) ☐ Damage or destruction of a Facility ☐ Physical Threat to its Facility ☐ Physical Threat to its BES control center ☐ System-wide voltage reduction ☐ BES Emergency: ☐ firm load shedding ☐ public appeal for load reduction ☐ voltage deviation on a Facility ☐ uncontrolled loss of firm load	Written description (optional):

EOP-004 Attachment 2: Event Reporting Form Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or voice: 404-446-9780, Option 1. Also submit to other applicable organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."		
Task		Comments
	☐ System separation (islanding) ☐ Generation loss ☐ Complete loss of off-site power to a nuclear generating plant (grid supply) ☐ Transmission loss ☐ Unplanned evacuation of its BES control center ☐ Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center ☐ Complete loss of monitoring or control capability at its staffed BES control center	

Version History

Version	Date	Action	Change Tracking
2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

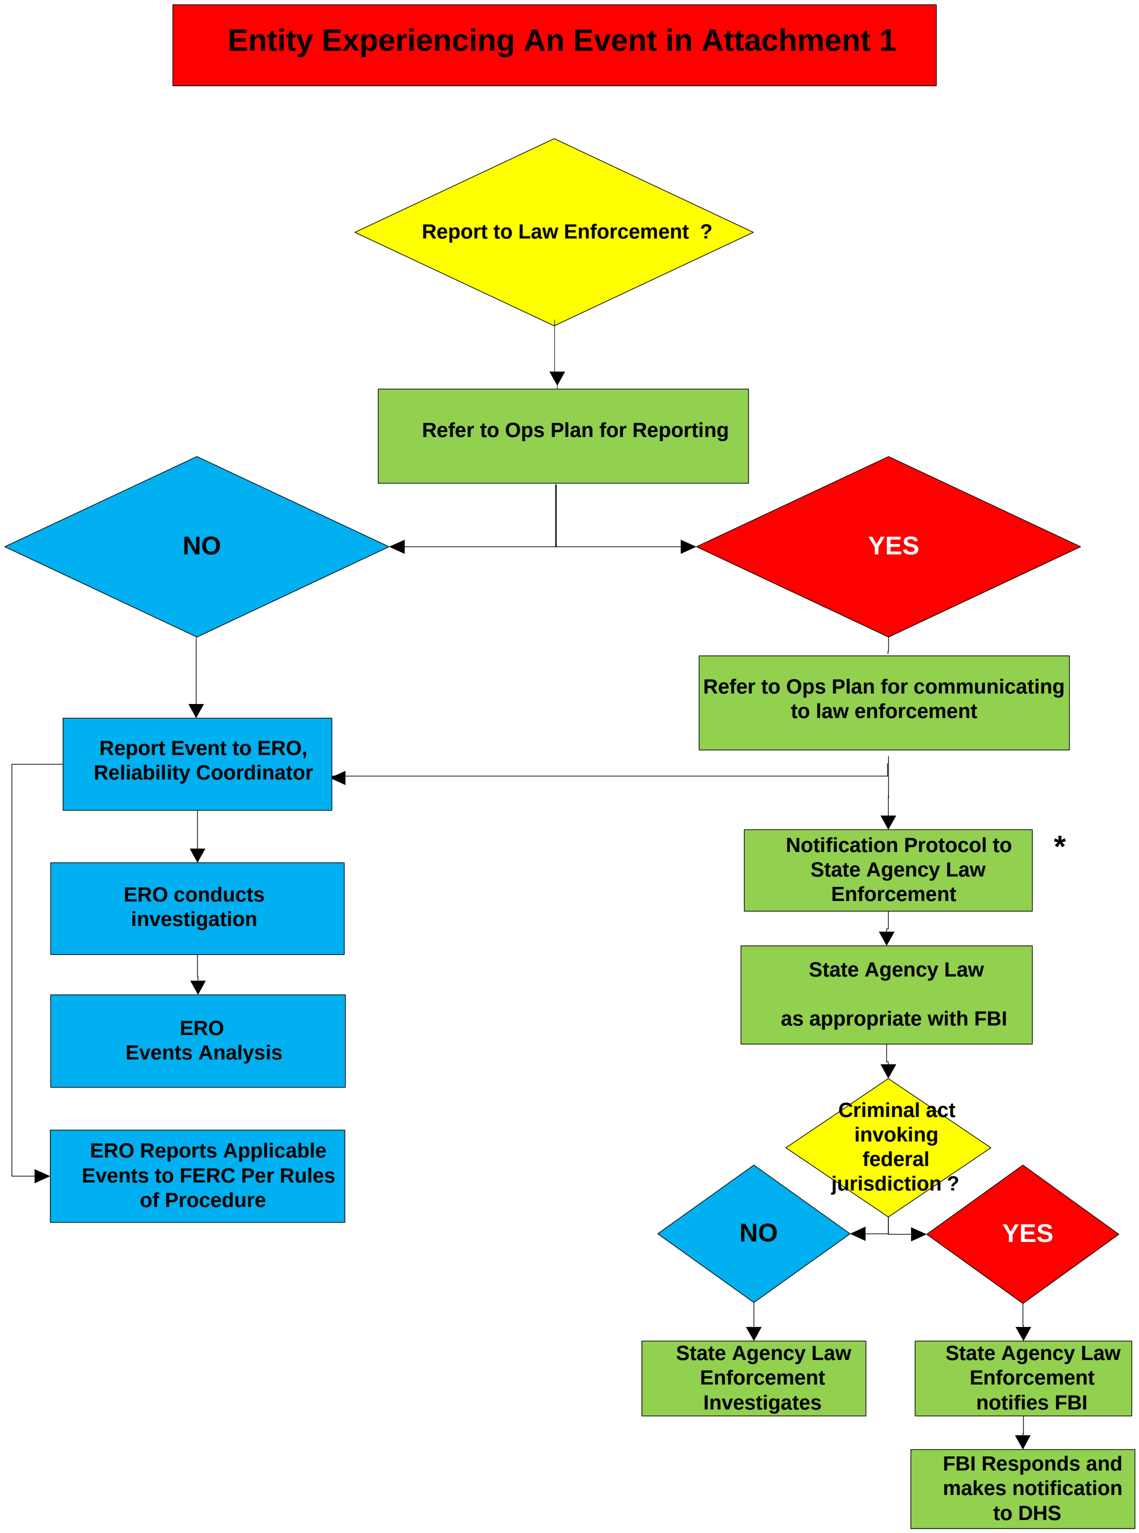
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional Entities to report the incidents and provide information known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-004-4 is being posted for a 45-day formal comment period with ballot.

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**

    4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following ~~functional~~ Functional ~~entities~~ Entities will be collectively referred to as "Responsible Entity."

    4.1.1. Reliability Coordinator

    4.1.2. Balancing Authority

    4.1.3. Transmission Owner

    4.1.4. Transmission Operator

    4.1.5. Generator Owner

    4.1.6. Generator Operator

    4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes~~, but is not limited to the~~ protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of ~~within~~ 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's ~~-~~next business day ~~if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday)~~ (4 p.m. local time will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of ~~within~~ 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day) ~~of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM local time on Monday)~~.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.

- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Plan within 24 hours or by the end of the next business day, as applicable.	within 24 hours or by the end of the next business day, as applicable. OR The Responsible Entity failed to submit a report for an event in EOP-004 Attachment 1.

D. Regional Variances

None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction resulting from a BES Emergency	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction ~~to maintain the continuity of the BES~~	TOP	System-~~-~~wide voltage reduction of 3% or more to maintain the continuity of the BES.
Firm load shedding resulting from a BES Emergency	Initiating RC, BA, TOP	Firm load shedding ≥ 100 MW (manual or automatic).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of =/> ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ ~~1,000~~1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirement
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES ~~Elements~~ Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center ~~evacuation~~	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at ~~a~~ its staffed BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting ~~a~~ its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at ~~a~~ its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability at ~~a~~ its staffed BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form		
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net , Facsimile 404-446-9770 or voice: 404-446-9780, Option 1. Also submit to other applicable organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."		
	Task	**Comments**
1.	Entity filing the report include: Company name: Name of contact person: Email address of contact person: Telephone Number: Submitted by (name):	
2.	Date and Time of recognized event. Date: (mm/dd/yyyy) Time: (hh:mm) Time/Zone:	
3.	Did the event originate in your system?	Yes ☐ No☐ Unknown ☐
	Event Identification and Description:	

EOP-004 Attachment 2: Event Reporting Form		
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net , Facsimile 404-446-9770 or voice: 404-446-9780~~, Option 1~~. Also submit to other ~~applicable~~ organizations per Requirement R1 "… (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or Applicable Governmental Authority)."		
	Task	**Comments**

4.	(Check applicable box)
	☐ Damage or destruction of a Facility
	☐ Physical Threat to its Facility
	☐ Physical Threat to its BES control center
	~~☐ Unplanned BES control center evacuation~~

	Task	**Comments**
	☐ Transmission loss ☐ Unplanned evacuation of its BES control center ~~evacuation~~ ☐ Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at ~~a~~ its staffed BES control center ☐ Complete loss of monitoring or control capability at ~~a~~ its staffed BES control center	

Version History

Version	Date	Action	Change Tracking
2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

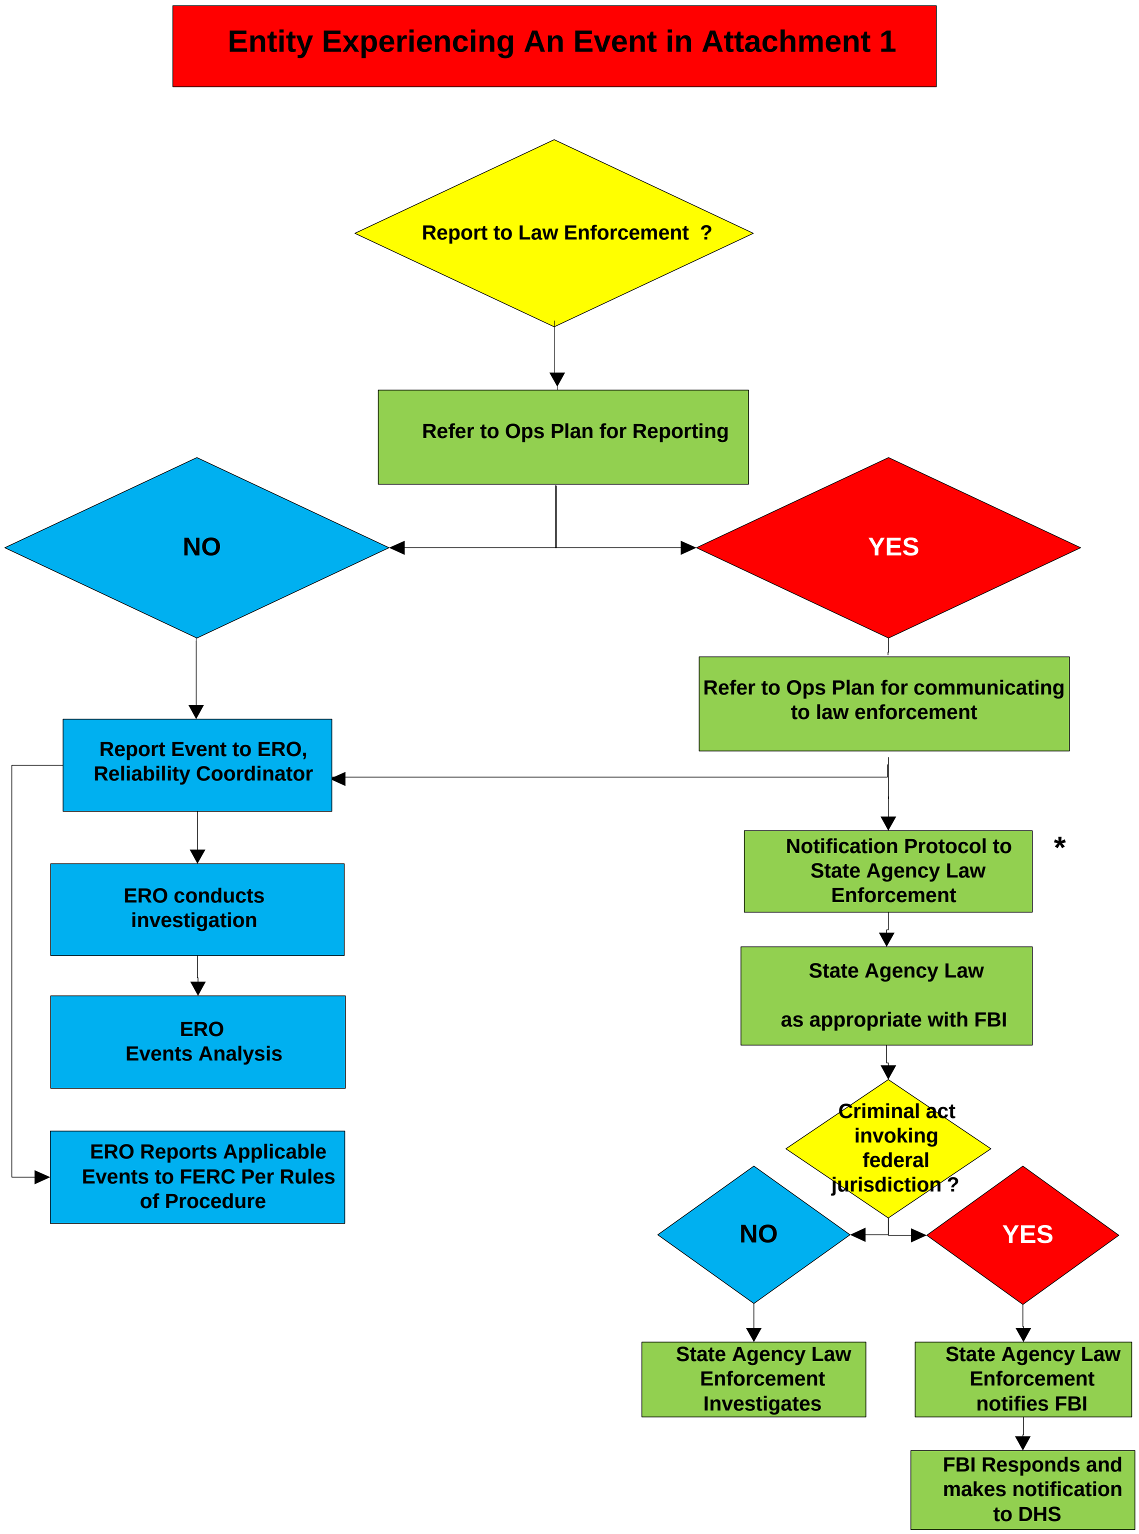
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional ~~entities~~ Entities to report the incidents and provide ~~known~~ information ~~as~~ known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standard EOP-004-4

Applicable Standard(s)

- EOP-004-4 — Event Reporting

Requested Retirement(s)

- EOP-004-3 — Event Reporting

Prerequisite Standard(s)

None.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Generator Owner
- Transmission Operator
- Generator Operator
- Distribution Provider

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standard making the standard more Results-based.

Effective Date

EOP-004-4 — Event Reporting

Where approval by an Applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the Applicable Governmental Authority.

Where approval by an Applicable Governmental Authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None.

Retirement Date

EOP-004-3 — Event Reporting
Reliability Standard EOP-004-3 shall be retired immediately prior to the effective date of EOP-004-4 in the particular jurisdiction in which the revised standard is becoming effective.

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standard EOP-004-4

Applicable Standard(s)

- EOP-004-4 — Event Reporting

Requested Retirement(s)

- EOP-004-3 — Event Reporting

Prerequisite Standard(s)

None.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Generator Owner
- Transmission Operator
- Generator Operator
- Distribution Provider

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standard making the standard more Results-based.

Effective Date

EOP-004-4 — Event Reporting

Where approval by an ~~applicable~~ Applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the ~~applicable~~ Applicable ~~governmental~~ Governmental ~~authority~~Authority.

Where approval by an ~~applicable~~ Applicable ~~governmental~~ Governmental ~~authority~~ Authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None.

Retirement Date

EOP-004-3 — Event Reporting
Reliability Standard EOP-004-3 shall be retired immediately prior to the effective date of EOP-004-4 in the particular jurisdiction in which the revised standard is becoming effective.

Unofficial Comment Form

2015-08 Emergency Operations – EOP-004-4

Do not use this form for submitting comments. Use the electronic form to submit comments on **Project 2015-08 Emergency Operations; EOP-004-4 – Event Reporting**. The electronic form must be submitted by **8 p.m. Eastern, Friday, January 6, 2017.**

Additional information is available on the project page. If you have questions, contact Standards Developer, Laura Anderson (via email), or at (404) 446-9671.

Background Information

Project 2015-08 Emergency Operations (EOP) implements the recommendations of the Project 2015-02 Periodic Review Team (PRT), including the recommendation to revise EOP-004-3 Attachment 1, and retire Requirement R3.[1] The EOP standards drafting team (SDT) considered those recommendations, along with additional input from the industry during the comment period on the project Standard Authorization Request (SAR) for this project. Additionally, the SDT has entered into collaborative efforts among NERC and the U.S. Department of Energy (DOE) to better align reporting requirements pursuant to EOP-004-3 and OE-417. Based on those inputs, the SDT proposes the changes to EOP-004-3 as indicated in this posting.

With respect to DOE collaboration, the SDT has discussed with DOE changes that would be necessary to EOP-004 Attachment 1 and to OE-417 to more closely align EOP-004-4 Attachment 1 Reportable Events with events reported on OE-417. Based on those discussions and the changes proposed in this posting, the SDT and DOE have made significant progress in harmonizing reporting requirements, which would relieve many entities from having to report Reportable Events on both forms. That collaboration continues, but it is important to note that **regardless of whether OE-417 is harmonized with EOP-004-4 Attachment 1, entities will be required to report all Reportable Events as required by EOP-004-4**.

The EOP SDT recommends the following changes to EOP-004-3:

- Update and clarify language in Requirements R1 and R2
- Retire Requirement R3
- Revise Attachment 1: Reportable Events and Attachment 2: Event Reporting Form

[1] The review included EOP-004-3, EOP-005-2, EOP-006-2 and EOP-008-1 to evaluate, for example, whether the requirements are clear and unambiguous. Recommended revisions to EOP-005-2, EOP-006-2, and EOP-008-1 have been posted for comment and ballot in a separate posting.

Update and Clarify Requirements R1 and R2

The SDT proposes a conforming edit in Requirement R1 to reference the correct version number of EOP-004-4 assuming EOP-004-4 ultimately is approved. Specifically, reference to "EOP-004-3" has been changed to "EOP-004-4." That conforming change also is made to Measure M1.

The SDT proposes to clarify in Requirement R2 that each Responsible Entity shall report events "specified in EOP-004-4 Attachment 1 to the entities specified" in its Operating Plan. The SDT proposes this addition to ensure the Responsible Entity is reporting on the event types and thresholds from EOP-004-4 Attachment 1. Additionally, the SDT proposes to clarify what constitutes a weekend for the purpose of implementing the requirement, i.e., "4 PM local time will be considered the end of the business day)." The SDT proposes similar language and additional clarifications in Measure M2.

Retire Requirement R3

The SDT recommends retiring Requirement R3 under Criterion B1, administrative, because it requires responsible entities to perform a function that is administrative in nature, does not support reliability, and is needlessly burdensome. The SDT notes that contact lists are administrative in nature and should not be part of a mandatory reliability standard.

Revise Attachment 1: Reportable Events and Attachment 2: Event Reporting Form

The SDT proposes several changes to the Event Type, Entity with Reporting Responsibility, and Threshold for Reporting in response to SAR comments and its own analyses. The SDTs changes intend to: clarify appropriate Responsible Entity responsibilities; eliminate duplicative reporting by the Generator Operator (GOP) and Balancing Authority (BA); clarify Generation loss criteria specific to Quebec Interconnection and ERCOT Interconnection; and align reporting requirements OE-417 where appropriate. The SDT provided its reasoning in the redlined standard.

The SDT proposes several changes to Attachment 2 to clarify to whom the Event Reporting Form should be submitted and to more appropriately describe the "Event Identification and Description" field on the form.

Questions

1. Do you agree with the SDT's recommended changes to EOP-004-3, Requirements R1 and R2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

2. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

   ☐ Yes
   ☐ No

   Comments:

4. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Requirement R2 **R2.** Each Responsible Entity shall report events per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM Monday local time).	EOP-004-04, Requirement R2 **R2.** Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).	Requirement R2 revisions were to provide for clarity; to remove the ambiguity for weekends and to add clarity for holidays.
EOP-004-03, Requirement R3 **R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year.	Recommended for retirement.	The EOP SDT recommends retirement of Requirement R3 under Criterion B1, administrative; the R3 requirement in EOP-004-3 requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. Contact lists are administrative in nature.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Attachment 1 Event Type: Damage or destruction of a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action.	EOP-004-04, Attachment 1 Event Type: Damage or destruction of its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-03, Attachment 1 Event Type: Physical threats to a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster	EOP-004-04, Attachment 1 Event Type: Physical threats to its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as:

Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		2.2. Processes to prepare for and mitigate Emergencies including: **2.2.1.** Notification to its Reliability Coordinator, to include current and projected conditions when experiencing a Capacity Emergency or Energy Emergency; **2.2.2.** Requesting an Energy Emergency Alert, per Attachment 1; **2.2.3.** Managing generating resources in its Balancing Authority Area to address: **2.2.3.1.** capability and availability; **2.2.3.2.** fuel supply and inventory concerns; **2.2.3.3.** fuel switching capabilities; and **2.2.3.4.** environmental constraints. **2.2.4.** Public appeals for voluntary Load reductions;
EOP-004-03, Attachment 1 Event Type: BES Emergency requiring system-wide voltage reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting	EOP-004-04, Attachment 1 Event Type: System-wide voltage reduction Entity with Reporting Responsibility: TOP Threshold for Reporting: System-wide voltage reduction of 3% or more to maintain the continuity of the BES.	The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: System wide voltage reduction of 3% or more.		
EOP-004-03, Attachment 1 Event Type: BES Emergency requiring manual firm load shedding Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Manual firm load shedding ≥ 100 MW.	EOP-004-04, Attachment 1 Event Type: Firm load shedding resulting from a BES Emergency Entity with Reporting Responsibility: Initiating RC, BA, TOP Threshold for Reporting: Firm load shedding ≥ 100 MW (manual or automatic).	The RC, BA and TOP are the entities that would initiate manual firm load shedding.
EOP-004-03, Attachment 1 Event Type: BES Emergency resulting in automatic firm load shedding Entity with Reporting Responsibility: DP, TOP Threshold for Reporting: Automatic firm load shedding ≥ 100 MW (via automatic undervoltage or underfrequency load shedding schemes, or RAS).	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.
EOP-004-03, Attachment 1 Event Type: Voltage deviation on a Facility	EOP-004-04, Attachment 1	To provide clarity to the Event Type and to the Threshold for Reporting, the language revisions were made.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Entity with Reporting Responsibility: TOP Threshold for Reporting: Observed within its area a voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	Event Type: BES Emergency resulting in voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: A voltage deviation of =/> ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	
EOP-004-03, Attachment 1 Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) Entity with Reporting Responsibility: RC Threshold for Reporting: Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL for more than 30 minutes for Major WECC Transfer Paths (WECC only).	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement. Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) are in the new standard TOP-001-3, Requirement R12 that becomes effective on 4/1/17, requiring a self-report if Tv is exceeded; the TOP-007-WECC-1 standard is pending retirement.
EOP-004-03, Attachment 1 Event Type: Loss of firm load Entity with Reporting Responsibility: BA, TOP, DP	EOP-004-04, Attachment 1 Event Type: Uncontrolled loss of firm load resulting from a BES Emergency	To provide clarity to the Threshold for Reporting and to align with the DOE's OE-417 reporting category, language revisions were made.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Loss of firm load for ≥ ≥ 300 MW for entities with previous yea 3,000 MW OR ≥ 200 MW for all other entities	Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Uncontrolled loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities	
EOP-004-03, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA, GOP Threshold for Reporting: Total generation loss, within one minute, of : ≥ 2,000 MW for entities in the Eastern or Western Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection	EOP-004-04, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA Threshold for Reporting: Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection	The EOP SDT removed the reporting requirement from the GOPs to reduce redundant reporting. The BA should do the reporting given they have the generation status information. Technical justification for reverting back to the value of 2,000 MW for the generation loss for the Québec Interconnection and for harmonizing with NERC EA process. 1. Generation in the Québec Interconnection is 95 % hydraulic. To be efficient, generation must

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operate within 80 % of its operating range. There is a large spinning reserve available at all times which aids in the recovery period after an event (ACE-Area Control Error). Historically, the recorded average ACE recovery time for a 2,000 MW loss is 5 minutes which is 3 times faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. Based on the Hydro Québec's generation loss reports, generation loss between 1,500 MW to 2,000 MW does not trig the first stage threshold of the UFLS scheme. The frequency stayed above the underfrequency limit. 3. In order to maintain the integrity of the Québec system, the RPTC SPS in Québec (Generation Rejection and Remote Load Shedding) is designed to detect abnormal or

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		predetermined system conditions, to take corrective actions and to deliberately remove up to 1,500 MW of preselected generation from the power system. Consequently, the system is design to remain stable upon the instantaneous loss of 1,500 MW of generation. For Hydro-Québec, a generation loss of more than 2,000 MW is considered as an issue, which is make sense with previous 2,000 MW generation loss reporting requirement. 4. The EEA Level 3 alert (EOP-002) in Québec is set generally set at 2,000 MW, based on the deficiency of operating reserves and margins. Up to now, no EEA Level 3 alert has occurred in the Québec Interconnection. 5. Hydro Québec's loss of generation in first contingency (n-1) is set around 2,000 MW.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Technical justification for ERCOT 1,400 MW for the generation loss for the ERCOT Interconnection. 1. ERCOT maintains a mix of operating reserves (typically 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves) available at all times, which aids in the recovery period after an event affecting Area Control Error (ACE) or frequency. ERCOT typically procures between 2,300 MW to 3,000 MW of frequency responsive reserves for all operating hours besides procuring additional regulation and non-spinning reserves. The Load Resources controlled by Under-Frequency relay are set to respond automatically at 59.7 Hz to provide instantaneous frequency response. Historically, the recorded average ACE recovery time for a 1,400 MW

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		loss is less than 10 minutes, which is much faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. The design criteria for ERCOT's frequency responsive reserves is to procure adequate reserves that allow frequency to stay above the under-frequency limit for up to ERCOT's resource contingency criteria limit of 2,750 MW. 3. The EEA level 1 alert (EOP-002) in ERCOT is set at 2,300 MW of Physical Responsive Capability (PRC) which is a mix of operating reserves (typically 50% Load Resources and 50% frequency responsive spinning reserves).
EOP-004-03, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power affecting a nuclear generating	EOP-004-04, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP	The Event Analysis Program (EAP) refers to loss of off-site power as "(LOOP)". Therefore, LOOP has been added to the Threshold for Reporting to provide consistency.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
station per the Nuclear Plant Interface Requirement	Threshold for Reporting: Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirement	
EOP-004-03, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).	EOP-004-04, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).	The definition of BES Element includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event Type. It could lead to confusion as to the element count for three elements contrary to design. In addition, the EAP uses the definition of "BES Facility" in its application, which could lead to additional confusion in evaluating a reporting during an event. The EOP SDT revised "BES Elements" to "BES Facilities" to add clarity to the Threshold for Reporting and to align with the EAP language.
EOP-004-03, Attachment 1 Event Type: Unplanned BES control center evacuation	EOP-004-04, Attachment 1 Event Type: Unplanned evacuation of its BES control center	In the Threshold for Reporting, with the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…BES control center" to "…its BES control center."

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from BES control center facility for 30 continuous minutes or more.	Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.	
EOP-004-03, Attachment 1 Event Type: Complete loss of voice communication capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of voice communication capability affecting a BES control center for 30 continuous minutes or more.	EOP-004-04, Attachment 1 Event Type: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.	COM-001-2 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." And Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."
EOP-004-03, Attachment 1 Event Type: Complete loss of monitoring capability	EOP-004-04, Attachment 1 Event Type: Complete loss of monitoring or control capability at its staffed BES control center	The language revisions to this event type provides clarity to the Threshold for Reporting and better aligns with the EAP language.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.	Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.	

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Requirement R2 **R2.** Each Responsible Entity shall report events per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM Monday local time).	EOP-004-04, Requirement R2 **R2.** Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).	Requirement R2 revisions were to provide for clarity; to remove the ambiguity for weekends and to add clarity for holidays.
EOP-004-03, Requirement R3 **R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year.	Recommended for retirement.	The EOP SDT recommends retirement of Requirement R3 under Criterion B1, administrative; the R3 requirement in EOP-004-3 requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. Contact lists are administrative in nature.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Attachment 1 Event Type: Damage or destruction of a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action.	EOP-004-04, Attachment 1 Event Type: Damage or destruction of its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-03, Attachment 1 Event Type: Physical threats to a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster	EOP-004-04, Attachment 1 Event Type: Physical threats to its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as:

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at a Facility. Do not report theft unless it degrades normal operation of a Facility.	disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.	"A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-03, Attachment 1 Event Type: Physical threats to a BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center.	EOP-004-04, Attachment 1 Event Type: Physical threats to its BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center.	With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a BES control center" to "…its BES control center."

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
OR Suspicious device or activity at a BES control center.	OR Suspicious device or activity at its BES control center.	
EOP-004-03, Attachment 1 Event Type: BES Emergency requiring public appeal for load reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Public appeal for load reduction event.	EOP-004-04, Attachment 1 Event Type: Public appeal for load reduction resulting from a BES Emergency Entity with Reporting Responsibility: BA Threshold for Reporting: Public appeal for load reduction to maintain continuity of the BES.	To maintain the continuity of the BES was added to better align with the DOE OE-417 reporting category. Rationale: The EOP SDT changed the reporting responsibility to the BA only based on the BA requirements in EOP-011-1 (FERC approved, pending enforcement) Requirement R2 "Each Balancing Authority shall develop, maintain, and implement one or more Reliability Coordinator-reviewed Operating Plan(s) to mitigate Capacity Emergencies and Energy Emergencies within its Balancing Authority Area. The Operating Plan(s) shall include the following, as applicable: *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations, Operations Planning, Long-term Planning]* **2.1.** Roles and responsibilities for activating the Operating Plan(s);

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		2.2. Processes to prepare for and mitigate Emergencies including: **2.2.1.** Notification to its Reliability Coordinator, to include current and projected conditions when experiencing a Capacity Emergency or Energy Emergency; **2.2.2.** Requesting an Energy Emergency Alert, per Attachment 1; **2.2.3.** Managing generating resources in its Balancing Authority Area to address: **2.2.3.1.** capability and availability; **2.2.3.2.** fuel supply and inventory concerns; **2.2.3.3.** fuel switching capabilities; and **2.2.3.4.** environmental constraints. **2.2.4.** Public appeals for voluntary Load reductions;
EOP-004-03, Attachment 1 Event Type: BES Emergency requiring system-wide voltage reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting	EOP-004-04, Attachment 1 Event Type: System-wide voltage reduction Entity with Reporting Responsibility: TOP Threshold for Reporting: System-wide voltage reduction of 3% or more to maintain the continuity of the BES.	The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: System wide voltage reduction of 3% or more.		
EOP-004-03, Attachment 1 Event Type: BES Emergency requiring manual firm load shedding Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Manual firm load shedding ≥ 100 MW.	EOP-004-04, Attachment 1 Event Type: Firm load shedding resulting from a BES Emergency Entity with Reporting Responsibility: Initiating RC, BA, TOP Threshold for Reporting: Firm load shedding ≥ 100 MW (manual or automatic).	The RC, BA and TOP are the entities that would initiate manual firm load shedding.
EOP-004-03, Attachment 1 Event Type: BES Emergency resulting in automatic firm load shedding Entity with Reporting Responsibility: DP, TOP Threshold for Reporting: Automatic firm load shedding ≥ 100 MW (via automatic undervoltage or underfrequency load shedding schemes, or RAS).	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.
EOP-004-03, Attachment 1 Event Type: Voltage deviation on a Facility	EOP-004-04, Attachment 1	To provide clarity to the Event Type and to the Threshold for Reporting, the language revisions were made.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Entity with Reporting Responsibility: TOP Threshold for Reporting: Observed within its area a voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	Event Type: BES Emergency resulting in voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: A voltage deviation of =/> ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	
EOP-004-03, Attachment 1 Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) Entity with Reporting Responsibility: RC Threshold for Reporting: Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL for more than 30 minutes for Major WECC Transfer Paths (WECC only).	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement. Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) are in the new standard TOP-001-3, Requirement R12 that becomes effective on 4/1/17, requiring a self-report if Tv is exceeded; the TOP-007-WECC-1 standard is pending retirement.
EOP-004-03, Attachment 1 Event Type: Loss of firm load Entity with Reporting Responsibility: BA, TOP, DP	EOP-004-04, Attachment 1 Event Type: Uncontrolled loss of firm load resulting from a BES Emergency	To provide clarity to the Threshold for Reporting and to align with the DOE's OE-417 reporting category, language revisions were made.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Loss of firm load for ≥ ≥ 300 MW for entities with previous yea 3,000 MW OR ≥ 200 MW for all other entities	Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Uncontrolled loss of firm load for ≥ 15 Minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities	
EOP-004-03, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA, GOP Threshold for Reporting: Total generation loss, within one minute, of : ≥ 2,000 MW for entities in the Eastern or Western Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection	EOP-004-04, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA Threshold for Reporting: Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection	The EOP SDT removed the reporting requirement from the GOPs to reduce redundant reporting. The BA should do the reporting given they have the generation status information. Technical justification for reverting back to the value of 2,000 MW for the generation loss for the Québec Interconnection and for harmonizing with NERC EA process. 1. Generation in the Québec Interconnection is 95 % hydraulic. To be efficient, generation must

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operate within 80 % of its operating range. There is a large spinning reserve available at all times which aids in the recovery period after an event (ACE-Area Control Error). Historically, the recorded average ACE recovery time for a 2,000 MW loss is 5 minutes which is 3 times faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. Based on the Hydro Québec's generation loss reports, generation loss between 1,500 MW to 2,000 MW does not trig the first stage threshold of the UFLS scheme. The frequency stayed above the underfrequency limit. 3. In order to maintain the integrity of the Québec system, the RPTC SPS in Québec (Generation Rejection and Remote Load Shedding) is designed to detect abnormal or

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		predetermined system conditions, to take corrective actions and to deliberately remove up to 1,500 MW of preselected generation from the power system. Consequently, the system is design to remain stable upon the instantaneous loss of 1,500 MW of generation. For Hydro-Québec, a generation loss of more than 2,000 MW is considered as an issue, which is make sense with previous 2,000 MW generation loss reporting requirement. 4. The EEA Level 3 alert (EOP-002) in Québec is set generally set at 2,000 MW, based on the deficiency of operating reserves and margins. Up to now, no EEA Level 3 alert has occurred in the Québec Interconnection. 5. Hydro Québec's loss of generation in first contingency (n-1) is set around 2,000 MW.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Technical justification for ERCOT 1,400 MW for the generation loss for the ERCOT Interconnection. 1. ERCOT maintains a mix of operating reserves (typically 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves) available at all times, which aids in the recovery period after an event affecting Area Control Error (ACE) or frequency. ERCOT typically procures between 2,300 MW to 3,000 MW of frequency responsive reserves for all operating hours besides procuring additional regulation and non-spinning reserves. The Load Resources controlled by Under-Frequency relay are set to respond automatically at 59.7 Hz to provide instantaneous frequency response.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Historically, the recorded average ACE recovery time for a 1,400 MW loss is less than 10 minutes, which is much faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. The design criteria for ERCOT's frequency responsive reserves is to procure adequate reserves that allow frequency to stay above the under-frequency limit for up to ERCOT's resource contingency criteria limit of 2,750 MW. 3. The EEA level 1 alert (EOP-002) in ERCOT is set at 2,300 MW of Physical Responsive Capability (PRC) which is a mix of operating reserves (typically 50% Load Resources and 50% frequency responsive spinning reserves).

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement	EOP-004-04, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirement	The Event Analysis Program (EAP) refers to loss of off-site power as "(LOOP)". Therefore, LOOP has been added to the Threshold for Reporting to provide consistency.
EOP-004-03, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).	EOP-004-04, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).	The definition of BES Element includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event Type. It could lead to confusion as to the element count for three elements contrary to design. In addition, the EAP uses the definition of "BES Facility" in its application, which could lead to additional confusion in evaluating a reporting during an event. The EOP SDT revised "BES Elements" to "BES Facilities" to add clarity to the Threshold for Reporting and to align with the EAP language.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Attachment 1 Event Type: Unplanned BES control center evacuation Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from BES control center facility for 30 continuous minutes or more.	EOP-004-04, Attachment 1 Event Type: Unplanned evacuation of its BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.	In the Threshold for Reporting, with the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…BES control center" to "…its BES control center."
EOP-004-03, Attachment 1 Event Type: Complete loss of voice communication capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of voice communication capability affecting a BES control center for 30 continuous minutes or more.	EOP-004-04, Attachment 1 Event Type: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.	COM-001-2 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." And Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-03, Attachment 1 Event Type: Complete loss of monitoring capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.	EOP-004-04, Attachment 1 Event Type: Complete loss of monitoring or control capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.	The language revisions to this event type provides clarity to the Threshold for Reporting and better aligns with the EAP language.

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were slightly revised to add "event reporting." The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their event reporting Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their event reporting Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable..	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 36 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable..	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable..	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 60 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable..

VSL Justifications for EOP-004-4, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event reporting Operating Plan and reporting events, and Requirement 2 language of EOP-004-4 is only slightly changed from EOP-004-3. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-004-4, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were ~~not~~ slightly revised to add "event reporting." The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their event reporting Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their event reporting Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable..	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 36 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting. FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Standards Announcement

Project 2015-08 Emergency Operations
EOP-004-4

Formal Comment Period Open through January 6, 2017

Now Available

A 45-day formal comment period for **EOP-004-4 – Event Reporting** is open through **8 p.m. Eastern, Friday, January 6, 2017.**

The standard drafting team's considerations of the responses received from the last comment period are reflected in this draft of the standard.

Commenting

Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

An additional ballot for the standard and non-binding poll of the associated Violation Risk Factors and Violation Severity Levels will be conducted December 28 – January 6, 2017.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standards Announcement

Project 2015-08 Emergency Operations
EOP-004-4

Formal Comment Period Open through January 6, 2017

Now Available

A 45-day formal comment period for **EOP-004-4 – Event Reporting** is open through **8 p.m. Eastern, Friday, January 6, 2017.**

The standard drafting team's considerations of the responses received from the last comment period are reflected in this draft of the standard.

Commenting

Use the electronic form to submit comments on the standards. If you experience any difficulties in using the electronic form, contact Nasheema Santos. An unofficial Word version of the comment form is posted on the project page.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

An additional ballot for the standard and non-binding poll of the associated Violation Risk Factors and Violation Severity Levels will be conducted December 28 – January 6, 2017.

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Comment Report

Project Name:	2015-08 Emergency Operations | EOP-004-4
Comment Period Start Date:	11/18/2016
Comment Period End Date:	1/9/2017
Associated Ballots:	2015-08 Emergency Operations | EOP-004-4 EOP-004-4 AB 2 ST 2015-08 Emergency Operations | EOP-004-4 EOP-004-4 NBP AB 2 NB

There were 38 sets of responses, including comments from approximately 33 different people from approximately 31 companies representing 8 of the Industry Segments as shown in the table on the following pages.

Questions

1. Do you agree with the SDT's recommended changes to EOP-004-3, Requirements R1 and R2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

2. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

4. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

Comment	
Duke Energy requests clarification on the addition of "by the later of" and the use of 4pm as the end of a business day. Is it the drafting team's intent that the Responsible Entity has the option of submitting an Event Report 24 hours after the Event threshold has been reached, or the entity may choose to submit the report later than the 24 hours, as long as the report is submitted by 4pm the next business day? The proposed language as currently written may create some ambiguity depending on the reader.

Comment	
As stated in the comments with the initial ballot, Texas RE noticed there is no requirement specifically indicating how events should be reported. Additionally, the VSLs indicate that a verbal report is acceptable. Since an event reporting form exists, Texas RE recommends the requirements specify the form in Attachment 2 be used for event reporting. In the Severe VSL for R2 "-4_ should be added to the last sentence to maintain consistency (e.g. "EOP-004-4").

(1) We thank the SDT for the development of this draft standard revision and the removal of the administrative burden reflected in Requirement R3 of the current standard. While we generally agree with the results-based compliance approach presented in this draft, we feel that the SDT has an opportunity to further clarify the intentions of their proposed changes.

(2) We believe Requirement R2 is intended to provide the Responsible Entity an option of using the criterion that will occur last when reporting. While either criterion will occur "later" from the initial event discovery, as used in the context of an adverb describing a point in time, the ability to select one criterion versus the other is an adjective that describes the criteria's comparison. We recommend using "…by the latter of…" in the requirement text instead.

(3) The first criterion listed in Requirement R2 states "24 hours of recognition of meeting an event type threshold for reporting." We believe the SDT inadvertently removed a necessary and supportive phrase that identifies the duration of the criterion. We also believe the SDT failed to establish a starting trigger for this criterion with the recognition and discovery of the event. We recommend rewording the criterion to read "within 24 hours following recognition of meeting an event type threshold for reporting."

(4) The second criterion listed in Requirement R2 identifies the end of a business day as 4:00 PM. What is the rationale for selecting an arbitrary time? How do joint-filing entities that operate across large geographic regions and multiple time zones identify the local time? How does a single entity with centralized operations in one time zone identify local time for an event originating in a different time zone? We agree with the SDT's intent to remove ambiguity regarding weekends and holidays, but believe the addition of the 4:00 PM local time reference creates unintended confusion. We recommend removing the reference entirely and allow some flexibility for the Responsible Entity to define its own meaning of "next business day." This would allow smaller entities, with a limited impact on BES reliability, to report after an extended weekend and after becoming fully staffed.

(5) To clearly delineate the possible criteria available for Requirement R2, we believe each criterion should be renumbered into individual subparts list.

Response

Thank you for your comment. The intent is to provide entities at least 24 hours for reporting after recognition of an event; for recognition of reporting events on a weekend or a holiday, it allows the entity up to 4:00 p.m. on their next business day (4:00 pm was selected because it is a typical ending time for operating personnel). The recognition of meeting an event type would be the trigger for reporting. It is the intent of the drafting team that the Responsible Entity would report by 4 p.m. of the next business day based on the local time of the entity's centralized location. The Responsible Entity could document this in their event reporting Operating Plan.

To clarify the Standard pertains to Event Reporting, Reclamation respectfully proposes the following revised language for Standard EOP-004-4, R1, R2, M1, and M2: R1. : Each Responsible Entity shall have an Event Reporting Operating Plan that includes the protocol(s) for reporting the Reportable Events listed in EOP-004-4 Attachment 1 to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, Responsible Entity personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). Reclamation suggests re-wording M1 as follows: Each Responsible Entity will have a dated Event Reporting Operating Plan that includes the reporting protocol(s) and name(s) of organization(s) to receive an event report for the Reportable Event(s) specified in EOP-004-4 Attachment 1. R2. Each Responsible Entity shall report the types of events specified in EOP-004-4 Attachment 1, to the entities specified per its Event Reporting Operating Plan, by the later of 24 hours after recognition of meeting an event type threshold or by the end of the Responsible Entity's next business day, whichever is later (4 p.m. local time will be considered the end of the business day). M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating the event report was submitted within the timeframes identified in R2 above. Reclamation suggests the following change to both R2 and M2: "by the later of 24 hours after recognition of meeting an event type…"

As for Requirement R1, we have no concerns pertaining to the proposed changes. However, we feel the clarity notes applicable to Measurement M1 in the comment form are inaccurate (page 2). The notes mentions the correction to the version number however, it doesn't mention the phrase **"but is not limited to the"** being stricken from the standard. We suggest the drafting team update all applicable documents to reflect that change.

Elizabeth Axson - Electric Reliability Council of Texas, Inc. - 2	
Answer	No
Document Name	ERO_EAP_Documents DL-Justification_for_Event_Category_1g_and_3a_changes_for_ERCOT.pdf

Comment

ERCOT appreciates the SDT revising the generation loss reporting threshold for the ERCOT Interconnection to 1,400 MW from 1,000 MW in Attachment 1 of EOP-004. This change is consistent with ERCOT's September 8, 2016 comments, which requested this revision to align the reporting threshold with the *ERO Event Analysis Process* (EAP) document's threshold for initiating an analysis of a Category 3a generation loss event in the ERCOT Interconnection, which, at the time of ERCOT's comment, was 1,400 MW.

However, concurrent with Project 2015-08, the NERC Event Analysis Subcommittee (EAS) proposed changes to the EAP document that, among other things, sought to standardize the event analysis threshold for all Interconnections—including ERCOT—at 2,000 MW. The draft EAP document was first posted for comment on the NERC website on September 30, 2016, some three weeks after ERCOT submitted its comments to the latest version of EOP-004. The revised EAP document—version 3.1—was ultimately approved by the NERC Operating Committee at its December 13, 2016 meeting and became effective January 1, 2017. Thus, the threshold for conducting an analysis of Category 3a events is now 2,000 MW.

Consistent with ERCOT's September 8 comments and with the SDT's change to the reporting threshold in the last version of the draft standard, ERCOT believes the threshold for generation loss reporting in EOP-004 should continue to align with the EAP document's threshold for analysis of Category 3a events, which is now 2,000 MW. If there are any reasons for differentiating between the two thresholds, this justification does not seem immediately obvious. Fundamentally, in ERCOT's view, it would make little sense to require development of a written report of a generation loss event and distribute it to various entities if the event did not also justify an analysis under the EAP process. Furthermore, the reasons cited by the EAS for increasing the event analysis threshold—the implementation of BAL-003-1.1 and BAL-001-TRE-01, and the procurement of greater quantities of responsive reserve in ERCOT, among other reasons—would also appear to justify increasing the event reporting threshold. See *Justification for Proposed Changes to the ERO Event Analysis Process Categories 1g and 3a* (attached).

In conclusion, ERCOT appreciates the SDT's recognition of the need to align the EOP-004 generation loss reporting threshold with the EAP document's generation loss event analysis threshold and asks the SDT to continue this alignment by setting the generation loss reporting threshold for the ERCOT Interconnection in EOP-004 Attachment 1 to 2,000 MW.

Likes 0	
Dislikes 0	

Response

Thank you for your comments. To establish the equitable criteria for reporting in the ERCOT interconnection, the EOP SDT has revised the reporting threshold from 1,000 MW to 1,400 MW for generation loss in the ERCOT interconnection, as recommended from the September comments. Please refer to the project's mapping document for the technical justification regarding this revision. The intent of the EAP is to be used to promote a structured and consistent approach to performing event analyses in North America, it is a process for addressing event analysis and provides a lessons learned process and facilitates communication and information exchange among registered entities, NERC and its Regional Entities; it is a voluntary data-gathering tool; whereas the proposed Reliability Standard EOP-004-4 is mandatory. The EOP SDT collaborated with both the Events Analysis Subcommittee, as well as the United States Department of Energy, to better align reporting requirements of EOP-004, the EAP, and the OE-417. The reporting threshold for generation loss in the ERCOT Interconnection in proposed EOP-004-4 is aligned with the DOE OE-417.

BPA believes that the BA or TOP could be the initiating parties for a load appeal. Also, more clarity should be added for automatic load shedding causes (UVLS, UFLS, RAS).

Likes 0	
Dislikes 0	

Response

Thank you for your comments. EOP-011-1 puts the responsibility of having public appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. The EOP SDT feels that the Threshold for Reporting is clear, the Responsible Reporting Entity will know if the Firm load shedding was done either manually, automatically or a combination of both.

Ruida Shu - Northeast Power Coordinating Council - 1,2,3,4,5,6,7,10 - NPCC, Group Name RSC no Dominion

Answer	No
Document Name	

Comment

For the "Complete loss of monitoring or control capability at its staffed BES control center" Event Type, the "Threshold for Reporting" column should be revised as follows: "Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more, such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable." The "Threshold for Reporting" language should continue to include the "such that […]" language to maintain consistency with the EAP.

Answer	No

Document Name	
Comment	

Texas RE appreciates the SDT's response to Texas RE's previous comments regarding the removal of the IROLTV reporting obligation. As the SDT noted in its response, the SDT removed the reporting requirement because the new TOP-001-3 R12 requirement requires registered entities to avoid exceeding IROLs for the relevant TV period. As such, the SDT reasons that entities will self-report any noncompliance and there is no need to retain the corresponding reporting requirement.

Texas RE sees two issues with the SDT's rationale. First, as Texas RE noted in its original comments, there is a significant difference in the purpose and timing of the EOP-004 reporting requirements and the substantive obligations set forth under the new TOP-001-3, R12. Texas RE noted: "While such an exceedance may be investigated in the compliance or enforcement process, there is necessarily a delay in these activities. The contemporaneous reporting obligations serve to ensure that the NERC regions have immediate knowledge that a significant risk of a cascading outage has occurred, permitting the region to begin steps to identify the root cause and develop appropriate mitigation. Because such awareness appears critical to the core reliability functions performed within the NERC regions, Texas RE cautions against eliminating this requirement." Simply put, the mere existence of a parallel substantive requirement does not address Texas RE's concern. Texas RE cannot support the elimination of the IROLTV reporting obligation based on the SDT's proffered rationale.

Second, the SDT appears to misunderstand the self-reporting process. Principally, entities are under no obligation to self-report potential noncompliance instances, and may elect not to do so at their sole discretion. Given that certain utilities are on three- or even six-year audit cycles, an entity could decline to self-report an IROL exceedance violating TOP-001-3, R12 and wait until its next scheduled audit (contingent on the requirement being included in the audit scope). Accordingly, a potential issue could linger for years before it is addressed in the enforcement process. This is precisely the reason Texas RE believes the contemporaneous reporting requirement continues to be a necessary part of the NERC Reliability Standards.

Texas RE also suggests the Standard is too narrow in its reporting requirements for events. According to the Events Analysis Process effective January 1, 2017, "The primary reason for participating in an event analysis is to determine if there are lessons to be learned and shared with the industry. The analysis process involves identifying what happened, why it happened, and what can be done to prevent reoccurrence." Texas RE recommends broadening the requirements in order to understand prevention as well as what took place when event actually occurred. Texas RE provides the following suggestions for broadening the reporting requirements.

- Public appeal for load reduction should not be limited to a BES Emergency. In some cases the appeal may be done to avoid a BES Emergency and that event should be evaluated per the Events Analysis Process in order to prevent issues from occurring in the future.

- As previously submitted in comments with the initial ballot, Texas RE recommends adding the TOP function to the public appeal event type. This will align and be consistent with EOP-001-2.1b Requirement R2, which requires a TOP to "Develop, maintain, and implement a set of plans for load shedding", EOP-001-2.1b Requirement R3, which requires a TOP emergency plan to include "Load reduction", and EOP-001-2.1b Requirement R4, which references elements in Attachment 1-EOP-001 that a TOP and BA should consider when developing emergency plans.

- For the event types, "Complete loss of monitoring or control capability at its staffed BES control center" and "Complete loss of Interpersonal Communications and Alternative Interpersonal Communication capability at its staffed BES control center", Texas RE recommends removing "its staffed". Loss of monitoring or control capability is just as important at a non-staffed site as it is a staffed site and there should be no distinction in staffing status. Understanding why complete loss of monitoring or control capability and complete loss of Interpersonal and Alternative Interpersonal Communications occurred will increase the likelihood of prevention in the future.

Reliability Standard EOP-004-2 does not take into account GOP Control Centers. As previously stated, Texas RE recommends adding the GOP to the entity with reporting responsibility. Reliability Standard CIP-002-5 states that "each Control Center or back up Control Center used to perform the functional obligations of the Generator Operator" (CIP-002-5, Attachment 1, Sections 1.4 and 2.11) should be considered in an entity's identification of high and medium BES Cyber Systems. Reliability Standard CIP-008-5 Requirement 1 requires Responsible Entities with High and Medium Impact BES Cyber Systems (which could include GOP Control Centers) to have a process to determine if a Cyber Security Incident is reportable and noticed the E-ISAC. Since this includes GOP Controls Centers, it would be consistent to include GOP Control Centers in EOP-004-4. Also, there are several GOPs in Texas (and other regions) that may control more megawatts than some BAs and yet there is no requirement to report events that occur so they are studied and preventative measures are taken in the future. Since CIP-002-5 has a mechanism for considering GOP Control Centers, and there are several GOP Control Centers that may control as much or more generation than a BA, Texas RE recommends adding the GOP as an entity with reporting responsibility. From a consistency and reliability stand point, events that occur at a GOP Control Center should be reported on and evaluated.

Thank you for your comments.

The EOP SDT has discussed your concerns and still contends that IROL reporting should be removed from this standard. TOP-001-3, Requirement R12 becomes effective 4/1/17, requiring a self-report if Tv is exceeded; TOP-007-WECC-1 is pending retirement; IRO-009-2, Requirement R3, requires the RC to act or direct others to act until the IROL exceedance is mitigated with in the IROL's Tv. The EAP also lists Category 2 "…g.) Interconnection Reliability Operating Limit (IROL) Violation for the time greater than Tv." EOP-004 is not the proper vehicle for immediate reporting. The drafting team suggests following the standard development process of submitting a SAR for modification.

The purpose of the EAP is to be used to promote a structured and consistent approach to performing event analyses in North America, it is a process for addressing event analysis and provides a lessons learned process and facilitates communication and information exchange among registered entities, NERC and its Regional Entities; it is a voluntary, data-gathering tool; whereas the proposed Reliability Standard EOP-004-4 is mandatory. The EOP SDT collaborated with both the Events Analysis Subcommittee, as well as the United States Department of Energy, to better align reporting requirements of EOP-004, the EAP, and the OE-417.

Public appeal for load reduction in a BES Emergency is in the currently-enforced EOP-004 standard, the EOP SDT finds the Event Type is appropriate as written.

In Reliability Standard EOP-011-1 (subject to future enforcement, retires EOP-001-2.1b, EOP-002-3.1, and EOP-003-2), Requirement R2, it is the function of the BA to include within its RC-reviewed Operating Plan to mitigate Capacity Emergencies and Energy Emergencies public appeals for voluntary load reductions (Requirement R2, Part 2.2.4.). The BA is the proper Entity with reporting responsibility for public appeal for load reduction resulting in a BES Emergency.

The EOP SDT team reviewed your comment about removing “its staffed” related to monitoring or control and Interpersonal/Alternative Interpersonal Communications. The team held many discussion on this topic related to staffed or not staffed; and, yes, it is important to the capability there, but if the site is not staffed the responsible entity will not be aware of the issue plus if you are not actively operating from the site there is no impact on reliability. The team is sure once the issues are identified the Responsible Entity will resolve the situation.

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

We suggest that the Event Type **“Transmission Loss”** in Attachment 1 be removed from this section of the document. We feel that this effort is redundant and has been addressed in the NERC Event Analysis Program. Our first example would be applicable to, the renewable generation such as wind farms would require reporting for the loss of three or more generators pertain to a Misoperations. Another example would be, the slow trip of a circuit breaker clearing three or more transmission lines would be reportable even if it didn’t include a Misoperations.

In Attachment 1, the Event Type, "Transmission loss" should be eliminated from mandatory reporting. Events reported under this category are included in voluntary reporting under the NERC Event Analysis Program and this minimum impact level of events should not be included in mandatory compliance reporting subject to fines and penalties. This category includes BES Facilities experiencing unexpected loss, contrary to design, of three or more BES Facilities. Facilities are defined as: A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.). The following examples support removal of this Event Type:

1. Renewable generation, such as wind farms, with total generation >75MWs are included in BES Facilities. A misoperation on a feeder at a wind facility including three (3) or more generators would require a mandatory report under EOP-004-4. A typical wind farm generator is approximately 1.5 – 3.0 MWs each. So, under Transmission loss, a generation loss of less than 10 MWs is required to be reported, but under the "Generation loss" Event Type in Attachment 1 to EOP-004-4, the reportable generation loss would need to be greater than 2,000 MWs (Eastern Interconnection) to be subject to mandatory fines and penalties. 10 MWs versus 2,000 MWs is an obvious disparity and clearly shows the minimal level of impact to reliability of the BES is not met.

2. Under "Transmission loss", a slow trip of a circuit breaker clearing a bus with 3 or more transmission lines or transformers, or generators, would be reportable under this mandatory compliance obligation and subject to fines and penalties. This can happen even without a misoperation, if the circuit breaker is merely slow in clearing the fault and the backup protection on the breaker clears the bus. All the protection systems can operate correctly and an entity is still subject to reporting under this event type. These types of events are being collected under the NERC Event Analysis Program and these events do not meet the threshold of risk to the BES to enforce fines and penalties. More significant "Transmission loss" events are included in other Event Types and associated with BES Emergencies. Minor risk "Transmission loss" events are more appropriately handled through the voluntary NERC Event Analysis Program and do not need to be included in EOP-004 reporting. The risk of these minor events does not translate to a significant risk to the BES and does not need to be included in mandatory compliance and enforcement.

3. Under "transmission loss", misoperations involving 3 or more Transmission lines, transformers, or generators are reportable under EOP-004-4. Misoperation reporting is mandatory under PRC-004. Redundant reporting under EOP-004 is not needed and subjects entities to double jeopardy for compliance violations.

4. The NERC Event Analysis Program has matured over the past few years and is an excellent tool for industry to review, discuss, and develop lessons learned to improve reliability. Compliance obligations under the event type "Transmission loss" are no longer needed and are a detriment to reliability by taking the operational focus away from operation of the BES during these minor events to reporting when these reporting requirements are better handled through other existing programs.

Comment

Duke Energy recommends the following edits to Event Types in Attachment 1:

• Public appeal for load reduction

• Firm load shedding

We recommend the removal of the phrase “resulting from a BES Emergency” from the Event Type, and placing the phrase in the Threshold for Reporting.

Duke Energy recommends the following edits to Threshold for Reporting in Attachment 1:

• Public appeal for load reduction resulting from a BES Emergency.

• System-wide voltage reduction of 3% or more resulting from a BES Emergency.

• Firm load shedding ≥ 100 MW (manual or automatic) resulting from a BES Emergency.

We recommend the removal of the of the phrase “to maintain continuity of the BES” and replacing with the more widely understood “resulting from a BES Emergency”. We feel that adding “resulting from a BES Emergency” to the “Threshold for Reporting” in both cases consistently creates a better understanding and is less vague. By doing this, it puts the details in the “Threshold for Reporting” language where we feel they are best suited. Additionally, while we understand the phrase “to maintain continuity of the BES” would mirror the reference used in OE-417, that doesn’t mean that the phrase is any less ambiguous or clearly understood throughout the industry. With BES Emergency being a defined term, and readily used throughout the industry, we believe it better suited than the less known, undefined concept of “to maintain continuity of the BES”.

Firm load shedding resulting from a BES Emergency:

We recommend the drafting team consider adding "*or*" to the "Entity with Reporting Responsibility" section for this Event Type. We suggest the following: "*Initiating RC, BA, or TOP*". We feel that the addition of "*or*" furthers the drafting team's intent that only one of the listed entities is expected to file the report. As written, one could still read the language as to state that all entities are required to file a report rather than just the initiating entity.

Response	
Thank you for your comment. The EOP SDT reviewed your comments and agreed with your suggested changes to System-wide voltage reduction and updated the Event Type category and the Threshold. The EOP SDT agrees with your comment to add 'or' between BA and TOP, it adds clarity to the Entity with Reporting Responsibility. For consistency with Attachment 1 Event Types, and identifying that a BES Emergency has occurred and that an action has taken place, no change was made to Event Type category for public appeal and firm load shedding.

For the "Complete loss of monitoring or control capability at its staffed BES control center" Event Type, the "Threshold for Reporting" column should be revised as follows: "Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more**, such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable**." The "Threshold for Reporting" language should continue to include the "such that[…]" language to maintain consistency with the EAP.

Response	
Thank you for your comment. The EOP SDT feels that complete loss of monitoring or control capability at its staffed BES control center is clear as written and does not need "such that analysis capability (i.e., State Estimator or Contingency Analysis) added. This was discussed at length at many drafting team meetings and the "such that analysis capability (i.e., State Estimator or Contingency Analysis)" language did not bring any clarity to the reporting trigger.

Comment	
Regarding the Event Type "Transmission Loss" in Attachment 1, we suggest that the SDT consider one of the following options: **1. Modify the threshold language as follows:**	

"Unexpected loss within its area, contrary to design, of three or more BES Transmission elements caused by a common disturbance (excluding successful automatic reclosing)."

Reasons:

a. The current NERC Glossary of Terms definition of "Facilities" includes generators. Therefore, renewable generation such as wind farms would require reporting for the loss of three or more generators. This loss in MW is minimal compared to the threshold stated in the Event Type "Generation loss".

b. Generation loss is required to be reported by the BA. Including generation in the reporting requirements for the TOP as well introduces confusion and the possibility of unnecessary or duplicative reporting.

OR

2. Remove this event type from this section of the document.

Reasons:

a. Same reasons as listed above

b. This reporting is redundant having already been addressed in the NERC Event Analysis Program.

In Attachment 1, the Event Type, “Transmission loss” should be eliminated from mandatory reporting. Events reported under this category are included in voluntary reporting under the NERC Event Analysis Program and this minimum impact level of events should not be included in mandatory compliance reporting subject to fines and penalties. This category includes BES Facilities experiencing unexpected loss, contrary to design, of three or more BES Facilities. Facilities are defined as: A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.). The following examples support removal of this Event Type:

1. Renewable generation, such as wind farms, with total generation >75MWs are included in BES Facilities. A misoperation on a feeder at a wind facility including three (3) or more generators would require a mandatory report under EOP-004-4. A typical wind farm generator is approximately 1.5 – 3.0 MWs each. So, under Transmission loss, a generation loss of less than 10 MWs is required to be reported, but under the “Generation loss” Event Type in Attachment 1 to EOP-004-4, the reportable generation loss would need to be greater than 2,000 MWs (Eastern Interconnection) to be subject to mandatory fines and penalties. 10 MWs versus 2,000 MWs is an obvious disparity and clearly shows the minimal level of impact to reliability of the BES is not met.

2. Under “Transmission loss”, a slow trip of a circuit breaker clearing a bus with 3 or more transmission lines or transformers, or generators, would be reportable under this mandatory compliance obligation and subject to fines and penalties. This can happen even without a misoperation, if the circuit breaker is merely slow in clearing the fault and the backup protection on the breaker clears the bus. All the protection systems can operate correctly and an entity is still subject to reporting under this event type. These types of events are being collected under the NERC Event Analysis Program and these events do not meet the threshold of risk to the BES to enforce fines and penalties. More significant “Transmission loss” events are included in other Event Types and associated with BES Emergencies. Minor risk “Transmission loss” events are more appropriately handled through the voluntary NERC Event Analysis Program and do not need to be included in EOP-004 reporting. The risk of these minor events does not translate to a significant risk to the BES and does not need to be included in mandatory compliance and enforcement.

3. Under “transmission loss”, misoperations involving 3 or more Transmission lines, transformers, or generators are reportable under EOP-004-4. Misoperation reporting is mandatory under PRC-004. Redundant reporting under EOP-004 is not needed and subjects entities to double jeopardy for compliance violations.

4. The NERC Event Analysis Program has matured over the past few years and is an excellent tool for industry to review, discuss, and develop lessons learned to improve reliability. Compliance obligations under the event type “Transmission loss” are no longer needed and are a detriment to reliability by taking the operational focus away from operation of the BES during these minor events to reporting when these reporting requirements are better handled through other existing programs.

Comments: Attachment 1, Page 10, 1st Row: Event Type: **BES Emergency resulting in voltage deviation on a Facility** – The voltage deviation range, as described in "Threshold for Reporting," includes everything greater than -10% of nominal voltage which includes acceptable voltages. (e.g. For 115.0kV, everything greater than -10% would include 103.5 to 126.4kV) **Suggested Language for "Threshold for Reporting":** A voltage deviation of < -10% OR > 10% of nominal voltage sustained for > 15 continuous minutes.

At times there may be a need for a TOP to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. We recommend replacing "BA" with "Initiating BA or TOP." The event types with multiple applicable entities such as, "Uncontrolled loss of firm load resulting from a BES Emergency", and "System separation (islanding)" will most likely have the same event reported multiple times if the BA, TOP or RC are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type, "Uncontrolled loss of firm load resulting from a BES Emergency" to just the BA. We recommend changing the Entity with Reporting Responsibility for the Event Type, "System separation (islanding)" to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported.

Response	

Thank you for your comments. Reliability Standard EOP-011-1 (subject to future enforcement) puts the responsibility of having Public Appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004.

If an event applies to any of the entities listed as the "entities with reporting responsibilities," then it is up to those entities to ensure reporting is done. Whether it be reporting the event themselves or delegating reporting responsibilities, this should all be covered in the entity's event reporting Operating Plan.

Answer	No
Document Name	
Comment	

It appears that Attachment 1 is an effort to consolidate two separate reporting requirements. PJM believes the revision adds a bit of confusion. The 'Automatic' reporting section today states: via automatic undervoltage or underfrequency load shedding schemes, or SPS/RAS. PJM believes that the Standard should incorporate this clarity in the new EOP requirement so there is no confusion about reporting of 'automatic' load shed between 100-300MWs due to loss of BES Facilities (i.e. storms) which could be considered an emergency and also automatic, uncontrolled loss of 300MWs for any reason is reportable, which is why the 100-300MW presents confusion.

Comment	

Under physical threats to a facility, suspicious activity at a facility must be defined. I suggest suspicious activity be given its own row (removed from within physical threats to a facility). Specifically, "suspicious device or activity" is ambiguous. Further clarification on "suspicious activity" is needed. For example, does this include photography near a Facility? Also, Attachment 1 should specifically cover cyber related suspicious activity – for example, solicitation attempts or phishing calls at Facilities. There should also be instruction on what an Entity should do if they later realize the incident was NOT suspicious – for example, a prior reported incident which, after further investigation, turns out to be innocuous. The effect of using ambiguous terms and no mechanism for correcting incidents post investigation has left the industry with an output that contains more "trash" than value – many incidents that do not truly meet the definition of EOP 004 are sent out via EISAC which leads to the dilution of truly important incidents.

Response	

Thank you for your comment. The EOP SDT feels the language in the Threshold for Reporting is clear as written. This is the language in the original reporting requirement the only change the EOP SDT made was the removal of “Do not report theft unless it degrades normal operation of a Facility.” Entities should define in their event reporting Operating Plan what they deem as suspicious, and report accordingly.

Comment

(1) We believe the SDT is attempting to align Transmission Loss events with similar reportable criteria listed under the current NERC Event Analysis process. As identified within supportive documentation for this mature process, Category 1a Events caused by common disturbances affecting BES Facilities only refers to BES-defined lines, generators, and transformers. When capitalizing Facility in the context of this reportable criterion, this includes equipment like shunt compensators, circuit breakers, and busses. Furthermore, events caused by Misoperations are reportable under NERC Reliability Standard PRC-004, and could cause repetitive reporting in the process. If the SDT does not consider the outright removal of this event type from the EOP-004 reportable criteria, we recommend rephrasing the threshold for reporting a Transmission Loss event, as reportable to TOPs only, as “Unexpected loss, within its area and contrary to design or successful automatic reclosing, of three or more Transmission Facilities caused by a common disturbance.”

(2) The reference to “=/>” in the reporting threshold for a BES Emergency resulting in a voltage deviation literally reads “equal to or greater than.” Is the intent of the SDT to identify a reporting threshold greater than ± 10% of nominal voltage? We propose using the symbol “≥” to reflect reporting a sustainable voltage deviation that is greater than or equal to ± 10% of nominal voltage over a continuous 15-minute period.

(3) We believe the proposed reportable threshold reference under Generation Loss should be clarified to identify Forced Outages only. Forced Outages is listed under the NERC Glossary and identifies the removal of generation from service for either emergency reasons or unanticipated failures. We feel the incorporation of references to extreme weather patterns or fuel supply unavailability is unnecessary when used within this context.

Comment	
Overall the changes to the Standard are positive and WAPA appreciates the efforts of the SDT. However, there is still significant room for confusion regarding reportable Transmission Loss Events as a TOP with the change from Element to Facility. WAPA would very much appreciate examples within the standard that clarify events which would be reportable and events which would not be reportable.

CenterPoint Energy generally agrees with the SDT's proposed revisions to EOP-004-3, Attachment 1: Reportable Events, but would like the SDT to consider the following: The addition of the word "staffed" in front of "BES control center…" becomes a qualifier to distinguish which control center is in scope for reporting to this category. An entity may have more than one control center that is "staffed" but we believe that the control center that is responsible for performing Real-time functions responsible for reliability is the control center that is in scope for when the threshold for complete loss of interpersonal Communication capability has been lost is met. Additionally, the term "control center" is not capitalized. We suggest that the term be capitalized to align with the glossary definition of Control Center and to align with the use Control Center in category 1h as it applies to the loss of monitoring or control at a Control Center. It is not necessary to have BES in front of Control Center because it is already included in the NERC definition. In summary, CenterPoint energy offers the following suggestions for the Event Type and Threshold for Reporting: Event Type - Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a Control Center. Threshold for Reporting - Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting a staffed Control Center responsible for performing Real-time functions for the reliability of its BES for 30 continuous minutes or more.

Response	
Thank you for your comments. The EOP SDT team reviewed your comment about removing "its staffed" related to monitoring or control and Interpersonal/Alternative Interpersonal Communications. The team held many discussion on this topic related to staffed or not staffed; and, yes, it is important to the capability there, but if the site is not staffed the responsible entity will not be aware of the issue plus if you are not actively operating from the site there is no impact on reliability. The team is sure once the issues are identified the responsible entity will resolve the situation. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

The NSRF believes we discovered a compliance concern that may cause entities to be non-compliant with Attachment 1, Event Type of *Transmission loss*. With the use of Facility (and Element) in threshold for reporting, a Transmission Operator may not be aware that the NERC defined term of Facility also contains "a generator". Even though Event Type *Generation loss* is predicated on a MW threshold, a *Transmission loss* event also contains generators. So, a TOP may lose 2 BES Transmission Facilities AND a BES Generator is tripped (due to the same Event), the TOP has then met the loss of "three or more BES Facilities" and is required to make a report per EOP-004-4. Either the SDT or NERC should publically post this clarification so all TOPs understand their obligations to the current enforceable EOP-004-2 and any further enforceable EOP-004. BES Elements (lines, transformers, and I5 reactors) that operate as a single Facility should be counted as one Facility. This is predicated on the definition that a Facility is "a set of…".

Response	
The SDT appreciates your comment regarding Transmission Loss in Attachment 1. The previous draft revision from "Elements" to "Facilities" was to align with the EAP. Some examples of Transmission loss can be found on the NERC website for Event Analysis Program; specifically, Addendum for Category 1a Events. If further examples or questions arise, contact your Regional Entity.

Comment	

Draft Standard EOP-004-4 Attachment 1, under table heading “Event Type”, Reclamation respectfully suggests consistent application of the replacement of “a” with “its” when referencing the Responsible Entity’s ownership, to be consistent with EOP-004-4 Attachment 2’s use of “its”.

(1) Based on the specifics of Attachment 1, we believe there is sufficient information available to include an applicability section within the standard pertaining to Facilities. The intent of this standard is to not capture events occurring on non-BES identified facilities. This would include reporting on small generating resources or dispersed power producing resources with nameplate ratings under 20 MVA or aggregate nameplate ratings under 75 MVA that are connected to a common connection point at 100 kV or above. (2) We question the VSL for Requirement R2 identifying a severity for when a Responsible Entity fails to submit an event report within 24 hours. We ask the SDT to clarify if the severity is based on 24 hours of the event's discovery or within 24 hours of the event's conclusion, independently of the expectation already proposed within the requirement text. (3) From the last commenting period for this draft standard revision, we previously recommended the implementation of an event reporting software tool on the NERC website providing capabilities to notify applicable Regional Entities and the DOE. We thank the SDT for its efforts to align event reporting activities with the DOE. However, based on the SDT's response to our comments, we are left with the impression that no automated mechanism is available to share event notifications submitted to the DOE with required Regional Entities, Reliability Coordinators, law enforcement, and other governmental authorities per Requirement R1. We believe a preventable human performance issue could be diverted through the development of a centralized portal that would disperse event reports to appropriate entities when necessary. We again ask the NERC Standards Developer assigned to this project to share this comment with NERC's IT department to see if a viable solution is available or could be developed. (4) We thank you for this opportunity to provide feedback.

Thank you for your comments. Attachment 1, as it relates to Facilities, is clear as written. A Facility is defined in the NERC Glossary as; “A set of electrical equipment that operates as a single BES Element (e.g., a line, a generator, a shunt compensator, transformer, etc.).” The EOP SDT has updated the VSLs for Requirement R2. NERC Events Analysis has been forwarded your comment regarding implementation of an event reporting software.

Comment

R2 of EOP-004-4 state:

Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan:

-by the later of 24 hours of recognition of meeting an event type threshold for reporting

or

-by the end of the Responsible Entity’s next business day (4 p.m. local time will be considered the end of the business day).

The VSL Section state:

The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting.

By example, if an event occurred at midnight (12 a.m. Tuesday), the entity can submit a report by the end of the next business day (4 p.m. local time will be considered the end of the business day) which is Wednesday 4p.m. That means 40 hours after the event.

We suggest to remove this paragraph “The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR” of the Lower VSL.

We suggest also modifying the moderate VSL as following: “The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 40 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting.”

1. In the section below, not sure why “Event Report” is capitalized? It seems that this “NOTE” intends to give an entity flexibility on the reporting timing, “under certain adverse conditions”, by differentiating between issuing a “written Event Report” and a “notification” (still to be done within timing requirements of R2), but I’m not sure this is the reasons for capitalizing “Event Report”?

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1

2. For SDT's consideration - Event Types in the Attachment 1 do not seem to capture GOP BES control centers (either evacuation or physical threats)?

· By capitalizing "Facility" in the Event Type for a "Physical Threat to its Facility", since this term is defined in the NERC Glossary (and does not capture control center in the definition), this category excludes GOPs from reporting physical threats to their BES control centers under EOP-004.

· By excluding GOPs from the "Entity with Reporting Responsibility" list in the "Unplanned BES control center evacuation" Event Type, this category excludes GOPs from reporting evacuations from their BES control centers under EOP-004.

· Same as the bullet above for the "Complete loss of Interpersonal Communication capability at a BES control center"

Not sure if this is an intentional omission? CIP standards explicitly identify GOP control centers (High, Medium and Low Impact Rating) as subject to CIP requirements. CIP requirements are being implemented recognizing that there is an impact on BES from a CIP incident on a GOP control center, but EOP-004 doesn't capture non-cyber events associated with the same facilities for reporting requirements – seems inconsistent.

At least High Impact GOP control centers, under the "Threshold for Reporting" should be considered for reporting requirements under EOP-004, for the events identified above.

This comment is being submitted recognizing that the current version of EOP-004-2 does not required this reporting either, for the same reasons identified in the three bullets above.

Likes 0

Response

Thank you for your comments. The EOP SDT updated the VSLs for Requirement R2. The first paragraph of EOP-004, Attachment 1, has been updated.

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers. In addition, there is no specific requirement in CIP-006 to report any physical threats to a Facility. CIP-006 says to refer to CIP-008 Cyber Security response plan. The Cyber Security response plan requires notification to E-SIAC only, which is not related to EOP-004 reporting.

Rachel Coyne - Texas Reliability Entity, Inc. - 10

Comment

In its previous comments, Texas RE requested that the SDT provide the rationale for adopting a 12-month implementation timeframe. In particular, Texas RE noted that "Given that registered entities presently are required to submit event reports under the current version of EOP-004 and the revised version largely narrows the scope of such reporting activities, it is unclear why a 12-month implementation period is necessary." With this comment, Texas RE sought to understand the basis for the SDT's conclusion that a 12-month period was necessary to give entities appropriate time to address the revised Standard requirements. Rather than provide a rationale in its response, the SDT merely noted that its intent is for the 12-month Implementation Plan "was to give all entities an appropriate time frame for implementation."

Texas RE therefore reiterates its request that the SDT provide a substantive basis for its determination that a 12-month time frame is appropriate. In response, the SDT could describe the additional compliance obligations for entities for the revisions, whether these will impose additional costs, require additional staffing, or other compliance burdens that serve as the basis for its conclusion.

Likes 0	
Dislikes 0	

Response

The Implementation Plan takes into account any barriers to implementation. The EOP SDT intent for the twelve-month Implementation Plan was to give all entities an appropriate time frame for implementation. Based on the EOP SDT's expertise, there are multiple processes that a NERC standard procedure has to go through and evaluated by an entity prior to being finalized, trained on, and approved. This standard would require changes to processes/procedures and training shift workers which requires ample time; and, therefore, a 12-month Implementation Plan is required.

Shannon Mickens - Southwest Power Pool, Inc. (RTO) - 2 - SPP RE, Group Name SPP Standards Review Group

Comment

We suggest capitalizing the term **"control center"** as it's defined in the NERC Glossary of Terms. Additionally, the terms "Reliability Coordinator (RC)", "Balancing Authority (BA)", and "Transmission Operator (TOP)" (applicable in the **Entity with Reporting Responsibility sections of Attachment 1)** are terms included in the definition of the term **"Control Center"** which provides more details on why the term should be capitalized throughout Attachment 1.

Likes 0	
Dislikes 0	

Response

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

Questions

1. Do you agree with the SDT's recommended changes to EOP-004-3, Requirements R1 and R2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

2. Do you agree with the proposed revisions to EOP-004-3, Attachment 1? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

3. Do you agree with the proposed revisions to EOP-004-3, Attachment 2? If you do not agree, or if you agree but have comments or suggestions on the SDT's recommendation, please provide your explanation and suggested language.

4. Please provide any additional comments you have on the proposed revisions and clarifications to EOP-004-3.

The Industry Segments are:

1 — Transmission Owners

2 — RTOs, ISOs

3 — Load-serving Entities

4 — Transmission-dependent Utilities

5 — Electric Generators

6 — Electricity Brokers, Aggregators, and Marketers

7 — Large Electricity End Users

8 — Small Electricity End Users

9 — Federal, State, Provincial Regulatory or other Government Entities

10 — Regional Reliability Organizations, Regional Entities

Comment	
Duke Energy requests clarification on the addition of "by the later of" and the use of 4pm as the end of a business day. Is it the drafting team's intent that the Responsible Entity has the option of submitting an Event Report 24 hours after the Event threshold has been reached, or the entity may choose to submit the report later than the 24 hours, as long as the report is submitted by 4pm the next business day? The proposed language as currently written may create some ambiguity depending on the reader.

Response	
Thank you for your comment. The intent is to provide entities at least 24 hours for reporting after recognition of an event; for recognition of reporting events on a weekend or a holiday, it allows the entity up to 4:00 p.m. on their next business day.	
Rachel Coyne - Texas Reliability Entity, Inc. - 10	
Answer	No
Document Name	
Comment	
As stated in the comments with the initial ballot, Texas RE noticed there is no requirement specifically indicating how events should be reported. Additionally, the VSLs indicate that a verbal report is acceptable. Since an event reporting form exists, Texas RE recommends the requirements specify the form in Attachment 2 be used for event reporting.	

In the Severe VSL for R2 "-4_ should be added to the last sentence to maintain consistency (e.g. "EOP-004-4").

Comment
(1) We thank the SDT for the development of this draft standard revision and the removal of the administrative burden reflected in Requirement R3 of the current standard. While we generally agree with the results-based compliance approach presented in this draft, we feel that the SDT has an opportunity to further clarify the intentions of their proposed changes. (2) We believe Requirement R2 is intended to provide the Responsible Entity an option of using the criterion that will occur last when reporting. While either criterion will occur "later" from the initial event discovery, as used in the context of an adverb describing a point in time, the ability to select one criterion versus the other is an adjective that describes the criteria's comparison. We recommend using "…by the latter of…" in the requirement text instead. (3) The first criterion listed in Requirement R2 states "24 hours of recognition of meeting an event type threshold for reporting." We believe the SDT inadvertently removed a necessary and supportive phrase that identifies the duration of the criterion. We also believe the SDT failed to establish a starting trigger for this criterion with the recognition and discovery of the event. We recommend rewording the criterion to read "within 24 hours following recognition of meeting an event type threshold for reporting." (4) The second criterion listed in Requirement R2 identifies the end of a business day as 4:00 PM. What is the rationale for selecting an arbitrary time? How do joint-filing entities that operate across large geographic regions and multiple time zones identify the local

time? How does a single entity with centralized operations in one time zone identify local time for an event originating in a different time zone? We agree with the SDT's intent to remove ambiguity regarding weekends and holidays, but believe the addition of the 4:00 PM local time reference creates unintended confusion. We recommend removing the reference entirely and allow some flexibility for the Responsible Entity to define its own meaning of "next business day." This would allow smaller entities, with a limited impact on BES reliability, to report after an extended weekend and after becoming fully staffed. (5) To clearly delineate the possible criteria available for Requirement R2, we believe each criterion should be renumbered into individual subparts list.

Thank you for your comment. The intent is to provide entities at least 24 hours for reporting after recognition of an event; for recognition of reporting events on a weekend or a holiday, it allows the entity up to 4:00 p.m. on their next business day (4:00 pm was selected because it is a typical ending time for operating personnel). The recognition of meeting an event type would be the trigger for reporting. It is the intent of the drafting team that the Responsible Entity would report by 4 p.m. of the next business day based on the local time of the entity's centralized location. The Responsible Entity could document this in their event reporting Operating Plan.	
Ryan Buss - Bonneville Power Administration - 1,3,5,6 - WECC

To clarify the Standard pertains to Event Reporting, Reclamation respectfully proposes the following revised language for Standard EOP-004-4, R1, R2, M1, and M2: R1. : Each Responsible Entity shall have an Event Reporting Operating Plan that includes the protocol(s) for reporting the Reportable Events listed in EOP-004-4 Attachment 1 to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, Responsible Entity personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority).	

Reclamation suggests re-wording M1 as follows: Each Responsible Entity will have a dated Event Reporting Operating Plan that includes the reporting protocol(s) and name(s) of organization(s) to receive an event report for the Reportable Event(s) specified in EOP-004-4 Attachment 1. R2. Each Responsible Entity shall report the types of events specified in EOP-004-4 Attachment 1, to the entities specified per its Event Reporting Operating Plan, by the later of 24 hours after recognition of meeting an event type threshold or by the end of the Responsible Entity's next business day, whichever is later (4 p.m. local time will be considered the end of the business day). M2. Each Responsible Entity will have as evidence of reporting an event either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating the event report was submitted within the timeframes identified in R2 above. Reclamation suggests the following change to both R2 and M2: "by the later of 24 hours after recognition of meeting an event type…"

Comment	
As for Requirement R1, we have no concerns pertaining to the proposed changes. However, we feel the clarity notes applicable to Measurement M1 in the comment form are inaccurate (page 2). The notes mentions the correction to the version number however, it doesn't mention the phrase **"but is not limited to the"** being stricken from the standard. We suggest the drafting team update all applicable documents to reflect that change.

Elizabeth Axson - Electric Reliability Council of Texas, Inc. - 2	
Answer	No
Document Name	ERO_EAP_Documents DL-Justification_for_Event_Category_1g_and_3a_changes_for_ERCOT.pdf
Comment	

ERCOT appreciates the SDT revising the generation loss reporting threshold for the ERCOT Interconnection to 1,400 MW from 1,000 MW in Attachment 1 of EOP-004. This change is consistent with ERCOT's September 8, 2016 comments, which requested this revision to align the reporting threshold with the *ERO Event Analysis Process* (EAP) document's threshold for initiating an analysis of a Category 3a generation loss event in the ERCOT Interconnection, which, at the time of ERCOT's comment, was 1,400 MW.

However, concurrent with Project 2015-08, the NERC Event Analysis Subcommittee (EAS) proposed changes to the EAP document that, among other things, sought to standardize the event analysis threshold for all Interconnections—including ERCOT—at 2,000 MW. The draft EAP document was first posted for comment on the NERC website on September 30, 2016, some three weeks after ERCOT submitted its comments to the latest version of EOP-004. The revised EAP document—version 3.1—was ultimately approved by the NERC Operating Committee at its December 13, 2016 meeting and became effective January 1, 2017. Thus, the threshold for conducting an analysis of Category 3a events is now 2,000 MW.

Consistent with ERCOT's September 8 comments and with the SDT's change to the reporting threshold in the last version of the draft standard, ERCOT believes the threshold for generation loss reporting in EOP-004 should continue to align with the EAP document's threshold for analysis of Category 3a events, which is now 2,000 MW. If there are any reasons for differentiating between the two thresholds, this justification does not seem immediately obvious. Fundamentally, in ERCOT's view, it would make little sense to require development of a written report of a generation loss event and distribute it to various entities if the event did not also justify an analysis under the EAP process. Furthermore, the reasons cited by the EAS for increasing the event analysis threshold—the implementation of BAL-003-1.1 and BAL-001-TRE-01, and the procurement of greater quantities of responsive reserve in ERCOT, among other reasons—would also appear to justify increasing the event reporting threshold. See *Justification for Proposed Changes to the ERO Event Analysis Process Categories 1g and 3a* (attached).

In conclusion, ERCOT appreciates the SDT's recognition of the need to align the EOP-004 generation loss reporting threshold with the EAP document's generation loss event analysis threshold and asks the SDT to continue this alignment by setting the generation loss reporting threshold for the ERCOT Interconnection in EOP-004 Attachment 1 to 2,000 MW.	
Likes 0	
Dislikes 0	
Response	
Thank you for your comments. To establish the equitable criteria for reporting in the ERCOT interconnection, the EOP SDT has revised the reporting threshold from 1,000 MW to 1,400 MW for generation loss in the ERCOT interconnection, as recommended from the September comments. Please refer to the project's mapping document for the technical justification regarding this revision. The intent of the EAP is to be used to promote a structured and consistent approach to performing event analyses in North America, it is a process for addressing event analysis and provides a lessons learned process and facilitates communication and information exchange among registered entities, NERC and its Regional Entities; it is a voluntary data-gathering tool; whereas the proposed Reliability Standard EOP-004-4 is mandatory. The EOP SDT collaborated with both the Events Analysis Subcommittee, as well as the United States Department of Energy, to better align reporting requirements of EOP-004, the EAP, and the OE-417. The reporting threshold for generation loss in the ERCOT Interconnection in proposed EOP-004-4 is aligned with the DOE OE-417.

BPA believes that the BA or TOP could be the initiating parties for a load appeal. Also, more clarity should be added for automatic load shedding causes (UVLS, UFLS, RAS).	
Likes 0	
Dislikes 0	

Response	
Thank you for your comments. EOP-011-1 puts the responsibility of having public appeals for load reduction in the BA's Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. The EOP SDT feels that the Threshold for Reporting is clear, the Responsible Reporting Entity will know if the Firm load shedding was done either manually, automatically or a combination of both.	
Ruida Shu - Northeast Power Coordinating Council - 1,2,3,4,5,6,7,10 - NPCC, Group Name RSC no Dominion	
Answer	No
Document Name	
Comment	
For the "Complete loss of monitoring or control capability at its staffed BES control center" Event Type, the "Threshold for Reporting" column should be revised as follows: "Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more, such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable." The "Threshold for Reporting" language should continue to include the "such that […]" language to maintain consistency with the EAP.

Comment	

Texas RE appreciates the SDT's response to Texas RE's previous comments regarding the removal of the IROLTV reporting obligation. As the SDT noted in its response, the SDT removed the reporting requirement because the new TOP-001-3 R12 requirement requires registered entities to avoid exceeding IROLs for the relevant TV period. As such, the SDT reasons that entities will self-report any noncompliance and there is no need to retain the corresponding reporting requirement.

Texas RE sees two issues with the SDT's rationale. First, as Texas RE noted in its original comments, there is a significant difference in the purpose and timing of the EOP-004 reporting requirements and the substantive obligations set forth under the new TOP-001-3, R12. Texas RE noted: "While such an exceedance may be investigated in the compliance or enforcement process, there is necessarily a delay in these activities. The contemporaneous reporting obligations serve to ensure that the NERC regions have immediate knowledge that a significant risk of a cascading outage has occurred, permitting the region to begin steps to identify the root cause and develop appropriate mitigation. Because such awareness appears critical to the core reliability functions performed within the NERC regions, Texas RE cautions against eliminating this requirement." Simply put, the mere existence of a parallel substantive requirement does not address Texas RE's concern. Texas RE cannot support the elimination of the IROLTV reporting obligation based on the SDT's proffered rationale.

Second, the SDT appears to misunderstand the self-reporting process. Principally, entities are under no obligation to self-report potential noncompliance instances, and may elect not to do so at their sole discretion. Given that certain utilities are on three- or even six-year audit cycles, an entity could decline to self-report an IROL exceedance violating TOP-001-3, R12 and wait until its next scheduled audit (contingent on the requirement being included in the audit scope). Accordingly, a potential issue could linger for years before it is addressed in the enforcement process. This is precisely the reason Texas RE believes the contemporaneous reporting requirement continues to be a necessary part of the NERC Reliability Standards.

Texas RE also suggests the Standard is too narrow in its reporting requirements for events. According to the Events Analysis Process effective January 1, 2017, "The primary reason for participating in an event analysis is to determine if there are lessons to be learned and shared with the industry. The analysis process involves identifying what happened, why it happened, and what can be done to prevent reoccurrence." Texas RE recommends broadening the requirements in order to understand prevention as well as what took place when event actually occurred. Texas RE provides the following suggestions for broadening the reporting requirements.

- Public appeal for load reduction should not be limited to a BES Emergency. In some cases the appeal may be done to avoid a BES Emergency and that event should be evaluated per the Events Analysis Process in order to prevent issues from occurring in the future.

- As previously submitted in comments with the initial ballot, Texas RE recommends adding the TOP function to the public appeal event type. This will align and be consistent with EOP-001-2.1b Requirement R2, which requires a TOP to “Develop, maintain, and implement a set of plans for load shedding”, EOP-001-2.1b Requirement R3, which requires a TOP emergency plan to include “Load reduction”, and EOP-001-2.1b Requirement R4, which references elements in Attachment 1-EOP-001 that a TOP and BA should consider when developing emergency plans.

- For the event types, “Complete loss of monitoring or control capability at its staffed BES control center” and “Complete loss of Interpersonal Communications and Alternative Interpersonal Communication capability at its staffed BES control center”, Texas RE recommends removing “its staffed”. Loss of monitoring or control capability is just as important at a non-staffed site as it is a staffed site and there should be no distinction in staffing status. Understanding why complete loss of monitoring or control capability and complete loss of Interpersonal and Alternative Interpersonal Communications occurred will increase the likelihood of prevention in the future.

Reliability Standard EOP-004-2 does not take into account GOP Control Centers. As previously stated, Texas RE recommends adding the GOP to the entity with reporting responsibility. Reliability Standard CIP-002-5 states that “each Control Center or back up Control Center used to perform the functional obligations of the Generator Operator” (CIP-002-5, Attachment 1, Sections 1.4 and 2.11) should be considered in an entity’s identification of high and medium BES Cyber Systems. Reliability Standard CIP-008-5 Requirement 1 requires Responsible Entities with High and Medium Impact BES Cyber Systems (which could include GOP Control Centers) to have a process to determine if a Cyber Security Incident is reportable and noticed the E-ISAC. Since this includes GOP Controls Centers, it would be consistent to include GOP Control Centers in EOP-004-4. Also, there are several GOPs in Texas (and other regions) that may control more megawatts than some BAs and yet there is no requirement to report events that occur so they are studied and preventative measures are taken in the future. Since CIP-002-5 has a mechanism for considering GOP Control Centers, and there are several GOP Control Centers that may control as much or more generation than a BA, Texas RE recommends adding the GOP as an entity with reporting responsibility. From a consistency and reliability stand point, events that occur at a GOP Control Center should be reported on and evaluated.

Thank you for your comments.

The EOP SDT has discussed your concerns and still contends that IROL reporting should be removed from this standard. TOP-001-3, Requirement R12 becomes effective 4/1/17, requiring a self-report if Tv is exceeded; TOP-007-WECC-1 is pending retirement; IRO-009-2, Requirement R3, requires the RC to act or direct others to act until the IROL exceedance is mitigated with in the IROL's Tv. The EAP also lists Category 2 "…g.) Interconnection Reliability Operating Limit (IROL) Violation for the time greater than Tv." EOP-004 is not the proper vehicle for immediate reporting. The drafting team suggests following the standard development process of submitting a SAR for modification.

The purpose of the EAP is to be used to promote a structured and consistent approach to performing event analyses in North America, it is a process for addressing event analysis and provides a lessons learned process and facilitates communication and information exchange among registered entities, NERC and its Regional Entities; it is a voluntary, data-gathering tool; whereas the proposed Reliability Standard EOP-004-4 is mandatory. The EOP SDT collaborated with both the Events Analysis Subcommittee, as well as the United States Department of Energy, to better align reporting requirements of EOP-004, the EAP, and the OE-417.

Public appeal for load reduction in a BES Emergency is in the currently-enforced EOP-004 standard, the EOP SDT finds the Event Type is appropriate as written.

In Reliability Standard EOP-011-1 (subject to future enforcement, retires EOP-001-2.1b, EOP-002-3.1, and EOP-003-2), Requirement R2, it is the function of the BA to include within its RC-reviewed Operating Plan to mitigate Capacity Emergencies and Energy Emergencies public appeals for voluntary load reductions (Requirement R2, Part 2.2.4.). The BA is the proper Entity with reporting responsibility for public appeal for load reduction resulting in a BES Emergency.

The EOP SDT team reviewed your comment about removing "its staffed" related to monitoring or control and Interpersonal/Alternative Interpersonal Communications. The team held many discussion on this topic related to staffed or not staffed; and, yes, it is important to the capability there, but if the site is not staffed the responsible entity will not be aware of the issue plus if you are not actively operating from the site there is no impact on reliability. The team is sure once the issues are identified the Responsible Entity will resolve the situation.

The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event

reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

We suggest that the Event Type **"Transmission Loss"** in Attachment 1 be removed from this section of the document. We feel that this effort is redundant and has been addressed in the NERC Event Analysis Program. Our first example would be applicable to, the renewable generation such as wind farms would require reporting for the loss of three or more generators pertain to a Misoperations. Another example would be, the slow trip of a circuit breaker clearing three or more transmission lines would be reportable even if it didn't include a Misoperations.

In Attachment 1, the Event Type, “Transmission loss” should be eliminated from mandatory reporting. Events reported under this category are included in voluntary reporting under the NERC Event Analysis Program and this minimum impact level of events should not be included in mandatory compliance reporting subject to fines and penalties. This category includes BES Facilities experiencing unexpected loss, contrary to design, of three or more BES Facilities. Facilities are defined as: A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.). The following examples support removal of this Event Type:

1. Renewable generation, such as wind farms, with total generation >75MWs are included in BES Facilities. A misoperation on a feeder at a wind facility including three (3) or more generators would require a mandatory report under EOP-004-4. A typical wind farm generator is approximately 1.5 – 3.0 MWs each. So, under Transmission loss, a generation loss of less than 10 MWs is required to be reported, but under the “Generation loss” Event Type in Attachment 1 to EOP-004-4, the reportable generation loss would need to be greater than 2,000 MWs (Eastern Interconnection) to be subject to mandatory fines and penalties. 10 MWs versus 2,000 MWs is an obvious disparity and clearly shows the minimal level of impact to reliability of the BES is not met.

2. Under “Transmission loss”, a slow trip of a circuit breaker clearing a bus with 3 or more transmission lines or transformers, or generators, would be reportable under this mandatory compliance obligation and subject to fines and penalties. This can happen even without a misoperation, if the circuit breaker is merely slow in clearing the fault and the backup protection on the breaker clears the bus. All the protection systems can operate correctly and an entity is still subject to reporting under this event type. These types of events are being collected under the NERC Event Analysis Program and these events do not meet the threshold of risk to the BES to enforce fines and penalties. More significant “Transmission loss” events are included in other Event Types and associated with BES Emergencies. Minor risk “Transmission loss” events are more appropriately handled through the voluntary NERC Event Analysis Program and do not need to be included in EOP-004 reporting. The risk of these minor events does not translate to a significant risk to the BES and does not need to be included in mandatory compliance and enforcement.

3. Under “transmission loss”, misoperations involving 3 or more Transmission lines, transformers, or generators are reportable under EOP-004-4. Misoperation reporting is mandatory under PRC-004. Redundant reporting under EOP-004 is not needed and subjects entities to double jeopardy for compliance violations.

4. The NERC Event Analysis Program has matured over the past few years and is an excellent tool for industry to review, discuss, and develop lessons learned to improve reliability. Compliance obligations under the event type “Transmission loss” are no longer needed and are a detriment to reliability by taking the operational focus away from operation of the BES during these minor events to reporting when these reporting requirements are better handled through other existing programs.

Duke Energy recommends the following edits to Event Types in Attachment 1: • Public appeal for load reduction • Firm load shedding We recommend the removal of the phrase “resulting from a BES Emergency” from the Event Type, and placing the phrase in the Threshold for Reporting. Duke Energy recommends the following edits to Threshold for Reporting in Attachment 1: • Public appeal for load reduction resulting from a BES Emergency. • System-wide voltage reduction of 3% or more resulting from a BES Emergency. • Firm load shedding ≥ 100 MW (manual or automatic) resulting from a BES Emergency. We recommend the removal of the of the phrase “to maintain continuity of the BES” and replacing with the more widely understood “resulting from a BES Emergency”. We feel that adding “resulting from a BES Emergency” to the “Threshold for Reporting” in both cases consistently creates a better understanding and is less vague. By doing this, it puts the details in the “Threshold for Reporting” language	

where we feel they are best suited. Additionally, while we understand the phrase "to maintain continuity of the BES" would mirror the reference used in OE-417, that doesn't mean that the phrase is any less ambiguous or clearly understood throughout the industry. With BES Emergency being a defined term, and readily used throughout the industry, we believe it better suited than the less known, undefined concept of "to maintain continuity of the BES". Firm load shedding resulting from a BES Emergency: We recommend the drafting team consider adding "*or*" to the "Entity with Reporting Responsibility" section for this Event Type. We suggest the following: "*Initiating RC, BA, or TOP*". We feel that the addition of "*or*" furthers the drafting team's intent that only one of the listed entities is expected to file the report. As written, one could still read the language as to state that all entities are required to file a report rather than just the initiating entity.

Thank you for your comment. The EOP SDT reviewed your comments and agreed with your suggested changes to System-wide voltage reduction and updated the Event Type category and the Threshold. The EOP SDT agrees with your comment to add 'or' between BA and TOP, it adds clarity to the Entity with Reporting Responsibility. For consistency with Attachment 1 Event Types, and identifying that a BES Emergency has occurred and that an action has taken place, no change was made to Event Type category for public appeal and firm load shedding.

For the "Complete loss of monitoring or control capability at its staffed BES control center" Event Type, the "Threshold for Reporting" column should be revised as follows: "Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more**, such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable**." The "Threshold for Reporting" language should continue to include the "such that[…]" language to maintain consistency with the EAP.

Thank you for your comment. The EOP SDT feels that complete loss of monitoring or control capability at its staffed BES control center is clear as written and does not need “such that analysis capability (i.e., State Estimator or Contingency Analysis) added. This was discussed at length at many drafting team meetings and the “such that analysis capability (i.e., State Estimator or Contingency Analysis)” language did not bring any clarity to the reporting trigger.

Comment	

Regarding the Event Type “Transmission Loss” in Attachment 1, we suggest that the SDT consider one of the following options:

1. Modify the threshold language as follows:

“Unexpected loss within its area, contrary to design, of three or more BES Transmission elements caused by a common disturbance (excluding successful automatic reclosing).”

Reasons:

a. The current NERC Glossary of Terms definition of “Facilities” includes generators. Therefore, renewable generation such as wind farms would require reporting for the loss of three or more generators. This loss in MW is minimal compared to the threshold stated in the Event Type “Generation loss”.

b. Generation loss is required to be reported by the BA. Including generation in the reporting requirements for the TOP as well introduces confusion and the possibility of unnecessary or duplicative reporting.

OR

2. Remove this event type from this section of the document.

Reasons:

a. Same reasons as listed above b. This reporting is redundant having already been addressed in the NERC Event Analysis Program.

Comments: Attachment 1, Page 10, 1st Row: Event Type: **BES Emergency resulting in voltage deviation on a Facility** – The voltage deviation range, as described in “Threshold for Reporting,” includes everything greater than -10% of nominal voltage which includes acceptable voltages. (e.g. For 115.0kV, everything greater than -10% would include 103.5 to 126.4kV) **Suggested Language for “Threshold for Reporting”:** A voltage deviation of < -10% OR > 10% of nominal voltage sustained for > 15 continuous minutes.

At times there may be a need for a TOP to implement a public appeal for load reduction in certain areas of their system if there is a system operating limit that can only be controlled by reduced load. We recommend replacing “BA” with “Initiating BA or TOP.” The event types with multiple applicable entities such as, “Uncontrolled loss of firm load resulting from a BES Emergency”, and “System separation (islanding)” will most likely have the same event reported multiple times if the BA, TOP or RC are different entities. This has in the past been a source of confusion with the same event being reported multiple times. We recommend changing the Entity with Reporting Responsibility for the Event Type, “Uncontrolled loss of firm load resulting from a BES Emergency” to just the BA. We recommend changing the Entity with Reporting Responsibility for the Event Type, “System separation (islanding)” to just the BA. This would eliminate multiple reports for the same event, while still making sure the events are reported.

Thank you for your comments. Reliability Standard EOP-011-1 (subject to future enforcement) puts the responsibility of having Public Appeals for load reduction in the BA’s Operating Plan to Mitigate Capacity Emergencies and Energy Emergencies; therefore, it should only be the BA reporting this event type in EOP-004. If an event applies to any of the entities listed as the “entities with reporting responsibilities,” then it is up to those entities to ensure reporting is done. Whether it be reporting the event themselves or delegating reporting responsibilities, this should all be covered in the entity’s event reporting Operating Plan.

Comment	
It appears that Attachment 1 is an effort to consolidate two separate reporting requirements. PJM believes the revision adds a bit of confusion. The ‘Automatic’ reporting section today states: via automatic undervoltage or underfrequency load shedding schemes, or SPS/RAS. PJM believes that the Standard should incorporate this clarity in the new EOP requirement so there is no confusion about reporting of ‘automatic’ load shed between 100-300MWs due to loss of BES Facilities (i.e. storms) which could be considered an emergency and also automatic, uncontrolled loss of 300MWs for any reason is reportable, which is why the 100-300MW presents confusion.

Under physical threats to a facility, suspicious activity at a facility must be defined. I suggest suspicious activity be given its own row (removed from within physical threats to a facility). Specifically, “suspicious device or activity” is ambiguous. Further clarification on “suspicious activity” is needed. For example, does this include photography near a Facility? Also, Attachment 1 should specifically cover cyber related suspicious activity – for example, solicitation attempts or phishing calls at Facilities. There should also be instruction on what an Entity should do if they later realize the incident was NOT suspicious – for example, a prior reported incident which, after further investigation, turns out to be innocuous. The effect of using ambiguous terms and no mechanism for correcting incidents post investigation has left the industry with an output that contains more “trash” than value – many incidents that do not truly meet the definition of EOP 004 are sent out via EISAC which leads to the dilution of truly important incidents.

Thank you for your comment. The EOP SDT feels the language in the Threshold for Reporting is clear as written. This is the language in the original reporting requirement the only change the EOP SDT made was the removal of “Do not report theft unless it degrades normal operation of a Facility.” Entities should define in their event reporting Operating Plan what they deem as suspicious, and report accordingly.

(1) We believe the SDT is attempting to align Transmission Loss events with similar reportable criteria listed under the current NERC Event Analysis process. As identified within supportive documentation for this mature process, Category 1a Events caused by common disturbances affecting BES Facilities only refers to BES-defined lines, generators, and transformers. When capitalizing Facility in the context of this reportable criterion, this includes equipment like shunt compensators, circuit breakers, and busses. Furthermore, events caused by Misoperations are reportable under NERC Reliability Standard PRC-004, and could cause repetitive reporting in the process. If the SDT does not consider the outright removal of this event type from the EOP-004 reportable criteria, we recommend rephrasing the threshold for reporting a Transmission Loss event, as reportable to TOPs only, as “Unexpected loss, within its area and contrary to design or successful automatic reclosing, of three or more Transmission Facilities caused by a common disturbance.” (2) The reference to “=/>” in the reporting threshold for a BES Emergency resulting in a voltage deviation literally reads “equal to or greater than.” Is the intent of the SDT to identify a reporting threshold greater than ± 10% of nominal voltage? We propose using the symbol “≥” to reflect reporting a sustainable voltage deviation that is greater than or equal to ± 10% of nominal voltage over a continuous 15-minute period. (3) We believe the proposed reportable threshold reference under Generation Loss should be clarified to identify Forced Outages only. Forced Outages is listed under the NERC Glossary and identifies the removal of generation from service for either emergency reasons or unanticipated failures. We feel the incorporation of references to extreme weather patterns or fuel supply unavailability is unnecessary when used within this context.

The drafting team is comprised of industry SMEs, NERC SMEs, and FERC observers, and the EOP SDT has conducted many discussions on this issue as a result of industry comments received; but finds that there remains a need for this reporting requirement. Transmission Loss event type in Attachment 1 closely aligns with the EAP. The EOP SDT collaborated with both the Events Analysis Subcommittee, as well as the United States Department of Energy, to better align reporting requirements of EOP-004, the EAP, and the OE-417. The intent of the EAP is to be used to promote a structured and consistent approach to performing event analyses in North America, it is a process for addressing event analysis and provides a lessons learned process and facilitates communication and information exchange among registered entities, NERC and its Regional Entities; it is a voluntary data-gathering tool; whereas the proposed Reliability Standard EOP-004-4 is mandatory. The EOP SDT appreciates you comment about the voltage reporting requirement in the Threshold for Reporting and will change the language to “A voltage deviation of =/> 10% of nominal voltage sustained for > 15 continuous minutes.” The EOP SDT discussed your comment and decided no changes were needed to the Generation loss Event Type category.

Answer	Yes
Document Name	
Comment	
Overall the changes to the Standard are positive and WAPA appreciates the efforts of the SDT. However, there is still significant room for confusion regarding reportable Transmission Loss Events as a TOP with the change from Element to Facility. WAPA would very much appreciate examples within the standard that clarify events which would be reportable and events which would not be reportable.

Response	
Thank you for your comment. The previous draft revision from “Elements” to “Facilities” was to align with the EAP. Some examples can be found on the NERC website for Event Analysis Program; specifically, Addendum for Category 1a Events. If further examples or questions arise, contact your Regional Entity.

Comment	
CenterPoint Energy generally agrees with the SDT’s proposed revisions to EOP-004-3, Attachment 1: Reportable Events, but would like the SDT to consider the following: The addition of the word “staffed” in front of “BES control center…” becomes a qualifier to distinguish which control center is in scope for reporting to this category. An entity may have more than one control center that is “staffed” but we believe that the control center that is responsible for performing Real-time functions responsible for reliability is the control center that is in scope for when the threshold for complete loss of interpersonal Communication capability has been lost is met. Additionally, the term “control center” is not capitalized. We suggest that the term be capitalized to align with the glossary definition of Control Center and to align with the use Control Center in category 1h as it applies to the loss of monitoring or control at a Control Center. It is not necessary to have BES in front of Control Center because it is already included in the NERC definition. In summary, CenterPoint energy offers the following suggestions for the Event Type and Threshold for Reporting: Event Type - Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a Control Center. Threshold for Reporting - Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting a staffed Control Center responsible for performing Real-time functions for the reliability of its BES for 30 continuous minutes or more.

Response	

Thank you for your comments. The EOP SDT team reviewed your comment about removing "its staffed" related to monitoring or control and Interpersonal/Alternative Interpersonal Communications. The team held many discussion on this topic related to staffed or not staffed; and, yes, it is important to the capability there, but if the site is not staffed the responsible entity will not be aware of the issue plus if you are not actively operating from the site there is no impact on reliability. The team is sure once the issues are identified the responsible entity will resolve the situation. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers.

Comment	
The NSRF believes we discovered a compliance concern that may cause entities to be non-compliant with Attachment 1, Event Type of *Transmission loss*. With the use of Facility (and Element) in threshold for reporting, a Transmission Operator may not be aware that the NERC defined term of Facility also contains "a generator". Even though Event Type *Generation loss* is predicated on a MW threshold, a *Transmission loss* event also contains generators. So, a TOP may lose 2 BES Transmission Facilities AND a BES Generator is tripped (due to the same Event), the TOP has then met the loss of "three or more BES Facilities" and is required to make a report per EOP-004-4. Either the SDT or NERC should publically post this clarification so all TOPs understand their obligations to the current enforceable EOP-004-2 and any further enforceable EOP-004. BES Elements (lines, transformers, and I5 reactors) that operate as a single Facility should be counted as one Facility. This is predicated on the definition that a Facility is "a set of…".

(1) Based on the specifics of Attachment 1, we believe there is sufficient information available to include an applicability section within the standard pertaining to Facilities. The intent of this standard is to not capture events occurring on non-BES identified facilities. This would include reporting on small generating resources or dispersed power producing resources with nameplate ratings under 20 MVA or aggregate nameplate ratings under 75 MVA that are connected to a common connection point at 100 kV or above. (2) We question the VSL for Requirement R2 identifying a severity for when a Responsible Entity fails to submit an event report within 24 hours. We ask the SDT to clarify if the severity is based on 24 hours of the event's discovery or within 24 hours of the event's conclusion, independently of the expectation already proposed within the requirement text.	

(3) From the last commenting period for this draft standard revision, we previously recommended the implementation of an event reporting software tool on the NERC website providing capabilities to notify applicable Regional Entities and the DOE. We thank the SDT for its efforts to align event reporting activities with the DOE. However, based on the SDT's response to our comments, we are left with the impression that no automated mechanism is available to share event notifications submitted to the DOE with required Regional Entities, Reliability Coordinators, law enforcement, and other governmental authorities per Requirement R1. We believe a preventable human performance issue could be diverted through the development of a centralized portal that would disperse event reports to appropriate entities when necessary. We again ask the NERC Standards Developer assigned to this project to share this comment with NERC's IT department to see if a viable solution is available or could be developed.

(4) We thank you for this opportunity to provide feedback.

Response

Thank you for your comments. Attachment 1, as it relates to Facilities, is clear as written. A Facility is defined in the NERC Glossary as; "A set of electrical equipment that operates as a single BES Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)." The EOP SDT has updated the VSLs for Requirement R2. NERC Events Analysis has been forwarded your comment regarding implementation of an event reporting software.

R2 of EOP-004-4 state:

Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan:

-by the later of 24 hours of recognition of meeting an event type threshold for reporting

or

-by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).

The VSL Section state:

The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting.

By example, if an event occurred at midnight (12 a.m. Tuesday), the entity can submit a report by the end of the next business day (4 p.m. local time will be considered the end of the business day) which is Wednesday 4p.m. That means 40 hours after the event.

We suggest to remove this paragraph "The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting. OR" of the Lower VSL.

We suggest also modifying the moderate VSL as following: "The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 40 hours but less than or equal to 48 hours after recognition of meeting an event threshold for reporting."

1. In the section below, not sure why "Event Report" is capitalized? It seems that this "NOTE" intends to give an entity flexibility on the reporting timing, "under certain adverse conditions", by differentiating between issuing a "written Event Report" and a "notification" (still to be done within timing requirements of R2), but I'm not sure this is the reasons for capitalizing "Event Report"?

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written Event Report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1

2. For SDT's consideration - Event Types in the Attachment 1 do not seem to capture GOP BES control centers (either evacuation or physical threats)?

· By capitalizing "Facility" in the Event Type for a "Physical Threat to its Facility", since this term is defined in the NERC Glossary (and does not capture control center in the definition), this category excludes GOPs from reporting physical threats to their BES control centers under EOP-004.

· By excluding GOPs from the "Entity with Reporting Responsibility" list in the "Unplanned BES control center evacuation" Event Type, this category excludes GOPs from reporting evacuations from their BES control centers under EOP-004.

· Same as the bullet above for the "Complete loss of Interpersonal Communication capability at a BES control center"

Not sure if this is an intentional omission? CIP standards explicitly identify GOP control centers (High, Medium and Low Impact Rating) as subject to CIP requirements. CIP requirements are being implemented recognizing that there is an impact on BES from a CIP incident on a GOP control center, but EOP-004 doesn't capture non-cyber events associated with the same facilities for reporting requirements – seems inconsistent. At least High Impact GOP control centers, under the "Threshold for Reporting" should be considered for reporting requirements under EOP-004, for the events identified above. This comment is being submitted recognizing that the current version of EOP-004-2 does not required this reporting either, for the same reasons identified in the three bullets above.

Response	
Thank you for your comments. The EOP SDT updated the VSLs for Requirement R2. The first paragraph of EOP-004, Attachment 1, has been updated. The EOP SDT reviewed the defined term for Control Center (effective 7/1/2016 as identified in CIP standards) and GOP is included in this definition. The defined term is not applicable, given that the GOPs were not originally identified in Attachment 1 or Attachment 2 as an entity with reporting responsibilities for control center event types. Although the GOPs have other reporting responsibilities, they have no event reporting responsibility for control center event types. There is also not a currently-enforced standard that requires GOPs to have Control Centers or backup Control Centers. In addition, there is no specific requirement in CIP-006 to report any physical threats to a Facility. CIP-006 says to refer to CIP-008 Cyber Security response plan. The Cyber Security response plan requires notification to E-SIAC only, which is not related to EOP-004 reporting.

Comment	
In its previous comments, Texas RE requested that the SDT provide the rationale for adopting a 12-month implementation timeframe. In particular, Texas RE noted that "Given that registered entities presently are required to submit event reports under the current version of EOP-004 and the revised version largely narrows the scope of such reporting activities, it is unclear why a 12-month implementation period is necessary." With this comment, Texas RE sought to understand the basis for the SDT's conclusion that a 12-month period was necessary to give entities appropriate time to address the revised Standard requirements. Rather than provide a rationale in its response, the SDT merely noted that its intent is for the 12-month Implementation Plan "was to give all entities an appropriate time frame for implementation." Texas RE therefore reiterates its request that the SDT provide a substantive basis for its determination that a 12-month time frame is appropriate. In response, the SDT could describe the additional compliance obligations for entities for the revisions, whether these will impose additional costs, require additional staffing, or other compliance burdens that serve as the basis for its conclusion.

Response	
The Implementation Plan takes into account any barriers to implementation. The EOP SDT intent for the twelve-month Implementation Plan was to give all entities an appropriate time frame for implementation. Based on the EOP SDT's expertise, there are multiple processes that a NERC standard procedure has to go through and evaluated by an entity prior to being finalized, trained on, and approved. This standard would require changes to processes/procedures and training shift workers which requires ample time; and, therefore, a 12-month Implementation Plan is required.

We suggest capitalizing the term **"control center"** as it's defined in the NERC Glossary of Terms. Additionally, the terms "Reliability Coordinator (RC)", "Balancing Authority (BA)", and "Transmission Operator (TOP)" (applicable in the **Entity with Reporting Responsibility sections of Attachment 1)** are terms included in the definition of the term **"Control Center"** which provides more details on why the term should be capitalized throughout Attachment 1.	
Likes 0

"Suspicious device or activity" in Attachment 1 is not defined even though Suspicious is capitalized. The NERC Glossary of Terms does not define "Suspicious" either.	
Likes 0	
Dislikes 0	
Response	
Thank you for your comment. "Suspicious" is capitalized because it is the first word in a new sentence. It was not the intent of the EOP SDT for "suspicious" to be defined.	

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-008-2 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/30/2016 – 08/15/2016

Anticipated Actions	Date
10-day final ballot	11/30/2016 – 12/09/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinator

   4.1.2. Transmission Operator

   4.1.3. Balancing Authority
5. **Effective Date:** See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

Rationale for Requirement R1: The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons:

COM-001-1 (no longer enforceable) covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data.

The topic of data exchange has historically been covered in the IRO / TOP Standards. Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data exchange capabilities.

1.2.3. Interpersonal Communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards are applicable to the primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality. To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual test of its Operating Plan that demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. **Compliance Monitoring Process**

  1.1. **Compliance Enforcement Authority:**
  "Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

  1.2. **Evidence Retention:**
  The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

  The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

  - Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in effect Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
  - Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in effect copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.
  - Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Measurement M3.
  - Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it's backup functionality (provided either through a

facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality in accordance with Measurement M4.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in effect Operating Plan for backup functionality, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in effect since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and the previous calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in effect document and any such documents in effect since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality.
R4.	N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				primary control center functionality.
R5.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved. OR, The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.
R6.	N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R7.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but it did not document the results. OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than two continuous hours but more than or equal to 1.5 continuous hours.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1.5 continuous hours but more than or equal to 1 continuous hour.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct an annual test of its Operating Plan for backup functionality. OR, The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 0.5 continuous hours.
R8.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
	calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted more than six calendar months but less than or equal to seven calendar months after the date when the functionality was lost.	calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than seven calendar months but less than or equal to eight calendar months after the date when the functionality was lost.	calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

D. Regional Variances

None.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-008-2 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/30/2016 – 08/15/2016

Anticipated Actions	Date
~~45-day formal comment period with ballot~~	~~06/22/2016 – 08/08/2016~~
~~45-day formal comment period with additional ballot~~	~~08/30/2016 – 10/14/2016~~
10-day final ballot	11/~~01~~30/2016 – ~~11~~12/~~11~~09/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Reliability Coordinator
     - **4.1.2.** Transmission Operator
     - **4.1.3.** Balancing Authority
5. **Effective Date:** See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

Rationale for Requirement R1: The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons:

COM-001-1 (no longer enforceable) covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data.

The topic of data exchange has historically been covered in the IRO / TOP Standards. Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data ~~communications~~exchange capabilities.

1.2.3. Interpersonal Communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards ~~that depend on~~are applicable to the primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~ are applicable to the primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality ~~respectively~~. To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to ~~-~~a Balancing Authority's or Transmission Operator's primary control center functionality ~~respectively~~ in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality ~~at least once every 15 calendar months~~. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved ~~at least once every 15 calendar months~~annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual~~a~~ test of its Operating Plan that ~~at least once every 15 calendar months and shall document the results from such a test. This test shall~~ demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in ~~force~~ effect Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in ~~force~~ effect copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.
- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality in accordance with Measurement M3.
- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has

demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality ~~respectively~~ in accordance with Measurement M4.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in ~~force~~ effect Operating Plan for backup functionality, has been reviewed and approved ~~at least once every 15 calendar months~~annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in ~~force~~ effect since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and the previous calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality would last for more than six calendar months shall retain evidence for the current in ~~force~~ effect document and any such documents in ~~force~~ effect since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (Requirement R1, Parts 1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.
R2.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.
R3.	N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
				center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality.
R4.	N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				Transmission Operator's primary control center functionality ~~respectively~~.
R5.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved ~~at least once every 15 calendar months~~. OR, The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.
R6.	N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				to maintain compliance with Reliability Standards.
R7.	The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but it did not document the results. OR, The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than two continuous hours but more than or equal to 1.5 continuous hours.	The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than 1.5 continuous hours but more than or equal to 1 continuous hour.	The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR, The responsible entity conducted ~~a~~an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~. OR, The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than 0.5 continuous hours.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R8.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted more than six calendar months but less than or equal to seven calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than seven calendar months but less than or equal to eight calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-008-2 is being posted for a 45-day formal comment period with ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/30/2016 – 08/15/2016

Anticipated Actions	Date
10-day final ballot	11/30/2016 – 12/09/2016
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Loss of Control Center Functionality
2. **Number:** EOP-008-~~1~~2
3. **Purpose:** Ensure continued reliable operations of the Bulk Electric System (BES) in the event that a control center becomes inoperable.
4. **Applicability:**

   4.1. Functional Entit~~y~~ies:

   4.1.1. Reliability Coordinator~~.~~

   4.1.2. Transmission Operator~~.~~

   4.1.3. Balancing Authority~~.~~

~~5. **Effective Date:** The first day of the first calendar quarter twenty-four months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the standard shall become effective on the first day of the first calendar quarter twenty-four months after Board of Trustees adoption.~~

5. **Effective Date:** See the Implementation Plan for EOP-008-2.
6. **Standard-Only Definition:** None

B. Requirements and Measures

Rationale for Requirement R1: The phrase "data exchange capabilities" is replacing "data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards. Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include ~~the following, at a minimum~~: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

1.1. The location and method of implementation for providing backup functionality ~~for the time it takes to restore the primary control center functionality.~~.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include~~, at a minimum:~~:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data ~~communications.~~ exchange capabilities.

~~**1.1.1.** Voice communications.~~

1.2.3. Interpersonal Communications.

~~**1.2.3.**~~ **1.2.4.** Power source(s).

~~**1.2.4.**~~ **1.2.5.** Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.

1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.

1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include ~~at a minimum~~:

1.6.1. A list of all entities to notify when there is a change in operating locations.

1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality, as well as during outages of the primary or backup functionality.

1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.

M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.

R2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, and in effect copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.

R3. Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards ~~that depend on~~are applicable to the primary control center functionality. To avoid requiring a tertiary facility, a backup facility is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup facilities of two weeks or less
- Unplanned outages of the primary or backup facilities

~~M1.~~M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.

R4. Each Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality~~ respectively.~~ . To avoid requiring tertiary functionality, backup functionality is not required during: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]*

- Planned outages of the primary or backup functionality of two weeks or less
- Unplanned outages of the primary or backup functionality

M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.

R5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall annually review and approve its Operating Plan for backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. An update and approval of the Operating Plan for backup functionality shall take place within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1.

M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have evidence that its dated, current, and in effect Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.

R6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.

R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall conduct and document results of an annual test of its Operating Plan that demonstrates: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The transition time between the simulated loss of primary control center functionality and the time to fully implement the backup functionality.

7.2. The backup functionality for a minimum of two continuous hours.

M7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.

R8. Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide a plan to its Regional Entity within six calendar months of the date when the functionality is lost, showing how it will re-establish primary or backup functionality. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~**B. Measures**~~

~~6. M1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, in force Operating Plan for backup functionality in accordance with Requirement R1, in electronic or hardcopy format.~~

~~7. M2. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a dated, current, in force copy of its Operating Plan for backup functionality in accordance with Requirement R2, in electronic or hardcopy format, available at its primary control center and at the location providing backup functionality.~~

~~8. M3. Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.~~

~~9. M4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.~~

~~10. M5. Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall have evidence that its dated, current, in force Operating Plan for backup functionality, in electronic or hardcopy format, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Requirement R5.~~

~~M2.~~M1. ~~M6.~~ ~~Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have dated evidence that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Requirement R6.~~

~~M3.~~M1. ~~M7.~~ ~~Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall provide evidence such as dated records, that it has completed and documented its annual test of its Operating Plan for backup functionality, in accordance with Requirement R7.~~

~~M4.~~M8. ~~M8.~~ Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months shall provide evidence that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Requirement R8.

C. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Enforcement Authority:

~~2. Regional Entity.~~

~~**1.1. Compliance Monitoring and Enforcement Processes:**~~

~~3. Compliance Audits~~

~~4. Self-Certifications~~

~~5. Spot Checking~~

~~6. Compliance Violation Investigations~~

~~7. Self-Reporting~~

~~8. Complaints~~

~~**1.2. Data Retention**~~

~~The Reliability Coordinator, Balancing Authority, and Transmission Operator~~ "Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall ~~retain~~keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain its dated, current, in ~~force~~effect Operating Plan for backup functionality plus all issuances of the Operating Plan for backup functionality since its last compliance audit in accordance with Measurement M1.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain a dated, current, in ~~force~~effect copy of its Operating Plan for backup functionality, with evidence of its last issue, available at its primary control center and at the location providing backup functionality, for the current year, in accordance with Measurement M2.

- Each Reliability Coordinator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) in accordance with Requirement R3 that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality in accordance with Measurement M3.
- Each Balancing Authority and Transmission Operator shall retain dated evidence for the time period since its last compliance audit, that it has demonstrated that it's backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) in accordance with Requirement R4 includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality ~~respectively~~ in accordance with Measurement M4.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator, shall retain evidence for the time period since its last compliance audit, that its dated, current, in ~~force~~effect Operating Plan for backup functionality, has been reviewed and approved annually and that it has been updated within sixty calendar days of any changes to any part of the Operating Plan described in Requirement R1 in accordance with Measurement M5.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain dated evidence for the current year and for any Operating Plan for backup functionality in ~~force~~effect since its last compliance audit, that its primary and backup functionality do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards in accordance with Measurement M6.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall retain evidence for the current calendar year and ~~one~~the previous ~~year~~calendar years, such as dated records, that it has tested its Operating Plan for backup functionality, in accordance with Measurement M7.
- Each Reliability Coordinator, Balancing Authority, and Transmission Operator that has experienced a loss of their primary or backup functionality and that anticipates that the loss of primary or backup

functionality would last for more than six calendar months shall retain evidence for the current in ~~force~~effect document and any such documents in ~~force~~effect since its last compliance audit that a plan has been submitted to its Regional Entity within six calendar months of the date when the functionality is lost showing how it will re-establish primary or backup functionality in accordance with Measurement M8.

~~8.1.~~1.3. ~~Additional~~ Compliance ~~Information~~ Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~None.~~Violation Severity Levels

R #	Violation Severity Levels			
~~R#~~	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (Requirement R1, Parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (Requirement R1, Parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (Requirement R1, Parts (1.1 through 1.6). Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standard(s)

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirement(s)

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standard(s)

None.

Applicable Entities

EOP-005 — System Restoration from Blackstart Resources

- Transmission Operator
- Generator Operator
- Transmission Owners identified in the Transmission Operators restoration plan
- Distribution Providers identified in the Transmission Operators restoration plan

EOP-006 — System Restoration Coordination

- Reliability Coordinator

EOP-008 — Loss of Control Center Functionality

- Reliability Coordinator
- Transmission Operator
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing an outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standard(s)

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirement(s)

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standard(s)

None.

Applicable Entities

EOP-005 — System Restoration from Blackstart Resources

- Transmission Operator
- Generator Operator
- Transmission Owners identified in the Transmission Operators restoration plan
- Distribution Providers identified in the Transmission Operators restoration plan

EOP-006 — System Restoration Coordination

- Reliability Coordinator

EOP-008 — Loss of Control Center Functionality

- Reliability Coordinator
- Transmission Operator
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing an outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3 Requirement R1,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		EOP-005-2 Requirement R7, is redundant to EOP-005-3 Requirement R1.
EOP-005-2, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.	EOP-005-3, Requirement R3 R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall update and submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan. The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements per EOP-006.	The EOP SDT revisions harmonize the use of “BES modification” and clarify the timing for unplanned permanent and planned permanent BES modifications.
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	“Implementation date” was revised to “effective date” to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady	The sentence, “This shall be completed every five years at a minimum” was revised to: “This shall be completed at least once

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	every five years" to eliminate any ambiguity in the prior language.
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training	The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value. Requirement R8, Part 8.5 was added to Requirement R8 to address findings from

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	annually for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority.	the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. Federal Energy Regulatory Commission (Commission) Order no. 749:

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	restoration training every 24 calendar months to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	*"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."* The Project 2015-02 Emergency Operations Periodic Review Team, as well as the Project 2015-08 Emergency Operations Standards Drafting Team determined (through conducted outreach and comment questions/responses during postings of periodic review templates and the SAR) that industry does not find ambiguity with the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the TOP, TO, and the DP. A rationale box was added to the requirement to clarify "unique tasks."
EOP-005-2, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as emails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.	EOP-005-3, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is GOP.
EOP-005-2, Requirement R17 **R17.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a	EOP-005-3, Requirement R15 **R15.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every 24 calendar months to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and	"Two calendar years" was revised to "24 calendar months" for consistency in the standards.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
bus. The training program shall include training on the following:	energizing a bus. The training program shall include training on the following:	
EOP-005-2, Measure M16 **M16.** Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.	EOP-005-3, Measure M16 **M16.** Each Generator Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.	"…such as dated training records…" was deleted from the Measure for consistency with Measure M10.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8 , and 1.9 **R1.** Each Reliability Coordinator shall have a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shut down area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]* **1.1** A description of the high level strategy to be employed during	EOP-006-3, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 **R1.** Each Reliability Coordinator shall develop, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-006-2 Requirement R1, Parts 1.2, 1.3, and 1.4 should be retired under Paragraph 81, Criterion B7, as redundant with Requirement R1, Part 1.5. Due to the addition of the language "implement," Real-time Operations was added to the Time Horizon. The language "adjacent" in Requirement R1, Part 1.2 was removed in which the EOP SDT agreed with comments from industry. . Requirement R1 already establishes that restoration efforts are complete when neighboring Transmission Operators are connected. The term "neighboring" should be interpreted as "adjacent" and no further clarification is necessary.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
restoration events for restoring the Interconnection including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan. **1.2** Operating Processes for restoring the Interconnection. **1.3** Descriptions of the elements of coordination between individual Transmission Operator restoration plans. **1.4** Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators. **1.5** Criteria and conditions for reestablishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.	**1.1** A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan. **1.2** Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area with Transmission Operators in other Reliability Coordinator Areas and with Reliability Coordinators. **1.3** Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event. **1.4** Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and	

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
1.6 Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event. **1.7** Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area. **1.8** Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area. **1.9** Criteria for transferring operations and authority back to the Balancing Authority.	Balancing Authorities within its Reliability Coordinator Area. **1.5** Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area. **1.6** Criteria for transferring operations and authority back to the Balancing Authority.	

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R4, and Requirement R4, Part 4.1 **R4.** Each Reliability Coordinator shall review their neighboring Reliability Coordinator's restoration plans. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** If the Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved in 30 calendar days.	EOP-006-3, Requirement R4, and Requirement R4, Part 4.1 **R4.** Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **4.1** If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.	Language for timeframe and written notification was added for clarity.
EOP-006-2, Measure M4 **M4.** Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within 30 calendar days in accordance with Requirement R4. .	EOP-006-3, Measure M4 **M4.** Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4 Part 4.1.	The language in Measure M4 was updated to align the timing requirements of Requirement R4 and Requirement R4 Part 4.1.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R6 **R6.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-006-3, Requirement R6 **R7.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" for clarity.
EOP-006-2, Requirement R7 **R7.** Each Reliability Coordinator shall work with its affected Generator Operators~~,~~ and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R7 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R7 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3,

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		Requirement R1, EOP-006-2, Requirement R7, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R8 **R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R9 **R9.** Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program	EOP-006-3, Requirement R7 **R7.** Each Reliability Coordinator shall include within its operations training program annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk*	"To assure the proper execution of its restoration plan" was removed because it added no additional value; the entire standard is based upon using your restoration plan when needed.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	*Factor = Medium] [Time Horizon = Operations Planning]*	

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.
EOP-008-1, Requirement R4	EOP-008-1, Requirement R4	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality.	**R4.** Each ach Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality	primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.
EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	Revised "depend on" to "are applicable to." evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.	evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.	with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. ~~The EOP SDT removed the language: "*…to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System*" in Requirement R1, as it is covered in Requirement R1, Part 1.8.~~ Due to the addition of the word "implement," the phrase, "Real-time

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3~~,~~ Requirement R1, EOP-005-2~~,~~ Requirement R7, is redundant to EOP-005-3~~,~~ Requirement R1.
EOP-005-2, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1 Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R3 R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator ~~at least once each 15 calendar months~~annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	~~The language, "…at least once each 15 calendar months…" was added to provide clarity.~~

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.		Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall update and submit its revised restoration plan to ~~to~~ its Reliability Coordinator for approval, ~~that~~when the revision would change ~~the~~its ability to implement its restoration plan, as follows~~Each Transmission Operator shall update and submit to its Reliability Coordinator for approval of its restoration plan to reflect System modifications that would change the ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. ~~This language creates two ambiguities. First, the phrase: "... that would change the implementation of its restoration plan" appeared to apply to both types of changes; however, no time frame is specified for~~

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		~~updating the restoration plan for a planned BES modification. One could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications.~~ ~~Second, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes is confusing. Some "system modifications" can include "BES modifications". Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.~~ ~~For clarity, the EOP SDT revise the language in this Requirement to require a TOP to update its restoration plan to only reflect System modifications that affect its ability to implement its restoration plan as describe in Requirement R1 Parts. The intent is not to capture minor modifications that would have no impact on the implementation of a restoration, such as element number changes or device changes~~

Standard: EOP-005-3		
Requirement in Approved Standard	Translation to New Standard or Other Action	Description and Change Justification
		~~that have no significance to the implementation of the plan.~~ The changes made in Requirement R4 and the requirement parts do not refer to outages. The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within ~~No more than~~ 90 calendar days after identifying ~~the Transmission Operator identifies~~ any unplanned permanent ~~System~~ BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to the Reliability Coordinator approval requirements ~~in order to meet~~	The EOP SDT revisions harmonize the use of "BES modification" and clarify the timing for unplanned permanent and planned permanent BES modifications.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
	~~the Reliability Coordinator approval requirement~~ per EOP-006~~No less than 30 calendar days prior to the Transmission Operator's implementation of planned System modifications~~.	
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation*	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation*	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once every five years" to eliminate any ambiguity in the prior language.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Risk Factor = Medium] [Time Horizon = Long-term Planning]	*Risk Factor = Medium] [Time Horizon = Long-term Planning]*	
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following:	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training ~~at least once each 15 calendar months~~annually for its System Operators. This training program shall include training on the	~~The language, "…at least once each 15 calendar months…" was added to provide clarity and to align training with the timing for updates to the restoration plan.~~ The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
[Violation Risk Factor = Medium] [Time Horizon = Operations Planning] **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority. ~~for Area Control Error and Automatic Generation Control.~~	Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards.

shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	standard is based upon using your restoration plan when needed.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing "data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.
EOP-008-1, Requirement R4	EOP-008-1, Requirement R4	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-008-2 – Loss of Control Center Functionality**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to have an Operating Plan for backup facilities. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an Operating Plan for backup functionality that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance; only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** There is a similar requirement (Requirement R1) in EOP-005-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the creation of a plan: EOP-005-2 for a restoration plan and EOP-008-2 for a backup plan. The VRF assigned to EOP-008-1, Requirement R1 is lower than EOP-005-2, Requirement R1. The SDT recognizes that the VRF for EOP-008-1, Requirement R1 is lower than the VRF for the similar requirement in EOP-005-2 which is assigned a High VRF, however the SDT and stakeholders support the Medium VRF based on NERC's criteria for VRFs. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to create an Operating Plan for backup functionality. While the SDT agrees that, under some circumstances, it is possible that a failure to have an Operating Plan for backup functionality may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to have an Operating Plan for backup functionality would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to have an Operating Plan for backup functionality, it would still be expected to handle the situation if it occurred.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to have an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion Guideline 5- Treatment of	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to have an Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-008-2, R1			
Lower	**Moderate**	**High**	**Severe**
The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.

VRF Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1 with some minor edits. The VSL's for R1 were revised slightly by replacing "Part" with "part". The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that requires entities to shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. This is a requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the entity to have the Operating Plan for backup functionality at its primary and backup control centers. This is consistent with FERC guideline G1 regarding operating tools and backup facilities, however this requirement is administrative in nature.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 is unchanged from EOP-008-1, Requirement R2 and the VRF remains as Lower.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a copy of the Operating Plan for backup functionality at each of its control locations should not have an adverse impact on the bulk power system because operations at the different locations should be essentially identical. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R2			
Lower	**Moderate**	**High**	**Severe**
N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.

VSL Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R3	
Proposed VRF	**High**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R3 is unchanged from EOP-008-1, Requirement R3 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center) will impact the situational awareness of the Reliability Coordinator, and thus could affect the Reliability Coordinator's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Reliability Coordinator is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality.

VSL Justifications for EOP-008-2, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Reliability Coordinator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	The proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R4	
Proposed VRF	**High**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Balancing Authority or Transmission Operator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R4 is unchanged from EOP-008-1, Requirement R4 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have backup functionality (provided either through a facility or contracted services) will impact the situational awareness of the Transmission Operator or Balancing Authority, and thus could affect the Transmission Operator's or Balancing Authority's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Transmission Operator or Balancing Authority is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R4			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality.

VSL Justifications for EOP-008-2, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is binary and is at the Severe level. The requirement specifies that a Balancing Authority or Transmission Operator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Balancing Authority or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to update an Operating Plan for backup facilities annually. The assignment of the Medium VRF was made based on the premise that failure to annually update an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the annual review of the Operating Plan for back up functionality that is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has one part that is related to the main requirement regarding updating the Operating Plan and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R5 is unchanged from EOP-008-1, Requirement R5 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to update an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R5			
Lower	**Moderate**	**High**	**Severe**
The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved. OR The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.

VSL Justifications for EOP-008-2, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that, if violated, could prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the independence between the primary and back up control centers. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures. This is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R6 is unchanged from EOP-008-1, Requirement R46and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R6 addresses the situation applicable entities primary and backup capabilities can't depend on each other. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

VSL Justifications for EOP-008-2, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R6 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator, Balancing Authority, or Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. The Reliability Coordinator, Balancing Authority, or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires entities to conduct and document the results of an annual test of its backup facility. Violation of this requirement is not likely to cause bulk electric system instability, separation, or a cascading sequence of failures and is therefore assigned a Medium VRF consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R7 is unchanged from EOP-008-1, Requirement R7 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** EOP-008-1, Requirement R7 mandates testing of an applicable entity's Operating Plan for backup capability. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did not test their Operating Plan for backup capability it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R7			
Lower	**Moderate**	**High**	**Severe**
The responsible entity conducted an annual test of its Operating Plan for backup functionality, but it did not document the results. OR The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than two continuous hours, but more than or equal to 1.5 continuous hours.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1.5 continuous hours, but more than or equal to 1 continuous hour.	The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct an annual test of its Operating Plan for backup functionality. OR The responsible entity conducted an annual test of its Operating Plan for backup functionality, but the test was for less than 0.5 continuous hours.

VSL Justifications for EOP-008-2, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the entity that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months to provide a plan to its Regional Entity showing how it will re-establish primary or backup functionality. If an entity fails to provide a plan to the Regional Entity, this violation in and of itself is not likely to cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. This is consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R8 is unchanged from EOP-008-1, Requirement R8 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R8 mandates that entities provide a plan for re-establishing backup capabilities following a catastrophic failure. A failure to provide this plan does not affect the applicable entity's ability to effectively monitor and control the bulk power system. Violation of this requirement is unlikely, by itself, to lead to bulk power system instability, separation, or cascading failures, thus the assignment of a "Medium" VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R8			
Lower	**Moderate**	**High**	**Severe**
The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted more than six calendar months, but less than or equal to seven calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted in more than seven calendar months, but less than or equal to eight calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

VSL Justifications for EOP-008-2, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R8

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-008-2 – Loss of Control Center Functionality**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels
VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to have an Operating Plan for backup facilities. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an Operating Plan for backup functionality that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance; only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** There is a similar requirement (Requirement R1) in EOP-005-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the creation of a plan: EOP-005-2 for a restoration plan and EOP-008-2 for a backup plan. The VRF assigned to EOP-008-1, Requirement R1 is lower than EOP-005-2, Requirement R1. The SDT recognizes that the VRF for EOP-008-1, Requirement R1 is lower than the VRF for the similar requirement in EOP-005-2 which is assigned a High VRF, however the SDT and stakeholders support the Medium VRF based on NERC's criteria for VRFs. The assignment of the Medium VRF was made based on the premise that failure to have an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to create an Operating Plan for backup functionality. While the SDT agrees that, under some circumstances, it is possible that a failure to have an Operating Plan for backup functionality may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to have an Operating Plan for backup functionality would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to have an Operating Plan for backup functionality, it would still be expected to handle the situation if it occurred.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk

VRF Justifications for EOP-008-2, R1	
Proposed VRF	**Medium**
	power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to have an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion Guideline 5- Treatment of	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to have an Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-008-2, R1			
Lower	**Moderate**	**High**	**Severe**
The responsible entity had a current Operating Plan for backup functionality, but the plan was missing one of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing two of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing three of the requirement's six parts (1.1 through 1.6).	The responsible entity had a current Operating Plan for backup functionality, but the plan was missing four or more of the requirement's six parts (1.1 through 1.6) OR The responsible entity did not have a current Operating Plan for backup functionality.

VRF Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1 with some minor edits. The VSL's for R1 were revised slightly by replacing "Part" with "part". The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that requires entities to shall have a copy of its current Operating Plan for backup functionality available at its primary control center and at the location providing backup functionality. This is a requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the entity to have the Operating Plan for backup functionality at its primary and backup control centers. This is consistent with FERC guideline G1 regarding operating tools and backup facilities, however this requirement is administrative in nature.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 is unchanged from EOP-008-1, Requirement R2 and the VRF remains as Lower.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a copy of the Operating Plan for backup functionality at each of its control locations should not have an adverse impact on the bulk power system because operations at the different locations should be essentially identical. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R2			
Lower	**Moderate**	**High**	**Severe**
N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality available in at least one of its control locations.	N/A	The responsible entity did not have a copy of its current Operating Plan for backup functionality at any of its locations.

VSL Justifications for EOP-008-2, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R3	
Proposed VRF	**High**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R3 is unchanged from EOP-008-1, Requirement R3 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center) will impact the situational awareness of the Reliability Coordinator, and thus could affect the Reliability Coordinator's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Reliability Coordinator is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator does not have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to the primary control center functionality.

VSL Justifications for EOP-008-2, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Reliability Coordinator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	The proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R4	
Proposed VRF	**High**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Balancing Authority or Transmission Operator to have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. A high VRF was assigned consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R4 is unchanged from EOP-008-1, Requirement R4 and the VRF remains as High.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have backup functionality (provided either through a facility or contracted services) will impact the situational awareness of the Transmission Operator or Balancing Authority, and thus could affect the Transmission Operator's or Balancing Authority's ability to effectively monitor and control the bulk power system, however violation of this requirement is unlikely to lead to bulk power system instability, separation or cascading failures. The Transmission Operator or Balancing Authority is required to maintain control and awareness of the bulk power system at all times.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R4			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity does not have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that ~~depend on~~are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality ~~respectively~~.

VSL Justifications for EOP-008-2, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is binary and is at the Severe level. The requirement specifies that a Balancing Authority or Transmission Operator must have a backup control center facility that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. The Balancing Authority or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time to update an Operating Plan for backup facilities annually. The assignment of the Medium VRF was made based on the premise that failure to annually update an Operating Plan for backup functionality, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the annual review of the Operating Plan for back up functionality that is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has one part that is related to the main requirement regarding updating the Operating Plan and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R5 is unchanged from EOP-008-1, Requirement R5 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update an Operating Plan for backup functionality could directly affect the electrical state or the capability of the bulk power system, and could affect the applicable entity's ability to effectively monitor and control the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to update an Operating Plan for backup functionality will not, by itself, lead to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R5			
Lower	**Moderate**	**High**	**Severe**
The responsible entity did not update and approve its Operating Plan for backup functionality for more than 60 calendar days and less than or equal to 70 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 70 calendar days and less than or equal to 80 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not update and approve its Operating Plan for backup functionality for more than 80 calendar days and less than or equal to 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.	The responsible entity did not have evidence that its Operating Plan for backup functionality was annually reviewed and approved ~~at least once every 15 calendar months~~. OR The responsible entity did not update and approve its Operating Plan for backup functionality for more than 90 calendar days after a change to any part of the Operating Plan described in Requirement R1.

VSL Justifications for EOP-008-2, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that, if violated, could prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the independence between the primary and back up control centers. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures. This is consistent with FERC guideline G1 regarding operating tools and backup functionality.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R6 is unchanged from EOP-008-1, Requirement R46and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R6 addresses the situation applicable entities primary and backup capabilities can't depend on each other. A violation of this requirement is assigned a "Medium" VRF because, if the applicable entity did have a dependence between their primary and backup capabilities it is not clear that this could directly lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The responsible entity has primary and backup functionality that do depend on each other for the control center functionality required to maintain compliance with Reliability Standards.

VSL Justifications for EOP-008-2, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R6 is binary and is at the Severe level. The requirement specifies that a Reliability Coordinator, Balancing Authority, or Transmission Operator shall have primary and backup functionality that do not depend on each other for the control center functionality required to maintain compliance with Reliability Standards. The Reliability Coordinator, Balancing Authority, or Transmission Operator will either have a backup facility that meets the requirement or they will not. Therefore, a binary VSL of Severe is justified. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP

The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test did not assess the transition time between the simulated loss of its primary control center and the time to fully implement the backup functionality OR The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than 1 continuous hour but more than or equal to 0.5 continuous hours.	The responsible entity did not conduct ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~. OR The responsible entity conducted ~~a~~ an annual test of its Operating Plan for backup functionality ~~at least once every 15 calendar months~~, but the test was for less than 0.5 continuous hours.

VSL Justifications for EOP-008-2, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-008-2, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the entity that has experienced a loss of its primary or backup functionality and that anticipates that the loss of primary or backup functionality will last for more than six calendar months to provide a plan to its Regional Entity showing how it will re-establish primary or backup functionality. If an entity fails to provide a plan to the Regional Entity, this violation in and of itself is not likely to cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. This is consistent with FERC guideline G1 regarding operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R8 is unchanged from EOP-008-1, Requirement R8 and the VRF remains as Medium.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Requirement R8 mandates that entities provide a plan for re-establishing backup capabilities following a catastrophic failure. A failure to provide this plan does not affect the applicable entity's ability to effectively monitor and control the bulk power system. Violation of this requirement is unlikely, by itself, to lead to bulk power system instability, separation, or cascading failures, thus the assignment of a "Medium" VRF.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective and only one VRF was assigned.

VSLs for EOP-008-2, R8			
Lower	**Moderate**	**High**	**Severe**
The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months and provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted more than six calendar months, but less than or equal to seven calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality, but the plan was submitted in more than seven calendar months, but less than or equal to eight calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months provided a plan to its Regional Entity showing how it will re-establish primary or backup functionality but the plan was submitted in more than eight calendar months but less than or equal to nine calendar months after the date when the functionality was lost.	The responsible entity experienced a loss of its primary or backup functionality and anticipated that the loss of primary or backup functionality would last for more than six calendar months, but did not submit a plan to its Regional Entity showing how it will re-establish primary or backup functionality for more than nine calendar months after the date when the functionality was lost.

VSL Justifications for EOP-008-2, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-008-2 deal with having an Operating Plan to address the loss of control center functionality and mirrors the Requirements of EOP-008-1. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-008-2, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Standards Announcement

Project 2015-08 Emergency Operations
EOP-008-2

Final Ballot Open through December 9, 2016

Now Available

A final ballot for **EOP-008-2 – Loss of Control Center Functionality** is open through **8 p.m. Eastern, Friday, December 9, 2016**.

Balloting

In the final ballot, votes are counted by exception. Only members of the ballot pool may cast a vote. All ballot pool members may change their previously cast vote. A ballot pool member who failed to vote during the previous ballot period may vote in the final ballot period. If a ballot pool member does not participate in the final ballot, the member's vote from the previous ballot will be carried over as their vote in the final ballot.

Members of the ballot pool associated with this project may log in and submit their vote for the standard here. If you experience any difficulties using the Standards Balloting & Commenting System (SBS), contact Nasheema Santos.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

The voting results for the standard will be posted and announced after the ballot closes. If approved, the standard will be submitted to the Board of Trustees for adoption and then filed with the appropriate regulatory authorities.

Standards Development Process

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for final ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/26/2016 – 12/09/2016
10-day final ballot	12/28/2016 – 01/06/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources
2. **Number:** EOP-005-3
3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Transmission Operators
     - **4.1.2.** Generator Operators
     - **4.1.3.** Transmission Owners identified in the Transmission Operators restoration plan
     - **4.1.4.** Distribution Providers identified in the Transmission Operators restoration plan
5. **Effective Date:** See the Implementation Plan for EOP-005-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator’s System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator’s System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for System restoration that are coordinated with its Reliability Coordinator’s high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of its Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring operations back to the Balancing Authority in accordance with its Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform:

(1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities.

The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R4. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has submitted the revised restoration plan to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation, such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. System restoration plan including coordination with its Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of a revised restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by its Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. .

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in effect since its last compliance audit for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in effect since its last compliance audit on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. The Compliance Enforcement Authority shall keep the last compliance audit records and all requested and submitted subsequent compliance audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three or more of the requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the

R #	Violation Severity Levels

				entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.
R3.	The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.
R4.	The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification.	The Transmission Operator has failed to submit its revised restoration plan to its Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. OR The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator prior

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				to a planned permanent BES modification.
R5.	N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.
R6.	The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.
R7.	N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				one or more of the requirement parts of Requirement R7.
R8.	The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.
R9.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train 5% or less of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 5% and up to 10% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a two-calendar-year period.
R10.	N/A	N/A	N/A	The Transmission Operator has failed to comply with a request for its participation from its Reliability Coordinator.
R11.	N/A	The Transmission Operator and Generator Operator	N/A	The Transmission Operator and Generator Operator

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
		with a Blackstart Resource do not reference Blackstart Resource Testing requirements in their written Blackstart Resource Agreements or mutually-agreed upon procedures or protocols.		with a Blackstart resource do not have a written Blackstart Resource Agreement or mutually-agreed upon procedure or protocol.
R12.	N/A	N/A	N/A	The Generator Operator does not have documented starting and bus energizing procedures for each Blackstart Resource.
R13.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 24 hours but did make the notification within 48 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 48 hours but did make the notification within 72 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan within 72 hours but did make the notification within 96 hours.	The Generator Operator with a Blackstart Resource did not notify the Transmission Operator of a known change in Blackstart Resource capability affecting the ability to meet the Transmission Operator's restoration plan for more than 96 hours.

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R14.	The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.
R15.	The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a two-calendar-year period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a two-calendar-year period.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for ~~a 45-day formal comment period with~~final ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/~~25~~26/2016 – 12/~~08~~09/2016
10-day final ballot	12/~~27~~28/2016 – 01/~~10~~06/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources

2. **Number:** EOP-005-3

3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Transmission Operators

   4.1.2. Generator Operators

   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan

   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan

5. **Effective Date:** See the Implementation Plan for EOP-005-3.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for System restoration that are coordinated with ~~the~~ its Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of ~~the~~ its Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring operations back to the Balancing Authority in accordance with ~~the~~ its Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform:

(1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities. ~~Examples of unplanned System modifications could include natural disasters that affect BES Facilities, major equipment failures, etc., that are integral to the restoration plan.~~

~~The changes made in Requirement R4 and the requirement parts do not refer to outages.~~ The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to ~~update and~~ submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to ~~update and~~ submit changes that do not substantively change the restoration plan~~, the TOP's ability to implement the plan,~~ or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, ~~or~~ device changes, or administrative changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and ~~draft~~ EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R4. Each Transmission Operator shall ~~update and~~ submit its revised restoration plan to its Reliability Coordinator for approval, when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to ~~the~~ its Reliability Coordinator approval requirements per EOP-006.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has ~~updated its restoration plan and~~ submitted ~~it~~ the revised restoration plan to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

M6. Each Transmission Operator shall have documentation, such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

7.2. A list of required tests including:

7.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

7.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

7.3. The minimum duration of each of the required tests.

M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations~~,~~ back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

R8. Each Transmission Operator shall include within its operations training program, annual System restoration training ~~-~~for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. System restoration plan including coordination with ~~the~~ its Reliability Coordinator and Generator Operators included in the restoration plan.

8.2. Restoration priorities.

8.3. Building of cranking paths.

8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every ~~24 calendar months~~two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in ~~the~~ its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

14.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R7.

14.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every ~~24 calendar months~~ two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

15.1. System restoration plan including coordination with the Transmission Operator

15.2. The procedures documented in Requirement R12

M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, ~~and~~ energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R15.

R16. Each Generator Operator shall participate in ~~the~~ its Reliability Coordinator's restoration drills, exercises, or simulations as requested by ~~the~~ its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M16. Each Generator Operator shall have evidence that it participated in ~~the~~ its Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R16.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time

since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in effect since the last ~~monitoring activity~~compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of a~~n updated~~ revised restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current restoration plan approved by ~~the~~ its Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R7, Measure M7.
- Training program materials or descriptions for three calendar years for Requirement R8, Measure M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last ~~monitoring activity~~compliance audit, as well as one previous ~~monitoring activity~~compliance audit period for Requirement R10, Measure M10.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. ~~it shall keep information related to the non-compliance until found compliant.~~

The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Training program materials or descriptions and training records for three calendar years for Requirement R9, Measure M9.

If a Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. ~~it shall keep information related to the non-compliance until found compliant~~.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in effect since its last ~~monitoring activity~~compliance audit for Requirement R11, Measure M11.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in effect since its last ~~monitoring activity~~compliance audit on procedures to start each Blackstart Resource and for energizing a bus for Requirement R12, Measure M12.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R13, Measure M13.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R14, Measure M14.
- Training program materials and training records for three calendar years for Requirement R15, Measure M15.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. ~~it shall keep information related to the non-compliance until found compliant.~~

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last ~~monitoring activity~~compliance audit for Requirement R16, Measure M16.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. ~~it shall keep information related to the non-compliance until found compliant.~~

The Compliance Enforcement Authority shall keep the last ~~monitoring activity~~compliance audit records and all requested and submitted subsequent ~~monitoring activity~~compliance audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three or more of the requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
				entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.
R3.	The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.
R4.	The Transmission Operator failed to ~~update and~~ submit its revised restoration plan to ~~the~~ its Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator ~~updated and~~ submitted its revised restoration plan to ~~the~~ its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator ~~updated and~~ submitted its revised restoration plan to ~~the~~ its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification. ~~.~~	The Transmission Operator has failed to ~~update and~~ submit its revised restoration plan to ~~the~~ its Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. 2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-005-2 (approval effective 5/23/11)	
2	February 7, 2013	R3.1 and associated elements approved by NERC Board of Trustees for retirement as part of the Paragraph 81 project (Project 2013-02) pending applicable regulatory approval	
2	July 1, 2013	Updated VRFs and VSLs based on June 24, 2013 approval	
2	November 21, 2013	R3.1 and associated elements approved by FERC for retirement as part of the Paragraph 81 project (Project 2013-02)	

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-005-3 is being posted for final ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/26/2016 – 12/09/2016
10-day final ballot	12/28/2016 – 01/06/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration from Blackstart Resources

2. **Number:** EOP-005-~~2~~3

3. **Purpose:** Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to ~~a~~enss~~s~~ure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Transmission Operators~~.~~

   4.1.2. Generator Operators~~.~~

   4.1.3. Transmission Owners identified in the Transmission Operators restoration plan~~.~~

   4.1.4. Distribution Providers identified in the Transmission Operators restoration plan~~.~~

~~5. **Proposed Effective Date:** Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~

5. **Effective Date:** See the Implementation Plan for EOP-005-3.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Transmission Operator shall ~~have~~develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall ~~allow for restoring~~be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the ~~shut down~~shutdown area ~~to service,~~ to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. Strategies for ~~s~~System restoration that are coordinated with ~~the~~its Reliability Coordinator's high level strategy for restoring the Interconnection.

1.2. A description of how all Agreements or mutually-agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of ~~the~~its Reliability Coordinator.

1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

1.6. Identification of acceptable operating voltage and frequency limits during restoration.

1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

1.9. Operating Processes for transferring ~~authority~~operations back to the Balancing Authority in accordance with ~~the~~its Reliability Coordinator's criteria.

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator and will have evidence, such as operator logs, voice recordings or other operating documentation, voice recordings or other communication documentation to show that its restoration plan was implemented for times when a Disturbance has occurred, in accordance with Requirement R1.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M2. Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.

~~**R3.**~~ Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. ~~*[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~

~~**3.1.** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. (Retirement approved by FERC effective January 21, 2014.)~~

~~R4.~~R3. ~~Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan.~~ *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, dated electronic receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

Rationale for Requirement R4: As previously written, Requirement R4 addressed (in one sentence) two restoration plan update items that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The phrase: "… that would change the implementation of its restoration plan" appeared to apply to both types of changes. There was no time frame specified for updating the restoration plan for a planned BES modification; although one could infer that "90 calendar days" is intended to be the same time frame for both unplanned and planned modifications. Furthermore, the distinction between "System modifications" for unplanned changes and "BES modifications" for planned changes has been seen as confusing to some Responsible Entities.

The references to permanent unplanned and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a Responsible Entity to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

In addition, the timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the

Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.

R4. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval ~~within the same 90 calendar day period.~~ , when the revision would change its ability to implement its restoration plan, as follows: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. Within 90 calendar days after identifying any unplanned permanent BES modifications.

4.2. Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.

~~**M1.**~~**M4.** Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, dated electronic receipts, or registered mail receipts, that it has submitted the revised restoration plan to its Reliability Coordinator in accordance with Requirement R4.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its ~~implementation~~effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan, in electronic or hardcopy format, in its primary and backup control rooms and available to its System Operators prior to its effective date in accordance with Requirement R5.

Rationale for Requirement R6: Dynamic simulations should simulate frequency and voltage response. It is the intent of the EOP SDT that the simulation provides for the feedback of the System performance as generation and Load are added.

R6. Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years ~~at a minimum.~~ . Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*

6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

~~R7. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected~~Each Transmission Operator shall ~~implement~~have documentation, such as power flow outputs, that it has verified that its latest restoration plan~~. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize~~ will accomplish its ~~restoration strategies to facilitate restoration. *[Violation Risk Factor*~~

Rationale for Requirement R8: The addition of Requirement 8, Part 8.5 allows operating personnel to gain experience on all stages of restoration, including coordination needed transferring Demand and resource balance operations, back to the Balancing Authority in accordance with Requirement R1, Part 1.9.

~~*= High] [Time Horizon = Real-time Operations]*~~

~~M2.~~M6. ~~Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or~~intended function in accordance with ~~the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~Requirement R6.

~~R8.~~R7. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

- **~~8.1.~~7.1.** The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.
- **~~8.2.~~7.2.** A list of required tests including:
  - **~~8.2.1.~~7.2.1.** The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.
  - **~~8.2.2.~~7.2.2.** The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.
- **7.3.** The minimum duration of each of the required tests.

~~M3.~~M7. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R7.

~~R9.~~R8. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan.~~. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~9.1.~~8.1. System restoration plan including coordination with ~~the~~its Reliability Coordinator and Generator Operators included in the restoration plan.

~~9.2.~~8.2. Restoration priorities.

~~9.3.~~8.3. Building of cranking paths.

~~9.4.~~8.4. Synchronizing (re-energized sections of the System).

8.5. Transition of Demand and resource balance within its area to the Balancing Authority.

M8. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R8.

Rationale for Requirement R9: The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.

~~R10.~~R9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M9. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R9.

~~R11.~~R10. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M10. Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.

~~R12.~~R11. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M11. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R11.

~~R13.~~R12. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M12. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R12.

~~R14.~~R13. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M13. Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within 24 hours of such changes in accordance with Requirement R13.

~~R15.~~R14. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

- **~~15.1.~~14.1.** Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement ~~R9~~R7.
- **~~15.2.~~14.2.** Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

M14. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R14.

~~R16.~~R15. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~16.1.~~15.1. System restoration plan including coordination with the Transmission Operator~~.~~

~~16.2.~~ The procedures documented in Requirement ~~R14.~~

~~**R17.** Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*~~

~~C. Measures~~

~~**M4.** Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator.~~

~~**M5.** Each Transmission Operator shall have evidence such as e-mails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.~~

~~**M6.** Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, e-mails with receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.~~

~~**M7.** Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, e-mails with receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.~~

~~**M8.** Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available in its primary and backup control rooms and its System Operators prior to its implementation date in accordance with Requirement R5.~~

~~**M9.** Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.~~

~~**M10.** If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it implemented its restoration plan or restoration plan strategies in accordance with Requirement R7.~~

~~**M11.** If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved in such an event shall have evidence, such as voice recordings, e-mail, dated computer printouts, or operator logs, that it resynchronized shut down areas in accordance with Requirement R8.~~

~~**M12.** Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R9.~~

~~**M13.** Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R10.~~

~~**M14.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R11.~~

~~17.1.~~15.2. ~~Each Transmission Operator shall have evidence, such as training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement~~ R12~~.~~

~~**M15.** Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R13.~~

~~**M16.** Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R14.~~

~~**M17.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within twenty-four hours of such changes in accordance with Requirement R15.~~

~~**M18.** Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R16.~~

~~M19.~~M15. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup, energizing a bus and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R1~~7~~5.

R16. Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~M20.~~M16. Each Generator Operator shall have evidence~~, such as dated training records,~~ that it participated in ~~the~~its Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R1~~8~~6.

~~D.~~C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority: Regional Entity~~.~~

~~**1.4. Compliance Monitoring Period and Reset Time Frame**~~

~~Not applicable.~~

~~**1.5. Compliance Monitoring and Enforcement Processes:**~~

~~Compliance Audits~~

~~Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations~~

~~Self-Reporting~~

~~Complaints~~

~~**Data**~~"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in ~~force~~effect since the last compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.

- Submission of the Transmission Operator's annually-reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of ~~an updated~~a revised restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three calendar years for Requirement R4, Measure M4.
- The current~~,~~ restoration plan approved by ~~the~~its Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
  - ~~Implementation of its restoration plan or restoration plan strategies on any occasion for three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R7, Measure M7.~~
  - ~~Resynchronization of shut down areas on any occasion over three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R8, Measure M8.~~
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement ~~R9~~R7, Measure ~~M9~~M7.
- ~~Actual training~~Training program materials or descriptions for three calendar years for Requirement ~~R10~~R8, Measure ~~M10~~M8.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R1~~2~~0, Measure M1~~2~~0.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer. The Transmission Operator, applicable Transmission Owner, and applicable Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

~~The Transmission Operator, applicable Transmission Owner, and applicable Distribution provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:~~

- ~~Actual training~~Training program materials or descriptions and ~~actual~~ training records for three calendar years for Requirement ~~R11~~R9, Measure ~~M11~~M9.

If a Transmission Operator, applicable Transmission ~~o~~Owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the time period specified above, whichever is longer. .

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in ~~force~~effect since its last compliance audit for Requirement R1~~3~~1, Measure M1~~3~~1.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in ~~force~~effect since its last compliance audit on procedures to start each Blackstart Resource~~s~~ and for energizing a bus for Requirement R1~~4~~2, Measure M1~~4~~2.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R1~~5~~3, Measure M1~~5~~3.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R1~~6~~4, Measure M1~~6~~4.
- ~~Actual training~~Training program materials and ~~actual~~ training records for three calendar years for Requirement R1~~7~~5, Measure M1~~7~~5.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement R1~~8~~6, Measure M1~~8~~6.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the time period specified above, whichever is longer. The Compliance Enforcement Authority shall keep the last compliance audit records and all requested and submitted subsequent compliance audit records.

1.3. ~~The~~ **Compliance Monitoring and Enforcement** ~~Authority shall keep~~**Program**

As defined in the ~~last audit records and all requested and submitted subsequent audit records~~NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

~~1.6. Additional Compliance Information~~

~~None.~~Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Transmission Operator has an approved plan but failed to comply with one of the ~~sub-requirements within the~~ requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with two of the ~~sub-requirements within the~~ requirement parts within Requirement R1.	The Transmission Operator has an approved plan but failed to comply with three or more of the ~~sub-requirements within the~~ requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.
R2.	The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. ~~OR~~	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. ~~OR~~	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. ~~OR~~	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the ~~implementation~~effective date of the plan. OR

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
	~~The Transmission Operator provided the information to all entities but was up to 10 calendar days late in doing so.~~	~~The Transmission Operator provided the information to all entities but was more than 10 and less than or equal to 20 calendar days late in doing so.~~	~~The Transmission Operator provided the information to all entities but was more than 20 and less than or equal to 30 calendar days late in doing so.~~	~~The~~ Transmission Operator ~~provided~~failed to provide at least half of the ~~information to all~~ entities ~~but was more than 30 calendar days late~~identified in ~~doing so~~its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.
R3.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ within 30 calendar days after the ~~pre-determined~~mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ more than 30 and less than or equal to 60 calendar days after the ~~pre-determined~~mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan ~~or confirmation of no change~~ more than 60 and less than or equal to 90 calendar days after the ~~pre-determined~~mutually-agreed, predetermined schedule. Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for final ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/26/2016 – 12/09/2016
10-day final ballot	12/28/2016 – 01/6/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination
2. **Number:** EOP-006-3
3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
4. **Applicability:**
   - **4.1. Functional Entities:**
     - **4.1.1.** Reliability Coordinators
5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.
6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall provide notification to the Transmission Operator of approval or disapproval, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator; and

7.2. Re-establishing the Interconnection.

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.

- The current, approved restoration plan and any restoration plans in effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late. B. Requirements and Measures

R1. Each Reliability Coordinator shall develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

1.2. Criteria and conditions for re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review its neighboring Reliability Coordinator's restoration plans and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days of receipt of written notification.

M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall provide notification to the Transmission Operator of ~~approve~~ approval or ~~disapprove~~disapproval, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M6. Each Reliability Coordinator shall have documentation such as electronic receipts that it has made the latest copy of its restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the effective date in accordance with Requirement R6.

R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

7.1. The coordination role of the Reliability Coordinator; and

7.2. Re-establishing the Interconnection.

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the

Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every ~~24 calendar months~~two calendar years.

M8. Each Reliability Coordinator shall have evidence, such as dated electronic documents, that it conducted two System restoration drills, exercises, or simulations per calendar year in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

- The current restoration plan and any restoration plans in effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.

- The current, approved restoration plan and any restoration plans in effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
- Actual training program materials or descriptions for three calendar years for Requirements R7, Measure M7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement R8, Measure M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer. ~~it shall keep information related to the non-compliance until found compliant.~~

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, “Compliance Monitoring and Enforcement Program” refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirements parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator had a restoration plan, but failed to implement it.
R2.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2 but was 90 or more calendar days late but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2 but was 120 calendar days or more late.
R3.	N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

R #	Violation Severity Levels			
	Lower VSL	**Moderate VSL**	**High VSL**	**Severe VSL**
R4.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts 91 or more calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.
R5.	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 45 calendar days of receipt. OR	The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt but did review and approve/disapprove the plans within 60 calendar days of receipt. Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	Nov. 1, 2006	Adopted by Board of Trustees	Revised
2		Revisions pursuant to Project 2006-03	Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-006-2 (approval effective 5/23/11)	
2	July 1, 2013	Updated VRFs and VSLs based on June 24, 2013 approval.	

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon Board adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-006-3 is being posted for final ballot.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	July 15, 2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	06/22/2016 – 08/08/2016

Anticipated Actions	Date
45-day formal comment period with additional ballot	10/26/2016 – 12/09/2016
10-day final ballot	12/28/2016 – 01/6/2017
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** System Restoration Coordination

2. **Number:** EOP-006-~~2~~ 3

3. **Purpose:** Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. **Applicability:**

   4.1. Functional Entities:

   4.1.1. Reliability Coordinators~~.~~

~~5. Proposed Effective Date: Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.~~

5. **Proposed Effective Date:** See the Implementation Plan for EOP-006-3.

6. **Standard-Only Definition:** None

B. Requirements and Measures

R1. Each Reliability Coordinator shall ~~have~~develop and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a ~~shut down~~shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*

1.1. A description of the high-level strategy to be employed during restoration events for restoring the Interconnection, including minimum criteria for meeting the objectives of the Reliability Coordinator's restoration plan.

~~1.2. Operating Processes for restoring the Interconnection.~~

~~1.3. Descriptions of the elements of coordination between individual Transmission Operator restoration plans.~~

~~1.4. Descriptions of the elements of coordination of restoration plans with neighboring Reliability Coordinators.~~

~~1.5.~~1.2. Criteria and conditions for ~~reestablishing~~re-establishing interconnections with other Transmission Operators within its Reliability Coordinator Area, with Transmission Operators in other Reliability Coordinator Areas, and with other Reliability Coordinators.

~~1.6.~~1.3. Reporting requirements for the entities within the Reliability Coordinator Area during a restoration event.

~~1.7.~~1.4. Criteria for sharing information regarding restoration with neighboring Reliability Coordinators and with Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.

~~1.8.~~1.5. Identification of the Reliability Coordinator as the primary contact for disseminating information regarding restoration to neighboring Reliability Coordinators, and to Transmission Operators, and Balancing Authorities within its Reliability Coordinator Area.

~~1.9.~~1.6. Criteria for transferring operations and authority back to the Balancing Authority.

M1. Each Reliability Coordinator shall have available a dated copy of its restoration plan and will have evidence, such as operator logs or other operating documentation, voice recordings, or other communication documentation to show that its restoration plan was implemented in accordance with Requirement R1.

R2. The Reliability Coordinator shall distribute its most recent Reliability Coordinator Area restoration plan to each of its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of creation or revision. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

M2. Each Reliability Coordinator shall provide evidence such as electronic receipts, posting to a secure website with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.

R3. Each Reliability Coordinator shall review its restoration plan within 13 calendar months of the last review. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

M3. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.

R4. Each Reliability Coordinator shall review ~~their~~its neighboring Reliability Coordinator's restoration plans~~.~~ and provide written notification of any conflicts discovered during that review within 60 calendar days of receipt. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

4.1. If ~~the~~a Reliability Coordinator finds conflicts between its restoration plans and any of its neighbors, the conflicts shall be resolved within 30 calendar days~~.~~ of receipt of written notification.

~~M1.~~M4. Each Reliability Coordinator shall provide evidence such as dated review signature sheets or electronic receipt that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within the timing requirements of Requirement R4 and Requirement R4, Part 4.1.

R5. Each Reliability Coordinator shall review the restoration plans required by EOP-005 of the Transmission Operators within its Reliability Coordinator Area. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

5.1. The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall ~~approve~~provide notification to the Transmission Operator of approval or disapprov~~e~~al, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.

M5. Each Reliability Coordinator shall provide evidence such as a dated review signature sheet or electronic receipt that it has reviewed, approved or disapproved, and notified its Transmission Operators within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.

R6. Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the ~~implementation~~effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*

~~M2.~~M6. Each Reliability Coordinator shall ~~work with its affected Generator Operators, and Transmission Operators~~have documentation such as ~~well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the~~ electronic receipts that it has made the latest copy of its restoration plan ~~cannot be completed as expected the~~ and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator ~~shall utilize its restoration plan strategies to facilitate~~Area available in its primary and backup control rooms and to each of its System ~~restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*~~ Operators prior to the effective date in accordance with Requirement R6.

~~**R7.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability~~

~~Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. [Violation Risk Factor = High] [Time Horizon = Real-time Operations]~~

~~R8.~~R7. Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators ~~to assure the proper execution of its restoration plan.~~ . This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~8.1.~~7.1. The coordination role of the Reliability Coordinator~~.~~; and

7.2. ~~Reestablishing~~Re-establishing the Interconnection.

M7. Each Reliability Coordinator shall have an electronic copy or hard copy of its training records available showing that it has provided training in accordance with Requirement R7.

~~R9.~~R8. Each Reliability Coordinator shall conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*

~~9.1.~~8.1. Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.

~~C. Measures~~

~~M1.~~Each Reliability Coordinator shall have ~~available a dated copy of its restoration plan in accordance with Requirement R1.~~

~~M9. Each Reliability Coordinator shall provide~~ evidence, such as ~~e-mails with receipts, posting to a secure web site with notification to affected entities, or registered mail receipts, that its most recent restoration plan has been distributed in accordance with Requirement R2.~~

~~M10.M1. Each Reliability Coordinator shall provide evidence such as a review signature sheet, or revision histories, that it has reviewed its restoration plan within 13 calendar months of the last review in accordance with Requirement R3.~~

~~M11. Each Reliability Coordinator shall provide evidence such as dated review signature sheets that it has reviewed its neighboring Reliability Coordinator's restoration plans and resolved any conflicts within 30 calendar days in accordance with Requirement R4.~~

~~M12. Each Reliability Coordinator shall provide evidence, such as a review signature sheet or emails, that it has reviewed, approved or disapproved, and notified its Transmission Operator's within 30 calendar days following the receipt of the restoration plan from the Transmission Operator in accordance with Requirement R5.~~

~~M13. Each Reliability Coordinator shall have documentation such as e-mail receipts that it has made the latest copy of its restoration plan and copies of the latest approved~~

~~restoration plan of each Transmission Operator in its Reliability Coordinator Area available in its primary and backup control rooms and to each of its System Operators prior to the implementation date in accordance with Requirement R6.~~

~~**M14.** Each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it monitored and coordinated restoration progress in accordance with Requirement R7.~~

~~**M15.** If there has been a resynchronizing of an islanded area, each Reliability Coordinator involved shall have evidence such as voice recordings, e-mail, or operator logs, that it coordinated or authorized resynchronizing in accordance with Requirement R8.~~

~~**M16.** Each Reliability Coordinator shall have an~~ dated electronic ~~or hard copy of its training records available showing that it has provided training in accordance with Requirement R9.~~

~~**M17.**~~**M8.** ~~Each Reliability Coordinator shall have evidence~~documents, that it conducted two System restoration drills, exercises, or simulations per calendar year ~~and that Transmission Operators~~ in accordance with Requirement R8. And each Reliability Coordinator shall have evidence that the Reliability Coordinator requested each applicable Transmission Operator and Generator ~~Operators included in the Reliability Coordinator's restoration plan were invited in accordance with Requirement R10.~~Operator to participate per Requirement R8 and Requirement R8, Part 8.1.

~~D.~~C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

~~Regional Entity.~~

~~**1.4. Compliance Monitoring Period and Reset Time Frame**~~

~~Not applicable.~~

~~**1.5. Compliance Monitoring and Enforcement Processes:**~~

~~Compliance Audits~~

~~Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations~~

~~Self-Reporting~~

~~Complaints~~

~~**1.6. Data Retention**~~

~~The Reliability Coordinator~~"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:

The following evidence retention period(s) identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full-time period since the last audit.

The applicable entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- The current restoration plan and any restoration plans in ~~force~~effect since the last compliance audit for Requirement R1, Measure M1.
- Distribution of its most recent restoration plan and any restoration plans in ~~force~~effect for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- It's reviewed restoration plan for the current review period and the last three prior review periods for Requirement R3, Measure M3.
- Reviewed copies of neighboring Reliability Coordinator restoration plans for the current calendar year and the three prior calendar years for Requirement R4, Measure M4.
- The reviewed restoration plans for the current calendar year and the last three prior calendar years for Requirement R5, Measure M5.
- The current, approved restoration plan and any restoration plans in ~~force~~effect for the last three calendar years was made available in its control rooms for Requirement R6, Measure M6.
  - ~~If there has been a restoration event, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R7, Measure M7.~~
  - ~~If there has been a resynchronization of an islanded area, implementation of its restoration plan on any occasion over a rolling 12 month period for Requirement R8, Measure M8.~~
- Actual training program materials or descriptions for three calendar years for Requirements ~~R9~~R7, Measure M~~9~~7.
- Records of all Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit, as well as one previous compliance audit period for Requirement ~~R10~~R8, Measure ~~M10~~M8.

If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant.~~mitigation is complete and approved or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

~~1.2.~~1.3. ~~Additional~~ Compliance ~~Information~~ Monitoring and Enforcement Program

~~None.~~

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	~~November~~Nov. 1, 2006	Adopted by Board of Trustees	Revised
2	~~TBD~~	Revisions pursuant to Project 2006-03	Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-006-2 (approval effective 5/23/11)	
2	July 1, 2013	Updated VRFs and VSLs based on June 24, 2013 approval.	

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon Board adoption, the text from the rationale text boxes was moved to this section.

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standards EOP-005-3, EOP-006-3, and EOP-008-2

Applicable Standard(s)

- EOP-005-3 — System Restoration from Blackstart Resources
- EOP-006-3 — System Restoration Coordination
- EOP-008-2 — Loss of Control Center Functionality

Requested Retirement(s)

- EOP-005-2 — System Restoration from Blackstart Resources
- EOP-006-2 — System Restoration Coordination
- EOP-008-1 — Loss of Control Center Functionality

Prerequisite Standard(s)

None.

Applicable Entities

EOP-005 — System Restoration from Blackstart Resources

- Transmission Operator
- Generator Operator
- Transmission Owners identified in the Transmission Operators restoration plan
- Distribution Providers identified in the Transmission Operators restoration plan

EOP-006 — System Restoration Coordination

- Reliability Coordinator

EOP-008 — Loss of Control Center Functionality

- Reliability Coordinator
- Transmission Operator
- Balancing Authority

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standards and apply Paragraph 81 criteria, while making the standards more Results-based and addressing an outstanding directive from FERC Order No. 749.

Effective Date

EOP-005-3 — System Restoration from Blackstart Resources

Where approval by an applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-006-3 — System Restoration Coordination

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

EOP-008-2 — Loss of Control Center Functionality

Where approval by an applicable governmental authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the applicable governmental authority.

Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition

None.

Retirement Date

EOP-005-2 — System Restoration from Blackstart Resources
Reliability Standard EOP-005-2 shall be retired immediately prior to the effective date of EOP-005-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-006-2 — System Restoration Coordination
Reliability Standard EOP-006-2 shall be retired immediately prior to the effective date of EOP-006-3 in the particular jurisdiction in which the revised standard is becoming effective.

EOP-008-1 — Loss of Control Center Functionality
Reliability Standard EOP-008-1 shall be retired immediately prior to the effective date of EOP-008-2 in the particular jurisdiction in which the revised standard is becoming effective.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3 Requirement R1,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		EOP-005-2 Requirement R7, is redundant to EOP-005-3 Requirement R1.
EOP-005-2, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.	EOP-005-3, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with its Reliability Coordinator's high level strategy for restoring the Interconnection.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.	EOP-005-3, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of its Reliability Coordinator.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with its Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	The word "email" doesn't capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.	EOP-005-3, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval, when the revision	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	would change its ability to implement its restoration plan, as follows	System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. The references to unplanned permanent and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a TOP to submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to submit changes that do not substantively change the restoration plan or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes, device changes, or administrative changes that have no significance to the implementation of the plan.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject to its Reliability Coordinator approval requirements per EOP-006.	The EOP SDT revisions harmonize the use of “BES modification” and clarify the timing for unplanned permanent and planned permanent BES modifications.
EOP-005-2, Requirement R5	EOP-005-3, Requirement R5	“Implementation date” was revised to “effective date” to clarify that System

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	**R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	The sentence, “This shall be completed every five years at a minimum” was revised to: “This shall be completed at least once every five years” to eliminate any ambiguity in the prior language. Based on comments received from industry, the issue was raised that Requirement R6, as written, could be misinterpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This interpretation could result in numerous simulations having to be performed, which was outside of the intention of the drafting team. To eliminate any unintentional

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		misinterpretation of Requirement R6, it was revised to: "Each Transmission Operator shall verify through analysis of actual events, **a combination of** steady state and dynamic simulations…"
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4 **R10.** Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5 **R8.** Each Transmission Operator shall include within its operations training program, System restoration training annually for its System Operators. This training program shall include training on	The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value. Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional*

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with its Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority.	*Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time. "The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R11 **R11.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	EOP-005-2, Requirement R9 **R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	standard is a revision back to the original language of EOP-005-2. Federal Energy Regulatory Commission (Commission) Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."* The Project 2015-02 Emergency Operations Periodic Review Team, as well as the Project 2015-08 Emergency Operations Standards Drafting Team determined (through

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		conducted outreach and comment questions/responses during postings of periodic review templates and the SAR) that industry does not find ambiguity with the term “unique tasks.” The industry understands “unique tasks” to be those tasks that are defined by the TOP, TO, and the DP. A rationale box was added to the requirement to clarify “unique tasks.”
EOP-005-2, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator’s restoration drills, exercises, or simulations as requested in accordance with Requirement R10.	EOP-005-3, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in its Reliability Coordinator’s restoration drills, exercises, or simulations as requested in accordance with Requirement R10.	“The Reliability Coordinator” has been updated to “its Reliability Coordinator” for consistency throughout the standard.
EOP-005-2, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as emails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within	EOP-005-3, Measure M13 **M13.** Each Generator Operator with a Blackstart Resource shall provide evidence, such as dated electronic receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource	The word “email” doesn’t capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is GOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
24 hours of such changes in accordance with Requirement R13.	capabilities within 24 hours of such changes in accordance with Requirement R13.	
EOP-005-2, Requirement R17 **R17.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following:	EOP-005-3, Requirement R15 **R15.** Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following:	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2.
EOP-005-2, Measure R16 **R18.** Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator.	EOP-005-3, Measure R16 **R16.** Each Generator Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Measure M16 **M16.** Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if	EOP-005-3, Measure M16 **M16.** Each Generator Operator shall have evidence that it participated in its Reliability Coordinator's restoration drills, exercises, or	"…such as dated training records…" was deleted from the Measure for consistency with Measure M10.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requested to do so in accordance with Requirement R16.	simulations if requested to do so in accordance with Requirement R16.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8 , and 1.9 **R1.** Each Reliability Coordinator shall have a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shut down area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and ~~it~~ its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning]* **1.1** A description of the high level strategy to be employed during	EOP-006-3, Requirement R1, and Requirement R1, Parts 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 **R1.** Each Reliability Coordinator shall develop, and implement a Reliability Coordinator Area restoration plan. The scope of the Reliability Coordinator's restoration plan starts when Blackstart Resources are utilized to re-energize a shutdown area of the Bulk Electric System (BES), or separation has occurred between neighboring Reliability Coordinators, or an energized island has been formed on the BES within the Reliability Coordinator Area. The scope of the Reliability Coordinator's restoration plan ends when all of its Transmission Operators are interconnected and its Reliability Coordinator Area is connected to all of its neighboring Reliability Coordinator Areas. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-006-2 Requirement R1, Parts 1.2, 1.3, and 1.4 should be retired under Paragraph 81, Criterion B7, as redundant with Requirement R1, Part 1.5. Due to the addition of the language "implement," Real-time Operations was added to the Time Horizon. The language "adjacent" in Requirement R1, Part 1.2 was removed in which the EOP SDT agreed with comments from industry. Requirement R1 already establishes that restoration efforts are complete when neighboring Transmission Operators are connected. The term "neighboring" should be interpreted as "adjacent" and no further clarification is necessary.

.	requirements of Requirement R4 and Requirement R4 Part 4.1.	
EOP-006-2, Requirement R5, Part 5.1 **5.1.** The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall approve or disapprove, with stated reasons, the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.	EOP-006-3, Requirement R5, Part 5.1 **5.1.** The Reliability Coordinator shall determine whether the Transmission Operator's restoration plan is coordinated and compatible with the Reliability Coordinator's restoration plan and other Transmission Operators' restoration plans within its Reliability Coordinator Area. The Reliability Coordinator shall provide notification to the Transmission Operator of approval or disapproval, with stated reasons, of the Transmission Operator's submitted restoration plan within 30 calendar days following the receipt of the restoration plan from the Transmission Operator.	To align the requirement to the measure in Requirement R5, Part 5.1.
EOP-006-2, Requirement R6 **R6.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the latest approved restoration plan of	EOP-006-3, Requirement R6 **R6.** Each Reliability Coordinator shall have a copy of its latest restoration plan and copies of the	"Implementation date" was revised to "effective date" for clarity.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms so that it is available to all of its System Operators prior to the effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	
EOP-006-2, Requirement R7 **R7.** Each Reliability Coordinator shall work with its affected Generator Operators~~,~~ and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration.		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R7 as “a logical action that does not require a standard.” The EOP SDT recommends retirement of EOP-006-2, Requirement R7 under Criterion A (Overreaching Criterion). In addition, by adding the language: “develop and implement” to EOP-006-3, Requirement R1, EOP-006-2, Requirement R7, is redundant to EOP-006-3, Requirement R1.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
[Violation Risk Factor = High] [Time Horizon = Real-time Operations]		
EOP-006-2, Requirement R8 **R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.	EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R9 **R9.** Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-006-3, Requirement R7 **R7.** Each Reliability Coordinator shall include within its operations training program annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"To assure the proper execution of its restoration plan" was removed because it added no additional value; the entire standard is based upon using your restoration plan when needed.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing “data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.
EOP-008-1, Requirement R4	EOP-008-1, Requirement R4	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the

Standard:EOP-008-2

R4. Each Balancing Authority and Transmission Operator shall provide dated evidence that its Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority and Transmission Operator's primary control center functionality respectively. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality.	**R4.** Each ach Balancing Authority and Transmission Operator shall have backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) that includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's and Transmission Operator's primary control center functionality. To avoid requiring tertiary functionality, backup functionality is not required during: • Planned outages of the primary or backup functionality of two weeks or less • Unplanned outages of the primary or backup functionality	primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.
EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	EOP-008-1, Measure M4 **M4.** Each Balancing Authority and Transmission Operator shall provide dated	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that depend on a Balancing Authority or Transmission Operator's primary control center functionality respectively in accordance with Requirement R4.	evidence that its backup functionality (provided either through a facility or contracted services staffed by applicable certified operators when control has been transferred to the backup functionality location) includes monitoring, control, logging, and alarming sufficient for maintaining compliance with all Reliability Standards that are applicable to a Balancing Authority's or Transmission Operator's primary control center functionality in accordance with Requirement R4.	with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R1 **R1.** Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: [Violation Risk Factor = High] [Time Horizon = Operations Planning]	EOP-005-3, Requirement R1 **R1.** Each Transmission Operator shall develop and implement a restoration plan approved by its Reliability Coordinator. The restoration plan shall be implemented to restore the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shutdown area ~~to service~~, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Violation Risk Factor = High] [Time Horizon = Operations Planning, Real-time Operations]*	EOP-005-3, Requirement R1 In this industry it is widely understood that "*have a restoration plan*," is not simply to be in possession of a restoration plan. The intent of the EOP SDT to add the language "develop and implement" is for the TOP to develop its restoration plan and for the restoration plan to be utilized. Due to the addition of the word "implement," the phrase, "Real-time Operations" was added to the Time Horizon. The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" and "be implemented to restore" to EOP-005-3 Requirement R1,

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		EOP-005-2 Requirement R7, is redundant to EOP-005-3 Requirement R1.
EOP-005-2, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.	EOP-005-3, Requirement R1, Part 1.1 **1.1.** Strategies for System restoration that are coordinated with ~~the~~ its Reliability Coordinator's high level strategy for restoring the Interconnection.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.	EOP-005-3, Requirement R1, Part 1.3 **1.3.** Procedures for restoring interconnections with other Transmission Operators under the direction of ~~the~~ its Reliability Coordinator.	"The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.	EOP-005-3, Requirement R1, Part 1.9 **1.9.** Operating Processes for transferring operations back to the Balancing Authority in accordance with ~~the~~ its Reliability Coordinator's criteria.	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised to: "1.9 Processes for transferring **operations** ~~authority~~ back to the Balancing Authority in accordance with the Reliability Coordinator's criteria."

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		“The Reliability Coordinator” has been updated to “its Reliability Coordinator” for consistency throughout the standard.
EOP-005-2, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R2 **R2.** Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	“Implementation date” was revised to “effective date” to clarify that the approved restoration plan is provided to entities prior to its effective date, rather than prior to any given implementation date of the restoration plan.
EOP-005-2, Measure M2 **M2.** Each Transmission Operator shall have evidence such as emails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.	EOP-005-3, Measure M2 **M2.** Each Transmission Operator shall have evidence such as dated electronic receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan in accordance with Requirement R2.	The word “email” doesn’t capture the universe of electronic receipts; verification for submitting entity, as opposed to receiving entity. Submitting entity is TOP.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-005-2, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* EOP-005-2, Requirement R3, Part 3.1 **3.1** If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.	EOP-005-3, Requirement R3 **R3.** Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually-agreed, predetermined schedule. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	Retirement of EOP-005-2, Requirement R3, and Part 3.1 was approved by FERC with an effective date of January 21, 2014.
EOP-005-2, Requirement R4 **R4.** Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to	EOP-005-3, Requirement R4 **R4.** Transmission Operator shall ~~update and~~ submit its revised restoration plan to its Reliability Coordinator for approval, when	As previously written, Requirement R4 addressed (in one sentence) two restoration plan updates that a Transmission Operator must perform: (1) the restoration plan must be updated within 90 calendar days after identifying any unplanned permanent

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
implementing a planned BES modification, that would change the implementation of its restoration plan. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	the revision would change its ability to implement its restoration plan, as follows	System modifications and (2) the restoration plan must be updated prior to implementing a planned BES modification. ~~The changes made in Requirement R4 and the requirement parts do not refer to outages.~~ The references to unplanned permanent ~~unplanned~~ and planned BES modifications that will change the ability to implement the RC-approved restoration plan are intended to require a ~~Responsible Entity~~TOP to ~~update and~~ submit a revised restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to ~~update and~~ submit changes that do not substantively change the restoration plan~~, the TOP's ability to implement the plan,~~ or the RCs ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		changes, ~~or~~ device changes, or administrative changes that have no significance to the implementation of the plan. The timeframes referenced in Requirement R4, Part 4.2 for a permanent planned BES modification directs the Responsible Entity to EOP-006-2, Requirement R5.1 and draft EOP-006-3, Requirement R5, Part 5.1, which states that the RC shall approve or disapprove the TOPs submitted restoration plan within 30 days of receipt. This allows the Responsible Entity to coordinate submission with the RC based on the RCs specific requirements.
EOP-005-2, Requirement R4, Part 4.1 **R4.1** Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.	EOP-005-3, Requirement R4, Parts 4.1 and 4.2 **4.1** Within 90 calendar days after identifying any unplanned permanent BES modifications. **4.2** Prior to implementing a planned permanent BES modification subject	The EOP SDT revisions harmonize the use of "BES modification" and clarify the timing for unplanned permanent and planned permanent BES modifications.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
	to ~~the~~ its Reliability Coordinator approval requirements per EOP-006.	
EOP-005-2, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	EOP-005-3, Requirement R5 **R5.** Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its effective date. *[Violation Risk Factor = Lower] [Time Horizon = Operations Planning]*	"Implementation date" was revised to "effective date" to clarify that System Operators will be in possession of the most current version of a restoration plan prior to that plan becoming effective, rather than prior to any given implementation date of a restoration plan.
EOP-005-2, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	EOP-005-3, Requirement R6 **R6.** Each Transmission Operator shall verify through analysis of actual events, a combination of steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed at least once every five years. Such analysis, simulations or testing shall verify: *[Violation Risk Factor = Medium] [Time Horizon = Long-term Planning]*	The sentence, "This shall be completed every five years at a minimum" was revised to: "This shall be completed at least once every five years" to eliminate any ambiguity in the prior language. Based on comments received from industry, the issue was raised that Requirement R6, as written, could be misinterpreted to require that every step of the restoration process must be validated through steady state and dynamic simulation, which can be an overly burdensome task. This

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		interpretation could result in numerous simulations having to be performed, which was outside of the intention of the drafting team. To eliminate any unintentional misinterpretation of Requirement R6, it was revised to: "Each Transmission Operator shall verify through analysis of actual events, **a combination of** steady state and dynamic simulations…"
EOP-005-2, Requirement R7 **R7.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the Independent Experts Review Panel (IERP) recommendation to retire EOP-005-2, Requirement R7 as redundant. By adding the language: "develop and implement" to EOP-005-3, Requirement R1, EOP-005-2, Requirement R7, is redundant to EOP-005-3, Requirement R1. R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System.
EOP-005-2, Requirement R8 **R8.** Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-005-2, Requirement R8 as "duplicative with EOP-005-2, Requirement R1, Part 1.3 (have a plan) and RC authority in IRO-001-1.1b, Requirement R3." The EOP SDT recommends retirement of EOP-005-2, Requirement R8 under Criterion B7 as Redundant.
EOP-005-2, Requirement R10, and Requirement R10, Parts 10.1, 10.2, 10.3, and 10.4	EOP-005-3, Requirement R8, and Requirement R, Parts 8.1, 8.2, 8.3, 8.4, and 8.5	The language, "…to assure the proper execution of its restoration plan" was removed from this requirement, as it added no additional value.

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R10. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **10.1** System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan. **10.2** Restoration priorities. **10.3** Building of cranking paths. **10.3** Synchronizing (re-energized sections of the System).	**R8.** Each Transmission Operator shall include within its operations training program, System restoration training annually for its System Operators. This training program shall include training on the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]* **8.1** System restoration plan including coordination with ~~the~~ its Reliability Coordinator and Generator Operators included in the restoration plan. **8.2** Restoration priorities. **8.3** Building of cranking paths. **8.4** Synchronizing (re-energized sections of the System). **8.5** Transition of Demand and resource balance within its area to the Balancing Authority.	Requirement R8, Part 8.5 was added to Requirement R8 to address findings from the *Report on the FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans*. Requirement R8, Part 8.5 has been revised to include language within the definition of BA, which was approved by the Board on 2/11/2016; pending FERC approval. The Board approved definition of Balancing Authority is: The responsible entity that integrates resource plans ahead of time, maintains Demand and resource balance within a Balancing Authority Area, and supports Interconnection frequency in real time. "The Reliability Coordinator" has been updated to "its Reliability Coordinator" for consistency throughout the standard.
EOP-005-2, Requirement R11	EOP-005-2, Requirement R9	"Two calendar years" was revised to "24 calendar months" for consistency in the

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R11. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	**R9.** Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every ~~24 calendar months~~two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2. Federal Energy Regulatory Commission (Commission) Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*

Standard: EOP-005-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The Project 2015-02 Emergency Operations Periodic Review Team, as well as the Project 2015-08 Emergency Operations Standards Drafting Team determined (through conducted outreach and comment questions/responses during postings of periodic review templates and the SAR) that industry does not find ambiguity with the term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the TOP, TO, and the DP. A rationale box was added to the requirement to clarify "unique tasks."
EOP-005-2, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10.	EOP-005-3, Measure M10 **M10.** Each Transmission Operator shall have evidence that it participated in ~~the~~ its Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R10. EOP-006-2, Requirement R7 **R7.** Each Reliability Coordinator shall work with its affected Generator Operators~~,~~ and Transmission Operators as well as neighboring Reliability Coordinators to monitor restoration progress, coordinate restoration, and take actions to restore the BES frequency within acceptable operating limits. If the restoration plan cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate System restoration.		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R7 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R7 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R7, is redundant to EOP-006-3, Requirement R1.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
[Violation Risk Factor = High] [Time Horizon = Real-time Operations]		
EOP-006-2, Requirement R8 **R8.** The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization. *[Violation Risk Factor = High] [Time Horizon = Real-time Operations]*		The EOP SDT agrees with the IERP to retire EOP-006-2, Requirement R8 as "a logical action that does not require a standard." The EOP SDT recommends retirement of EOP-006-2, Requirement R8 under Criterion A (Overreaching Criterion). In addition, by adding the language: "develop and implement" to EOP-006-3, Requirement R1, EOP-006-2, Requirement R8, is redundant to EOP-006-3, Requirement R1.
EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every 24 calendar months.	EOP-006-2, Requirement R8, Part 8.1 **8.1.** Each Reliability Coordinator shall request each Transmission Operator identified in its restoration plan and each Generator Operator identified in the Transmission Operators' restoration plans to participate in a drill, exercise, or simulation at least once every two calendar years.	"Two calendar years" was revised to "24 calendar months" for consistency in the standards. This provides flexibility for training schedules and equipment availability. This revision to Draft 3 of the standard is a revision back to the original language of EOP-005-2.

Standard: EOP-006-3		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-006-2, Requirement R9 **R9.** Each Reliability Coordinator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	EOP-006-3, Requirement R7 **R7.** Each Reliability Coordinator shall include within its operations training program annual System restoration training for its System Operators. This training program shall address the following: *[Violation Risk Factor = Medium] [Time Horizon = Operations Planning]*	"To assure the proper execution of its restoration plan" was removed because it added no additional value; the entire standard is based upon using your restoration plan when needed.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-008-1, Requirement R1, Part 1.1 **1.1.** The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.	EOP-008-2, Requirement R1, Part 1.1 **1.1** The location and method of implementation for providing backup functionality.	To provide clarification: Requirement R1, Part 1.1, it would be difficult to establish a timing requirement to restore primary control center functionality, given the range of events that could render the primary control center inoperable. The revision to Requirement R1, Part 1.1. prevents a tertiary (i.e., already included in EOP-008-2, Requirements R3 and R4).
EOP-008-1, Requirement R1, Part 1.2.2 **1.2.2** Data communications.	EOP-008-2, Requirement R1, Part 1.2.2 **1.2.2** Data exchange capabilities.	The phrase "data exchange capabilities" is replacing "data communications in Requirement R1, Part 1.2.2 for the following reasons: COM-001-1 (no longer enforceable) enforceable covered telecommunications, which could be viewed as covering both voice and data. COM-001-2.1 (currently enforceable) focuses on "Interpersonal Communication" and does not address data. The topic of data exchange has historically been covered in the IRO / TOP Standards.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Most recently the revisions to the standards that came out of Project 2014-03 Revisions to TOP and IRO Standards use the phrase "data exchange capabilities." The rationale included in the IRO-002-4 standard discusses the need to retain the topic of data exchange, as it is not addressed in the COM standards.
EOP-008-1, Requirement R1, Part 1.2.3 **1.2.3** Voice communications.	EOP-008-2, Requirement R1, Part 1.2.3 **1.2.3** Interpersonal Communications.	The COM-001-2 standard, along with the defined term "Interpersonal Communications" became effective 10/1/2015, therefore the EOP SDT agreed that this defined term should be used.
EOP-008-1, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality. To avoid	EOP-008-2, Requirement R3 **R3.** Each Reliability Coordinator shall have a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality. To avoid	Revised "depend on" to "applicable to." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality.

Standard:EOP-008-2		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	requiring a tertiary facility, a backup facility is not required during: Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities	
EOP-008-1, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that depend on primary control center functionality in accordance with Requirement R3.	EOP-008-2, Measure M3 **M3.** Each Reliability Coordinator shall provide dated evidence that it has a backup control center facility (provided through its own dedicated backup facility or at another entity's control center staffed with certified Reliability Coordinator operators when control has been transferred to the backup facility) that provides the functionality required for maintaining compliance with all Reliability Standards that are applicable to the primary control center functionality in accordance with Requirement R3.	Revised "depend on" to "applicable to the." The intent was not to have the backup facility "depend on" the functions of the primary control center to meet compliance with Reliability Standards, rather to meet compliance for Reliability Standards that were met with the primary control center functionality need to be met with the backup control center functionality. The revision aligned the measure to the requirement.
EOP-008-1, Requirement R4	EOP-008-1, Requirement R4	Revised "depend on" to "are applicable to." The intent was not to have the backup facility "depend on" the functions of the

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard

FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards

FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three or more of the ~~r~~requirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirement” with “requirement part” and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing "implementation date" to "effective date" requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "implementation" with "effective" and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator within 90 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent System BES modification.	The Transmission Operator submitted its revised restoration plan to its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent System BES modification.	The Transmission Operator has failed to submit its revised restoration plan to its Reliability Coordinator within 150 calendar days of an unplanned permanent System BES modification. OR The Transmission Operator failed to submit its revised restoration plan to its Reliability Coordinator prior to a planned permanent BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address one or more of the requirement parts of Requirement R7.

VSL Justifications for EOP-005-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Transmission Operator to include within its operations training program System restoration training. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding System restoration training. Only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to be included within its operations training program. This is a revised requirement (EOP-005-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program System restoration training would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective, which is to include within its operations training program System restoration training. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R8			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.

VSL Justifications for EOP-005-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
NERC VRF Discussion	R9 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R9 requires the Transmission Operator, applicable Transmission Owners, and applicable Distribution Providers to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. This is a revised requirement (EOP-005-2, Requirement R11) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R9 contains only one objective, which is to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R9			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train 5% or less of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 5% and up to 10% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 10% and up to 15% of the personnel required by Requirement R9 within a two-calendar-year period.	The Transmission Operator, applicable Transmission Owner, or applicable Distribution Provider failed to train more than 15% of the personnel required by Requirement R9 within a two-calendar-year period.

VSL Justifications for EOP-005-3, R9	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R9 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R9	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R10	
Proposed VRF	**Medium**
NERC VRF Discussion	R10 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R10 requires the Transmission Operator to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R12) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R10 contains only one objective, which is to participate in restoration drills. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R10

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
NERC VRF Discussion	R16 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R16 requires each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R18) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
	R16 contains only one objective, which is to have to have each Generator Operator participate in the Reliability Coordinator's restoration drills, exercises, or simulations. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R16			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R16 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R16	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in EOP-005-3 – System Restoration from Blackstart Resources. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on a Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in an Operations Planning and a Real-time Operations time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires Transmission Operator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Reliability Coordinator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-005-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator has an approved plan, but failed to comply with one of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with two of the requirement parts within Requirement R1.	The Transmission Operator has an approved plan, but failed to comply with three or more of the ~~r~~equirement parts within Requirement R1.	The Transmission Operator does not have an approved restoration plan. OR The Transmission Operator has an approved restoration plan, but failed to implement the applicable requirement parts within Requirement R1.

VSL Justifications for EOP-005-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Transmission Operator to distribute to entities identified in its approved restoration plan with description of any changes to their roles and specific tasks and is administrative in nature. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for description of changes distribution of a restoration plan. This is a slight revision replacing “implementation date” to “effective date” requirement (EOP-005-2, Requirement R2) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute changes of a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective, which is to distribute changes of a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to provide one of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide two of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide three of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan.	The Transmission Operator failed to provide four or more of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date of the plan. OR Transmission Operator failed to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date.

VSL Justifications for EOP-005-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective” and adding a Severe VSL regarding the failure to provide at least half of the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the effective date. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Transmission Operator to review its restoration plan within 15 calendar months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is a revised requirement (EOP-005-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective, which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R3			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator submitted the reviewed restoration plan within 30 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 30 and less than or equal to 60 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 60 and less than or equal to 90 calendar days after the mutually-agreed, predetermined schedule.	The Transmission Operator submitted the reviewed restoration plan more than 90 calendar days after the mutually-agreed, predetermined schedule.

VSL Justifications for EOP-005-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Transmission Operator to update its restoration plan to reflect System modifications and submit it to its Reliability Coordinator for approval. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding unplanned and planned System modifications timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for an update of its restoration plan and submission for Reliability Coordinator approval to reflect System modifications. This is a revised requirement (EOP-005-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to update a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R4	
Proposed VRF	**Medium**
	R4 contains only one objective, which is to update its restoration plan and submit for Reliability Coordinator approval to reflect System modifications. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator failed to ~~update and~~ submit its revised restoration plan to ~~the~~ its Reliability Coordinator within 90 calendar days of an unplanned permanent ~~System~~ BES modification.	The Transmission Operator ~~updated and~~ submitted its revised restoration plan to ~~the~~ its Reliability Coordinator between 91 calendar days and 120 calendar days of an unplanned permanent ~~System~~ BES modification.	The Transmission Operator ~~updated and~~ submitted its revised restoration plan to ~~the~~ its Reliability Coordinator between 121 calendar days and 150 calendar days of an unplanned permanent ~~System~~ BES modification.	The Transmission Operator has failed to ~~update and~~ submit its revised restoration plan to ~~the~~ its Reliability Coordinator within 150 calendar days of an unplanned permanent ~~System~~ BES modification. OR The Transmission Operator failed to ~~update and~~ submit its revised restoration plan to ~~the~~ its Reliability Coordinator prior to a planned permanent BES modification.

VSL Justifications for EOP-005-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R5	
Proposed VRF	**Lower**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Transmission Operator to have a copy of its latest Reliability Coordinator approved restoration plan in its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF because, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having its Reliability Coordinator approved restoration plan within its primary and backup control rooms. This is a simply revised requirement (EOP-005-2, Requirement R5) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have a restoration plan within primary and backup control rooms would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R5 contains only one objective, which is to have a restoration plan within primary and backup control rooms. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R5			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator did not make the latest Reliability Coordinator approved restoration plan available in its primary and backup control rooms prior to its effective date.

VSL Justifications for EOP-005-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “implementation” with “effective.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R6	
Proposed VRF	**Medium**
NERC VRF Discussion	R6 is a requirement in a Long-term Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Transmission Operator to verify that its restoration plan accomplishes its intended function. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains three parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for verification that its restoration plan accomplishes its intended function. This is a slightly revised requirement (EOP-005-2, Requirement R6) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to verify that its restoration plan accomplishes its intended function would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective, which is to verify that its restoration plan accomplishes its intended function. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R6			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator performed the verification within the required timeframe but did not comply with one of the requirement parts.	The Transmission Operator performed the verification within the required timeframe but did not comply with two of the requirement parts.	The Transmission Operator performed the verification but did not complete it within the required time frame.	The Transmission Operator did not perform the verification or it took more than six calendar years to complete the verification. OR The Transmission Operator performed the verification within the required timeframe but did not comply with any of the requirement parts.

VSL Justifications for EOP-005-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Transmission Operator to have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding Blackstart Resource testing topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for the Transmission Operator to have Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. This is an unrevised requirement (EOP-005-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include Blackstart Resource testing requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R7	
Proposed VRF	**Medium**
	R7 contains only one objective which is to include within its restoration plan requirements to verify each Blackstart Resource is capable of meeting the requirements of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Transmission Operator's Blackstart Resource testing requirements do not address one or more of the requirement parts of Requirement R7.

VSL Justifications for EOP-005-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with restoration plans similar to EOP-005-2. The VSLs were revised slightly by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Transmission Operator to include within its operations training program System restoration training. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains several parts regarding System restoration training. Only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to be included within its operations training program. This is a revised requirement (EOP-005-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program System restoration training would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective, which is to include within its operations training program System restoration training. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R8			
Lower	**Moderate**	**High**	**Severe**
The Transmission Operator's training does not address one of the requirement parts of Requirement R8.	The Transmission Operator's training does not address two of the requirement parts of Requirement R8.	The Transmission Operator's training does not address three or more of the requirement parts of Requirement R8.	The Transmission Operator has not included System restoration training in its operations training program.

VSL Justifications for EOP-005-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
NERC VRF Discussion	R9 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R9 requires the Transmission Operator, applicable Transmission Owners, and applicable Distribution Providers to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for System restoration training to field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. This is a revised requirement (EOP-005-2, Requirement R11) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-005-3, R9	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R9 contains only one objective, which is to provide a minimum of two hours of System restoration training to their field switching personnel identified as performing unique tasks associated with the transmission Operator's restoration plan that are outside of their normal tasks. Since the requirement has only one objective, only one VRF was assigned.

FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
NERC VRF Discussion	R14 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R14 requires each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. This is an unrevised requirement (EOP-005-2, Requirement R16) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R14	
Proposed VRF	**Medium**
	R14 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to perform Blackstart Resource tests in accordance with the testing requirements set by the Transmission Operator. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R14			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource performed tests and maintained records but the records did not include all of the items in Requirement R14, Part 14.1. OR The Generator Operator did not supply the Blackstart Resource testing records as requested for 31 to 60 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests and maintained records but did not supply the Blackstart Resource testing records as requested for 61 to 90 calendar days after the request.	The Generator Operator with a Blackstart Resource performed tests but either did not maintain records or did not supply the Blackstart Resource testing records as requested within 91 or more calendar days after the request.	The Generator Operator with a Blackstart Resource did not perform Blackstart Resource tests.

VSL Justifications for EOP-005-3, R14	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R14 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R14	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
NERC VRF Discussion	R15 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R15 requires each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. This is an unrevised requirement (EOP-005-2, Requirement R17) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R15	
Proposed VRF	**Medium**
	R15 contains only one objective, which is to have to have each Generator Operator with a Blackstart Resource to provide training to its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R15			
Lower	**Moderate**	**High**	**Severe**
The Generator Operator with a Blackstart Resource did not train less than or equal to 10% of the personnel required by Requirement R15 within a two-calendar-year~~24 calendar month~~ period.	The Generator Operator with a Blackstart Resource did not train more than 10% and less than or equal to 25% of the personnel required by Requirement R15 within a two-calendar-year~~24 calendar month~~ period.	The Generator Operator with a Blackstart Resource did not train more than 25% and less than or equal to 50% of the personnel required by Requirement R15 within a two-calendar-year~~24 calendar month~~ period.	The Generator Operator with a Blackstart Resource did not train more than 50% of the personnel required by Requirement R15 within a two-calendar-year~~24 calendar month~~ period.

VSL Justifications for EOP-005-3, R15	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R15 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R15	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
NERC VRF Discussion	R16 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R16 requires each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations. This is an unrevised requirement (EOP-005-2, Requirement R18) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have each Generator Operator to participate in the Reliability Coordinator's restoration drills, exercises, or simulations would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-005-3, R16	
Proposed VRF	**Medium**
	R16 contains only one objective, which is to have to have each Generator Operator participate in the Reliability Coordinator's restoration drills, exercises, or simulations. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-005-3, R16			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Generator Operator failed to participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by ~~the~~ its Reliability Coordinator.

VSL Justifications for EOP-005-3, R16	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-005-3 deals with System restoration from Blackstart Resources similar to EOP-005-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R16 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-005-3, R16	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.

FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts over 91 calendar days calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.

VSL Justifications for EOP-006-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Reliability Coordinator to review the restoration plans of Transmission operators within its reliability Coordinator Area. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a review the restoration plans of Transmission operators within its reliability Coordinator Area. This is an unrevised requirement (EOP-006-2, Requirement R5) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
	R5 contains only one objective which is to review the review the restoration plans of Transmission operators within its reliability Coordinator Area. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R5			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator did not review and approve/disapprove the submitted restoration plans, with stated reasons for disapproval, from its Transmission Operators and neighboring Reliability Coordinators within 30 calendar days of receipt, but did review and approve/disapprove the plans within 45 calendar days of receipt. OR The Reliability Coordinator failed to notify the Transmission Operator of its approval or disapproval with stated reasons for disapproval for more than 90 calendar days of receipt.

notify the Transmission Operator of its approval or disapproval with reasons within 45 calendar days of receipt.	notify the Transmission Operator of its approval or disapproval with reasons within 60 calendar days of receipt	for disapproval within 30 calendar days of receipt but did notify the Transmission Operator of its approval or disapproval with reasons within 90 calendar days of receipt.	

VSL Justifications for EOP-006-3, R5	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R5 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R5	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R6	
Proposed VRF	**Lower**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Reliability Coordinator to have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having copies of the latest restoration plans. This is a slightly revised requirement (EOP-006-2, Requirement R6) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have copies of the latest restoration plans would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective which is to have copies of the latest restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R6			
Lower	Moderate	High	Severe
N/A	N/A	The Reliability Coordinator did not have a copy of the latest approved restoration plan of all Transmission Operators in its Reliability Coordinator Area within its primary and backup control rooms prior to the implementation date.	The Reliability Coordinator did not have a copy of its latest restoration plan within its primary and backup control rooms prior to the implementation date.

VSL Justifications for EOP-006-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "implementation date" with "effective date." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the annual System restoration training within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the annual System restoration training within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing “annual” with “at least once each 15 calendar months” and by replacing “subrequirements” with “requirement parts.” The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
	electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R8 contains only one objective which is to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R8			
Lower	**Moderate**	**High**	**Severe**
N/A	The Reliability Coordinator only held one restoration drill, exercise, or simulation during the calendar year. OR The Reliability Coordinator did not request each applicable Transmission Operator or Generator Operator identified in its restoration plan to participate in a drill, exercise, or simulation at least once every two calendar years.	N/A	The Reliability Coordinator did not hold a restoration drill, exercise, or simulation during the calendar year.

VSL Justifications for EOP-006-3, R8	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R8 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R8	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the standard drafting team's (SDT's) justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in EOP-006-3 – System Restoration Coordination. Each requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the Electric Reliability Organizations (ERO) Sanction Guidelines. The SDT applied the following NERC criteria and FERC Guidelines when developing the VRFs and VSLs for the requirements.

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
NERC VRF Discussion	R1 is a requirement in a Real-time Operations and Operations Planning time frame that, if violated, could directly prevent restoration to normal operations, cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R1 requires the Reliability Coordinator to develop, maintain and implement a restoration plan that is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has parts that are of equal importance and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for development, maintenance and implementation of a restoration plan. This is similar to EOP-005-2, Requirement R1 which also places similar requirements of the Transmission operator and is assigned a High VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to develop and implement a restoration plan could directly affect the electrical state or capability of the BES, or the ability to effectively monitor and control the BES. Violation of the requirement could lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is "High" which is consistent with NERC guidelines for similar requirements.

VRF Justifications for EOP-006-3, R1	
Proposed VRF	**High**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective which is to develop, maintain and implement a restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R1			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator failed to include one requirement part of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include two requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include three of the requirement parts of Requirement R1 within its restoration plan.	The Reliability Coordinator failed to include four or more of the requirement parts within its restoration plan. OR The Reliability Coordinator has a restoration plan, but failed to implement it.

VSL Justifications for EOP-006-3, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "subrequirement" with "requirement part" and adding a Severe VSL regarding the failure to implement the restoration plan. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R2	
Proposed VRF	**Lower**
NERC VRF Discussion	R2 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the Reliability Coordinator to distribute its most recent restoration plan and is administrative in nature. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for distribution of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R2) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to distribute a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective which is to distribute restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R2			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was more than 30 calendar days late but less than 60 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 60 calendar days or more late, but less than 90 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to the entities identified in Requirement R2, but was 90 or more calendar days late, but less than 120 calendar days late.	The Reliability Coordinator distributed the most recent Reliability Coordinator Area restoration plan to entities identified in Requirement R2, but was 120 calendar days or more late.

VSL Justifications for EOP-006-3, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R3	
Proposed VRF	**Medium**
NERC VRF Discussion	R3 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R3 requires the Reliability Coordinator to review its restoration plan within 13 months of the last review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R3) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R3 contains only one objective which is to review the restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R3			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	N/A	The Reliability Coordinator did not review its restoration plan within 13 calendar months of the last review.

VSL Justifications for EOP-006-3, R3	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R3 is binary and assigned at the Severe level. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R3	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R4	
Proposed VRF	**Medium**
NERC VRF Discussion	R4 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R4 requires the Reliability Coordinator to review its neighboring Reliability Coordinator's restoration plan and provide written notification of conflicts discovered during the review. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding conflict resolution timelines and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a neighboring Reliability Coordinator's restoration plan. This is a slightly revised requirement (EOP-006-2, Requirement R4) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R4 contains only one objective which is to review the neighboring Reliability Coordinator's restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R4			
Lower	**Moderate**	**High**	**Severe**
The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt, and resolved conflicts between 31 and 60 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts between 61 and 90 calendar days following written notification.	The Reliability Coordinator reviewed the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt and resolved conflicts over 91 calendar days calendar days following written notification.	The Reliability Coordinator did not review the submitted restoration plans from its neighboring Reliability Coordinators within 60 calendar days of receipt.

VSL Justifications for EOP-006-3, R4	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R4 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R4	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
NERC VRF Discussion	R5 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R5 requires the Reliability Coordinator to review the restoration plans of Transmission operators within its reliability Coordinator Area. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has contains a single part regarding coordination and compatibility of the plans and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for review of a review the restoration plans of Transmission operators within its reliability Coordinator Area. This is an unrevised requirement (EOP-006-2, Requirement R5) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to review a restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation**

VRF Justifications for EOP-006-3, R5	
Proposed VRF	**Medium**
	R5 contains only one objective which is to review the review the restoration plans of Transmission operators within its reliability Coordinator Area. Since the requirement has only one objective, only one VRF was assigned.

FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R6	
Proposed VRF	**Lower**
NERC VRF Discussion	R6 is a requirement in an Operations Planning time frame that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R6 requires the Reliability Coordinator to have a copy of its latest restoration plan and copies of the latest approved restoration plan of each Transmission Operator in its Reliability Coordinator Area within its primary and backup control rooms. A violation of this requirement has been assigned a Lower VRF, consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has does not contain parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for having copies of the latest restoration plans. This is a slightly revised requirement (EOP-006-2, Requirement R6) that is assigned a Lower VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to have copies of the latest restoration plans would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R6 contains only one objective which is to have copies of the latest restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R6			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator did not have a copy of the latest approved restoration plan of all Transmission Operators in its Reliability Coordinator Area within its primary and backup control rooms prior to the implementation date.	The Reliability Coordinator did not have a copy of its latest restoration plan within its primary and backup control rooms prior to the implementation date.

VSL Justifications for EOP-006-3, R6	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "implementation date" with "effective date." The VSLs for this requirement meet or exceed the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment for R6 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R6	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
NERC VRF Discussion	R7 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R7 requires the Reliability Coordinator to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains two parts regarding training topics and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for to inclusion within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This is an unrevised requirement (EOP-006-2, Requirement R9) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system.

VRF Justifications for EOP-006-3, R7	
Proposed VRF	**Medium**
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R7 contains only one objective which is to include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-006-3, R7			
Lower	**Moderate**	**High**	**Severe**
N/A	N/A	The Reliability Coordinator included the annual System restoration training within its operations training program, but did not address both of the requirements parts.	The Reliability Coordinator did not include the annual System restoration training within its operations training program.

VSL Justifications for EOP-006-3, R7	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	EOP-006-3 deals with restoration plans similar to EOP-006-2. The VSLs were revised slightly by replacing "annual" with "at least once each 15 calendar months" and by replacing "subrequirements" with "requirement parts." The VSLs for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R7 is not binary. Guideline 2b: The propose VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-006-3, R7	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-006-3, R8	
Proposed VRF	**Medium**
NERC VRF Discussion	R8 is a requirement in an Operations Planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R8 requires the Reliability Coordinator to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. A violation of this requirement has been assigned a Medium VRF because, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. This is consistent with FERC guideline G1 regarding Emergency Operations.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement contains one part regarding requesting other entities to participate in the System restoration drills, exercises, or simulations and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** This requirement calls for conducting two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted. This is an unrevised requirement (EOP-006-2, Requirement R10) that is assigned a Medium VRF.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to conduct two System restoration drills, exercises, or simulations per calendar year, which shall include the Transmission Operators and Generator Operators as dictated by the particular scope of the drill, exercise, or simulation that is being conducted would not be expected to adversely affect the

Consideration of Issues and Directives

Project 2015-08 Emergency Operations

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
Order no. 749: *"[N]ERC, in its comments about the term [unique tasks], states that it 'could promote the development of a guideline to aid registered entities in complying with Requirement R11.' The Commission notes that this Reliability Standard will not become effective for at least 24 months, during which time ambiguities in language or differences of opinion among affected entities may be resolved in practical ways. Once the Standard is effective, if industry determines that ambiguity with the term arises, it would be appropriate for NERC to consider its proposal to develop a guideline to aid entities in their compliance obligations."*	FERC Order Number 749	The Project 2015-02 Emergency Operations Periodic Review Team (EOP PRT), as well as the Project 2015-08 Emergency Operations Standards Drafting Team (EOP SDT) determined (through conducted outreach and comment questions/responses during postings of periodic review templates, the project SAR, and project postings) that industry does not find ambiguity with the term "unique tasks." The industry understands "unique tasks" to be those tasks that are defined by the Transmission Operator (TOP), Transmission Owner (TO), and the Distribution Provider (DP). A rationale box was added to EOP-005-3, Rquirement R9 to clarify "unique tasks." **Rationale:** The intent of "unique tasks" are those tasks that are defined by the Transmission Operator, the Transmission Owner, and the Distribution Provider.
Clarify when system changes will trigger a requirement to update restoration plans. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for updating restoration	FERC-NERC-Regional Entity Joint Review of Restoration	The Project 2015-08 EOP SDT revised EOP-005-3, Requirement R4 and the requirement parts. The references to unplanned permanent and planned permanent BES modifications that will change the ability to implement the Reliability Coordinator (RC)-approved restoration plan are intended to require a TOP to

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
plans for all system modifications that would change the implementation of an entity's restoration plan for an extended period of time, not just permanent or planned system modifications. In considering these measures, the kinds of events that may warrant an update to the system restoration plan should be identified, taking into account the length of time the system is affected, as well as the overall objective of ensuring that restoration plans are generally flexible enough so that system modifications can be addressed without continuous updates.	and Recovery Plans. **Section IV.E**	update and submit a restoration plan to the RC when the modification would substantively change the TOP's ability to implement the restoration plan or impact the RC's ability to monitor and direct restoration efforts. The intent is not to require a TOP to update and submit changes that do not substantively change the restoration plan, the TOP's ability to implement the plan, or the RC's ability to monitor and direct the restoration efforts. Examples of instances that do not require update and submission of a restoration plan include element number changes or device changes that have no significance to the implementation of the plan.
Verification/testing of modified restoration plan. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to address the need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably, i.e., when needed to ensure that the restoration plan, when implemented, allows for restoration of the system within acceptable operating voltage and frequency limits.6 In considering such measures, the types of system changes that could impact reliable implementation of the restoration plan should be taken into account (e.g., identification of a new	FERC-NERC-Regional Entity Joint Review of Restoration and Recovery Plans. **Section IV.G**	The EOP SDT discussed the recommendation to address the "…need for re-verification of a system restoration plan when a system change precipitates the need to determine whether the plan's restoration processes and procedures, when implemented, will operate reliably…" The TOP performs detailed testing at least every five years to ensure that its restoration plan accomplishes its intended function (EOP-005, Requirement R6). In addition, the TOP 1) has to annually review its restoration plan and submit it to its RC for approval, 2) when there are revisions that would change the TOP's ability to implement its restoration plan, these also have to be submitted to the RC for review, 3) include within its operations training program annual System restoration training

Project 2015-08 Emergency Operations		
Issue or Directive	**Source**	**Consideration of Issue or Directive**
blackstart generator location or on redefinition of a cranking path).		for its System Operators, and 4) participate in RC restoration drills, exercises or simulations (EOP-005, Requirements R3, R4, R8, and R10). The RC 1) has to review its restoration plan within 13 calendar months of the last review, 2) has to review its neighboring RC's restoration plans and provide notice of any conflicts discovered, 3) has to review and approve/disapprove its TOP's restoration plans, 4) provide annual System Restoration training for its System Operators, and 5) conduct two System Restoration drills, exercises or simulations per calendar year (EOP-006, Requirements R3, R4, R5, R7, and R8). The recommendation pointed to system changes that could impact the viability of the plan. When the RC reviews the TOP restoration plan for annual approval/disapproval, the RC is the only entity that has the wide-area view of the entire System, and the RC is the only entity that can effectively complete this approval. The EOP SDT believes that since the TOP and RC have to meet multiple requirements, that both entities are continually reviewing and testing the viability of their restoration plans; and, therefore, no changes were made in EOP-005 based on the recommendation.
Operator training: Exercises on transferring control back to the balancing authority. The joint staff review team recommends that measures be taken (including considering changes to the Reliability Standards) to	FERC-NERC-Regional Entity Joint Review of	Since the Balancing Authority does not relinquish any BA authority to the TOP, language was revised in EOP-005-3, Requirement R1, Part 1.9 to the standard: "Processes for

Standards Announcement

Project 2015-08 Emergency Operations
EOP-005-3 and EOP-006-3

Final Ballots Open through January 6, 2017

Now Available

Final ballots for **EOP-005-3 - System Restoration from Blackstart Resource** and **EOP-006-3 - System Restoration Coordination** are open through **8 p.m. Eastern on Friday, January 6, 2017**.

Balloting

In the final ballot, votes are counted by exception. Votes from the previous ballot are automatically carried over in the final ballot. Only members of the applicable ballot pools can cast a vote. Ballot pool members who previously voted have the option to change their vote in the final ballot. Ballot pool members who did not cast a vote during the previous ballot can vote in the final ballot.

Members of the ballot pools associated with this project can log in and submit their vote(s) here. If you experience any difficulties using the Standards Balloting & Commenting System (SBS), contact Nasheema Santos.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

- *Passwords expire every **6 months** and must be reset.*
- *The SBS **is not** supported for use on mobile devices.*
- *Please be mindful of ballot and comment period closing dates. We ask to **allow at least 48 hours** for NERC support staff to assist with inquiries. Therefore, it is recommended that users try logging into their SBS accounts **prior to the last day** of a comment/ballot period.*

Next Steps

The voting results will be posted and announced after the ballot closes. If approved, the standard will be submitted to the Board of Trustees for adoption and then filed with the appropriate regulatory authorities.

Standards Development Process

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

EOP-004-4 is being posted for a 10-day final ballot period.

Completed Actions	Date
Standards Committee approved Standard Authorization Request (SAR) for posting	07/15/2015
SAR posted for comment	07/21/2015 – 08/19/2015
45-day formal comment period with ballot	07/25/2016 – 09/08/2016
45-day formal comment period with additional ballot	11/18/2016 – 01/09/2016
10-day final ballot period	01/24/2017 – 02/02/2017

Anticipated Actions	Date
NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting

2. **Number:** EOP-004-4

3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.

4. **Applicability:**

    4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following Functional Entities will be collectively referred to as "Responsible Entity."

    4.1.1. Reliability Coordinator

    4.1.2. Balancing Authority

    4.1.3. Transmission Owner

    4.1.4. Transmission Operator

    4.1.5. Generator Owner

    4.1.6. Generator Operator

    4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

Violation Severity Levels

R #	Violation Severity Levels			
	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.
R2.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients up to 24 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 48 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours or by	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 72 hours after the timing requirement for submittal. 		the end of the next business day, as applicable.	the end of the next business day, as applicable.	end of the next business day, as applicable. OR The Responsible Entity failed to submit a report for an event in EOP-004-4 Attachment 1.

D. Regional Variances

None.

E. Associated Documents

Link to the Implementation Plan and other important associated documents.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written event report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: “Any medium that allows two or more individuals to interact, consult, or exchange information.” The NERC Glossary of Terms defines Alternative Interpersonal Communication as: “Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.”

Complete loss of monitoring or control capability at a BES control center: Language revisions to: “Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more” provides clarity to the “Threshold for Reporting” and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction resulting from a BES Emergency	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction resulting from a BES Emergency	TOP	System-wide voltage reduction of 3% or more.
Firm load sheddingresulting from a BES Emergency	Initiating RC, BA, or TOP	Firm load shedding ≥ 100 MW (manual or automatic).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of =/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

Version History

Version	Date	Action	Change Tracking
2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

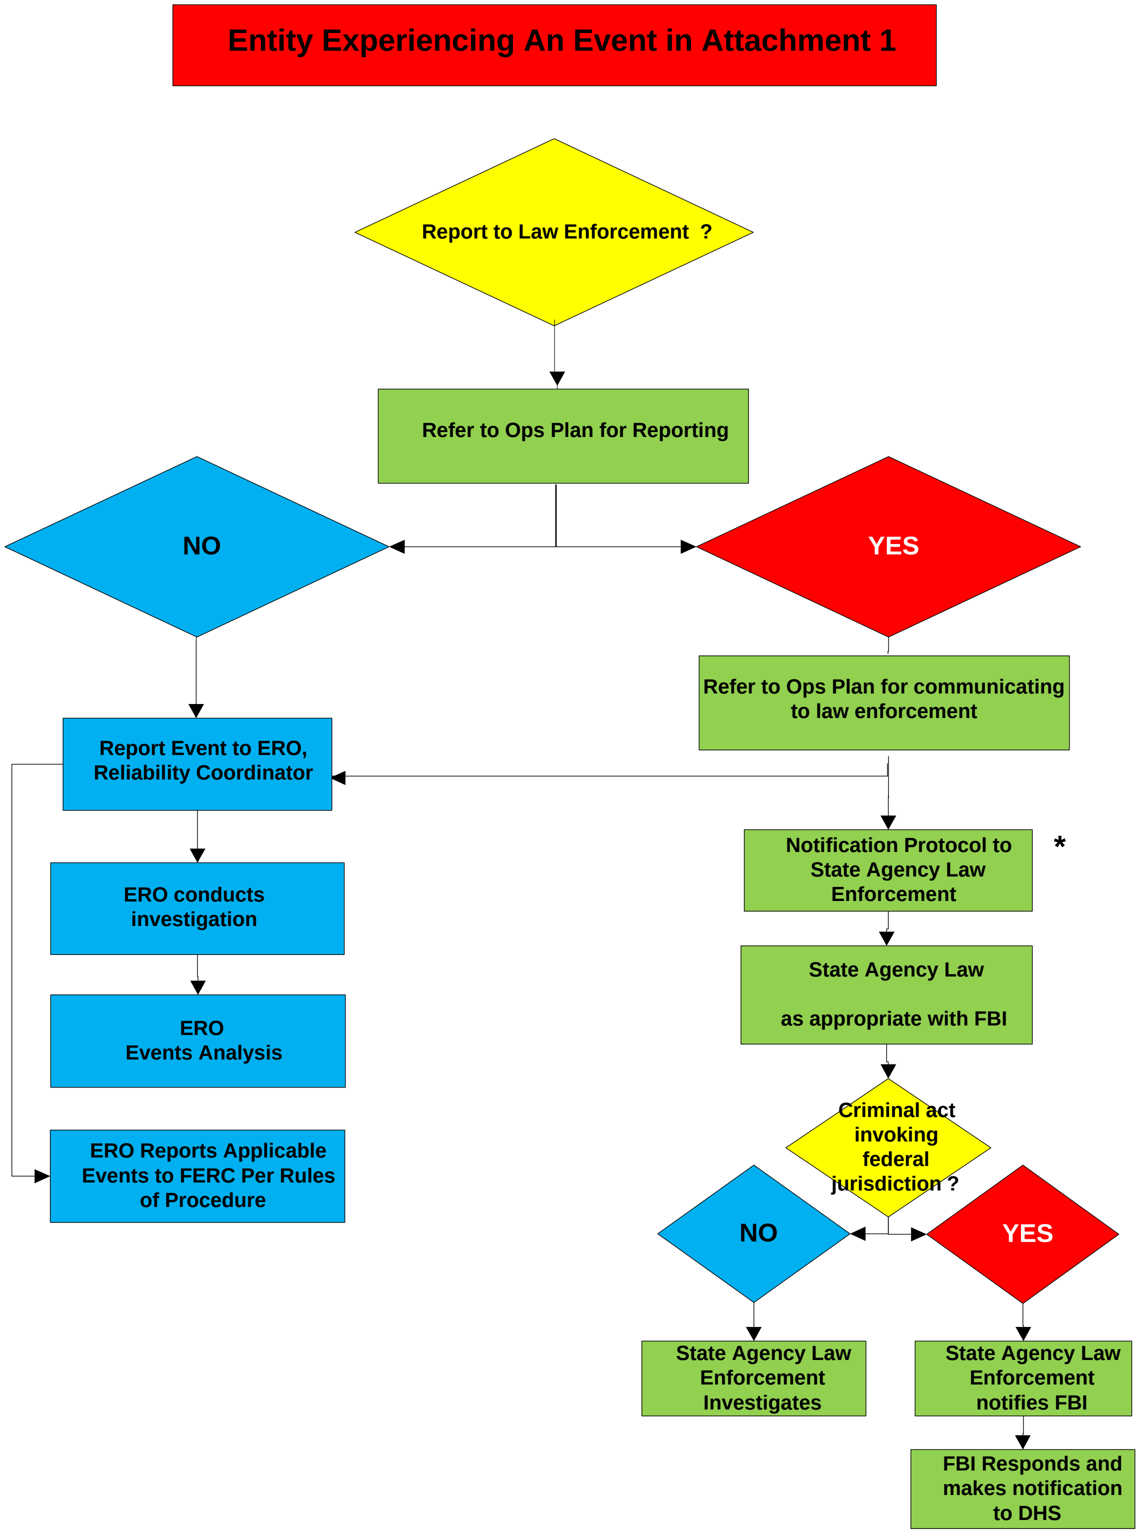
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional Entities to report the incidents and provide information known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

NERC Board (Board) adoption	February 2017

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting
2. **Number:** EOP-004-4
3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.
4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following Functional Entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

5. **Effective Date:** See the Implementation Plan for EOP-004-4.

B. Requirements and Measures

R1. Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. Each Responsible Entity will have as evidence of reporting an event to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:
"Compliance Enforcement Authority" means NERC or the Regional Entity, or any entity as otherwise designated by an Applicable Governmental Authority, in their respective roles of monitoring and/or enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. Evidence Retention:
The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement R2 and Measure M2.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Enforcement Program

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written ~~Event~~ event ~~Report~~ report within the timing in the standard. ~~-~~In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of its Facility	TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to its Facility	TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.
Physical threats to its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.
Public appeal for load reduction resulting from a BES Emergency	BA	Public appeal for load reduction to maintain continuity of the BES.
System-wide voltage reduction resulting from a BES Emergency	TOP	System-wide voltage reduction of 3% or more ~~to maintain the continuity of the BES~~.
Firm load shedding resulting from a BES Emergency	Initiating RC, BA, or TOP	Firm load shedding ≥ 100 MW (manual or automatic).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
BES Emergency resulting in voltage deviation on a Facility	TOP	A voltage deviation of =/> ~~±~~ 10% of nominal voltage sustained for ≥ 15 continuous minutes.
Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	Uncontrolled loss of firm load for ≥ 15 ~~Minutes~~ minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA	Total generation loss, within one minute, of: ≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).
Unplanned evacuation of its BES control center	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.

EOP-004 - Attachment 2: Event Reporting Form

EOP-004 Attachment 2: Event Reporting Form		
Use this form to report events. The Electric Reliability Organization will accept the DOE OE-417 form in lieu of this form if the entity is required to submit an OE-417 report. 2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

Multiple Reports for a Single Organization

For entities that have multiple registrations, the requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

Law Enforcement Reporting

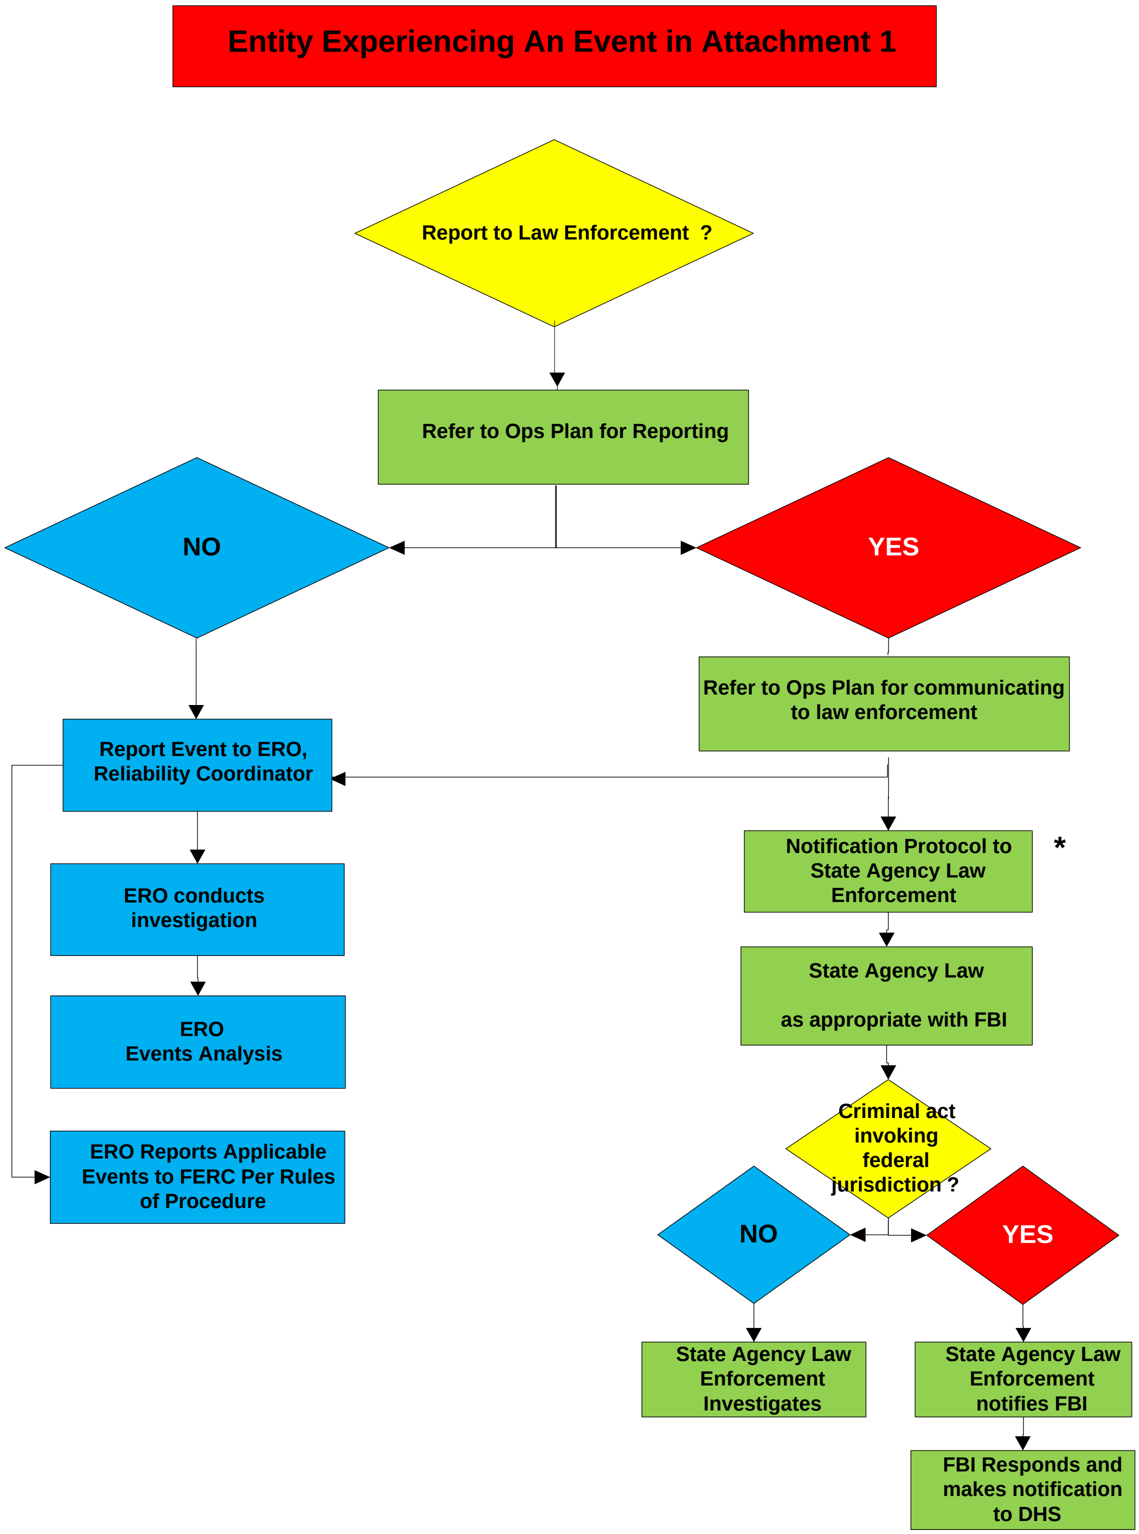
The reliability objective of EOP-004-4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

Potential Uses of Reportable Information

General situational awareness, correlation of data, trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional Entities to report the incidents and provide information known at the time of the report. Further data gathering necessary for analysis is provided for under the ERO Event Analysis Program and the NERC Rules of Procedure. The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

Rationale

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT adoption, the text from the rationale text boxes was moved to this section.

~~A.~~ Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Description of Current Draft

New or Modified Term(s) Used in NERC Reliability Standards

This section includes all new or modified terms used in the proposed standard that will be included in the *Glossary of Terms Used in NERC Reliability Standards* upon applicable regulatory approval. Terms used in the proposed standard that are already defined and are not being modified can be found in the *Glossary of Terms Used in NERC Reliability Standards*. The new or revised terms listed below will be presented for approval with the proposed standard. Upon Board adoption, this section will be removed.

Term(s):

None.

When this standard receives Board adoption, the rationale boxes will be moved to the Supplemental Material Section of the standard.

A. Introduction

1. **Title:** Event Reporting

2. **Number:** EOP-004-~~3~~4

3. **Purpose:** To improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the Requirements and the EOP-004 Attachment 1 contained herein, the following ~~functional entities~~Functional Entities will be collectively referred to as "Responsible Entity."

   4.1.1. Reliability Coordinator

   4.1.2. Balancing Authority

   4.1.3. Transmission Owner

   4.1.4. Transmission Operator

   4.1.5. Generator Owner

   4.1.6. Generator Operator

   4.1.7. Distribution Provider

~~5.~~ **Effective Date~~s~~:** See the Implementation Plan for ~~the Revised Definition of "Remedial Action Scheme"~~

~~**5. 6. Background:**~~

~~6.~~5. ~~NERC established a SAR Team in 2009 to investigate and propose revisions to the CIP-001 and~~ EOP-004 ~~Reliability Standards. The team was asked to consider the following:~~ -4.

~~1. CIP-001 could be merged with EOP-004 to eliminate redundancies.~~
~~2. Acts of sabotage have to be reported to the DOE as part of EOP-004.~~
~~3. Specific references to the DOE form need to be eliminated.~~
~~4. EOP-004 had some 'fill-in-the-blank' components to eliminate.~~

~~The development included other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient Bulk Electric System reliability standards.~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009.~~

~~The DSR SDT developed a concept paper to solicit stakeholder input regarding the proposed reporting concepts that the DSR SDT had developed. The posting of the concept paper sought comments from stakeholders on the "road map" that will be used by the DSR SDT in updating or revising CIP-001 and EOP-004. The concept paper provided stakeholders the background information and thought process of the DSR SDT. The DSR SDT has reviewed the existing standards, the SAR, issues from the NERC issues database and FERC Order 693 Directives in order to determine a prudent course of action with respect to revision of these standards.~~

B. ~~B.~~ Requirements and Measures

R1. ~~**R1.**~~ Each Responsible Entity shall have an event reporting Operating Plan in accordance with EOP-004-~~2~~ ~~3~~4 Attachment 1 that includes the protocol(s) for reporting to the Electric Reliability Organization and other organizations (e.g., the Regional Entity, company personnel, the Responsible Entity's Reliability Coordinator, law enforcement, or governmental authority). *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. ~~**M1.**~~ Each Responsible Entity will have a dated event reporting Operating Plan that includes~~, but is not limited to the~~ protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-~~3~~4 Attachment 1 and in accordance with the entity responsible for reporting.

R2. ~~**R2.**~~ Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan ~~within~~by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day ~~if the event occurs on a weekend (which is recognized to be 4 PM~~(4 p.m. local time ~~on Friday to 8 AM Monday local time).~~will be considered the end of the business day). *[Violation Risk Factor: Medium] [Time Horizon: Operations Assessment]*

M2. ~~**M2.**~~ Each Responsible Entity will have as evidence of reporting an event~~,~~ to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-~~3~~4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted ~~within~~ by the later of 24 hours of recognition of meeting ~~the~~an event type threshold for reporting or by the end of the Responsible Entity's next business day ~~if the event occurs on a weekend (which is recognized to be~~ (4 ~~PM~~p.m. local time ~~on Friday to 8 AM Monday local time). (R2)~~will be considered the end of the business day).

~~**R3.** Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*~~

~~**M3.** Each Responsible Entity will have dated records to show that it validated all contact information contained in the Operating Plan each calendar year. Such evidence may include, but are not limited to, dated voice recordings and operating logs or other communication documentation. (R3)~~

C. ~~C.~~ Compliance

1. ~~1.~~ Compliance Monitoring Process

1.1. ~~1.1~~ Compliance Enforcement Authority:

~~The Regional Entity shall serve as the~~ "Compliance Enforcement Authority ~~(CEA) unless the applicable~~" means NERC or the Regional Entity, or any entity ~~is owned, operated, or controlled~~as otherwise designated by ~~the Regional Entity. In such cases the ERO~~ an Applicable Governmental Authority, in their respective roles of monitoring and/or ~~a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA~~enforcing compliance with mandatory and enforceable Reliability Standards in their respective jurisdictions.

1.2. ~~1.2~~ Evidence Retention:

The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain the current Operating Plan plus each version issued since the last audit for Requirement~~s~~ R1, and Measure M1.
- Each Responsible Entity shall retain evidence of compliance since the last audit for Requirement~~s~~ R2~~, R3~~ and Measure M2~~, M3~~.

If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. ~~1.3~~ Compliance Monitoring and Enforcement ~~Processes:~~Program

~~Compliance Audit~~

~~Self-Certification~~

~~Spot Checking~~

~~Compliance Investigation~~

~~Self-Reporting~~

~~Complaint~~

~~1.4 Additional Compliance Information~~

~~None~~

~~Table of Compliance Elements~~

As defined in the NERC Rules of Procedure, "Compliance Monitoring and Enforcement Program" refers to the identification of the processes that will be used to evaluate data or information for the purpose of assessing performance or outcomes with the associated Reliability Standard.

EOP-004 - Attachment 1: Reportable Events

NOTE: Under certain adverse conditions (e.g. severe weather, multiple events) it may not be possible to report the damage caused by an event and issue a written ~~Event Report~~event report within the timing in the standard. In such cases, the affected Responsible Entity shall notify parties per Requirement R2 and provide as much information as is available at the time of the notification. Submit reports to the ERO via one of the following: e-mail: systemawareness@nerc.net, Facsimile 404-446-9770 or Voice: 404-446-9780, select Option 1.

Submit EOP-004 Attachment 2 (or DOE-OE-417) pursuant to Requirements R1 and R2.

Rationale for Attachment 1:

System-wide voltage reduction to maintain the continuity of the BES: The TOP is operating the system and is the only entity that would implement system-wide voltage reduction.

Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at a BES control center: To align EOP-004-4 with COM-001-2.1. COM-001-2.1 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." The NERC Glossary of Terms defines Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."

Complete loss of monitoring or control capability at a BES control center: Language revisions to: "Complete loss of monitoring or control capability at a BES control center for 30 continuous minutes or more" provides clarity to the "Threshold for Reporting" and better aligns with the ERO Event Analysis Process.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of a Facility	RC, BA, TOP	Damage or destruction of a Facility within its Reliability Coordinator Area, Balancing Authority Area or Transmission Operator Area that results in ~~actions~~action(s) to avoid a BES Emergency.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Damage or destruction of ~~a~~its Facility	~~BA,~~ TO, TOP, GO, GOP, DP	Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.
Physical threats to ~~a~~its Facility	~~BA,~~ TO, TOP, GO, GOP, DP	Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at ~~a Facility.~~ ~~Do not report theft unless it degrades normal operation of a~~its Facility.
Physical threats to ~~a~~its BES control center	RC, BA, TOP	Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at ~~a~~its BES control center.
~~BES Emergency requiring public~~Public appeal for load reduction resulting from a BES Emergency	~~Initiating entity is responsible for reporting~~BA	Public appeal for load reduction ~~event~~to maintain continuity of the BES.
~~BES Emergency requiring system~~System-wide voltage reduction resulting from a BES Emergency	~~Initiating entity is responsible for reporting~~TOP	System-wide voltage reduction of 3% or more.

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
~~BES Emergency requiring manual firm load shedding~~	~~Initiating entity is responsible for reporting~~	~~Manual firm load shedding ≥ 100 MW.~~
Firm load sheddingresulting from a BES Emergency ~~resulting in automatic firm load shedding~~	~~DP,~~Initiating RC, BA, or TOP	~~Automatic firm~~Firm load shedding ≥ 100 MW (~~via~~manual or automatic ~~undervoltage or underfrequency load shedding schemes, or RAS~~).
~~Voltage~~BES Emergency resulting in voltage deviation on a Facility	TOP	~~Observed within its area a~~A voltage deviation of ~~±~~=/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.
~~IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only)~~	~~RC~~	~~Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL for more than 30 minutes for Major WECC Transfer Paths (WECC only).~~
~~Loss~~Uncontrolled loss of firm load resulting from a BES Emergency	BA, TOP, DP	~~Loss~~Uncontrolled loss of firm load for ≥ 15 ~~Minutes:~~minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
System separation (islanding)	RC, BA, TOP	Each separation resulting in an island ≥ 100 MW
Generation loss	BA~~, GOP~~	Total generation loss, within one minute, of: ≥ 2,000 MW ~~for entities~~ in the Eastern ~~or~~, Western ~~Interconnection~~ ~~OR~~ ~~≥ 1,000 MW for entities in the ERCOT~~ , or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection Generation loss will be used to report Forced Outages not weather patterns or fuel supply unavailability for dispersed power producing resources.
Complete loss of off-site power to a nuclear generating plant (grid supply)	TO, TOP	Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements
Transmission loss	TOP	Unexpected loss within its area, contrary to design, of three or more BES ~~Elements~~Facilities caused by a common disturbance (excluding successful automatic reclosing).

Event Type	Entity with Reporting Responsibility	Threshold for Reporting
Unplanned evacuation of its BES control center ~~evacuation~~	RC, BA, TOP	Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.
Complete loss of ~~voice communication~~Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center	RC, BA, TOP	Complete loss of ~~voice communication~~Interpersonal Communication and Alternative Interpersonal Communication capability affecting ~~a~~its staffed BES control center for 30 continuous minutes or more.
Complete loss of monitoring or control capability at its staffed BES control center	RC, BA, TOP	Complete loss of monitoring or control capability ~~affecting a~~at its staffed BES control center for 30 continuous minutes or more ~~such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.~~.

EOP-004 - Attachment 2: Event Reporting Form

<table>
<tr><th colspan="3">EOP-004 Attachment 2: Event Reporting Form

~~Version~~	~~Date~~	~~Action~~	~~Change Tracking~~
2		Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.	Revision to entire standard (Project 2009-01)
2	November 7, 2012	Adopted by the NERC Board of Trustees	
2	June 20, 2013	FERC approved	
3	November 13, 2014	Adopted by the NERC Board of Trustees	Replaced references to Special protection System and SPS with Remedial Action Scheme and RAS
3	November 19, 2015	FERC Order issued approving EOP-004-3. Docket No. RM15-13-000.	

Guideline and Technical Basis

~~**Distribution Provider Applicability Discussion**~~

~~The DSR SDT has included Distribution Providers (DP) as an applicable entity under this standard. The team realizes that not all DPs will own BES Facilities and will not meet the "Threshold for Reporting" for any event listed in Attachment 1. These DPs will not have any reports to submit under Requirement R2. However, these DPs will be responsible for meeting Requirements R1 and R3. The DSR SDT does not intend for these entities to have a detailed Operating Plan to address events that are not applicable to them. In this instance, the DSR SDT intends for the DP to have a very simple Operating Plan that includes a statement that there are no applicable events in Attachment 1 (to meet R1) and that the DP will review the list of events in Attachment 1 each year (to meet R3). The team does not think this will be a burden on any entity as the development and annual validation of the Operating Plan should not take more that 30 minutes on an annual basis. If a DP discovers applicable events during the annual review, it is expected that the DP will develop a more detailed Operating Plan to comply with the requirements of the standard.~~

Multiple Reports for a Single Organization

For entities that have multiple registrations, the ~~DSR SDT intends~~requirement is that these entities will only have to submit one report for any individual event. For example, if an entity is registered as a Reliability Coordinator, Balancing Authority and Transmission Operator, the entity would only submit one report for a particular event rather submitting three reports as each individual registered entity.

~~**Summary of Key Concepts**~~

~~The DSR SDT identified the following principles to assist them in developing the standard:~~

- ~~Develop a single form to report disturbances and events that threaten the reliability of the Bulk Electric System~~
- ~~Investigate other opportunities for efficiency, such as development of an electronic form and possible inclusion of regional reporting requirements~~
- ~~Establish clear criteria for reporting~~
- ~~Establish consistent reporting timelines~~
- ~~Provide clarity around who will receive the information and how it will be used~~

~~**23.**~~

~~During the development of concepts, the DSR SDT considered the FERC directive to "further define sabotage". There was concern among stakeholders that a definition may be ambiguous and subject to interpretation. Consequently, the DSR SDT decided to eliminate the term sabotage from the standard. The team felt that it was almost impossible to determine if an act or event was sabotage or vandalism without the intervention of law enforcement. The DSR SDT felt that attempting to define sabotage would result in further ambiguity with respect to reporting events. The term "sabotage" is no longer included in the standard. The events listed in EOP-004 Attachment 1 were developed to provide guidance for reporting both actual events as well as events which may have an impact on the Bulk Electric System. The DSR SDT believes that this is an equally effective and efficient means of addressing the FERC Directive.~~

~~The types of events that are required to be reported are contained within EOP-004 Attachment 1. The DSR SDT has coordinated with the NERC Events Analysis Working Group to develop the list of events that are to be reported under this standard. EOP-004 Attachment 1 pertains to those actions or events that have impacted the Bulk Electric System. These events were previously reported under EOP-004-1, CIP-001-1 or the Department of Energy form OE-417. EOP-004 Attachment 1 covers similar items that may have had an impact on the Bulk Electric System or has the potential to have an impact and should be reported.~~

~~The DSR SDT wishes to make clear that the proposed Standard does not include any real-time operating notifications for the events listed in EOP-004 Attachment 1. Real-time communication is achieved is covered in other standards. The proposed standard deals exclusively with after-the-fact reporting.~~

~~**24. Data Gathering**~~

~~**25.** The requirements of EOP-004-1 require that entities "promptly analyze Bulk Electric System disturbances on its system or facilities" (Requirement R2). The requirements of EOP-004-3 specify that certain types of events are to be reported but do not include provisions to analyze events. Events reported under EOP-004-3 may trigger further scrutiny by the ERO Events Analysis Program. If warranted, the Events Analysis Program personnel may request that more data for certain events be provided by the reporting entity or other entities that may have experienced the event. Entities are encouraged to become familiar with the Events Analysis Program and the NERC Rules of Procedure to learn more about with the expectations of the program.~~

Law Enforcement Reporting

The reliability objective of EOP-004-~~3~~4 is to improve the reliability of the Bulk Electric System by requiring the reporting of events by Responsible Entities. Certain outages, such as those due to vandalism and terrorism, may not be reasonably preventable. These are the types of events that should be reported to law enforcement. Entities rely upon law enforcement agencies to respond to and investigate those events which have the potential to impact a wider area of the BES. The inclusion of reporting to law enforcement enables and supports reliability principles such as protection of Bulk Electric System from malicious physical attack. The importance of BES awareness of the threat around them is essential to the effective operation and planning to mitigate the potential risk to the BES.

Stakeholders in the Reporting Process

- Industry
- NERC (ERO), Regional Entity
- FERC
- DOE
- NRC
- DHS – Federal
- Homeland Security- State
- State Regulators
- Local Law Enforcement
- State or Provincial Law Enforcement
- FBI
- Royal Canadian Mounted Police (RCMP)

The above stakeholders have an interest in the timely notification, communication and response to an incident at a Facility. The stakeholders have various levels of accountability and have a vested interest in the protection and response to ensure the reliability of the BES.

~~Present expectations of the industry under CIP-001-1a:~~

~~It has been the understanding by industry participants that an occurrence of sabotage has to be reported to the FBI. The FBI has the jurisdictional requirements to investigate acts of sabotage and terrorism. The CIP-001-1-1a standard requires a liaison relationship on behalf of the industry and the FBI or RCMP. These requirements, under the standard, of the industry have not been clear and have led to misunderstandings and confusion in the industry as to how to demonstrate that the liaison is in place and effective. As an example of proof of compliance with Requirement R4, Responsible Entities have asked FBI Office personnel to provide, on FBI letterhead, confirmation of the existence of a working relationship to report acts of sabotage, the number of years the liaison relationship has been in existence, and the validity of the telephone numbers for the FBI.~~

~~Coordination of Local and State Law Enforcement Agencies with the FBI~~

~~The Joint Terrorism Task Force (JTTF) came into being with the first task force being established in 1980. JTTFs are small cells of highly trained, locally based, committed investigators, analysts, linguists, SWAT experts, and other specialists from dozens of U.S. law enforcement and intelligence agencies. The JTTF is a multi-agency effort led by the Justice Department and FBI designed to combine the resources of federal, state, and local law enforcement. Coordination and communications largely through the interagency National Joint Terrorism Task Force, working out of FBI Headquarters, which makes sure that information and intelligence flows freely among the local JTTFs. This information flow can be most beneficial to the industry in analytical intelligence, incident response and investigation. Historically, the most immediate response to an industry incident has been local and state law enforcement agencies to suspected vandalism and criminal damages at industry facilities. Relying upon the JTTF coordination between local, state and FBI law enforcement would be beneficial to effective communications and the appropriate level of investigative response.~~

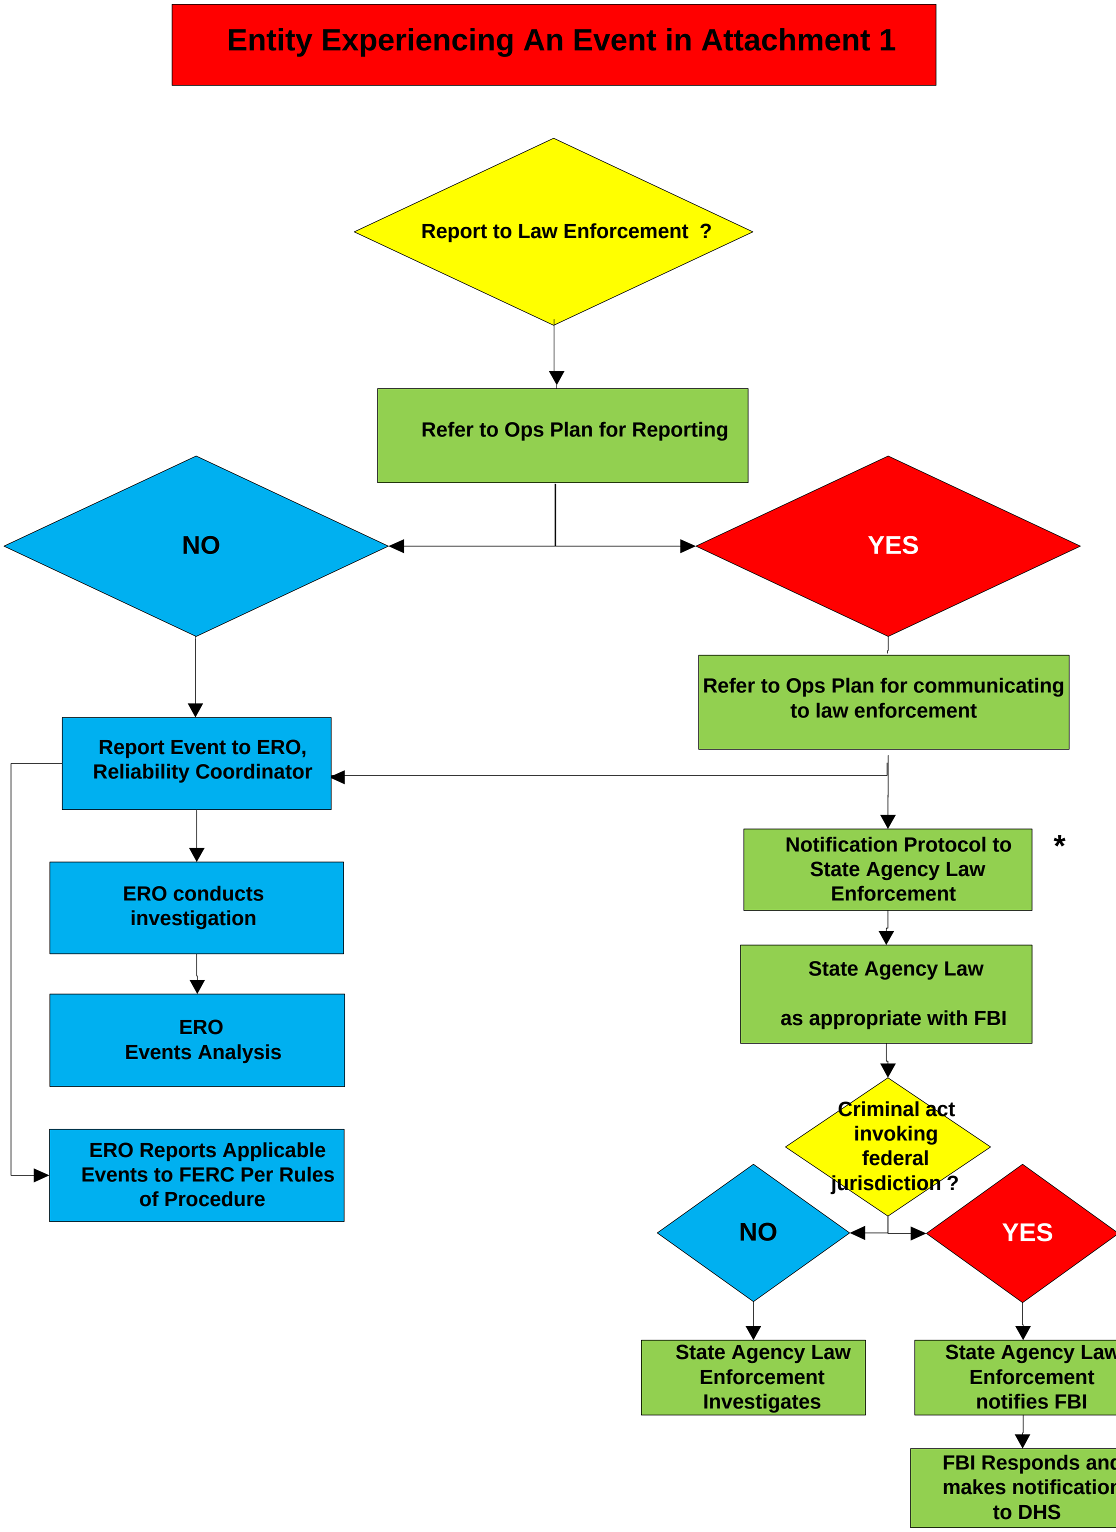
~~Coordination of Local and Provincial Law Enforcement Agencies with the RCMP~~

~~A similar law enforcement coordination hierarchy exists in Canada. Local and Provincial law enforcement coordinate to investigate suspected acts of vandalism and sabotage. The Provincial law enforcement agency has a reporting relationship with the Royal Canadian Mounted Police (RCMP).~~

~~A Reporting Process Solution – EOP-004~~

~~A proposal discussed with the FBI, FERC Staff, NERC Standards Project Coordinator and the SDT Chair is reflected in the flowchart below (Reporting Hierarchy for Reportable Events). Essentially, reporting an event to law enforcement agencies will only require the industry to notify the state or provincial or local level law enforcement agency. The state or provincial or local level law enforcement agency will coordinate with law enforcement with jurisdiction to investigate. If the state or provincial or local level law enforcement agency decides federal agency law enforcement or the RCMP should respond and investigate, the state or provincial or local level law enforcement agency will notify and coordinate with the FBI or the RCMP.~~

Example of Reporting Process including Law Enforcement



* Canadian entities will follow law enforcement protocols applicable in their jurisdictions

~~Disturbance and Sabotage Reporting Standard Drafting Team (Project 2009-01) - Reporting Concepts~~

~~Introduction~~

~~The SAR for Project 2009-01, Disturbance and Sabotage Reporting was moved forward for standard drafting by the NERC Standards Committee in August of 2009. The Disturbance and Sabotage Reporting Standard Drafting Team (DSR SDT) was formed in late 2009 and has developed updated standards based on the SAR.~~

~~The standards listed under the SAR are:~~

- ~~CIP-001 — Sabotage Reporting~~
- ~~EOP-004 — Disturbance Reporting~~

~~The changes do not include any real-time operating notifications for the types of events covered by CIP-001 and EOP-004. The real-time reporting requirements are achieved through the RCIS and are covered in other standards (e.g. EOP-002-Capacity and Energy Emergencies). These standards deal exclusively with after-the-fact reporting.~~

~~The DSR SDT has consolidated disturbance and sabotage event reporting under a single standard. These two components and other key concepts are discussed in the following sections.~~

~~Summary of Concepts and Assumptions:~~

~~The Standard:~~

- ~~Requires reporting of “events” that impact or may impact the reliability of the Bulk Electric System~~
- ~~Provides clear criteria for reporting~~
- ~~Includes consistent reporting timelines~~
- ~~Identifies appropriate applicability, including a reporting hierarchy in the case of disturbance reporting~~
- ~~Provides clarity around of who will receive the information~~

~~*Discussion of Disturbance Reporting*~~

~~Disturbance reporting requirements existed in the previous version of EOP-004. The current approved definition of Disturbance from the NERC Glossary of Terms is:~~

1. ~~An unplanned event that produces an abnormal system condition.~~
2. ~~Any perturbation to the electric system.~~
3. ~~The unexpected change in ACE that is caused by the sudden failure of generation or interruption of load.~~

~~Disturbance reporting requirements and criteria were in the previous EOP-004 standard and its attachments. The DSR SDT discussed the reliability needs for disturbance reporting and developed the list of events that are to be reported under this standard (EOP-004 Attachment 1).~~

~~*Discussion of Event Reporting*~~

~~There are situations worthy of reporting because they have the potential to impact reliability.~~

~~Event reporting facilitates industry awareness, which allows potentially impacted parties to prepare for and possibly mitigate any associated reliability risk. It also provides the raw material, in the case of certain potential reliability threats, to see emerging patterns.~~

~~Examples of such events include:~~

- ~~Bolts removed from transmission line structures~~
- ~~Train derailment adjacent to a Facility that either could have damaged a Facility directly or could indirectly damage a Facility (e.g. flammable or toxic cargo that could pose fire hazard or could cause evacuation of a control center)~~
- ~~Destruction of Bulk Electric System equipment~~

~~*What about sabotage?*~~

~~One thing became clear in the DSR SDT's discussion concerning sabotage: everyone has a different definition. The current standard CIP-001 elicited the following response from FERC in FERC Order 693, paragraph 471 which states in part: *". . . the Commission directs the ERO to develop the following modifications to the Reliability Standard through the Reliability Standards development process: (1) further define sabotage and provide guidance as to the triggering events that would cause an entity to report a sabotage event."*~~

~~Often, the underlying reason for an event is unknown or cannot be confirmed. The DSR SDT believes that by reporting material risks to the Bulk Electric System using the event categorization in this standard, it will be easier to get the relevant information for mitigation, awareness, and tracking, while removing the distracting element of motivation.~~

~~Certain types of events should be reported to NERC, the Department of Homeland Security (DHS), the Federal Bureau of Investigation (FBI), and/or Provincial or local law enforcement. Other types of events may have different reporting requirements. For example, an event that is related to copper theft may only need to be reported to the local law enforcement authorities.~~

Potential Uses of Reportable Information

~~Event analysis~~General situational awareness, correlation of data, ~~and~~ trend identification, and identification of potential events of interest for further analysis in the ERO Event Analysis Process are a few potential uses for the information reported under this standard. The standard requires Functional ~~e~~Entities to report the incidents and provide ~~known~~ information known at the time of the report. Further data gathering necessary for ~~event~~ analysis is provided for under the ~~Events~~ERO Event Analysis Program and the NERC Rules of Procedure. ~~Other entities (e.g. – NERC, Law Enforcement, etc) will be responsible for performing the analyses.~~ The NERC Rules of Procedure (section 800) provide an overview of the responsibilities of the ERO in regards to analysis and dissemination of information for reliability. Jurisdictional agencies (which may include DHS, FBI, NERC, RE, FERC, Provincial Regulators, and DOE) have other duties and responsibilities.

~~*Collection of Reportable Information or "One stop shopping"*~~

~~The DSR SDT recognizes that some regions require reporting of additional information beyond what is in EOP-004. The DSR SDT has updated the listing of reportable events in EOP-004 Attachment 1 based on discussions with jurisdictional agencies, NERC, Regional Entities and stakeholder input. There is a possibility that regional differences still exist.~~

~~The reporting required by this standard is intended to meet the uses and purposes of NERC. The DSR SDT recognizes that other requirements for reporting exist (e.g., DOE-417 reporting), which may duplicate or overlap the information required by NERC. To the extent that other reporting is required, the DSR SDT envisions that duplicate entry of information should not be necessary, and the submission of the alternate report will be acceptable to NERC so long as all information required by NERC is submitted. For example, if the NERC Report duplicates information from the DOE form, the DOE report may be sent to the NERC in lieu of entering that information on the NERC report.~~

Rationale~~:~~

During development of this standard, text boxes were embedded within the standard to explain the rationale for various parts of the standard. Upon BOT ~~approval~~adoption, the text from the rationale text boxes was moved to this section.

~~Rationale for R1:~~

~~The requirement to have an Operating Plan for reporting specific types of events provides the entity with a method to have its operating personnel recognize events that affect reliability and to be able to report them to appropriate parties; e.g., Regional Entities, applicable Reliability Coordinators, and law enforcement and other jurisdictional agencies when so recognized. In addition, these event reports are an input to the NERC Events Analysis Program. These other parties use this information to promote reliability, develop a culture of reliability excellence, provide industry collaboration and promote a learning organization.~~

~~Every Registered Entity that owns or operates elements or devices on the grid has a formal or informal process, procedure, or steps it takes to gather information regarding what happened when events occur. This requirement has the Responsible Entity establish documentation on how that procedure, process, or plan is organized. This documentation may be a single document or a combination of various documents that achieve the reliability objective.~~

~~The communication protocol(s) could include a process flowchart, identification of internal and external personnel or entities to be notified, or a list of personnel by name and their associated contact information. An existing procedure that meets the requirements of CIP-001-2a may be included in this Operating Plan along with other processes, procedures or plans to meet this requirement.~~

~~**Rationale for R2:**~~

~~Each Responsible Entity must report and communicate events according to its Operating Plan based on the information in EOP-004-3 Attachment 1. By implementing the event reporting Operating Plan the Responsible Entity will assure situational awareness to the Electric Reliability Organization so that they may develop trends and prepare for a possible next event and mitigate the current event. This will assure that the BES remains secure and stable by mitigation actions that the Responsible Entity has within its function. By communicating events per the Operating Plan, the Responsible Entity will assure that people/agencies are aware of the current situation and they may prepare to mitigate current and further events.~~

~~**Rationale for R3:**~~

~~Requirement 3 calls for the Responsible Entity to validate the contact information contained in the Operating Plan each calendar year. This requirement helps ensure that the event reporting Operating Plan is up to date and entities will be able to effectively report events to assure situational awareness to the Electric Reliability Organization. If an entity experiences an actual event, communication evidence from the event may be used to show compliance with the validation requirement for the specific contacts used for the event.~~

~~**Rationale for EOP-004 Attachment 1:**~~

~~The DSR SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as:~~

> ~~"A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)"~~

~~The DSR SDT does not intend the use of the term Facility to mean a substation or any other facility (not a defined term) that one might consider in everyday discussions regarding the grid. This is intended to mean ONLY a Facility as defined above.~~

~~Version History~~

~~Version~~	~~Date~~	~~Action~~	~~Change Tracking~~
~~2~~		~~Merged CIP-001-2a Sabotage Reporting and EOP-004-1 Disturbance Reporting into EOP-004-2 Event Reporting; Retire CIP-001-2a Sabotage Reporting and Retired EOP-004-1 Disturbance Reporting.~~	~~Revision to entire standard (Project 2009-01)~~

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Implementation Plan

Project 2015-08 Emergency Operations
Reliability Standard EOP-004-4

Applicable Standard(s)

- EOP-004-4 — Event Reporting

Requested Retirement(s)

- EOP-004-3 — Event Reporting

Prerequisite Standard(s)

None.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Owner
- Generator Owner
- Transmission Operator
- Generator Operator
- Distribution Provider

Background

Implementation of revisions and retirements recommended by the Project 2015-02 Emergency Operations Periodic Review Team clarify the critical methodology requirements for Emergency Operations, while ensuring strong planning, reporting, communication and coordination across the Functional Entities. In addition, the revisions are intended to streamline the standard making the standard more Results-based.

Effective Date

EOP-004-4 — Event Reporting

Where approval by an Applicable Governmental Authority is required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the effective date of the applicable governmental authority's order approving the standard, or as otherwise provided for by the Applicable Governmental Authority.

Where approval by an Applicable Governmental Authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees, or as otherwise provided for in that jurisdiction.

Definition
None.

Retirement Date

EOP-004-3 — Event Reporting
Reliability Standard EOP-004-3 shall be retired immediately prior to the effective date of EOP-004-4 in the particular jurisdiction in which the revised standard is becoming effective.

Implementation Plan

Mapping Document

Project 2015-08 Emergency Operations

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-3, Measure M1 **M1.** Each Responsible Entity will have a dated event reporting Operating Plan that includes, but is not limited to the protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-3 Attachment 1 and in accordance with the entity responsible for reporting.	EOP-004-4, Measure M1 **M1.** Each Responsible Entity will have a dated event reporting Operating Plan that includes protocol(s) and each organization identified to receive an event report for event types specified in EOP-004-4 Attachment 1 and in accordance with the entity responsible for reporting.	Updated standard version number. "…not limited to" removed from Measure M1, as unnecessary.
EOP-004-3, Requirement R2 **R2.** Each Responsible Entity shall report events per their Operating Plan within 24 hours of recognition of meeting an event type threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM	EOP-004-4, Requirement R2 **R2.** Each Responsible Entity shall report events specified in EOP-004-4 Attachment 1 to the entities specified per their event reporting Operating Plan by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business	Requirement R2 revisions were provided for clarity; to remove the ambiguity for weekends and to add clarity for holidays.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
local time on Friday to 8 AM Monday local time).	day (4 p.m. local time will be considered the end of the business day).	
EOP-004-3, Measure M2 **M2.** Each Responsible Entity will have as evidence of reporting an event, copy of the completed EOP-004-3 Attachment 2 form or a DOE-OE-417 form; and evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating the event report was submitted within 24 hours of recognition of meeting the threshold for reporting or by the end of the next business day if the event occurs on a weekend (which is recognized to be 4 PM local time on Friday to 8 AM Monday local time). (R2)	EOP-004-4, Measure M2 **M2.** Each Responsible Entity will have as evidence of reporting an event to the entities specified per their event reporting Operating Plan either a copy of the completed EOP-004-4 Attachment 2 form or a DOE-OE-417 form; and some evidence of submittal (e.g., operator log or other operating documentation, voice recording, electronic mail message, or confirmation of facsimile) demonstrating that the event report was submitted by the later of 24 hours of recognition of meeting an event type threshold for reporting or by the end of the Responsible Entity's next business day (4 p.m. local time will be considered the end of the business day).	Measure M2 was updated for clarity and to identify 4:00 p.m. local time to be considered as the end of the entity's business day.
EOP-004-3, Requirement R3	Recommended for retirement.	The EOP SDT recommends retirement of Requirement R3 under Criterion B1, administrative; the R3 requirement in EOP-

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
R3. Each Responsible Entity shall validate all contact information contained in the Operating Plan pursuant to Requirement R1 each calendar year.		004-3 requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome. Contact lists are administrative in nature.
EOP-004-3, Attachment 1 Event Type: Damage or destruction of a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action.	EOP-004-4, Attachment 1 Event Type: Damage or destruction of its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Damage or destruction of its Facility that results from actual or suspected intentional human action. It is not necessary to report theft unless it degrades normal operation of its Facility.	The EOP SDT wanted to change the reporting responsibility to the Facility owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-3, Attachment 1	EOP-004-4, Attachment 1	The EOP SDT wanted to change the reporting responsibility to the Facility

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Event Type: Physical threats to a Facility Entity with Reporting Responsibility: BA, TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at a Facility. Do not report theft unless it degrades normal operation of a Facility.	Event Type: Physical threats to its Facility Entity with Reporting Responsibility: TO, TOP, GO, GOP, DP Threshold for Reporting: Physical threat to its Facility excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the Facility. OR Suspicious device or activity at its Facility.	owner. It is the responsibility to the Facility owner, as the Threshold states. The EOP SDT used the defined term "Facility" to add clarity for several events listed in Attachment 1. A Facility is defined as: "A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.)" With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a Facility" to "…its Facility."
EOP-004-3, Attachment 1 Event Type: Physical threats to a BES control center Entity with Reporting Responsibility: RC, BA, TOP	EOP-004-4, Attachment 1 Event Type: Physical threats to its BES control center Entity with Reporting Responsibility: RC, BA, TOP	With the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…a BES control center" to "…its BES control center."

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at a BES control center.	Threshold for Reporting: Physical threat to its BES control center, excluding weather or natural disaster related threats, which has the potential to degrade the normal operation of the control center. OR Suspicious device or activity at its BES control center.	
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring public appeal for load reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Public appeal for load reduction event.	EOP-004-4, Attachment 1 Event Type: Public appeal for load reduction resulting from a BES Emergency Entity with Reporting Responsibility: BA Threshold for Reporting: Public appeal for load reduction to maintain continuity of the BES.	To maintain the continuity of the BES was added to better align with the DOE OE-417 reporting category. Rationale: The EOP SDT changed the reporting responsibility to the BA only based on the BA requirements in EOP-011-1 (FERC approved, pending enforcement) Requirement R2 “Each Balancing Authority shall develop, maintain, and implement one or more Reliability Coordinator-reviewed Operating Plan(s) to mitigate Capacity Emergencies and Energy Emergencies within its Balancing Authority Area. The Operating Plan(s) shall include the

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		following, as applicable: *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations, Operations Planning, Long-term Planning]* **2.1.** Roles and responsibilities for activating the Operating Plan(s); **2.2.** Processes to prepare for and mitigate Emergencies including: **2.2.1.** Notification to its Reliability Coordinator, to include current and projected conditions when experiencing a Capacity Emergency or Energy Emergency; **2.2.2.** Requesting an Energy Emergency Alert, per Attachment 1; **2.2.3.** Managing generating resources in its Balancing Authority Area to address: **2.2.3.1.** capability and availability; **2.2.3.2.** fuel supply and inventory concerns; **2.2.3.3.** fuel switching capabilities; and **2.2.3.4.** environmental constraints. **2.2.4.** Public appeals for voluntary Load reductions;

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring system-wide voltage reduction Entity with Reporting Responsibility: Initiating entity is responsible for reporting. Threshold for Reporting: System wide voltage reduction of 3% or more.	EOP-004-4, Attachment 1 Event Type: System-wide voltage reduction resulting from a BES Emergency Entity with Reporting Responsibility: TOP Threshold for Reporting: System-wide voltage reduction of 3% or more.	The TOP is operating the system and is the only entity that would implement System-wide voltage reduction.
EOP-004-3, Attachment 1 Event Type: BES Emergency requiring manual firm load shedding Entity with Reporting Responsibility: Initiating entity is responsible for reporting Threshold for Reporting: Manual firm load shedding ≥ 100 MW.	EOP-004-4, Attachment 1 Event Type: Firm load shedding resulting from a BES Emergency Entity with Reporting Responsibility: Initiating RC, BA, or TOP Threshold for Reporting: Firm load shedding ≥ 100 MW (manual or automatic).	The RC, BA and TOP are the entities that would initiate manual firm load shedding.
EOP-004-3, Attachment 1 Event Type: BES Emergency resulting in automatic firm load shedding Entity with Reporting Responsibility: DP, TOP	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting has been merged with Event Type: Firm load shedding resulting from a BES Emergency.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
Threshold for Reporting: Automatic firm load shedding ≥ 100 MW (via automatic undervoltage or underfrequency load shedding schemes, or RAS).		
EOP-004-3, Attachment 1 Event Type: Voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: Observed within its area a voltage deviation of ± 10% of nominal voltage sustained for ≥ 15 continuous minutes.	EOP-004-4, Attachment 1 Event Type: BES Emergency resulting in voltage deviation on a Facility Entity with Reporting Responsibility: TOP Threshold for Reporting: A voltage deviation of =/> 10% of nominal voltage sustained for ≥ 15 continuous minutes.	To provide clarity to the Event Type and to the Threshold for Reporting, the language revisions were made.
EOP-004-3, Attachment 1 Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) Entity with Reporting Responsibility: RC Threshold for Reporting: Operate outside the IROL for time greater than IROL T_v (all Interconnections) or Operate outside the SOL	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement.	This Event Type/Entity with Reporting Responsibility/Threshold for Reporting is proposed for retirement. Event Type: IROL Violation (all Interconnections) or SOL Violation for Major WECC Transfer Paths (WECC only) are in the new standard TOP-001-3, Requirement R12 that becomes effective on 4/1/17, requiring a self-report if Tv is exceeded; the TOP-007-WECC-1 standard is pending retirement.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
for more than 30 minutes for Major WECC Transfer Paths (WECC only).		
EOP-004-3, Attachment 1 Event Type: Loss of firm load Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Loss of firm load for ≥ ≥ 300 MW for entities with previous yea 3,000 MW OR ≥ 200 MW for all other entities	EOP-004-4, Attachment 1 Event Type: Uncontrolled loss of firm load resulting from a BES Emergency Entity with Reporting Responsibility: BA, TOP, DP Threshold for Reporting: Uncontrolled loss of firm load for ≥ 15 minutes from a single incident: ≥ 300 MW for entities with previous year's peak demand ≥ 3,000 MW OR ≥ 200 MW for all other entities	To provide clarity to the Threshold for Reporting and to align with the DOE's OE-417 reporting category, language revisions were made.
EOP-004-3, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA, GOP Threshold for Reporting: Total generation loss, within one minute, of :	EOP-004-4, Attachment 1 Event Type: Generation loss Entity with Reporting Responsibility: BA Threshold for Reporting: Total generation loss, within one minute, of:	The EOP SDT removed the reporting requirement from the GOPs to reduce redundant reporting. The BA should do the reporting given they have the generation status information.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
≥ 2,000 MW for entities in the Eastern or Western Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection	≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection	Technical justification for reverting back to the value of 2,000 MW for the generation loss for the Québec Interconnection and for harmonizing with NERC EA process. 1. Generation in the Québec Interconnection is 95 % hydraulic. To be efficient, generation must operate within 80 % of its operating range. There is a large spinning reserve available at all times which aids in the recovery period after an event (ACE-Area Control Error). Historically, the recorded average ACE recovery time for a 2,000 MW loss is 5 minutes which is 3 times faster than the standard requirement of 15 minutes. <u>BAL-002-1a (R4.2)</u>. 2. Based on the Hydro Québec's generation loss reports, generation loss between 1,500 MW to 2,000 MW does not trig the first stage threshold of the UFLS scheme.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The frequency stayed above the underfrequency limit. 3. In order to maintain the integrity of the Québec system, the RPTC SPS in Québec (Generation Rejection and Remote Load Shedding) is designed to detect abnormal or predetermined system conditions, to take corrective actions and to deliberately remove up to 1,500 MW of preselected generation from the power system. Consequently, the system is design to remain stable upon the instantaneous loss of 1,500 MW of generation. For Hydro-Québec, a generation loss of more than 2,000 MW is considered as an issue, which is make sense with previous 2,000 MW generation loss reporting requirement. 4. The EEA Level 3 alert (EOP-002) in Québec is set generally set at 2,000 MW, based on the deficiency of

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operating reserves and margins. Up to now, no EEA Level 3 alert has occurred in the Québec Interconnection. 5. Hydro Québec's loss of generation in first contingency (n-1) is set around 2,000 MW. Technical justification for the value of 1,400 MW for the generation loss for the ERCOT Interconnection and for harmonizing with NERC EA process. 1. ERCOT maintains a mix of operating reserves (typically 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves) available at all times, which aids in the recovery period after an event affecting Area Control Error (ACE) or frequency. ERCOT typically procures between 2,300 MW to 3,000 MW of frequency responsive reserves for all

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operating hours besides procuring additional regulation and non-spinning reserves. The Load Resources controlled by Under-Frequency relay are set to respond automatically at 59.7 Hz to provide instantaneous frequency response. Historically, the recorded average ACE recovery time for a 1,400 MW loss is less than 10 minutes, which is much faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. The design criteria for ERCOT's frequency responsive reserves is to procure adequate reserves that allow frequency to stay above the under-frequency limit for up to ERCOT's resource contingency criteria limit of 2,750 MW. 3. The EEA level 1 alert (EOP-002) in ERCOT is set at 2,300 MW of Physical Responsive Capability (PRC) which is

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		a mix of operating reserves (typically 50% Load Resources and 50% frequency responsive spinning reserves).
EOP-004-3, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement	EOP-004-4, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements	The Event Analysis Program (EAP) refers to loss of off-site power as “(LOOP)”. Therefore, LOOP has been added to the Threshold for Reporting to provide consistency.
EOP-004-3, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common disturbance (excluding successful automatic reclosing).	EOP-004-4, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common disturbance (excluding successful automatic reclosing).	The definition of BES Element includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event Type. It could lead to confusion as to the element count for three elements contrary to design. In addition, the EAP uses the definition of “BES Facility” in its application, which could lead to additional confusion in evaluating a

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		reporting during an event. The EOP SDT revised "BES Elements" to "BES Facilities" to add clarity to the Threshold for Reporting and to align with the EAP language.
EOP-004-3, Attachment 1 Event Type: Unplanned BES control center evacuation Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from BES control center facility for 30 continuous minutes or more.	EOP-004-4, Attachment 1 Event Type: Unplanned evacuation of its BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.	In the Threshold for Reporting, with the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…BES control center" to "…its BES control center."
EOP-004-3, Attachment 1 Event Type: Complete loss of voice communication capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of voice communication capability affecting a	EOP-004-4, Attachment 1 Event Type: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of Interpersonal Communication and	COM-001-2 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." And Alternative Interpersonal Communication as: "Any Interpersonal Communication that is able to serve as a substitute for, and does

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
BES control center for 30 continuous minutes or more.	Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.	not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.”
EOP-004-3, Attachment 1 Event Type: Complete loss of monitoring capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.	EOP-004-4, Attachment 1 Event Type: Complete loss of monitoring or control capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.	The language revisions to this event type provides clarity to the Threshold for Reporting and better aligns with the EAP language.

The BA should do the reporting given they have the generation status information.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
≥ 2,000 MW for entities in the Eastern or Western Interconnection OR ≥ 1,000 MW for entities in the ERCOT or Quebec Interconnection	≥ 2,000 MW in the Eastern, Western, or Quebec Interconnection OR ≥ 1,400 MW in the ERCOT Interconnection	Technical justification for reverting back to the value of 2,000 MW for the generation loss for the Québec Interconnection and for harmonizing with NERC EA process. 1. Generation in the Québec Interconnection is 95 % hydraulic. To be efficient, generation must operate within 80 % of its operating range. There is a large spinning reserve available at all times which aids in the recovery period after an event (ACE-Area Control Error). Historically, the recorded average ACE recovery time for a 2,000 MW loss is 5 minutes which is 3 times faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. Based on the Hydro Québec's generation loss reports, generation loss between 1,500 MW to 2,000 MW does not trig the first stage threshold of the UFLS scheme.

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		The frequency stayed above the underfrequency limit. 3. In order to maintain the integrity of the Québec system, the RPTC SPS in Québec (Generation Rejection and Remote Load Shedding) is designed to detect abnormal or predetermined system conditions, to take corrective actions and to deliberately remove up to 1,500 MW of preselected generation from the power system. Consequently, the system is design to remain stable upon the instantaneous loss of 1,500 MW of generation. For Hydro-Québec, a generation loss of more than 2,000 MW is considered as an issue, which is make sense with previous 2,000 MW generation loss reporting requirement. 4. The EEA Level 3 alert (EOP-002) in Québec is set generally set at 2,000 MW, based on the deficiency of

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		operating reserves and margins. Up to now, no EEA Level 3 alert has occurred in the Québec Interconnection. 5. Hydro Québec's loss of generation in first contingency (n-1) is set around 2,000 MW. Technical justification for ~~reverting back to~~ the value of ~~2~~1,~~000~~ 400 MW for the generation loss for the ~~Québec~~ ERCOT Interconnection and for harmonizing with NERC EA process. 1. ERCOT maintains a mix of operating reserves (typically 50% Load Resources controlled by under-frequency relays and 50% frequency responsive spinning reserves) available at all times, which aids in the recovery period after an event affecting Area Control Error (ACE) or frequency. ERCOT typically procures between 2,300 MW to 3,000 MW of

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		frequency responsive reserves for all operating hours besides procuring additional regulation and non-spinning reserves. The Load Resources controlled by Under-Frequency relay are set to respond automatically at 59.7 Hz to provide instantaneous frequency response. Historically, the recorded average ACE recovery time for a 1,400 MW loss is less than 10 minutes, which is much faster than the standard requirement of 15 minutes. BAL-002-1a (R4.2). 2. The design criteria for ERCOT's frequency responsive reserves is to procure adequate reserves that allow frequency to stay above the under-frequency limit for up to ERCOT's resource contingency criteria limit of 2,750 MW. 3. The EEA level 1 alert (EOP-002) in ERCOT is set at 2,300 MW of Physical

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
		Responsive Capability (PRC) which is a mix of operating reserves (typically 50% Load Resources and 50% frequency responsive spinning reserves).
~~EOP-004-03~~EOP-004-3, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power affecting a nuclear generating station per the Nuclear Plant Interface Requirement	~~EOP-004-04~~EOP-004-4, Attachment 1 Event Type: Complete loss of off-site power to a nuclear generating plant (grid supply) Entity with Reporting Responsibility: TO, TOP Threshold for Reporting: Complete loss of off-site power (LOOP) affecting a nuclear generating station per the Nuclear Plant Interface Requirements	The Event Analysis Program (EAP) refers to loss of off-site power as "(LOOP)". Therefore, LOOP has been added to the Threshold for Reporting to provide consistency.
~~EOP-004-03~~EOP-004-3, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Elements caused by a common	~~EOP-004-04~~EOP-004-4, Attachment 1 Event Type: Transmission loss Entity with Reporting Responsibility: TOP Threshold for Reporting: Unexpected loss within its area, contrary to design, of three or more BES Facilities caused by a common	The definition of BES Element includes generation. The reporting requirement for this Event Type is the TOP. The TOP does not have the visibility to report for the GO and/or the GOP for this Event Type. It could lead to confusion as to the element count for three elements contrary to design. In addition, the EAP uses the definition of "BES Facility" in its application, which could lead

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
disturbance (excluding successful automatic reclosing).	disturbance (excluding successful automatic reclosing).	to additional confusion in evaluating a reporting during an event. The EOP SDT revised "BES Elements" to "BES Facilities" to add clarity to the Threshold for Reporting and to align with the EAP language.
~~EOP-004-03~~EOP-004-3, Attachment 1 Event Type: Unplanned BES control center evacuation Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from BES control center facility for 30 continuous minutes or more.	~~EOP-004-04~~EOP-004-4, Attachment 1 Event Type: Unplanned evacuation of its BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Unplanned evacuation from its BES control center facility for 30 continuous minutes or more.	In the Threshold for Reporting, with the specific entities listed for reporting, the event type and reporting entity better aligns with the word change from "…BES control center" to "…its BES control center."
~~EOP-004-03~~EOP-004-3, Attachment 1 Event Type: Complete loss of voice communication capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of voice communication capability affecting a	~~EOP-004-04~~EOP-004-4, Attachment 1 Event Type: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP	COM-001-2 defined Interpersonal Communication for the NERC Glossary of Terms as: "Any medium that allows two or more individuals to interact, consult, or exchange information." And Alternative Interpersonal Communication as:

Standard: EOP-004-4		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Description and Change Justification**
BES control center for 30 continuous minutes or more.	Threshold for Reporting: Complete loss of Interpersonal Communication and Alternative Interpersonal Communication capability affecting its staffed BES control center for 30 continuous minutes or more.	"Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation."
~~EOP-004-03~~EOP-004-3, Attachment 1 Event Type: Complete loss of monitoring capability Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring capability affecting a BES control center for 30 continuous minutes or more such that analysis capability (i.e., State Estimator or Contingency Analysis) is rendered inoperable.	~~EOP-004-04~~EOP-004-4, Attachment 1 Event Type: Complete loss of monitoring or control capability at its staffed BES control center Entity with Reporting Responsibility: RC, BA, TOP Threshold for Reporting: Complete loss of monitoring or control capability at its staffed BES control center for 30 continuous minutes or more.	The language revisions to this event type provides clarity to the Threshold for Reporting and better aligns with the EAP language.

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels

VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were slightly revised to add "event reporting." The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their event reporting Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their event reporting Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients up to 24 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 24 hours but less than or equal to 48 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to two entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 48 hours but less than or equal to 72 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to three entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than 72 hours after the timing requirement for submittal. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to four or more entities identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable. OR The Responsible Entity failed to submit a report for an event in EOP-004-4 Attachment 1.

VSL Justifications for EOP-004-4, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event reporting Operating Plan and reporting events, and Requirement 2 language of EOP-004-4 is only slightly changed from EOP-004-3. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties <u>Guideline 2a</u>: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent <u>Guideline 2b</u>: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-004-4, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Violation Risk Factor and Violation Severity Level Justifications

Project 2015-08 Emergency Operations

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in **EOP-004-4 – Event Reporting**. Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined by the ERO Sanctions Guidelines. The Emergency Operations Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

NERC Criteria for Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Guidelines for Violation Risk Factors

Guideline (1) – Consistency with the Conclusions of the Final Blackout Report

FERC seeks to ensure that VRFs assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System. In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) – Consistency within a Reliability Standard
FERC expects a rational connection between the sub-Requirement VRF assignments and the main Requirement VRF assignment.

Guideline (3) – Consistency among Reliability Standards
FERC expects the assignment of VRFs corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) – Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular VRF level conforms to NERC's definition of that risk level.

Guideline (5) – Treatment of Requirements that Co-mingle More Than One Obligation
Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

NERC Criteria for Violation Severity Levels
VSLs define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple "degrees" of noncompliant performance and may have only one, two, or three VSLs.

VSLs should be based on NERC's overarching criteria shown in the table below:

Lower VSL	Moderate VSL	High VSL	Severe VSL
The performance or product measured almost meets the full intent of the requirement.	The performance or product measured meets the majority of the intent of the requirement.	The performance or product measured does not meet the majority of the intent of the requirement, but does meet some of the intent.	The performance or product measured does not substantively meet the intent of the requirement.

FERC Order of Violation Severity Levels

The FERC VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline (1) – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline (2) – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.
Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline (3) – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline (4) – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

Unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
NERC VRF Discussion	R1 is a requirement in an Operations Planning time frame to have an event reporting Operating Plan. The assignment of the Lower VRF was made based on the premise that failure to have an event reporting Operating Plan would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. This is mainly an administrative requirement and thus meets NERC's criteria for a Lower VRF.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report**

VRF Justifications for EOP-004-4, R1	
Proposed VRF	**Medium**
	R1 requires the entity to have an event reporting Operating Plan that is consistent with FERC guideline G1 regarding Operating tools and backup facilities.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R1 contains only one objective, which is to have an event reporting Operating Plan. Since the requirement has only one objective, only one VRF was assigned.

VSLs for EOP-004-4, R1			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity had an event reporting Operating Plan, but failed to include one applicable event type.	The Responsible Entity had an event reporting Operating Plan, but failed to include two applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include three applicable event types.	The Responsible Entity had an event reporting Operating Plan, but failed to include four or more applicable event types. OR The Responsible Entity failed to have an event reporting Operating Plan.

VRF Justifications for EOP-008-2, R1	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event operating plan Operating Plan and mirrors the Requirements of EOP-004-3 with some minor edits. The VSL's for R1 were slightly revised to add "event reporting." The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R1 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VRF Justifications for EOP-008-2, R1	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

VRF Justifications for EOP-004-4, R2	
Proposed VRF	**Medium**
NERC VRF Discussion	R2 is a requirement in Operations Assessment time frame that requires entities to report events per their event reporting Operating Plan. If violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures.
FERC VRF G1 Discussion	**Guideline 1- Consistency w/ Blackout Report** R2 requires the entity to report events per their event reporting Operating Plan. A violation of this requirement has been assigned a Medium VRF, consistent with FERC guideline G1.
FERC VRF G2 Discussion	**Guideline 2- Consistency within a Reliability Standard** The requirement has no parts and only one VRF was assigned, so there is no conflict.
FERC VRF G3 Discussion	**Guideline 3- Consistency among Reliability Standards** Requirement R2 uses similar language from EOP-004-3, Requirement R2, and the VRF remains unchanged from earlier versions.
FERC VRF G4 Discussion	**Guideline 4- Consistency with NERC Definitions of VRFs** Failure to report events per the Operating Plan would not be expected to have an adverse impact on the bulk power system, or the ability to effectively monitor and control the bulk electric system.
FERC VRF G5 Discussion	**Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation** R2 contains only one objective and only one VRF was assigned.

VSLs for EOP-004-4, R2			
Lower	**Moderate**	**High**	**Severe**
The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients up to 24 hours after the timing requirement for submittal~~more than 24 hours but less than or equal to 36 hours after recognition of meeting an event threshold for reporting~~. OR The Responsible Entity failed to submit an event report (e.g., written or verbal) to one entity identified in its event reporting Operating Plan within 24 hours or by the end of the next business day, as applicable.~~,~~	The Responsible Entity submitted an event report (e.g., written or verbal) to all required recipients more than ~~36~~ 24 hours but less than or equal to 48 hours after the timing requirement for submittal~~recognition of meeting an event threshold for reporting~~. VSL Justifications for EOP-004-4, R2	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The Requirements of EOP-004-4 deal with having an event reporting Operating Plan and reporting events, and Requirement 2 language of EOP-004-4 is only slightly changed from EOP-004-3. The VSL's for this requirement meet the current level of compliance.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 2a: The VSL assignment is for R2 is not binary. Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.
FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	The proposed VSL uses similar terminology to that used in the associated requirement, and is therefore consistent with the requirement.

VSL Justifications for EOP-004-4, R2	
FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations	Proposed VSLs are based on a single violation and not a cumulative violation methodology.
FERC VSL G5 Requirements where a single lapse in protection can compromise computer network security, i.e., the 'weakest link' characteristic, should apply binary VSLs	Non CIP
FERC VSL G6 VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence	Non CIP

Standards Announcement

Project 2015-08 Emergency Operations
EOP-004-4

Final Ballot Open through February 2, 2017

Now Available

A final ballot for **EOP-004-4 – Event Reporting** is open through **8 p.m. Eastern, Friday, December 9, 2016**.

Balloting

In the final ballot, votes are counted by exception. Only members of the ballot pool may cast a vote. All ballot pool members may change their previously cast vote. A ballot pool member who failed to vote during the previous ballot period may vote in the final ballot period. If a ballot pool member does not participate in the final ballot, the member's vote from the previous ballot will be carried over as their vote in the final ballot.

Members of the ballot pool associated with this project may log in and submit their vote for the standard here. If you experience any difficulties using the Standards Balloting & Commenting System (SBS), contact Nasheema Santos.

If you are having difficulty accessing the SBS due to a forgotten password, incorrect credential error messages, or system lock-out, contact NERC IT support directly at https://support.nerc.net/ (Monday – Friday, 8 a.m. - 5 p.m. Eastern).

Next Steps

The voting results for the standard will be posted and announced after the ballot closes. If approved, the standard will be submitted to the Board of Trustees for adoption and then filed with the appropriate regulatory authorities.

Standards Development Process

For more information on the Standards Development Process, refer to the Standard Processes Manual.

For more information or assistance, contact Standards Developer, Laura Anderson (via email) or at (404) 446-9671.
